Composition XtraVital Super Premium bird feeds

Canary feed

26 varieties of seeds, grains, fruit, bakery products, oils, fats, sugar, vegetable extracts, minerals, vegetable protein, egg and egg products.

Parakeet feed

26 varieties of seeds, grains, fruit, bakery products, oils, fats, sugar, vegetable extracts, minerals, vegetable protein, egg and egg products.

Large parakeet feed

30 varieties of seeds, grains, fruit, bakery products, oils, fats, sugar, vegetable extracts, minerals, vegetable protein, egg and egg products.

Parrot feed

17 varieties of seeds, grains, fruit, bakery products, oils, fats, sugar, vegetable extracts, minerals, vegetable protein, egg and egg products.

A problem that often occurs with parrots is feather picking. Feather picking can be caused by, amongst others, too one-sided a feed. The variation in XtraVital Parrot feed helps combat feather picking.

XtraVital

Complete bird food

Super Premium

XtraVital

Super Premium top quality bird feed

- Complete canary feed
- Complete parakeet feed
- Complete large parakeet feed
- Complete parrot feed

A healthy bird has splendid feathers, is lively, alert and sings or chatters away to its heart's content. Naturally you want the best there is for your feathered friend. A responsible feed is the basis of a happy and healthy bird life. One-sided seed mixtures are often given so that extra feed is needed. XtraVital, however, is much more than a seed mixture.

XtraVital bird feeds are complete and well-balanced. Each feed is tailored to the natural food requirements of the specific species. The compositions have been developed in co-operation with nutrition experts, vets and bird experts. XtraVital Super Premium is a top quality bird feed because of the high value ingredients, careful method of preparation, continuous quality control and varied composition.

Varied composition

XtraVital contains considerably more seed species than existing seed mixtures. A bird in the wild has varied eating habits and eats several species of seed each day. Existing seed mixtures contain 6 species of seeds on average. XtraVital Super Premium has 17 to 30 different species of seeds and thus meets the natural requirements of your bird.

- Canary feed: 26 different species of seed
- Parakeet feed: 26 different species of seed
- Large parakeet feed: 30 different species of seed
- Parrot feed: 17 different species of seed

Complete feed

Regular seed mixtures are often too one-sided. XtraVital Super Premium contains grains, fruits and egg supplement in addition to the seeds. This combination ensures that XtraVital is a complete feed in itself. The egg supplement contains all the vitamins, minerals and essential amino acids that a bird needs. Tuning the egg supplement correctly with the other ingredients is important. This tuning guarantees that each bird species absorbs the nutrients as completely as possible. Above all, this combination ensures that XtraVital is a well-balanced feed.

Building blocks of the bird body

XtraVital Super Premium bird feed contains chelated minerals to improve the mineral status of the bird body. Chelated minerals are surrounded by amino acids. Amino acids form the building blocks of the bird body. The advantage of chelated minerals is that these are absorbed better in the body and they do not disturb each other's absorption. Disturbance of the absorption of minerals can lead to anaemia for example. The chelated minerals ensure that your bird is in tip-top condition.

Resistance

XtraVital Super Premium bird feed is enriched with Echinacea. Echinacea is a homeopathic product, coming from the Echinacea purpurea plant. Research has shown that Echinacea improves the resistance.

Delicious aroma and taste

XtraVital Super Premium bird feed is prepared with pure honey for a delicious aroma and taste as well. This ensures first-rate acceptance. Your bird will really love XtraVital. In most cases changing over to XtraVital will cause no problems.

Contents

The contents of a packet of XtraVital are tuned to the average amount of feed that your bird needs. A measuring spoon is included in every packet so that

you can easily determine the correct amount.

The scheme below gives a general guideline of the average amount of feed per bird. The amount is determined on the basis of the average weight per species of bird. If your bird differs in weight or size, the amount should be adjusted.

Bird species	Average weight	Amount of feed required	Number of spoonfuls
Canary	25 g	5 g	1
Bodgeriger	40 - 50 g	7,5 g	1,5
Large parakeet			
Lovebird	40 - 65 g	10 g	1
Cockatiel	100 g	20 g	2
Parrot			
Peach-faced lovebird	100 g	20 g	2
Amazon	400 - 500 g	40 - 50 g	4
Grey parrot	450 g	45 g	4,5
Small cockatoo	400 - 500 g	40 - 50 g	4
Large cockatoo	800 g	80 g	8
Macaw	1000 g	100 g	10

The amounts recommended are guidelines; the correct amount is dependent upon the weight and size of the bird.

Recommendations

Hang feeding and watering trays on a clean and easily accessible place. Do not place feeding and watering trays under the perch in order to prevent the bird fouling them. Give your bird fresh feed and drinking water every day. The cage can be best placed in a light spot where there is no direct sunlight. Make sure that the cage is not placed in too warm a spot and avoid draughts.

Ingredients and nutritional analysis

Nutritional analysis	Canary feed	Parakeet feed	Large parakeet feed	Parrot feed
Rough protein	17,5%	14,1%	13,2%	12,8%
