Cross $\lambda cmi C^{13}N^{15} \times \lambda ++ C^{12}N^{14}$. Titer of the progeny phages of different genotypes in the drops collected after centrifugation. λh was added as density and band shape reference.

in $\lambda ++$. As may be seen by comparison of Figures 4 and 5, the result of reversing the parental label is that the distributions of the two recombinants as well as the two parental types
