Real PhosphorImager™  
performance—for less.

## Not just for big budgets anymore.

### **Fast, quantitative autoradiography without film**

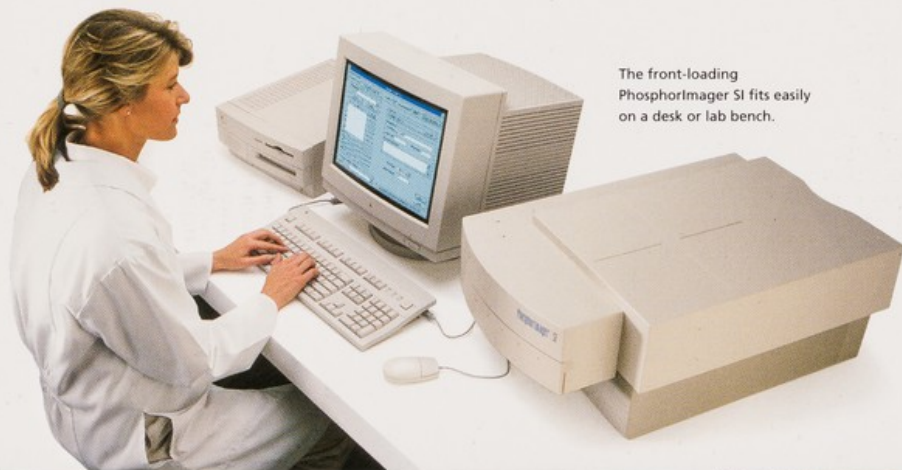

You no longer need a big budget to escape the time-consuming re-exposures, inexact quantitation, and darkroom hassles of film autoradiography. The compact PhosphorImager SI system uses

**PhosphorImager:SI**

sensitive Kodak™ storage phosphor screens for fast, quantitative imaging of  $^{14}\text{C}$ ,  $^3\text{H}$ ,  $^{125}\text{I}$ ,  $^{131}\text{I}$ ,  $^{32}\text{P}$ ,  $^{33}\text{P}$ ,  $^{35}\text{S}$ , and other radioisotopes, and delivers publication-quality images in one-tenth the exposure time of conventional X-ray film. And now, new lower pricing on the PhosphorImager SI makes these advantages available to everyone.

### **Field-proven performance**

The PhosphorImager SI system is a real Molecular Dynamics PhosphorImager. PhosphorImager systems from Molecular Dynamics are the most popular—and widely cited—filmless autoradiography systems in the world.

The front-loading PhosphorImager SI fits easily on a desk or lab bench.

For a free PhosphorImager SI brochure, send in the attached reply card. Or call us at

Kodak storage phosphor screens are simple to use and are not impaired by exposure to visible light.

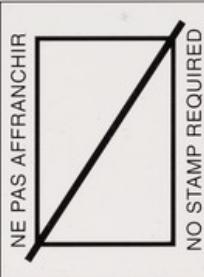

After exposure, slide the screen into the compact PhosphorImager SI. Scanning takes just a few minutes.

ImageQuant® software (included) for Macintosh® or Windows® workstations simplifies analysis and lets you print out complete, organized records of your data and results.
