METROPOLITAN BOROUGH OF STOKE NEWINGTON

REPORT OF THE MEDICAL OFFICER OF HEALTH
FOR THE YEAR 1954.

Public Health Department, Town Hall, Stoke Newington, N.16.

TO THE MAYOR, ALDERMEN AND COUNCILLORS
OF THE METROPOLITAN BOROUGH OF STOKE NEWINGTON.

This Annual Report is presented in the abridged form required by the Ministry of Health.

The number of new Sanitary complaints received was 1341 as compared with 1160, for the previous year showing an increase of 181.

The Housing Repairs and Rents Act, 1954, placed an additional burden on the staff of the department. Inspections prior to the issue of Certificates of Disrepair, involve a great amount of the Inspectors' time, while the administrative work in this connection is correspondingly increased. From the 30th August, 1954, the date of the commencement of the Act, to the 31st December, 1954, 30 applications for Certificates of Disrepair were received and 19 Certificates were issued.

During the year, the Senior Sanitary Inspector, Mr.A.P.Piggott retired from the service of the Council, having spent the whole of his municipal life with this Authority, and his post was filled by the promotion of Mr.C.V.Frisby, the Senior Housing Inspector. Mr.Piggott's knowledge of the borough was very extensive and during his long service, he saw many major changes take place. It was during his last few years of service that the London County Council built the very large Woodberry Down Estate and Mr.Piggott was personally responsible for the supervision of the installation of the drainage system on this estate. Mr.L.Foxley, Assistant Housing Inspector left the service at the end of the year to take up an appointment with another Authority. This created two vacancies on the establishment of Sanitary Inspectors, which at the time of writing, have not been filled.

The shortage of qualified Sanitary Inspectors is general throughout the Country, and all local authorities are finding it increasingly difficult to fill vacant posts. This fact is having serious repercussions, as only the more important items of Sanitary Inspection can be carried out, and at the present time, there appears to be little likelihood of the position of the supply of Sanitary Inspectors being remedied.

The Registrar-General's estimate of the civilian population in 1954 was 51,260 as compared with 51,250 in 1953, while the number of births allocated to Stoke Newington in 1954 was 812 as compared with 753 in 1953, thus showing an increase in the birth rate from 14.69 to 15.84.

The number of deaths of children under one year of age was 15 as compared with 18 in 1953, showing a decrease in the death rate from 23.90 to 18.47. The rate for England and Wales was 25.5. The causes of death were Pneumonia 1, Congenital Malformations 3, Bronchitis 1, and Other Causes 10. Of these 15 deaths, 3 occurred in the first 24 hours of life and 10 in the first month of life.

Deaths from Motor Vehicle Accidents were 2. These involved a man between the age groups of 45 and 65 and a woman over 75. This is an increase of one death over the previous year and the third successive year in which no young children were involved in fatal accidents.

Deaths due to other accidents totalled 8 and showed an increase of 3 over the previous year. 3 males and 5 females were involved, and deaths were caused from fractures after having fallen, after being knocked down by a motor cycle and from drowning.

Suicides totalled 4 and involved 1 male and 3 females.

Deaths of Stoke Newington residents totalled 505 as compared with 503 in 1953 and the death rate increased very slightly from 9.81 to 9.85. The causes of death were Tuberculosis 7, Syphilitic Diseases 1, Cancer 90, Vascular Lesions of Nervous System 61, Heart Diseases 154, Pneumonia 19, Bronchitis 44, Motor Vehicle Accidents 2, Suicides 4 and Other Diseases 123.

Once again it is to be noted that the number of deaths from Pulmonary Tuberculosis is decreasing. The number of deaths from Cancer of the Lung was 23 this figure being the same as that for 1953. The deaths in 1954 from Pulmonary Tuberculosis were 6 as compared with 11 in 1953.

It will be remembered that during the year a public statement was made regarding the association of smoking with Lung Cancer. The public should appreciate the fact that there is every indication that there is an association between smoking particularly cigarettes and the incidence of Cancer of the Lung.

Notifications of Infectious Diseases showed a marked decrease over the figure for 1953. 472 notifications were received as compared with 1251 for

the previous year. There were no cases of Diphtheria, but one case of Poliomyelitis was removed to Hospital. 16 cases of Food Poisoning were reported and involved persons in various age groups. Particulars regarding Food Poisoning will be found in the main body of the Report.

417 specimens were sent to the Laboratory at County Hall, and once again, I would like to express my appreciation to Dr. Tomlinson and his staff for the help they have given with these examinations.

During the year, 3122 enquiries were dealt with at the Public Health Department counter and covered a wide variety of subjects. In addition, posters were displayed in the department and on the Council notice boards and leaflets were distributed throughout the Council's establishments to which the public has access. The matters dealt with were varied and included Diphtheria Immunisation, Influenza, Accidents in the Home, Atmospheric Pollution and Food Hygiene.

Throughout the year, the investigation into Atmospheric Pollution continued and readings for the full year will be found in the Statistical part of the report. In addition daily readings have been taken, showing the extent of pollution in the borough.

In this connection, the Public Health Committee have discussed at great length the question of the supply and burning of smokeless fuels in premises in the borough. Difficulties have been experienced in connection with the supply in small quantities suitable for the limited storage accommodation in many Council and privately owned dwellings. This situation has now been remedied and coal merchants are now arranging for smokeless fuels to be delivered in small quantities in order to solve the storage problem.

There still remains the widespread problem of adequate supplies of this type of fuel, particularly when heavy demands are made during bad weather.

The Clean Food Campaign continued throughout the year with the display of posters, lectures and film shows. A series of six monthly film shows, the first of which took place in October, included a full length feature film, as well as short films on food and other health matters. These shows were so well attended that the Public Health Committee has decided that a further series should commence in October 1955.

Further details of the Campaign, including a survey of food premises will be found in the main body of the report.

319 samples of Food, Drugs and other articles were taken under the Food and Drugs Act, 1938, of which 141 were formal samples and 178 were informal samples. None of these samples was adulterated.

Six complaints of foreign bodies in food were received in the department and details of these and the action taken are to be found in the food section of the report.

A few old and infirm persons have caused the department some anxiety during the year, but in no case was it necessary to invoke Section 47 of the National Assistance Act, 1948.

Dr.C.F.Stott, the Deputy Medical Officer of Health, has continued to assist the department throughout the year.

I wish to extend my thanks and appreciation to His Worship the Mayor and to the Chairman and Members of the Public Health Committee for the support they have given me during 1954.

I also thank the staff of the Public Health Department who have worked efficiently throughout the year.

S. KING

HEALTH EDUCATION

During the year, pamphlets were distributed at the Public Health counter, through the Public Libraries and through the Medical Practitioners.

The pamphlets covered Diphtheria, Influenza, Whooping Cough, Care of the Feet, Care of the Teeth, Rodent Control and Atmospheric Pollution.

Enquiries were also dealt with personally in the Public Health Department.

SCABIES AND VERMINOUS CONDITIONS

The cases of Scabies notified and number of treatments given during 1954 and the two preceding years were as follows:-

		1953	1954
Cases notified	2	3	7
Cases treated at Cleansing Station.	26	13	29

The work done at the Council's Cleansing Station is summarised in the following table:-

SI	S	cabies	Head o	r Body Lice
200 200	Cases	Treatments	Cases	Treatments
Children under 5 years	4	8	38	38
Children over 5 years	21	30	207	207
Adults	4	10	30	30
	29	48	275	275

PUBLIC MORTUARY

Stoke Newington has an agreement with Hackney Borough Council for the use of the Hackney Borough Council Mortuary at a cost of £300 per annum.

Details of the bodies of Stoke Newington residents deposited in the Mortuary during the year are as follows:-

Total number of bodies in the Mortuary	90
(1) to await inquests - (a) Infectious	- 5
(2) To await burial	-
(3) Cause of death certified by Coroner	85
Number of post-mortem examinations made	90

The drain choked or stopped.	7
The rainwater pipe defective.	11
The house without a proper water supply.	2
The roof defective so as to be insanitary.	153
The guttering defective so as to be insanitary.	41

AIR POLLUTION

As in previous years, regular measurements of air pollution have been made with the Deposit Gauge and the Lead Peroxide apparatus installed at the Town Hall. From these instruments monthly readings are obtained, details of which are given in tables in this report.

Investigation into the great "Smog" of 1952 showed that throughout London there was almost a complete lack of local information as to the daily variation in pollution. The Fuel Research Station at Greenwich submitted a scheme whereby instruments would be sited throughout the Metropolitan area so that a fairly complete picture of daily pollution could be obtained, and the adoption of this scheme was recommended by the Metropolitan Boroughs Standing Joint Committee.

It was suggested by the Fuel Research Station that one instrument should be set up in Stoke Newington, in the Allen Road area, and this was immediately agreed to by the Public Health Committee. The site had to be one which was representative of the area, safe from interference and available for regular attention. The office at the Disinfecting Station met these requirements and the apparatus was installed there in November. The regular changing of filter discs etc., is under the care of the Disinfecting Station staff.

The Fuel Research Station have made plans for widespread investigations at short intervals during heavy and persistent fog in the London area. Arrangements have been made for this newly-installed instrument to be available in such investigation, and for two-hourly readings to be taken when the request for these is received from Greenwich.

Increased publicity of the need for the prevention of smoke was given by the display of posters and leaflets, while the film "Guilty Chimneys" was among those shown to the public in October.

The implications of the Beaver report were considered by the Public Health Committee when it was published. In Stoke Newington the emission of smoke arises largely from domestic chimneys, and the fact that the new Council and L.C.C. flats are all fitted with modern solid fuel burning appliances will be a great advantage if the proposals set out in the report are put into force.

The success of any general scheme for the prevention of smoke from domestic chimneys must depend largely on guaranteed regular and adequate supplies of coke, and representations have been made by the Council to the Authorities concerned on this matter. The problem of providing sufficient storage for coke in Council's flats is also an important one which has been considered by the Public Health and Housing Committees.

Miscellaneous	. 49 9			6		. 11	1078

Drainage Applications.

During the year, 36 Drainage Applications and plans were approved by the Council.

Water Supply.

The water supply of the Borough is controlled by the Metropolitan Water Board, and is supplied direct to the dwelling houses.

No complaint regarding the supply was received during the year.

Housing Repairs and Rents Act 1954.

This act came into force at the latter part of the year and the following is a statement in connection therewith:-

				for Certificat	tes	of Disrepa	ir	 30
(b)	No.	of	Certificates	granted .				 27
(c)	No.	of	Certificates	refused .				 1
(d)	No.	of	Applications	withdrawn .				 2

National Assistance Act 1948.

During the year only one person, a female, aged 80 was buried by The Council under Section 50 of the above Act. The cost to the Council was £14.12.6.

Swimming Bath.

During the summer months, a series of samples of water from the Clissold Road Swimming Bath were taken and submitted for bacteriological examination.

The samples proved satisfactory and showed the high degree of efficiency achieved with the break-point chlorination plant used for purifying the water. Samples sent for chemical analysis were also satisfactory.

RODENT CONTROL

Surface Treatment

During the year 1954 treatment of the Borough in accordance with the recommendations of the Ministry of Agriculture and Fisheries continued. Complaints received by the department, showing a comparison with the year 1953, are set out below:-

19	954	19	53
Rats	Mice	Rats	Mice
156	284	159	152

The following is a summary of the work of the rodent operative:-

No.	of	premises in	vestigated	for	rats				212
No.	of	premises in	restigated	for	mice				309
No.	of	premises in	vestigated	and	found	not	bother	ed	154
No.	of	baits laid	to deal wit	th ra	ats				1218
No.	of	drains found	d defective						29

Sewer Treatments

During the year, two treatments of the Council's Sewers were carried out as follows:-

First Treatment (No.19)

This was carried out as follows:-

Pre-Baiting	14th & 15th June, 1954.	
Poison Baiting	16th June, 1954.	
Check of Poison Bait	17th June, 1954.	
Bait base and poison used	Sausage rusk & zinc phosphid	е

2.65 Manholes were baited and 168 showed 'takes' of pre-bait. The estimated kill based on 'takes' of poison bait was 1320.

Second Treatment (No.20)

This was carried out as follows:-

Pre-Baiting

Poison Baiting

Check of Poison Bait

Bait base and poison used

29th & 30th November, 1954.

1st December, 1954.

2nd December, 1954.

Sausage rusk and arsenious oxide.

256 Manholes were baited and 168 showed 'takes' of pre-bait. The estimated kill based on 'takes' of poison bait was 772.

OUTWORKERS

Outworkers - Employers of outworkers in certain classes of work are required to keep lists of the names and addresses of all outworkers employed by them and to send twice annually (in February and August) copies of such lists for the information of the local authority. From this information, the local authority is able to take steps to ensure that the places in which the outworkers are employed are not injurious or dangerous to the health of the workers and that goods are not distributed from premises where there is dangerous infectious disease.

The following is a summary of the information secured from the employers lists during the year:-

INSPECTION AND SUPERVISION OF FOOD AND FOOD PREMISES

Milk Supply

At the end of the year there remained on the register 44 distributors of milk whose premises are situated in the Borough, and 25 distributors whose premises are situated outside the Borough.

Milk (Special Designations) Regulations, 1936-1949.

Under the Milk (Special Designations) Regulations, the following Licences were issued: -

	DEALERS * LICENCES	
Pasteurised	Sterilised	Tuberculin Tested
26	43	6
	SUPPLEMENTARY LICENCES	
Pasteurised	Sterilised	Tuberculin Tested
20	24	20
Milk Samples		

156 samples of milk were sent for bacteriological examination and of these 4 failed to pass the Methylene Blue Test.

Ice Cream.

During the year 45 samples of Ice Cream were sent to the Laboratory for Bacteriological examination, and were reported upon as follows:-

33 samples were up to Grade I Standard

7	as" and		**	"		II	*
2	18. #25	**	"	"	Ion.	III	
3	**	#	**	**	**	IV	10

Pharmacy and Poisons

The names and addresses of 53 persons remained on the Council's list of persons entitled to sell Poisons under Part II of the Pharmacy and Poisons Act, 1933.

MILK

The average composition of the samples of milk submitted during each month of year and returned as genuine was as under:-

Month	200 L	Number	Total Solids	Milk Fat	Non-Fatty Solids
January	en, J. P. D.	21	12.25%	3.45%	8.80%
February		14	12.31%	3.50%	8.81%
March		13	12.26%	3.47%	8.79%

October		17	12.72%	3.80%	8.92%
November	··· Ida	8	12.88%	3.91%	8.97%
December	true eres	9	12.65%	3.75%	8.90%

The average composition of the whole of the 159 samples of milk received during the year and returned as genuine was as under:-

Total Milk Solids 12.42%

Milk Fat 3.58%

Non-Fatty Solids 8.84%

COMPLAINTS OF FOREIGN BODIES IN FOOD

Apple Turnover affected by Mould

A person living outside the Borough brought to the Public Health Department five apple turnovers purchased from a bakers shop within the Borough. It was alleged that one of the turnovers was affected by mould.

The firm's premises were visted by the District Sanitary Inspector who, in the presence of the Manager, opened the remaining four turnovers and found them all to be in excellent condition. The Manager voluntarily produced a number of similar articles displayed for sale in the shop and on opening them, none showed any sign of mould.

He was questioned as to the possibility of the turnovers having been in stock for several days, but stated that they were prepared daily in small quantities and produced the bakehouse records to corroborate his statement. These showed daily bakings varying from two to four dozen turnovers.

The bakehouse itself was satisfactory and the standard of cleanliness fairly good. Although no quantity of apple turnovers were kept in the bakehouse, it seemed likely that this complaint was the result of one having been left over from an earlier baking.

Foreign Matter in Swiss Roll.

A Swiss Roll, purchased in the Borough was brought to the Department by a resident who complained of the presence of some foreign matter in the roll.

The roll was submitted to the analyst for examination who found the discolouration to be due to crystals of sugar, probably caused by recrystallization from the mixture.

The matter was taken up with the firm concerned who also investigated the complaint. It was maintained that very great care was taken in the production of foodstuffs and as the report from the analyst did not suggest that the roll contained any harmful matter, no further action was taken.

String in Loaf of Bread.

A loaf of bread, submitted by a non-resident, was found, on examination, to contain a piece of string. The matter was brought to the notice of the Supplier concerned, with a request that, in future, more care be taken in the preparation and handling of the foodstuffs he sold.

Insect in Loaf of Bread.

A resident submitted a loaf of bread in the crust of which was some

foreign matter resembling a portion of an insect. The bread was sent to the analyst who reported that the foreign matter was the abdominal portion of an insect which he was unable to identify.

As the complainant did not wish to pursue the matter to the extent of giving Court evidence, a letter was sent to the Suppliers of the bread requesting them to take more care in the preparation and handling of their goods.

Mouse Excreta in Bread.

Complaint was made that a loaf of bread, purchased in the Borough, contained mouse excreta.

The complainant did not wish to pursue the matter to the extent of giving Court evidence, and a warning letter was sent to the Suppliers of the bread.

Joke Sweets.

A resident complained that she had purchased some joke sweets for her child, who, upon eating them, stated that they burned the mouth.

Several packets of these sweets were submitted to the analyst who reported that they gave reactions suggesting the presence of capsicum or extract of capsicum, but owing to the smallness of the quantity, he was unable to prove this. He did not think, however, that capsicum, although very "hot" in the mounth, would cause burns.

A letter, giving this information, was sent to the retailer, and pointing out to him that as sweets of this nature could be a little frightening to young children, it was suggested that purchasers should be advised that they should not be given to young children.

CONDEMNED FOOD

The following is a list of foods condemned during the year by the Sanitary Inspectors as being unfit for human consumption:-

CLEAN FOOD CAMPAIGN

Throughout the year a series of posters were displayed on Council premises, Council notice boards, Public Libraries, Infant Welfare Centres, General Practitioners Waiting Rooms, Political and Social Organisations, and pamphlets were also distributed to the foregoing.

Lectures and film shows were given to pupils of local schools and to members of local organisations.

A series of six monthly film shows was arranged and the first of the series began in October. Each showing included a full length feature film as well as short films on clean food and other health matters.

In addition to the normal routine visits paid to food premises, all trades involving the handling of food were inspected in detail by the District Sanitary Inspectors within the first three months. The survey was made bearing in mind the Food and Drugs Amendment Bill and its implications as to registration, etc., as well as a means of extending the Clean Food Campaign. Particular attention was paid to the question of a satisfactory supply of hot water for general cleansing and for the purpose of hand washing after using the toilet or otherwise soiling the hands. It was found that the majority of traders were becoming more clean food conscious and their co-operation was a pleasing feature of the survey. Of the 343 premises inspected during the survey it was found that 246 had a constant supply of hot water and 96 had other means of obtaining a supply of hot water.

A policy of discussion and persuasion in place of relying solely upon the enforcement of legal provisions has resulted in considerable improvement. This is disclosed by a re-survey up to and including 30th April, 1954, when it was ascertained that 14 more traders had provided means for a constant supply of hot water and 31 other traders were in process of having such a facility installed.
