ACONITE COUGH POWDERS FOR HORSES.

DIRECTIONS FOR USE.

For Horses—Thoroughly mix one powder with the horse's usual feed at night, and repeat on alternate nights. The improvement in the breathing will quickly become noticeable, but the medicine should be continued until a cure is effected.

For Cattle—First drench the animal with Epsom Salts, and on the following and alternate days give one of the powders in a cold mash.

For Ponies and Calves—Use one half of a powder for a dose, water only at night, and keep the remains of the food away from small animals, as it contains a small amount of POISON, and is so labelled in accordance with the laws.

These powders are specially designed for use in Cough (Horse), Broken Wind, and Diseases generally of the Respiratory Organs. Their action on the animal is also that of a general condition powder and will effect great improvements in the appearance and condition of the animal.
