## REPORT

TO

The Board of Works for the Lewisham District

TO THE END OF THE YEAR 1894,

BY

Dr. S. BLAKE JOLLY,

*Medical Officer of Health for the District.*

---

GENTLEMEN,

The number of deaths registered as having occurred in the Lewisham District during the year 1894 was 1340. Of these 18 were of persons who did not belong to this District, while, on the other hand, 82 persons belonging to the District died in hospitals and asylums outside, making the actual total of deaths 1404, as against 1468 in the previous year, and the corrected death rate for 1894 14.0 per 1000, as compared with 15.1 per 1000 in 1893.

The year 1894 has been, in every respect, more healthy than the previous year. We have had less zymotic disease, and the Influenza was of a much milder type. There have been only 312 cases of scarlet fever, and 172 cases of diphtheria against 524, and 219 in 1893. Enteric fever was very prevalent in London, but in this District during the year there were only 58 cases of this disease notified, against 63 in 1893, and in the great majority of cases there was distinct proof that the disease had been contracted in London

and not in this District. There were only 8 cases of small-pox notified, against 28 notifications last year, and there was no death from this disease.

The deaths from influenza were only 29, as compared with 58 in 1893, and 74 in 1892.

#### POPULATION.

The population of the Lewisham District, at the Census of 1891, was found to be 92,647, occupying 15,643 houses, giving an average of 5·9 inmates to each inhabited house. The number of inhabited houses at Midsummer, 1894, was 16,983, and the population was therefore estimated at 100,200.

#### BIRTHS.

The registered births in the District in the year 1894 amounted to 2,430, or 39 less than in the previous year; of these 76, or 3·1 per cent., were illegitimate.

Males	. . . . .	1,259
-------	-----------	-------

Females	. . . . .	1,171
---------	-----------	-------

The birth rate to population was 24·2 per 1,000.

In England and Wales it was 29·6 per 1,000 of the population. This is the lowest birth rate ever recorded, and is 2 per 1,000 below the mean rate of the previous ten years. The birth rate in London, 30·1 per 1000, was also the lowest yet recorded.

#### DEATHS.

The total number of deaths for 1894 was 1,404, as against 1,468 in 1893.

Males . . . . . 687

Females . . . . . 717

The number of deaths in public institutions in the District amounted to 165, an increase of 15 on the previous year.

Lewisham Workhouse . . . . . 127 deaths.

Lower Sydenham Home for Sick

Children . . . . . 14 „

St. John's Hospital, Blackheath . . . . . 13 „

North Surrey District Schools, Penge . . . . . 8 „

Watermans' Asylum, Penge . . . . . 3 „

Death rate for 1894, 14.0 per 1000, as compared with 15.1 per 1,000 in the previous year.

During the same period the death rate in England and Wales, which in the preceding four years had been successively 19.5, 20.2, 19.0 and 19.7 per 1000, was 16.6 per 1,000, being not only the *lowest ever recorded*, but so much as 1.5 per 1,000 under the lowest previous rate, viz., 18.1 in 1888. It was also 2.6 per 1,000 below the mean annual rate of the preceding ten years.

The death rate in London for 1894 was 17.8 per 1000, also lower by 2.6 than the average of the preceding ten years.

The death rate of the "Outer Ring" of suburban districts, with a population of over a million and a-half was only 13.0 per 1,000.

The death rate of the thirty-three great towns of England and Wales, with a population of nearly ten and a half millions, averaged 18.1 per 1,000, ranging from 13.2 in Croydon to 23.8 in Liverpool.

## ZYMOTIC DISEASE.

The number of deaths from Zymotic Disease was 202 as compared with 153 in the previous year. The increase was due to measles and whooping cough, these complaints having caused 108 deaths in 1894 as compared with 29 in the previous year.

*Scarlet Fever* . 12 deaths as compared with 14 in 1893.

*Diphtheria* . . 35    „    „    53    „

*Small-pox* . . 0    „    „    5    „

*Typhoid Fever* 15    „    „    10    „

*Measles* . . 54    „    „    19    „

*Whooping Cough* 54    „    „    10    „

*Diarrhœa* . . 32    „    „    42    „

## SCARLET FEVER.

There were 312 notifications of this disease received during 1894, with 12 deaths, as compared 524 notifications and 14 deaths in 1893. The cases were scattered over the district. The type was as a rule mild. In no case could milk be traced as a source of infection.

## DIPHTHERIA.

There were 172 cases of this disease reported during the year, with 35 deaths, as compared with 219 notifications and 53 deaths in 1893. Very few cases have been reported from the Freehold, Forest-hill, in which part of the district there were so many cases last year. Most of the houses here have been inspected and redrained, and the small number of cases now occurring there is undoubtedly due to this improvement in sanitation. The treatment of diphtheria

by antitoxine is still on its trial ; but so far there seems to be good ground for hoping that in it there has been discovered, at any rate, a most valuable help in the treatment of this disease. It should certainly be given a fair trial in all severe cases of diphtheria and diphtheric croup, and the earlier it is used the more chance there seems of its being successful. It is my intention to ask all the medical men in this District to send me intimation of their use of this treatment and its result. Thus the result in cases in private practice may be known as well as in those treated in Hospital. At present the Hospital cases treated by antitoxine appear to have much benefited by this treatment, and many cases have recovered which would generally have proved hopeless. More time and a larger number of cases, however, is necessary before we can look upon antitoxine as a certain specific in diphtheria.

#### SMALL-POX.

There were 8 notifications of this disease with no deaths in 1894, as compared with 28 notifications and 5 deaths in 1893. Most of these 8 cases were mitigated small-pox, and I believe the cessation of the epidemic was owing to the great increase in the number of revaccinations. I have been allowed by the Board to use the Hither-green Fever Hospital as an isolation hospital in small-pox cases, as it is now no longer used as a hospital. Thus, in all cases of small-pox, the friends of the patient, or all those who have been in contact with him, can be isolated till they are proved not to have contracted the disease. This, however, can only be done with their free consent ; but, so far, I have found

them very willing to avail themselves of the opportunity. It has the double advantage of the isolation of suspected persons, and the more thorough disinfection of their houses in their absence. As an example of the value of vaccination in the prevention of contagion from small-pox, I may mention an instance which occurred this year. A man contracted small-pox, and was removed to hospital, and his wife and children isolated, as they had all been in direct contact with him. They had all been thoroughly vaccinated, and all escaped, while a friend of the patient's, who came in to see him for only a few minutes, when he was first taken ill, contracted the disease; he, however, had not been vaccinated.

#### DISEASES OF THE RESPIRATORY ORGANS.

The number of deaths from Phthisis show an increase of 5 on the previous year.

The total number of deaths from diseases of the respiratory organs was 249, or 86 less than last year. Of this number 29 deaths were attributed directly to Influenza, as compared with 58 in 1893.

#### INQUESTS.

Coroner's inquests were held in 61 cases of death.

The causes of death were returned as follows:—

Natural causes	. . . . .	34
Violent deaths	. . . . .	21

Of these latter 16 were accidental, 4 suicidal, and 1 homicidal. Six cases were returned as "Found dead," and 22 deaths were registered as "Not Certified."

## MARRIAGES.

During the year 1894 there were 495 Marriages in the Parish of Lewisham, of which 329 were solemnised in the various Churches, 60 in Dissenting Chapels, and 106 at the Registrar's Office.

During the same period there were 157 marriages in the Hamlet of Penge, of which 126 were solemnised in Churches, 18 in Dissenting Chapels, and 10 at the Registrar's Office. Total 652, as compared with 651 in 1893.

The marriage rate was equal to 13·0 persons married per 1,000 of estimated population.

In London the proportion of persons married to the total population was 17·0 per 1,000.

## METEOROLOGY.

The mean temperature of the air at Greenwich in 1894 was 49·9.

The highest reading by day, 86·0, was registered in July, and the lowest reading by night, 12·8, in January.

Rain fell on 192 days. The total amount of rainfall was 26·88 inches.

I am, Gentlemen,

Faithfully yours,

S. BLAKE JOLLY,

*Medical Officer of Health to the Lewisham District.*

TABLE I.—*Shewing the Population, Inhabited Houses, Marriages, Births, and Deaths, for the Year 1894 and 10 years preceding.*  
(GROSS NUMBERS).

The Year.*	Estimated Population.	No. of Inhabited Houses.	Marriages.	Registered Births.	Corrected No. of Deaths.			Deaths in Public Institutions.
					Total All Ages.	Under One Year.	Under Five Years

Average of 10 years, 1884—1893 }	88769	14508	552	2373	1255	...	...	...

NOTES.

1. Population according to Census, 1891, 92,647.
2. Average No. of Persons in each House at Census 1891, 5.9.
3. Area of District in acres, 6544.

\*For statistical purposes the Registrar-General estimates the population to the middle of the year on the basis of the rate of increase ruling between the two preceding Census periods. The estimate of population may be checked by the known number of inhabited houses, and by the average number of inmates per house, as ascertained at the preceding Census.

TABLE II.—*Showing the Annual Birth and Death Rates, Death Rates of Children, and Proportion of Deaths in Public Institutions in a Thousand Deaths for the Year 1894 and 10 years preceding.*

In the Year	Birth Rate per 1000 of the Population.	Corrected Death Rate per 1000 of the Population.	Deaths of Children under 1 year; per 1000 of Registered Births.	Deaths of Children under 1 year; per 1000 of Total Deaths.	Deaths of Children under 5 years: per 1000 of Total Deaths.	Deaths in Public Institutions; per 1000 of Total Deaths.
1894.....	24·2	14·00	137·0	327·1	367·5	175·9
1893.....	25·4	15·10	124·7	209·8	312·6	158·0

## SUMMARY OF TABLE III.

	No. of Deaths.
I.—SPECIFIC FEBRILE, OR ZYMOTIC DISEASES—	
1. Miasmatic Diseases .....	170
2. Diarrhoeal „ .....	32
3. Malarial „ .....	—
4. Zoogenous „ .....	—
5. Venereal „ .....	4
6. Septic „ .....	18
II.—PARASITIC DISEASES .....	2
III.—DIETIC DISEASES .....	7
IV.—CONSTITUTIONAL DISEASES .....	290
V.—DEVELOPMENTAL DISEASES .....	167
VI.—LOCAL DISEASES—	
1. Diseases of Nervous System.....	146
2. Diseases of Organs of Special Sense .....	2
3. Diseases of Circulatory System .....	92
4. Diseases of Respiratory System .....	249
5. Diseases of Digestive System .....	96
6. Diseases of Lymphatic System .....	1
7. Diseases of Gland-like Organs of Uncertain Use .....	2
8. Diseases of Urinary System.....	32
9. Diseases of Reproductive System—	
(a) Diseases of Organs of Generation ...	7
(b) Diseases of Parturition .....	7
	—
10. Diseases of Bones and Joints .....	14
11. Diseases of Integumentary System .....	4
VII.—VIOLENCE—	
1. Accident or Negligence .....	15
2. Homicide .....	1
3. Suicide .....	4
4. Execution .....	—
VIII.—ILL-DEFINED AND NOT SPECIFIED CAUSES.....	52
Total.....	<u>1404</u>

NOTE—The Deaths of non-residents occurring in Public Institutions situated in the District are excluded, and the Deaths of residents occurring in Public Institutions situated beyond the limits of the District are included.

TABLE IV.

*Showing the Number of Deaths at all ages in 1894, from certain groups of Diseases, and proportions to 1000 of Population, and to 1000 Deaths from all causes; also the Number of Deaths of Infants under one year of age from other groups of Diseases, and proportions to 1000 Births and to 1000 Deaths from all causes under one year.*

Division I. (Adults).	Total Deaths.	Deaths per 1000 of Population, at all ages.	Deaths per 1000 of Total Deaths, at all ages.
1. Principal Zymotic Diseases.....	202	2.01	143.15
2. Pulmonary Diseases ...	249	2.48	177.3
3. Principal Tubercular Diseases .....	170	1.69	121.1
<hr/>			
Division II. (Infants under One Year).	Total Deaths.	Deaths per 1000 of Births.	Deaths per 1000 of Total Deaths under 1 Year.
4. Wasting Diseases .....	95	39.0	285.3
5. Convulsive Diseases ...	44	18.1	132.1

## NOTICE.

1. Includes Smallpox, Measles, Scarlet Fever, Diphtheria, Whooping Cough, Typhus, Enteric (or Typhoid), and Simple Continued Fevers, and Diarrhœa, 21 of the deaths occurred in Hospitals situated beyond the limits of the District.
2. Includes Influenza.
3. Includes Phthisis, Scrofula, Tuberculosis, Rickets, and Tabes.
4. Includes Marasmus, Atrophy, Debility, want of Breast Milk, and Premature Birth.
5. Includes Hydrocephalus, Infantile Meningitis, Convulsions, and Teething.

TABLE V.

*the number of Deaths from the seven principal Zymotic Diseases, in the 10 years, 1884 to  
and in the Year 1894.*

	1885.	1886.	1887.	1888.	1889.	1890.	1891.	1892.	1893.	Annual Average of 10 years, 1884--1893.	Proportion of Deaths to 1000 Deaths in 10 years, 1884--1893.
