Congreve Lights. Preparation

Put a quantity of mucilage of
gum arabic into an earthen vessel
and heat it to the temperature of 40°

or 50° C. ($= 100$ to 125 Far) and to five
parts of the mucilage add one part of
phosphorus: it instantly melts; stir it
so as to mix it well with the mucilage
and when well divided, add chlorate
of Potash in powder, nitrate of Potash
and a little Benzoin so as to form a soft
paste: into this dip the ends of the match
sticks. The mass constitutes what is called
fulminating tinder.
