St. Pancras, Middlesex.

EIGHTEENTH ANNUAL REPORT
OF THE
MEDICAL OFFICER OF HEALTH,
Being the Report for the Year 1873.

—♦♦♦♦♦—

TO THE VESTRYMEN OF ST. PANCRAS.

GENTLEMEN,

The Census of 1871 gave to St. Pancras parish a population of 221,465. The average annual increase of population between 1861 and 1871 was 1·1 per cent. Assuming that the same increase of population has been maintained, the population of St. Pancras in the middle of the year 1873 would be 227,000; and this is taken as the population of the parish in 1873, and forms the basis of the calculations in the following Report.

In the 53 weeks ending on January 3rd, 1874, 8,095 births were registered in the parish.

The number of registered deaths during the 53 weeks ending January 3rd, 1874, was 5,276; and during the year of 365 days, was 5,195. Deducting 79 deaths in the Strand Union Workhouse, and 56 deaths of non-parishioners in the Highgate Infirmary; adding 8 deaths of parishioners in the London Fever Hospital, and in the Homerton Fever Hospital, the actual mortality of parishioners becomes 5,068 in the year of 365 days. The natural increase of population was hence 2,896.

The natural increase in 1867 was 2,724

"	"	1868	"	2,915
"	"	1869	"	2,594
"	"	1870	"	2,301
"	"	1871	"	1,912
"	"	1872	"	3,086
"	"	1873	"	2,896

The birth-rate was 35·09 per 1,000 persons living.

The deaths exceeded by 302 those of the preceding year. The annual rate of mortality was 22·32 per 1,000 persons living.

In 1864 the death-rate was 26·03

"	1865	"	"	24·80
"	1866	"	"	24·45
"	1867	"	"	24·25
"	1868	"	"	22·50
"	1869	"	"	22·81
"	1870	"	"	24·15
"	1871	"	"	25·19
"	1872	"	"	21·28
"	1873	"	"	22·32

The average annual rate of mortality of the ten years 1864-73 was 23·78 per 1,000 persons living.

In the metropolis, as a whole, the annual rate of mortality during the year 1873 was 22·50 per 1,000; and in the north district, of which St. Pancras is a part, it was 21·20 per 1 000. The death-rate in this parish was hence 0·18 per 1,000 below the metropolitan average, and 1·12 per 1,000 above that of the north registration district.

MORTALITY AT VARIOUS AGES.

Annual rate of mortality in	1st quarter	22·90	per 1,000
"	2nd	20·25	"
"	3rd	21·51	"
"	4th	27·95	"

An examination of the appended tables will show how largely the increased mortality of the concluding quarter of the year was due to lung affections.

MORTALITY AT VARIOUS AGES.

		1872. 52 weeks.	1873. 53 weeks.
Under 1 year of age		1,291	1,305
1 — 5	" ..	1,986	2,115
5 — 60	" ..	1,851	1,984
Above 60	" ..	1,093	1,177

exclusive of deaths of parishioners in hospitals outside the parish.

The deaths of children under one year of age formed 16·1 per cent. of the registered births.

MORTALITY PER 1000 FROM VARIOUS DISEASES.

	London, 1873.	St. Pancras, 1873.	1872.
Small Pox	0·03	0·01	0·26
Diarrhœa and Cholera ..	1·25	1·92	1·05
Continued Fevers	0·36	0·34	0·35
Scarlet Fevers	0·19	0·08	0·31
Diphtheria	0·09	0·17	0·07
Hooping Cough	0·80	0·95	1·16
Measles	0·66	0·98	0·47
Phthisis, Tabes, Atrophy } Scrofulous Diseases - }	4·43	4·16	4·38
Bronchitis, Pneumonia, and Asthma - - }	4·89	4·44	4·06

The aggregate mortality from Small Pox, Diarrhœa, Cholera, the Continued Fevers, Scarlet Fever, Diphtheria, Hooping Cough, and Measles, was 4·45 per 1,000 as compared with 3·67 in the year 1872.

The most prevalent forms of epidemic disease were Hooping Cough during the first half of the year, and Measles during the latter half. It is remarkable that during the quarter preceding the great outbreak of Measles, not a single death was registered in St. Pancras from that disease. Though very prevalent, the Measles were not very fatal in proportion to the number of children attacked. Some schools had to be entirely closed during the course of the epidemic. The facility with which these highly contagious diseases—Hooping Cough, and

Measles are spread by means of schools and other places of public resort, renders it very difficult for the Sanitary authorities to exercise any efficient check upon the spread of these maladies; and, I may add, with two inspectors, for a population of 227,000, almost impossible. Nevertheless, by visiting all the houses where the Measles had proved fatal, and by cautioning the parents, and also by visiting the infected schools, some check was put upon their extension.

There is nothing that calls for special remark in the mortality from other contagious and infectious diseases. The accompanying tables give details of the mortality from all the chief zymotic diseases.

SMALL POX AND VACCINATION.

Only two deaths occurred in the parish from Small Pox, and, I believe the cases of this disease were exceedingly few.

I am indebted to the courtesy of Mr. A. Robertson, the Vaccination Officer, for the appended table relative to Vaccination during the first half year of 1873. I regret that I am unable to give a table for the complete year.

SLAUGHTER-HOUSES.

Your Medical Officer was called upon to give evidence before the Select Committee of the House of Commons relative to noxious businesses. As my evidence has been made public through a Blue Book, I need not further advert to it. Legislation on the subject is promised during the present Session of Parliament.

All the Slaughter-houses in the parish were visited by the Sanitary Committee before the Annual Licensing Day. Many defects were thus brought under the direct notice of the Sanitary Committee.

There are 83 licensed Slaughter-houses in St. Pancras Parish.

COW SHEDS.

The Sanitary Committee also visited all the Cow Sheds previous to the Licensing Day, and this resulted in a manifest improvement in the condition of many of the sheds.

The dispute between the Vestry and the Justices was happily settled by a compromise, after a discussion between the Vestry Clerk, myself, and the Justices, and 800 cubic feet of space was settled as a minimum. All the licensed cowkeepers signed agreements to observe this regulation; and from the reports of the inspectors the agreement appears, as a rule, to have been pretty generally observed.

SANITARY WORKS.

A Table is appended, drawn up by the Clerk, giving details of work carried out by the Sanitary Department during the year.

GAS SUPPLY.

The average illuminating power of the Gas supplied at the

testing station by the Imperial Company, as tested by the requirements of the Metropolis Gas Act, 1860, was 14·7 standard sperm candles. The maximum illuminating power noted was 16·1, and the minimum 13·0 candles.

The average illuminating power was 0·3 candle above that of the preceding year.

Ammonia was always present in the Gas, though never in excess. Sulphuretted hydrogen was never detected.

Sulphur was present in amounts ranging from 11·71 to 30·46 grains per 100 cubic feet, the average being 22·42 grains.

I have the honor to be, Gentlemen,

Your obedient Servant,

THOS. STEVENSON, M.D.,

Medical Officer of Health and
Examine of Gas.

SANITARY DEPARTMENT,

10, Edward Street, Hampstead Road, N.W.

TABLE VIII.

Seven hundred and ninety-six notices have been served during the year ; the custom of serving final notices has been discontinued.

It has been necessary in 15 cases to enforce compliance with notices by Police Court proceedings.

The market places are frequently visited, and 30 seizures of stale and unsound fish, fruit, vegetables, and other articles of food exposed for sale were made during the year.

There were amongst the articles seized—

FISH AND POULTRY.

Plaice, 5 kits, 1 pad, 2 turns, 1 trunk, and 206 not packed.

Haddocks, 1 brl., herrings, 4 boxes.

Periwinkles, $\frac{1}{2}$ bushel, whelks, 1 bushel.

Mackerel, 3 pads and 4 boxes ; crabs, 1 barrel.

Soles, 1 Trunk. 1 Goose.

MEAT.

1 piece of mutton ; 44lbs. of pork : 53lbs. of beef, and 117 rabbits

FRUIT.

700 cocoa nuts and 3 baskets of cherries.
