T. ROBINSON

C. E. UPTON

* * *

To the Mayor, Aldermen and Councillors of the Metropolitan Borough of Lambeth

Your Worship, Ladies and Gentlemen,

I have the honour to present to you the 98th Annual Report upon the health of the Borough of Lambeth. The health of the population has been satisfactory as will be seen from the statistics which appear in the report. The population has been estimated by the Registrar General to be nearly three thousand less than that of 1953 at 226,200. The birth rate is slightly higher at 14.33 and the death rate slightly lower at 10.26 per thousand population as adjusted by the comparability factor, both being lower than corresponding rates for the county and also lower than those for England and Wales as well.

For the first time since 1938 new dwellings numbered more than a thousand completed in one year. The actual number was 1,124 compared with 790 in 1953 and 1,951 in 1938.

The problem of the infirm aged is assuming larger proportions each year as the expectation of life increases with more and more elderly people becoming a burden to others. Plans to provide occupation for retired fit people are in hand and it is hoped that these will go some way to help to do what is urgently wanted. If old people can be found some work to do which is worth doing the two prime abjectives have been achieved, first they show that they are still useful to the community and not on the shelf, and secondly they are obliged to get about to follow their occupation which keeps them on their feet.

I am again grateful to the members of the Council and especially to the Public Health Committee, to all the chief officers working as a team and especially to the staff of the Public Health Department.

> I am, Mr. Mayor, Ladies and Gentlemen, Your obedient servant,

A.G. G. Thompson.

Medical Officer of Health.

July 1955.

STAFF of the PUBLIC HEALTH DEPARTMENT at 31st DECEMBER, 1954

Medical Officer of Health

A. G. G. THOMPSON, M. A., M. D., B. C. (Cantab.), D. P. H.

STATISTICS AND SOCIAL CONDITIONS

Summary of Vital and Mortal Statistics, etc.

(The comparable figures for the previous year appear in brackets)

Area of Borough - 4087.5 Statute acres (inclusive of land and inland water, but exclusive of tidal water and foreshore), divided into 4 Registration Sub-Districts, 3 Parliamentary Constituencies, and 21 wards.

Population - estimated, 1954 - 226,200 (229,000)

- Density 55.34 (56.02) persons per statute acre (inclusive of land and inland water, but exclusive of tidal water and foreshore).
- Births (corrected) 3,684 (3.649). Birth rate per 1,000 estimated resident population. *14.33 (14.02).

Deaths (corrected) - 2,298 (2.408). Death rate per 1,000 estimated resident population *10.26 (10.62). Maternal mortality (corrected) per 1,000 total births (live and still) 1.59 (1.08) Infantile mortality 23.34 (25.49) Neonatal mortality 17.10 (15.89)

Zymotic Death-rate (corrected) 0.04 (0.06) per 1,000 population total zymotic deaths 9 (13)

Marriages - Marriage rate per 1,000 population 8.33 (7.97)

Rateable Value at 1st April, 1954 - £2,221,855 (£2,197,823). Sum represented by 1d. rate - £9,062 (£8,927).

Comparable rates for England and Wales and London:-

	England	and Wales	London			
Birth rate	15.2	(15.5)	17.6	(17.5)		
Death rate	11.3	(11.4)	11.7	(12.5)		
Infantile mortality	25.5	(26.8)	22.5	(24.8)		

*As adjusted by comparability factor.

VITAL STATISTICS

The population of the Borough of Lambeth at the mid year 1954 has been estimated by the Registrar-General to be 226,200 which is 2,800 less than the estimated population in 1953. The natural increase by births over deaths was 1,386.

The following table shows the actual numbers and the percentages of deaths in various age groups from which it will be observed that 67.32% of all deaths occurred among those aged 65 years and older. Much is being done to help these elderly people from becoming a burden upon others as well as often a burden to themselves. Steps are being taken which it is much to be hoped will lead to the Metropolitan Borough Councils being responsible statutorily and directly for care which now is limited to financial assistance to voluntary organisations. Infantile mortality has been reduced by a better knowledge of the nursing and feeding requirements of mothers and babies but the problem with the elderly is not the same, children eat what they are given and their day works to a time table. Adults eat and drink what they choose and as much or little as they want or can obtain. They suit their day and mode of life to their own time table with the result that most elderly people suffer later on for their lack of care for themselves in the past.

All ages	0-1	1-5	5-15	15-25	25-45	45-65	65-75	75 & over
				14 0,61	90 3 - 92		668 29.07	879 38.25

The principal causes of death were heart disease 687 (717) or 29.89 per cent. (29.78) of the total deaths, cancer 445 (426) or 19.36 per cent(17.69), and influenza, bronchitis and pneumonia, three causes of death largely dependent upon the weather, were the cause of 290 (409) deaths or 12.62 (16.99) per cent.

During the year the number of live births corrected by inward or outward transfers was 3,684, giving a corrected birth rate of 16.29 compared with 15.93 in 1953, an increase of 0.36 per 1,000 population. These rates have not been adjusted.

Deaths from tuberculosis of the lungs continue to fall with better knowledge of treatment but much less improvement is noticeable in the incidence. The number of deaths in 1948, six years ago was 135 and new cases 369; the corresponding numbers for 1954 were 41 and 369 new cases. The disease is attacking as many as ever. It is often forgotten that it is infectious and that overcrowding due to inadequate housing is a potent cause of spread. Neoplasms of the lung and bronchus

MATERNAL MORTALITY

The maternal mortality is expressed as the number of deaths attributed to puerperal and post-abortive sepsis and other maternal causes for each 1,000 births. There were six deaths during the year. 1.59 per 1,000 live and still births. Last year there were four deaths

The cost of repairs particularly to old property remains a serious problem both for owners and for the Council who themselves carry out the necessary work when a Court Order is ignored, collecting rents to recoup themselves and registering a charge upon the property. At the end of the year there were 90 cases outstanding from which some £6,486 was owing while in 23 others the estimated cost of works approved but not completed was £2,237. It was anticipated that the opportunity of obtaining higher rent envisaged by the Housing Repairs and Rents Act 1954 would be seized by large numbers of owners of property and that the publicity given to the grants obtainable under the Housing Act 1949 would lead to a spate of applications, In fact the numbers applying were remarkably few. Details will be found elsewhere in the report.

SCABIES AND VERMINOUS PERSONS

Cleansing Centre

A total of 323 persons were treated at the cleansing station and given 428 treatments, compared with 321 persons treated in the previous year.

The number of cases of scabies notified, 48, compares with 30 in 1953, 36 in 1952, 43 in 1951, 40 in 1950, 68 in 1949, 125 in 1948, 310 in 1947, 758 in 1946 and 851 in 1945. More settled conditions of life and modern treatments have both conduced to this end.

NATIONAL ASSISTANCE ACTS, 1948 and 1951 Section 47. Removal to suitable premises of person in need of care and protection

In no case was it necessary to apply for an order for the compulsory removal of any aged person to an institution. Section 50. Burial or Cremation of the Dead.

Arrangements were made during the year for the burial of 29 cases, of whom 19 were males. 10 were females.

All were Lambeth cases. The net cost to the Council was \pounds 143 17s. 5d.

THE PREVENTION OF DAMAGE BY PESTS

During the year 1954, 727 complaints have been investigated. Of these, 551 were found to be brown (common) rats, 1 black (ship) rat, 128 mice, and 47 were found to be not justified: 927 baitings were carried out and in 87 cases defective or disused drains were found to be the cause of infestations and were dealt with by the Borough Engineer and the Sanitary Inspectors. No major infestations have come to light during the year. There has been a further reduction in the number of black rat infestations, and in no case has the infestation been of a serious character.

Inspections .		 	 914
Powieite		 	 1,082
Notices served	1	 	 8

Once again, two separate sewer treatments with poison have been carried out by the Borough Engineer's department during the year in conjunction with the rodent officer and his staff.

There were many complaints during the year of insect infestations which were effectively combatted. The usual offenders were wood boring beetles, psocids, ants, cockroaches, drug store beetles, carpet beetles, clothes moths, and weevils.

INSPECTION AND SUPERVISION OF FOOD

This part of the report deals with the work carried out by the Food Inspectors under the Food and Drugs Act, 1938, the Public Health (Meat) Regulations, 1924, and the Milk(Special Designation) Regulations, 1949 and 1950, and the Ice Cream (Heat Treatment), etc.) Regulations, 1947.

1. Sampling of Food and Drugs

(a) For Chemical analysis

Number	procured	formally	 	200
Number	procured	informally	 	1,300

Of the 200 formal samples, 171 were of milk, one sample was found to be adulterated.

(b) For bacteriological and other examinations.

The following shows the number and types of samples submitted for bacteriological and other examinations: -

Bacteriological Examinations

Calves Foot Jelly				 1
*Cream canned				 20
Egg dried				 1
Finger swabs				 2
Ice Cream and Ice	Cream	Mix		 155
Ice Cream Churns				 2
				 2
Mallow Russe				 1
*Peanut Butter				 1
Skimmed Milk Powd	er			 1
			Total	 186

*These articles were suspected to have caused food poisoning.

In February a press report stated that a certain brand of canned cream had been found, in Birmingham, to be infected with typhoid organisms. In addition to this report a broadcast by the B.B.C. urged the public who were in possession of this particular brand of cream not to consume it but to take it to the office of the local authority. In consequence of this appeal 65 tins were brought to the Town Hall and as a result of information given by the purchasers an embargo was placed on all known stocks of this cream in the possession of retailers. 17 samples were taken and submitted to the Public Health Laboratory Service for examination and no organisms capable of causing illness were isolated.

It was eventually established that the manufacturers of the cream had cooled the batch of tins by water from a polluted well, and that the culprit tin in Birmingham had been imperfectly sealed allowing water to leak into the tin.

As a precautionary measure, on the advice of the Ministry of Health, all tins of this brand of cream in the Borough were surrendered by retailers and destroyed. The public who had surrendered their tins were all financially reimbursed.

2. Inspection of Food

(i) At the Slaughterhouse.

No animals were slaughtered here during the year. Two pigs were slaughtered privately elsewhere in the presence of the food inspector.

(ii) At shops, stores and factories:

Large quantities of food of all varieties were inspected and as a result the following weight of food was surrendered as unfit for human consumption and unsound food certificates were issued 38 tons 18 cwts. 0 qrs. 19% lbs.

87 complaints about food were received. 62 of these were justified and a list of them is set out below.

1.	Unsound Chicken	31.	Dirty Milk Bottle
2.	Metal and string in Sugar	32.	Mouldy Bread
	Almonds.	33.	Piece of Mortar in Milk
3.	Pineapple, misleading label.	34.	Maggots in Lamb and Rabbit
4.	Cork, dust in medicine	35.	Insect in Bread
5.	Foil in Cheese	36.	Mouldy Chocolate Cream Roll,
6.	Apricots tough	* 37.	Mouldy Apple Pie
7.	Mouldy Apple Tart	38.	Fungal Hyphae in Lemonade
8.	Mould in Lime Juice Cordial	*3.9.	Nail in Chocolate Crunch
9.	Metal in Canned Milk	40.	Ants in Jam & Cream Puff
10.	Rag in Bread	41.	Mouldy Bread
11.	Glass in cheese roll.	42.	Lime deposit in Crisp bread
12.	Unsound jellied eels	43.	Cake ingredients insufficiently
13.	Cigarette end in Bread		mixed.
14.	Wool, cotton and hair in Milk	44.	Mouldy Pork Pie
	Maggots in Chocolate		Yeast mixed with dust in
* 16.	Foreign body in Buttered Roll		Cream Soda.
17.	Screw in Scone	46.	Unsound Kidney
*18.	Cigarette end in Bread	47.	Unsound Pork Pies

22.	Mouldy meat pies	52.	Maggots in Dried Fruit
23.	Mineral oil, carbonaceous	53.	Unsound eggs
	matter and particles of iron	54.	String in Bread
	in Bread	55.	Maggots in Toffees
* 24.	Dirty Bread	56.	Damaged Milk Bottle
	Cigarette end in Bread.	57.	Unsound Sweets
	Mouldy Cornish Pasty		Insects in Drinking Chocolate.
	Unsound salt pork		Unsound Walnuts
	Wire in bread		Unsound Goose
	Insect in Meat Pie		
30.	Mice excreta in Flour	62.	Unsound Chicken
			analysing the bornbar west

Legal proceedings were instituted in the under-mentioned cases, with the results showm: -

16.	Foreign body in Buttered	Roll	Fined £	4 0	0 £2	2 0 costs.
18.	Cigarette end in Bread		Fined £	5 0	0 £2	2 0 costs.
24.	Dirty Bread		Fined £	4 0	0 £2	2 0 costs.
37.	Mouldy Apple Pie		Fined £	3 0	0 no	costs
39.	Nail in Chocolate Crunch		Fined £	5 0	0 £2	2 0 costs.

3. Clean Food Campaign

(i) The number of food premises by type of business in the area is as follows:-

Greengrocers and fr	uiterers 172
Fish shops, wet, dr.	y and fried 91
Bakers	109
Butchers	157
Restaurants	231

'(ii) The number of premises registered under section 14 Food and Drugs Act, 1938, and Milk and Dairies Regulations 1949.

Ice Cream	511
Sausages and potted processed	etc.
meat.	157
Registered milk distributors	269

- (iii) Number of inspections of food premises 2,198
- (iv) Education Activities, etc.

The Lambeth Clean Food Association has again increased its membership and whereas this was originally limited to the retail traders, the doors have now been opened to the wholesale trade and manufacturers.

Since its inception there have been 378 applications for membership of which 36 were not proceeded with or withdrawn for one reason or another. 285 have been approved and accepted and 367 certificates (one for each shop) have been issued. Of these 76 have been surrendered as the premises have changed hands but 36 of the newcomers have been accepted for membership and are included in the 285 mentioned above.

> The number of badges issued is 844, these being worn by those serving the public whether members or employees of members.

The practice of taking finger swabs serves as a reminder to wash hands before handling unwrapped food for sale. Of the 1581taken only 50 have been found to be contaminated with faecal coli. There are no figures for comparison with conditions of twenty years ago but it is safe to say that standards are far higher today.

Qualification for membership consists of two principal requirements, first that the premises shall comply with the statutory requirements and bylaws and second that the applicant and employees agree to maintain scrupulous cleanliness of person, of clothing and of utensils. The first insures that the facilities for cleanliness are available for use and the second the promise that they shall be properly and efficiently used. The method of disposal of condemned food.

All condemned animal products are sent to firms specialising in the making of glues and other like commodities. Such vegetable waste as is suitable is converted into pig food under the Council's Scheme.

(vi)

Details of the few stocks or consignments of food specially examined are included in the food condemned or surrendered, for which unsound food certificates were issued.

1949	99	22	27	29	21

5. Food Poisoning

There have been 154 cases of food poisoning notified during the year. 120 of these cases occurred as an outbreak in Lambeth Hospital. The outbreak was among the medical and nursing staff of the Lambeth Hospital, some 120 in all being affected out of 200. The symptoms of acute abd minal pain and diarrhoea occurred on an average of six hours after dinner at 8.0 p.m.on the 27th April. All recovered, symptoms subsiding in 24 hours and many were such mild cases that they carried on with their duties. All those taken ill had eaten the chicken course which was responsible for the outbreak. The chickens were cooked the day before, allowed to cool and were put in the refrigerator. About mid day on the 27th April the chickens were carved and put on plates and stored at room temperature on a shelf in a room next to the kitchen until 7.0 p.m. The remains of the chickens including the bones were used for making gravy just before the meal. The remaining items in the menu, grapefruit, cauliflower, potatoes, white sauce and bread sauce, were eliminated as probable causes.

Unfortunately all the food was consumed and nothing was left for bacteriological examination so that there is no absolute confirmation of the cause. The quick onset and recovery indicate a toxin as the likely cause, most probably the toxin of a coagulase positive staphylococcus aureus. Examination of the kitchen staff appeared to show that the birds were probably contaminated during trussing and before delivery to the hospital.

All food particularly meats, jellies, sauces and gravies should be kept in a refrigerator where dangerous organisms if present are unable to multiply and it would seem that the lack of sufficient refrigerating space is partly at least responsible as well as the temporary kitchen arrangements which are inadequate The rebuilding of the war damaged kitchen is long overdue. These points have been taken up with the hospital authority who are aware that the conditions obtaining in the hospital kitchen would not be tolerated for one moment if existing elsewhere in the borough. Since this outbreak the refrigerator space has been increased but the lack of ordinary facilities for the clean preparation of food and the washing up of utensils places a continuous strain upon the kitchen staff and upon the administration. The kitchen was damaged by enemy action and was patched up in 1944. There has been little improvement since then. It is understood that despite the most urgent appeals to have the kitchen rebuilt this most necessary work has again been postponed.

The remaining 34 cases were notified throughout the year and were not connected with each other.

6. Slaughterhouses

There was no licensed slaughterhouse being used in the district during the year.

SMOKE EMISSION

During the year 21 complaints were received of nuisance from smoke from factory shafts which were satisfactorily handled without recourse to more than the intimation notice and by word of mouth.

OFFENSIVE TRADES

Establishment Orders have been granted to two companies who carry on the offensive trades respectively of (a)fellmonger and (b) fatboiler.

- (a) Messrs. Gaston Morrell, Ferndale Road.
- (b) Messrs. Lepard, Wandsworth Road.

These two orders are renewable annually.

DRAINAGE PLANS

All plans are registered with the Borough Engineer but the Sanitary Inspectors are responsible for seeing that the work is carried out in accordance with the drainage by-laws. 49 plans of new buildings and 59 plans of alteration to existing drains were deposited. In addition combined drainage was carried out in 20 cases. There were no cases of relaying defective combined drains for which no order had been made by the Council and no plans could be found, and which therefore were deemed to be sewers repairable by the Council.

HOUSING REPAIRS AND RENTS ACT, 1954

This Act came into force on the 30th August, 1954.

Certificates	issued		198
stand ""	refused		6
Applications	withdrawn		5
Revocation co	ertificates	issued	10

DANGEROUS STRUCTURES

Information was forwarded to the District Surveyor on 84 occasions during the year of the presence of structures which were considered to be dangerous to life or limb.

REGISTRATIONS

Under the Milk and Dairies Regulations, 1949, 46 distributors of milk were registered. Under the Milk (Special Designation) (Raw Milk) Regulations, 1949 and the Milk (Special Designation) (Pasteurised and Sterilised Milk) Regulations, 1949, there were 269 licenses with 22 supplementary licenses and two Pasteurisers licenses.

The number of persons entered or retained on the list under the Pharmacy and Poisons Act, 1933 (Section 21) Part II was 184.

Rag Flock and other Filling Materials Act, 1951

Under the provisions of this Act no premises were registered during the year.

Pet Animals Act, 1951

Under the provisions of this Act, which came into force on the 1st January 1952, no pet animals may be sold except from registered premises. The conditions in which animals, including birds, fish, reptiles, etc., must be kept if registration is granted insure that they enjoy a reasonably comfortable existence while on the premises and has greatly improved safety from fire and other calamities. Sixteen premises have been registered and are under supervision.

EXHUMATIONS

The Home Secretary issued licenses for the removal of one human remains from one grave to another grave in the district and one for cremation. The sanitary inspector was present on each occasion to see that the terms of the licenses were fulfilled and that no nuisance or danger to the public health was permitted.

STREET MARKETS

Markets are held in The Cut, Lower Marsh, Lambeth Walk and Wilcox Road in the inner wards, and in the Popes Road, Electric Avenue and Brixton Station Road. All these are inspected regularly.

WATER

Section 95, Public Health (London) Act, 1936

The number of new dwellings for which applications were received for certificates that a proper and sufficient supply of water had been installed was 1,124 (790), Borough Council 586 others 538.

The water supply for the area is provided almost entirely by the Metropolitan Water Board, but there are a few deep wells of which some supply water for purposes other than human consumption, while in a few cases the supply is used for potable purposes both for drinking on the premises as well as for the manufacture of beverages and for similar trade purposes. In these latter cases a comprehensive examination of the supply both bacteriological as well as chemical is made every three months at least which is deemed sufficient for ample warning of any serious changes to be observed before there is danger to health.

PREVALENCE OF AND CONTROL OVER INFECTIOUS AND OTHER DISEASES

The mortality from infectious disease was again almost negligible: scarlet fever 0, diphtheria 0, measles 0, and whooping cough 1.

Although immunisation against whooping cough is by no means certain, even with the best prophylactics now in use, because it is at present a more dangerous disease than diphtheria it is no doubt expedient to satisfy the demand for immunisation against both diseases. If not there is a possiblity that immunisation against diphtheria may be less diligently sought.

Poliomyelitis

Although 6 notifications were received only 5 were cases of poliomyelitis, the rate per 1,000 population being 0.02 all five were paralytic and there was one death. In no instance was it possible to trace any contact with another case.

Tuberculosis

Notifications received during the year ended 31st December, 1954.

Respiratory	 	• • • •	352	(318)
Non-respiratory	 		17	(29)
Deaths certified	 		41	(53)

The notifications per 1,000 population for the past ten years (1944-54) have been: 2.28, 2.24, 1.16, 1.68, 1.63, 2.01, 1.87. 1.86, 1.55, 1.52, 1.63. During the Good Health Exhibition at the Town Hall in May 336 people were X-rayed resulting in the discovery of two previously unknown cases of respiratory tuberculosis.

Notifications received during the Year ended 31st December, 1954.

DISINFECTING DEPARTMENT

2.633 rooms and 6,936 articles of bedding and clothing were disinfected during the year, among them being the rooms and articles used by the 352 cases of various forms of infectious disease taken to hospital; 135 certificates of disinfection were issued, and 69 library books dealt with from the 4,060 premises visited during the year. The clean van was used regularly for the delivery of stores to the day nurseries and to the Welfare Centres.

286 houses were treated for bed bugs and in them 879 separate rooms were sprayed with Vermicine, a preparation of 5 per cent. D.D.T. with Pyrethrum as a 'Knock out.' It was necessary to treat 49 houses a second time.
