# Glycosyltransferases and Donor Substrates

**20%  
Discount**

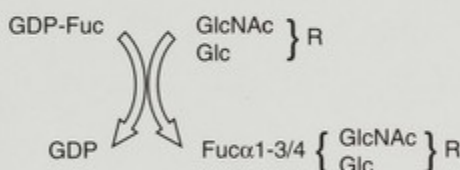

For a limited period, Oxford GlycoSystems is offering a **20% discount** on two commonly used glycosyltransferases and their donor substrates. These products are ideal for studying the effects of specific glycosylation of glycoproteins or whole cells; or can be used in the enzymatic synthesis of oligosaccharides.

Glycosyltransferases are supplied with a suitable incubation buffer and suggested directions for use. Donor substrates are prepared to a high degree of purity, generally >90%.

Galactosyltransferase  
(Bovine milk)
