bond angle, $\langle X-Y\dots Z$ (defined in the section on Treatment of groups. n is the number of bonds in a given range of angle. The frequencies and the mean value of bond angle in each histogram, θ , is given

with the bond angle, $\langle C-N\dots O$, for the hydrogen bond $NH_3^+\dots COO^-$. The more accurate examples are represented by filled circles.

EXPLANATORY CAPTION TO TABLES I-XXI

* indicates an estimated limit of error of 0.05\AA ., † a neutron diffraction and ‡ an electron diffraction determination. Titles of journals have been abbreviated as follows:

Acta Cryst.
Current Sci

A.
C.
