AS SUPPLIED TO H. M. GOVERNMENT.

Extract from THE VETERINARY RECORD.

The above illustration, Fig. 438, shows the 'Reliance' tooth rasp, which is manufactured by Messrs. ARNOLD & SONS, only with some improvements made at my suggestion, which now makes it a most perfect rasp. Instead of the old fastening, which projected and caught the teeth when in use, a flush screw joint is used, and is so arranged that, by a few turns, only one-half of the upper part of the frame comes out, thus enabling one to change the plates quickly. Again, the plate is made curved instead of straight and the joint at the end of the frame which receives the plate is made flat, and the top rounded so that there is no possibility of lacerating the gums of restive horses during the operation.

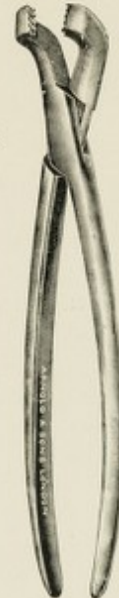

"H. THOMPSON, C.B., Major-General (Director-General, Army Veterinary Department)."
