Waler

German Paste

Take one pint of Pea flour, in which
rub up a new laid egg; then add two
ounces of Honey or treacle. Continue to
rub this well, so as to prevent its being
in large lumps, when got to a fine
powder put it into a clean earthen
puffin & place it over a slow & clear
fire until warm through stirring
it all the while to prevent its
burning when sufficiently hot
take it off & pass it through a fine
wire sieve then add about two
ounces of maw seed & if hemp seed
is thought essential give the small
Rusian whole in preference to the
common sort bruised as it only
tends to bring on the hush or dry cough

To remove a gold ring
 fill in the ring with powdered chalk & with a
 strip of linen soaked gently then apply
 quicklime to the surface of the gold & in the
 course of a few minutes use a little
 of the preparation with the paper & it
 will break. It forms an amalgam which
 crystallizes & becomes as hard & brittle as glass.

Solution of Corrosive Sublimato
 ℞ one teaspoonful of Sublimato dissolved
 in a few drops of Muriatic' to of Sp. Rect.
 Try by dipping a blk feather in it, if it is
 too strong it will turn it white -

Arsenical Soap

℞ Pulv Gum. Camphora ℥v
 Pulv Arsenic ℥ij
 Sapo alb ℥ij
 Salt of Tartar ℥xij
 Pulv Calcis ℥iv

Slice fine the soap, add water & boil
 gently till melted stirring with wooden
 Spatula then add Salt of Tartar & Pulv
 Calcis. Take then off the fire, add
 the arsenic & mix lastly add Camphor
 & mix the whole well together

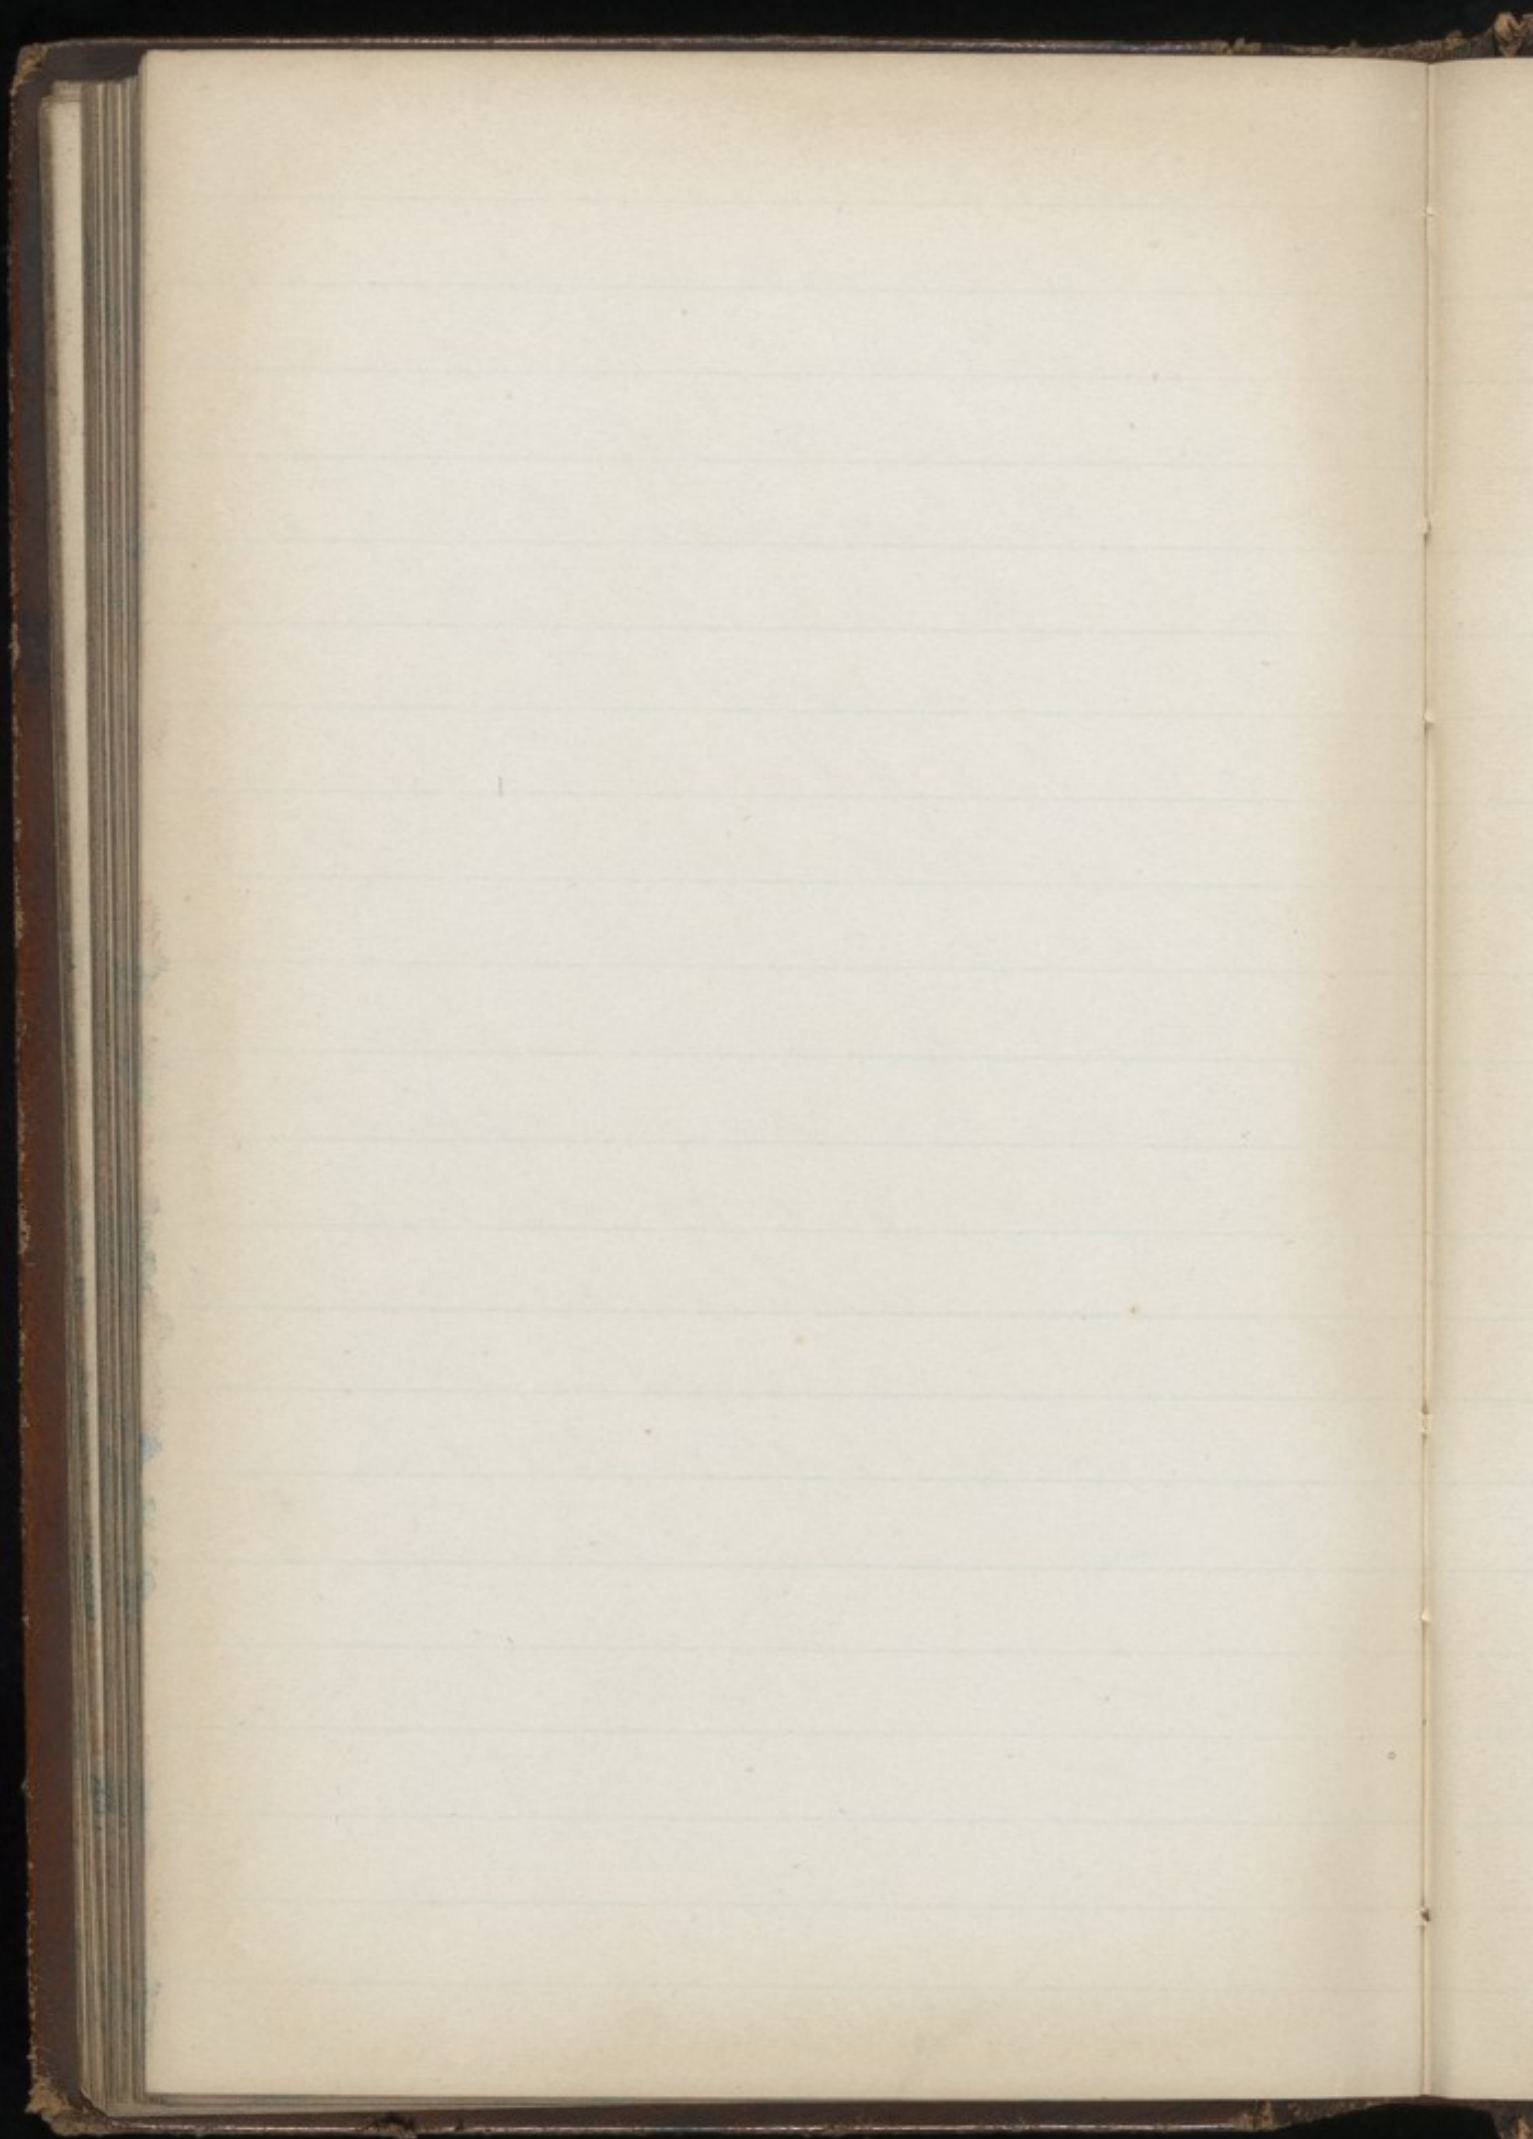

General remarks on Nat. Hist^y
from Swainson's Taxidermy
Birds -

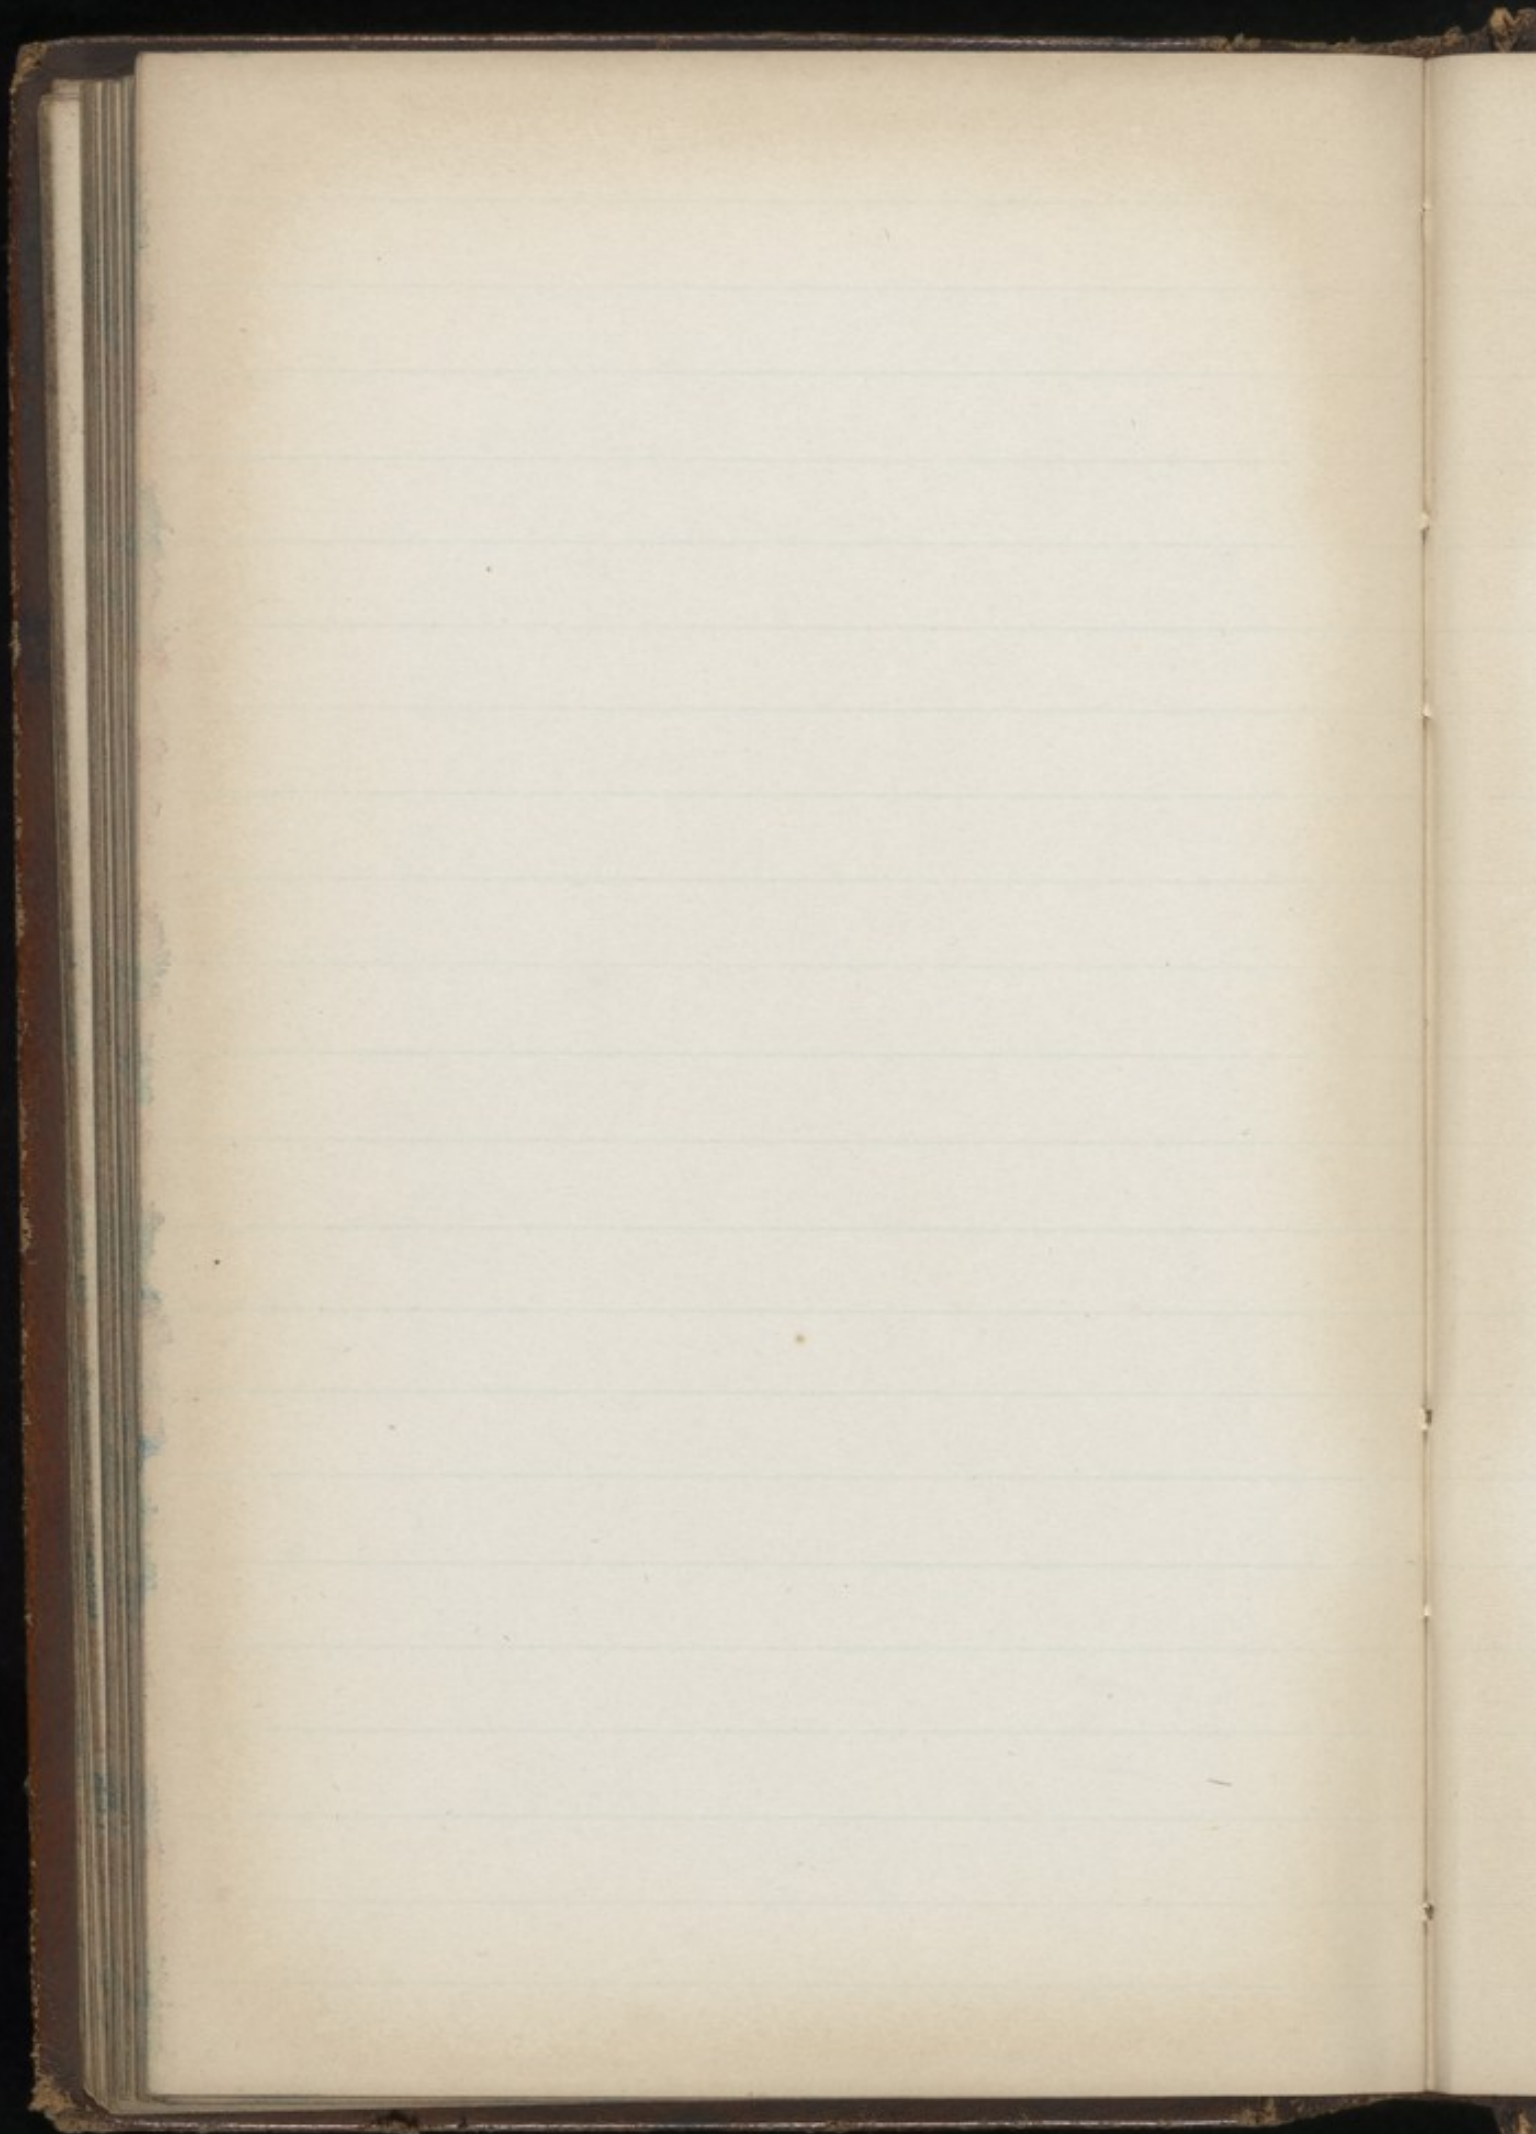

A Collector of birds may have one or 2 light Fowling pieces powder in Canisters & different sizes of shot. For preserving his Specimens in large Arsenical Trap. if small Preserving Powder - The Instruments &c. are as follows A small case containing knives or scalpels & Scissors with pointed blades of both of different sizes. Forceps pointed obtuse smooth & indented. Tass flat pinches large & small, round do. & cutting do. A Hammer. Files for wire &c. Brushes of different sizes for applying the preserving drugs or smoothing the fur or feathers. A thin & thick Goose quill cut like a scoop for removing the brains of small birds. Box of powdered Chalk for absorbing the blood. An assortment of Iron wire of different sizes. Needles

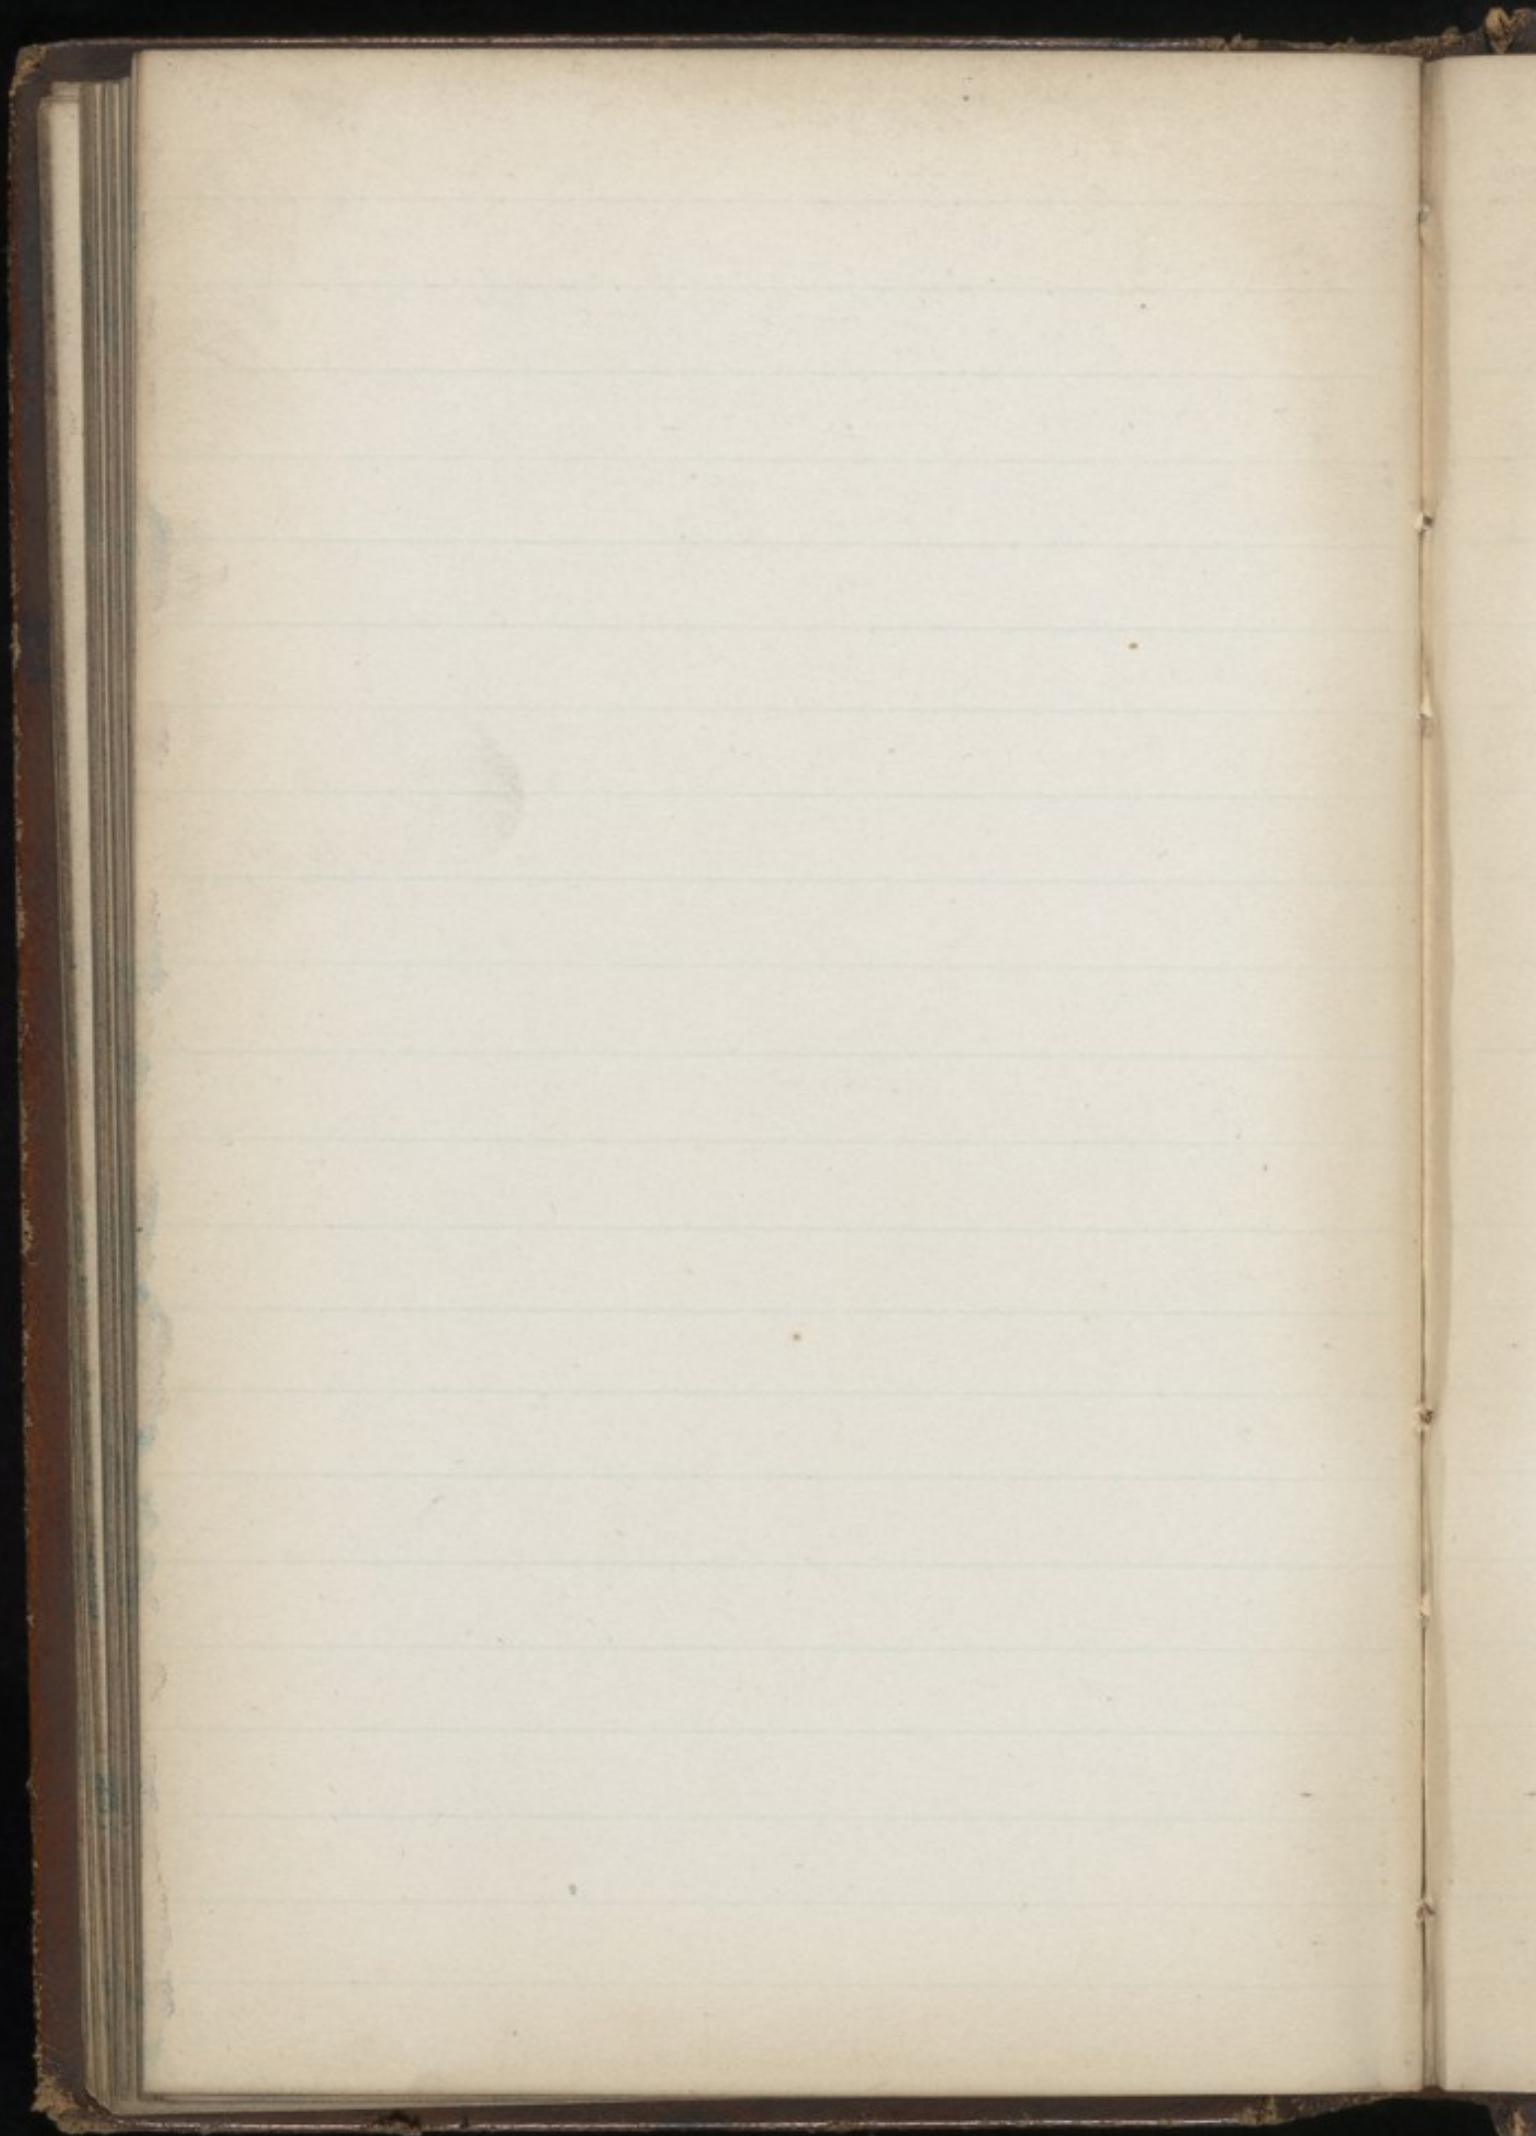

Silk Flap, Tow or Cotton & a collection of
enamel Eyes. When a bird is shot it
should have its feathers smoothed
& its nostrils & beak wrapped in Cotton
If it bleeds much some tow should
be laid upon it & then wrap it in
paper to prevent it from soiling the
others. The sexes of each should be
carefully sort for & notice taken
of its habits &c. The nest may if
unavailable be procured. Birds
will keep a long time if placed
in a tin box partially filled with
Charcoal -

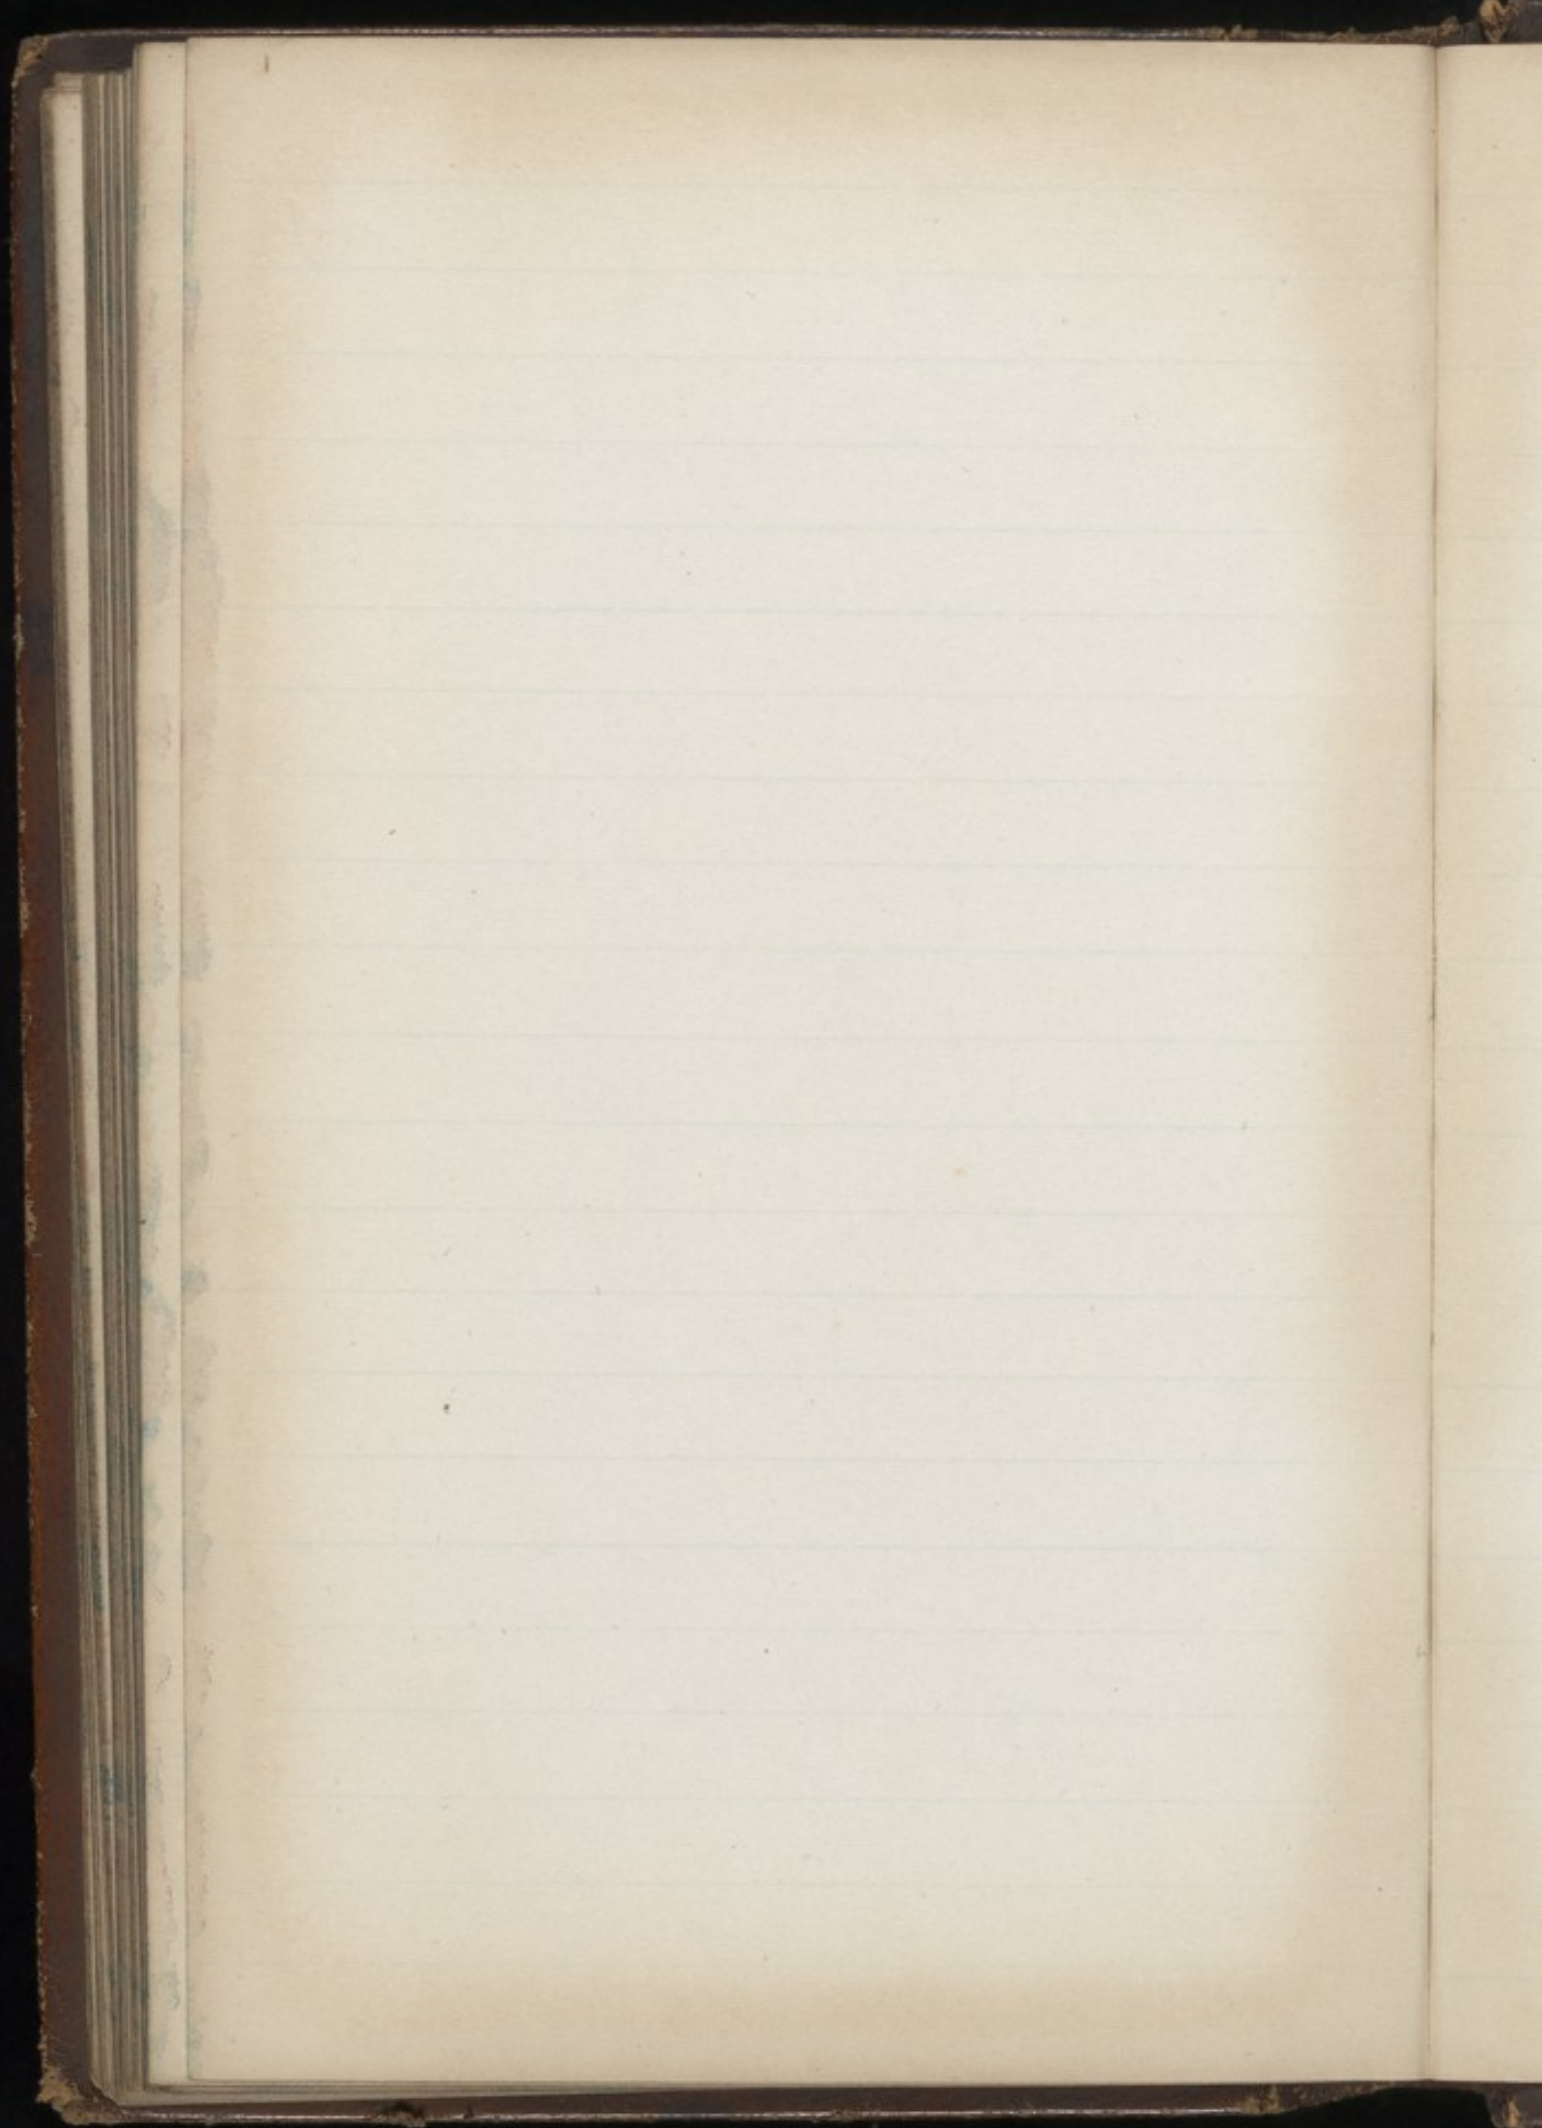

Skinning & Stuffing Birds
The first precaution to be taken is this
to cleanse the mouth of blood & mucus
by means of cotton affixed to a bent
wire. The specimen is then to be laid
on the table the head being turned
towards the left of the operator.
The feathers of the belly are divided
in opposite directions in a straight
line & the down is removed by a pair
of small forceps. an incision is
then made in the skin from the
commencement of breast bone
untilt beyond the middle of the belly.
The skin is then raised on one side
by the forceps & separated from the
muscles by a knife continuing to

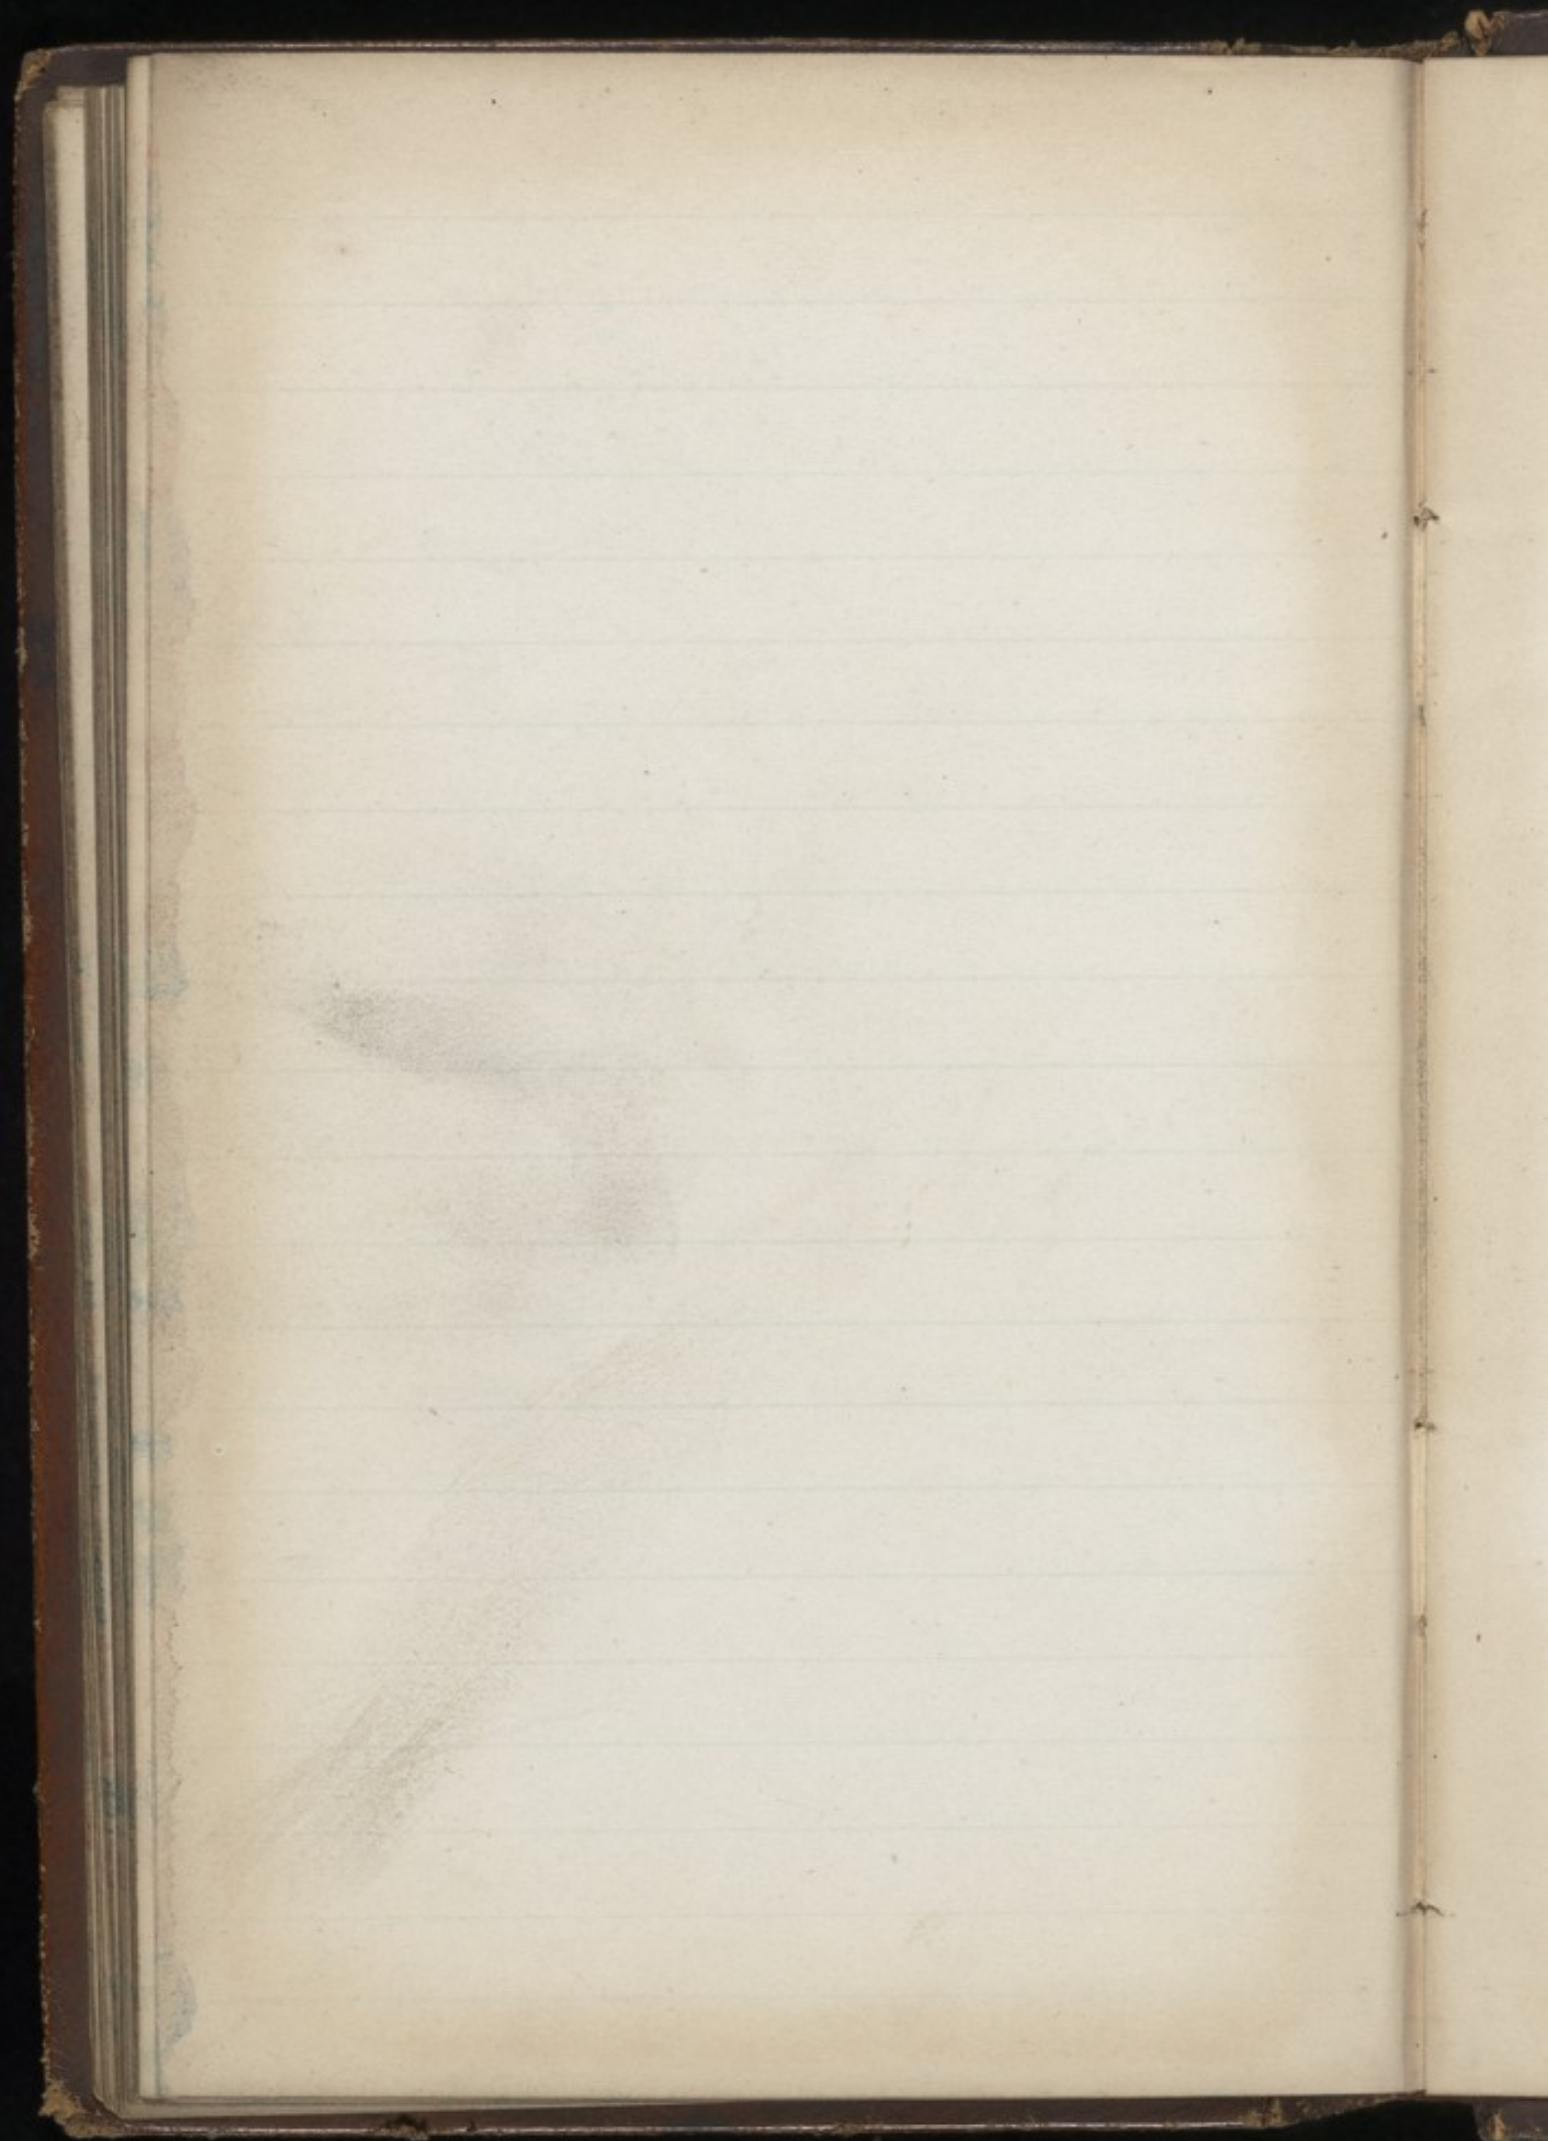

[Faint, illegible handwriting in cursive script, likely bleed-through from the reverse side of the page.]
