## Borough of Bermondsey.

## ANNUAL REPORT

OF THE

## MEDICAL OFFICER OF HEALTH.

To the Mayor, Aldermen and Councillors of the Borough of Bermondsey.

#### MADAM, LADIES AND GENTLEMEN,

I beg to submit my Annual Report for the year 1932. There are no special points to which it is necessary to draw attention this year. The work of the Department has proceeded smoothly, and I trust, with efficiency during the year, and I have to thank both the Chairmen and Members of Committees, and the staff, for their very willing co-operation at all times.

Perhaps I may be allowed also to express my own personal sense of loss occasioned by the death of Mrs. Nix, lately the Chairman of the Maternity and Child Welfare Committee—a real friend—an ideal Chairman.

I am, Madam, Ladies and Gentlemen,

Your obedient Servant,

D. M. CONNAN.

## I.—VITAL STATISTICS.

#### GENERAL.

The area of the Borough (exclusive of area covered by water) is 1,336 acres.

The number of inhabited houses at the end of 1932 according to the Rate Books was 18,711.

The rateable value of the Borough on the 31st December, 1932 was £871,361, the product of a penny rate being £3,415.

#### POPULATION.

Cer	nsus	Estim Registrar	ate of General
1921	1931	to 30th June, 1931	to 30th June, 1932
119,452	111,542	112,400	110,100

#### BIRTHS.

The total number of births belonging to the Borough registered during 1932 was 1831, consisting of 961 males and 870 females. The number for 1931 was 1,958.

The birth rate for 1932 was 16.6 per 1,000 persons living, compared with 17.4 for 1931.

#### DEATHS.

The total number of deaths belonging to the Borough registered during 1932 was 1,326, consisting of 750 males and 576 females. The number for 1931 was 1,408.

The death rate for 1932 was 12.0 per 1,000 persons living, compared with 12.5 for 1931.

#### MARRIAGES.

The total number of marriages in the Borough in 1932 was 936, being 65 below the number for 1931, and 84 below the average for the last 10 years.

The figures have been supplied by the Superintendent Registrar. This makes a marriage rate of 17.00 per 1,000 of the population, compared with a marriage rate last year of 17.81.

## II.—INFECTIOUS DISEASES, ETC.

The following diseases are notifiable:-

Anthrax

Acute Poliomyelitis

Acute Influenzal Pneumonia

Cerebro Spinal Meningitis

Diphtheria

Enteric Fever and Typhoid

Fever

Glanders

Malaria

Ophthalmia Neonatorum

Puerperal Pyrexia

Scarlet Fever and Scarlatina

Typhus

Acute Polioencephalitis

Acute Primary Pneumonia

Cholera

Continued Fever

Encephalitis Lethargica

Erysipelas

Hydrophobia in Man

Membranous Croup

Puerperal Fever

Relapsing Fever

Small Pox

Tuberculosis-all forms

Owing to the housing conditions of the Borough, it is the practice to remove to hospital nearly all cases of diphtheria and scarlet fever.

#### DIPHTHERIA.

The number of cases notified was exactly the same as last year, namely 263. Six cases were returned as not suffering from Diphtheria, and there were eleven deaths. Very little use is being made of the provision for immunisation against the disease, and the total number of attendances for the whole year was only 55.

No. of patients examined	No. found to be positive and immunised		No. immunised without Test	No. of sessions	Total attend- ances
12	3	6	3	30	55

#### SCARLET FEVER.

There has been a rise in the number of cases of Scarlet Fever, the number being 446, with a net total of 432 as 14 cases were returned as not suffering from the disease. The mild form of the disease still prevails and there were no deaths.

#### SMALL-POX.

There were 16 cases of Small-pox during the year. This is an increase as compared with 3 last year, but on the whole this borough has been exceptionally fortunate as compared with other metropolitan boroughs, in having so few cases.

No re-vaccinations were performed under the Public Health (Small-pox Prevention) Regulations, 1917.

#### MEASLES.

The number of cases reported was 1,730 as compared with 1,418 in the last epidemic year (1930) and 216 last year. Of these, 240 cases were removed to hospital and nursing was provided for 68 cases at home. There were 25 deaths, 7 at home and 18 in hospital.

#### OPHTHALMIA NEONATORUM.

The following table gives particulars of the number of cases of this disease. In five instances nursing was provided:—

	Cases					h bro.
Notified	Trea	ated	Vision Un-	Vision Impaired	Total Blindness	Deaths
Notified	At home	In Hospital	Impaired	Impaned	Dilliditese	
10	5	5	9	_		_

The subsequent history of one case which was treated in hospital could not be ascertained owing to the removal of the family to an unknown address.

#### PUERPERAL FEVER AND PUERPERAL PYREXIA.

The number of cases notified was, as follows:—

Puerperal Fever .. 8 Puerperal Pyrexia .. 27

Facilities are provided by the Council for assistance in the diagnosis and treatment of these cases. These facilities include the provision of the services of a consultant and of a nurse where necessary. We also undertake bacteriological examinations and arrange for the admission of patients to hospital where this is desired.

Facilities			No. of Cases
Second Opinions			 2
Nursing provided		1	 4
Bacteriological examinations			 Nil
Admitted to Hospital	THE PARTY NAMED IN	to mode	 30

#### DISINFECTION.

Disinfection of premises and of articles exposed to infection is insisted upon in all cases of notifiable infectious disease. Respect is always had as far as possible to the convenience and comfort of the householder. Rooms are sealed up for disinfection and beds, bedding, clothes and other articles are removed and disinfected at the station. The following table shows the number of articles disinfected during the year:—

Beds	98.20 9	 934	Pillows	 2,162
Blankets		 4,208	Pillows (cases)	 1,991
Bolsters		 666	Quilts	 1,448
,, (ca	ses)	 298	Sheets	 1,750
Books		 283	Miscellaneous	 5,290
Cushions		 292	Verminous Clothing	 3,645
Mattresses		 103	,, Bedding	 280
Overlays		 724	Scabies, Clothing	 13,021

24,098 new tabs were used to replace those taken off mattresses, palliasses, and cushions before disinfection.

Number of rooms disinfected	 	 2,597
Carling Santa and Santa		

2,829

#### CLEANSING STATION

Number of mattresses and other articles destroyed

		01711	10111	
Verminous persons clear	nsed		Adult Fer Adult Ma Children	
Persons treated for So	cabies :-			
			Number	Number of
			treated	baths given
Adult Females .			32	69
Adult Males			24	58
Children—Females .	. 0000 . 100		148	930
Children—Males .			103	646

#### SHELTER.

Four flats are provided in The Neckinger for the temporary housing of families or persons while their premises are being disinfected. The number of families accommodated during the year was 17, 7 for Small-pox, 3 for Diphtheria, 3 for Scarlet Fever, and 4 for verminous conditions, the total number of persons accommodated being 54.

#### BACTERIOLOGICAL LABORATORY.

As in previous years the work of the laboratory has consisted very largely in the examination of sputa and throat swabs. Many of the throat swabs are sent by general practitioners and sterile outfits for this purpose are supplied free on application to the Medical Officer of Health. All Diphtheria contacts of school age are excluded from school until the throat swab is negative. A positive result of course necessitates a further examination, and treatment in the meantime by the private practitioner. Proved "Carriers" are usually referred to the London County Council "Carriers" Clinic at Guy's Hospital.

In addition to the examination of swabs and sputa other bacteriological investigations are undertaken when requested.

Total specimens taken	4628	3957	567	412	4061	3545		

#### FOOD POISONING.

Section 7 of the London County Council (General Powers) Act, 1932, provides that every registered medical practitioner shall send to the Medical Officer of Health a notification for every case, or suspected case, of Food Poisoning.

Number of cases notified during 1932 .. .. .. 10

#### FOOT CLINIC.

The total number of sessions per week is as it was last year, viz., 9, but on the 16th August this year a new clinic was opened in Bermondsey Town Hall for two sessions a week and the number of sessions at Rotherhithe was reduced by two. In spite of the fact that the fee for treatment is now 1/- instead of 6d., there has been no falling off in the number of attendances which were 10,145 as against 9,021 last year.

Quite a large number of patients now attend regularly for treatment every three or four weeks, and there is no doubt that these clinics render a very valuable service in this borough.

#### NURSING.

The following table shows the number of patients nursed under the Council's Scheme, the diseases from which these patients were suffering and the number of visits paid. Under this scheme the Council assists in the provision of nursing for expectant and nursing mothers, children under five, and for patients suffering from the following diseases:—Measles, German Measles, Whooping Cough, Puerperal Fever and Puerperal Pyrexia, Epidemic Diarrhæa, Dysentery, Influenza, Ophthalmia Neonatorum, Polio-myelitis, Encephalitis Lethargica, Malaria, Acute Primary and Acute Influenzal Pneumonia and Tuberculosis.

## III.—TUBERCULOSIS.

In Table I are set out particulars of new cases and deaths during the year, and Table II shows the period elapsing between notification and death.

TABLE I.
TUBERCULOSIS, 1932—NEW CASES AND DEATHS.

In Table II. it will be noted that eleven cases of pulmonary tuberculosis were not notified to me before death, an actual increase of four over the number of such cases in 1931. Of these 11 cases 4 males and 1 female were aged 56 years or over at death and had been admitted to the local general hospital only a short time before death. Another female, aged 32, died out of the district and had not been resident in the borough for a considerable period before death. With regard to the 5 remaining males (aged 16—37), on 2 of whom inquests were held, death occurred suddenly or the diagnosis remained in doubt until the end. Thus, although there has been a small increase in the number of unnotified deaths there is no evidence to suggest that there has been any relaxation amongst medical practitioners in their efforts to comply with the notification regulations.

I am pleased to report that there was a decline in the number of deaths due to miliary or meningeal tuberculosis, amongst children aged 10 and under. In 1932 these numbered only 4 compared with 16 in 1930 and 11 in 1931. It is difficult to account precisely for this decline. Advantage is taken of the London County Council's scheme for the boarding out of children from homes where there is an infectious case of tuberculosis in the family and approximately 15 children are sent away each year. Difficulty, however, is always experienced in persuading parents to part from infants, who are of course the most susceptible to the disease, and the majority of children "boarded out" are of school age.

It seems possible that one of the deciding factors in the decline is the increased use of the local hospital for the admission of active and advanced cases. The Tuberculosis Officers, who are known to the patients and their families, visit the hospital regularly and this has, without doubt, helped to keep in the institution many who would otherwise return home and remain a source of infection to others. Attention was drawn, in a previous report, to the importance of human infection in cases of miliary tuberculosis. Of the 4 children, all males, who died in 1932, 3

had been in contact during their lifetime with cases of active pulmonary tuberculosis, but in the fourth case it was impossible to discover the source of infection as the contacts refused to be examined.

On page 31 is a return showing the work done at the Tuberculosis Dispensary during the year. There has been a slight increase both in the number of new cases of tuberculosis seen at the Dispensary and in the number of cases referred for investigation. The majority of the latter are sent by medical practitioners who are making good use of the services of the Tuberculosis Officers and of the auxiliary facilities, such as X-rays, provided for the diagnosis of obscure cases.

The periodical examination and supervision of contacts is being maintained, and there has been a slight increase in the number of adult contacts examined. It is always easier to secure the examination of children, but the supervision of adults, and especially of adolescents, is of equal importance in our attempt to prevent the disease or to check it at its onset.

The number of X-ray examinations shows a decline, due solely to an increase in the charges made by the London County Council for this work. These charges, however, have now been revised and the number of X-ray examinations made will not be determined primarily by expense.

In my last report, I mentioned that the Tuberculosis Officers were now giving artificial pneumothorax refills at the Dispensary to the great advantage of the patients. The number of "refills" this year has reached a total of 453 and in view of the fact that a charge of 10/6 for each "refill" is sanctioned when these are done at hospital, this work of the Tuberculosis Officers has meant a considerable saving to the borough.

An evening clinic is held for those who work during the day.

The following Table shows the present condition of patients who have had artificial pneumothorax treatment. The small figures in brackets indicate the number of patients (in each group) in whom the disease was already bilateral when the treatment was started.

Results in such cases are not expected to be as good as in those patients with early unilateral disease.

Treatment begun	Arrested	Quiescent	Stationary	Dead
1923	1	_	_	_
1928	1	_	_	
1929	3			2 (2)
1930	8	2	2	3 (2)
1931	4	12	10 (4)	

(The cases started during 1932 are not shown in this table.)

The total numbers are too small, and sufficient time has not yet elapsed to enable a comparison to be drawn between this and other forms of treatment. The results so far achieved, however, are encouraging, and the benefits of the treatment in early cases of pulmonary tuberculosis in an industrial district are undoubted. It is of interest to note that in ten of the arrested and quiescent cases shown above, the treatment was started in St. Olave's Hospital, where a close association and co-operation has been maintained between the Tuberculosis Officers and the Medical Officers of the Hospital.

#### NURSING AND EXTRA NOURISHMENT.

The Nursing Associations have been of the very greatest assistance to us during the year and their work has been of value in two ways. In quite a number of cases a daily record of temperature (morning and evening) is of assistance in diagnosis, and the Tuberculosis Officer often makes use of the services of the district nurse for this purpose. In other cases where the patient is bedridden, the nurse can do much to alleviate suffering and to see that the patient carries out instructions so that the risk of infection for other members of the household is lessened.

In addition to the services of the district nurses, the Tuberculosis Officer has authority to supply a small amount of extra nourishment to tuberculous patients, which takes the form of milk and eggs or Virol and milk; a total of 212 patients have been thus assisted during the year.

#### SHELTERS.

For many years the Council has loaned shelters free for the use of patients suffering from tuberculosis. The shelters are built by the Works Department and are of the ordinary sanatorium fixed type, so constructed that even when completely closed, ample ventilation through louvres is provided. The use of a shelter diminishes the risk of infection which is so serious in an overcrowded home, but the instances in which a shelter can be erected are few, since the garden space available is usually either insufficient or unsuitable. Beds and bedding are supplied with the shelter and in some cases arrangements have been made for electric light to be installed. There are 21 shelters at present in use, 6 new ones having been erected during the year and 7 dismantled owing to the death or removal of the patient.

In addition to the supply of shelters, beds and bedding are supplied on loan for the use of patients at home where suitable use can be made of them. By this means we are often enabled to arrange for a patient to sleep alone and so lessen the risk of infection. Twenty-three beds are in use at present.

#### LADY ALMONER.

The social side of tuberculosis work is of the utmost importance. Practically all tuberculous patients in this borough require assistance of some sort beyond the mere diagnosis of the disease and provision of sanatorium treatment. The Lady Almoner is the connecting link between the needy patient and the source of assistance. During this year Miss Pike has made 966 visits to homes of patients in connection with this side of the Tuberculosis Scheme, and a great deal of very varied assistance has been given to patients. In many cases clothing has been found for needy

patients going to sanatoria. In other cases help has been given by way of providing surgical boots, belts, artificial limbs and elastic bandages. Convalescent treatment and seaside holidays have been arranged in a number of non-tuberculous cases, and in others assistance has been given in the matter of fares. Continuous attempts have been made to find work for ex-sanatorium patients, in a few cases with some degree of success.

The Lady Almoner continues the work of assessment for the London County Council in connection with sanatorium treatment and for patients for admission to Fairby Grange. She also conducts the handicraft class on Friday afternoons at the Dispensary. Many articles in leather and pewter have been made, and in spite of the difficulties of the year, all these have been sold.

Our grateful thanks are due to the following societies for their kind assistance on many occasions—Metropolitan Convalescent Institution, Surgical Aid Society, Friends of the Poor, United Services Fund, Royal Red Cross Society, Charity Organisation Society, Woman's Holiday Fund, Queen Mary's Needlework Guild per Lady Ludlow for grant of clothing and the Public Assistance Committee.

# PUBLIC HEALTH (PREVENTION OF TUBERCULOSIS) REGULATIONS, 1925.

It was not found necessary to take any action under these Regulations in 1932.

	the year					685

(The Maternity and Child Welfare patients formed 32.5 per cent. of the total number under treatment and the tuberculosis patients 5.3 per cent.)

All patients attending for treatment are recommended by general practitioners or by medical officers of the Maternity and Child Welfare Centres, the Tuberculosis Dispensary or Hospitals. Every patient is examined by a member of the medical staff before and during treatment and a medical officer is on duty in the Solarium during nine of the sessions each week.

During the year there has been a considerable increase in the amount of work done in the Solarium, and the number of attendances shows an increase of 6,000 compared with last year.

These figures are gratifying when it is remembered that the light clinic is situated in a temporary corrugated iron building which in many respects is unsatisfactory, particularly in the matter of dressing room accommodation. In previous years the Solarium has not been closed at all during the year, except for a day or two at Christmas. This year the staff took their holidays

at the same time, and the Solarium was closed for three weeks in August. This arrangement has worked well, and as many patients, especially school children, become irregular in their attendances during the holiday months of August, there has been little or no disadvantage to patients.

There was no change in the general equipment of the apparatus, and maintenance in this direction was limited to the rejuvenation of quartzburners, the output of which deteriorates when subjected to prolonged usage. Individual treatment is conducted in cubicles and the group system has been maintained for school children and toddlers.

This Clinic is of great value to the Tuberculosis Officers, who report improvement in many cases.

Good results, previously noted, have been achieved in cases of tuberculosis, particularly, in suppurative or non-pulmonary conditions. The treatment is also of high value in helping to maintain a patient's condition after his return home from Sanatorium.

Uniformly good improvement was obtained in the Maternity and Child Welfare section, both in ante-natal cases and amongst children suffering from rickets and from malnutrition and debility.

As stated last year many patients were referred for treatment for chronic rheumatism conditions, and, in approximately twothirds of these cases, an improvement is noted with amelioration of suffering.

# V.—MATERNITY AND CHILD WELFARE.

There has been no material alteration in the Maternity and Child Welfare Scheme during the year. I reported last year that, owing to re-building operations in connection with Percy Hall, it had been necessary to find temporary accommodation at the Time and Talents Club. The new building in Jamaica Road was completed in the early part of this year, and the clinic has now removed from the Time and Talents Club to the new premises of the Bermondsey Gospel Mission. Changes have also been made with regard to the child welfare work at the Central Hall in Tower Bridge Road, so as to bring this centre more directly into line with the general scheme. There are six clinics held each week, at two of which Dr. Telfer now attends. In addition, three municipal health visitors are now helping at each session, and a district has been allocated to the health visitor employed by the Central Hall for systematic home visiting. It is anticipated that these alterations will result in a considerable improvement in the quality of the work done at this centre.

#### FAIRBY GRANGE CONVALESCENT HOME.

There has been a slight decrease in the total number of admissions to the home as compared with last year, the figures being:—

Number of women admitted	 	 	 224
Number of babies admitted	 	 	 107
Number of toddlers admitted		 	 147

#### MIDWIFERY SERVICE.

Under this scheme 498 patients "booked" during the year. In 313 of these cases the full fee of the midwife was paid by the Council and a proportion of the fee was paid in 169 other cases; the remaining 16 cases were assessed to pay the full fee.

#### OBSTETRIC AND PUERPERAL FEVER CONSULTANTS.

The names of the gentlemen who have agreed to act in this capacity will be found on page 71.

The number of consultation	ıs	during	the	year	was as	follows	:
Obstetric Consultations							Nil
Puerperal Fever Consultations							2

# VI. DENTAL TREATMENT.

I have to report an increase of 933 in the number of patients treated during 1932. This figure includes an increase of 231 in the number of children treated.

Generally speaking there has been an increase in the amount of surgical work carried out, and a slight decrease of prosthetic work. This decrease is due partly to trade depression and partly to restriction of dental benefit under the National Health Insurance.

It has been found possible to dispense with one gas session at the Bermondsey Centre.

# VII.—PROPAGANDA.

During the year 1932, the following lectures and demonstrations, each illustrated by lantern slides and cinema films, were given:—

				Lectures.	Audiences.
Schools			 	40	10,350
Clubs and ot	her Ins	titutions	 	46	3,880
Open-air, with cinema van		 	62	29,550	
				148	43,780
				-	

The total of 148 is three less than for the previous year, when the number of 151.

A new film of 2,000 ft. entitled "Consumption," was written and produced, the general theme being that "Consumption is Curable, Consumption is Preventable." The film strikes a cheery note throughout, and has been very useful in helping to remove from the public mind the dread of the disease, and the feeling of hopelessness which so commonly seizes those who suffer from pulmonary tuberculosis.

We now have a total of 22 films and 47 pamphlets in our library.

The annual examination for school children in Personal Hygiene was held in June. This is the third year of this scheme, which is worked in co-operation with the Head Teachers and Teaching Staff of the schools. Three classes of certificates are given, i.e., Elementary, Intermediate and Final. The Final Certificate also entitles the holder to a Proficiency Badge.

The successful pupils at the June Examination were as follows:—

Final Certificate and Proficiency Badge	 4
Intermediate Certificate	 19
Elementary Certificate	 66

It is proposed during the year 1933 to hold similar examinations for nursing.

During the year an attempt was made to bring our films more into line with the "Talkies" at present in general use, and for this purpose, it was proposed to prepare gramophone records with running comments synchronised with the films. The film selected for the experiment is about 1,500 feet long, and entitled "Our Food Supplies." After deducting the captions there remained about 1,000 feet of the picture for which the speaking part had to be written. It was necessary so to time the words that they fitted in exactly with the portion of the picture being described, and so that the last word was spoken as each section of the picture finished.

After a good deal of careful thought, this was managed without any alteration at all in the photography. The next step was to get the records made, and, for this purpose, the well-known gramophone companies were asked to give quotations. The cost of this work, however, was so high that it became impracticable. In fact, the records for the film would have cost almost as much as the film itself. We then endeavoured to obtain an apparatus to make our own records, but, so far, have not been successful. There are a number of self-recording machines on the market, but they are really only toys, and quite unsuitable for our purpose. Many enquiries have been made during the year, but, as far as we can ascertain, no British manufacturer can supply a suitable apparatus, and it seems that eventually we shall be compelled to purchase abroad.

# VIII. SANITARY ADMINISTRATION.

#### HOUSING.

Work has proceeded actively in connection with the areas which were set out in my last annual report, and I anticipate that, before the end of 1933, these areas will have been entirely cleared, and the population rehoused in modern dwellings.

Three new areas have been declared by the Council during the year. With regard to the Leroy Street Area, it is necessary to point out that part of the area has been excluded, and the remainder has now been divided into two smaller areas.

The following are the areas declared: -

Title of	Area in	No. of	Popu	Date declared	
Clearance Area	sq. ft. (approx.)	dwelling houses	families	persons	by Council
Porlock Place	11,282	12	21	90	19/4/32
Bethel Place	14,985	49	56	217	21/6/32
Leroy Street	67,518	111	176	762	22/11/32

During the year the following new premises have been erected by the Council:—

Position	No. of Flats	No. of families accommodated
Grange House, Grange Walk	 32	32
Bermondsey Street	 6 and 2 cottages	8
Harold Estate, Pages Walk	 50	50
Horney Lane	 14	14
Amos Estate, Rotherhithe Street	 56 and 2 shops	56
Lavender House, Rotherhithe St.	 15	15
Redriff Estate, Rotherhithe Street	 24	24
Aylwin Estate, Grange Walk	 14	14
Silver Street Flats	 14	14
Acorn Walk	 57	57
Millpond Estate, Gilhams Court	 38	38
Vauban Street	 5 and 3 shops	5 2
83/87 The Grange	 2 cottages	2

As there are no vacant sites in the Borough suitable for working class houses, there is no prospect of building by private enterprise, and so far as I am aware only six houses were erected during 1932 by private individuals.

The London County Council have completed the erection of Dombey House and Copperfield House, providing 65 flats in all, and two further blocks are in course of erection.

The following premises are in course of erection by the Council:—

Position.			No. of Flats
Acorn Walk Extension	 	 	22
Amos Estate, Rotherhithe Street	 	 	48 and 5 shops
Lavender House, Rotherhithe Street	 	 	29
Redriff Estate, Rotherhithe Street	 	 	42
Aylwin Estate, Grange Walk	 	 	14
Silver Street Flats	 	 	36
Millpond Estate, Gilhams Court	 	 	16
Vauban Street	 	 	18 and 3 shops
Fort Road (Stansfeld Estate)	 	 	49
Crosby Row	 		36

No new premises have been purchased, leased or converted.

#### OVERCROWDING.

So far as overcrowding is concerned, I have no fresh facts to report. The position does not seem to me to improve, and the number of overcrowded families known to us in the Borough is practically the same as last year. The figures are as follows:—

Overcrowded families desiring local accommodation ... 1,100

Other families desiring local accommodation ... 806

Total ... 1,906

Underground Rooms.—The number of underground rooms in the Borough is shown in the following table :—

Living only	Living and sleeping	Sleeping only	Total
317	32	3	352

and the number of rooms where the whole of the accommodation of families is underground is 5. During the year 8 underground rooms used for sleeping purposes have been closed.

One Closing Order was made under the Housing Act, 1925. The house has now been demolished and the inhabitants rehoused elsewhere.

Seven Demolition Orders have been made under Section 19 of the Housing Act, 1930. One of these houses has been demolished, and eight houses, including two on which Orders were made in 1931, are now closed for demolition.

No notices have been served under Section 17 of the Housing Act, 1930.

Hereunder will be found particulars of Inspections, Proceedings, etc., for the year 1932:—

INSPECTION OF DWELLING HOUSES DURING THE YEAR :-	_
(1) (a) Total number of dwelling-houses inspected for housing defects (under Public Health	
or Housing Acts)	8,741
(b) Number of Inspections made for the purpose	34,225
(2) (a) Number of dwelling-houses (included under sub-head (1) above) which were inspected	
and recorded under the Housing Consolidated Regulations, 1925	5,014
(b) Number of Inspections made for the purpose	5,014
(3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	178
(4) Number of dwelling-houses (exclusive of those referred to under the preceding subhead) found not to be in all respects reasonably fit for human habitation	Nil

# 

#### RAG FLOCK ACTS, 1911 AND 1928-

There are four premises in the District where rag flock is used, and each of these premises was inspected twice during the year, the total number of inspections being eight. There were no prosecutions.

Water Supply.—Most of the houses in the Borough have the water supply either on the ground floor or in the yard, and many of these houses are, of course, inhabited by more than one family. Quite a number of houses are without a direct supply from the rising main.

Water Closet Accommodation.—Practically every house in the Borough has one water closet, which is, in many cases, shared by two or more families. Many of the flats have one water-closet to two families.

**Schools.**—The sanitary accommodation in each of the schools has been inspected twice during the year, and the attention of the London County Council has been drawn to the accommodation in one of these schools,

# NUMBER OF PROSECUTIONS UNDER BY-LAWS UNDER PUBLIC HEALTH ACT, 1891 :-

(a)	For prevention of nuisance arising from offensive matter running out of any manufactory, etc	-
(b)	For the prevention of keeping of animals in such a manner as to be injurious to health	
(c)	As to paving of yards, etc., of dwelling houses	-
(d)	In connection with the removal of offensive matter, etc	4
(e)	As to removal and disposal of refuse, etc	-
(f)	For securing the cleanliness of tanks, cisterns, etc	_
(g)	With respect to water closets, etc	-
(h)	With respect to sufficiency of water supply to water closets	
(1)	With respect to drainage, etc. (Metropolis Management Act, Sec. 202)	N -
( <i>j</i> )	With respect to deposit of plans as to drainage, etc. (Metropolis Management Acts Amendment (By-laws) Act, 1899)	-

,,	"	" Shoot	22	27	10	-
		Totals	17,918	25,681	15	

#### OFFENSIVE TRADES.

The offensive trades	on the	Register are as follows:	
Fellmongers	3	Fatmelters	2
Glue and size makers	3	Dresser of Fur Skins	6
	MORT	UARY.	

Particulars of bodies removed to the Mortuary during the year are, as follows:—

Total number of infectious bodies removed 33

Total number of bodies removed .. 97

#### STREET MARKETS.

The market scheme continues to work smoothly and satisfactorily.

Number		ences in	opera	tion	 		631
Income	8				 	kenn	£2,855

There have been 67 prosecutions during the year.

#### DRAINAGE WORK.

Hereunder will be found particulars of drainage work, &c., carried out by the Drainage Inspector during 1932:—

Drains Tested	 721
Intimation Notices served	 10
Visits to Underground Conveniences	 410
Other Visits	 3,620

# IX.-FOOD CONTROL.

In this section of my report is given tabulated information concerning the work of the three Wharves Inspectors and of the Food and Drugs Inspector. There have been no unusual features in their work this year and there is therefore no need for any special comments.

#### UNSOUND FOOD.

The general inspection of food in shops and on stalls forms part of the duty of the District Sanitary Inspector. The following food, in the quantities stated, came under the notice of the Inspectors during the year, and being found unfit for human consumption was destroyed:—

D :-		Indi	Wei	Weight			
Descript	tion of	Food		Tons	cwts.	qrs.	bs.
Fresh Meat				1	2	3	14
Fresh Fish				_	1	1	14
Fresh Fruit				-	14	_	12
Hams, Tinned				-	3	2	22
Poultry					- 3	2	6
Vegetables				_	3	3	-
		Total		2	6	1	12

#### PUBLIC HEALTH (IMPORTED FOOD) REGULATIONS, 1925.

Under these Regulations, 24 samples were taken during the year by the Wharves Inspectors. Of this number, 2 samples were taken in order to ascertain the composition of an unusual product; 11 were examined for preservatives; 6 samples were bacteriologically examined and 4 were examined for the presence of tin. The remaining sample was taken from a consignment of broken worm-eaten nutmegs and in this case the attention of the Ministry of Health was drawn to the matter with a view to further investigation in other districts.

Article Examined	No. of Samples	Examination	Result	Action taken
Sardine Oil	1	To ascertain composition	Genuine	Released
Mace Butter Pork Brawn	1	For presence of tin	0.03 grain of tin per pound	Released for ren- dering down

#### MILK PREMISES.

# MILK AND DAIRIES (AMENDMENT) ACT, 1922.

Forty-seven milksellers were registered under the above Act during 1932, and 41 names were removed from the Register, making a total of 296 milksellers on the Register at the end of the year under report.

MILK (SPECIAL DESIGNATIONS) ORDER, 1923.

During the year under report, the following Licences were granted:—

Dealers' Licences :—		
To bottle and sell Grade "A" (Tuberculin	Tested)	
Milk		11
To sell Grade "A" (Tuberculin Tested) Milk		29
To sell "Pasteurised" Milk		- 5
Supplementary Licences :-		
To sell " Certified " Milk		3
To sell Grade "A" Milk		-
To sell Grade "A" (Tuberculin Tested) Milk		
T11 " D+		

All premises used for the sale of milk are regularly inspected to ensure that the standard of cleanliness laid down is maintained.

#### MILK SAMPLING.

A total of 511 milk samples has been taken during the year. This is made up as follows:—

# "For chemical (i.e., Fat and non-Fatty Solids) Examination."

Liquid milk undesignated		479	)
Condensed milk		6	3
Condensed full cream milk		1	L
Condensed machine skimme	d milk	2	-

#### AMBULANCE FACILITIES.

The following facilities are afforded by the London Ambulance Service of the London County Council. Ambulances are provided free of cost except where otherwise stated.

#### Infectious Cases.

Telephone—City 7200. At any hour of the day or night Patients will not be removed to hospital unless a medical certificate stating definitely the nature of the disease is handed to the ambulance nurse.

Infectious cases are conveyed to hospitals other than the L.C.C. hospitals for infectious diseases at a minimum fee of 12/6.

#### Non-Infectious Cases.

Telephone—City 7200. At any hour of the day or night. Minimum fee 12/6.

#### Accident Cases.

Ask telephone operator for "Ambulance." At any hour of the day or night.

#### Serious Illness.

Telephone—Hop 6000, New Cross 2645, Central 6300-1, or Regent 4000. At any hour of the day or night.

Ambulances are provided for persons suffering from illnesses in their homes if a medical practitioner certifies that the case is one of life or death, and that arrangements have been made for the reception of the patient in a hospital.

# Maternity Cases.

Telephone—Hop 6000, New Cross 2645, Central 6300-1, or Regent 4000 except where otherwise stated.

Urgent Cases .. At any hour of the day or night on application by a doctor or certified midwife, provided that either a doctor or midwife accompanies the case and that arrangements for the reception of the patient in a hospital have been made.

Non-urgent Cases

Between 11.0 p.m. and 8.0 a.m.—provided that admission to a maternity bed has been previously arranged and a card (issued by the London County Council to hospitals, maternity homes, etc.) for such admission obtained. This card must be handed to the ambulance attendant at the time of removal. The husband or a female friend must accompany the patient.

Between 8.0 a.m. and 11.0 p.m. (Telephone City 7200)—by payment (minimum fee 12/6) or by application to the Medical Officer of Health, provided that arrangements for the reception of the patient in a hospital have been made. Cases approved by the Medical Officer of Health will be conveyed to hospital free of charge. The husband or a female friend must accompany the patient.
