Hospital *Leith Fort*

From *March 22nd* 18*87*

To _____ 18 _____

Watkinson & Sons, London.

Vide Instructions on First Page

MEDICAL CASE BOOK.

All cases in which extras or drinks of any kind are given must invariably be entered in the Case Book, and the reasons stated for their issue; and all cases on completion, or handing over charge, must be supported by the signature of the Medical Officer.

The Medical Officer should study to make his Report of every case clear and graphic, and to express it in as few words as possible.

He should record the etiology of the case, the symptoms on admission, the daily changes in the symptoms, the diagnosis, the prognosis, the diet, regimen, medical or surgical treatment, operation, remedial agents applied, with their effect.

He should note carefully the pathological changes, the development, decline, crisis, and termination of the disease; and he should, moreover, carefully record the morbid changes discovered after death in all fatal cases, accompanying his description of the morbid anatomy with an account of the microscopic and chemical analysis of morbid products, so far as he may have an opportunity of doing so.

By carrying out these instructions the Medical Case Book will become a record of scientific experience, and Medical Officers are enjoined to keep the records of their cases in such a manner that the Director General can be furnished with a *verbatim* copy of any case at any time he may call for such information.

Medical Officers are requested to forward copies of any cases remarkable in their nature or experience to the Director General, with a view to their publication in the Departmental Blue Book, and which cases, if selected and approved, will be published with the authors' names attached.

Previous history. Good. Before enlistment he worked as a labourer. Since enlistment he was in hospital for 6 days about 3 months ago with dyspepsia, "probably alcoholic".

Family history. One sister died of a "cold" of two year duration. Another sister is dead - cause unknown. Family history good otherwise.

Commencement & Course of Present illness

Eight days ago while on guard he caught cold and was greatly troubled by cough and a pain in his mediastinum. Four days afterwards he went sick, got some medicine and returned to duty. His cough did not improve and next day he began to spit blood.

On 28th Feb^y he was transferred to Leith Fort Station Hospital from Edinburgh Castle his condition being not yet diagnosed.

Complaints of pain in chest, cough, spit and night sweats.

Present Condition. Well nourished, healthy looking man. Rather anxious expression. Face flushed and alac

March 22 34

The physical signs have become more apparent. The pneumonia condition seems to have run a very chronic course. On percussion the whole of the lower $\frac{1}{2}$ of the left lung posteriorly gives a high pitched note. On auscultation the vocal resonance is found to be increased in this area and the respiratory sounds are accompanied with numerous crep-
-itant rales. Over the upper half of the lung the respiratory murmur is harsh and accom-
-panied with an occasional rales.

Ch. Carter C.T.

His sputum is still rusty but is less viscid than previously and also more yellowish.

His pulse is very chlorotic.

His expectorant medicine has been omitted and he is to have:

		<u>Left Lung.</u> Left pleural cavity contained 18 oz of clear serum. The parietal and visceral pleurae were not adherent except slightly at the apex. There was however evidence of almost universal pleurisy and the whole lung was covered with recent organising lymph. Here & there were subserous haemorrhages. The lung was in great part solid especially the lower lobe and heavier than normal. In the upper lobe there was much oedema and scattered throughout the lobe were numerous nodules which showed a tendency to break down and cavate. These nodules were yellowish in colour and surrounded with pneumonic zones. The lower lobe was a solid mass of these nodules and presented two cavities of considerable size, one containing caseous matter, and the other a blood stained fluid. The walls of these were irregular

Right Lung. Right pleural cavity
contained 6 oz clear serum and
there was evidence of recent pleurisy.
The whole lung was almost solid
except a small part at the
apex which was very adenomatous.
The condition of the lung was
much the same as that of the
left but there were no distinct
cavities, though here and there
some of the nodules had run
together and were on the point
of breaking down. The lower
and middle lobes were functionally
useless.

There were one or two points like
tubercles under the mucous membrane
of the trachea, and the vocal cords
were ulcerated.

The condition of the lung corresponded
closely to the Acute Tuberculous
Bronchopneumonia of Traylor.
The Spleen and Kidneys were
congested but the other organs

May 26th Ch.

In 1875 while at Fort Attoch he contracted Syphilis. There is no mention in his Medical History that of any constitutional treatment having been adopted. In 1877 he was in hospital for 24 days at Pichot with Oupia. Still no constitutional treatment was adopted and later in the same year he had nodes on both clavicles. These were treated with Ostar's Iodide. In 1882 Syphilis again showed itself and an abscess formed at back of neck. This was opened. Since then he has had frequent manifestations of Syphilis.

Ch. Ale D.

Present Condition.

The peculiar mottling of the forehead shows at once that he has had Syphilis.

Sp. Gr: 1020. No albumen. Deposit Ch. All of none

Nervous System. No headache pains in joints or other manifestation of nervous lesion or disturbance.

Locomotor System. Fourteen months ago he sprained his ankle. This seems to have been followed by a gumma which was opened and he gradually recovered but with a stiff and weak ankle.

At present the movements of the right ankle are fairly good but the ankle becomes stiff after resting and painful after little exercise. There is evidence of considerable periostitis and osteitis of the outer malleolus and lower part of the fibula.

Diagnosis. Tertiary Syphilis.

Prognosis. Good.

Family History. Good. One brother died Religious Not
in infancy, one by accident. Six
members of family alive and well.Previous History Born in Saltcoats.
Brought up at Board School and was
fairly smart at lessons. As a
boy he was of cheerful disposition
but since puberty he has become
reserved & quiet. Has rather a
lasty temper. Steady in habits and
industrious. After leaving school
he became a weaver at home
and afterwards at the age of
a clerk in Glasgow. He left this
place on account of a quarrel
with his employer. Since enlistment
he has done nothing.Present Illness. For a few days
before admission to Hospital
his brother - Bombardier Cuthbert -
noticed that he was peculiar. One
night his patient went to his brother
during the night, awakened him and
told him not to go away and
said that if he went away he
was not to come back.Admitted

May 25

In the morning he was morose and O.S. Nil. would give no reason for his behaviour on the previous night. In the evening of the 8th inst he told the battery orderly that he wished to "go sick" in the morning. He gave no reason for this and several times during the night he awakened the battery orderly telling him at one time that he would "go sick" and at another that he would not. The battery orderly thought he was peculiar in manner and appearance. Next morning he did not report himself sick and was told off to a fatigue at the Sergeant's mess. Here he refused to work, kept staring about him in a peculiar way and when removed stated with hyacinth & talk absurdly about religious matters. The man in charge of the party thought he was drunk. In the same afternoon he came to hospital and was detained. He was noticed to be stupid & peculiar

He kept up a constant hollowning at the pitch of his voice. He would not answer questions nor showed that he heard what was said to him or that he was conscious of what was going on.

The diagnosis I arrived at was uncertain but I thought he was suffering from either mania, ~~melancholia~~ or mania, or was malingering.

The constitutional disturbance seemed to negative this last idea.

The immediate treatment I adopted was to shave the nape of the neck and apply blistering fluid, put him on milk diet and give Aconitum Crotonis M. II.

A few hours after this he became quiet and settled down but was stupid and

out during dressing.
He is much better this morning
temperature, pulse & respiration
near normal. Has ceased
vomiting and pain in side has
gone. On examining right
side very carefully by percussion
and auscultation nothing abnormal
can be found.

App. One pudding
Porter 1/2
Tea 1/2
Whisky 3/4
Lyp 2.

I think that the rise of temperature
etc, was due to some keeping
back of pus and the formation
of a kind of abscess in the
left side. The increased
discharge which accompanied
the crisis of this condition was
due to the bursting of this abscess.

July 5th 219

Still complains of pain in right chest.
No physical signs of disease can be
discovered on examination.

July 10th 224

Last night had severe pain in
right chest which prevented his
sitting up in bed as it caught
his breath. Pain was relieved
by Dr Opium MXX.

On examining right chest this

1887.

July 29th 1887.

This morning on removing the dressing, the drainage tube has found only the thread missing only the thread being found at the opening of the wound.

Careful examination of the thread showed that the knot had given way. The wound was carefully examined in its whole extent but nothing of the tube could be found. The cavity of the chest was also washed out but with no result in bringing the thread into light.

It was resolved for the present to allow it to remain without any further attempt at extraction.

July 30th 1887.

Complains of pain in the region of the back of the lungs, but otherwise as usual.

Has served 16 $\frac{1}{2}$ yrs abroad. Moderate
smoker and very moderate drinker.
Previous illnesses seem to have been
mostly fever, general debility & neuralgia.
His medical history shut has been lost.
Had much fever - acute at - in Persia
& Haradabad. Has mark of wound
received in action in 1879. It was
caused by a slender rifle bullet
striking his chest obliquely at the
junction of the 2nd right costal
cartilage.

With

Nil

Course of Present illness. Began in Lucknow
in 1882 with tightness across the
stomach after food, pain in small of
back, proceeding to shoulders, and
headache. About this time he
began to suffer from myopia.
He has been in hospital several times
with the above symptoms and has
been sent out relieved but not
cured. The eyes have remained much
the same. The above symptoms
are what he still complains of.
Present Condition. Strong well developed
man. No obvious marked appearance.

Post Mortem Examination 28 hours
after death. Body fairly well nourished.
Abdomen distended, commencing
discoloration. Rigor mortis marked
in lower extremities. Pupils moderately
dilated, equal. Bedson over sacrum
and rt. trochanter major.

Hypostatic congestion in dependent
parts, ~~covered with coagulated lymph~~
~~and feces~~. Linear incision about
1 inch long on outer side of upper 1/3
of left thigh. Large ~~incision~~
opening in right Scarpa's triangle
about 6" long by 2" in widest part
covered with coagulated lymph
and pushing on the fascia lata
of the thigh. Some enlarged
glands in left inguinal region
below Poupart's ligament.

On opening the abdomen, the intestines
are distended and matted together
with recent peritoneal adhesions.

Thorax. Heart normal, valves
healthy.

Right lung presents some oedema
in dependent parts, otherwise normal.

Nov-16.

Patient was transferred from R.P. mil.
Cheshire Reg^t to the Royal Artillery
last month but did not join
here till Nov-13th
Nearly 3 months ago he was examined
for the Artillery and passed "fit"
at the depot in Cheshire. About
a month after he had passed
for the S.D.R.A. he was on
cool fatigue and was ordered
to lift a box of coal. In
doing this he felt something
give way in right groin. He
noticed that this part became
swollen and blue and he
applied a bandage. ~~Short~~
It began to increase in size
and became painful and about
3 weeks after its onset he went
to hospital where he was fitted
with a truss and where he
remained until he was trans-
ferred here. The truss however
fitted badly and pressed on
the cord causing much
tenderness

Admitted into Hosp. all at
Scott's on 17 Jan 88
with Pneumonia Altem
Patient has been reported
sick although he has
been seen supposing
from cough for some
time has no family
history & can give no
information as regards
previous illness. He
has entered 2 months
ago according to his
Medical history chest
his measurement at that
time was.

Chest: 34 1/2 height - 12 8 lbs.

He applied for vaccination
with Indian Draft but
was rejected.

Present Condition

Looks worn out & emaciated
Eyes sunken, Complaint
of cough & wheezing -
gradual deterioration &
shortness of breath. To take 92

all at
milk etc.

Examination of urine is made. Urine is
-acting during 24 hrs in
clust. from very rapid
in urine has examined
on the successive days
the following result.
First day, very scanty
concentrated & deposited
a copious white deposit
and in reaction, no trace
of albumen, attempts examined
by four different methods.
Microscope showed, granulation
of amorphous matter, a few
crystals of urate of soda,
a little renal epithelium
but no tub. casts, although
renal specimen of the sediment
was examined.
Second day, scanty, no
albumen, no casts, slight
deposits of amorphous matter, but
no crystals.
Third day, examined in same
way. No trace of albumen
and of renal specimen, there is 1001

Admitted on 12 March Behinder 2 days.
 with Jaundice having
 been discharged
 about nine days
 with some symptoms
 The jaundice was intense
 & came on rapidly, little
 or no pain in hepatic
 region, liver very slightly
 enlarged, tongue clean
 temperature normal, no
 albumen in urine, but about
 black with bile, no bile in
 stools. Examined on several
 occasions for gall stones
 particularly about time
 when bile began to appear
 but failed to find any.
 Jaundice disappeared in
 about a month & before
 skin lost all yellow tint
 appeared again suddenly
 a third time, without pain
 in side. The attacks lasted
 about three weeks then
 bile appeared again in

2 June

The urine is tested daily. 2800
and on a few occasions
not a trace of bile could
be found. The skin is
annually is natural
but it shows by having
the greenish yellow hue.
Caused by repeated attacks
of jaundice, the course
has been regular while in
existence but kept up, but
for a short time the
discharge has ceased
when they became very
constipated, examining
their excretion when
it has again administered
the liver is decidedly
enlarged though not to
a very great extent, &
examination of the gall
bladder gives negative results
The stools have remained
on many occasions, but
nothing in the shape of
a pale stool could be found.

27 June 8

During his winter the 27th June
 patient suffered a
 faintness from a
 chronic bronchial attack,
 and getting fainting to
 insensible called the method,
 he has been about,
 lately he has had a
 slight eruption ~~about~~
 on the shoulders which
 disappeared on the local
 application of. Hydrargyrum
 melior. It is quite
 probable that the lines
 may be expected by
 dyspepsia, from which the
 patient suffered some
 time ago, & that the
 chances may have
 partly accounted for
 his protracted convalescence

28 June 8

He has had no trace of bile
 in urine for five days &
 he himself thinks is good
 although rather thin & discolored

Admitted on 25 May 88 at 11 AM
 with Contusion of
 Elbow. Caused by
 a fall from a tree
 when out for a
 drive on the Sunday
 morning. On admission
 his left Elbow was
 enormously swollen
 the swelling extending
 down to the wrist
 neither fracture nor
 dislocation could be
 detected. The arm
 was therefore placed
 on a pillow & trap-
 ping lotion applied
 After some days the
 inflammation & swelling
 disappeared, but the
 arm remained partially
 bent & stiff, passive
 motion is being
 used. From patient's
 general condition it
 was considered advisable

?

The Patient stated on Admission that he had been in a delicate state of health for some months passed, that he had come from Woolwich on 21st March 1888 and that during that time he had been getting rapidly worse, on being questioned as to his family history, he stated that they were all healthy and that he had never known them to suffer from any chest complaint, his mother however stated to my regret that his father's been incorrect, as he described the idea that there was nothing the matter with him but a bad cold, and that some of her family had died of Chest Disease

4 Sept 88 ?

Expectoration was again examined
for bacilli by Gibbs and
also by Ehrlich's methods, but
the stain was allowed to remain
longer than the prescribed time
I never before saw any one
specimen contain so many bacilli
Some part of the lower part
stained Ehrlich, some literally
crammed with bacilli, the
expectoration was fresh having
been collected in the morning.
Cough still a very harassing
one trying Tinct. Belladonna,
during the most severe fit of
plain steam inhalations at other
times. The Anker-Pain-Expeller
turned out useless and the
cough was symptomatic for
which has been changed to milk.

17 Nov.	?	Admitted on 5 Nov 88 from Camp all symptoms from an acute attack of consumption. Patient has a bad family history & while living in Egypt was sent to Cyprus for change on account of his condition. He is very anaemic & expectorates daily a mucopurulent sputum containing more or less blood. Sometimes only streaked with blood & containing small purulent spots in white tubercle sputa. Have been found. The physical signs are not marked, but there is slight dulness under left apex, the dulness of expiration in some places crepitations the pulse, respiration 162

Has been a sufferer
from this complaint
since

Although from the
nature of his duties
he has been for
years, the disease
has become greatly
aggravated during
his service in the
District, owing to
change of the generally
climate & cold East
winds, which produce
periodical inflammatory
attacks. Last winter
patient suffered from
periodical inflammatory
attacks & in March
was admitted with
pneumonia. The
attacks of asthma are becoming
more frequent &
disrupting him
to a great extent

8 Apr 88 ? Arrived by rail at
Columbia River
Jenny 186

13 June ? When he left the man had traveled
by steam, probably to Columbia River &
by which he suffered in all parts of the
considerable aggravation of his trouble.
He was readmitted to admission. When
I saw him he was in a very bad way.
but he absolutely refused to have anything
done except to be given the best
hot vapors Chloroform bath of a light
neurotic temperament having contracted
his constitution he was placed on
tonics & nursing diet. Besides that
on regimen, drainage kept a free as
possible, then was some difficulty in
maintaining this, as he would not
keep his legs straight. Having himself of the
such an excitable state that a high type
of heat was applied but the temperature
became aggravated. Eventually the
pain ceased but the skin was so often that
he had the best under observation in some weeks

2 Oct 91

Admitted on Monday with Fever Temperature 103.4 Evening Temperature 105.6. There was Erythema of throat and fauces & twelve hours previous to admission the boy had a rigor. He was on admission isolated & placed under observation for Diphtheria or Scarlet fever; both of which diseases have been prevalent in Leith. (although the boy's relations live in Leith, & he is frequently with them, he is unaware of any disease in the house, - tenement house.)

No medicine was given to influence the temperature on the first day, but as the evening temperature has so high. So. 290

16 Sept 84 ?

Admitted on 20 July 1884 from the
Lying-in Hospital. Patient found
to be in a state of delirium
by consequence of the course
of his delirious condition
until he refused to take
tobacco leaf with food
difficultly, and to take
amount of food in the
stomach & the delirious
nature of his leaf.
He was detained and
given mustard & water
Emetics & quantities of
warm water & by the
aid of stimulation of
the fauces quantities
of tobacco leaf were
discharged. After the
first gulp his inclination
to vomit ceased &
could not be resisted
except by pushing the
finger down the throat.
The patient was exceedingly so 195

Administrative treatment
on that occasion he
was taken to the
Police Station & on his
Dr. Young & afterwards
discharged. This occurred
on 4 January 89. Thinking
that he went by his name
of Morrison, his statement
was corroborated by Lt.
Geo. Habbington, Extra
Police Chambers, Glasgow,
in a letter dated 9. 2. 89.

The patient who was
brought up in Barrow
Bookhouse Glasgow states
that his father's name is
Morrison, but that his
mother kept him in ignorance
of his real for many years
his mother is a Mrs Scott
at present residing in
Glasgow, & her maiden
name being Sharpe. He
entered under that name.
Re. Melancholia he was registered

A "sharp" & stout looking
 looking about his father.
 & any of his relations.

From his medical
 history, that he appears
 to have indulged freely
 in alcohol, his medical
 sheets also state in
 the Engineers, show a
 history of intemperance.

He enlisted in the
 1st. Served eight years
 while in the 1st. Class. During
 reserve enlisted in the
 Division at Hamilton &
 has since transferred
 to Regulars at Liitt 2nd.

Patient states that when
 in Engineers he was punished
 for being drunk when he
 was not drunk, "a very
 little drink had a bad
 effect on him". He never
 had a chance to get
 on as he was superseded
 by his duties as a tailor

The reasons which lead
me to believe him to
be suffering from
Melancholia are.
His extreme depression
without sufficient cause, other
than hereditary predisposition
to mental affection, aggravated
by a life of intemperance,
the circumstances surrounding
the mental affection appear to have had
some influence in determining
his condition of mind, He
has been temperate & well
behaved since his admission
to the prison where he has been
confined for some time under
similar circumstances for
devotion to so that drink
& confinement alone cannot
have brought about the
mental disturbance
which culminated in his
attempt at suicide.
He had attempted suicide
before commitment &

*In transmitting the
accompanying documents.
I have the honor to state
that the man concerned
in his medical history
shows, on bearing the
name of Scott, the other
that of Sharpe. As his
mother's name is Scott &
he has been recommended
for discharge in the case
of his Parachial Battalion
his documents have been
made out in both names*

*I have &c,
C. A. R. M.*

of late I have been
According to order from
Army. Certificate of admission
has been postdated two
days. Copy as follows.

I On 19th July 1889 attempted
to commit suicide by
swallowing half an ounce
of black tobacco

II His mother Margaret
Scott states that she
first noticed a change
in her son about April
1888 when he became
sullen & very depressed.
This culminated in
his taking about an
ounce of laudanum on
4 January 1889

Admitted on the 8th Nov. milk
had been out in the
pleasants on the 4th.
Reported sick on
the 8th at Edinburgh
Castle on the 8th
complaining of swelling
pain & discharge
from nose. There is a
fleshy discharge from
the nose. Thick cream
like foetid after free
use of Boracic Acid
injected. There is an
unhealing ulcer which
has bled away the
proseum of upper lip
The swollen mucous membrane
is chiefly on septum. There
is also considerable febrile
disturbance. The secretion
has been collected &
sealed in tubes for examination
& experiment at Bacteriological
laboratory. C. M. McDonald

Admitted on 25.10.89. Brought by Brandy
with Fracture of Clavicle
from Edinburgh Castle
he was sent down down
up in plaster but the
day after admission the
bone was & the fragments
were too much displaced
necessitating the setting
of fracture being unable
to obtain sufficient plaster
to put the shoulder up
permanently the crutch
sprung was used. but
as the patient complained
of some discomfort
about the wrist he frequently
moved the limb & the
bone ended misplaced
the fragments. today
joint union was found
but the patient from
some cause or other
had a Syncopeal attack
he had just finished his
meal of Scotch Whisky

Patient to be discharged from *Clinton* hospital today. An ~~off~~ letter has been addressed to his O.C. informing him of Dyson's condition. I am of opinion that D. is of sound mind but that he has failed a good deal of late mentally. This I attribute to the natural result of long service and his being prematurely aged.

R Kirkpatrick Surg Sec

4.1.90

Patient came to hospital on the evening of the 1st suffering from a wound of the left elbow. As he had been intoxicated he could not give an account of how he came by his ~~accident~~. It is apparently a wound caused by a blunt pointed instrument about 3 inches below the point of the olecranon and running up towards the joint. There was a great escape of serous fluid the first two days accompanied by much swelling & pain. There does not seem to be a fracture but I think the joint has been opened. He is feverish at night & sleeps badly.

Treatment Poultices, free drainage by a tube. Antiseptic lotions and injections. Milk diet & Opials as required.

With the probe a considerable surface of bare exposed bone can be felt.

R Kirkpatrick Surg. Genl

8.1.90

There is no improvement. However drainage is free & the discharge is of a healthy colour. Poultices discontinued.

compressible. On examination of chest the blisters appear to have been caused by mustard - considering the low condition of the patient until these are healed no poultices or other counterirritation deemed prudent. During respiration there is attraction of the intercostal spaces especially on left side. The left side is dull from top to bottom. Loud friction crepitation heard over the whole of the left lung. The back was not examined as it would fatigue the patient too much. On the right side the lung is resonant no friction crepitation. A few bronchitic rales. Breath sounds harsh. ^{Sputum viscid mixed with a little blood} The position of apex beat not defined. Heart appears to be somewhat displaced to the right. Treatment continued - patient's strength to be kept up by nourishment & stimulants. Quinine to be continued. Spongioline jacket. I am of opinion that this is not a case of Pneumonia as at first it was supposed, but a bad case of Pleurisy affecting the whole of the left side.
