FOURTH ANNUAL REPORT
OF
The Medical Officer of Health
FOR THE
GREENWICH DISTRICT,

PRESENTED TO THE DISTRICT BOARD ON THE 23rd MAY, 1860.

To the Greenwich District Board of Works.

GENTLEMEN,

Beyond the continued inspections by your Officers, and the removal of a large number, principally of surface nuisances, no sanitary measures of sufficient importance to bring before your notice, have been carried out in the District during the past year.

In this, therefore, my Fourth Annual Report, I have only to lay before your Board the annexed Tables, which I have prepared for the purpose of clearly illustrating to you the sanitary condition and mortality of your District during the year ending the 31st of December, 1859.

Tables Nos. 1, 2, 3, and 4, I have so arranged as to point out to you the Births and Deaths, Males and Females, the ages at which those deaths took place and the different diseases causing those deaths, in each separate division of the District, as they occurred during each *month* in the year.

Table No. 5, will comprise the whole of the four preceding monthly Tables condensed into one comprehensive form, illustrating the Births and Deaths, the ages at death, and the causes of those deaths during each of the four *quarters*

of the year. In this Table you will be able to compare one quarter with another, and one division of the District with another, in respect to the varied mortality during the different seasons of the year.

Table No. 6, comprises the total Births and Deaths for the past year, condensed in such order as to show you at a glance the actual numbers to be assigned to each division of the District; the numbers dying at certain specified ages; and the number of deaths to be attributed to each particular cause or disease throughout the several divisions of the District.

Table No. 7, will illustrate a comparative statement of the Births, and Deaths, the ages at which death took place, and the causes of those deaths during the past three years.

Table No. 8, will show you the comparative number of Deaths in the District caused by Epidemic Diseases, during the past four years.

Table No. 10, is so arranged as to show the Death-rate per 1000 during the past year, inclusive and exclusive of the Hospital and Union Workhouse, taking the population according to the census of 1851. These figures will, of course, exhibit a higher Death-rate than actually exists. Since the year 1851 the population of this District has increased by many thousands, partly by the increase of Births over Deaths, but more particularly on account of the influx of population from the Metropolis and other Districts; of such increase of population it is impossible to form a correct estimate.

We must therefore await the result of the next census before we can arrive at a correct estimate of the healthiness or unhealthiness of this District as compared with all the Metropolitan and Country Districts.

Table No. 11, will show the comparative Death-rate per 1000 inhabitants during the past four years. This Death-rate shows an increase of mortality throughout the whole District with the exception of the division of Greenwich West.

Table No. 12. In this Table is condensed a comparative statement of the number of Births that have been registered in the several divisions of the District during the past four years.

In laying these Tables before you I have unfortunately to announce a gradually increased Death-rate, the past year especially numbering 81 deaths over the preceding year.

In their general import they agree very nearly with those of the previous two years as far as relates to the ages at which the deaths took place, (infantile mortality being still somewhat excessive over former years,) and also as relates to the causes of those deaths, with the exception of Epidemic Diseases, which for the past year will show a very considerably increased mortality. In a former Report I remarked that in this District we had to refer chiefly to Epidemic and Chest Affections for the real sanitary condition of the District, as it was to those diseases that the predominating mortality of particular Districts and seasons was to be attributed. It is therefore with regret that I have to point to the heavy mortality arising from those causes. I have on former occasions, and more particularly in my last Annual Report, examined and dwelt minutely on such facts as are set forth in these Tables. I have already stated to you that the causes of this still heavy mortality, and more particularly the mortality arising from Epidemic influences, are susceptible in the highest degree of being mitigated or almost entirely removed under an efficient sanitary system; and were I to make further detailed comments on the Mortality Tables of the past year, as now handed down to you, I should be doing little else than making a repetition of arguments and facts already submitted to your consideration.

I have therefore most respectfully to request that you will give the annexed materials your particular notice, and in your future deliberations and decisions at the Board give me that assistance in working out the various propositions which

must naturally arise from the perusal of those Tables, and which I may have the honour to suggest for the well-being of your District, and which are at present so much required. It belongs to me, it belongs to you, to take deliberate cognisance of each and every specific cause or origin of disease and of every influence exerting the slightest tendency towards the production of disease; and it equally belongs to us all to devise such appropriate remedies as shall appear conducive to the removal or prevention of each and every cause of disease.

We have had severe and malignant Epidemics in former years; we have had severe Epidemic Diseases during the past year; we shall assuredly have a repetition of such Epidemics in years to come:—when that recurrence may take place, what may be the duration of, or what malignant character they may assume, no human being can foretell. Having pointed out to you the dangers that are likely to arise, so it is my duty, to the best of my ability, to state to you the remedy and the means of prevention.

Whether it be that a house to house inspection may be recommended, whether it be the completion of the sewerage of your District, the more stringent removal of surface nuisances, or the more systematic drainage of all the houses in the District, rest assured that the benefit to be derived, and the exemption from disease that will accrue to your homes, will be well worth the expenditure that must naturally be entailed by adopting such necessary sanitary measures.

I remain,

Your obedient Servant,

HENRY N. PINK.

Crooms Hill, May 23rd, 1860.

1859.
