DICAL OFFICER OF BEALTH

A second second is the second of the master of the master of the Holoman and and been in the not believed and the master of the Holoman second for the second of the second of the second of the second for the population of the second formation upon the subject of the population and of the information of the second in Tables I and VI and in these relating the administration of the Factory and Workshop Act, 1001 (Appendix).

Metropolitan Borough of Shoreditch.

ANNUAL REPORT

OF THE

MEDICAL OFFICER OF HEALTH.

TOWN HALL,

OLD STREET, E.C. 1,

January, 1928.

TO THE MAYOR, ALDERMEN AND COUNCILLORS

OF THE METROPOLITAN BOROUGH OF SHOREDITCH.

SIR, LADIES AND GENTLEMEN,

Owing to the most sad death on 14th December, 1927, of the Medical Officer of Health, Dr. L. T. Fraser Bryett, the duty devolves upon me of submitting the following report on the health and sanitary conditions of the Borough for the year ending 31st December, 1927.

POPULATION.

The Registrar-General's estimate of the population of the Borough as at 30th June, 1927 is 105,700. Included are the inmates of the Holborn Institution, numbering approximately 1,000, who are not regarded as belonging to Shoreditch. Excluding these, 104,700 is the estimated figure taken into account for the statistical purposes of this report. Further information upon the subject of the population, area, number of inhabitated houses, number of families, rateable value and chief occupations of the inhabitants are contained in Tables I and VI and in those relating to the administration of the Factory and Workshop Act, 1901 (Appendix).

BIRTHS

The lift is registered in the Forough numbered 1,870 of which 951 were of males and 919 tennies. The number corrected by the inclusion of the births outside Shoredich, the parents being residents in the Borough and the exclusion of those occurring writing the Borough, the parents not being residents of Shoreditch, was 2,188 of which 1,122 were of males and 1,065 females.

The distribution of the conserted births in the could Wards of the Borough is

The birth rate for England and Wales was 167 per 1,000 population, and for London 16-1.

MARRINGES

The number for the year ended 31st Docember, 1927 was 355, as compared with 947 in 1920, 938 in 1925, 978 in 1924, 873 in 1923, 969 in 1924, 976 in 1921 and 1, 164 in 1927. The persons married were at the rate of 18-2 per 1,000 population, this rate being the same as that for the Metropolis.

BIRTHS.

The births registered in the Borough numbered 1,870 of which 951 were of males and 919 females. The number corrected by the inclusion of the births outside Shoreditch, the parents being residents in the Borough and the exclusion of those occurring within the Borough, the parents not being residents of Shoreditch, was 2,188 of which 1,123 were of males and 1,065 females.

The distribution of the corrected births in the eight Wards of the Borough is given below :—

Ware	d.	Males.	Females.	Total.
Moorfields		 47	55	102
Church		 230	178	408
Hoxton		 181	180	361
Wenlock		 165	175	340
Whitmore		 174	188	362
Kingsland		 114	93	207
Haggerston		 116	107	223
Acton		 96	89	185
Totals		 1,123	1,065	2,188

Outside the Borough 331 births were registered, the parents being residents of Shoreditch. Of these 179 were of males and 152 females. Thirteen births, six of males, occurred within the Borough, the parents being non-residents. In the Shoreditch Institution there were 276 births, 145 of males and 131 females. In seven of these the parents were not residents of Shoreditch.

The illegitimate births numbered 66, of which 33 were of males and 33 females. Of these 26 of which 17 were of males, occurred in the Shoreditch Institution.

The birth-rate for the Borough was 20.9 per 1,000 population. The birth-rates for the Wards of the Borough are given in Table VI (Appendix).

The birth-rate for England and Wales was 16.7 per 1,000 population, and for London 16.1.

MARRIAGES.

The number for the year ended 31st December, 1927, was 956, as compared with 947 in 1926, 936 in 1925, 979 in 1924, 873 in 1923, 959 in 1922, 976 in 1921 and 1,194 in 1920. The persons married were at the rate of 18.2 per 1,000 population, this rate being the same as that for the Metropolis.

DEAFHS.

Haggerston		 70	45	115	
Acton		 77	58	135	
Totals		 729	599	1,328	

The deaths during 1927 numbered 1,328, slightly above the number for the preceding year. They were distributed in the Borough as shown in the table below :—

The deaths of males were 130 in excess of those of females, and the death-rate amongst males was approximately 19 per cent. higher than amongst females.

The general death-rate was 12.7 per 1,000 population. The causes of death and the death-rates for the Borough and its eight Wards, together with other particulars relating to the mortality amongst the inhabitants during 1927, are contained in Tables I, III, IV, V and VI (Appendix).

The death-rate was above the mean rate for the year during the first two-and-ahalf months, and again during the last three months of the year. The rate was lowest during the month of June, the average being 7.9 per 1,000. The highest point touched was during the second week of February, when the rate was 32.5 per 1,000 population, diseases of the respiratory organs being largely contributory to this elevation.

The deaths amongst infants under one year numbered 163, of which 95 were of males. They amounted to 12.3 per cent. of the deaths from all causes, as compared with 12.8 for 1926. The mortality amongst infants under one year was at the rate of 74 per 1,000 births registered during the year. The infantile mortalities for recent years were 66 in 1926, 88 in 1925, 87 in 1924, 82 in 1923, 102 in 1922, 114 in 1921 and 91 in 1920. The infantile mortality rate amongst males was 85 as compared with 64 amongst females. The chief causes of death amongst infants under a year were : pneumonia, prematurity, atrophy, debility and marasmus, diarrhœa and enteritis and whooping cough.

In Table IV (Appendix), the causes of death amongst infants under one year are given, together with the ages in weeks and months and the nett deaths and births amongst legitimate and illegitimate infants.

Totals		1	45	19	25	31	9	13	20	163

The infantile mortality rates of the eight wards of the Borough are given in Table VI. (Appendix). The rate was highest in Church and lowest in Moorfields, being 110 and 10 per 1,000 births respectively. The infantile mortality for England and Wales was at the rate of 69, and for London 59 per 1,000 births.

The deaths of children between the ages of one and two years numbered 53, the chief causes being measles and diseases of the respiratory organs. Between the ages of two and five years 43 deaths occurred, measles, scarlet fever, diphtheria, whooping cough, diseases of the respiratory organs and violence by accident or negligence being the main causes. Altogether 259 or 19.5 per cent. of the total number of deaths at all ages were of children under the age of five years.

Taking the deaths at all ages, the chief causes were : diseases of the circulatory organs, including heart disease, which accounted for 164, tuberculosis 144, including

a nom phthisis, diseases of the brain and nervous system 87, bronchills 128, a mount 107, old age 90, cancer 124, violence 67, whoeping cough 24, Bright's even 97, and no migurity which was given as causing 26 deaths

(4) the statistic train state of the ware of male stands of females; 7 were of persons and from 3 to 53 points at of persons aged between 45 and 65 years, 39 were aged between 45 and 75 and a month persons aged 75 and appraish there were 11 deaths, a difficult of deaths were structured to malignant disease or sateoma. The deathrest is a few between the operated of path 1 for 1920, 0 98 for 1825, 1 -1 for 1924, and 1928 are structured at an additional of the 1920, 0 98 for 1825, 1 -1 for 1924.

56 from phthisis, diseases of the brain and nervous system 87, bronchitis 128, pneumonia 167, old age 90, cancer 124, violence 67, whooping cough 24, Bright's disease 97, and prematurity which was given as causing 26 deaths.

Of the deaths from cancer, 68 were of males and 56 females; 7 were of persons aged from 25 to 45 years, 67 of persons aged between 45 and 65 years, 39 were aged between 65 and 75, and amongst persons aged 75 and upwards there were 11 deaths. In addition, 8 deaths were attributed to malignant disease or sarcoma. The death-rate due to cancer was 1.18 as compared with 1.1 for 1926, 0.98 for 1925, 1.1 for 1924, 1.0 for 1923, 0.82 for 1922, 0.87 for 1921, 0.91 for 1920, 0.93 for 1919, 0.95 for 1918 and 1.1 for 1917.

Eight deaths, 6 of them males, resulted from appendicitis, and 3 males died from peritonitis.

Chronic alcoholism was the cause of death in one instance, and 5 males and 1 female were stated to have died from cirrhosis of the liver, a disease that may be caused through chronic poisoning by alcohol.

Of the deaths due to violence, 42 were amongst males and 25 amongst females. Through accidents or negligence, 29 males and 20 females lost their lives; 21 of these were in connection with vehicular traffic, 12 were due to falls, chiefly amongst people getting on in years, and 3 were attributed to suffocation. Two of these were amongst infants, and was due to suffocation in bed. There were 18 cases of suicide, 13 of which were amongst males.

Attention has been directed in recent reports to the decrease in the number of infants suffocated in bed. During the five years ending 1897 the number averaged approximately 30 per annum; during the five years ending 1927 this average has been only $2 \cdot 2$.

the second secon

And deathe more the principal symptic descars seemally on a meases, scarlet fever, diphtheria, whooping cough, enteric fever and distributa (excluding entoritis) number Altogether 838 or 63.1 per cent. of the people belonging to Shoreditch who died during the year died in public institutions. During recent years this percentage has been as follows: 1920, 55 per cent.; 1921, 56.9 per cent.; 1922, 60.2 per cent.; 1923, 63.6 per cent.; 1924, 63.5 per cent.; 1925, 63.3 per cent.; 1926, 63.7 per cent.

INFECTIOUS DISEASES.

The infectious diseases included under headings 1 to 35, inclusive, and 171 and 172 in Table V. (Appendix) were the cause of 243 deaths. Comparative figures regarding deaths from these diseases during recent years are contained in the following table :—

		Death rate from infectious diseases per 1,000 population.	Percentage of total deaths due to infectious diseases.	Percentage of deaths from infectious disease due to tuberculosis.
1918*	 	9.1	37.7	32.1
1919	 	4.5	28.5	47.6
1920	 	3.9	25.0	41.8
1921	 	3.8	26.6	43.1
1922	 	$4 \cdot 2$	25.7	41.2
1923	 	2.6	20.3	58.5
1924	 	3.0	22.3	46.1
1925	 	2.8	21.5	50.0
1926	 	2.5	20.4	57.0
1927	 	2.3	18.2	46.9

* Influenza was the cause of an exceptionally large number of deaths in 1918.

In the subjoined table the deaths from the infectious diseases during 1927 referred to above have been grouped according to age :---

Age period.	Under 1	1-5	5-10	10-15	15-20	20-25	25-35	35-45	45-55	55-65	65-75		85 and up- wards.
No. of deaths	35	35	17	11	14	14	21	19	43	21	10	2	1

Of the total mortality from all causes of children under five years, 27.1 per cent. resulted from these diseases. Of the deaths of infants under one year, 14 were due to whooping cough and 7 enteritis. Amongst children aged from one to five years, measles, diphtheria and tuberculosis were the chief causes of death. Most of the mortality from infectious diseases amongst persons aged from 15 years upwards was the result of consumption, influenza and septic diseases.

The deaths from the principal zymotic diseases—smallpox, measles, scarlet fever, diphtheria, whooping cough, enteric fever and diarrhœa (excluding enteritis) number

80, which vield a symolog death-rate of 0-48 per 1,000 population. Including deaths from enterities under two years this rate is increased to 0-54 per 1,000. A comparison of the symolog death-rates of Londonnami Shoreditch and the eight Wards of the Borningh is given in Table VI (Appendix). The rate was highest in Wenlock and based to Meenfelds

The second device three devices on a prosperie, entered fever and pactperal leave and pactperal devices and the device second se

and the second s

8

50, which yield a zymotic death-rate of 0.48 per 1,000 population. Including deaths from enteritis under two years this rate is increased to 0.54 per 1,000. A comparison of the zymotic death-rates of London and Shoreditch and the eight Wards of the Borough is given in Table VI. (Appendix). The rate was highest in Wenlock and lowest in Moorfields.

The cases of scarlet fever, diphtheria, erysipelas, enteric fever and puerperal fever and pyrexia, numbered 961, as compared with 28,990 for the Metropolis; the attack-rates were 9.2 for Shoreditch and 6.4 per 1,000 population for London.

Excluding tuberculosis the following table shows the numbers of cases of infectious disease certified in the Borough, the numbers of the cases removed to hospital and the numbers of deaths attributed to the diseases specified, the numbers of cases for the four quarters of the year being given also :—

the set of the sheet without after conset of the set As compared with the figures for 1926 there were more cases of diphtheria and erysipelas, whilst cases of scarlet fever and ophthalmia neonatorum show a decrease.

ISOLATION OF INFECTIOUS CASES.

The hospitals of the Metropolitan Asylums Board receive cases of smallpox, scarlet fever, diphtheria and membranous croup, enteric, typhus, and continued fevers, relapsing fever, anterior polio-myelitis, encephalitis lethargica, cerebro-spinal fever, puerperal fever and pyrexia, malaria and dysentery, and in some instances cases of measles and whooping cough.

During July an intimation was received from the Board to the effect that owing to the decrease in the severity of scarlet fever and the increase in that of measles, it had been decided in regard to applications for admission in the Board's Hospitals to depart from the established practice of always giving priority to cases of the former disease.

Under the new arrangement the Medical Officer of Health is asked when notice of a shortage of beds has been given by the Board, to obtain full particulars from the medical practitioner in attendance, and to recommend for admission those cases whether scarlet fever or measles which would in his opinion derive most benefit.

The cases of diphtheria, scarlet fever, enteric fever, puerperal fever, puerperal pyrexia, cerebro-spinal fever, polio-myelitis and encephalitis lethargica, certified numbered 906 and the number removed to hospital was 883 or 97.5 per cent.

Almost all the cases removed went into the hospitals of the Board.

RETURN CASE.

The following was noted during the year.

A boy, aged 6 years, was removed to hospital with scarlet fever on 23rd March, and was discharged on 11th June. Five days later his sister, aged 3, developed scarlet fever and was removed to hospital.

SMALLPOX.

On 26th May a child, aged 14 months, was removed for observation after consultation with Dr. Wanklyn, and on the following day information was received that the diagnosis of smallpox had been confirmed. Four days later, however, this diagnosis was revised and a final decision was reached that the case was not one of smallpox. A large number of persons were kept under observation as contacts until the final decision was received.

not regarded as issing diphtheria. This percentage is lower than that for 1990

SCARLET FEVER.

The cases certified numbered 383 of which 33 or 8.6 per cent. were subsequently not regarded as scarlet fever.

The corresponding percentage during recent years has been 1.7 in 1920, 2.5 in 1921, 1.4 in 1922, 1.2 in 1923, 13.4 in 1924, 11.7 in 1925, 14.6 per cent. in 1926.

The distribution of the cases certified, and the deaths amongst males and females in the Borough and its eight Wards during the year were as shown in the subjoined table :—

			SCARLET FEVER.

Haggerston			17	26	43				
Acton			17	27	44				
Totals for	Borougl	n	178	205	383	2	1	3	

The cases are grouped according to ages in Table II. (Appendix). With exception of five cases all those certified during the year were removed to hospital. The attack rate was 3.7 per 1,000 inhabitants. It was lowest in Wenlock and highest in Kingsland, being 3.1 per 1,000 in the former as compared with 5.0 in the latter.

The deaths were at the rate of 0.03 per 1,000 population. There were no deaths in Moorfields, Hoxton, Wenlock, Kingsland, Haggerston and Acton Wards. The case mortality was a shade under 0.7 per cent.

Amongst children under five years there were 131 cases with a case mortality, allowing for errors in diagnosis, of 1.8 per cent. The case mortality amongst persons over five years was only 0.4 per cent., errors in diagnosis being allowed for.

The cases certified as scarlet fever in London numbered 13,265, and were at the rate of 2.9 per 1,000 population. The deaths numbered 63, being at the rate of 0.01 per 1,000 population, as estimated for the middle of 1926. Taking the cases certified the case mortality for the Metropolis was barely 0.5 per cent.

DIPHTHERIA (INCLUDING MEMBRANOUS CROUP).

The cases certified numbered 467, of which 87 or 18.6 per cent., were subsequently not regarded as being diphtheria. This percentage is lower than that for 1926.

The number of cases and the deaths appongst males and females in the Borough

Totals for	Borough		217	250	467	3	9	12		

The number of cases and the deaths amongst males and females in the Borough and its eight Wards are given in the subjoined table :---

The cases are grouped according to ages in Table II (Appendix). They were, with one exception, all removed to hospital for treatment. The attack-rate was 4.5 per 1,000 inhabitants. The rate was highest in Haggerston and lowest in Acton Ward, being 6.1 and 2.3 per 1,000, respectively.

The deaths numbered 12, the rate being 0.11 per 1,000 population. It was highest in Haggerston Ward, where it amounted to 0.27 per 1,000. There were no deaths in Hoxton and Wenlock Wards. Of the cases certified, 2.6 per cent. terminated fatally. Six of the deaths were of children under five years. Allowing for 32 cases of children under 5 and 55 cases of those over 5 that were not regarded as diphtheria at the hospitals of the Metropolitan Asylums Board the case mortality was 2.9 per cent. in both the age groups 0-5 years and 5 upwards.

During the year anti-toxin obtained from the Health Department was administered in one case before removal to hospital, 9,000 units being used.

The usual enquiries were made. With regard to the cases investigated, they were distributed amongst males and females according to age periods as set out below :---

Age Period.	Male.	Female.	Total.
Under 1 year	 8	1	9
From 1 to 2 years	 22	20	42
" 2 to 3 years	 24	20	44
" 3 to 4 years	 19	29	48
" 4 to 5 years	 27	22	49
" 5 to 10 years	 67	86	153
" 10 to 13 years	 17	24	41
Over 13 years	 20	47	67
Totals	 204	249	453

In 255 of the cases the patients were attending school and in 192 they were at school within a week of being certified as having the disease. In some instances the children were attending whilst suffering from diphtheria, the nature of the illness not being recognised. In 293 cases there were children in the house invaded who were attending school. In 51 instances the histories showed the presence of cases of " sore throat " amongst the inmates of the houses in which the patients were resident, and in 38 instances there was evidence pointing to infection from previous cases in the Borough. In 330 instances the houses were occupied by members of more than one family, in 101 by single families and in 23 the cases occurred in artisan's dwellings of the block type. In 242 the sanitary condition of the dwellings was satisfactory, in 80 fairly so, and in 105 it was unsatisfactory.

The cases certified as diphtheria in the Metropolis numbered 12,285, being at the rate of 2.7 per 1,000 population. The deaths numbered 387, the death-rate being 0.09 per 1,000 and the case mortality 3.1 per cent.

ENTERIC FEVER.

Four cases were certified, three of which were paratyphoid. One of these, a case of paratyphoid in a male of 27 years, proved fatal. In no case was information obtained as to the source of infection.

The cases certified in London numbered 329, being at the rate of 0.07 per 1,000 population. The deaths numbered 27, the death rate being 0.006 per 1,000 and the case mortality 8 per cent.

ERYSIPELAS.

The cases certified as erysipelas numbered 62, with three deaths.

The cases and deaths amongst males and females in the Borough and its eight Wards were distributed as set out below :—

	ERYSIPELAS.

The cases contified in the Metropolis numbered 245, a restriction of the rate 1,040 births. The deaths in Shereditch were at the a restriction of the barries compared with 1-3 for London.

PERSONAL STREET, BESTER

PUERPERAL FEVER.

Eleven cases were certified, two of which terminated fatally; nine were removed to hospital. The cases certified were at the rate of 5.0 per 1,000 births as compared with 3.9 in 1926, 4.9 in 1925, 3.9 in 1924, 2.5 in 1923, 3.1 in 1922, 2.0 in 1921, 2.9 in 1920 and 1.3 in 1919. The cases certified in the Metropolis numbered 265, and were at the rate of 3.5 per 1,000 births. The deaths in Shoreditch were at the rate of 0.91 per 1,000 births as compared with 1.3 for London.

PUERPERAL PYREXIA.

Puerperal pyrexia as defined in the Public Health (Notification of Puerperal Fever and Puerperal Pyrexia) Regulations, 1926, means any febrile condition other than puerperal fever, occurring in a woman within 21 days after childbirth or miscarriage in which a temperature of 100.4° Fahrenheit or more has been sustained during a period of 24 hours, or has recurred during that period. Thirty-four cases were certified, of which twenty-three were removed to hospital. Consultations with obstetric specialists, for which provision is made in the regulations above referred to, were held in 7 cases.

DIARRHŒA.

Three deaths were attributed to diarrhœa and 7 to enteritis. All these deaths were of infants under one year, and were at the rate of a little under 0.1 per 1,000 population or 4.6 per 1,000 births.

The deaths from diarrhœa and enteritis in children under two years, in the Metropolis numbered 552 the death-rate being 0.12 per 1,000 inhabitants.

MEASLES.

The deaths numbered 7, this being greatly below the average for recent years. The deaths from this disease numbered 25 in 1926, 34 in 1925, 58 in 1924, 23 in 1923, 84 in 1922, 18 in 1921, 50 in 1920, 12 in 1919, 72 in 1918, 139 in 1917, 33 in 1916, and 67 in 1915. Four of the deaths were amongst males and three females. All were amongst children under five years.

The death rate was 0.09 per 1,000 as compared with 0.23 in 1926, 0.32 in 1925, 0.55 in 1924, 0.21 in 1923, 0.81 in 1922, 0.17 in 1921, 0.49 in 1920, 0.12 in 1919, 0.82 in 1918, 1.57 in 1917, and 0.33 in 1916. The deaths during 1927 were mostly during the first three months of the year. Four of these deaths occurred in Whitmore Ward and one each in Church, Kingsland and Acton Wards.

Some 20 cases were nursed by nurses from the Local District Nursing Association in accordance with arrangements made by the Borough Council with the Association. The nurses paid 141 visits in connection with the cases. The number of cases removed to the hospitals of the Metropolitan Asylums Board was 106.

В

The deaths from measies in the Metropolis numbered 179 as compared with 014 in 1926, 357 in 1925. The death rate

The deaths from measles in the Metropolis numbered 179 as compared with 914 in 1926, 357 in 1925, 1,335 in 1924, 367 in 1923 and 1,559 in 1922. The death rate was 0.04 per 1,000 inhabitants.

WHOOPING COUGH.

There were 24 deaths from whooping cough in Shoreditch during the year and the death rate 0.22 per 1,000 inhabitants. The deaths for recent years were 0 in 1926, 29 in 1925, 28 in 1924, 10 in 1923, 27 in 1922, 19 in 1921, 12 in 1920, 2 in 1919, and 93 in 1918. The deaths in the Metropolis numbered 546, the rate being 0.12 per 1,000.

INFLUENZA.

Twenty-five deaths, nine amongst males, were attributed to influenza. The death rate was 0.24 per 1,000 inhabitants. The deaths during recent years were 22 in 1926, 19 in 1925, 28 in 1924, 14 in 1923, 69 in 1922, 27 in 1921, 51 in 1920, 121 in 1919, 295 in 1918, and 12 in 1917.

The deaths in the Metropolis numbered 1,790, being at the rate of 0.39 per 1,000 inhabitants. The corresponding figures for last year were 786 and 0.17.

TYPHUS FEVER.

No cases were certified in Shoreditch.

TUBERCULOSIS.

Tuberculosis (Appendix Table V, Nos. 29 to 34 inclusive) resulted in 114 deaths as compared with 151 in 1926, 154 in 1925, 145 in 1924, 161 in 1923, 182 in 1922, 172 in 1921, 166 in 1920, 209 in 1919, 255 in 1918, 302 in 1917, 302 in 1916, and 328 in 1915. It accounted for 8.6 per cent. of the total mortality for the year. The deaths during 1927 include those of 21 persons who were not certified under the Tuberculosis Regulations in Shoreditch. The mortality was at the rate of 1.07 per 1,000 inhabitants, varying from 1.47 in Church to 0.80 in Wenlock.

The deaths from tuberculosis of the lungs or consumption numbered 86, of which 57 were of males, a decrease of 47 on the figure for 1926. The death rate was 0.82 per 1,000 being highest in Church and lowest in Kingsland, the rates being 1.14 and 0.57 per 1,000 respectively.

The deaths from tuberculosis in the Metropolis numbered 4,780, the death rate being 1.05 per 1,000 population. The deaths attributed to tuberculosis of the respiratory system numbered 4,140, which gives a rate of 0.91 per 1,000 persons.

A summary of the notifications under the regulations received during the year is contained in Table VIII. and the distribution of the cases according to age periods and localities is given in Table II. (Appendix). subjected are particulars of new cases and of deaths during 1927 in the form

Subjoined are particulars of new cases and of deaths during 1927 in the form required by the Minister of Health :—

† In addition.

The cases certified numbered 238, being at the rate of $2\cdot3$ per 1,000 persons in the Borough, as compared with $2\cdot7$ in 1926, $2\cdot9$ in 1925, $2\cdot4$ in 1924, $2\cdot4$ in 1923, $2\cdot7$ in 1922, $2\cdot5$ in 1921, $3\cdot0$ in 1920 and $5\cdot1$ in 1919. The cases artified were most numerous in proportion to the population in Hoxton Ward and least in Moorfields, bying at the rate of $2\cdot9$ per 1,000 in the former as compared with $1\cdot6$ in the latter.

The cases certified as pulmonary tuberculosis numbered 186, and were at the rate of 1.8 per 1,000, as compared with 2.1 in 1926, 2.2 in 1925, 2.0 in 1924, 2.1 in 1923, 2.1 in 1922, 2.1 in 1921, 2.8 in 1920 and 4.0 in 1919. The notifications of pulmonary fuberculosis were proportionately most numerous in Hoxton and least in Moorfields, being 2.5 and 0.7 per 1,000 respectively.

At the close of the year there were on the Tuberculosis Register at the Town Hall the names of 1,761 persons, of whom 968 were males. Approximately the names of 1.7 per cent. of the population were on the Register. This number is too large owing to the failure of those who have recovered to report themselves for the purpose of having their names removed. It is expected, however, that with improved arrangements for tuberculosis visiting the register will be brought up to date.

The report of Dr. Leitch which summarises the work carried out at the Tuberculosis Dispensary during the year under consideration is appended (pp. 58-61).

The removals to hospitals, sanatoria and other institutions are given in Table II. (Appendix). Of the deaths from consumption belonging to Shoreditch, approximately 39 per cent. occurred in public institutions within or without the Borough and of these 67 per cent. took place in St. Leonard's Hospital.

OPHTHALMIA NEONATORUM.

Under the Public Health (Ophthalmia Neonatorum) Regulations, 1926, the hills of notifying cases of ophthalmin neonatorum is placed solely upon the medical securitizate in charge of the cases.

The section convert numbered of relating to (0 cases, 27 being amongst with an intervent convert work a section of the Tasks of inflamed eyes in the section of the section of the Markel Officer of Health of the latter of the Scholard are the section of the Minister

Two cares of the division date which is reactify frown as infantile paralysis, write remained. One of there was remayed to the Western Respital, where it was found test to be a race of pulsers in a

The second case occurred in an infant aged eight months. The child was admitted to the Queen's Hospital and discharged in April. The arm, which was the part affected in this case, has improved since the child's discharge from hospital.

OPHTHALMIA NEONATORUM.

Under the Public Health (Ophthalmia Neonatorum) Regulations, 1926, the duty of notifying cases of ophthalmia neonatorum is placed solely upon the medical practitioner in charge of the cases.

The certificates received numbered 62 relating to 49 cases, 27 being amongst males and 22 females. There were besides some 83 other cases of inflamed eyes in infants which were brought to our notice by the Medical Officer of Health of the London County Council. These were not formally notified. Subjoined are the particulars relating to the cases certified during the year as required by the Minister of Health :--

	CASES.						
	Trea	ated.	Vision Unim-	Vision	Total Blindness.	Deaths	
Notified.	At Home.	In Hospital.	paired.	impaired.	. Jundness,	Deaths 	
49	40	9	48	1			

The usual supervision was exercised through the Health Visitors for securing proper treatment. Of the cases certified, seven were of a severe type. In one instance vision was impaired. A number of the cases received treatment at the Moorfields Eye Hospital. Nine cases were treated in hospital, one of them being admitted to St. Margaret's Hospital, a special institution of the Metropolitan Asylums Board for the treatment of this disease. When necessary mothers are admitted with their infants. Fourteen of the cases were attended to by nurses from the Local District Nursing Association who made an average of 22 visits per case.

The certified cases were at the rate of 22.4 per 1,000 births as compared with 10.7 for London as a whole, more than twice as great.

EPIDEMIC CEREBRO-SPINAL MENINGITIS.

One case was certified. It occurred in an infant and terminated fatally in the Queen's Hospital.

POLIO-MYELITIS.

Two cases of the above disease. which is generally known as infantile paralysis, were certified. One of these was removed to the Western Hospital, where it was found not to be a case of poliomyelitis.

The second case occurred in an infant aged eight months. The child was admitted to the Queen's Hospital and discharged in April. The arm, which was the part affected in this case, has improved since the child's discharge from hospital.

ENCEPHALITIS LETHARGICA.

The following are third particulars respecting the four cases certified during the

A second and the second on juntary 5th to the Eastern Hospital, a second and the part of the second on 2th April. At the time of certification are a second an attended on 2th April. ENCEPHALITIS LETHARGICA.

The following are brief particulars respecting the four cases certified during the vear under consideration :---

 A boy aged 2¹/₂ years was removed on January 5th to the Eastern Hospital, where the diagnosis was changed to pneumonia. He was discharged on 11th February.

(2) A woman aged 28 years was certified on 5th April. At the time of certification the disease had reached an advanced stage, the patient being unable to look after herself by reason of tremors of the limbs. She was admitted to St. Leonard's Hospital, where she died towards the end of the year.

(3) A young man aged 18 years was certified in October, and is being treated at home. The patient has only slight tremors, and is able to get about and to look after himself. He is not able to work. At the time of going to press no mental change was noticeable.

(4) A young man aged 21 years was also notified in October. In this patient paralysis with accompanying tremors is very marked and salivation is excessive. He is unable to dress or feed himself, but there is no mental deterioration. He is being treated at home.

GLANDERS, ANTHRAX AND HYDROPHOBIA.

No cases were certified in Shoreditch during the year.

PNEUMONIA, MALARIA AND DYSENTERY.

In accordance with the Regulations of 1919 some 273 cases of acute primary pneumonia and 21 of influenzal pneumonia were certified during the year.

Of the cases of pneumonia investigated 218 were treated in St. Leonard's Hospital, 4 in St. Bartholomew's Hospital, and 5 in other institutions. Some 46 were nursed at home by relatives, 7 of their with the help of the District Nursing Association. Some 26 other cases of pneumonia (not notified) also received the nursing assistance of the Association. Altogether 451 visits were made by the nurses of the District Association in connection with pneumonia cases. In 108 instances the dwellings occupied were satisfactory as regards air space, light and ventilation; in 62 they were fairly so, and in 103 they were unsatisfactory.

Three cases of malaria were certified. In each case the patient was an ex-service man and contracted the disease abroad.

VENEREAL DISEASES.

The London County Council is the authority responsible for the provision of facilities for the diagnosis and treatment of these diseases and special clinics are held in various voluntary hospitals and in other institutions. None of these are actually within the boundaries of the Borough but those at the Metropolitan, the London, the Royal Free and University College Hospitals are readily accessible to the people of Shoreditch.

In addition to the formating. The London County Council makes provision for loctors of infortiony facinities for aid in diamosis, supply of salvarsan and its subdiffuse procession of untraction for productorers and students and co-ordinates the and of Hospitairs, Public Health Services and practitioners. The Council also more also publicity and programma with regard to matters relating to countrate theory.

In addition to the foregoing, The London County Council makes provision for doctors of laboratory facilities for aid in diagnosis, supply of salvarsan and its substitutes, provision of instruction for practitioners and students and co-ordinates the work of Hospitals, Public Health Services and practitioners. The Council also undertakes publicity and propaganda work with regard to matters relating to venereal diseases.

A Shoreditch Propaganda Committee associated with the Shoreditch Public Welfare Association and working in close co-operation with the British Social Hygiene Council made arrangements in connection with the following film lectures, at the Town Hall:—Dr. Otto May—The Dangers of Ignorance. Film, Whatsoever a Man Soweth; Dr. I. Feldman—The Shadow.

At the Welfare Centre, Kingsland Road, Dr. Rose Turner delivered a series of four lectures (for women only), do ling mainly, though not exclusively, with the subject of venereal disease. No film was shown at the first lecture. The following films were shown at the other lectures :—The Gift of Life, Public Health, Twins at Work, Clean Milk and Care of the Teeth, The Shadow.

INFECTIOUS DISEASES AND SCHOOLS.

The numbers of children suffering from infectious diseases or resident in houses in which infectious diseases existed, concerning whom intimations of exclusion from school were received, in accordance with the requirements of the School Management Code of the London County Council, were as follows : diphtheria 740, scarlet fever 639, measles 519, chicken pox 638, whooping cough 440, mumps 461 and 343 of other infectious diseases. The exclusions altogether numbered 3,780 and related to 38 schools.

The scheme for the more effective control of measles in public Elementary Schools, referred to in previous reports, was reintroduced in a modified form in December. Under the new arrangements leaflets prepared in the Health Department are handed to the head teachers for distribution in the schools affected.

A number of intimations were received as to investigations by the School Medical Authorities in consequence of the occurrence of cases of scarlet fever and diphtheria amongst children attending some of the schools in the Borough. In only a few instances was it found necessary to exclude any of the children.

Information was also received from the School Medical Officer relative to the exclusions from school of 36 children on account of the presence of diphtheria bacilli in their noses or throats. The families, residents in some twenty-eight houses, to which the children belonged, were kept under observation; in one instance a case of diphtheria was subsequently notified amongst the residents in the house.

BACTERIOLOGICAL EXAMINATIONS.

During the year some 1,133 examinations were made. Dr. J. Andrew made 717 of these at his laboratory in Kingsland Road and Dr. F. H. Teale 416 at the University College Hospital Medical School. Of these 792 were for suspected diphtheria, 11 for

meric fever, 251 for tuberculosis and 36 for generiben. Thirty Wassermann

Territor and disconsistent of the disconsistent for diphtheria organisms,

Thirty Wassermann tests were made, two samples of fæces and two of urine were examined, five specimens of cerebrospinal fluid, three specimens for organisms and one for blood culture were also examined.

Positive results were obtained in 137 of the examinations for diphtheria organisms, 36 of those for tubercle bacilli, six of the examinations for gonococci and in nine of the Wassermann tests.

In addition to the above some 706 bacteriological examinations were made at the Royal Chest Hospital in connection with the work at the Tuberculosis Dispensary.

DISINFECTION.

The premises disinfected numbered 1,074; the articles removed to the Borough Disinfecting Station to be there disinfected totalled 11,713 and included 969 beds, 837 mattresses, 2,069 pillows, 530 bolsters and some 7,308 other articles such as sheets, blankets, quilts, curtains, carpets, clothing and the like. It was necessary to destroy one pair of mattresses which were so dilapidated and contaminated as to render it inadvisable to return them. These were replaced with new.

THE SHELTER.

The accommodation provided under Section 60 (4) of the Public Health (London) Act, 1891, was in use on three occasions during the year under consideration :—

One family in which occurred a case thought at first, as described already, to be a case of small-pox was admitted to the Shelter while the house was disinfected.

A family consisting of man, wife and five children were allowed to occupy the Shelter while the drains at their house were reconstructed in accordance with requirements of the Health Committee.

A man was admitted to the Shelter in order that his clothes might be disinfected.

PUBLIC MORTUARY.

The bodies of 128 persons were deposited in the mortuary and inquests were held in 117 instances. In connection with these inquests 65 post-mortem examinations were made at the mortuary. No infectious bodies were removed to the mortuary by the sanitary authority.

WATER SUPPLY.

The Meteorological Table for London deduced from observations at Greenwich, under the Astronomer Royal, issued by the Registrar General for 1926, shows a rainfall for the year of approximately 29.8 inches, which is above the average.

In accordance with Section 49 of the Public Health (London) Act, 1891, communications were received from the Metropolitan Water Board as to water supplies being cut off in respect to six premises : in five instances on account of non-payment of rates, and in one because water was not required. Water was laid on to some 183 new premises and in 10 instances additional taps

Four complaints were received as to the quality of the water, but there was no monotone for every fine the occurrence of any blacks due to the water supplied.

Water was laid on to some 183 new premises and in 10 instances additional taps were provided in tenement houses.

Four complaints were received as to the quality of the water, but there was no reason for suspecting the occurrence of any illness due to the water supplied.

MUNICIPAL DENTAL HOSPITAL.

In the preceding Annual Report reference was made to the decision of the Council towards the end of 1926 to establish an Institution for the care of the teeth of those who live or work in the Borough. At the beginning of the year now under consideration the lease of suitable premises at 164, Kingsland Road was obtained and the following staff was engaged :---

Dental Surgeon (part time) .	. J. Peter, M.C., M.R.C.S., L.R.C.P., L.D.S.
Anæsthetist (part time) .	. M. Marcus, M.B.B.S.
Mechanic (full time)	. T. Lamb.
Nurse (part time)	. Nurse Frier (Certificate of General Training).
Caretakers (residents)	. Mr. & Mrs. Whittard.
At first five Sessions were held	at the following times :

Monday		 	 6.30-8.30.
Tuesday		 	 2.30-4.30.
Thursday	y	 	 10 a.m12 noon.
Friday		 	 2.30-4.30.
Friday '		 	 6.30-8.30.

Owing to the large number of patients requiring extractions it was soon found necessary to hold an additional anæsthetic session. It was accordingly arranged for an extra session to be held every fortnight, the time of this being varied to suit the convenience of the patients.

The summary of the work done during the year is as follows :---

TABLE IINSPECTION	AND	TREATMENT	OF	CHILDREN.

These figures are evidence of the extensive and useful work that is being done at the Hospital, and in view of the fact that most disease and chronic ill-health is caused in the first instance by neglect of the care of the teeth, this work should in time contribute appreciably towards improving the health of the Borough.

So important is the Hospital that it is greatly to be hoped that it will before long be open as a full-time department.

SANITARY WORK.

Intimations as to insanitary conditions were served in respect to 5,720 premises. In 505 they were dealt with by Inspector Wright, in 528 by Inspector Chapman, oan insector Siehelmorenden Inspector Thomas, 413 Inspector Shaw, 329 Inspect Molloy, 037 Inspector Bishop, 627 Tospector Girling, 444 Inspector Strattor 533 Inspector Grant and 106 by Inspector Walter.

STOKE NURSENCES

There were two communications from the London County Council referring to the emission of black smoke. The same well duty brobght to the notice of the parties responsible. Some seven observations were made by the Sanitary Inspector and in four instances intimations were given to the offenders. These were effective and there was no necessity for further action on the part of the Sanitary Authority 545 Inspector Sickelmore, 356 Inspector Thomas, 413 Inspector Shaw, 329 Inspector Molloy, 937 Inspector Bishop, 522 Inspector Girling, 444 Inspector Stratton, 590 Inspector Grant and 706 by Inspector Walker.

In connection with the inspectors' work some 1,659 letters were written to owners and others concerned.

The Inspectors made 45,958 visits; 9,377 of these visits were in connection with dwellings, 2,623 workshops, besides factories, laundries, bakehouses, cowsheds and milk vendors' premises, ice-cream shops, slaughterhouses, and other places where food is prepared and sold were also visited. Some 644 visits of inspection made in connection with the street markets, stables and stable yards, and for the detection of unsound food are included in the total given above. The inspection of 2,756 of the dwellings was the result of house-to-house inspection carried out in accordance with the intention of the Health Committee.

Unfortunately, there was considerable illness amongst the Sanitary Inspectors during the year. As a result of this the house-to-house inspection was in arrears towards the end of the year.

To catch up these arrears, and to bring the house-to-house inspection into line with the scheme approved in 1926, Mr. Gibbs, a member of the clerical staff of the Department, who has obtained his Sanitary Inspector's Certificate, was appointed as temporary Sanitary Inspector for six months, for the special duty of making house-to-house inspection.

In Table IX (Appendix) a summary is given showing particulars of the work carried out for the abatement of nuisances and for improving the sanitary condition of the dwellings of the people which has been compiled by the Senior Inspector from information supplied by the Sanitary Staff. The work done in compliance with the provisions of the Factory and Workshops Act, 1901, and in connection with the drains and sanitary arrangements of new buildings, is included in the Summary. Most of it was carried out to meet the requirements indicated on the written intimations given by the Sanitary Inspectors. Statutory Notices under the Public Health (London) Act, 1891, were served by order of the Sanitary Authority upon parties responsible for the abatement of nuisances and for otherwise infringing the Act in 1,235 instances. For non-compliance with the requirements of the Sanitary Authority proceedings were taken before the magistrate in 31 instances.

SMOKE NUISANCES.

There were two communications from the London County Council referring to the emission of black smoke. The same were duly brought to the notice of the parties responsible. Some seven observations were made by the Sanitary Inspectors and in four instances intimations were given to the offenders. These were effective, and there was no necessity for further action on the part of the Sanitary Authority.

eren and all the signe of the Samitary Large take some time Sanitary Notices.

FUR SKIN DRESSERS.

At the end of the year there were two on the Register, one having been removed therefrom during the course of the year. They were regularly inspected and some 13 visits were made in connection with them. Two Statutory Notices were served on account of lime-washing which were duly complied with.

RAG AND BONE DEALERS.

Some 22 premises to which the byelaws under Section 9 of the London County Council (General Powers) Act, 1908, are applicable were on the Register at the end of the year. Some 67 visits of inspection were made in connection with them, and in 13 instances written intimations on account of the need for cleanliness were required. These were duly attended to.

VERMINOUS HOUSES.

The houses where it was necessary to take measures on account of the presence of vermin numbered 203, and in connection with them some 319 rooms were dealt with during the year. Sanitary notices were served where required and the usual steps were taken. An appreciable number of the premises came under notice through intimations from the School Authorities respecting children reported as being in a verminous condition.

During the year the homes of some 323 children, 105 boys and 218 girls, notified as verminous by the School Medical Officer, were reported with a view to the homes, bedding, etc., where necessary, being dealt with by the Sanitary Authority, whilst the children were cleaned and their clothing disinfected at the cleansing stations of the London County Council in the neighbourhood. Intimations were received that 21 boys and 29 girls had been given the opportunity of being cleansed at the cleansing stations, that in the case of 53 boys and 162 girls Statutory Notices had been served upon the parents to cleanse the children within 24 hours under Section 122 of the Children's Act, 1908, and that in the cases of 2 girls legal proceedings were pending for non-compliance with the requirements of Statutory Notices under the Act mentioned. In some instances the same children were more than once reported and their homes had to be visited and dealt with accordingly. In 8 cases the addresses given were erroneous.

In practically all the cases reported the homes were visited by the Sanitary Inspectors and the following summarises the results obtained :—In 240 the rooms occupied were satisfactory, varying from fairly clean to very clean, in 16 they were dirty, and in 1 also buggy. In 266 the bedding was clean or fairly so, in 4 it was dirty, in 1 dirty and buggy, and in 3 bugs and in 2 fleas were noted. In 6 of the homes evidence of poverty was marked. No evidence of lice was found in connection with any of the homes.

Arising out of the visits of the Sanitary Inspectors some nine Sanitary Notices were served upon owners and one upon the occupier of verminous dwellings. These were mostly for general repairs and cleansing.

The children reported by the School Authorities as suffering from scabies numbered 47, of whom 24 were females. As a result of the enquiries made by the Sanitary Inspectors six other cases came under observation. As far as practicable steps were taken to prevent infection spreading.

RATS AND MICE DESTRUCTION ACT, 1919.

The following is a statistical summary relating to the work carried out by the Rat Officer with a view to giving effect to the provisions of the above-mentioned Act during 1927 :—

HOUSING.

The special house-to-house inspection of dwelling houses in the Borough is referred to on page 22. Further particulars as regards housing are contained in the Appendix (pp. 64/65).

The work on the area included in the London County Council Ware Street Housing Scheme continued in progress throughout the year. Some 80 tenements were completed and the erection of 32 others was commenced. Mention should also be made that the erection of 104 flats by the Corporation of the City of London was completed during the year. These dwellings which contain 342 rooms are for the accommodation of persons displaced in the City in connection with schemes for improving the housing conditions of the people. The dwellings are built upon a site adjoining Shepherdess Walk and Wenlock Road.

Four other dwellings were commenced during the year, one 4-roomed house at 40. Shap Street, and a block of three flats at 44, Pearson Street.

Reference was made in the preceding report to the inadequacy of the lighting of the staircases of many of the tenement buildings in the Borough, and it is satisfactory to be able to report that under Section 61 of the L.C.C. (General Powers) Act, 1927, the Council now have powers which should ensure a great improvement in this matter in the near future.

The houses let in lodgings or occupied by members of more than one family on the register at the end of the year numbered 303, and some 1,231 visits of inspection were made in connection with them. In 213 instances intimations relating to various matters requiring attention were served upon the persons responsible for dealing with the same, and in 134 instances Statutory Notices followed. In 4 instances proceedings before the magistrate became necessary.

There were two applications for certificates under the Rent and Mortgage Interest (Restrictions) Acts, 1920-23, that dwellings were not in all respects reasonably fit for human habitation. Both were granted.

FACTORY AND WORKSHOP ACT, 1901.

The number of workshops, exclusive of bakehouses, on the register at the end of the year was 1,631. Of these 369 had been added, 184 having been removed. A classification of the workshops registered is contained in the summary of proceedings under the Act which is appended. Some 2,623 visits of inspection were made in connection with workshops and 614 with factories.

Five communications were received from the factory inspectors relative to the ^{establishment} of 151 new workshops in the Borough. As the result of inspection 127 ^{were} found in a satisfactory condition, and 11 were not in use. With regard to the ^{remainder} sanitary notices were necessary; in 8 instances for cleansing, 1 on account of defective w.c., 2 for defective roofs, 1 for dirty urinal and 1 on account of w.c. ^{being} improperly screened.

Forty seven wilten intimations were received from the factory inspector relating to instantiary conditions and intringrate metal tig law as to public health in connection with 14 factories and 33 work they are the close from there conditions to which the helter is exclose fir standarts are given were given conditions of walks and cellings in 18 detective and an anythere were accomposingly and 27 detective roots in 8, foul wind in 5 observes of the in 1 and to we instance there was a detective realistic.

Instruction of the law shift angles this posses of the department by the factors into also also 282 motionizes white any its wise, 284 explored into a being served upon the number response to the second table into applying the sumfaces sumface how we set and required. The following is an abstract of the sumface work therein to be completed with these matters.

Forty-seven written intimations were received from the factory inspector relating to insanitary conditions and infringements of the law as to public health in connection with 14 factories and 33 workshops. The chief insanitary conditions to which the factory inspector directed attention were : dirty conditions of walls and ceilings in 18, defective and insufficient w.c. accommodation in 27, defective roofs in 5, foul urinal in 1, obstructed drain in 1 and in one instance there was a defective ceiling.

Including those brought under the notice of the department by the factory inspector 282 workshops were dealt with, 294 sanitary notices being served upon the parties responsible for their proper sanitary upkeep. In eight instances sanitary notices were not required. The following is an abstract of the sanitary work carried out to comply with these notices :--

Premises cleansed throughout 122	Soil and vent pipes dealt with 3
,, ,, partially 58	Water-closets newly constructed 4
Number of rooms cleansed 213	,, repaired, etc 227
Walls, floors, sashes, etc., re-	" obstructions
paired 72	removed 50
Light and ventilation improved 3	Sinks, etc., cleansed and re-
Roofs, guttering, etc., repaired 119	paired 14
Overcrowding abated	Sink traps provided 6
Water reinstated or improved 3	Sculleries, yards, etc., paving re-
Drains newly constructed 2	paired 7
,, reconstructed 6	Sculleries, yards, etc., cleansed
,, repaired, etc 25	or limewashed 94
" obstructions removed 15	Dust receptacles provided 21
Urinals cleansed, etc 17	Foul accumulations removed 27

The number of factories under observation for insanitary conditions during the year was 93, and in connection with them some 93 sanitary notices were served. The work carried out to comply with these notices included the cleansing and repairing of water-closets in 27 instances, the removal of obstructions from drains and water-closets in 24 instances, besides several other matters. Limewashing of factories can only legally be dealt with by the Factory Inspector, but defects in connection with the sanitary arrangements in factories are matters within the province of the sanitary authority.

During the year 80 lists of out-workers were received from employers in the Borough, 40 in the first and 40 in the second half-year. Those for the first halfyear are due in February, for the second in August. These lists contained the names of 959 out-workers, of whom 691 were not residents in Shoreditch. The addresses of those non-resident were forwarded to the sanitary authorities of the districts to which they belonged. Communications were received from various sanitary authorities relating to some 1,568 out-workers, and of these 2 were residents in other Borouglis, and their addresses were duly forwarded to the authorities concerned. A table is given in the Appendix showing the numbers of addresses of out-workers received from the sanitary authorities referred to during 1927. The number of out-workers reported was 2,527, and of these some 1,834 were way in Shee facts. These figures are below the average for the past five years,

A solution of the second is reports, in numerous instances names and addresses and the second second of the second of the second in twice a year, and in some of the second second of the second second second municipal and second second second second second second second second municipal of out-workers as a second second second second second second second municipal of the second second

and have dealer of alternative to the servers contribution in year was

the number of uther backs has down a marcal increase each year since 1918, and attendence at a welfare centre of down taken for granted by a large proportion if the methers of the Borough. If more on one were available a still larger proportion of the moleculour weak of the Borough. The number of out-workers reported was 2,527, and of these some 1,834 were residents in Shoreditch. These figures are below the average for the past five years, but they show an increase as compared with those for 1926.

As pointed out in previous reports, in numerous instances names and addresses of out-workers are duplicated owing to lists being sent in twice a year, and in some cases the same out-workers are employed by more than one firm, so that the numbers given above must not be taken as representing the actual numbers of individual out-workers. Tables are appended showing the distribution of out-workers as regards trades in the Borough. Most of them are engaged in work connected with the making of wearing apparel, artificial flowers, paper bags and boxes, umbrellas, toys and crackers.

Some 774 visits of inspection were made to places where home-work was being carried on, and in connection with these 88 sanitary notices were served. The cases of notifiable infectious disease occurring at out-workers' premises numbered 17 and included 5 of scarlet fever, 8 diphtheria and 4 pneumonia. The usual steps were taken in connection with them by the officers of the sanitary authority.

MATERNITY AND CHILD WELFARE.

The births notified numbered 1,802 and there were in addition some 73 still births. Of the notifications 1,259 were received from registered midwives practising in the Borough. In addition, 201 births occurring in institutions outside Shoreditch were notified weekly, on forms sent in by the London County Council. Including these the live births notified during the year were approximately 95 per cent. of the births registered during the year as compared with 96 per cent. in 1926, 94 in 1925, 93 in 1924, 88 in 1923, 88 in 1922, 98 in 1921, 85 in 1920 and 95 in 1919.

A summary of the work of doctors and health visitors is appended (pp. 66-71). It follows generally on the lines of previous years.

The work has been carried on as in previous years with the addition of a morning Toddlers' Clinic by Dr. Sylvia Smith. This was opened on Tuesday morning 1st February and was transferred to Wednesday morning in August and the opening in November of a new Infant Welfare Consultation at Hoxton Market Mission on Wednesday afternoon. In this clinic, which is taken by Dr. Edna Goffe, mothers resident in Health Visitors districts Nos. 5 and 6 are invited to take their babies.

The total number of attendances at the various centres during the year was nearly 39,000, as compared with 35,500 during 1926.

The number of attendances has shown a marked increase each year since 1918, and attendance at a welfare centre is now taken for granted by a large proportion of the mothers of the Borough. If more centres were available a still larger proportion of the mothers would attend. The Monday of ernoon clinic previously held in the basement of the Town B where the accommodation was not suitable for the purpose was (construct in July the Review Mether Massion. Here the room is large, light and any and the char has been a rest increased.

The Monday afternoon clinic previously held in the basement of the Town Hall where the accommodation was not suitable for the purpose was transferred in July to the Hoxton Market Mission. Here the room is large, light and airy and the change has been a great improvement.

The numbers at the ante-natal clinics have been well maintained.

The light clinic has been continued throughout the year and the numbers referred for treatment show an increase on the preceding year.

Allowances of milk and dinners under Circular 185 were made as usual, the number showing little change as compared with the preceding year.

Particulars as to the admissions to the wards of the Model Welfare Centre are given on page 71.

According to information supplied by the Hospital Authorities 360 cases from Shoreditch were dealt with at the Ante-Natal and Consultative Maternity Centre of the City of London Maternity Hospital during 1927. Of these 213 were examined by the Obstetric Surgeon attached to the Centre, some 425 examinations being made. In 147 the Sister attached to the department saw and advised expectant mothers upon various aspects of their pregnancies, 459 examinations being made. The number of cases delivered in the District during the period under review was 154, and in the Hospital 212. In all cases the urine was tested.

Some 8 cases were referred to this Centre by the Council's Medical Officers under the existing agreement with the Hospital for diagnoses and for their confinements in the institution.

Special features noted during the year were : hæmorrhage in 7 instances, contracted pelvis in 9, albuminuria in 4, breech presentations in 6, transverse 1, heart disease 4, tuberculosis 2, bad histories 12, varicose veins 2, removal of placenta 1, hydrocephalus 1, faetal ascites 1, syphilis 1, prolapsed cord 1, breast abscess 1, epileptics 2, hydramnios 2, placenta praevia 5, Caesarian Section 2, induction of labour 2, in 1 case decapitation was required, and in 3 cases version. There were 4 sets of twins. The number of cases admitted to the wards for their confinements were 199 and 187 were attended in their own homes.

The cases nursed under the arrangement with the District Nursing Association numbered 272 children under five years. The total number of visits to children under five was 2,745. Measles, ophthalmia neonatorum, otorrhoea, threadworms, tonsils and adenoids, pneumonia and bronchitis, furnished the majority of the cases under five years. Further particulars are given in the Nursing List (Appendix p. 72).

STREET MARKETS AND FOOD.

The usual supervision was exercised by the Sanitary Officers as regards food exposed for sale in the market streets and generally throughout the Borough.

MILK AND CREAM RECULATIONS, 1912

the at the suppress of million and the analysis were reported to contain

The following were surrendered or seized and destroyed as unfit for the food of man :-

4 boxes (48 lbs.) of tomatoes, 500 tins of oxtail soup, 100 tins of mulligatawny soup, 56 tins of vegetable soup, 1 box (2 qrs.) of mixed fish, 168 lbs. of tomatoes, 21 boxes (441 lbs.) of apricots, 14 lbs. of sweets, 6 stone of skate wings, 7 cwts. of grapes, 1 cwt. of conger eels, 75 lbs. of apples, 9 lbs. of prawns, 2 tins of condensed milk, 78 packets of dates and 1 cwt. of dabs.

SLAUGHTERHOUSES.

The two slaughterhouses in the Borough were subject to the usual inspection and 26 visits were made in connection with them. Their general sanitary condition may be reported as satisfactory. Little use is made of them and the L.C.C. refused, for this reason, to renew the licence in respect of premises at 7, The Broadway, London Fields, which was accordingly removed from our register on 20th October.

Some 54 butchers' shops were under inspection during the year and some 162 visits of inspection were made. Due attention was given to the shops and stalls coming within the scope of the Public Health (Meat) Regulations, 1924.

COWHOUSES.

Some 54 visits of inspection were made to the two cowhouses in the Borough. Their sanitary condition may be reported as satisfactory. There were 26 cows kept in the sheds towards the close of the year.

The number of dairymen and milk purveyors on the register at the end of the year was 280, 17 having been added and seven removed therefrom. In 35 instances there were changes in the names of the persons registered. The premises were under regular inspection throughout the year and some 1,315 visits were made in connection with them. In 14 instances sanitary notices were served, mainly for cleansing. Three cases of diphtheria were certified on milk vendors premises during the year. The usual steps were taken for safeguarding the milk. The Public Health (Prevention of Tuberculosis) Regulations, 1925, prohibit a person suffering from tuberculosis of the respiratory tract from following any employment or occupation in connection with a dairy, which would involve the milking of cows, the treatment of milk, or the handling of vessels used for containing milk, if he is in an infectious condition. There was no necessity for any action under these regulations during the year with a view to enforcing same.

MILK AND CREAM REGULATIONS, 1912.

None of the samples of milk submitted for analysis were reported to contain any preservative. No samples of cream were submitted for analysis.

C

CONDENSED MEEK REGULATIONS.

CONDENSED MILK REGULATIONS.

Four samples were submitted for analysis under the above Regulations, all of which were returned as genuine.

MILK AND DAIRIES ORDER, 1926.

Under this Order a milk vendor was fined for delivering milk in a bottle which was not filled and closed on registered premises.

PUBLIC HEALTH (PRESERVATIVES, &c., IN FOOD) REGULATIONS.

These Regulations came into operation on January 1st, 1927, and so far as they relate to bacon, ham and egg yolk on 1st July, 1927.

In these regulations the use of all preservatives in food, with the exception of specified inocuous substances which are allowed in minute quantities in certain foods as stated in the schedules to the regulations, is prohibited.

Upon analysis of five samples of cordial taken towards the end of the year under consideration, it was found that these contained salicylic acid ranging from 1.8 to 2.9 grains per pint contrary to the provisions of these regulations. Proceedings were instituted but the cases did not come before the Magistrate until the new year. The Council was granted one guinea costs in respect of each summons.

A sample of candied peel also taken towards the end of the year contained sulphite preservative expressed as sulphur dioxide 50 parts per million in excess of 100 parts allowed and was the subject of proceedings under these regulations. After the third sample had been examined at Somerset House, 3 guineas costs were awarded to the Borough Council.

MILK (SPECIAL DESIGNATIONS) ORDER, 1922.

The following are the premises at which "certified" milk may be sold in accordance with the requirements of the above Order : 73, Kingsland Road, 193, Kingsland Road, 60, Shepherdess Walk, 13/15, Sun Street and 147, Goldsmith Row.

COOKSHOPS AND EATING-HOUSES.

Including the kitchens of public houses where food is prepared for customers, 190 were under inspection during the year, and some 689 visits were made in connection with them. Some 43 sanitary notices were served, mainly for cleansing.

FRIED FISH SHOPS.

Some 64 were under inspection and 304 visits were made to them. Thirty-five sanitary notices were served, mainly for cleansing.

ICE-CREAM SHOPS.

The number under observation during the year was 126, and 256 visits of these were means made. In think during multices were served. Most of these were

The samples taken influded 433 of talls (2 mound), 66 batter 65 vinegal, to marganne, 37 toeca. 35 percent 16 non dealadir wire, 16 tan, 15 ulisky, 16 dappage 11 sultanas, 13 cautas, 12 male vinegal, 11 ground ginger, 10 coffee, cautard powder, 8 junt, 8 michane drama d confluenci mille, 8 sausage, 8 candled Pol, 7 ground almonds, 7 taploca, 7 currants, 6 self-rusing floar, 6 offwe oil, 6 gin.

ICE-CREAM SHOPS.

The number under observation during the year was 126, and 256 visits of inspection were made. In 16 instances sanitary notices were served. Most of these were for general cleansing.

BAKEHOUSES.

The bakehouses in the Borough, to the number of 61, were inspected. Thirty were found in a satisfactory sanitary condition.

The necessary sanitary notices were served and duly complied with, and advice was given regarding cleanliness both of the premises and of the hands of the employees.

Thirty-six of the bakehouses on the register at the close of the year were underground.

In 29 power is used in connection with the work of bread baking.

SALE OF FOOD AND DRUGS ACTS.

The reports of the Public Analyst, Mr. H. G. Harrison M.A., show that 1,062 samples were submitted to him during the year. This number is at the rate of 9 9 per 1,000 inhabitants, and is above the average for recent years.

The results of the year's work are summarised in the following Table :---

Quarter of 1927.	Number of Samples taken.	Number of Samples, Adulterated.	Percentage Adulterated.	Number of Prosecutions Instituted.	Prosecutions withdrawn be- cause of War- ranties, &c. In ouch 145 tartaric acid, 5 mustard, 5 glycerine, 5 ammoniated tincture of quinine, 5 breakfast sausage, 4 camphorated oil, 4 ground rice, 4 sago, 4 boracic acid, 4 full-cream condensed milk, 4 full-cream dried milk (2 informal), 4 meat pie, 4 fruit cordial, 4 mixed spice, 4 Lisbon wine, 3 bun mixture, 3 lard, 3 rice, 3 salmon and shrimp paste, 3 coffee and chicory, 3 sauce, 3 rum, 2 baking powder, 2 compound liquorice powder, 2 arrowroot, 2 dried milk food, 2 corned beef, 2 sugar, 1 each of "Brinite" (informal), modified full-cream dried milk, lime juice cordial, turpentine, brawn, ground cinnamon, apples, apricots, mixed fruit, fruit salad, gelatine, lemon squash, mincemeat, ground nutmegs, oatmeal, shredded cocoanut, flour, sodium bicarbonate, bloater paste, bread and butter, oil of eucalyptus and pickles.

Of the samples of milk 8 or 1.6 per cent. were found to be below the standard fixed by the Board of Agriculture. The proportion of milk samples returned as adulterated during 1927 was again greatly below the average.

In the subjoined table are shown the numbers of samples of milk taken during the four quarters of the year, with the numbers and percentages of those not found to be genuine :—

	ter of th year.	e	Number of Samples.	Number not genuine.	Percentage adulterated.
lst			138	2	1.4
2nd			130	1	0.8
3rd			87	4	4.6
4th			142	1	0.7

In three of the samples water was certified to have been added; in two cases it was less than 5 per cent., and in the third case it was 8 per cent.; in five the samples showed deficiencies in milk fat; in one of these it was less than 5 per cent., and in the other four the deficiency ranged from 13 to 42 per cent. taking the standard of the Board of Agriculture.

Legal proceedings were instituted in five or 62.5 per cent. of the cases in which samples of milk were below standard. In one instance a warranty was proven and the case was dismissed. In two instances the summonses were dismissed upon payment of costs, and in the other two cases costs only were allowed the Council.

No legal proceedings were considered advisable as regards the remainder of the samples of milk below standard. The percentage of the adulterated samples of milk in which it was not thought advisable to institute legal proceedings was 37.5.

Sixty-six samples of butter were taken, all of which were returned as genuine, 28 were reported as containing boric acid, not exceeding 0.5 per cent. in each.

Of the 63 semples of vineger taken, four contained 1, 3, 4 and 6 per cent, excessive

one sample characters and found to contain a per cent, of wheat and had traces

consistent of sharing standard Lyner cents extensive water. A warning letter

and a start of the second second and the second second second second second second second second second second

Ine percentage of samples found to be adulterated is the lowest so far recorded.

Forty-six samples of margarine were taken, all of which were returned as s^{enuine} .

Of the 63 samples of vinegar taken, four contained 1, 3, 4 and 6 per cent. excessive water respectively. No proceedings were taken.

One sample of mustard was found to contain 5 per cent. of wheat and had traces of turmeric. No action was taken.

One sample of whisky contained 1 per cent. excessive water. A warning letter was sent to the vendor.

The informal sample of "Brinite " was a preparation of common salt with some sodium sulphate and sodium sulphite.

The subjoined table gives a comparison of the results of the work under the Sale of Food and Drugs Acts for the years 1903-1927 inclusive :---

Year. Number of Samples.	Number of persons in the Borough to each Sample.	Number of Samples adulterated.	Percentage of Samples adulterated.	Number of prosecu- tions instituted. Reference Lass aircady have rande, under the heading of Sanitary Work, to the absente through illness of members of the start. Mr. Wrighs was absent from this cause from 13th January antil 21st March and Mr. Pranson from 6th October until after the end of the year.

The particulars of appointments to the staff consequent upon the opening the Shoreditch Municipal Dental Hospital have been given under the gener description of that institution.

RAG FLOCK ACT, 1911.

Under the above Act 19 samples (3 informal) were taken for analysis. Of the formal samples four contained 2,166, 835, 690 and 150 parts respectively of soluble chlorine per 100,000 in excess of the amount allowed. Proceedings were instituted and the defendant was ordered to pay f_5 5s. 0d. costs in each case.

The 3 informal samples contained 135; 285, 2,270 parts per 100,000 in excess of the 30 parts per 100,000 allowed.

STAFF.

In the last month of the year under consideration Dr. Bryett, who had been Medical Officer of Health for thirty-four years, died after a long illness, during the greater part of which, with characterisitic courage and devotion to duty, he continued at his post.

The Council has placed on record an appreciation of the fine work done by Dr. Bryett as Medical Officer of Health of the Borough, and of deep regret at his sad death.

The members of the staff of the Public Health Department wish to express their grief at the loss of the chief under whose leadership they have served for so many years.

The late Medical Officer of Health was absent from duty on account of illness for some months during the year under consideration. During this period the Assistant Medical Officer of Health was relieved of his clinical duties in connection with the work of the Maternity and Child Welfare Committee, the following temporary appointments being made : Dr. Olivier Richards took charge of the wards at the Model Welfare Centre ; Dr. Edna Goffe and Dr. Elizabeth Karn, of Infant Welfare Consultations, and Dr. Mackenzie Shattock of the Light Clinic.

The Maternity and Child Welfare Committee accepted with great regret the resignation owing to ill-health of Dr. Amy Hodgson of her appointment as Medical Officer to the Infant Welfare Consultations held on Tuesday afternoons at the Model Centre, and on Friday afternoons at Harbour Lights. Dr. Karn was subsequently appointed to the former, and Dr. Goffe to the latter consultations.

Reference has already been made, under the heading of Sanitary Work, to the absence through illness of members of the staff. Mr. Wright was absent from this cause from 19th January until 8th May, Mr. Thomas from 19th January until 21st March, and Mr. Pearson from 6th October until after the end of the year.

The particulars of appointments to the staff consequent upon the opening of the Shoreditch Municipal Dental Hospital have been given under the general description of that institution. seen r Andrews resigned her appointment at the Model Welfare Centre on securing tals the appointment of Matron to the Poplar Matemity and Child Welfare Centre. See Kennedy was appointed by the Matemity and Child Welfare Committee at meeting of 1% by the for the Security and Child Welfare Committee at

a guinnib Bails alls to antidar sut the of Thermore state of the

Sister Andrews resigned her appointment at the Model Welfare Centre on securing in July the appointment of Matron to the Poplar Maternity and Child Welfare Centre. Sister Kennedy was appointed by the Maternity and Child Welfare Committee at their meeting of 15th July to the post thus vacated.

As in previous years, Mrs. Levi, a former health visitor, was temporarily employed during the period of the health visitors' holidays.

The following is a brief summary of the communications prepared by the Clerical Staff :---

Under the Health Committee some 30,771 communications written and printed were despatched from the Office during the year. These included 7,284 notices and summonses, 7,503 letters, cards and other communications under the Public Health and Sale of Food and Drugs Acts, 170 in connection with the work under the Factory and Workshops Acts, 10,614 on various matters relating to infectious disease, verminous cases and disinfection, and 5,200 agendas and reports respecting the work carried out. In connection with the work under the Maternity and Child Welfare Committee some 29,120 communications were despatched, including 11,148 forms, books and cards in connection with the distribution of milk, 12,532 letters and other communications, and 5,440 agendas and reports.

I have to acknowledge the help rendered by all members of the staff during a year made difficult by much illness.

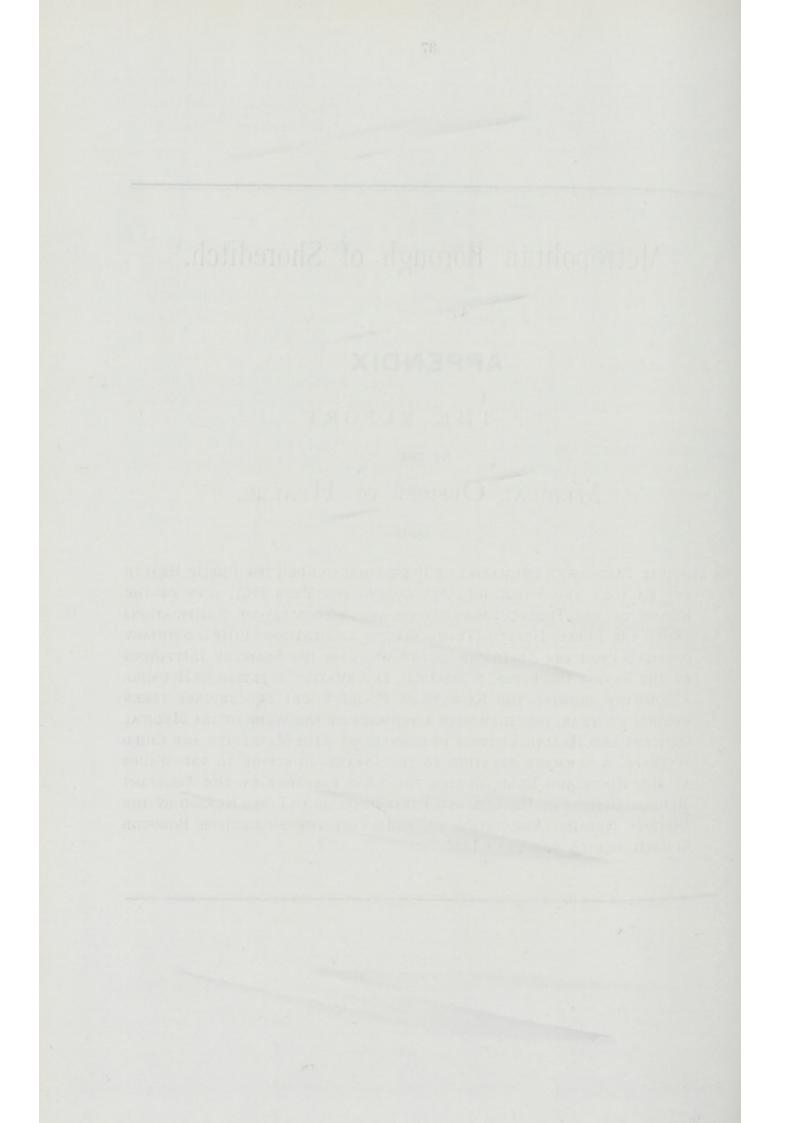

I have also to express my thanks to the Mayor, the Chairman and members respectively of the Health and Maternity and Child Welfare Committees, and to the members of the Borough Council generally for their kind consideration and help in connection with the work carried out during the year.

I have the honour to be,

Sir, Ladies and Gentlemen,

Your obedient Servant,

MAITLAND RADFORD, Medical Officer of Health.

Metropolitan Borough of Shoreditch.

NOTE.—The above table is arranged to show the gross births and deaths in the Borough, and the births and deaths properly belonging to it with the corresponding rates. The rates are calculated per 1,000 of the estimated gross population. For columns 5 and 13 the population of the Holborn Institution, estimated at 1,000, has been deducted in calculating the rates.

In column 6 are included the whole of the deaths except those of soldiers and sailors in public institutions, which were registered during the year as having actually occurred within the Borough. In column 12 is entered the number in column 6 corrected by subtraction of the number in column 8 and by the addition of the number in column 9. Deaths in column 10 have been similarly corrected by subtraction of the deaths under one year included in the number given in column 8 and by addition of the deaths under one year included in the number given in column 9.

"Transferable Deaths" are deaths of persons who, having a fixed or usual residence in England or Wales, die in a district other than that in which they resided.

Nett Births in the year.—Legitimate, 2,122; illegitimate, 66. Nett Deaths in the year of legitimate infants, 151; illegitimate infants, 12.

NOTES TO TABLE III.

NOTES TO TABLE III.

The classification and numbering of Causes of Death are those of the "Short List on page xxv. of the Manual of the International List of Causes of Death."

- (a) All "Transferable Deaths" of residents, *i.e.*, of persons resident in the district who have died outside it, have been included with the other deaths in columns 2-10. Transferable deaths of non-residents, *i.e.*, of persons resident elsewhere in England or Wales who have died in the district, have been in like manner excluded from these columns. For the precise meaning of the term "Transferable Deaths," *see* footnote to Table I.
- (b) All deaths occurring in institutions for the sick and infirm situated within the district, whether of residents or of non-residents, have been entered in the last column of Table III.
- (c) All deaths certified by registered medical practitioners and all inquest cases have been classified as "Certified"; all other deaths being regarded as "Uncertified."
- (d) Exclusive of "Tuberculous Meningitis" (10), but inclusive of cerebrospinal meningitis.
- (e) Title 19 has been used for deaths from diarrhœa and enteritis at all ages. (In the "Short List" deaths from diarrhœa and enteritis under 2 years are included under 19; those at 2 years and over being placed under title 28.)

NOTES TO TABLE IV.

- (a) The total in the last column of Table IV equals the total of column 10 of Table I and in column 3 of Table III.
- (b) Under abdominal tuberculosis have been included deaths from tuberculous peritonitis and enteritis, and from tabes mesenterica.
- (c) The total deaths from congenital malformation, premature birth, atrophy, debility and marasmus equal the total in Table III under the headings congenital debility and malformation, atelectasis and premature birth. Want of breast milk has been included under atrophy and debility.
- (d) For references to the meaning of any other headings, see Notes to Table III.

TABLE V.

DEATHS FROM ALL CAUSES IN THE BOROUGH OF SHOREDITCH, AND IN EACH WARD DURING THE YEAR ENDING 31st DECEMBER, 1927.

Note.—The deaths of persons not belonging to Shoreditch occurring in hospitals and other institutions in the Borough are excluded ; deaths of persons belonging to Shoreditch occurring in public institutions in London beyond the limits of the Borough are included.

* Fever includes typhus, typhoid and continued fevers.

† Diarrheea in this table includes enteritis in children under two years.

The inhabitants of the Holborn Institution, which is situate in Wenlock Ward, estimated at 1,000, and the deaths occurring in that institution are excluded.

S The Shoreditch Institution is situate in this Ward. In the cases of some of the deaths in outlying institutions, the Shoreditch Institution is the last known place of residence. This Ward is therefore probably credited with some deaths belonging to other Wards.
 NOTE.—Where the deaths under any heading are too few to express as a rate per 1,000 within two places of decimals, 0.00 is inserted; where no deaths have occurred, dots are placed in the space under the heading. The London population is adjusted to the middle of 1926.

(a) There were no names and addresses of outworkers received in respect to the following classes of work :—Sacks, basket making, mats other than wire nets, racquet and tennis balls, stuffed toys, file making, electro plate, cables and chains, anchors and grapnels, cart gear, locks, latches and keys, pea picking, household linen, lace, lace curtains and nets, curtains and furniture hangings, brass and brass articles, tents, feather sorting, and carding, &c., of buttons.

(b) The figures in columns 2, 3 and 4 are the total number of lists received from employers who sent them both for February and August, and of the entries of names of outworkers in those lists. They are therefore double the number of employers and approximately double the number of individual workers whose names are given, since in the February and August lists of the same employers, the same outworker's name will often be repeated.

BOROUGH OF SHOREDITCH TUBERCULOSIS DISPENSARY.

REPORT FOR YEAR 1927.

To the Medical Officer of Health, Town Hall, Shoreditch.

SIR,

Herewith I beg to submit my Report of the work done in the Tuberculosis Dispensary during the year 1927.

The total number of attendances during the year, viz., 5,809, is less than that for the year 1926, but rather more than the corresponding number for 1925.

The total number of new persons examined, viz., 678, shows an increase of 62 when compared with the total for 1926.

In my Report for last year I stated that the Dispensary Register had been revised. In the course of this revision, I found it necessary to include a number of cases in which a definite diagnosis had not been made in past years. The actual number so included was 100, a number out of proportion to the definite cases. During the year 1927 special attention has been given to these cases, and I am glad to state the number of such cases now on the Register is 29; several of these have been known at the Dispensary for a period of less than one month.

There are two matters in connection with the Council's Tuberculosis Scheme to which I think it advisable to call attention.

At the moment, there is only one Sister on the Dispensary Staff, and half of her time is spent in the Dispensary. When it is remembered that there are some 1,761 notified cases of Tuberculosis in the Borough, it will be seen that Home Visiting by the Sister cannot be carried out as thoroughly and consistently as is desirable. During the past year 2,744 such visits have been paid to the homes of patients; it should be noted, however, that a large number of cases require constant attention. I may perhaps be allowed to add that the Sister visits *all* notified cases of Tuberculosis, not merely those attending the Dispensary. The services of a second Sister would put Home Visiting on a sound footing.

The second matter which calls for consideration is the home nursing of bedridden cases. The number of such cases is not large, but the attendance of a nurse for an hour or so daily adds enormously to the comfort of these patients. I would suggest that arrangements be made with some local Nursing Association for the provision of this service.

I desire again to express my satisfaction with the way in which the members of the Staff of the Dispensary have carried out their duties, and I have to thank you for the assistance given by your Department.

I am, SIR,

Yours obediently,

A. LEITCH,

Tuberculosis Officer.

Patients notified as suffering from both pulmonary and non-pulmonary disease are included in the "pulmonary" returns. Primary Notifications relate to patients who have not previously been notified in this or former years, either on Form A or on Form B, in Shoreditch.

A School Medical Inspector is required to notify on Form B all cases of tuberculosis discovered in the course of inspection of children attending public elementary schools whether or not these have been previously notified.

Cols. 2-13. Only those cases which have been notified for the first time during the year on Form A, and which have never previously been notified in Shoreditch, either on Form A or on Form B, are included in these returns.

Col. 14. All notifications on Form A, whether duplicate or not, are included in this column. Cols. 15-18. Only those cases which have been notified for the first time during the year on Form B, and which have never

previously been notified in Shoreditch, either on Form A or on Form B, are included in these columns. Col. 19. All notifications which have been made during the year on Form B, whether the cases have previously been notified

in the area or not, either on Form A or on Form B, are included in this column. Col. 21. Only notifications on Form C, made by the medical officers of sanatoria, as defined in the Tuberculosis Regulations,

col. 21. Only notifications on Form C, made by the medical oncers of sanatoria, as defined in the Tuberculosis Regulations, are included in this column.

	Improved						 23

(6) There was one case of whooping cough, one of diphtheria and one of scarlatina, which were transferred to hospitals of the Metropolitan Asylums Board. Of these the first two have been transferred to other Hospitals, where they still are, and the third has made a satisfactory recovery.

(7) Number of deaths : one died from prematurity on 5th March after three days' residence, and one died from duodenal ulcer on 7th March after 19 days' residence.

Three cases referred to under Section 6 above.

One child was transferred to the Mildmay Hospital for operation for glands of neck. This child made a satisfactory recovery and was later sent to convalescent home.

One child was transferred to the Woodford Convalescent Home.

One child was transferred to the National Children's Home, hoping to be adopted.

* Includes one re-admission.
