Medicina O Vitamina Heroína O Cocaína,

Si Compartes La Jeringa, Te Puedes Pegar El SIDA.

Muchos piensan que para infectarse con el SIDA uno tiene que ser homosexual o drogadicto. Esto no es verdad.

La realidad es que sólo basta usar una jeringa que ha sido usada por una persona infectada para infectarnos con el SIDA. Por eso nunca deben compartirse las jeringas. No importa si es con un familiar o un amigo.

Si por fuerza tienes que compartir una jeringa, entonces desinfectala dos veces con cloro y luego enjuagala dos veces con agua.

Házte la vida más tranquila, segura y saludable. Infórmate llamando al 1-800-367-2437 en California del Norte y al 1-800-922-2437 en California del Sur.

EL SIDA.
Está En Tus Manos.
State of California AIDS Education Campaign
