There is a new cost-effective entry point to quantitative and preparative glycan labelling and profiling available from Oxford GlycoSystems.

New glycan fluorescent labelling together with GlycoSep™ HPLC profiling columns allow the researcher quantitative and preparative fractionation and detection of sialylated and neutral glycans.

Signal™ Fluorescent Labelling Kit

Signal™ is a simple, convenient method of fluorescent labelling a glycan pool. The technique utilizes 2-aminobenzamide (2-AB) in a validated, 2 step procedure that labels glycans efficiently(>85%) and non-selectively at the reducing terminus.

GlycoSep™ High Resolution Glycan Profiling

GlycoSep™ has been developed specifically for high resolution profiling and fractionation of labelled glycans.

The HPLC based kit allows 2 dimensional profiling of 2-AB labelled glycans, which provides the researcher with reproducible, quantitative results, and as no high pH conditions are used, structural integrity is assured and sample isolation and work-up is easy.

To find out how Signal and GlycoSep can extend your carbohydrate-related research, complete and return the attached coupon.

Oxford GlycoSystems

Oxford GlycoSystems Ltd., Hitching Court, Blacklands Way, Abingdon, OX14 1RG,
