ROYAL BOTANIC GARDENS,

KEW, SURREY.

~~All communication should be addressed to~~~~The Director,~~~~and the following authorities~~

The specimen is definitely not the fruit of the *Sorbus palm* (*Hyphaene thebaica*) and does not seem to be in any way connected with that palm.

There would appear to be little doubt that the small seeds present are those of the common fig *Ficus carica* (fig seeds are very variable). The specimen is probably some sort of fig cake or foodstuff in which mashed fig is largely used. Such cakes have been used in the Mediterranean region from the earliest times.

I knew the late Dr David Steyer and I feel sure that, with his wide botanical knowledge he would not have confused this specimen with a *Sorbus palm* fruit, which has a large single seed. Some mistake over the labelling must surely have taken place at some time. This raises the question as to whether the rest of the information on the label (c. 1500 B.C.) really refers to this specimen.

A fig is enclosed in case you wish to compare the seeds yourself.

Sir James Paget was born in Great Yarmouth in 1814, and in 1830 was apprenticed to Charles Costerton a St. Bartholomew's man, who practiced in Great Yarmouth. From this it can be assumed that Paget purchased this stethoscope between 1830 and 1834 as he went to St. Bartholomew's in 1834.			
This stethoscope is of a type that dates from the 1830's.
