[†] Part-time Officers.

To the Mayor, Aldermen and Councillors of the Borough of Hornsey.

MR. MAYOR, LADIES AND GENTLEMEN,

I have the honour to submit my Annual Report for the year ending December 31st, 1941.

The birth rate was 12.86 per 1,000 of population, practically the same as in the previous year. The death rate was 13.95, as against the unusually high figure of 15.16 in 1940.

Infant Mortality (63.2).

Fifty infants died in 1941 before reaching the age of 1 year. The live births numbered 791. The infant mortality rate is therefore 63. One must go back to the last war to find so high a figure. The fall in infant mortality which has occurred in the last quarter of a century, and most notably in the dozen years before the present war, reached its lowest point in 1939, when it was 27.25. In 1940 it rose to 49, and in 1941 there is this further striking increase to 63.

The causes of these infant deaths and the exact ages at which they occurred are set out in detail in the table on Infant Mortality. The most important facts which this analysis reveals are—

- (1) Thirty of the fifty infant deaths occurred in the first month of life; 25 of them occurred in the first week.
- (2) Thirty-three deaths resulted from conditions associated with the period of gestation and the process of parturition.
- (3) Of the causes of deaths of infants from infection after birth, pneumonia (10 deaths) claimed more victims than all the other infections together.

The high proportion of the infant deaths occurring in the first month, due to congenital conditions and the hazards of childbirth, is an indication of the strain which the conditions of 1940-1941 placed on expectant and nursing mothers. This appears to be true, whether they chose to have their babies

at home, in hospitals in London, or in maternity homes in reception areas.

Apart from the rise in infant mortality rate in the last two years, there is nothing in the vital statistics to indicate any adverse influence of war conditions on the public health. There has been no undue prevalence of, or deaths from, any of the infectious diseases. The deaths from all forms of tuberculosis were 49 in 1940 and 48 in 1941—the lowest figures ever recorded in this Borough. The general nutritional state of the child population of school and pre-school ages has been excellent and there has been a conspicuous absence of disease-conditions attributable to insufficient or unsuitable diet.

I have the honour to be, Mr. Mayor, Ladies and Gentlemen, Your obedient servant,

R. P. GARROW.

Medical Officer of Health.

HOUSING STATISTICS.

(SECTION D).

The housing statistics of the year as required by the Ministry of Health are set out below:—

- 1. Inspection of Dwelling-houses during the Year:—
 - (1) (a) Total number of dwelling-houses inspected for housing defects (under Public Health or Housing Acts) 808
 - (b) Number of inspections made for the purpose 2,531

(2) (a) Number of dwelling-houses (included under sub-head (1) above) which were inspected and recorded under the Housing Consolidated Regulations, 1925	_
(b) Number of inspections made for the purpose	-
(3) Number of dwelling-houses found to be in a state so dangerous or injurious to health as to be unfit for human habitation	
(4) Number of dwelling-houses (exclusive of those referred to under the preceding sub-head) found not to be in all respects reasonably fit for human habitation	397
2. Remedy of Defects during the Year without service of formal Notices:—	
Number of defective dwelling-houses rendered fit in consequence of informal action by the Local Authority or their Officers	343
3. Action under Statutory Powers during the Year: -	
A.—Proceedings under Sections 17, 18 and 23 of the Housing Act, 1930:—	
(1) Number of dwelling-houses in respect of which notices were served requiring repairs	
(2) Number of dwelling-houses which were ren- dered fit after service of formal notices:—	
(a) By owners	-
(b) By local authority in default of owners	
B.—Proceedings under Public Health Acts:—	
(1) Number of dwelling-houses in respect of which notices were served requiring defects	
to be remedied (2) Number of dwelling-houses in which	18
defects were remedied after service of formal notices:—	

(a) By owners	18
(b) By local authority in default of	
owners	-
C.—Proceedings under Sections 19 and 21 of the	
Housing Act, 1930:—	
(1) Number of dwelling-houses in respect of	
which Demolition Orders were made	-
(2) Number of dwelling-houses demolished in	
pursuance of Demolition Orders	-
D.—Proceedings under Section 20 of the Housing	
Act, 1930:—	
(1) Number of separate tenements or under-	
ground rooms in respect of which Closing	
Orders were made	1
(2) Number of separate tenements or under-	
ground rooms in respect of which Closing	
Orders were determined, the tenement or	
room having been rendered fit	-
*4. Housing Act, 1936. Overcrowding:	
(a) (i) Number of dwellings overcrowded at the end	
of the year	29
(ii) Number of families dwelling therein	42
(iii) Number of persons dwelling therein	207
(b) Number of new cases of overcrowding reported	
during the year	9
(c) (i) Number of cases of overcrowding relieved	
during the year	6
(ii) Number of persons concerned in such cases	31
OTHER HOUSING ACTIVITIES.	
FAMILIES RE-HOUSED BY THE COUNCIL.	_The

FAMILIES RE-HOUSED BY THE COUNCIL.—The Council re-housed 50 families, representing 207 persons, from various roads in the Borough.

^{*}These figures are taken from Departmental records, but owing to changes brought about by war conditions the figures may not indicate the final position in regard to overcrowding.

INSPECTION AND SUPERVISION OF FOOD.

(SECTION E.)

DAIRIES AND MILKSHOPS.

At the end of the year the register showed 55 shops classed as dairies. There were also 75 milkshops on the register, i.e., shops where dairy produce is sold, but where it does not form the principal trade.

Thirty-two of the dairies are situated outside Hornsey but deliver milk within the Borough.

SPECIAL DESIGNATED MILK LICENCES.

Producers of, and dealers in, special designated milks are required to obtain licences annually.

INFECTIOUS DISEASES.

(SECTION F.)

IMMUNISATION AGAINST DIPHTHERIA.

The Council's diphtheria immunisation scheme, which has been in operation for five years, consists of special immunisation sessions at Centres 1, 2, 3 and 4 on the first, second, third and fourth Saturday morning in each month. The immunising material used is Toxoid antitoxin follicles (T.A.F.) — three doses of 1 c.c. at intervals of one month.

Satisfactory progress is being made and there is a steady flow of children at each of the centres.

In addition, immunisation is carried out of young babies at the infant welfare centres and of school children in the schools.

About 40 per cent, of school children are immunised or in process of being immunised and 60 per cent, of pre-school children. Parents now appreciate that the process is simple, safe, painless, free from reaction and entirely harmless. There is also no doubt that in all but a very small minority of children it produces a real and lasting immunity. In the rare event of an attack of diphtheria after immunisation, the illness is mild and the danger of death is practically removed.

In these circumstances parents who fail to have their children immunised against diphtheria are taking upon themselves a heavy responsibility, for which they may have reason to be sorry if this treacherous disease enters the household. For it is a treacherous disease—stealing in unsuspected and doing its deadly work so stealthily that a young child may be moribund before the disease is diagnosed.

It is frequently stated—sometimes on high authority—that there has been no reduction in the mortality from diphtheria

since the beginning of this century. This fortunately is not true of Hornsey, as the following figures show:—

Diphtheria Cases and Deaths in Decennia.

Decennium.	Cases.	Deaths.	Case Mortality.
1901-1910	1,177	91	7.7 per cent.
1911-1920	988	76	7.7 per cent.
1921-1930	1,904	52	4.7 per cent.
1931-1940	780	27	3.6 per cent.

There is a steady reduction in each successive decennium in the number of diphtheria deaths, and in the last two decennia in the case mortality. This is no doubt accounted for, to some extent, at least, by the measures taken for the control of diphtheria—quick detection of the disease by the doctor called in, rapid removal to hospital, efficient treatment, especially in relation to adequacy of dosage of antitoxin, together with measures to prevent the spread of infection at home.

It is well, however, to remember that the change in age constitution of the population during the forty years under review would naturally tend to favour a fall in the incidence of diphtheria. The census population of 1901 was 72,056, that of 1931 was 95,523, and, if a census had been possible in normal conditions in 1941, the total population of the Borough would almost certainly have been over 100,000. But whereas 26 per cent. of the 1901 population was under 15 years of age, only 17 per cent. of the 1931 population was under 15, and if a census had been taken in 1941, the proportion under 15 would probably have been in the region of 14 per cent. The fall in the birth rate has cost us nearly half our child population in forty years. The diphtheria-susceptible elements in the population are being separated—and so to some extent protected from infection—by the older immune elements in the population.

The question might be asked whether 27 deaths in ten years—an average of less than three per annum—is not in itself a satisfactory achievement compared with the early years of the century. The answer is that, since the perfecting of the process of artificial immunisation in the last few years, its complete safety and reliability—27 deaths from diphtheria in ten years are just 27 too many. Our aim should be a decade without a

diphtheria death. This has been achieved in some towns in Canada and U.S.A. and there is no reason why it should not be achieved in Hornsey.

Since the commencement of holding sessions in Hornsey in 1936 three thousand nine hundred and seventy-two children have been immunised up to the end of 1941.

The following are particulars of the children immunised during 1941:—

Town Hall Centre	Age under 5 years 354	Age 5 years and over but under 15. 285

VACCINATION.

The Public Vaccinators inform me that they performed vaccination of persons in the Borough during 1941 as follows:—

Dr.	E.	Buckler	 	 	100
Dr.	R.	Mackay	 	 	196

PREVENTION OF BLINDNESS. (PUBLIC HEALTH ACT, 1925, SECTION 66.)

Two cases of ophthalmia neonatorum were notified, both cases being nursed at home.

There was no case of blindness resulting from this infection.

	Cases						
Notified.	Tre	ated	Vision unimpaired.	Vision impaired.	Total blindness.	Deaths.	
	At home.	In hospital or nursing home.

TUBERCULOSIS.

PUBLIC HEALTH (PREVENTION OF TUBERCULOSIS) REGULATIONS.

No occasion has arisen in the course of the year to put these powers into action.

There were 696 beds available solely for Middlesex under the Middlesex County Council's scheme for the treatment of Tuberculosis in sanatoria, namely:—

Institution		commod ults F	Children	Type of Case				
County Sanatorium, Harefield	136	164	68 10	Pulmonar	y—sanatorium observation			
County Sanatorium, Clare Hall	170	72	_		sanatorium			
Danesbury Manor, Welwyn	_	57	5					
Victoria Home, Widdicombe, Devon	-		6	Non-pulm	onary			

Patients are also sent to the Middlesex County Council's general hospitals and to numerous other voluntary hospitals and sanatoria.

The total number of cases on the Tuberculosis Register at the end of 1941 was 874, viz., pulmonary 669, non-pulmonary 205, an increase of 21 on the total for last year.

A table showing the history of cases of Tuberculosis during the year will be found on Table F.

MORTUARY.

Seventy-three bodies were received at the mortuary and inquests held on 12 of them.

DISEASES OF ANIMALS ACTS.

Mr. F. G. Buxton, the Veterinary Inspector, has kindly supplied me with details of his work in the Borough under the Diseases of Animals Acts and Orders during 1941 as follows:—

Inspections made under the Diseases	
of Animals Acts	28
Animals inspected:	(Pigs 220)
Under the Parasitic Mange Order: Horses	1
Under the Swine Fever Order, 1908: Pigs	5
o action was necessary under the Tuberculos Five post-mortem examinations on pigs w	sis Order, 1925.

ANNUAL REPORT

ON

Maternity and Child
Welfare Services

1941

MATERNITY & CHILD WELFARE COMMITTEE

AS AT 31ST DECEMBER, 1941.

Alderman W. V. Wall, (Chairman), Kilten Lodge, Rowben Close, Totteridge.

THE MAYOR, Alderman H. G. J. WILLIAMS, J.P.,

105, The Chine, N.21.

Alderman Mrs. C. M. CAVE, 10, Wood Vale, N.10.

- ,, S. G. Goulding, Woodlands, Cranley Gardens, N.10.
- ,, Wm. J. Grimshaw, 25, Sheldon Avenue, N.6.
- ,, J. W. Shipp, 40, Coleridge Road, N.8.
- ,, R. Steeds, 19, Coolhurst Road, N.S.
- ,, L. J. Valette, 59, Allison Road, N.8.

Councillor Mrs. J. H. BARRENGER, 18, Fordington Road, N.6.

- ,, F. A. P. Boustred, 26, Lanchester Road, N.6.
- ,, M. W. Burns, 7, Womersley Road, N.8.
- ,, Mrs. N. C. Clegg, 28, Stormont Road, N.6.
- ., F. D. Dew, 101, Turnpike Lane, N.8.
- ,, J. Edwards, 102, Turnpike Lane, N.8.
- ,, H. G. R. GRIFFIN, 33, Fordington Road, N.6.
- ,, Mrs. M. N. Hill, 16, Bishopswood Road, N.6.
- ,, G. F. N. NORMAN, 12, Woodberry Crescent, N.10.
- ,, G. B. Walker, 7, Waverley Road, N.S.
- ,, J. L. R. Webb, 11, Wilmer Way, N.14.

Selected Members:

Lady F. O. Dixon, 2, Woodside Avenue, N.6.

Mrs. H. M. INWARD, 99, Pemberton Road, N.4.

Mrs. M. King, 45, Wood Vale, N.10.

Miss B. I. SMITH, 43, Weston Park, N.8.

Mrs. B. Walton, "Greenacre," The Green, Ealing, W.5.

Miss E. F. Wood, 38, Church Crescent, N.10.

THE MATERNITY AND CHILD WELFARE SCHEME.

The Maternity and Child Welfare Scheme has continued its normal work at the four centres throughout the war. The heavy aerial bombardments in the last few months of 1940 led to the evacuation of a considerable number of expectant and nursing mothers and pre-school children to places of greater safety in the country. This disturbance does not appear to have raised maternal mortality or morbidity, but it is reflected in the increase in premature births and neo-natal deaths.

During 1941 there has been a steady return to more normal conditions and the number of attendances at the centres has increased, so that extra sessions have been held for expectant mothers and for infants and young children.

MATERNITY HOSPITAL ACCOMMODATION.

NORTH MIDDLESEX HOSPITAL.—The maternity admissions from Hornsey to the North Middlesex Hospital numbered 127 in 1941, as compared with 114 in 1940.

MIDWIFERY SERVICES.

There were 15 Midwives, including 4 Borough Midwives, notified to the Middlesex County Council as practising in the Borough, 6 of whom reside outside the Borough.

The Borough Midwives attended 226 births, in addition to ante-natal clinics held at the Welfare Centres. One of the conditions upon which the Council's Midwives accept a case is that the expectant mother shall attend an ante-natal clinic.

Three thousand two hundred and sixty-six births have been attended by the Borough Midwives since the appointment of a Midwife was first made in 1922.

PAINLESS CHILDBIRTH.

Up to the end of the year seventy-five mothers had had gas and air administered at their confinements and the results may be claimed to be very satisfactory.

PUBLIC HEALTH ACT, 1936 (Sec. 203). NOTIFICATION OF BIRTHS.

All live births and still births of seven months and over must be notified to the Medical Officer of Health within 36 hours, in addition to being registered within a period of six weeks after birth.

The number of births notified under the Act during 1941 was:—

C4:11 1.:	Male. 427 15 442	Female 409 12 ———————————————————————————————————	Total. 836 27
The births were notified:— By doctors ,, Borough Midwives ,, other midwives ,, hospitals ,, parents ,, others			18 226 143 127 1 295
Not notified (from Registrar's re Live births Still births		12 1 —	850 13 863
Of this number there were:— Occurring in the Borough and ferred to other districts Belonging to Hornsey and occurring in Hospitals, &c., outside	urring the	e births	. Still births.
district		396	13

The 773 nett number of notified births belonging to Hornsey were divided among the districts of the Centres as follows:—

Town Hall Centre	Live Births. 387	Still Births. 5	Total.
Burgoyne Road Centre	129	7	136
Highgate Centre	204	13	217
Coldfall Sub-Centre	28	0	28
	748	25	773

HOME HELPS.

The Hornsey Home Helps Society, started in 1930 by members of the Voluntary Committees of the Centres, continued its work during the year (Hon. Secretary: Mrs. Inward, 99, Pemberton Road, N.4).

THE NATIONAL MILK SCHEME.

The distribution of milk to expectant and nursing mothers and children under five was transferred from the Health Department to the local Food Control Office in 1940. This work, together with the distribution of fruit juices and cod liver oil, is carried out by Food Control in close co-operation with the Maternity Centres, and is an extremely important factor in maintaining the health of mothers, babies and young children.

MATERNITY AND CHILD WELFARE DENTAL SCHEME.

The following is a record for the year of the work of the Dental Clinic:—

Mothers. Children.

Chillo.			Mouners.	Cimarei
Old cases			409	62
New cases		·	153	87
Total attendances			562	233
Finished cases			62	68
Attendances for denta			127	_
Dentures provided			23	brun er
Dentures repaired			5	
Teeth extracted			624	81
Fillings done			77	90
Inspections			162	56
General anæsthetics				51
Local anæsthetics			90	1
Other treatments (dr				1
scaling, gum treat	1,76		97	203

ORTHOPÆDICS.

The Surgeon attends monthly and the Masseuse three times weekly at the School Clinic for the treatment of elementary school children and children under five years.

The following are the statistics for the year for children under five:—

Children	treated—New cases	Surgeon.	Masseuse.
	Old cases	83	577
**	attendances	139	666

The cost to the Maternity and Child Welfare Committee was £55 10s. 11d. for the treatment of children under five years for the year to 31st March, 1942.

VOLUNTARY COMMITTEES.

Valuable assistance to mothers and children attending the Centres has been rendered by the Voluntary Committees during the year in special cases requiring surgical boots, convalescent homes and other forms of treatment.

CHILD LIFE PROTECTION. PUBLIC HEALTH ACT, 1936 (Secs. 206—220).

Regular visits are paid by the Health Visitors to the homes of foster-mothers in their respective areas, and foster-mothers are encouraged to bring the children to the centres for periodical medical examination.

The number of requests for foster-mothers is much in excess of the number available and requests are often received from Societies and Authorities outside the Borough.

A register of foster-mothers and foster-children is kept by the Medical Officer of Health and at each Centre. The following is a summary of the Register:—

			C	entre-		
		No. 1	No. 2	No. 3	No. 4	Total
