PREFACE.

PUBLIC HEALTH DEPARTMENT.

ILFORD.

May 17th, 1920.

To the Chairman and Members of the

ILFORD URBAN DISTRICT COUNCIL.

GENTLEMEN,

In accordance with the regulations of the Ministry of Health and the Board of Education, I herewith submit my Annual Report for the year 1919.

Dr. Oates relinquished his duties as Medical Officer of Health on the 13th September, 1919, since which date I have carried out the duties of the office, having been duly appointed by you to the vacancy on the 27th October, 1919.

The work of the department is steadily increasing in all directions. You will be considering in the near future the questions of increasing the accommodation at the Isolation Hospital, of providing improved premises for the School Clinic, and of the establishment of a new Maternity Home.

The Maternity and Child Welfare work has grown to considerable proportions, and on the 27th October, 1919, Dr. Alice Rattray was appointed to act as Assistant Medical Officer particularly for this work.

On the 24th February, 1920, Dr. N. Gebbie was appointed as Assistant Medical Officer to fill the vacancy caused by my appointment as Medical Officer of Health.

The appointment of a whole-time Dentist will permit the dental work to be carried on as before the war. The low death-rate and zymotic death-rate show that the health of this district is good, while the low infantile mortality is an indication of an increased diffusion of knowledge of the care of infants.

Unfortunately, owing to war conditions, the statistics of the department during the past few years have not been compiled as formerly; the present report has only been prepared by the laborious effort of the clerical staff, to whom I must express my indebtedness.

The staff in all branches of the service have worked loyally and well, and I am convinced that you are being rendered efficient service.

May I also express my appreciation of the consideration which I have received at the hands of the responsible Committees and of the interest they have shown in the varied activities of the department.

I am, Gentlemen,

Your obedient Servant,

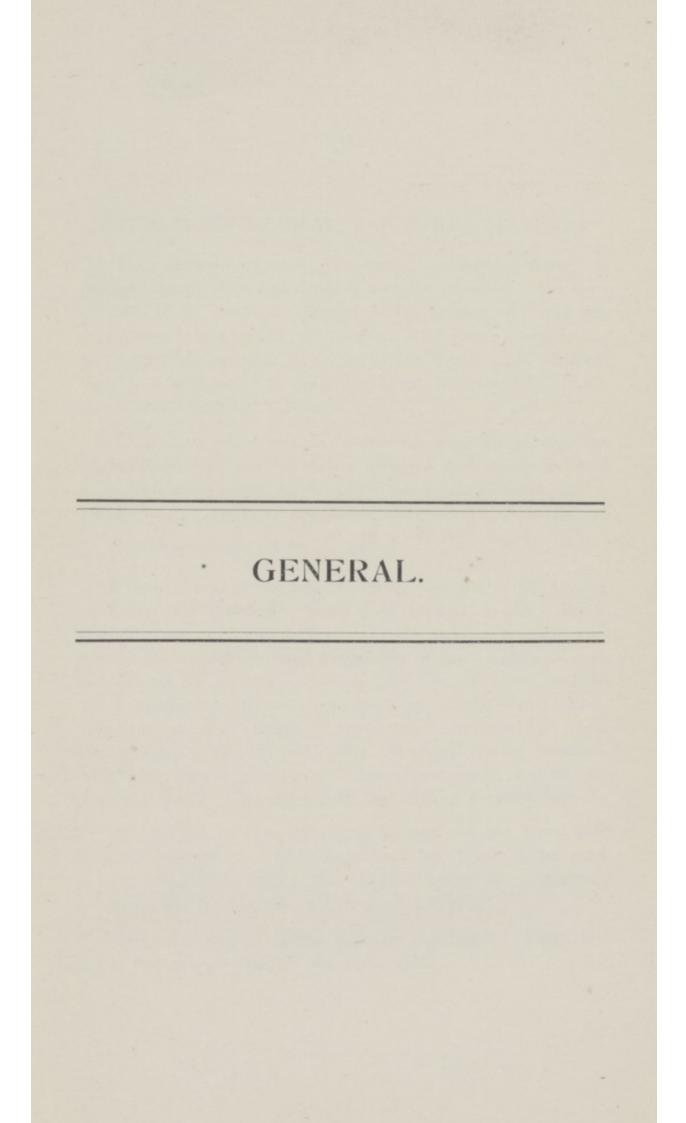

A. H. G. BURTON, Medical Officer of Health.

PHYSICAL, GEOLOGICAL, AND OTHER FEATURES.

The surface generally is gently undulating, flatter in the southern portions, but rising to a higher elevation in the more northern parts. Ilford is situated on the London clay, but this only comes to the surface as a narrow strip running almost due East and West through the middle of the district. In addition, there is a large patch to the North-West, as exemplified in the names of Clayhall and Claybury.

There is a large area of brick-earth lying roughly in the angle between the junction of the Romford Road with the Ilford Lane, extending down the Romford Road nearly as far as St. Mary's Church, and down Ilford Lane nearly to Uphall Farm.

The rest of the subsoil is gravel.

Ilford is one of the largest Urban Districts in the County of Essex, the population being concentrated in the South-Western portion of the district, while the remaining larger portion is still rural. A large proportion of the inhabitants earn their living in London, which is only seven miles distant. The population mainly belong to the lower middle class, with a proportion of other classes. There are a few industries :--(1) Photographic works, (2) paper mills, (3) manufacturing chemists, (4) electric battery makers, (5) nautical instrument makers, (6) aeroplane works. The latter three are modern developments.

Water Supply.—The district is divided by the Cranbrook Road into two areas. The portion North and West of this road is supplied by the Metropolitan Water Board, the remaining portion by the South Essex Waterworks Company.

There are now no public wells in existence. There are still a few private wells in the rural area.

STATISTICAL SUMMARY.

Enumerated Population at Census, 1911	78,188
Registrar-General's Estimate of the For birth rate Civil Population at the midde of For death rate 1919.	82,840 79,524

TABLE I. VITAL STATISTICS OF WHOLE DISTRICT DURING 1919 AND PREVIOUS YEARS.

* The Registrar-General's estimate for the purpose of the Death Rate.
† The Registrar-General's estimate for the purpose of the Birth Rate.
† The Registrar-General's estimate for the purpose of the Death Rate, including the populations of Claybury and West Ham Mental Hospitals.

NOTE ON TABLE I.

In column 6 there is entered the whole of the deaths registered during the year as having actually occurred in the district. In column 12 there is entered the number in column 6, corrected by the subtraction of the number in column 8 and the addition of the number in column 9. Deaths in column 10 are similarly corrected by the sub-traction of the deaths under 1, and included in the number given in column 8, and the addition of the deaths under 1 included in the number given in column 9.

- (a) The nett estimated population is found by deducting the population of Claybury and West Ham Asylums from the gross estimated population.
- (b) The nett number of births is obtained by taking the uncorrected number of births supplied by the local Registrar and adding to or subtracting from it such a number as is supplied for this purpose by the Registrar-General.
- (c) The birth-rate is calculated on the estimated nett population for birth-rate.
- (d) Calculated on the estimated nett population for death-rate.

(e) Calculated on the estimated nett population. "Transferable Deaths" are deaths of persons who, having a fixed or usual residence in England or Wales, die in a district other than that in which they resided. The deaths of persons without fixed or usual residence, e.g., casuals, are not included in columns 8 or 9, except in certain instances under 3 (b) below. There is stated in column 8 the number of transferable deaths of "non-residents" which have not been deducted, and there is in column 9 the number of deaths of "residents" registered outside the district which have been added in calculating the nett death-rate of the district.

The following special cases arise as to Transferable Deaths:-

(1) Persons dying in Institutions for the sick or infirm, such as hospitals, lunatic asylums, workhouses, and nursing homes (but not almshouses), must be regarded as residents of the district in which they had a fixed or usual residence at the time of admission. If the person dying in an Institution had no fixed residence at the time of admission, the death is transferable. If the patient has been directly transferred from one such Institution to another, the death is transferable to the district of residence at the time of admission to the first Institution.

(2) The deaths of infants born and dying within a year of birth in an Institution to which the mother was admitted for her confinement should be referred to the district of fixed or usual residence of the parent.

(3) Deaths from violence are to be referred (a) to the district of residence, under the general rule; (b) if this district is unknown, or the deceased had no fixed abode, to the district where the accident occurred, if known; (c) failing this, to the district where the body occurred, if known; and (d) failing this, to the district where the body was found.

BIRTHS.

Number of	births	registered	during	the	vear	 1,167

Legitimate Males 584, Females 579 Illegitimate Males 35, Females 29

The birth-rate, calculated on the Registrar-General's estimate of the population of 82,840 for this purpose is 14.1 per 1,000.

As compared with 12.9 in 1918 14.4 in 1917 17.2 in 1916 19.1 in 1915 18.3 in 1914

DEATHS.

Total number of deaths registered in district du	uring
the year was	1,029
Number of deaths of non-residents registered in	the
district (principally in the large institutions)	416
These deaths occurred as follows :	
In Claybury (L.C.C.) Mental Hospital	296
	105
In Ilford Isolation Hospital and Sanatorium	3
	- 4
Other man maril-	8
Total	416

To be added to the total are 176 deaths of Ilford residents registered as having died in other districts, The latter figure includes deaths at the following institutions :---

The Infirmary, Romford		74
The Essex County Mental Hospital		24
The London Hospital		19
The East London Hospital		2
The Royal Free Hospital, London		5
Guy's Hospital		2
Queen Mary's Hospital		2
Royal Eastern Counties Hospital, Colchester		2
Severall's Asylum, Colchester		2
Infectious Diseases Hospital, Colchester		1
In other Hospitals, Institutions and residence beyond the Ilford district	es	43
Total		176
The total deaths accountable to Ilford is therefore		789

Calculated on the Registrar-General's estimate of the population for this purpose the death-rate is 9.9, compared with 13.00 per 1,000 during 1918, and with 10.5 in 1917.

8.5 in 1916.10.5 in 1915.8.8 in 1914.

NOTES TO TABLE III.

The classification and numbering of Causes of Death are those of the "Short List" on page XXV. of the Manual of the International List of Causes of Death, which should be consulted and followed in all cases of doubt.

- (a) All "Transferable Deaths" of residents, *i.e.*, of persons resident in the District who have died outside it, are *included* with the other deaths in Columns 2-10. Transferable deaths of non-residents, *i.e.*, of persons resident elsewhere in England and Wales who have died in the District, are in like manner *excluded* from these columns. For the precise meaning of the term "transferable deaths" see footnote to Table I.
- (b) All deaths occurring in institutions for the sick and infirm situated within the district, whether of residents or of non-residents, are entered in the last column of Table III.
- (c) All deaths certified by registered Medical Practitioners and all Inquest cases are classed as "Certified"; all other deaths are regarded as "Uncertified."

.

ZYMOTIC DISEASES.

The deaths registered were as follows :---

Small Pox					
Measles					9
Scarlet Fever					1
Whooping Coug Diphtheria and			Cron		6
Enteric Fever	mem	····		P	2
Diarrhœa					5
Total					24

This gives a Zymotic death-rate for 1919 of .31 per 1,000 of the population. This appears to be the lowest Zymotic death-rate so far recorded for this district.

The Zymotic death-rate for the previous five years was as under :--

1914	 	 	.35	per 1,000
1915	 	 	.82	do.
1916	 	 	.45	do.
1917	 	 	.93	do.
1918	 	 	.42	do.

NOTIFIABLE DISEASES.

During 1919, 1,770 cases were notified, as compared with 900 in 1918.

Table II. shows the number of cases of infectious disease notified during 1919, arranged according to age and distributed in Wards. Of these the following occurred in institutions :--

CASES OF INFECTIOUS DISEASE OCCURRING IN INSTITUTIONS IN THE DISTRICT DURING THE YEAR, 1919.

CLAYBURY MENTAL HOSPITAL-

Enteric Feve	r	 	 	 6	cases.
Erysipelas		 	 	 6	
Pneumonia		 	 	6	,,
Dysentery		 	 	22	,,

WEST HAM MENTAL HOSPITAL-

Diphtheria				 	1 c	ases.
Enteric Fever				 	1	,,
Erysipelas				 	1	,,
Pneumonia				 	3	,,
BARNARDO'S VILLAGE	Hon	MES-	_			

Scarlet Fever		 	 	10	cases.
Diphtheria .	 	 	 	101	,,
				4	,,
Pneumonia .	 	 	 	3	,,

Of the cases notified, exclusive of those from Public Institutions, the following table shows the per cent. removed to the Isolation Hospitals :—

Small-pox	 100	0.0
Diphtheria	 88	3.6
Scarlet Fever	 82	2.8
Enteric Fever	 57	.1
Erysipelas	 15	5.1
Puerperal Fever	 66	5.6
Ophthalmia Neonatorum	 66	5.6
Influenzal Pneumonia	 44	1.1
Cerebro-Spinal Fever	 100	0.0
Encephalitis Lethargica	 100	0.0

The total number of deaths from infectious disease in the district is shown in the following table :---

DEATHS FROM INFECTIOUS DISEASE IN THE DISTRICT DURING , 1919.

Scarlet Fev	rer		 	 	1
Diphtheria	and	Croup	 	 	6
Enteric Fey	ver		 	 	2
Erysipelas			 	 	2
Influenza			 	 	64
Pneumonia	(all	forms)	 	 	34

Puerperal Fever	 	 0
-Cerebro-Spinal Fever	 	 1
Measles	 	 9
Pulmonary Tuberculosis	 	 57
Tuberculous Meningitis	 	 11
Other Tuberculous Diseases	 	 16

The following additional diseases were made notifiable by order of the Local Government Board in January, 1919 :---

(1)	Dysentery	(5)	Acute	Prir	nary
(2)	Encephalitis Lethargica		Pne	eumo	mia
(3)	Malaria	(6)	Relaps	sing	Feve
(4)	Acute Influenzal Pneumon	ia(7)	Trench	Fe	ver

28 cases of MALARIA occurred in demobilised or discharged soldiers who contracted the disease while on active service.

22 cases of DYSENTERY occurred in Claybury Mental Hospital. It is a common ailment in Institutions of this character.

One case of ENCEPHALITIS LETHARGICA was removed to the Isolation Hospital.

MEASLES and GERMAN MEASLES accounted for 930 notifications, as against 276 in 1918. These diseases cease to be notifiable on and after January 1st, 1920.

SMALL-POX.

One case was notified on March 24th and was removed to the Metropolitan Asylums Board Hospital at Dartford. Vaccination of contacts and disinfection of premises were carried out. No further cases arose. The origin of the case was obscure. The man was a worker in a factory at Purfleet.

A number of cases of contacts of Small-pox have been referred to this department either from the Army or Navy or from incoming ships; all such contacts have been kept under careful observation, The Relieving Officer informs me that during the year 611 primary vaccinations have been performed. The number of births registered was 1,167, showing the proportion of infants vaccinated to be 523 per 1,000. This is an undesirable state of affairs, and it is only by extreme vigilance on the part of the Public Health Department that spread of the disease does not occur

SCARLET FEVER.

231 cases of this disease were notified during the year in comparison with 167 in 1918. In common with other London districts there was a marked rise in the number of cases in the autumn and winter of 1919. As is well known scarlet fever shows a periodic rise in incidence every fifth to sixth year. The disease was fortunately of a mild type and only one death of an Ilford resident occurred, and this in a hospital outside Ilford.

DIPHTHERIA.

260 cases were notified during 1919 as compared with 216 in 1918. The increase, 'however, is not a real one, as 101 of the cases occurred in Dr. Barnardo's Girls' Village Homes, and most of these were not true clinical cases but children suffering from discharging ears, the diphtheria bacillus having been detected bacteriologically in the discharge.

It is necessary to notify these cases as they may, under certain unknown conditions, act as "carriers" of the disease to healthy children. The problem of dealing with them is a very difficult one, and is much exercising the minds of the authorities of the Home. In my opinion surgical treatment of the ears affected is the only method likely to be successful.

ENTERIC FEVER.

Fourteen cases only were notified during 1919, and of these six occurred in Claybury Mental Hospital and one in West Ham Mental Hospital.

CEREBRO-SPINAL FEVER.

One case was notified and removed to the Isolation Hospital. It was sporadic. The origin was obscure, and no further cases arose. In spite of active serum-treatment, unfortunately, a fatal issue ensued.

Ophthalmia Neonatorum.

Nine cases were notified during the year compared with eight in 1918. The corresponding figures for England and Wales were 6,532 in 1918, and 8,548 in 1919. It must be remembered that the birth-rate for England and Wales in 1918 was 17.7, and in 1919, 18.5.

It is now well known that ophthalmia of the newly born is caused by venereal disease (gonorrhœa) in the mother, and the above figures are a fairly satisfactory indication that venereal disease is not yet rampant in Ilford.

Of the nine cases, six were admitted to the Isolation Hospital; of the others, one was treated at the London Hospital and recovered, one died of tetanus at the West Ham Hospital, and one left the district and its after-history is unknown.

Acute Influenzal Fneumonia and Acute Primary Pneumonia.

It will be seen from Table II. that 46 cases of pneumonia were notified during the year.

The number of deaths from Influenza and Pneumonia amongst Ilford residents during 1919 as compared with 1918 may be seen from the following :—

		1919.	1918.
Influenza	 	 64	249
Pneumonia	 	 34	55

The services of temporary nurses have been engaged from time to time to assist in making enquiries as to any possible sources of infection, and to provide help in nursing patients stricken with these complaints.

TABLE II.-CASES OF INFECTIOUS DISEASE NOTIFIED DURING THE YEAR 1919.

The number of cases of infectious disease notified having been carefully revised will account for any discrepancy that may occur in comparison with the weekly return sent to the Local Government Board and the Essex County Council.

TUBERCULOSIS.

During the year 1919 there were 138 fresh notifications of pulmonary tuberculosis and 41 of other forms of tuberculosis.

The following particulars as to the sex and age of notified cases of Tuberculosis are of interest :---

Diseases.	Sex.	Under 1 year.	1 to 5 years.	5 to 15 years.	$15\ {\rm to}\ 25\ {\rm years}.$	25 to 35 years.	35 to 45 years.	45 to 55 years.	55 to 65 years.	Over 65 years.	Totals.
Pulmonary Tuberculosis Tuberculosis (all other forms)	M. F. M. F.			$ \begin{array}{r} 7 \\ 5 \\ 12 \\ 11 \end{array} $	$ \begin{array}{r} 19 \\ 15 \\ 2 \\ 3 \end{array} $	17 16 	$ \begin{array}{c} 16 \\ 13 \\ 1 \\ \end{array} $	$\begin{array}{c}13\\2\\1\\2\end{array}$	10 3 		$ \begin{array}{r} 82 \\ 56 \\ 22 \\ 20 \end{array} $

Dr. Barnard	o's ·	Village	Homes.	-Puln	nonary	Tube	ercu-	-
losis								3
Tuberculosis	(all	other	forms)					1

During 1919 there were 57 deaths from pulmonary tuberculosis and 27 from other forms of tuberculosis.

The following Table shows the number of deaths from Tuberculosis of llford residents, together with the death rate for that disease per 1,000 living persons, during the last eight years.

	19	1912		013	19	914	15	915	
	No.	Rate.	No.	Rate.	No.	Rate.	No.	Rate.	
Pulmonary Tuberculosis Tubercular Meningitis Tuberculosis	43 12	-55 -15	51 15	·6 ·18	55 6	·90 ·07	74 15	·92 ·18	
(all other forms)	13	.16	7	.08	8	.09	12	•14	
	1916					240	1919		
	1	916	1	917	1	918	19	919	
	No.	Rate.	No.	Rate.	No.	Rate.	No.	Rate	
Pulmonary Tuberculosis Tubercular Meningitis				1					

It will be seen that there was a decline in the death-rate from pulmonary tuberculosis in 1919 from the very heavy death rates of 1917 and 1918. There is no doubt the heavy rate in 1918 was influenced by the epidemic of Influenza.

The following is a table of the Bacteriological Examinations carried out during 1919, the Bacteriological Laboratory having been re-opened in April, 1919.

96

SUPERVISION OF FOOD SUPPLY. (1) Food and Drugs Act.

These Acts are administered by the Essex County Council. Mr. H. C. Card, the Chief Inspector, has kindly given me certain particulars, which I append :—

Samples of milk taken Samples of butter taken	 •	 135 18
Other samples	 	 47
Total	 	 200

Proceedings were taken in six cases, fines being inflicted in four cases as follows :---

Milk	 	 10s. fine and 5s. costs.
Milk	 	 £1 1s. costs.
Milk	 	 £1 fine and £1 12s. costs.
Milk	 	 £20 fine and 4s. costs.

In the remaining two cases, milk vendors pleaded, and substantiated, warranties.

(2) MILK SUPPLY.

There were in the Ilford district at the end of the year 46 dairies and milkshops and 10 cowsheds on the register. 149 inspections of dairies, milkshops, and cowsheds were carried out during the year.

(3) BAKEHOUSES.

There are 25 bakehouses in the district, including 7 factory bakehouses. There is 1 underground bakehouse. 68 inspections of bakehouses were carried out during the year.

(4) SLAUGHTERHOUSES.

There are two licensed slaughterhouses in the district. 72 inspections of slaughterhouses were carried out during 1919.

(5) ARTICLES OF FOOD SURRENDERED AND SEIZED.

During the year the following articles of food were surrendered and condemned as being unfit for the food of man :--

> 1 bullock's head without tongue. 1 bullock's tongue.

2 bullock's lungs. 1 bullock's liver. 1 bullock's paunch. 1 gut fat spleen and udders. 1 forequarter of mutton. Quantity of skate (2 lots). 3 boxes of kippers. 1221 boxes of dates. 1 beef liver. 1 buttock of beef. 1 box bloaters and quantity of herrings. 5 ducks. 13 chickens. l case of rabbits. 1 box of mackerel. 1 box of fresh herrings. barrel of fresh herrings. 1 barrel of crabs. 1 box of cat-fish. 2 boxes of whiting. carcase of beef with all organs. forequarter and loin. 1

1 buttock and thick flank.

The following articles of food were seized and condemned :---

- (a) 12 chickens.
- (b) 19 geese and 40 chickens.
- (c) 1 lb. 10 ozs. bacon.

On legal proceedings being instituted, the following were the results of the prosecutions :---

- (a) The defendant was convicted and fined £5.
- (b) The defendant was convicted and fined £20 and £3 3s. costs.
- (c) The defendants were convicted and fined £5 and 40s. costs respectively.

HOUSING AND TOWN PLANNING ACT, 1909.

Following are particulars as to work under the Housing and Town Planning Act, 1909 :---

Number of houses inspected	353
Number represented to the Local Authority as	
being unfit for human habitation	1
Number of closing orders made by the Local	
Authority	1
Number of closing orders determined	
Number of houses voluntarily demolished after	
closing order	1000
Number of houses in which defects were remedied without closing orders	19
Orders to execute work under Section 15 ,	252

REMOVAL OF HOUSE REFUSE.

The Chief Sanitary Inspector, Mr. F. W. King, was responsible for this work until the end of October, and I am obliged to him for the following particulars :--

During the 52 weeks ended 31st December, 1919, the number of horses and vans engaged in the collection and the number of loads of house refuse removed were as follows :---

> Horses and vans, 5,776. Loads, 10,154. Collection took place on 303 days. Average number of horses and vans per day, 19.06. Average number of loads per horse per day, 1.77.

The refuse was disposed of as follows :---

Deposited at Destructor Works ... 10,024 loads. Deposited elsewhere 130 ,,

SEWERAGE AND SEWAGE DISPOSAL.

The methods whereby the sewage of the district is disposed of have been detailed in previous reports.

There are in the district in addition :----

83 Cesspools and privies. 56 Pail closets.

FACTORIES.

There are 68 factories on the register, made up as follows :---

ISOLATION HOSPITAL.

ISOLATION HOSPITAL.

The work of the Hospital has been carried on in a most satisfactory manner during the year. During the autumn and winter months the capacity has been strained to the utmost, and the question of enlargement is one which is now under consideration; also that of providing a motor-ambulance and disinfecting-van service.

I am satisfied that the nursing staff is at the present time carrying on its duties most efficiently. The usual course of lectures was given, and two probationer nurses passed the examination of the Fever Nurses' Association during the year.

The following tables show the variety of diseases which were under treatment during the course of the year :--

Number of patients in Hospital at beginning of year :--

Scarlet Fever		 	 14
Diphtheria		 	 9
Phthisis		 	 14
Erysipelas	* * *	 	 1

Pulmonary Tuberculosis . Average stay in Hospita		67.0	,,
09.869	a or an	40.2	,,

The above averages are based on cases that completed their stay in Hospital during the year 1919.

Average number of patients in Hospital per day ... 49.9

INFLUENZAL PNEUMONIA.

Of 15 cases admitted during the year no less than 10 died. Whilst the chief cause of this high mortality is the very fatal character of the disease, I think the removal of such cases to Hospital is also a factor, and in my opinion no case should be removed unless the home conditions make it absolutely imperative.

SCARLET FEVER AND DIPHTHERIA

The results in these diseases were satisfactory. No death from Scarlet Fever occurred, while from Diphtheria five deaths only occurred. These were cases coming late under treatment. Any delay in the injection of serum in a case of diphtheria detracts from the chance of recovery and may make a fatal result inevitable.

OPHTHALMIA NEONATORUM.

Six cases were admitted; one died from marasmus, the other five made a complete recovery with no loss of vision in either eye. The disease can only be cured by constant unremitting attention on the part of the nursing staff, and the results achieved are a credit to the Institution. The cost of 5 blind children to the State would be not inconsiderable and this lowest motive makes the treatment of these cases an important section of preventive medicine.

In four of the cases the infants were accompanied by their mothers in order that breast feeding might be continued. Fifty per cent. of the cost of maintenance will be refunded under the Maternity and Child Welfare Grant.

SCABIES.

Four children were admitted with this complaint, having been treated for considerable periods at the School Clinic without success. They quickly yielded to a few days' efficient treatment in Hospital.

CASES UNDER OBSERVATION.

Eight were admitted. These were doubtful cases of infectious disease. Six were discharged, not having shown any definite sign of the disease. One, admitted as doubtful enterte fever, proved to be appendicitis, and was removed to the Emergency Hospital. One, admitted as doubtful meningitis, was found to be suffering from cerebral tumour and was transferred to the London Hospital.

TUBERCULOSIS.

The treatment of tuberculosis patients proceeded on the usual lines. Unfortunately but few of the cases are in such an early stage that any possibility of cure can be hoped for, although most show improvement by their stay in the Sanatorium. Three were in such an advanced condition that death ensued. The prospect of tuberculosis patients who spend their lives in or out of a Sanatorium until deaths overtakes them is a sad one. Very little hope of dealing with the problem exists unless a determined attempt is made (1) to segregate all advanced cases in residential institutions. (2) To adequately assist the patient's dependents financially, so that he can accept Sanatorium treatment at the earliest stage and remain in the Institution until arrest of the disease occurs. (3) To commence with the treatment of the pre-tuberculous child in open-air schools, etc., and so prevent the onset of the disease.

Total number of day-patients for the year, 21,119 (calculated from 521 patients spending 21,119 days in Hospital) cost per day per patient, 9s. 10.9d., as compared with 6s. 1.3d. per day for the year ended 31st March, 1913.

MATERNITY & CHILD WELFARE.

NOTIFICATION OF BIRTHS ACTS, 1907 AND 1915.

The number of births notified under the above Acts during 1919 was 1,233.

The percentage of births notified by the various responsible persons is as follows :----

By	Medical Practitioners	 	 29
,,	Certified Midwives	 	 36
	Parents and others	 	 33

INFANTILE MORTALITY.

The number of infants dying within the first year of life was 71, the total number born being 1,167. The infant mortality or rate of death per 1,000 births was therefore 61.

In previous years the total number of deaths and the rates have been as follows :---

Year.		o. of Deaths nder 1 year.	Rate per 1,000 Registered Births.	
1913	 	102	68	
1914	 	93	62	
1915	 	122	79	
1916	 	89	60	
1917	 	82	70	
1918	 	73	69	
1919	 	71	61	

The figure for 1919 is therefore a satisfactory one and compares favourably with that of 89 for England and Wales and 85 for London.

	Ward	1.					Infantile Mortality per 1,000 Births.

Loxford			***	***	235	11	47 46
Ilfe	ord				1,167	71	61

The following table shows the infantile mortality in each ward of the district :---

* Deducting from the North Hainault Ward the deaths of Infants occurring in the Village Homes, Barkingside, there is left an Infantile Mortality rate of 13 per 1,000 births for that ward. The extreme handicap which a child suffers as to its chance of life by being born out of wedlock is shown by separating the illegitimate children from the total infant deaths.

Of 64 illegitimate children born, 10 died, giving an infantile mortality rate of 156, while of 1,103 legitimate children born 61 died, giving an infantile mortality rate of 55.

On the following page is seen an analysis of the causes of death in infants during the first year of life.

It will be seen that the chief causes are atrophy, debility and marasmus, 16 deaths; premature birth, 14 deaths.

It is difficult to say how far these two causes can be minimised. They are chiefly due to maternal ill-health or disease. Syphilis is a factor in some cases of premature birth, but there are other causes for the determination of which further medical research is necessary.

It is hoped that the system of Ante-Natal Clinics when established, by their effect on the health of the mother during pregnancy, will reduce the number of deaths from these causes. It is satisfactory to note that diarrhœa and enteritis only caused five deaths of infants under 1 year.

Three infants were suffocated by overlying, a preventable cause of death which should not occur at all in a district like Ilford.

Causes of Death.	Under 1 week.	1-2 weeks.	2-3 weeks.	3-4 weeks.	Total under 4 weeks.	4 weeks & under 3 months.	3 months and under 6 months	6 months and under 9 month.	9 months and under 12 month	Total Deaths

TABLE	IV -	INFANT	MORTALITY.
A. 184.04.11.2		TTAT L SPITA T	MAURIALIII.

WORK OF HEALTH VISITORS.

The first Health Visitor was appointed in Ilford in June, 1909. This lady was responsible for the whole district, and baturally the work she was able to do was of a very limited scope. In 1916 two nurses were appointed as Health Visitors and School Nurses. In 1917 these were increased to three. In 1919 the number was still further increased to four, one of whom is, however, almost entirely occupied with School Medical work.

The work of the Infant Welfare Centres is increasing to such an extent that when the Ante-Natal Clinics are in working order it is doubtful if the present staff will be able to cope with the work.

The area is divided into three districts, for each of which one Health Visitor is responsible. She visits the home three weeks after the birth of a child where a doctor is in attendance, or 10 to 14 days if a midwife has attended the confinement.

Subsequent visits are paid according to the condition of the child and the circumstances of the parents.

The most satisfactory plan is to visit infants-

Under 1 year, once a month. Under 2 years, once a quarter. Under 5 years, once in 6 months.

but with the present staff it has not been possible to carry this out completely.

In 1919 the following visits were paid :--

First Visits Subsequent	hildren	undo	 r. 1. vo	ar of	1,195
age) Subsequent					2,861
age)					4,133

An important work which I hope the Health Visitors will be able to extend still further is that of visits of advice to expectant mothers. This will be correlated with that of the Ante-Natal Clinics. 47 visits have been paid to expectant mothers during the year.

Cases of still-birth, cases of premature births, and of deaths, of young infants are enquired into by the Health Visitors.

The work of the Health Visitors has been still further increased by the Milk (Mothers and Children) Order, 1918, and the Milk (Mothers and Children) Order, December 22nd, 1919.

The enquiries into the circumstances of expectant and nursing mothers who are so necessitous as to require milk at a reduced rate, or free, have in all cases been carried out by the Health Visitors. The present high price of milk has brought many applicants, and a large number of visits of enquiry have been made, as I shall show in my next Annual Report.

INFANT WELFARE CENTRES.

This work in Ilford dates from April 2nd, 1914, when a small Voluntary Committee of interested ladies commenced a School for Mothers at the Friends' Meeting House, Albert Road. In April, 1916, a second centre was opened by the same committee at Barkingside. On April 16th, 1917, another Voluntary Committee opened a centre at Seven Kings; while on September 4th, 1917, a fourth centre was opened at Newbury Park.

The above Centres were taken over by the Council in April, 1917, a Maternity and Child Welfare Sub-Committee having been appointed in February, 1917.

In September, 1918, a Statutory Maternity and Child Welfare Committee, consisting of eight Councillors and four co-opted members, was appointed by the Council.

During the past year a new Centre was opened in June at the Cecil Hall, and the attendances show that it is much appreciated by the mothers of the district. In view of the number of mothers and children attending the Centre at the Friends' Meeting House it was decided to divide this Centre and additional premises were found at Emmanuel Church, Ilford Lane, and a very satisfactory Centre is now flourishing there.

The Barkingside Centre had never shown the success common to the others, and in December it was decided to amalgamate it with that at Newbury Park. This has been done with improved results.

More satisfactory premises are being obtained for the Newbury Park and Albert Road Centres, which will enable the work to be carried on under better conditions.

The amount of work and the appreciation which has attended the extension of the Welfare Centres is shown by the following figures for the past year :—

Total number of children on rolls December 31st, 1919, after omission of all those who had not made an attendance for six months, 652.

The main function of the Infant Welfare Centre is advisory, and treatment should be limited to that required for digestive and similar disturbances.

Very many of the minor ailments of infants are due to errors of feeding and a doctor's advice can prevent more serious illnesses resulting. The purpose of a Centre is therefore preventive rather than curative. The scope of the work of a Centre is laid down by the Ministry of Health as follows :—

(1) CONSULTATIONS BY A DOCTOR.—This is carried out in Ilford in a satisfactory manner, all the infants attending the Centre being seen at regular intervals by a Doctor, and the mother given advice.

- (2) HOME VISITING.—I have already referred to the work of the Health Visitors.
- (3) COLLECTIVE TEACHING.—Health talks are given by a doctor from time to time.

Mothers are advised as to the clothing of their infants. Mannikins and model sets of garments have been provided at each of the Centres.

- (4) SALE OF CLOTHING.—Wool and suitable materials for infants' clothing have been sold at cost price. I am arranging also for cut-out garments to be provided. This work is of importance, as emphasizing the quality of material which is suitable to be used and is of advantage, especially in the poorer districts where mothers are unable to cope with the present prices of good garments.
- (5) SALE OF FOOD AND MILK.—This has been carried on in increasing degree during the past year. No mother is allowed to obtain dried milk or other food except on a certificate from the Medical Officer. It is not the purpose of a Welfare Centre to become merely a distributing agent for dried milk, but with the present high cost of milk the advantage of obtaining such milk from a Welfare Centre is very much accentuated. Our experience with dried milk has proved that it is a satisfactory substitute for fresh cow's milk, while it has the advantage of being freer from contamination.

The following are the quantities of food dealt with during 1919 :--

	Sold.	Free.		
Dried milk Fat emulsion Condensed milk Lactagol	12,331 lbs. 1,128 lbs. 210 tins. 90 packets.	1,043 lbs. 3 lbs. 88 tins.		

- (6) TREATMENT OF MINOR AILMENTS.—These have been treated to some extent at the Public Health Offices in connection with the School Clinic. This is a work which should show considerable development in the future.
- (7) RECORDS.—A case-sheet is kept for each child attending the Centre and a weight card supplied to each mother. I hope to be able to give some of the information to be derived from these records in a future Report.

DENTAL TREATMENT.

Mr. Rose, the part-time Council Dentist, has continued the work of treating expectant and nursing mothers, and children under five. The arrangement has been to give one session to this work as required.

> During 1919, 116 mothers and 10 children under five have been treated.

No arrangements having been come to for the provision of dentures for mothers, it has not been so easy to get patients to attend the Dental Clinic, especially where a number of extractions have been required.

The decision of the Council to appoint a whole-time Dentist who will do the work of the Maternity as well as the Education Committee, will enable me to arrange for dentures to be provided at a minimum charge, or if necessary free to necessitous cases. I therefore anticipate a very large increase in this work when it is placed on a satisfactory basis.

SUPPLY OF FREE MILK (MOTHERS AND CHILDREN) ORDER, 1918.

In 1919, 1,043 lbs. of dried milk were supplied free to necessitous nursing and expectant mothers.

In view of the high price of cow's milk and pursuant to the wishes of the Ministry of Health, a very considerable increase in this department of the work will be necessary next year.

ANTE-NATAL CLINICS.

In November, 1919, the Ministry of Health sanctioned the use of certain rooms in the Maternity Home for the purpose of an Ante-Natal Clinic. Owing to shortage of medical staff it was not found possible to commence this scheme, but the appointment by the Council in November, 1919, of a Lady Assistant Medical Officer of Health will enable this most important work to be proceeded with. Its purpose is :—

- To discover those conditions which make a confinement difficult or dangerous to the mother so that as far as possible they can be dealt with beforehand.
- (2) To discover any conditions which would prejudice the birth of a living healthy child and as far as possible to rectify them.

A scheme of this character in such a district as Ilford is not easy to carry on to large proportions, but I feel convinced that if the susceptibilities of the mothers are considered it will be soon found to exercise a most useful function and will reduce Infantile Mortality below the present rate.

MATERNITY HOME.

This was opened at 130-2, Cranbrook Road, Ilford, on July 20th, 1918, the two houses concerned having been thoroughly redecorated and adapted as far as possible for the purpose. The Home can accommodate nine mothers with their babies. The staff at first consisted of a Matron and two Staff Nurses. Later a Pupil midwife was appointed, and in the latter part of 1919 a second trained nurse was accepted as Pupil Midwife for training. The former lady obtained her C.M.B. certificate during the year. The staff is now adequate for ordinary events, but when there is a patient seriously ill, requiring undivided attention, it has been necessary to employ the services of a temporary nurse, as also at the times of the annual vacations of the nursing staff.

The Home speedily became popular and its value recognised in the district, and it therefore became necessary to refuse cases from adjacent districts. On December 31st, 1919, 53 cases had been booked for future admission into the Home.

From the date of opening until December 31st, 1919---

161 women were admitted into the Home; of these 151 were confined in the Home,

of the remaining ten

- 5 were admitted immediately after confinement,
- 1 was admitted after an incomplete abortion,
- 1 after a threatened abortion,
- 3 for examination as to some puerperal condition; of these, 1 was transferred to the Emergency Hospital for an abdominal operation, and
- 1 to the Isolation Hospital suffering from mastitis.
- had a slight operation (curettage) in the Home and was discharged, being cured.

Of the 151 confinements 82 had engaged their own doctor, and 69 were attended by one or other of the Midwives of the Home; owing to various complications it was necessary to call in a doctor in 28 of the latter cases.

Eight deaths occurred in the Home-5 women and 3 babies -3 of the women died from influenzal pneumonia during the epidemic of the winter of 1918 and spring of 1919, having been admitted owing to home exigencies while suffering from this very fatal ailment. One woman died from nephritis and severe postpartum hæmorrhage, and one from severe ante-partum and postpartum hæmorrhage.

The three babies died from congenital debility, one lived only 8 hours, another 26 hours, and the third 16 days.

Four children were still-born.

- 1 owing to eclampsia in the mother. 1 craniotomy—difficult labour.
- 2 macerated foetus.

In November, 1919, a woman was admitted while incubating scarlet fever, and developed the rash shortly after admission. She was removed to the Isolation Hospital, the Home placed in quarantine and thoroughly disinfected, and no further cases occurred.

In April, 1919, a case of puerperal fever was notified from the Home. The patient went home and is still suffering from attacks of pyrexia, which are now considered by her doctor to be due to a septic condition of the gums. I do not think that the case was associated with any septic infection during the confinement.

It is interesting to note that "twilight sleep" was administered in three cases, and that twins were born on only one occasion, but that 10 children were born prematurely, necessitating the use of the incubator.

29 babies have been circumcised at the Home.

No case suitable of admission to the Home has been refused. Seven unmarried mothers were admitted. Two necessitous cases were admitted free, and three others were admitted at nominal fees.

At the present time the circumstances of all those unable to pay an adequate fee are enquired into by the Health Visitors and reported to the Medical Officer of Health, who, in conjunction with the Statutory Committee, decides as to what reduction shall be made.

Of the 161 cases above referred to, the average stay in the Home was 16 days.

The premises at present used for the Maternity Home are not altogether adapted for institutional work and entail a good deal of unnecessary labour. The popularity of the Home, together with this fact, led the Statutory Committee to negotiate, with the sanction of the Ministry of Health, for the purchase of a site in Hatch Lane for the erection of a fully equipped Home of 20 beds. Draft plans of the new Home are under consideration at present, and I hope by the issue of my next report to be able to state that this project is on its way to completion.

CHILDREN'S HOSPITAL.

This most necessary adjunct to Child Welfare work is proposed to be built by the Ilford War Memorial Committee, with the assistance of the Ministry of Health, on a site adjacent to the proposed Maternity Home. At the present time the facilities for treatment of child-ailments in Ilford are very meagre, and mothers are obliged to take their sick children to hospitals in London to get the necessary attention. Furthermore, there is no provision in Ilford for ailing babies who require the skilled nursing which an institution alone can provide. The Statutory Committee considered, therefore, the possibility of using Valentines Mansion as a Children's Hospital until such time as the War Memorial Hospital could be erected. After a careful examination of the suitability of the building, the cost of adaptation, and the number of patients that could be treated, it was

CUI

The following is a summary of the expenditure incurred in

decided not to proceed further with the scheme, but to concentrate on the provision of a modern children's hospital which could be worked in conjunction with the new Maternity Home from a common administrative block. This will be both an economic and a practical method of dealing with the subject.

The Children's Hospital will serve the School Medical Service to a greater extent than that of Infant Welfare, though it will provide for infant ailments requiring hospital treatment. I hope, however, that the time will come in Ilford when there will be one Committee responsible for all matters affecting the health of the child, both before and during school age. Such an arrangement would tend both to efficiency and to economy of labour.

The following is a summary of the expenditure incurred in connection with Maternity and Child Welfare to 31st March, 1919 :---

SCHOOL MEDICAL SERVICE.

SCHOOL ACCOMMODATION.—There were at the end of the year 16 public elementary schools in the district, with 35 departments, and accommodation for 13,486 children, the Boys' Department of Church of England School (National) being closed in December.

The total number of children on the school rolls was 10,781.

SANITARY CONDITION OF THE SCHOOLS.—Most of the schools are of a modern type and in good sanitary condition.

DISINFECTION OF SCHOOLS.—During the mid-summer holidays the cloak-rooms and lobbies in the various schools have been disinfected by spraying. After several cases of infectious disease in a school it has been the practice to disinfect the class-rooms and any articles likely to carry infection. The following gives the complete schedule of work carried out :—

DATE.	School.	PART DISINFECTED.
2/1/19	Loxford	All lobbies
2/1/19	Barkingside	All lobbies
3/1/19	Chadwell	All lobbies
3/1/19	Cleveland	All lobbies

Holidays	All Schools	All lobbies
4/10/19	Loxford	Class 6, Room 6; Class 7, Room 8 and lobby
11/10/19	Cleveland	Class 8, Room 1 and lobby
21/11/19	Highlands	Room 1 and lobby-Junior Mixed
22/12/19	Loxford	Junior Mixed -all class rooms (8) and lobbies
23/12/19	Highlands	Junior Mixed-8 class rooms and lobbies

SCHOOL MEDICAL STAFF.—There were a good many changes during the past year.

Dr. Oates resumed his duties as School Medical Officer on demobilisation in December, 1918. He left in September, 1919.

Dr. Dundas, temporary School Medical Officer left on March 31st, 1919.

Dr. Burton, Assistant Medical Officer, resumed his duties on demobilisation on March 17th, 1919, was appointed Acting School Medical Officer on Dr. Oates leaving the district, and School Medical Officer on October 27th.

Dr. Rattray appointed as Lady Assistant Medical Officer, took up her duties on November 24th.

Drs. Coleman and Whiting (local medical practitioners) assisted with medical inspection towards the end of the year.

Another Assistant Medical Officer is to be appointed by the Council.

Nurse Sandle acted as School Nurse during the whole of 1919.

GENERAL STATEMENT OF EXTENT AND SCOPE OF MEDICAL INSPECTION.

Number of visits paid to 25 different departments of 10 schools in the district, 128.

Number of children examined during the year, 2,512 (1,194 boys and 1,318 girls).

Number of children presented for special examination, in addition to the above, 47 (25 boys and 22 girls).

From March, 1919, the Medical Inspection has been carried out in accordance with Article 58 (b) of the Code of Regulations: (1) of all children freshly admitted to school, (2) all children between 8 and 9 years of age, (3) all children between 12 and 13 years of age, together with children over 13 years of age who have not been examined on reaching the age of 12.

The practice which became necessary during the war, of only examining children who were supposed to be ailing, resulted in numbers of children suffering from remediable defects being overlooked. The resumption of Medical Inspection on the old basis obviates this, and is much more satisfactory.

BOARD OF EDUCATION GRANT FOR THE YEAR 1918-1919.

A total grant of $\pounds 490$ 18s. 11d. was made. This figure practically amounts to half the actual cost of the school medical service for the year ending 31st March, 1919.

The following shows the particulars of expenditure :---

					£ ¢	s.	d.
Salaries of Medical Officers					100	0	0

EMPLOYMENT OF CHILDREN ACT (BYE-LAWS).

This matter is under the control of the Clerk-Solicitor to the Council. The necessary supervision is carried out by a Shops Act Inspector. I am informed that no prosecutions were taken during the year 1919.

A Report was presented by the School Medical Officer in February, 1919, on the question of relaxing the provisions of Section 13 (1) (i) of the Education Act, 1918. The subject is still under consideration.

SCHOOL CLINIC.

The Clinic held at the Public Health Offices each morning was continued during the year. A large number of minor ailments, especially skin diseases, received treatment. This work is much hampered by the inadequacy of the accommodation. Records of all children attending the Clinic are kept, and either certificates of exclusion or of fitness to attend school are given.

A number of children are referred to the Clinic from Medical Inspection in the Schools, when more detailed examination is required. Also a number attend as a result of the "following up" by the School Nurse, of defects which have been discovered at Medical Inspection.

The number of individual children seen at the Clinic during 1919 was 962.

Many of these children attended on numerous occasions. A total of 2,028 exclusion certificates and 789 of fitness to attend school were given.

The variety of ailments met with is seen from the following list. One marked feature is that no less than 74 cases of scabies or itch were treated. This is a high figure for such a district as llford, and is probably due to infection from men returning from military service. Many of the cases of scabies were protracted, and four were so obstinate to treatment that they were admitted to the Isolation Hospital, where they were cured in from 5 to 14 days.

CLEANSING OF CHILDREN, &c.

CHILDREN ACT, 1908, SECTION 122.

It was found necessary during the year to deal with 3 cases under the above Act. Statutory notice was served in each case on the parents or guardians of the child, to remedy a "verminous or foul or filthy condition" within 24 hours. In one of the three cases the child was brought to the Clinic and thoroughly cleansed. The School Nurse paid 35 visits to the schools, for the purpose of inspecting the heads and clothing of the children, for any verminous condition, with the following result :---

No. of Children Inspected.	No. Infected.	Per Cent.
9,083	972	10.7

OPHTHALMIC WORK.

Dr. Charsley, the School Oculist, continued to attend when necessary during the year, and held 32 sessions.

A total of 368 children were examined, and of these 118 were re-examined. 345 were found to have a defect of vision.

Here again a great increase in the work is to be observed.

In 1918 274 children were examined by the Oculist.

In 1919 368 children were examined by the Oculist.

297 pairs of spectacles were provided; of this number, 30 pairs of spectacles were provided free, and 16 pairs partly free of charge—on necessitous grounds.

All spectacles are now provided by the Education Committee, the cost being recovered from the parents whenever possible. In a few cases the parents preferred to take the prescription and obtain the spectacles other than from the Council's Opticians, who continue to supply spectacles at as moderate a charge as possible.

The appreciation of this work by the parents of the school children is shown by the fact that 88 per cent. of the defects of vision found during 1919 were remedied.

The following table shows the defects detected, arranged according to age and sex :---

1. Cases with Defects Discovered in 1919 and Treated in 1919.

SCHOOL DENTIST.

Mr. C. F. Rose, L.D.S., continued his work as temporary School Dentist, giving two half-days a week during the school terms.

From Table D below it will be seen that 2,095 children were inspected by the Dentist, and of these no less than 1,413 were found to require treatment; but that only 577 accepted the treatment offered them.

The work in this department has increased very considerably during the past year.

The figures do not, of course, compare with those of the work carried out by a whole-time Dentist in 1915, and two half-days a week are quite inadequate for dental treatment of the school children of a district of this size.

The question of the appointment of a whole-time Dentist is now under consideration.

FURTHER DEVELOPMENTS OF THE SCHOOL MEDICAL SERVICE.

In March, 1919, a Report was presented by the School Medical Officer on the Education Act, 1918, so far as it affects the School Medical Service.

The main points represented as requiring attention were :---

- (1) THE EMPLOYMENT OF A WHOLE-TIME DENTIST.—This matter is at the present time under consideration.
- (2) THE EXTENSION AND IMPROVEMENT OF THE SCHOOL CLINIC PREMISES.—I regard this matter of the greatest importance. The present premises served the purpose when Medical Inspection was in its infancy, but are no longer large enough or suitable.
- (3) THE APPOINTMENT OF ADDITIONAL SCHOOL NURSES.— There is only one nurse allocated to School Medical work. The duties of the nurse are now so extensive, including
 (1) attendance at the School Clinic, (2) attendance with the School Dentist when anæsthetics are given, (3) " following up " defects, (4) inspections as to cleanliness, (5) visits with reference to cases of infectious disease; that it is not possible for one nurse to carry out the work efficiently in such a wide district as Ilford.
- (4) THE TREATMENT OF NOSE, THROAT AND EAR DISEASES.— No means exist at present in Ilford by which children suffering from such ailments can receive treatment by a Specialist. Parents are forced to take their children long distances and wait for long periods before the necessary attention can be given. Some Local Authorities have appointed a nose, thoat and ear surgeon to attend to the school children in their district, and such an arrangement is urgently required in Ilford. It would be necessary to have beds for cases requiring operative treatment.

- (5) THE ESTABLISHMENT OF NURSERY SCHOOLS.-In my opinion these should be established in close connection with the already existing Infant Welfare Centres, from which suitable children could be drafted. The possibilities of infection in schools for children of 2 to 5 years of age are considerable, and it will be necessary to have them very completely under the supervision and control of the School Medical Staff, if the spread of infection is to be limited. The main condition which should be observed in the creation of a Nursery School are :--(i.) It must be easy for access from the children's homes. (ii.) It must be an open-air school with ample garden space. (iii.) Provision must be made for meals and for rooms for rest and sleep. All children admitted will be required to be fed at the School. (v.) Admission should be limited, at least at the commencement, to those children who are in unsatisfactory home conditions. (v.) Infection should be avoided by daily inspection by a nurse of every child entering the School. (vi.) Medical inspection and treatment of all children admitted should be enforced and in this way physical defects cured at their earliest stage. It will be seen that Nursery Schools will be expensive to maintain, and in the first place will be of an experimental character. There is no doubt that there are districts in Ilford where such schools would serve a most useful purpose.
- (6) THE ESTABLISHMENT OF A SPECIAL SCHOOL FOR MENTALLY DEFECTIVE CHILDREN WHO CAN BE EDUCATED.—This matter is now under consideration. It will be seen from Table II. that there are 21 who have been certified as mentally deficient but educable. A number of children come under the notice of the School Medical Officer who are not mentally deficient but backward, and require more attention than is possible in a class of normal children. Some provision should be made for such children.

- (7) ESTABLISHMENT OF A SPECIAL SCHOOL FOR PHYSICALLY DE-FECTIVE CHILDREN.—(a) From Table III. it will be seen that at the present time there are 15 children who are so physically defective as to be unable to attend a public elementary school. It may be possible for the Commitmake some tee to arrangements for teaching children and others who require to be cripple taken to school in vehicles, and who further require special accommodation at school, in connection with the school for mentally defective children. (b) There are a number of children also who are suffering from slight physical deformities, e.g., lateral curvature, defective chest development, etc., who require remedial physical exercises, massage, etc., which should be given by a skilled instructor, under the direction of the School Medical Officer, at a Special Clinic.
- (8) ESTABLISHMENT OF AN OPEN-AIR SCHOOL.—There is little doubt that such a school is required in Ilford. There are numbers of children examined by the School Doctors who are in a pre-tubercular condition, who would greatly benefit by a school of this character. There are at the present time 62 school children attending the Ilford Tuberculosis Dispensary who are pre-tubercular

EDUCATION (PROVISION OF MEALS) ACTS, 1906-1914.

There did not arise during the year any necessity to put into force the provisions of these Acts.

During 1919, three individual children (all of one family) were supplied with a total of 51 meals, funds being supplied from voluntary sources.

MENTALLY DEFECTIVE CHILDREN.

The following table shows the number of children examined during 1919, and the result of the examination :--

		Boys.		1	GIRLS.		
Ages.	Form "A"	Form "B"	Form "C"	Form "A"	Form "B"	Form "C"	Total.
7 to 15 years	. 1	5	·	-	5	1	12

Under Form "A "____

The child is certified as "not incapable, by reason of mental defect, of receiving benefit from the instruction in an ordinary Public Elementary School."

Under Form "B"-

The child is certified as " not being merely dull or backward and not being an idiot, or imbecile, or a moral imbecile, is feeble-minded within the meaning of the Mental Deficiency Act, 1913, but is not incapable by reason of mental defect of receiving benefit from instruction in a special school or class under the Elementary Education (Defective and Epileptic Children) Act, 1899."

Under Form "C"-

The child is certified as "incapable, by reason of mental defect, of receiving benefit from instruction in a special school or class under the Elementary Education (Defective and Epileptic Children) Act, 1899."

The children who are found to be imbeciles or idiots are notified to the Essex County Council, who are responsible for their control. From Table III. it will be seen that at the present time there are 21 mentally deficient children for whom the Ilford Education Committee is responsible; of these 6 are institutional cases, 15 are suitable for a day special school. The provision of such a school is now under contemplation.

Ringworm :	No. of Cases at begining of 1919	No, of cases reported during 1919.	Total.	Remedied during 1919.	No. of cases under observation at end of 1919.
Scalp	13	36	49	34	15
Body	_	24	24	22	2
	13	60 -	73	56	17

RINGWORM.

The X-ray treatment by the operator employed by the Education Committee continues to be most satisfactory. No case of permanent loss of hair occurred, though dermatitis resulted in a few cases.

A total of 29 children were X-rayed during the year. It will be seen that the number of cases at the beginning and end of the year was practically the same.

When parents fully realise the very chronic character of ringworm of the scalp, unless treated by X-rays, the difficulty at present experienced in some cases of obtaining consent to its use will be overcome.

INFECTIOUS DISEASE IN SCHOOL CHILDREN.

SCARLET FEVER.

There has been a considerable increase in the number of cases reported from the schools during 1919. 165 notifications were received as against 49 in 1918. This is the highest number of cases of scarlet fever which has been notified since 1912, when 208 cases occurred in school children. All the schools were affected, but Loxford especially so. The disease was part of a general epidemic which attacked the London and extra London districts. Fortunately the type of scarlet fever was a mild one, but this also increased the chances of spread, several children being discovered attending school by the School Medical Officer in a peeling stage, having previously suffered from a slight sore throat, which had not directed attention to the real condition.

DIPHTHERIA.

The figures for 1919 are satisfactory; 78 cases were notified from the schools as compared with 115 in 1918. There was no special incidence in any one school.

MEASLES AND GERMAN MEASLES.

There was a distinct rise in the number of cases in 1919, 645 cases being reported as compared with 151 in 1918.

The following table shows the incidence of Scarlet Fever, Diphtheria, and Measles (including German Measles) in the Ilford schools since 1915 :—

1915	 	Scarlet Fever. 136	Diph- theria. 66	Measles. 851
1916	 	83	82	1821
1917	 	57	104	1115
1918	 	49	115	151
1919	 	165	78	645

CHICKEN-POX AND WHOOPING COUGH.

263 cases of Chicken Pox occurred, compared with 188 in 1918, while only 15 cases of Whooping Cough were reported, as compared with 471 in 1918.

On the whole it may be said that 1919 was an average year as regards the incidence of infectious disease in the schools, with the exception of Scarlet Fever, of which there was an unusually large number of cases.

(a) Cleanliness of Head.—In addition to the above, see School Nunse's visits to schools, also Table II. The above figures are only of children found with living vermin.
 re (b) Teeth—Of these 1,697 cases, 1,649 were the result of examination by the School Dentist; and 48 were found on Medical Inspection to require very urgent treatment.
 * The return should show comprehensively all defects found during the year, from whatever source derived, which required treatment.

TABLE V.-INSPECTION, TREATMENT, &C., OF CHILDREN DURING 1919.

(1)	The total number of children medically inspected (whether Code Group, special or ailing child)	M.I. Clinic Dental	962
		Total	5,616
(2)	The number of children in (1) suffering from defects (other than uncleanliness or defective clothing or footgear) who require to be kept under observation (but not referred for treatment)	M.I.	3
(3)	The number of children in (1) who were referred for treatment (excluding uncleanliness, defective clothing, etc.)	3,3	81
(4)	The number of children in (3) who received treatment for one or more defects (excluding uncleanliness, defective clothing, etc.)	2,1	13

NOTE :- In (1) above-2,095 children were inspected by the School Dentist. In (3) above - Included in this total are 1,413 cases referred by the

In (4) above—Included in this total are 765 cases treated by the School Dentist.
