10 YEARS ON

KEEP IT UP!

It is 10 years since the first person was diagnosed with AIDS in New Zealand

But...

At least 2 people per week are still being infected with HIV . . .

85% of all New Zealanders with AIDS are gay or bisexual men . . .

The number of women with HIV is increasing . . .

Young gay and bisexual men are the largest group of new infections . . .

People who get infected with HIV are Pakeha, Maori, Pacific Islander and from other ethnic groups . . .

People living with HIV or AIDS still need our support.
