FUCKING *then* **pulling out** *before cumming...can transmit* **HIV**

During Anal Sex HIV infects before cumming because HIV is found in small amounts of pre-cum, in tiny cuts too small to see, in sores and in the mucous from the arse lining. HIV can get in through skin breaks on your dick or down your piss hole. HIV can infect you through your arse. Avoiding the cum doesn't mean you've avoided the virus.
