REPORT

RELATING TO THE

Vital Statistics and Sanitary Condition of the Area of the Holborn District Board of Works; of the Holborn Sub-District, now part of the Metropolitan Borough of Holborn; and of the Parish of St. Sepulchre Without and the Liberty of Glasshouse Yard, now in the Metropolitan Borough of Finsbury.

FOR THE YEAR ENDED 31st DECEMBER, 1900.

TO THE MAYORS, ALDERMEN AND COUNCILLORS OF THE

METROPOLITAN BOROUGHS OF HOLBORN AND FINSBURY.

GENTLEMEN,

I have the honour to submit my report for the year ending December 31st, 1900.

The year has been a very memorable one on account of the changes under the London Government Act, 1899; the new Metropolitan Boroughs coming into existence on the 9th November, 1900.

AREA, POPULATION AND HOUSES.

HOLBORN DISTRICT BOARD OF WORKS.

Parish.		Population.		Area	Inhabited Houses.	
	1881.	1891,	1896.	Acres.	1881.	18\$1.
St. Andrew and St. George Saffron Hill, Hatton Garden, Ely Rents St. Sepulchre Glasshouse Yard (St. Botolph, Aldersgate, part)	28,874 3,980 2,392 931	26,228 4,506 1,972 708	24,991 2,832 1,717 668	111 32 19 6	2,423 453 275 93	2,573 605 190 69
Total—Holborn District Board of Works	36,177	33,414	31,208	168	3,244	3,437
Gray's Inn	328 155 38	253 121 21	264 47 10	12 1 1	50 16 11	49 16 10
Total—Holborn Sub-District of Borough	33,375	31,129	29,144	157	2,953	3,253

St. Sepulchre and Glasshouse Yard are now included in the new Borough of Finsbury; and Gray's Inn, Staple Inn and the Holborn portion of Furnival's Inn, have been added to the Holborn Sub-Division of the new Holborn Borough.

The boundaries of the new Holborn Sub-Division, beginning at the north-west are:—Guilford Street, Doughty Mews, Henry Street, part of Gray's Inn Road, Elm Street, Mount Pleasant and Warner Street, Little Saffron Hill, part of the Clerkenwell Road, Farringdon Road; on the south east, the City boundary to Cursitor Street, Chancery Lane; on the south west and west, the boundary is common to the Sub-District of St. Giles-in-the-Fields and St. George, Bloomsbury.

ESTIMATED POPULATION, 1900.

The following are the estimated populations for the following Districts and Sub-Districts at the middle of the year 1900 :-

The Holborn District	Board o	of Wor	ks area		 	 29,448
The Holborn Sub-Di	strict of	the Ho	lborn I	Borough	 	 27,557
St. Sepulchre					 	 1,526
Glasshouse Yard	141.30		100	TO. The	 10	 636

BIRTHS AND BIRTH-RATES.

mography to Agree of the Pa		NI 6	LUSIS.	Males,	Females.	Total.
Holborn District Board of Works' Holborn Sub-District of the Borough St. Sepulchre Glasshouse Yard	***	 		 382 357 22 3	362 343 16 3	744 700 38 6

BIRTH-RATES.

Holborn District	Board	of Wo	orks			 	 25.3
Holborn Sub-Dist	rict of	Holbo	rn Bor	ough		 	 25.5
St. Sepulchre			***				 25.0
Glasshouse Yard					***	 A 444.353	 9.4

The birth-rate for the Holborn District in the preceding year was 24.4 per 1,000.

The number of births registered in London was 130,868, giving a rate of 28.6 per 1,000 of the population, the lowest London birth-rate recorded.

The number in England and Wales was 926,304 or a birth-rate of 28.9.

The excess of births over deaths was 338,845.

DEATHS AND DEATH-RATES.

The number of deaths in the following Holborn District and Sub-Districts after making the usual corrections (i.e. excluding those of persons who died in Public Institutions, who did not belong to the District, and including those of persons, who belong to the District but died in Public Institutions outside the District) were :-

Holborn District	Board of	Works					***	749
Holborn Sub-Distr	ict of the E	Borough						707
St. Sepulchre							*	31
Glasshouse Yard	*** ***	***						11
and the following were the co	orrected dea	th-rates p	er 1,00	00 of th	e popula	ation :-	-	
Holborn District	Board of V	Vorks						25.5
Holborn Sub-Distr	rict of the	Borough						25.7
St. Sepulchre								20.4
Glasshouse Yard								17.3
The rate for the Holb	orn Distric	t for the p	recedin	ng year	was 24	1.		

In London the corrected number of deaths was 86,007 equal to an annual death-rate of 18.3 per 1,000.

In England and Wales the number was 587,459 giving a death-rate of 18:3 per 1,000.

INFANTILE MORTALITY.

The number of deaths of children under five years of age was :-

Helborn District I	Board o	of Wor	ks	 		 	245
Holborn Sub-Dista				 		 	232
St. Sepulchre	***			 		 	10
Glasshouse Yard	***			 ***	***	 	2

The corresponding number in the Holborn District the preceding year was 222.

The number of deaths of children under one year of age, and the number of deaths of children under one year of age per 1,000 registered births, were the following for:—

							Deaths under 1 year.	Deaths under 1 year per 1,000 registered births
Holborn District Bos Holborn Sub-District			,	 	 	 	174 166 6	234 237 158
St. Sepulchre Glasshouse Yard			9.	 	 	 sing	2	333
Corresponding numb	ers pr	eceding	year	 	 	 ***	166	223

CAUSES OF DEATH.

Tables IV. and IVA. give the principal causes of death.

Table V. gives a list of the deaths of persons belonging to the District in outlying Public Institutions.

PHTHISIS OR CONSUMPTION.

The number of deaths from Phthisis during the year was 84, equivalent to a death-rate of 2.86 per 1,000. The rate diminished from 3.11 in 1898 and 2.99 in 1899.

For St. Sepulchre and Glasshouse Yard the number of deaths from phthisis was 5, equal to a death-rate of 2.31 per 1,000.

The corresponding rate for London was 1.71.

In 1899 it was 1.82 and in 1898 it was 1.72.

PREVENTION OF CONSUMPTION.

Although Sanitary improvements have already done much, there are still about 60,000 deaths annually in England and Wales from Consumption and other forms of tuberculosis. In London there were in 1899, 8,510 deaths from Consumption alone. The corrected annual average of the preceding ten years was 8,453, or rather less. It has been estimated that in any year there are five times as many persons as the deaths that are suffering from the disease.

It is known that this terrible waste of life with all the protracted suffering attending it, and the distress, moral and material which it involves, is in great measure preventable.

Years ago Farr gave £156 as the average value of each human life in England. The value in London is now probably more than £200. Taking it at this figure, the loss to London during the past ten years by deaths from all forms of tuberculosis may be estimated at more than £20,000,000 (twenty million pounds),

In addition therefore to humanitarian reasons there are powerful financial and economic reasons for its prevention.

VOLUNTARY NOTIFICATION.

In order that preventive measures may be carried out by the Council in individual cases, the Council must have information of their existence.

Voluntary notification was begun in the City of New York, March 1st, 1894, and in January, 1897, the notification was made compulsory. In New York the following numbers of cases of consumption were notified voluntarily:—

In 1894	 	 	 	 4,166 cases.
In 1895	 	 	 ***	 5,824 cases.
In 1896	 	 	 	 8,334 cases.

So that the system cannot be said to be impracticable or unsuccessful.

In England it has only recently been adopted in a few towns. In Manchester, Brighton and Sheffield it has been attended with successful results. It has also been recently adopted in the adjoining Borough of Finsbury. I have information of sixteen towns in England where voluntary notification is now practised, but in about half of them only within the past twelve months. In those towns in which no fees have been allowed, it has naturally not been a success.

I therefore think that it is desirable for your Council to adopt this system of voluntary notification and the same fees paid as for notifiable diseases.

DISINFECTION OF ROOMS.

Many experiments have proved that the dust of rooms in which a consumptive person has been living is generally infected with the germs of tuberculosis. Rooms occupied by consumptives ought therefore to be cleaned at least once a week by using wet dusters and wet tea leaves or sawdust. When the consumptive removes to a sanatorium, hospital, or other premises, or dies, the room ought to be thoroughly disinfected as after other infectious diseases.

SANATORIA.

Proper Sanatoria for the open air treatment of Consumption ought to be provided by the Boards of Guardians, instead of sending consumptives as at present to the general infirmaries. At a meeting of the representatives of the Metropolitan Guardian Boards at St. Martin's Town Hall last year, this subject was discussed and agreed to and referred to the Local Government Board, with a view to the necessary steps being taken by that Board for the carrying out of the proposal. This Council as Sanitary Authority might assist by writing to the Guardian Boards of the Borough and the Local Government Board, advocating the above proposal.

BACTERIOLOGICAL EXAMINATION OF SPUTUM.

As the sputum or expectoration of consumptives often contains large numbers of the germs of tuberculosis, before a certain diagnosis can be made by other methods of examination, and prevention and cure can be more successfully carried out in the early stages of the disease, it is desirable that the Medical practitioners of the Borough should have facilities for this bacteriological examination given them by the Council.

I have on previous occasions referred to the general Sanitary measures that assist in the prevention of consumption.

LEAFLET.

I am glad to report that the Council has consented to a leaflet giving hints on its prevention being circulated in the Borough. This leaflet is now being printed.

INFLUENZA.

Influenza was the assigned cause of 24 deaths, rather more than the preceding year, when it was 21.

In St. Sepulchre no death was assigned to this cause, and in Glasshouse Yard only 1.

In London the number of deaths referred to influenza was 1,950, which is the highest number recorded since 1895.

ZYMOTIC DISEASES.

During the year the number of deaths from the seven principal Zymotic diseases ("Typhus," 'Enteric" or "Typhoid" and "Simple continued fever" being classed by the Registrar-General under the heading of "Fever"), and the death-rate per 1,000 from these diseases were:—

ard of Works	69 2.35
et of the Borough	65 2.37
}	4 1.85
)	
	10,034

The following are the numbers of deaths from the separate diseases:-

SCARLET FEVER.

Excluding duplicate notifications 96 cases were notified, and 90 of them were removed to hospitals of the Metropolitan Asylums Board or the London Fever Hospital. Only 5 cases were notified in St. Sepulchre, of which 4 were removed to hospital, and in Glasshouse Yard only 1 case, which was removed to hospital.

There were fewer notifications of this disease both in the District and in London than in 1899.

In the first half of the year only 22 cases were notified.

The principal incidence of the disease was during the months of July, August, September and October.

Of the District cases 4 died, 1 belonging to St. Sepulchre; and of the London cases 361 died.

A case of Scarlet Fever that was not diagnosed until desquamation had begun was the cause of 5 other cases in the same house, and a similar cause led to 2 other cases in another house.

DIPHTHERIA.

The number of cases of Diphtheria was 65, of which 9 belonged to St. Sepulchre and one to Glasshouse Yard. Of these 56 were removed to hospitals for treatment; all the cases in St. Sepulchre and Glasshouse Yard were so removed.

The number of notifications for the three preceding years were in 1899, 65; in 1898, 138; and in 1897, 158 cases; so that Diphtheria has much declined in the District during the past two years.

The cases were sparsely scattered throughout the District during the year.

The number of deaths from Diphtheria was 5, or a mortality of under 8 per cent. One of the deaths belonged to St. Sepulchre.

In London the number of cases notified was 11,985 (including 209 cases of Membranous Croup) and the number of deaths was 1,558 or a mortality of 13.0 per cent.

The treatment of Diphtheria by its anti-toxin continues to give improved results, especially in laryngeal and tracheotomy cases, and those that come under the treatment within two or three days of the onset of the illness.

The bacteriological examination of material from doubtful cases of Diphtheria has been continued by the Jenner (late British) Institute of Preventive Medicine. Of 84 such cases the Diphtheria bacillus was isolated in 21, and the pseudo-diphtheria bacillus, which is non-virulent to animals, was isolated in 10 cases. In the remaining cases it was not isolated. Most of the material was sent by the London Homeopathic Hospital. At the Hospital for Sick Children where also many cases of Diphtheria from various parts of London are treated, the bacteriological examination is carried out by their own staff.

TYPHOID FEVER.

During the year the number of cases notified was 24, St. Sepulchre, and Glasshouse Yard having each but one notification, in comparison with 34 in 1899, 9 in 1898 and 25 in 1897. Of the 24 cases, 4 died, including one in Glasshouse Yard.

Of these 24 cases, two were afterwards certified not to be Typhoid, and 4 cases were not contracted in the District. Three cases were probably contracted by direct infection from previous cases, during nursing or attendance on the patients.

In London there were 4,291 cases of fever notified, and 756 deaths.

MEASLES.

The number of deaths assigned to Measles was 21, including one death in St. Sepulchre. In 1899 there were only 11 deaths, and 36 in 1898. In London there were 1,936, in comparison with 2,143 in 1899 and 3,075 in 1898.

Closure of St. George the Martyr Infants' School.—Information was received on May 6th, that 119 children out of a total of 220, or 54 per cent., were absent chiefly on account of measles, or measles in the houses in which children attending the school resided. There were also many cases of whooping cough. At a meeting of the Sanitary Committee the following day, an order for the closure of the Schools till the following Monday three weeks was issued. On the opening of the School there were 8 children still away on account of measles, and 20 children on account of whooping cough, or whooping cough or measles in the house, 5 of the 28 returning, however, during the week of re-opening.

Princeton Street Board School.—Although there were many absences from this school on account of measles, I did not advise the closure of the Infants' department, as on enquiry I found that rather less than 10 per cent. of the children in that department were absent for that reason.

Information from Board Schools.—In accordance with the regulations of the School Board for London many notices giving information of the exclusion of children on account of infectious disease in the house were received. In preceding years the number of notices thus received was very few.

WHOOPING COUGH.

The death rate in Holborn from Whooping Cough was less than that for London. The number of deaths in Holborn was only 10. There was no death in St. Sepulchre or Glasshouse Yard. All the deaths were of children under 5 years of age. The number of deaths in London was 1,948.

DIARRHŒA.

The number of deaths assigned to Diarrhœa was 25, of which 22 were of children under 5 years of age, the great majority being infants under 1 year of age, and took place in the third or summer quarter.

No death in St. Sepulchre and Glasshouse Yard was assigned to this cause.

Of 3,564 deaths assigned to Diarrhœa in London, 2,867 took place in the third quarter.

The temperature of the summer quarter was 2°-0 above the average of the preceding 129 years, and the rainfall of that quarter was less than the average.

PLAGUE.

NOTIFICATION AND PRECAUTIONARY MEASURES.

In accordance with the Regulations of the Local Government Board, dated the 19th September, 1900, Plague was made a notifiable disease, and a printed circular was at once prepared and sent to each medical practitioner practising in the District, giving information of this.

Arrangements were made with the Metropolitan Asylums Board for the removal of any case of Plague to one of their hospitals.

The London County Council made arrangements for any suspected case to be seen by Dr. James Cantlie before removal to a hospital of the Metropolitan Asylums Board.

An arrangement was also made with Dr. Klein for the bacteriological examination of material from suspected cases.

The London County Council also had premises prepared for the prompt removal of all persons who had been in contact with a plague case, where they could be isolated and placed under medical supervision until it could be ascertained whether or not any of them had been infected with the disease.

Inquiry was also made at all seamen's lodging houses, common lodging-houses and shelters in Sanitary Districts in the Eastern half of London on both sides of the Thames, for cases of sickness which might possibly prove to be plague; and all cases of sickness of a doubtful nature were enquired into by one of the Council's medical officers.

DISINFECTION.

During the year ending December, 1900, 278 rooms were fumigated and cleansed. The rooms were also stripped and limewhited where necessary.

1,928 articles were disinfected by steam, viz. :-

185	Beds	156	Quilts
15	Mattresses	395	Pieces of wearing apparel
74	Bolsters	5	Curtains
312	Pillows	3	Rugs
377	Blankets	68	Sundries
292	Sheets		
46	Cushions	1,928	Total
		-	

The family shelter at 47, Northampton Road (conjointly used by the Clerkenwell Vestry), was used for sleeping accommodation by 16 families, consisting of 62 persons from this District, during the disinfection of their rooms.

SICKNESS RETURNS.

The number of cases of sickness under the care of the District Medical Officers was 1,421. In 1891 the number of cases of sickness was nearly double, viz., 2,816 and they have diminished each year since that date. Details of these are given in Table VII.

HOUSING OF THE WORKING CLASSES ACT, 1890.

Union Buildings Area

Aylesbury Place, Clerkenwell, and Union Buildings, Holborn, Improvement Scheme, 1899.

Details of my reports on the Union Buildings Area were given in my Annual Report for the year 1899. I made a special report to the Board on the greater part of the Area in 1896.

The following are the mortality statistics for the Union Buildings Area, giving the average general death-rate, phthisis death-rate, and the zymotic death-rate for the four years, 1896-1899, inclusive. I give also the corresponding rates for the Holborn District, and for London as a whole.

This Board was not supplied with the details of deaths in the District until the year 1896, so that I can only give the statistics for the four years 1896-1899 inclusive.

The population as enumerated by the London County Council in June, 1899, viz., 817, may, I think, be fairly taken as the average of the population during the four years 1896-1899 inclusive, for although the population was greater in the beginning of 1896, the greater part of that year and in 1897 it was less on account of the closing and demolition of parts of the Area.

						General. Death-rate.	Phthisis. Death-rate.	Zymotic. Death-rate.
	Area		***		 ,,,	48-6*	7-96*	6.12*
	Holborn	District		***	 -	23.4	3:11	2.89
1	London				 	19-3	1-77	2/45

Per 1,000 persons.

* The true death rates of the Area are most probably greater than the above high figures, because a large number of the inhabitants of that Area, when they are ill or infirm, go to Hospitals, Infirmaries, Asylums, and Workhouses, and at death the address is often given as Holborn, St. Andrew's, or some other inexact address, and these deaths therefore cannot be included as of persons belonging to the Area.

The Local Inquiry was held at the Holborn Town Hall on the 15th and 16th March, 1900. At this inquiry the past and present District Poor Law Medical Officers, Dr. Gabe and Dr. Gahagan, gave evidence of the large proportion of sickness, especially phthis or consumption, other respiratory diseases and zymotic diseases, that had been prevalent amongst persons living in the Area. Many other witnesses (including Dr. Hamer, Assistant Medical Officer of Health to the London County Council, and myself) were also examined and cross-examined.

After the Local Inquiry a Provisional Order was made by one of Her Majesty's Principal Secretaries of State, for improving the above areas; and an Act confirming the Provisional Order was afterwards passed.

HOUSES CLOSED VOLUNTARILY, DEMOLISHED, REBUILT, &c.

First Avenue Hotel. Extension and new shops and offices in Brownlow Street, and 52, Bedford Row.

Also a considerable amount of Sanitary Work has been done in the District such as new buildings, etc., without notices being served.

THE MEAT MARKET.

The Meat Market is in the Parish of St. Sepulchre, now in the Metropolitan Borough of Finsbury.

During the past five years the amount of meat seized, offal excluded, was :-

							DISTAS	ED.	DECOMPOS	ED.	Тота	I.
	YEAR. Quarter	Stones.	Lbs.	Stones.	Lbs.	Stones.	Lbs					
1et Ou	arter			Him.	M		4069	3	378	4	4447	7
2nd						77.5	710	1	1215	4	1925	5
3rd						100	653	6	3476	4	4130	2
4th							1701	5	311	3	2013	0
Total f	or the year	1896				***	7134	7	5381	7	12516	6
Total f	or the year	1897					1881	2	2331	0	4212	2
Total f	or the year	1898			***		1012	6	3316	11/2	4528	71/2
Total f	or the year	1899					888	6	3101	4	3990	2
		190	0.				ow or	1 2	ROTOAR			
let On	arter						337	0	21	0	358	0
2nd						200000	653	3	739	7	1393	2 4
3rd						100	54	0 3	427	4	481	4
4th						1000	205	3	427	2	632	5
Total f	or the year	1900					1249	6	1615	5	2865	3

These figures show the marked change that has been effected in the Meat Market; the amount of diseased meat "seized" in 1897 being little more than a quarter of that of the previous year; in 1898 the amount was less than one-fourth of that "seized" in the first quarter of 1896, and in 1899 still less.

In 1900 the increase is due to the seizure of 132 Dutch calves. In preceding years they have been also decomposed and included amongst the decomposed meat.

In 1896 80 tubercular carcases of beef and 6 of pork were seized.

In 1897 16 tubercular carcases of beef were seized.

In 1898 6 tubercular carcases and 2 top pieces of beef were seized.

In 1899 3 tubercular carcases of beef were seized.

In 1900 1 tubercular carcase of beef and 1 of pork were seized.

DISEASED MEAT AND OFFAL SEIZED DURING 1900.

14 quarters of beef.

11 carcases of pork.

132 carcases of veal.

4 carcases of stirks.

1,961 sheep's livers.

40 bullock's livers.

1 carcase of lamb.

6 pieces of bacon.

58 bullock's lungs.

1 bullock's tongue.

1 bullock's head.

1 bullock's heart.

2 sides of beef.

24 sheep's lungs.

Total weight (less offal) 1,249 stones 6 lbs.

DECOMPOSED MEAT AND OFFAL SEIZED DURING 1900.

17	quarters of beef.
$623\frac{1}{2}$	stones of beef.
3	carcases of mutton.
4	quarters of mutton.
19	pieces of mutton.
2	stone of scragg of lamb.
7	carcases of pork.
2	quarters of pork.
21	pieces of pork.

Grand total 2,865 st. 3 lb. = 22,923 lbs.

SMOKE INSPECTION.

There are 56 furnaces and boilers on the register, and periodical inspection is made of them to see that they are in proper working order, and consume their own smoke. There are nine kinds of smoke consumers in the District which are as follows:—

Ventilated doors					 	12
Martin's Patent					 	4
Dr. Annan's Patent					 	3
Nicholson's Patent					 	3
Caddy's Patent Bars					 	2
Jukes' Patent					 	2
Galloway's Patent					 	6
Gregory & Veal's Patent					 	1
Gosling's Patent					 	2
						_
	Total of	smoke	consum	ers	 	35

The same as last year.

The number of furnaces and boilers without smoke consumers is 21. Nine intimation and five Statutory notices were served to abate smoke nuisances, and were all complied with. In several cases the owners were written to and cautioned not to allow the nuisance to recur. In one case the stoker of the furnace was discharged for his negligence.

THE MORTUARY.

There were 129 bodies brought into the Mortuary from 1st January to December 31st, 1900; in 1899 the number was 158. Coroner's inquests were held on 57 of these. The verdicts were:—

Natural caus	es		 	 	 50
Accidental de	eath	***	 ***	 	 3
Suffocation			 	 	 3
Suicide			 	 	 1
	TD. (,			
	Tota	al	 	 	 57

METEORLOGY.

Details are given in Table VIII.

The mean temperature for the year was 50.4 F., or 1.6 F. above the mean of the preceding 129 years. The rainfall was 22.32 inches, being 2.51 below the average of the preceding 85 years.

LEGAL PROCEEDINGS.

A list of the Legal Proceedings for diseased and unsound food is given in Table IX. For Nuisance Cases in Table X.

And Proceedings under the Sale of Food and Drugs Acts in Table XI.

I am, Gentlemen,

Your obedient Servant,

W. A. BOND.

* Rates calculated per 1,000 of estimated population.

Note —The deaths to be included in Column 7 of this table are the whole of those registered during the year as having actually occurred within the district or division. The deaths to be included in Column 12 are the number in Column 7, corrected by the subtraction of the number in Column 10 and the addition of the number in Column 11.

By the term "Non-residents" is meant persons brought into the district on account of illness, and dying there; and by the term "Residents is meant persons who have been taken out of the district on account of illness, and have died elsewhere.
