Medical Officer of Health.
G. F. McCleary, B.A., M.D., D.P.H.

To the Mayor, Aldermen and Councillors of the Metropolitan Borough of Hampstead.

MR. MAYOR, MADAM, AND GENTLEMEN,

I have the honour to place before you my Annual Report for the year 1910.

The vital statistics set forth in the Report may, on the whole, be considered highly satisfactory; they indicate that the public health work of the Council is continuing to be fruitful in results. I would particularly draw attention to the remarkably low rate of infantile mortality reached in 1910. That rate is well below what some authorities on the subject have regarded as the minimum rate to which it is possible to attain.

The figures relating to tuberculosis are much less satisfactory, and I regard the adoption of further preventive measures against this disease as the most pressing public health need in Hampstead at the present time. In the Report an attempt has been made to indicate the measures most required.

I am glad to acknowledge the excellent work of the Staff of the Public Health Department throughout the year. To the Chairman and the Members of the Public Health Committee my thanks are also due for their continued support.

I have the honour to be,

Mr. Mayor, Madam, and Gentlemen, Your obedient servant,

G. F. McCLEARY,

Medical Officer of Health.

FEB 1

Vital Statistics.

Summary of Vital Statistics for 1910.

| ,, ,, | excludin | g area co | vered by | y water) | 2253 | acres |

POPULATION.

The population of Hampstead at the middle of 1910 was estimated by the Registrar-General to be 95,729.

The Registrar-General's estimate has been adopted in this Report, and it forms the basis upon which the various rates have been calculated. It is arrived at by assuming that since the last census the population has increased at the same rate as in the last inter-censal period, and therefore it is based on the census returns of 1891 and 1901. Estimates of population have only an approximate value, and are likely to be more erroneous in the later years of an inter-censal period. The census that was taken on April 2nd of the present year will show how far the estimate of the Registrar-General has approached to accuracy, but the results of the census have not been published in time to be available for this Report.

The following is an approximate estimate of the population of the various Wards of the Borough:—

| War | d 1 | (Town) | | 15100 |
|-----|------|------------|------|-----------|
| " | 2 | (Belsize) | | 15200 |
| 19 | 3 | (Adelaide) | | 11000 |
| " | 4 | (Central) | | 10869 |
| ,, | -5 | (West End) | | 14900 |
| " | 6 | (Kilburn) | | 17260 |
| ,, | 7 | (Priory) | | 11400 |
| The | Bore | ough | | 95729 |

The area of the Borough (including the area, twelve acres in extent, covered by water) is 2,265 acres, and the estimated number of persons to the acre is 42·3. The proportion of persons to the acre at the census 1901 was 36·17.

At the census of 1881 the number of persons per acre was 23, and in 1891 it was 30,

MARRIAGES.

According to the returns of the Registrar-General, 631 marriages were registered in the Borough during 1910; they were distributed in the four quarters of the year as follows:—

| 1st qu | uarter | | | 136 |
|--------|--------|----|-------|---------|
| 2nd | ,, | | | 164 |
| 3rd | ,, | | | 191 |
| 4th | ,, | ., | ., | 140 |
| | | | Total | 631 |

The total number of persons married in Hampstead during 1910 was 1,262, which is equivalent to a rate of 13.2 per 1000 of the population, and is a decrease on that for the year 1909, when the marriages of 1,360 persons were registered, equivalent to a rate of 14.4 per 1000 of the population.

The following Table gives the marriage rates for the years 1900—1909 and the average rate for the decade:—

| Year. | | | No. of pers | sons married the population, |
|--------|------|---------|---------------|---------------------------------|
| 1900 | | | | 13.4 |
| 1901 | | | | 13.2 |
| 1902 | | | | 15.0 |
| 1903 | | | | 14.0 |
| 1904 | | | | 14.4 |
| 1905 | | | | 13.6 |
| 1906 | | | | 12.9 |
| 1907 - | | | | 14.2 |
| 1908 | | | | 13.4 |
| 1909 | | | | 14.4 |
| | | | | |
| | | Average | for the decad | e 13·8 |
| | | 0 | | 1 |
| 1910 | | | | 13.2 |

BIRTHS.

During the year 1,270 births were registered in Hampstead, a decrease of 12 as compared with the number—1,282—registered in the previous year. Of the total births 632 were of male and 638 of female children. In addition, 78 births of children whose mothers were Hampstead residents occurred in the principal lying-in institutions in other metropolitan boroughs, and eight of the births registered in Hampstead belonged to other districts, and should be deducted from the total. After these corrections have been made, the total number of births belonging to Hampstead is found to be 1,340, and, in accordance with the practice of the Registrar-General, I have taken this number as a basis for the various rates that depend on the number of births occurring during the year.

Illegitimate Births.—Out of the total of 1,270 births registered in Hampstead, 36, or 28 per 1000, were those of illegitimate children.

Birth-Rate.

The birth-rate calculated on the number of births registered in the Borough was 13.2 per 1000 of the population, as compared with the rate of 13.6 per 1000 in 1909, and 16.4 the average for the years 1900—1909. But when the birth-rate is calculated on the total number of births belonging to Hampstead, including those that took place without as well as within the Borough, the rate is found to be 14.0. This is slightly higher than the rate—13.9—in 1909, which is the lowest birth-rate ever recorded in Hampstead, the lowest rate in any previous year being 14.7, in 1907.

The following table shows the birth-rates in 1910 for England and Wales, the 77 Great Towns, the 136 Smaller Towns, England and Wales less these 213 Towns, London, and Hampstead:—

| | Birth-rate per 1000 of the population. |
|----------------------------------|--|
| | |
| England and Wales | 24.8 |
| 77 Great Towns | 25.0 |
| 136 Smaller Towns | 23.7 |
| England and Wales less the 213 T | owns 25.0 |
| London | 23.6 |
| Hampstead | 14.0 |

The highest birth-rate recorded in Hampstead was in the year 1878, when the rate was 24.5. Since then the rate has steadily declined. In England and Wales there has also been a marked reduction in the birth-rate, but the Hampstead figures show a greater proportionate decline.

The following table shows the Ward and sex-distribution of the births, and the birth-rate for each Ward:—

| | | Births. | Birth-rate per 100 of the | |
|------------------|--------|----------|------------------------------|-------------|
| Ward. | Males. | Females. | Total. | population. |
| No. 1 (Town) | 91 | 108 | 199 | 13.2 |
| No. 2 (Belsize) | 104 | 103 | 207 | 13.6 |
| No. 3 (Adelaide) | 48 | 48 | 96 | 8.7 |
| No. 4 (Central) | 47 | 58 | 105 | 9.7 |
| No. 5 (West End) | 109 | 107 | 216 | 14.5 |
| No. 6 (Kilburn) | 188 | 191 | 379 | 22.0 |
| No. 7 (Priory) | 80 | 58 | 138 | 12.1 |
| The Borough | 667 | 673 | 1340 | 140 |

The Natural Increase of the population—i.e. the excess of births over deaths—was 511 in 1910.

DEATHS.

The total deaths occurring in Hampstead during the year amounted to 1,071. Of these, however, no less than 350 were of persons not belonging to the Borough, while 108 residents of Hampstead died in outlying districts.

The total number of deaths, therefore, amongst persons belonging to Hampstead amounted to 829.

Death-Rate.

The death-rate, calculated upon the total number of deaths (whether of resident or non-resident persons) occurring in the Borough during the year, was 11.2 per 1000 of the population; but after subtracting

from the total deaths registered the deaths of non-resident persons dying in Hampstead, and adding the deaths of Hampstead residents who died outside the district, the recorded death-rate is found to be 8.6 per 1000 of the population, as compared with the rate of 8.9 per 1000 of the population in 1909. The average recorded death-rate for the 10 years 1900-1909 was 9.8.

The following table shows the death-rates in 1910 for England and Wales, the 77 Great Towns, the 136 Smaller Towns, England and Wales less these 213 Towns, London, and Hampstead:—

| | Death-rate per 1000 of the population. |
|--------------------------------------|--|
| England and Wales | 13.4 |
| 77 Great Towns | 13.4 |
| 136 Smaller Towns | 12·4 12·7 |
| England and Wales less the 213 Towns | 13.6 |
| London | 12.7 |
| Hampstead | 8.6 |

The following are the death-rates for each of the Wards:—

| WARD. | | | | | |
|-------|--|----|------|--|--|
| | | | 7.8 | | |
| | | | 7.8 | | |
| | | ٠. | 7.1 | | |
| | | | 7.5 | | |
| | | | 8.1 | | |
| | | | 11.1 | | |
| | | | 9.7 | | |
| | | | | | |

In the table on page 129 the death-rates of Hampstead may be compared with those of England and Wales since 1875.

The following table, which is issued by the Registrar-General, shows the death-rate of Hampstead as compared with the rates of the County of London, the City of London, and the Metropolitan Boroughs:—

TABLE SHOWING THE DEATH-RATES FROM ALL CAUSES IN THE COUNTY OF LONDON, THE CITY OF LONDON, AND THE METROPOLITAN BOROUGHS DURING THE 52 WEEKS OF 1910, AS CALCULATED BY THE REGISTRAR-GENERAL.

| | DI | STRICT. | | Death-rate from all causes. |
|---------------------|----|---------|------|-----------------------------------|
| Hampstead | | | | 8.6 |
| Lewisham | | | | 9.6 |
| Wandsworth | | | | 10.2 |
| Woolwich | | | | 10.5 |
| Fulham | | | | 10.5 |
| Stoke Newington | | | | 11.0 |
| Battersea | | | | 11.3 |
| City of Westminster | | | | 11.4 |
| Greenwich | | | | 11.6 |
| Hackney | | | | 11.7 |
| Paddington | | | | 11.8 |
| Kensington | | | | 11.9 |
| Camberwell | | | | 12.1 |
| Hammersmith | | | | 12.2 |
| Lambeth | | | | 12.5 |
| Chelsea | | | | 12.6 |
| St. Marylebone | | | | 12.8 |
| Islington | | | | 12.9 |
| Stepney | | | | 13.7 |
| St. Paneras | | | | 13.8 |
| Deptford | | | | 14.0 |
| Holborn | | | | 14.9 |
| Poplar | | | | 15.2 |
| Bethnal Green | | | | 15.3 |
| City of London | | | | 15.5 |
| Southwark | | | | 15.9 |
| Shoreditch | | | | 16.7 |
| Finsbury | | | | 17.6 |
| Bermondsey | | | | 17.7 |
| County of London | | | | 12.7 |

The death-rate in Hampstead in 1910—8.6—was lower than in 1909, when it was 8.9. This is the lowest death-rate ever recorded for Hampstead, with the exception of the rate in 1908, which was 8.5.

Deaths of Non-Residents.

The deaths of patients formerly resident in districts outside London, who have died in Hampstead Institutions, are reported to the Medical Officer of Health of the district to which they belong immediately upon receipt of the Registrar's weekly return. In the case of deaths belonging to other metropolitan districts, this procedure is not necessary, for the information is circulated by the Registrar-General.

Information concerning 95 deaths has been transmitted to the following extra-metropolitan districts:—

Aldershot.

Anglesey.

Aylesbury.
Barnet.

Bath.

Beckenham.

Berkhampstead.

Bexley.

Boxmoor.

Brighton.
Broadstairs.

Bromley.
Brotton.

Winchester.
Woking.

Wokingham.
Wood Green.
Worthing.
Yardley.

Information as to the deaths of 5 Hampstead residents was received from the Medical Officers of Health of the following districts, in which the deaths had occurred:—

Birmingham.
Tottenham.

Willesden.

The number of deaths of Hampstead residents that occurred in public institutions was 259, or 31.2 per cent. of the total deaths, and the number of deaths occurring in workhouses or workhouse infirmaries was 100, or 12.1 per cent. of the total deaths. A list of the institutions in which the deaths occurred is given on page 21.

Deaths at Various Ages.

The following table shows the number of deaths at the various age periods, the causes of such deaths being shown in Tables IV. and V., pages 120 and 121.

| Age Periods, | Jaco | Under 1 year. | 1 to 5. | 5 to 15. | 15 to 25. | 25 to 65. | 65 and upwards. | At all Ages. |

Senile Mortality.

The deaths of persons 65 years of age and upwards numbered 344, as compared with 326 in 1909. Of these 57 attained the age of 85 years and upward.

CAUSES OF DEATH.

The causes of death are given in Table IV. of the Local Government Board's series of tables, see page 120, and are set out in more detail in the extended table on the opposite page. The mortality from the various communicable diseases is given in the section of the Report devoted to those diseases. As regards the other causes of death, the following require special mention:—

Cancer.

The following table gives the number of deaths from cancer, and the death-rate per 1000 population in each of the ten years 1901-10:

| Year. | No. of Deaths from Cancer | Death-rate per 1000 of the population |
|-------|---------------------------------|---|
| 1901 | 77 | 0.93 |
| 1902 | 91 | 1.09 |
| 1903 | 105 | 1.23 |
| 1904 | 85 | 0.98 |
| 1905 | 73 | 0.83 |
| 1906 | 93 | 1.04 |
| 1907 | 69 | 0.76 |
| 1908 | 84 | 0.91 |
| 1909 | 85 | 0.90 |
| 1910 | 90 | 0.94 |
| | | |

The next table gives the anatomical distribution of the disease in each sex. It will be noted that a large proportion of the patients—58 out of a total of 90 cases—were females. In 42 cases the patients were over 65 years of age.

| | Situation. | | | Males- | Females. | Total. |
|----------------|-------------|------|---|------------------|----------|-----------------------|
| Tongue | | | 1 | 3 | _ | 3 |

| | Tot | als | | 32 | 58 | 90 |

Alcoholism.

In 3 cases death was certified to be due to alcoholism, and 11 persons died from cirrhosis of the liver, a disease usually attributed to the consumption of alcohol. The total number of deaths recorded as due to alcohol was, therefore, 14, as compared with 12 in 1909, but this is certainly an under-statement of the total mortality that may be directly attributed to this drug. Deaths due to alcoholism, especially those occurring in the higher social ranks, are often certified to be due to some less invidious condition. If death certificates, instead of being handed to the patient's relatives, were sent by the certifying practitioner direct to the Registrar, there is little doubt that the recorded mortality from alcoholism and certain other diseases would soon show a marked increase.

Diseases of the Circulatory System.

These accounted for 153 deaths, as compared with 141 in 1909.

Diseases of the Respiratory System.

The total mortality from these diseases was 130, as compared with 170 in 1909. Sixteen deaths occurred in children under five years of age, and 66 in persons aged from 65 years upward.

Of the total deaths 63 were due to pneumonia, 56 to bronchitis, 4 to pleurisy, and 7 to other diseases of the respiratory organs.

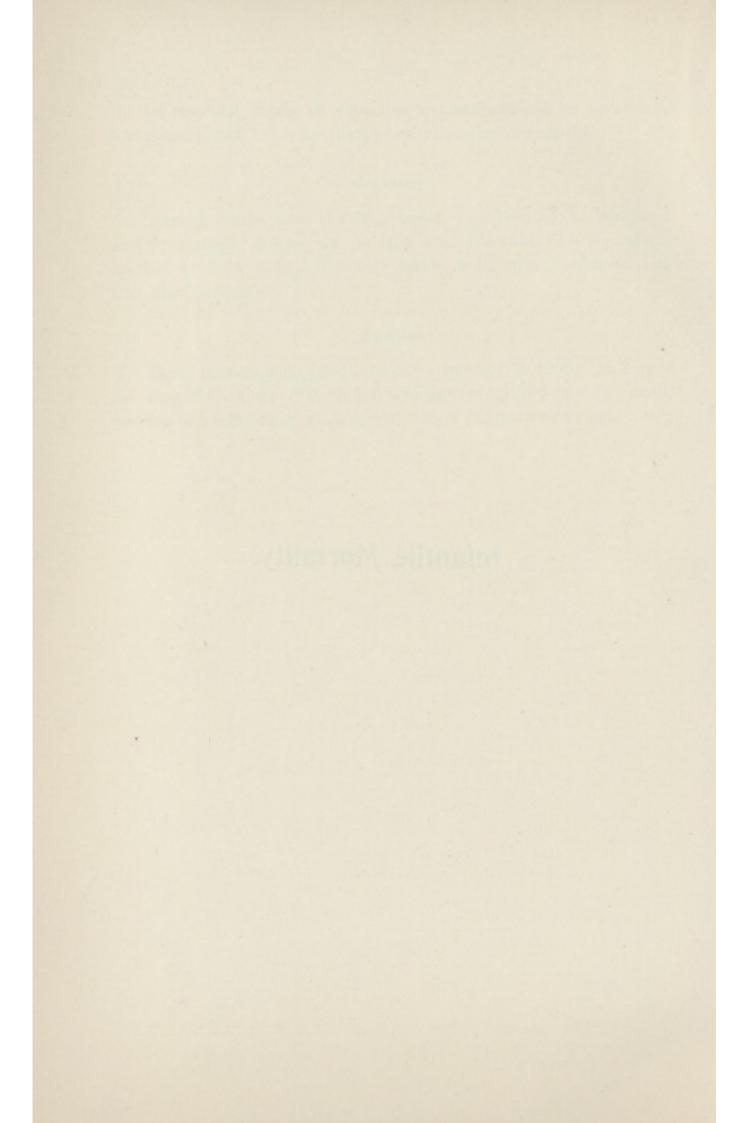

Accident.

Twenty deaths were classified under this heading, as compared with 18 in 1909; 5 were due to falls, 4 to suffocation (3 being infants overlaid in bed), 4 to burns and scalds, 2 to street accidents, and 5 to other accidents.

Suicide.

Eight persons committed suicide, as against 6 in 1909. In 3 cases the cause of death was poisoning, 2 persons were killed by trains, 1 death was due to a fall from a window, and 2 were due to other causes.

Infantile Mortality.

INFANTILE MORTALITY.

The number of deaths under one year registered in Hampstead was 110, but of these 31 deaths occurred in children not belonging to the Borough, while 2 infants belonging to Hampstead died in public institutions in other parts of London. The number of deaths of Hampstead infants was therefore 81, a decrease of 18 as compared with the previous year.

In the following table these infantile deaths are distributed in Wards under their respective causes:—

The "Infantile Mortality"—i.e., the number of deaths under one year per 1000 births—was 60, as compared with the rate of 74 per 1000 births in 1909, this figure being calculated on the total number of births belonging to Hampstead, including those that occurred in lying-in institutions outside Hampstead. The average rate for the years 1900-1909 was 87.

The following table shows the infantile mortality of Hampstead in each year since 1880:—

| 1880 | 140 | 1896 | 123 |
|------|---------|------|---------|
| 1881 | 136 | 1897 | 127 |
| 1882 | 99 | 1898 | 125 |
| 1883 | 98 | 1899 | 129 |
| 1884 | 143 | 1900 | 100 |
| 1885 | 110 | 1901 | 102 |
| 1886 | 131 | 1902 | 88 |
| 1887 | 107 | 1903 | 87 |
| 1888 | 110 | 1904 | 111 |
| 1889 | 122 | 1905 | 94 |
| 1890 | 122 | 1906 | 77 |
| 1891 | 104 | 1907 | 69 |
| 1892 | 122 | 1908 | 69 |
| 1893 | 102 | 1909 | 74 |

| London | | 1110 010 | | 103 |
| Hampstead | | | | |
| mampateau | | | | 60 |

The following are the infantile mortality rates for each of the Wards:—

| WARD. | | | | | Deaths of Infant under 1 year per 1000 births | |
|------------------|--|--|--|--|---|--|
| No. 1 (Town) | | | | | 75.4 | |
| No. 2 (Belsize) | | | | | 43.5 | |
| No. 3 (Adelaide) | | | | | 20.8 | |
| No. 4 (Central) | | | | | 76.2 | |
| No. 5 (West End) | | | | | 78.7 | |
| No. 6 (Kilburn) | | | | | 63.3 | |
| No. 7 (Priory) | | | | | 43.5 | |

The infantile mortality rate in 1910 was the lowest ever recorded in Hampstead, the lowest figure in any previous year being 69, which was recorded in 1907 and in 1908. This satisfactory result must be attributed in a considerable measure to the preventive work that has been carried on during recent years, for though the summer of 1910 was cold and wet, and therefore favourable to a low mortality, it was not more so than previous summers were. The figure now reached is very low when compared with previous years, but it is still too high, and with a continuance of our ameliorative work we may hope to bring about a considerable further reduction. The deaths from the diarrheal diseases, which frequently form a large proportion of the whole were only 10 in number, the chief cause of death being premature birth, a cause which is not easy to bring within the scope of preventive effort.

The following table, which is issued by the Registrar-General, shows the infantile mortality in each of the Metropolitan Boroughs and in the County of London. It will be noted that Hampstead occupies a very favourable position when compared with other districts or with the whole of London:—

Table showing the Infantile Death-Rates of the County of London, the City of London, and the Metropolitan Boroughs during the 52 Weeks of 1910, as calculated by the Registran-General.

The attack on infantile mortality is carried out by preventive measures, which may be formed into two groups—one consisting of the measures of general sanitation that are described in other sections of this report, the other of measures more specially directed to the preservation of infant life. The latter are more concerned with personal hygiene than the hygiene of environment, and are chiefly educational in character, the object being to assist mothers in various ways to bring up their babies successfully. The most important department of work of this kind is a comprehensive system of health visiting, working on the information furnished by the Notification of Births Act, 1907. This Act, which provides that all births shall be notified to the Medical Officer of Health within 36 hours of their occurence, is essential to the effective operation of any scheme of health-visiting on a large scale.

The Notification of Births Act came into operation in Hampstead in March, 1908, and the year 1910 is the second for which we possess a complete annual record of the working of the Act. The number of births notified in 1910 was 1,192, including 21 still-births, the number of live-births notified being 1,171. The total number of live-births occurring in Hampstead in 1910 was 1,270, so that the number of live-births notified formed 91.5 per cent. of the number that actually occurred. 285 births were notified by medical practitioners, 128 by midwives, 704 by parents, and 75 from other sources. The proportion of births notified in Hampstead is high—considerably higher than in most other districts.

The obligation to notify imposed by the Act is in addition to, and not in substitution for, the obligation to register a birth which is imposed by the Registration Act. The notification must be made within 36 hours of the birth, while registration may be delayed for as long as six weeks after, and is inadequate to supply the timely information necessary for effective health-visiting. In Hampstead a system of health-visiting under the Act is carried out on well-defined lines by the Council's lady sanitary inspectors, and by a body of voluntary visitors organised by the Hampstead Health Society. The first visit is paid by one of the lady inspectors, the voluntary visitors are responsible for subsequent visits, and the infants are kept under supervision during the whole of the first year of life. Periodical meetings of the visitors are held, where cases are discussed and future work arranged. The mothers are encouraged to bring their babies regularly to be weighed. The baby-

weighing takes place once a week at the Hampstead and North St. Pancras Day Nursery, 29, Pond Street, and at the Brondesbury and West Hampstead Day Nursery, 36, Hemstal Road. The weighing is carried out by the lady inspectors, assisted by the voluntary visitors, and, at Hemstal Road, by Nurse Barnett, of the Ranyard Nurses, whose help has been found most valuable.

One of the chief objects of the health visitors is to encourage breastfeeding, but in the poorer parts of Hampstead instances have been found where the mother, although anxious to continue nursing her baby, is unable to do so, owing to the fact that through poverty she herself is insufficiently nourished. To meet cases of this kind the West Hampstead Infants' Committee of the Hampstead Health Society have formed a fund to supply nursing mothers with milk and other food. This assistance, which is only given on certain conditions, one being that the baby must be brought regularly to be weighed, has been found of great value in our work in Hampstead for the prevention of infantile mortality. The effect on the baby, as ascertained by periodical weighing, of the improved nutrition of the mother, has in many cases been marked. Maternal nutrition is an important factor in infant welfare, and it is through improving the nutrition and general health of the mothers in the poorer districts that we may most confidently hope to effect further reductions in the amount of ill-health and mortality among infants.

A further development of this side of preventive work was made during the latter part of 1910 by Mrs. George Seaton, who made arrangements for supplying dinners for expectant and nursing mothers at the Day Nursery, 36, Hemstal Road. The dinners, which consist of meat, two vegetables, and a pudding, are served every week-day except Saturday, and any eligible woman with a proper recommendation may avail herself of this on payment of twopence. Some of the women are unable to pay even this small sum, and arrangements have been made for them to be supplied with free dinner tickets by health visitors and other responsible persous.

537 newly-born infants were visited by the lady inspectors during 1910, and 714 re-visits were paid.

In my Annual Report for the year 1907 particulars were given of an inquiry, instituted at the suggestion of the Home Secretary, on the relation of the industrial employment of married women to infantile

mortality. The object of the inquiry was to keep a number of children under observation during the first twelve months of life, with a view to ascertain, among other things, how the infants of mothers employed industrially compared with those of mothers not so employed. The inquiry was prosecuted in a large number of districts, under the direction of the respective Medical Officers of Health, and the results forwarded to the Home Office to be collated and published in a complete form. The Home Office has not yet issued the complete results, but those of a considerable number of districts have been published separately by the Medical Officers of Health concerned, and it may be useful to give the experience of Hampstead.

The visits in connection with the inquiry were made by Mrs. Fisher, and the number of infants visited was 270, but owing to removals from Hampstead it was found impracticable to keep more than 202 under observation for a whole year. The infants were all born in 1908, but as each child was supervised for a year the inquiry was not concluded until the end of 1909, and owing to pressure of other work it was not possible to prepare the results for publication in time for the Annual Report for the year 1909. Care was taken to ensure that the mothers dealt with should be of the same class and circumstances, and the inquiry was therefore limited to the following streets:—Netherwood Street, Palmerston Road, Linstead Street, Loveridge Road, Lowfield Road, Kelson Street, Ravenshaw Street, Broomsleigh Street, Fleet Road, and the northern end of Upper Park Road, together with a few of the mews in the poorer parts of the Borough.

The number of infants whose mothers were industrially employed was 83; 10 mothers were employed at home, 6 in factories or workshops, and 61 elsewhere—chiefly as charwomen. The number of infants of mothers not industrially employed was 119. Of the 83 infants whose mothers were industrially employed 6 died before completing the first year of life: this is equivalent to an infantile mortality rate of 72 per 1000 births. Of the 119 infants whose mothers were not industrially employed 16 died in infancy: equivalent to an infantile mortality of 133 per 1000 births. The infantile mortality among the wage-earning mothers was little more than one-half of that of the mothers not industrially employed.

The total number of infants concerned in the inquiry in Hampstead is small, and therefore the mortality rates must be received with caution;

but the results do not differ substantially from those obtained in other districts, and it is evident that the popular idea that infantile mortality is largely due to the industrial employment of married women stands much in need of revision. The disadvantages of the mother's absence from home seem more than counterbalanced by the advantages accruing from the increase in the family income owing to the employment of the mother. In the Hampstead inquiry it was found that whereas the average family income in the case of the mothers not industrially employed was 22s. 8d., it varied from 27s. 6d. among the women industrially employed at home to 26s. 6d. among women employed in factories and workshops, and 26s. 21d among women employed elsewhere. Moreover, it must not be forgotten that the wage-earning woman has an income of her own, and is not altogether dependent on what her husband allows her. It may be that she is better nourished both before and after childbirth than the mother who is not industrially employed, but further evidence is required before a definite statement can be made on this point. The employment of the mother is obviously harmful if it involves the premature weaning of the infant; but it by no means follows that it need necessarily have this result. In Hampstead a considerable proportion of mothers continued to suckle their babies after returning to work. The complete results of the Home Office inquiry will, no doubt, throw light on these difficult questions; but from the evidence so far adduced it is clear that the question of the relation of infantile mortality to the industrial employment of married women is much more complex than has hitherto been believed.

Infectious Diseases.

NOTIFIABLE INFECTIOUS DISEASES.

The list of infectious diseases notifiable in London during 1910 is as follows:—

| Small-pox | Typhoid Feve | r |
|-------------------------|---------------|-------------|
| Cholera | Typhus Fever | |
| Diphtheria | Relapsing Fev | ver |
| Membranous Croup | Continued Fe | ver |
| Erysipelas | Puerperal Fev | ver er |
| Scarlet Fever | Anthrax |) occurring |
| Epidemic Cerebro-spinal | Hydrophobia | in |
| meningitis | Glanders |) Man |
| Plague | | |

The total cases of infectious disease notified numbered 233. This is equivalent to an attack-rate of 2·4 per 1000 of the population. The following shows the number of cases of each disease notified:—

| Scarlet Fever | - | - | - | - | - | | 135 |
|----------------|-----|-------|--------|------|---|---|-----|
| Enteric Fever | - | - | - | - | - | - | 16 |
| Diphtheria and | Men | nbran | ous Ci | roup | - | | 48 |
| Puerperal Feve | er | - | - | - | - | - | 2 |
| Erysipelas - | - | - | - | - | - | - | 32 |

Two cases of anthrax and two cases of epidemic cerebro-spinal meningitis were notified during the year, but inquiry showed that in each case the diagnosis was mistaken.

The sanitary condition of the 214 houses in which the cases occurred was thoroughly investigated, and in 120 instances defects were found to exist,

The number of fatal cases was 13, equal to 5.5 per cent. of the cases notified. The deaths were distributed as follows:—

| | | | | WARDS. | | | | | | | |
|--------------------------------|-----|-------|-----|--------|---------------------|----------------------|------------------|----------------------|---------------------|--------------------|---------|
| DISEASE. | | | | | No. 2 (Belsize). | No. 3 (Adelaide). | No. 4 (Central). | No. 5 (West End). | No, 6 (Kilburn), | No. 7 (Priory). | TOTALS. |
| Scarlet Fever Enteric Fever | - | | | 1 | 1 1 | ·i | ·i | | 1 | | 3 |

Small-pox.

No case of small-pox occurred during the year. Hampstead has been free from small-pox since April, 1907, when a case occurred in the person of a manager of a shipping company, who was infected in Maderia. Previously no case had occurred since October, 1903.

Vaccination.

The table below gives some idea of the working of the Vaccination Act in Hampstead since 1900. I am indebted to the Vaccination Officer for the statistics in this table.

| gistered. | Unvaccinated. | 18 | (Cols.6,8,&9) 10.0 9.2 | 9.5 | 6.5 | 9.5 | 10.4 | 12.3 | 15.1 | 16.9 | - |

VACCINATION STATISTICS.

* In this figure are included 67 births in respect of which no legal action as to vaccination has yet been taken the rates for Columns 10-13 have therefore not been calculated. Note.—The number of births given as occurring in each year differs slightly from those stated elsewhere this Report, but for all practical purposes the difference is negligible.

Scarlet Fever.

The number of cases of scarlet fever notified in each of the last ten years is set out below.

| Year. | | No, of | Cases Notified. |
|-------|------|--------|-----------------|
| 1901 | | | 214 |
| 1902 | | | 251 |
| 1903 | | | 165 |
| 1904 | | | 159 |
| 1905 | | | 170 |
| 1906 | | | 385 |
| 1907 | | | 314 |
| 1908 | | | 265 |
| 1909 | | | 241 |
| 1910 | | | 135 |
| | | | |

The deaths from scarlet fever in 1910 were 3, as compared with 4 in the previous year. The number of cases and the number of deaths per 1000 of the population were 1.41 and 0.03 respectively, and the casemortality, or percentage of deaths to cases, was 2.2. The corresponding figures in 1909 were 2.56, 0.04, and 1.6 respectively.

Of the cases notified, 99, or 73 per cent., were removed to hospital. The corresponding percentage in 1909 was 87.

The total number of houses attacked was 114. Ten houses had 2 cases each, 2 houses had 3 cases, 4 cases occurred in one house, and 5 cases in another. In all these instances the subsequent cases took the infection directly or indirectly from the primary case. Throughout the year the type of scarlet fever in Hampstead was very mild, as is shown by the low case-mortality. In many cases the disease gave rise to little more discomfort than a common cold. Scarlet fever at the present time is far from being the fatal and dreaded disease it was over 30 years ago. It now exists in a mild form, but it must not be assumed that it will remain indefinitely in this form. The comparatively trivial character of the symptoms in many of the cases is a source of some danger, for it makes it difficult to recognise the disease, and so leads to "missed" cases. It is much to be regretted that bacteriology is not yet sufficiently developed to afford the help in the diagnosis of scarlet fever that is available in the case of diphtheria.

Careful inquiries were made in each case, with a view to ascertaining the source of infection, and in 43 cases it was found that the patient had been infected by a previous case. Ten cases were infected outside Hampstead. Three cases were discovered by the Medical Officer of Health in consequence of information supplied by school teachers.

The following table shows the number of cases occuring each month in the various wards:-

| | | | , | WARDS. | | | | |
|------------|------------------|---------------------|----------------------|---------------------|----------------------|--------------------|--------------------|--------|

| Totals | 9 | 35 | 17 | 12 | 20 | 35 | 7 | 135 |

Diphtheria and Membranous Croup.

The number of cases notified in 1910 was 48 as compared with 33 in 1909, the attack-rate, or number of cases notified per 1000 population, being 0.50. The number of fatal cases was 6, or 12.5 per cent. of the cases notified. The death-rate per 1000 population was 0.06; 39 patients, or 81 per cent. of the total cases notified, were removed to hospital.

The following table shows the number of cases occurring each month in the various Wards: -

| | | | | WARDS. | | | | |
|-----------|------------------|---------------------|----------------------|---------------------|----------------------|---------------------|--------------------|---------|
| Months. | No. 1 (Town). | No. 2 (Belsize). | No. 3 (Adelaide). | No. 4 (Central). | No. 5 (West End). | No. 6 (Kilburn). | No. 7 (Priory). | Totals. |
| January | _ | 1 | _ | 1 | - | _ | - | 2 |
| February | 2 | _ | _ | _ | 1 | _ | _ | 3 |

| November | - | 1 | | - | 6 | _ | - | 7 |
| December | - | - | - | 2 . | 4 | 2 | - | 8 |
| Totals | 4 | 3 | 2 | 8 | 22 | 9 | - | 48 |

One of the most satisfactory features of the Hampstead health statistics in recent years is the diminished prevalence of diphtheria.

The number of cases of this disease notified in 1910, viz., 48, was smaller than the corresponding number in any previous year except 1909. That the number of cases in 1910 was larger than in 1909 was due in some measure to the fact that in the former year the Council greatly extended the facilities of medical practitioners for obtaining the bacteriological examination of specimens from patients suspected to be suffering from diphtheria. The number of specimens examined was largely increased in 1910, and no doubt this brought to light cases that otherwise would have gone undiscovered. The total number of specimens examined was 51, of which 18 gave a positive and 33 a negative result. The following figures show the number of cases of diphtheria in Hampstead each year since 1890, the year in which the disease first became notifiable.

| Year. | No. of | f cases notified. | Year. | No | of cases notified. |
|-------|--------|-------------------|-------|----|--------------------|
| 1890 | | 96 | 1901 | | 142 |
| 1891 | | 88 | 1902 | | 85. |
| 1892 | | 136 | 1903 | | 79 |
| 1893 | | 158 | 1904 | | 55 |
| 1894 | | 96 | 1905 | | 63 |
| 1895 | | 112 | 1906 | | 97 |
| 1896 | | 189 | 1907 | | 103 |
| 1897 | | 100 | 1908 | | 55 |
| 1898 | | 131 | 1909 | | 33 |
| 1899 | | 106 | 1910 | | 48 |
| 1900 | | 153 | | | |
| | | | | | |

The decrease becomes more apparent when, instead of the number of cases, the attack-rate, or proportion of cases notified per 1000 population, is taken, as in the following table:—

| Years. | No. of ca | ses notifie | d per 1000 population. |
|---------|-----------|-------------|------------------------|
| 1890—94 | | | 1.61 |
| 1895—99 | | | 1.63 |
| 1900-04 | | | 1.22 |
| 1905—09 | | | 0.77 |
| 1910 | | | 0.50 |

In August, 1910, the Local Government Board made an Order, the Diphtheria Anti-toxin (London) Order, 1910, empowering London sanitary authorities to arrange for the supply of anti-toxin and of medical assistance in connection therewith for the poorer inhabitants of the district. In accordance with this Order the Council obtained a

supply of anti-toxin from a firm of wholesale chemists, and the following letter was sent by the Medical Officer of Health to all the medical practitioners practising in Hampstead. Five applications for anti-toxin were received before the end of the year.

Public Health Department,
7, Belsize Park Gardens,
Hampstead, N.W.

Dear Sir,

In accordance with a recent Order of the Local Government Board, the Hampstead Borough Council have arranged for the free supply of diphtheria anti-toxin to medical practitioners for use among the poorer inhabitants of Hampstead. The Local Government Board attach great importance to the prompt treatment of diphtheria by anti-toxin. You are aware that the beneficial effect of anti-toxin in the treatment of diphtheria depends greatly upon the stage of the disease in which it is administered; it has been conclusively shown that patients treated on the first or second day can almost invariably be cured, and hence it is most important that anti-toxin should be administered in cases where diphtheria may reasonably be suspected, without waiting for bacteriological confirmation of the diagnosis. In order to facilitate the early use of anti-toxin, I have been empowered by the Borough Council to supply it to medical practitioners making application to the Public Health Department, 7, Belsize Park Gardens, N.W. The application should be in writing, and should state the name and address of the patient for whom the anti-toxin is required.

The supply of anti-toxin is not, of course, intended as a substitute for removal to hospital of a patient suffering from diphtheria, or as implying that a patient to whom anti-toxin has been administered may properly be retained for treatment at home unless means are available for his efficient isolation.

I am, Dear Sir,
Yours faithfully,
G. F. McCleary.

Enteric Fever.

The number of cases notified was 16 as compared with 13 in 1909 and 24 in 1908. The attack-rate per 1000 population was 0·17. The number of fatal cases was 3, or 18·7 per cent. of the cases notified. The death-rate per 1000 population was 0·03; 8 patients, or 50 per cent. of the total cases notified, were removed to hospital.

Four specimens of blood from patients suspected to be suffering from enteric fever were submitted by the doctors in attendance for bacteriological examination, two specimens proving positive and two negative.

The following table shows the number of cases occurring each month in the various wards:—

| | | | | WARDS. | | | | |
|-----------|------------------|---------------------|----------------------|---------------------|----------------------|---------------------|--------------------|---------|
| Month. | No. 1 (Town). | No. 2 (Belsize). | No. 3 (Adelaide). | No. 4 (Central). | No. 5 (West End). | No. 6 (Kilburn). | No. 7 (Priory). | Totals. |
| January | _ | - | - | - | - | - | - | - |
| February | - | - | _ | _ | _ | 1 | _ | 1 |
| March | - | - | 1 | _ | - | - | - | 1 |

| September | _ | - | - | - | 1 | 1 | - | 2 |
| October | - | 1 | _ | _ | - | 1 | 1 | 3 |
| November | - | 1 | - | _ | _ | _ | - | 1 |
| December | - | | In The Land | 1 | - | _ | _ | 1 |
| Totals | 2 | 5 | 2 | 2 | 1 | 3 | 1 | 16 |

A careful inquiry was made as to the source of infection in each case. In five instances it was found that the patient had clearly been infected outside Hampstead; one of these patients was infected in India, one in Canada, one in Germany, and two elsewhere. In two

cases there was reason to think the infection had been conveyed by shell-fish.

In the remaining instances the source of infection could not be traced.

Puerperal Fever.

Two cases were notified, neither of which proved fatal, as compared with 5 cases and 3 deaths in 1909.

Both of the cases occurred in No. 2 (Belsize) Ward. One of the cases was removed to the Hampstead Workhouse Infirmary.

Erysipelas.

Thirty-two cases were notified, and 1 death occurred, as compared with 29 cases and 1 death in 1909.

The attack-rate per 1000 of the population was 0.33.

Of the cases notified, 10, or 31 per cent., were removed to the Hampstead Workhouse Infirmary.

The Metropolitan Asylums Board do not provide hospital accommodation for cases of erysipelas or puerperal fever, and the patients suffering from these diseases are unable to obtain hospital treatment except in Poor Law Infirmaries or Workhouses.

Epidemic Cerebro-Spinal Meningitis.

This disease, which is popularly known as "Spotted Fever," was made notifiable throughout London by an Order of the London County Council made in 1907, and subsequently renewed from time to time, but neither in that year nor 1908 was any case notified in Hampstead. In 1909, however, 4 cases were notified, all of which proved fatal. In 1910 two cases were notified and both patients died, but the post-mortem examination in each case showed that the disease was not epidemic cerebro-spinal meningitis.

SEVEN PRINCIPAL EPIDEMIC DISEASES.

The total number of deaths from these diseases amounted to 45, and the deaths were distributed as follows:—

| | | | 1 | VARD | S. | | | |
|-----------|------------------|-------------------------|-----------------------|-----------------------|---------------------|---|-----------------------|---------|
| DISEASE. | No. 1 (Town) | No. 2 (Belsize) | No. 3 (Adelaide) | No. 4 (Central) | No. 5 (West End) | No. 6 (Kilburn) | No. 7 (Priory) | TOTALS. |
| Small-pox | - 1 - - | -4 1 -2 1 - | - - - 1 1 | _ _ _ _ 1 | -3 -4 3 -3 | $-\frac{7}{1}$ $\frac{2}{5}$ $-\frac{2}{2}$ | - - 1 - 1 | |
| Totals | 1 | 8 | 2 | 2 | 13 | 17 | 2 | 45 |

The death-rate from the seven principal epidemic diseases was therefore, 0.47 per 1000 of the population.

In the following table a comparison is given of the annual death rates from these diseases in Hampstead, London, England and Wales, the 77 Great Towns, the 136 Smaller Towns, and England and Wales less these 213 Towns, during 1910:—

| | 7 Principal Epidemic Diseases. | Small-pox. | Measles. | Scarlet Fever. | Diphtheria. | Whooping Cough. | Fever. | Diarrhoa. |
|--|-----------------------------------|------------|--------------|----------------|--------------|-----------------|--------------|--------------|
| England and Wales | 0.99 | 0.00 | 0.23 | 0.06 | 0.12 | 0.24 | 0.05 | 0.29 |
| 77 Great Towns 136 Smaller Towns England and Wales | 1·23 0·88 | 0.00 | 0·31 0·16 | 0.08 | 0.11 | 0·29 0·24 | 0.05 | 0·38 0·26 |
| less the 213 Towns London | 0·74 1·14 | 0.00 | 0·15 0·41 | 0.05 0.04 | 0·12 0·09 | 0·17 0·28 | 0·05 0·04 | 0.20 0.28 |
| Hampstead · | 0.47 | - | 0.15 | 0.03 | 0.06 | 0.11 | 0.03 | 0.08 |

In this table 0.00 indicates that the deaths were too few to give a rate of 0.005; where no death occurred, — is inserted.

Detailed information concerning small-pox, scarlet fever, diphtheria, and fever will be found under the heading of Notifiable Infectious Diseases, on pages 42-49, but particulars concerning measles, whooping cough, and diarrhea, to which notification does not apply, are given here:—

| Year. | Seven Principal Epidemic Diseases. Death-rate per 1000 of the population. | Measles. Death-rate per 1000 of the population. | Whooping Cough. Death-rate per 1000 of the population. | Diarrhoa. Death-rate per 1000 of the population. |
|-------|--|--|---|---|
| 1901 | 0.77 | 0.12 | 0.29 | 0.04 |
| 1902 | 6.69 | 0.17 | 0.11 | 0.04 |
| 1903 | 0.49 | 0.09 | 0.18 | 0.05 |
| 1904 | 0.55 | 0.17 | 0.09 | 0.15 |
| 1905 | 0.43 | 0.09 | 0.11 | 0.02 |
| 1906 | 0.55 | 0.11 | 0.02 | 0.21 |
| 1907 | 0.45 | 0.12 | 0.13 | 0.05 |
| 1908 | 0.40 | 0.04 | 0.05 | 0.12 |
| 1909 | 0.51 | 0.12 | 0.19 | 0.03 |
| 1910 | 0.47 | 0.15 | 9.11 | 0.08 |

Measles.

Fourteen deaths were recorded from this disease, as compared with 11 in 1909.

The mortality was 0.15 per 1000 population, the mortality in 1909 being 0.12.

Measles is now included amongst the dangerous infectious diseases, to which Sections 60-65, 68-70, and 72-74 of the Public Health (London) Act, 1891, apply. These sections extend the provisions relating to isolation and disinfection to measles, but they do not make the disease compulsorily notifiable.

But although measles is not a notifiable disease, many cases are reported to the Medical Officer of Health by school teachers, parents and others.

During the year 1910, 642 cases were reported, as compared with 283 in 1909. The sources of information were as follows:—

| Cases notified by | y me | edical | practi | tioner | rs - | - | 8 |
|-------------------|------|---------|---------|--------|-------|------|-----|
| ,, | pa | rents | or gu | ardiai | 18 - | - | 141 |

| Totals - | 27 | 91 | 16 | 32 | 136 | 321 | 19 | 642 |

During the first two months of 1910 measles was unusually prevalent in Hampstead, especially in the Kilburn and West End Wards, where the great majority of the cases occurred. In the last quarter of the year the disease attacked the Fleet Road area, and became prevalent in the Town Ward in the early part of the present year. Unfortunately, measles is an extremely difficult disease to control. It is highly infectious even in the early stage before the appearance of the rash, when the symptoms very much resemble those of a common cold, for which complaint measles is usually mistaken. Until the fourth day of the disease, when the rash appears, measles can only be recognised by a

highly-skilled observer, and consequently in the great majority of cases measures of isolation are not adopted until the patient has been spreading infection for three days. For these reasons comparatively little can be done under present conditions to check the spread of measles. But a good deal can be done to lessen the fatality of an outbreak by educating the public to a proper appreciation of the seriousness of the disease, so that the patients may receive due care and attention. For this purpose health-visiting is of great value. All the cases reported in 1910 were visited by the lady inspectors, who gave instruction to the mothers in the precautions to be observed in nursing the patients. That these measures are needed is apparent from the fact that in 165 of the cases visited no doctor was in attendance on the patient, which is striking evidence of the failure of many of the public to appreciate that measles is a serious disease.

Hospital accommodation is badly needed for patients in the poorer districts for whom proper treatment is not available in their own homes. Up to the present year (1911) the only hospitals open to these patients were the workhouse infirmaries, but since February, 1911, hospital accommodation for measles cases has been provided by the Metropolitan Asylums Board. At first admission was only given to Poor Law patients, but later the Board, on the suggestion of the Local Government Board, agreed to receive cases of measles other than Poor Law cases, on the recommendation of the Medical Officer of Health of the district concerned. Hospital treatment for measles on any practicable scale cannot be expected to exercise much effect in checking the spread of the disease, but it may do much to lessen the mortality by saving the lives of those patients for whose recovery skilled nursing, plenty of good food and healthy surroundings are necessary, and who are unable to obtain these necessities in their own homes.

Whooping Cough.

There were 11 deaths from this disease in 1910, as compared with 18 in 1909 and 5 in 1908. The mortality per 1000 population was 0.11. Like measles, whooping cough tends to become complicated by pneumonia, and the patients require to be carefully looked after, but unfortunately it is popularly regarded as a disease of slight importance.

Hospital treatment is much needed in certain cases of whooping cough, and the Metropolitan Asylums Board now provide hospital accommodation for patients admitted through the Poor Law.

Diarrhœa.

The number of deaths from this cause was 8, as compared with 3 in 1909. The death rate per 1000 of the population from this disease was 0.08.

These deaths occurred as follows:—1 in No. 3 (Adelaide) Ward in September, 1 in No. 4 (Central) Ward in October, 3 in No. 5 (West End) Ward in May, June and September, 2 in No. 6 (Kilburn) Ward in December, and 1 in No. 7 (Priory) Ward in May.

Five of these deaths occurred among children under one year of age.

TUBERCULOSIS.

The number of deaths from tuberculosis in 1910 was 80. Of these, 58 deaths were due to pulmonary tuberculosis or phthisis, 10 to tubercular meningitis, and 12 other forms of tuberculosis.

The following table shows the number of deaths and the death-rates from tuberculosis and from phthisis respectively since 1899:—

| Year. | Total deaths from Tuberculosis. | Death- rate per 1000 population. | Phthisis deaths. | Death- rate per 1000 population. |
|-------|---------------------------------|--|------------------|--|
| 1899 | 98 | 1.21 | 81 | 0.98 |
| 1900 | 92 | 1.13 | 69 | 0.85 |
| 1901 | 118 | 1.43 | 73 | 0.88 |
| 1902 | 97 | 1.16 | 73 | 0.87 |
| 1903 | 90 | 1.06 | 66 | 0.77 |

The deaths from phthisis during 1910 were distributed among the Wards as follows:—

| nin i | | Ward. | Area (Acres). | Estimated Population middle of 1910. | Phthisis Deaths. | Phthisis Death-rate per 1000 of the Population |
|-------|---|------------|------------------|---|---------------------|---|
| No. | 1 | (Town) | 686 | 15100 | 6 | 0.40 |
| ,, | | (Belsize) | 271 | 15200 | 8 | 0.53 |
| ,, | 3 | (Adelaide) | 325 | 11000 | 5 | 0.45 |
| ,, | 4 | (Central) | 312 | 10869 | 3 | 0.28 |
| " | 5 | (West End) | 247 | 14900 | 11 | 0.74 |
| ,, | 6 | (Kilburn) | 195 | 17260 | 16 | 0.93 |
| -99 | 7 | (Priory) | 229 | 11400 | 8 | 0.70 |
| The | В | orough | 2265 | 95729 | 58* | 0.60 |

^{* 1} death from phthisis was non-distributable.

The following table shows the age distribution of the patients dying from consumption in Hampstead in the eight years 1903-1910:—

| Year. | Age Period. | | | | | | | |
|--------|-------------|------|-------|-------|-------|------|--|--|
| | 0-5 | 5—15 | 15—25 | 25—65 | 65— | Ages | | |
| 1903 | _ | 1 | 14 | 46 | 5 | 66 | | |
| 1904 | 1 | 1 | 15 | 53 | 3 | 73 | | |
| 1905 | 1 | _ | 12 | 57 | | 73 | | |
| 1906 | 1 | _ | 8 | 45 | 3 3 3 | 57 | | |
| 1907 | 1 | 2 | 10 | 45 | 3 | 61 | | |
| 1908 | _ | 2 | 14 | 55 | 3 | 74 | | |
| 1909 | 1 | 1 | 12 | 37 | 2 | 53 | | |
| 1910 | 1 | 1 | 12_ | 37 | 7 | 58 | | |
| Totals | 6 | 8 | 97 | 375 | 29 | 515 | | |

In 1902 a system of voluntary notification of phthisis was adopted in Hampstead, and on January 1st, 1909, the Public Health (Tuberculosis) Regulations of the Local Government Board, which provide for the compulsory notification of cases of phthisis occurring

in Poor Law patients, came into operation. The following table gives the number of patients notified in each year since 1902:--

| Year. | | No. of 1 | patients notified. |
|-------|---------------------|----------|--------------------|
| 1902 | | | 51 |
| 1903 | | | 34 |
| 1904 | TO MODELLE A 1. | | 39 |
| 1905 | | | 27 |
| 1906 | | | 35 |
| 1907 | | | 55 |
| 1908 | | | 30 |
| 1909 | | | 67 |
| 1910 | | | 77 |

The total number of Hampstead patients notified during 1910 was 77, but 13 of these had been previously notified—1 in 1906, 2 in 1907, 1 in 1908, and 9 in 1909; the number of new patients notified was 64, and of those 33 were males and 31 females. The increase in the number of patients notified in the last two years is due to the operation of the instalment of compulsory notification provided by the Public Health (Tuberculosis) Regulation, 1908.

The total number of notification certificates received during 1910, including duplicates, was 135, relating to 89 cases, of which 12 belonged to districts outside Hampstead. The number of certificates relating to Hampstead patients was 123, and of these 33 were made under the voluntary system, and 90 under the Regulations.

| The | notifications were received from the following source | s:- | |
|-----|---|------|-----|
| | Private Practitioners | | 14 |
| | Hospitals and Dispensaries | | 19 |
| | Hampstead District Poor Law Medical Officers | | 28 |
| | Medical Officer, Hampstead Workhouse | | 38 |
| | Medical Officers of outlying Poor Law Institutions | on | |
| | admission of Hampstead patients | | 5 |
| | Master of Hampstead Workhouse on discharge of patie | ents | 14 |
| | Masters of outlying Poor Law Institutions on | the | |
| | discharge of patients to Hampstead addresses | | 5 |
| | | - | 100 |
| | | | 123 |

The foregoing figures refer exclusively to Hampstead patients. In addition, 12 notifications relating to patients belonging to other districts were received from the following sources:—

| Medical Officer of Hampstead Workhouse on admission of | |
|---|---|
| patients from Mount Vernon or Freidenheim, belonging | |
| to other districts | 5 |
| Medical Officers of outlying Poor Law Institutions on removal | |
| of patients to Hampstead Institutions | 2 |
| Masters of outlying Poor Law Institutions on removal of | |
| patients to Hampstead Institutions | 4 |
| Medical Officer of outlying Workhouse on the admission of | |
| patient from Hampstead Institution | 1 |

The notified patients are visited by Mrs. Fisher, the lady sanitary inspector, who gives the necessary instruction in the precautions that a consumptive patient should observe to prevent the spread of the disease to others, and inquires into the source of infection. Mrs. Fisher made 287 visits to the homes of consumptive patients in 1910. To assist the work of the lady inspector a body of voluntary visitors, organised by the Joint Phthisis Committee of the Hampstead Health Society and the Hampstead Council of Social Welfare, works in close co-operation with the Public Health Department. In previous Annual Reports reference has been made to the valuable work of the Joint Committee, which is of special value in providing sanatorium treatment and material assistance in various ways for consumptive patients. Disinfection is carried out by the Public Health Department after a death from consumption, and, as occasion requires, during the life of a patient. The total number of premises disinfected in 1910 was 128.

The Council arrange for the bacteriological examination of specimens from suspected cases of consumption. In 1910 the total number of specimens examined was 14, of which 4 were positive and 10 negative.

Tuberculosis causes nearly one-tenth of the total mortality of Hampstead, and although the death-rate from the disease is declining, the decline is not so marked as it ought to be, considering that tuberculosis is preventable, and that an appropriate technique of prevention has already been fairly extensively worked out. Measures of general sanitation, such as the prompt removal of refuse, the sanitary construction of dwellings and workshops, &c., undoubtedly have a considerable

effect in reducing the mortality from tuberculosis, but more special measures are necessary to secure an effective control of the disease. The most common and destructive form of tuberculosis is tuberculosis of the lungs or consumption, and it is against this form that preventive measures should chiefly be directed. In considering what should be done to attack consumption, two propositions should be borne in mind:—

- Consumption is an infectious disease, but the infection can readily be controlled if the patient can be brought to live under proper conditions.
- 2.—Living under such conditions will not only prevent the spread of the disease to others, but will also promote the recovery of the patient, for consumption is a curable as well as a preventable disease.

The main object of preventive effort is to see to it that consumptive patients adopt a proper mode of life, and the essentials of such a life are (1) abundance of fresh air, (2) a sufficient amount of good food, (3) habits of scrupulous cleanliness. But before a Public Health Authority can do anything for a consumptive patient it is necessary that the patient should be known to the authority—in other words, a system of notification is necessary.

Voluntary notification of consumption has been in operation in Hampstead since 1902, but the number of notified cases has been small, probably considerably less than one-sixth of the total cases, and many of the patients have been notified only when in the last stage of the disease. The instalment of compulsory notification introduced by the Public Health (Tuberculosis) Regulations, 1908, has increased the number of notified cases, and a further increase will result from the Public Health (Tuberculosis in Hospitals) Regulations, 1911, which came in force on May 1st, and provide for the compulsory notification of cases of consumption occurring in hospital patients.

In the majority of cases, however, the patient is not notified until he is in an advanced stage of the disease. Consumption comes on insidiously; the patient often does not suspect what is the matter with him, and puts off seeing a doctor until he may be seriously ill. What is wanted is some means of identifying the disease in the early stage, and for this purpose it is important that a medical examination should be made of the members of a family in which a case of consumption has occurred. Consumptives frequently infect the persons with whom they live, and a systematic medical examination of the family of a consumptive patient will frequently bring to light other cases in the incipient stages, when a cure may be confidently expected if proper treatment be adopted. Efforts are made by the health visitors, in cases where infection is suspected, to induce the suspected patient to be medically examined, but usually without success, for he is often too poor to consult a private doctor, and the out-patient departments of Mount Vernon and the Brompton Hospital are too far off to be readily available for Hampstead patients.

Provision is required, not only for the discovery of cases, but also for the regular medical supervision of the patients. It was formerly thought that proper supervision could only be secured in a sanatorium, and that the most effective means of prevention was the establishment of sanatoria. It has now been shown that consumptives can be successfully treated at home, provided that they are subject to systematic medical supervision, and that sanatoria are chiefly of value as affording the patients a preliminary training in the habits and ways of living necessary for their own recovery and for the prevention of infection to other persons.

The most effective and inexpensive method of attacking consumption is by means of the dispensary system. The work of the tuberculosis dispensary consists in the supervision of the open-air treatment of consumptives in their own homes, and the detection of cases of consumption in persons who have been exposed to infection by living with a consumptive patient. The dispensary requires no elaborate buildings, an ordinary house can readily be adapted for the work, and in a district like Hampstead the staff need not consist of more than a doctor and a nurse. The dispensary can readily co-operate with other organisations, such as sanatoria and relief agencies, and is, indeed, necessary for their proper development. Tuberculosis dispensaries are now being established all over the country. A dispensary was started in Paddington two years ago, one began work in St. Marylebone last year, and others are on the point of beginning work in other parts of London. It was of consumption that King Edward asked the question: "If preventable, why not prevented? "--- a question that has never been answered--- and I think the Borough Council could set up no more appropriate or useful memorial to his late Majesty than a tuberculosis dispensary,

DISINFECTION.

| Number of article | s disinfec | eted:- | | |
|-------------------|------------|--------|----|------|
| Beds | | | 1. | 207 |
| Mattresses | | | | 525 |

Certificates as to Water Supply.

The number of certificates issued during the year was 30, as compared with 71 in 1909.

Drainage Work.

The by-laws of the London County Council that require that plans and written particulars of drainage construction and alteration shall be deposited with the Sanitary Authority came into operation in August, 1903, and from that date to the end of 1910 the Council have approved of 401 plans for the drainage of new buildings, and 4547 plans for alterations, etc., to drains of existing premises.

During the year 1910, 927 notices of drainage reconstruction or alteration were received, and in 838 cases the work necessitated the deposit of plans and written particulars. In 516 of these latter cases the work could not be delayed until the Council's approval of the plans had been received; in each of these cases the prescribed "urgency" notice was therefore submitted by the builders, the work put in hand forthwith and the plans, etc., deposited at a later date.

Of the 838 notices of drainage alterations, etc., requiring the deposit of plans, 335 related to work that involved the entire reconstruction of the drainage system. In 503 of the 838 drainage cases the work was carried out voluntarily, the number of instances in which voluntarily complete reconstruction was carried out being 135. The voluntary work was chiefly done in connection with the larger houses in Hampstead, and in many cases the voluntary drainage reconstructions were of a very extensive character.

Iron pipes are now chiefly used in drainage constructions and reconstructions in Hampstead. Of the 335 reconstructions in 1910 iron pipes were used in no less than 288 cases; in only 47 cases were the drains reconstructed with stoneware pipes. It has been found that iron drains are much more durable; in several cases in 1910, iron drains that were laid upwards of 15 years ago were found perfectly water tight on application of the water test.

Combined Drainage.

During the year several claims were made by owners of property that certain defective combined drains were not legally "drains" for

which the owners of the property were responsible, but "sewers" which the Council were under obligation to repair at the cost of the ratepayers.

An idea is prevalent that a combined drain is necessarily a sewer, but this is not so. If it can be shown that the combination has been made in accordance with an order of the local authority, the combined drain is legally a "drain" and not a "sewer." Usually the only way of proving that the combination was authorised is by producing the drainage plans that show that the combination was approved by the local authority. In Hampstead the Council is fortunate in possessing an exceptionally full set of drainage records, and consequently the cost of repairing drains, which from lack of a proper record have become "sewers," is small compared with the sums expended in other districts. In 1910, however, four claims were made which for various reasons could not be resisted, and the drains were reconstructed at the cost of the Council, the total sum expended during the year being £150 9s. 6d.

Houses Let in Lodgings.

The number of houses registered as houses let in lodgings at the 1910 was 364, no houses being added to the register in 1910. The registered houses are situated chiefly in the following streets:—

Bolton Road.
Dunboyne Street.
Fairfax Mews.
Fleet Road.
Kelson Street.

Linstead Street
Lowfield Road.
Netherwood Street.
Palmerston Road.

The number of tenement houses in Hampstead that might with advantage be dealt with under the by-laws relating to houses let in lodgings is considerably in excess of the number actually registered; but hitherto the staff of inspectors has been inadequate to deal with a greater number. When the new inspector has begun his duties it will be possible to carry out a more effective administration of the by-laws, and to add to the number of houses on the register.

Customs and Inland Revenue Acts.

These Acts provide that the owners of premises that are let in dwellings of a certain class may claim exemption or abatement from inhabited house duty on producing a certificate from the Medical Officer of Health that the dwellings afford proper sanitary accommodation for the occupants. During the year application for certificates under these Acts were received in respect of 51 dwellings, this number being 45 less than the number for which applications were made in 1909. The number of dwellings certified was 17.

Upon receipt of an application for a certificate a detailed sanitary survey is made of the premises, and should any of the dwellings fail to reach the required standard of sanitation, a list of requirements is drawn up and sent to the owner, and the certificate is only granted when these requirements are fulfilled. In every case the drains are required to stand the water test, and all gas stoves must be well ventilated into the open air by means of a properly constructed hood and shaft.

The following is a list of the dwellings certified:-

| Premises. | | No. of Dwellings. |
|--|------|----------------------|
| 86, Palmerston Road | | 3 |
| 1.6, Laurel Mansions, Lyncroft Gardens | | 6 |
| 1-6, New End Flats, New End | | . 6 |
| 1, Belsize Parade, Haverstock Hill | | 2 |

Underground Rooms.

The Public Health (London) Act, 1891, contains special provisions relating to underground rooms, an underground room being defined as a room the floor of which is more than three feet below the surface of the footway of the adjoining street, or of the ground adjoining or nearest to the room. An underground room that is not occupied in conjunction with a room on any other floor of the same house must comply with certain conditions that are set out in detail in the Act; it must, for instance, be sufficiently protected against damp, properly lighted and ventilated, and provided with a fireplace with a proper chimney or flue, &c. An underground room that does not comply with these requirements is illegally occupied. During 1910, as in previous years, special attention was paid to the inspection of underground rooms,

and 115 were found to be illegally occupied. These rooms were situated in the following streets:—

Belsize Road Langland Gardens

Bolton Road Mill Lane

Boundary Road Netherwood Street Hemstal Road Palmerston Road

Honeybourne Road Heath Villas, Vale of Health.

King's College Road

Of these rooms, 53 were altered to comply with the Public Health Act, 2 were in process of alteration at the end of the year, and 60 were vacated. In 2 cases the tenants were able to occupy a room on an upper floor in conjunction with the underground rooms, which in this way were removed from the operation of the Act. In two cases it was found necessary to take legal proceedings to enforce compliance with the Act. In each case the defendant was convicted.

The powers of sanitary authorities in relation to underground rooms are greatly strengthened by Section 17, Sub-section 7, of the Housing, Town Planning, &c., Act, 1909, which enables the sanitary authority to close an underground room that is habitually used as a sleeping place, unless the room is on an average at least seven feet high and complies with the regulations which the sanitary authority are empowered to make for securing the proper sanitary condition of such rooms. This new power will be useful in dealing with underground rooms, which, although used as sleeping places, are occupied with rooms on upper floors, and are therefore exempt from the special requirements for underground rooms in the Public Health Act.

Under the Housing, Town Planning, &c. Act, 1909, the Council drafted a set of regulations relating to underground sleeping rooms, and submitted them to the Local Government Board for approval. The regulations, which are set out in full on page 75 have not yet been approved by the Board.

Housing, Town Planning, etc., Act.

This Act imposes upon Sanitary Authorities certain duties of great importance. One of the most important of these is the duty laid upon every Sanitary Authority by Section 17 (1) of the Act "to cause to be made from time to time inspection of their district with a view to ascertain whether any dwelling-house therein is in a state so dangerous

or injurious to health as to be unfit for human habitation, and for that purpose it shall be the duty of the Local Authority, and of every Officer of the Local Authority, to comply with such regulations and to keep such records as may be prescribed by the Local Government Board."

On September 2nd, 1910, the Board made an Order prescribing the regulations referred to in Section 17 of the Act. These regulations are in the following terms:—

Article I.—(1) The local authority shall, as early as practicable after the date of this Order, take into consideration the provisions of Sub-section (1) of Section 17 of the Act of 1909, and shall determine the procedure to be adopted under these Regulations to give effect to the requirements of that sub-section in regard to the inspection of their district from time to time.

- (2) The local authority shall, as part of their procedure, make provision for a thorough inspection to be carried out from time to time according to the varying needs or circumstances of the dwelling-houses or localities in the district of the local authority.
- (3) The local authority shall cause to be prepared from time to time by the Medical Officer of Health, or by an Officer designated by them but acting under his direction and supervision, a list or lists of dwelling-houses the early inspection of which is, in the opinion of the Medical Officer of Health, desirable. The list or lists may, if thought fit, relate to the dwelling-houses within a defined area of the district without specifying each house separately therein.

Article II.—The inspection under and for the purposes of Sub-section (1) of Section 17 of the Act of 1909 shall be made by the Medical Officer of Health, or by an Officer designated by the local authority but acting under his direction and supervision, and the Officer making inspection of any dwelling-house shall examine the state of the dwelling-house in relation to the following matters, namely:—

- (1) The arrangements for preventing the contamination of the water supply.
- (2) Closet accommodation.
- (3) Drainage.
- (4) The condition of the dwelling-house in regard to light, the free circulation of air, dampness, and cleanliness.
- (5) The paving, drainage, and sanitary condition of any yard or out-houses belonging to or occupied with the dwelling-house.
- (6) The arrangements for the deposit of refuse and ashes,

- (7) The existence of any room which would in pursuance of Subsection (7) of Section 17 of the Act of 1909 be a dwelling-house so dangerous or injurious to health as to be unfit for human habitation.
- (8) Any defects in other matters which may tend to render the dwelling-house dangerous or injurious to the health of an inhabitant.

Article III.—Records of the inspection of dwelling-houses made under and for the purposes of Sub-section (1) of Section 17 of the Act of 1909 shall be prepared under the direction and supervision of the Medical Officer of Health, and shall be kept by the Officer of the local authority making the inspection or by some other Officer appointed or employed for the purpose by the local authority.

The records may be kept in a book or books or on separate sheets or cards, and shall contain information, under appropriate headings, as to:—

- 1. The situation of the dwelling-house, and its name or number,
- 2. The name of the Officer who made the inspection,
- 3. The date when the dwelling-house was inspected,
- The date of the last previous inspection and a reference to the record thereof,
- The state of the dwelling-house in regard to each of the matters referred to in Article II. of these Regulations,
- Any action taken by the Medical Officer of Health, or other Officer of the local authority, either independently or on the directions of the local authority,
- 7. The result of any action so taken,
- 8. Any further action which should be taken in respect of the dwelling-house.

Article IV.—The local authority shall, as far as may be necessary, take into consideration at each of their ordinary meetings the records kept in pursuance of Article III. of these Regulations, and shall give all such directions and take all such action within their powers as may be necessary or desirable in regard to any dwelling-house to which the records relate, and a note of any directions so given and the result of any action taken shall be added to the records.

Article V.—The Medical Officer of Health shall include in his Annual Report information and particulars in tabular form in regard to the number of dwelling-houses inspected under and for the purposes of Section 17 of the Act of 1909, the number of dwelling-houses which on inspection were considered to be in a state so dangerous or injurious to health as to be unfit for human habitation, the number of representations made to the

local authority with a view to the making of closing orders, the number of closing orders made, the number of dwelling-houses the defects in which were remedied without the making of closing orders, the number of dwelling-houses which after the making of closing orders were put into a fit state for human habitation, and the general character of the defects found to exist. He shall also include any other information and particulars which he may consider desirable in regard to the work of inspection under the said Section.

Article VI.—The Medical Officer of Health and any other Officer of the local authority shall observe and execute all lawful orders and directions of the local authority in regard to or incidental to the inspection of the district of the local authority under and for the purposes of Section 17 of the Act of 1909, and the execution of these Regulations.

Article VII.—In these Regulations "the Act of 1909" means the Housing, Town Planning, &c., Act, 1909.

Article VIII.—These Regulations may be cited as the Housing (Inspection of District) Regulations, 1910.

On the 17th November the Council considered the regulations, and decided that the present staff of the Public Health Department was inadequate to carry out the duties imposed by the regulations, and that it would be necessary to appoint an additional inspector for that purpose. Mr. A. C. Townsend, of Bermondsey, was appointed, but his appointment was not made and confirmed until April, 1911.

One house, namely, No. 83, Palmerston Road, was represented under Section 17 of the Act as unfit for habitation, and on January 12th the Council made a closing order on the house. The owner appealed against the closing order to the Local Government Board, but at the time of writing the appeal has not been decided.

One of the most important provisions of the Act is that relating to underground rooms. Under the Public Health Act underground rooms cannot be occupied separately as dwellings unless they comply with certain provisions which are specified in detail in the Act. These, however, do not apply if the rooms are occupied with a room or rooms on an upper floor. The new Act provides that every underground room that is habitually used as a sleeping place must be at least seven feet in height on an average from floor to ceiling, and must comply wth such regulations as the Sanitary Authority, with the consent of the Local Government Board, may make.

On 16th June the Council adopted the following draft regulations, which were submitted to the Local Government Board for approval. These regulations are in effect the requirements of the Public Health (London) Act relating to underground rooms occupied separately as dwellings:—

- (a) The room shall have at least three feet of its height above the surface of the street or ground adjoining or nearest to the room: Provided that, if the width of the area hereinafter mentioned be not less than the height of the room from the floor to the said surface of the street or ground, the height of the room above such surface may be less than three feet, but it shall not in any case be less than one foot, and the width of the area need not in any case be more than six feet.
- (b) Every wall of the room shall be constructed with a proper damp course, and, if in contact with the soil, shall be effectually secured against dampness from that soil.
- (c) There shall be outside of and adjoining the room and extending along the entire frontage thereof and upwards from six inches below the level of the floor thereof an open area, properly paved, at least four feet wide in every part thereof: Provided that in the area there may be placed steps necessary for access to the room, and over and across such area there may be steps necessary for access to any building above the underground room, if the steps in such case be so placed as not to be over or across any external window.
- (d) The said area and the soil immediately below the room shall be effectually drained.
- (e) If the room has a hollow floor, the space beneath it shall be sufficiently ventilated to the outer air.
- (f) Any drain passing under the room shall be properly constructed of a gas-tight pipe.
- (g) The room shall be effectually secured against the rising of any effluvia or exhalation, and for that purpose the site of the room shall be covered with a layer of good concrete, at least six inches thick, and smoothed on the upper surface. The concrete must be composed of clean gravel, broken hard brick, properly burnt ballast, or other approved hard material, well mixed with cement in the proportion of one of cement to eight of the other material.
- (h) The room shall be effectually ventilated.
- (i) The room shall have a fire-place with a proper chimney or flue.
- (j) The room shall have one or more windows opening directly into the external air with a total area clear of the sash-frames equal to at least one-tenth of the floor area of the room, and so constructed that one-half at least of each window of the room can be opened, and the opening in each case extends to the top of the window.

The Board took exception to some of these provisions, chiefly to that relating to the width of the area. They suggested that it was unnecessary to require a width of four feet in every part, and that the case would be met by prescribing a minimum width of three feet, and a mean width of four feet. To this the Council replied that the minimum width of four feet was already required by the Public Health Act, and the introduction of another and a lower standard would lead to misunderstanding and difficulty in administration. At the time of writing the regulations still require the confirmation of the Board.

The Water Supply of Tenement Houses.

In former Annual Reports an account was given of the action taken to improve the water supply of tenement houses under the powers conferred upon London sanitary authorities by Section 78 of the London County Council (General Powers) Act, 1907, which empowers the sanitary authority to require a proper and sufficient supply of water on each storey of a tenement house that is separately occupied. In many London tenement houses the only water supply available is from a tap in the basement or yard, and it is not surprising that in such houses the tenants of the upper floors practice a strict economy in the use of water, even to the extent of falling short of any decent standard of cleanliness. A plentiful supply of pure water is one of the first requisites of a healthy life, but in many tenement houses this requisite is not fulfilled, nor until the General Powers Act of 1907 was passed had sanitary authorities any power to insist on its fulfilment. This Act, however, has led to a considerable improvement. The number of houses dealt with in Hampstead during the last three years is as follows:-

| 1908 | | 24 |
|------|------|----|
| 1909 | | 85 |
| 1910 | | 99 |

In each house a water-tap and a glazed earthenware sink were provided on each floor. These alterations have been greatly appreciated by the tenants, and have had a beneficial effect in improving the general sanitary condition of the houses.

THE RESERVE AND PROPERTY.

Public Mortuary.

During the year the bodies of 87 persons were brought to the Mortuary, as against 85 last year—46 by order of the Coroner, 19 by the Police, and 22 at the request of friends of the deceased persons.

In 63 instances, or 72 per cent. of the bodies admitted, inquests were held, and in 39 instances, or 45 per cent., post-mortem examinations were made.

The following table indicates the causes of death of the persons whose bodies were received into the Mortuary:—

| Cause of Death or Verdict. | | | | | | Number of Bodies received | |
|----------------------------------|--------|------|--|--|--|---------------------------|--|
| Deaths from natural | causes | | | | | 48 15 | |
| Accidental deaths | | | | | | | |
| Suicide | | | | | | 14 | |
| Neglect at birth | | | | | | 1 | |
| Neglect at birth Misadventure | | | | | | 6 | |
| | T | otal | | | | 84 | |

Three of the bodies received at the Mortuary were those of still-born children.

MORTUARY RECORD FOR THE YEAR, 1910.

78

Food Inspection.

No seizures of unsound and diseased food were made during the year, but the following articles were voluntarily surrendered to the Inspectors.

| Date. | Premises. | Food seized or surrendered. |
|-----------|--------------------|-----------------------------|
| May 25th | Fortune Green Road | 1 trunk Hake (59 lbs.) |
| June 24th | Peebles Mews | 8 stone Plaice |

Slaughterhouses.

There are four slaughterhouses in the Borough, situated as follows:—40, England's Lane; 17, High Street; 69, High Street; 6 Fairfax Mews.

The slaughterhouses were regularly inspected during the year, the number of inspections being 59.

In December it was found that the quarterly lime-washing had not been carried out, and that at one slaughterhouse the offal was left in uncovered receptacles. Notices were served, and the necessary work was carried out by the end of the month.

The number of slaughterhouses in 1909 was five, including one at 242, Belsize Road, but the occupier of this slaughterhouse having been convicted in January, 1910, of a contravention of the London County Council (General Powers) Act, 1908, decided to discontinue the use of the premises as a slaughterhouse, and did not apply for the renewal of his licence.

In 1899 there were 7 slaughterhouses in Hampstead, and the number at the present time is only 4. A similar reduction in the number of slaughterhouses has taken place in the other parts of London, the total number in the County having fallen from 411 in 1899 to 264 in 1909.

Milk Supply.

The number of persons registered as purveyors of milk at the end of 1910 was 85, and the number of premises on which milk is sold was 107. The difference in the two numbers was accounted for by the fact that some of the milksellers occupy more than one shop.

| The premises on | which mi | lk is sol | d are a | s follow | s:- | |
|-----------------|------------|-----------|---------|----------|-----|----|
| Dairies | | | | | | 50 |
| Bakehouses an | d Confect | ioners | | | | 20 |
| Restaurants an | d Coffee 8 | Shops | | | | 16 |
| General Shops | | | | | | 21 |

Four of the registered milksellers do not occupy shops, two being registered in reference to refreshment tents on Hampstead Heath on Bank Holidays, and two have milk rounds in the Borough but no shops.

During the year 495 inspections were made of premises where milk is sold, and the following works were carried out.:—

| Premises or parts of premises repaired, cleansed, | |
|---|----|
| and limewashed | 18 |
| Water cisterns cleansed or covered | 5 |
| Drains repaired or reconstructed | 10 |
| Drains unstopped | 2 |
| Drain inlets inside premises abolished | 4 |
| Soil pipes repaired or reconstructed | 6 |
| Water-closets repaired or renewed | 15 |
| Water-closets cleansed | 9 |
| Roofs repaired | 4 |
| Gutters and rainwater pipes repaired or renewed | 6 |
| New sinks fixed | 5 |
| Waste pipes of sinks trapped, repaired or renewed | 12 |
| Yard paving repaired or renewed | 12 |
| Dustbins provided | 5 |
| Gullies cleansed | 2 |

Section 5 of the London County Council (General Powers) Act, 1908, empowers sanitary authorities in London to remove from the register of milksellers any cowkeeper, dairyman, or purveyor of milk who is carrying on his trade on premises unsuitable for the sale of milk, and to refuse to enter any such person upon the register. As a result of an inspection that was made in 1909 and the early part of 1910, the Public Health Committee recommended the Council in April, 1910 to remove 20 milkshops from the register as being unsuitable for the sale of milk. All these places were general shops in which milk was sold with a variety of articles, the presence of which rendered the milk liable to contamination. The Committee's recommendation was not adopted by the Council, and the shops remain upon the register, except two that changed in occupation during the year, and are now used for other trades.

Three general shops, in addition to those included in the Committee's report, changed occupation during the year, one was used for another trade, and the new occupiers of the other two were refused registration by the Council. The number of general shops selling milk was in this way reduced from 26 in 1909 to 21 in 1910.

Ice Cream.

The sale of ice cream in London is controlled by Sections 42 and 43 of the London County Council (General Power) Act, 1902.

There are 83 shops in the Borough in which ice cream is sold, and 289 inspections at these premises were made during the year.

In addition to these, the barrows which stand in the streets, and on Hampstead Heath on Bank Holidays have been inspected.

Table of sanitary work carried out at premises where ice cream is sold:—

| Premises or parts of pren | nises repa | ired, clean | ised | |
|----------------------------|------------|-------------|------|----|
| and limewashed | | | | 9 |
| Drains repaired or recon | structed | | | 5 |
| Drains unstopped | | | | 3 |
| Soil pipes reconstructed | | | | 4 |
| Water-closets renewed | | | | 8 |
| " cleansed | | | | 5 |
| Flushing cisterns to water | er-closets | repaired | | 4 |
| New sinks provided | | | | 3 |
| Waste pipes of sinks | trapped, | repaired, | or | |
| renewed | | | | 14 |
| Roofs repaired | | | | 4 |
| Rainwater pipes repaired | | | | 3 |
| Yards paving repaired | | | | 3 |
| Dustbins provided | | | | 1 |
| Other defects remedied | | | | 10 |
| | | | | |

Food Premises.

Section 8 of the London County Council (General Powers) Act, 1908, contains provisions that considerably increase the power of sanitary authorities to regulate the sanitary condition of places where food is prepared or sold. The section, which has been set out in full in previous Annual Reports, provides, among other things, that there shall be no drain inlet in any room where food is prepared or sold, that no sanitary convenience shall be within such a room or in direct communication with it, and that such a room shall be kept clean and not used as a sleeping place.

During 1909 and 1910 a systematic inspection of these places was made, and in a considerable number of cases conditions in contravention of the Act, were found. In 1909 the total number of premises altered in order to comply with the Act was 19, as set out in the Report for that year. In 1910 the number of premises dealt with was 52. Of these places 39 were found to have drain inlets in rooms where food was prepared or sold, in 39 premises the drains were defective, in 15 structural defects of various kinds were present, and 38 premises needed cleansing. The places were dealt with as follows:—in 36 instances the drains were entirely, and in 3 instances partially, reconstructed; in 39 instances improperly placed drain inlets were removed, with or without re-drainage; in 15 instances more or less extensive structural alterations, other than drainage alterations, were carried out; and 38 premises were thoroughy cleansed under notice. Two premises were pulled down, and in 7 cases the use of the premises for the sale or preparation of food was discontinued.

The trades carried on and the alterations made on the premises dealt with in 1910 were as follows:—

| | | | D | RAINAG | E. | PREMISES. | | |
|---------------------------|-------|--------------------|--------|--------------------------------|-------------------------|-----------|-------------------------------|---------------------------|
| Trades. | | No. of Premises | recon- | Partial recon- struction | Drain openings removed. | Cleansed | Structur- ally altered. | Use discon- tinued. |
| Butcher | | 8 | 6 | _ | 6 | 6 | 2 | 2 |
| Confectioner | | 7 | 2 | - | - 3 | 2 | . 5 | 1 |
| Dairy | | 3 | 3 | - | 1 | 3 | _ | |
| Fishmonger | ٠ | 4 | 3 | - | 4 | 4 | 2 | - |
| Greengrocer | | 11 | 6 | - | 7 | 8 | 2 | 4 |
| Grocer & Prov Merchant | ision | 9 | 8 | 1 | 9 | 9 | 1 | _ |
| Restaurants | | 4 | 3 | 1 | 4 | 4 | 2 | - |
| Other Trades | | 6 | 5 | 1 | 5 | 2 | 1 | - |
| Totals | | 52 | 36 | 3 | 39 | 38 | 15 | 7 |

The General Powers Act of 1908 has been found of considerable value in Hampstead in enabling the Sanitary Authority to require a reasonable standard of sanitation in places where food is prepared and sold, but it is chiefly of value in so far as it deals with structural conditions. There is still need for further powers to regulate the daily ordering of these places in order to secure a proper standard of cleanliness. Unfortunately, many of the persons engaged in the preparation of food have little appreciation of the importance of scrupulous cleanliness in their work, and not infrequently there is a striking contrast between the place where the food is shown to the public for sale and the place where it is prepared for sale. Slaughterhouses are not only regulated by a code of by-laws, but are also subject to annual licensing, and an important advance in sanitation would be secured if similar provisions were made to apply to bakehouses, dairies, restaurant kitchens, and other food premises. Modern research in sanitary science, based on the information furnished by a long and rapidly increasing series of food outbreaks in various parts of the country, tends to emphasize more and more the importance of the food factor in disease and the necessity for the stringent regulation of places where food is prepared for human consumption.

Inspection of Premises where Food is Prepared or Stored (other than Bakehouses, Milk Shops, Eating Houses and Slaughterhouses).

The premises inspected during the year, together with the nature of the business carried on, were as follows: -

| Butchers and Pork Bu | tchers | | 65 |
|-----------------------|--------|------|-----|
| Confectioners | | | 106 |
| Grocers | | | 76 |
| Provision and Cheesem | ongers | | 52 |
| Greengrocers and Frui | terers | | 86 |
| Fishmongers | | | 33 |
| Fried Fish Shops | | | 12 |
| General Shops | | | 27 |
| | | | 457 |

⁷³¹ inspections were made of these premises during the year and 155 notices were served.

Sale of Food and Drugs Acts.

The number of samples taken for analysis under the Sale of Food and Drugs Acts during the year was 506, and the number certified by the Public Analyst to be adulterated was 12, or 2.3 per cent. of the total number. The corresponding percentage in 1909 was 3.9; in 1908 it was 3.5. In addition, 17 samples were certified to be of low quality.

402 samples were purchased from Hampstead tradesmen, and 104 from persons residing without, but trading within, the Borough. The percentages of adulterated samples in these two classes were 1.9 and 3.8 respectively.

Seventeen samples were taken on Hampstead Heath on Bank Holidays, and of these 4, or 23.5 per cent. were adulterated, and one was of poor quality.

Forty-five samples were taken on Sundays; one of this number was found to be adulterated and two were of low quality.

The following table shows the articles of which samples were taken during the year, and the number found to be adulterated or of low quality:—

| Artic | les. | 1 | Number taken. | Adulterated. | Low Quality |
|-----------------|------|-----|------------------|-------------------|-------------|
| D | | | 73 | 1 | |
| Butter | | | | 1 | |
| Camphorated Oil | | | 6 | _ | |
| Cheese | | | 17 | _ | |
| Cocoa | | | 14 | - | _ |
| Coffee | | | 29 | - | _ |
| Cod Liver Oil | | | 5 | _ | _ |
| Dripping | | | 6 7 | - | - |
| Glycerine | | | 7 | _ | - |
| Lard | | | 24 | _ | - |
| Margarine | | | 5 | The land the same | _ |
| Milk | | | 310 | 11 | 17 |
| Mustard | | | | _ | _ |
| | | 133 | 2 1 2 5 | _ | _ |
| Peas, Preserved | | | 9 | Percent Three | _ |
| Pepper | | | 5 | | |
| Sausages | | | 1 | | |
| Tea | | | 1 | | |
| Tot | ala | | 506 | 12 | 17 |

The following table shows the number of samples analysed during each year from 1904 to 1910, the number and percentage of the adulterated samples, and the fines and costs recovered in legal proceedings:—

| Year. | Samples Analysed. | Number adulterated. | Percentage adulterated. | | es ar losts. | |
|-------|----------------------|------------------------|----------------------------|---------|-----------------|----|
| 1904 | 406 | 8 | 1.9 | £ 35 | s. 8 | d. |
| 1905 | 414 | 8 | 1.9 | 33 | 15 | 0 |
| 1906 | 413 | 20 | 4.8 | 50 | 8 | 6 |
| 1907 | 407 | 36 | 8.8 | 49 | 18 | 6 |
| 1908 | 508 | 18 | 3.5 | 12 | 1 | 0 |
| 1909 | 506 | 20 | 3.9 | 29 | 4 | 6 |
| 1910 | 506 | 12 | 2.3 | 25 | 6 | 0 |

The following table shows a comparison of the Wards in the Borough in respect of the samples purchased from Hampstead tradesmen:—

| Ward. | Samples analysed. | Number adulterated. | Percentage adulterated. |
|-------------------------------------|----------------------|---------------------|----------------------------|
| No. 1 (Town) | 67 | 1 | 1.4 |
| ST 0 (7) 1 ' \ | 68 | 1 | 5.8 |
| No. 2 (Belsize) No. 3 (Adelaide) | 18 | 1 | 5.5 |
| No. 4 (Central) | 21 | _ | _ |
| No. 5 (West End) | 86 | _ | _ |
| No. 6 (Kilburn) | 89 | 1 ' | 1.1 |
| No. 7 (Priory) | 53 | 1 | 1.8 |
| Totals | 402 | 8 | 1.9 |

The following table shows the articles adulterated, nature of adulteration and the result of proceedings taken: —

| No. of Sample. | Articl | e. | How adulterated. | | Res | ult o | f pro | ceeding | gs, | |
|-------------------|--------|----|---|------|-----|-------|-------|-----------|------|-----|
| 40 | Milk | | 6 per cent. deficient in butter-fat | | | sed. | | ndor | prov | ing |
| | | | | | £ | s. | d. | | | |
| 49 | Butter | | 59 grains of boric acid per pound | Fine | e 0 | 10 | 0 | Costs | 12 | 6 |
| 53 | Milk | | 25 per cent. deficient in butter-fat | ,,, | 0 | 10 | 0 | " | 12 | 6 |
| 127 | Milk | | $2\frac{1}{2}$ per cent. added water | I | | lie | | ore ealth | | |
| | | | | | | | d. | | s. | d. |
| 136 | Milk | | 16 per cent. added water | Fine | | | | Costs | | |
| 169 | Milk | | 31 per cent. added water | " | 10 | 0 | 0 | inclu | ding | , |
| 171 | Milk | | 93 per cent. deficient in butter-fat | 33 | 2 | 0 | 0 | | ,, | |
| 172 | Milk | | 9 per cent. deficient in butter-fat | " | 1 | 0 | 0 | Costs | 14 | 6 |
| 173 | Milk | | 10 per cent. added water | " | 1 | 1 | 0 | " | 21 | 0 |
| 210 | Milk | | 14 per cent. deficient in butter-fat | ,, | 2 | 0 | 0 | ,, | 12 | 6 |
| 222 | Milk | | 11 per cent. added water | ,, | 1 | 0 | 0 | ,, | 12 | 6 |
| 275 | Milk | | 26 per cent. deficient in butter-fat | " | 0 | 10 | 0 | " | 17 | 0 |

In addition to the samples hitherto described, three informal samples of butter were taken, two of which proved to be adulterated.

Complaints.

During 1910 755 complaints were made of the existence of insanitary conditions. A list of the matters of which complaint was made is given below:—

| Accumulations, offensive | | | 7 |
|--|----------|------|-----|

Factory and Workshop Act, 1901.

Pactory and Workshop Act, 1991.

Factory and Workshop Act, 1901.

This part of the Report is made pursuant to Section 132 of the Factory and Workshop Act, 1901, which provides that—

"The Medical Officer of Health of every District Council shall in his Annual Report to them, report specifically on the administration of this Act in workshops and workplaces, and he shall send a copy of his Annual Report, or so much of it as deals with this subject, to the Secretary of State."

At the end of 1910 there were 468 workshops on the register, o which 38 were domestic workshops. Excluding the latter, there were employed in the workshops 706 males and 1,040 females. Dressmaking is the trade chiefly carried on in the Hampstead workshops, and next in order of frequency come bootmaking, baking, tailoring and millinery.

The following table shows the number of each class of workshops' the number of workrooms, and the number of persons of each sex employed.

Workshops, and Domestic Workshops.

Workshop Inspection.

The following particulars relate to the workshop inspections made during 1910, bakehouse inspections being omitted. The total number of inspections made during the year was 594; this number is slightly lower than the corresponding number in 1909, owing to the fact that Miss Moynihan, one of the Workshop Inspectors, resigned during 1910, and her successor did not enter upon her duties until the following year.

Cleanliness.

Eleven workrooms were found on inspection to require cleansing; 5 of these were cleansed on the request of the Inspector, and in 6 cases it was necessary to serve a notice before the work was carried out.

Ventilation and Warming.

Two workshops were found to be without windows or any means of ventilation other than the door opening into the workshop. In both cases the lighting was so defective that it was necessary to use artificial light while work was being carried on. In 8 other workshops the means of ventilation were inadequate. In all these cases proper means of ventilation were provided.

Eight workshops were found to be warmed by gas stoves unprovided with flues to carry off the products of combustion. This is a contravention of Section 6 of the Factory Act, in which it is laid down that the measures which in every factory and workshop "must be taken for securing and maintaining a reasonable temperature in each room in which any person is employed, must not interfere with the purity of the air of any room in which any person is employed." In 5 cases suitable means of warming were provided, 2 cases were reported to the Factory Inspector, and one case was under notice at the end of the year.

Overcrowding.

All the workrooms in the workshops are measured by the inspectors, and the cubic space in each room is ascertained. The maximum number of workers that can legally occupy the room is then calculated, and this information set out on a card supplied by the Council, which is hung up in each room. The number of legal occupants varies according as overtime is worked, or whether the room is used as a sleeping room as well as a workroom. During 1910 47 new workrooms were measured.

Overcrowding was found in 14 instances. In 9 cases the overcrowding was abated at the request of the Inspector, but in 5 cases it was found necessary to serve a written notice.

Abstract of the Act.

Section 128 of the Factory Act provides that an abstract of the Act "shall be affixed at the entrance of every factory and workshop, and in such other parts thereof" as the factory inspector may direct; and Section 133 of the Act provides that "when any women, young person, or child is employed in a workshop in which no abstract of this Act is affixed as by this Act required, and the Medical Officer of Health of the District Council becomes aware thereof, he shall forthwith give written notice thereof to the Inspector for the district." The object of this section is to secure that all new workshops in which protected persons are employed, discovered by the officers of the local authority shall be brought to the notice of the Factory Inspector, who supplies the occupiers of workshops with the abstracts of the Act. The occupier of a workshop is under legal obligation to give notice of his occupation of the workshop to the Factory Inspector within a month after it has begun, but owing to ignorance of the law, and for other reasons this obligation is frequently left unfulfilled, and the inspector is informed of the occupation by the local Medical Officer of Health. Pursuant to this section 25 workshops were notified to H.M. Inspector of Factories as being without the abstract as required.

Bakehouses.

At the end of 1910 there were 38 bakehouses on the register, 22 being underground, and 16 above ground. Three of the bakehouses situated above ground use power and are therefore factories.

Three inspections were made in respect of the factory bakehouses, and 70 inspections in respect of the workshop bakehouses.

In a considerable number of bakehouses, particularly those where confectionery is made, the standard of cleanliness is not high, although the conditions are hardly serious enough to constitute a contravention of the Act. Bakehouses, like other places where food is prepared for human consumption, need to be regulated by by-laws formulating in detail the conditions as to cleanliness, &c., that should be observed.

The following is a list of the Bakehouses on the Register at the end of the year:—

Bakehouses in Wards.

Those marked * are underground bakehouses.

Those marked † are factory bakehouses.

| No. 1 (Town) Ward- | 553, Finchley Road. |

Workplaces.

This term is not defined in the Factory Act, nor in the Public Health Act, and it is sometimes exceedingly difficult to decide whether certain premises are or are not "workplaces." Among the more important workplaces are the kitchens of restaurants, coffee-houses, etc., and the number of these places in Hampstead in 1909 was 62. During 1910, 7 restaurant kitchens were added to the register, and 3 were removed, leaving a total of 66 on the register at the end of the year.

These premises are kept under regular supervision.

The following is a list of the restaurant kitchens in the various wards of the Borough :-

| Restaurant Kitch | hens in Wards. |
|---|----------------------------------|
| No. 1 (Town) Ward— | 143, Adelaide Road. |
| Jack Straw's Castle, Hampstead | 97, Haverstock Hill. |

| No. 7 (Priory) Ward- | Steer's Restaurant, Upper Avenue Road (13) |
| 121, Abbey Road. 21, Alexandra Road. | Total 66 |

The number of inspections of the above premises made during the year was 239 and 21 notices were served.

Home Work.

The Factory Act provides that in certain trades, to be specified by the Home Secretary, the employers shall send to the sanitary authority twice a year lists giving the names and addresses of the out-workers employed by them. The Home Secretary has from time to time specified certain trades to which these provisions apply.

The number of lists received from employers was 158 and the number of addresses contained in the lists was 415. In 355 instances it was found that the addresses were outside Hampstead, and in accordance with the Act they were sent to the Medical Officers of Health of their respective districts. The number of addresses of persons stated to be Hampstead workers received from the Medical Officers of Health of the districts in which the employers of these workers carried on business was 40.

The total number of outworkers' premises in Hampstead is 84. Of these 5 are factories, 51 are workshops (19 of these being domestic workshops), 2 are workplaces, and in 26 cases only a single worker is employed on the premises.

(0)

Factories.

The sanitation of factories is largely controlled by the Factory Inspectors, but duties of considerable importance relating to general sanitation devolve upon the Borough Council, who are responsible, among other duties, for the administration of Section 38 of the Public Health (London) Act, 1891. The section imposes upon the Council the duty of securing "suitable and sufficient accommodation in the way of sanitary conveniences" for the persons of both sexes employed in the Hampstead factories, workshops, and workplaces.

The following is a list of the different classes of factories in Hampstead:—

| Art Metal Workers | 2 | Dairymen | | 2 |
|-------------------|-------|---------------|------|----|
| Bakehouses | 2 | Laundries | | 6 |
| Bootmakers | 7 | Motor Workers | | 4 |
| Builders | 4 | Printers | | 9 |
| Butchers | 8 | Other trades | | 18 |
| Carpet Beaters | 2 | | | _ |
| Coffee Roasters | 5 | | | 69 |

The five tables that follow have been framed by the Home Secretary "for the guidance and convenience of Medical Officers of Health in preparing that part of their Annual Report which relates to factories, workshops, workplaces, and homework."

FACTORIES, WORKSHOPS, WORKPLACES AND HOMEWORK.

1,-Inspection of Factories, Workshops, and Workplaces.

INCLUDING INSPECTIONS MADE BY SANITARY INSPECTORS.

| | Number of | | | | | | |
|---------------|--------------|---------------------|---------------|--|--|--|--|
| Premises. (1) | Inspections. | Written Notices. | Prosecutions. | | | | |
| Factories | 78 | _ | - | | | | |
| Workshops | 763 | 22 | - | | | | |
| Workplaces | 1010 | 23 | _ | | | | |
| Total | 1851 | 45 | - | | | | |

2.—Defects found in Factories, Workshops, and Workplaces.

| | Numb | per of] | Defects. | |
|--|-------------------------------------|------------------------------------|-----------------------------------|---------------------------|
| Particulars. | Found. | Remedied. | Referred to H.M. Inspector. | Number of Prosecutions |
| (1) | (2) | (3) | (4) | (5) |
| Nuisances under the Public Health Act:— Want of cleanliness | 23 10 14 - 45 2 5 | 22 9 14 - 43 2 5 | 11111111 | |
| Offences under the Factory and Workshop Act:— Illegal occupation of underground bakehouse (s. 101) Breach of special sanitary requirements for bakehouses (ss. 97 to 100) Other offences (Excluding offences relating to outwork which are included in Part 3 of this Report.) | 1.1.1.1 | | | |

Column (2) in the above table gives the number of defects found, and column (3) the number remedied during the year. The corresponding figures in the two columns are not identical, because in the case of some of the defects discovered near the end of the year, the work necessary to remedy the defects had not been completed, and column (3) includes some defects which were found at the end of 1909, and remedied in the following year.

Report on the Analytical Work of the Year 1910,

BY

ALFRED W. STOKES, F.C.S., F.I.C., Public Analyst.

Report on the Analytical Work of the Year 1910,

ALERED W. STORIES, PRINCE PLANTED ASSESSED.

ANALYTICAL LABORATORY,

Town Hall, Paddington, W.

9th January, 1911.

A short abstract of the analytical work of the year 1910 may be of interest.

A total of 509 samples were analysed. These comprised Milk 310, Butter 76, Groceries 60, Lard 24, Cheese 17, Drugs 17, and Margarine 5.

Of the Milk samples only 11 samples, or $3\frac{1}{2}$ per cent., were adulterated, while in London generally the proportion of adulterated samples was about 10 per cent.

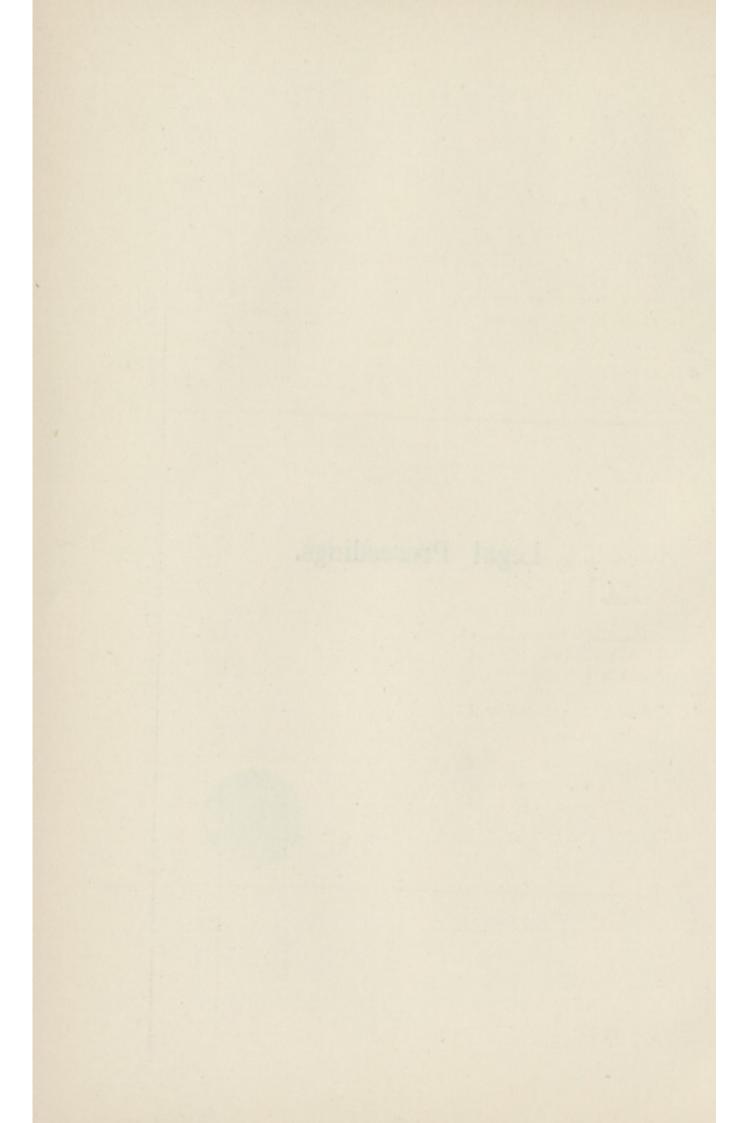

The 76 samples of Butter contained only 3 adulterated samples, or 4 per cent, as against the 9 per cent. in London generally. These were the only articles adulterated. The Groceries, Drugs, &c., were all genuine and of good quality.

Contrasted with the food supply of the Metropolis generally, which shows about $8\frac{1}{2}$ per cent. of adulterated samples, Hampstead comes out very well indeed, since it shows only $2\frac{3}{4}$ per cent. of adulterated samples.

ALF. W. STOKES, F.C.S., F.I.C.,

Public Analyst.

Legal Proceedings.

Legal Proceedings.

Legal proceedings were taken by the Council in connection with the work of the Health Department in 54 cases during the year. The chief facts relating to these proceedings are set out on pages 108-112, and are summarised below. The facts relate only to the cases that were heard and decided in 1910.

| Statute or By-law. | Number of Prosecutions. | Fines. | Costs. |
|---|-------------------------|---------|---------|

*Rates in Columns 4, 8 and 13 calculated per 1000 of estimated population.

Note.—The deaths included in Column 7 of this Table are the whole of those registered during the year as having actually occurred within the Borough. The deaths included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10, and the addition of the number in Column 11.

By the term "Non-residents" is meant persons brought into the Borough on account of sickness or infirmity, and dying in public institutions there; and by the term "Residents" is meant persons who have been taken out of the Borough on account of sickness or infirmity, and have died in public institutions "taken into account for the purposes of these Tables are those into which persons are habitually received on account of sickness or infirmity, such as hospitals, workhouses, and lunatic asylums. A list of the Institutions in respect of the deaths in which corrections have been made is given on the following pages.

Area of Borough in acres (exclusive of area covered by water), 2253.

Total population at all ages, \$1,942.

At Census of 1901.

Note.—The omission of a number from the first column denotes that no death was registered from the cause of death to which the number relates.

Note.—It will be noted that the total number of deaths in the Ward distribution is 8 less than the total number of deaths at the age periods. This is accounted for by the fact that in these cases a definite address was not registered. (See note at foot of Table II.)

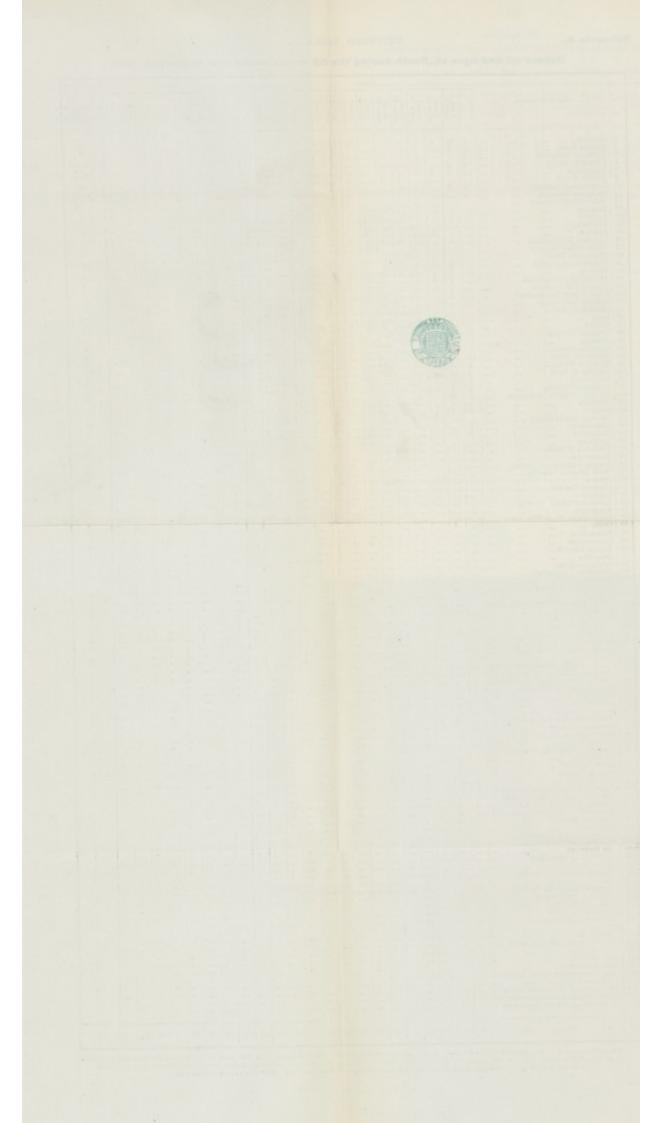

TABLE V.

(Required by the Local Government Board to be used in the Annual Report of the Medical Officer of Health.)

Infantile Mortality during the Year 1910.

DEATHS FROM STATED CAUSES IN WEEKS AND MONTHS UNDER ONE VEAR OF AGE.

legitimate infants, 71. illegitimate infants, 10.

The following table was suggested by the Medical Officer of Health to the County of London in order to secure uniformity of tabulation in the Annual Reports of the Medical Officers of Health of the Metropolitan Boroughs:—

TABLE VI.

| | NUM | IBER C | F PLA | CES. | 910. | 0. | 1910. |
|---|--------------------------------|-------------------|---------------------|--------------------------------|------------------------------|-----------|---------------------------------|
| PREMISES. | On register at end of 1909. | Added in 1910. | Removed in 1910. | On register at end of 1910. | Number of inspections, 19 | 95 38 | Number of prosecutions, 1910 |
| Milk premises | 115 | 6 | 14 | 107 | 495 | 38 | _ |
| Cowsheds | 5 | = | 1 | 4 | 59 | 3 | 1 |
| mises | - 78 | - 12 | 7 | 83 | 289 | 27 | = |
| Registered houses let in lodgings | 364 | _ | _ | 364 | 103 | _ | - |
| Number remedied Number of notices issue Number of prosecution | | | | | | | 4 |
| | 8 | | | | | | - 107 |
| Number closed during | | | | | | | 60 |
| Illegal occupation dealt | with | during | year | | | | 114 |
| Insanitary houses — Number closed under the | | lic Hea | | | | | - |
| Shelters provided under Sec. (Act, 1891— | 30 (4) | of the | Public | Healt | h (Lon | ndon) | |
| Number of persons acco | ommod | lated d | uring | the year | ar | | _ |

TABLE VI.—continued.

| Customs and Inland Revenue Acts- | |
|--|-----------|
| Number of houses for which applications were received | 15 |
| Number of dwellings comprised therein | 51 |
| Number of Certificates granted (houses) | *4 |
| ,, refused (,,) | - |
| ", deferred (",) | †11 |
| Number of prosecutions under By-laws under Public Health (London) Act, 1891— | |
| (a) For prevention of nuisance arising from snow, ice, salt, filth, &c | |
| (b) For prevention of nuisance arising from offensive matter | |
| running out of any manufactory, &c | Daniel CT |
| (c) For the prevention of keeping of animals in such a | |
| manner as to be injurious to health | _ |
| (d) As to paving of yards, &c., of dwelling houses | |
| (e) In connection with the removal of offensive matter, &c. | _ |
| (f) As to cesspools and privies, removal and disposal of | |
| refuse, &c | _ |
| (g) For securing the cleanliness of tanks, cisterns, &c | _ |
| (h) With respect to water-closets, earth-closets, &c | 1 |
| (i) With respect to sufficiency of water supply to water- | |
| closets | _ |
| Number of prosecutions under Dairies, Cowsheds and Milkshops | |
| Orders— Dirty milk utensils | _ |
| | |
| Number of prosecutious under By-laws under Metropolis Manage- ment Acts— | |
| (a) With respect to drainage, &c | 3 |
| (b) With respect to deposit of plans as to drainage, &c | 8 |
| London County Council (General Powers) Act, 1903, Part VIII.— | |
| Number of prosecutions for breach of by-laws as to con- | |
| veyance of dead horse through street | |
| | |

^{*} These 4 houses comprised 17 "dwellings." † ", 11 ", ", 39 ",

TABLE VI.—continued.

| London County Council (General Powers) Act, 1904, Part I) | V.— | |
|--|-----|----|
| Number of filthy articles purified (Sec. 19) | | _ |
| ", ", destroyed (Sec. 19) | | 11 |
| ,, verminous rooms cleansed (Sec. 20) | | 22 |
| " houses " (Sec. 20) | | 12 |
| ,, sanitary conveniences altered (Sec. 22) | | _ |
| ", removed (Sec. 22) | | _ |
| " fixed ashpits removed (Sec. 23) | | 22 |
