HOMŒOPATHIC BOOKS.

Just issued, a New Edition of

Jahr's New Manual of Homœopathic Practice; edited, with Annotations, by A. Gerald Hull, M.D. From the last Paris edition. This is the fourth American edition of a very celebrated work, written in French by the eminent Homœopathic Professor Jahr, and it is considered the best practical compendium of this extraordinary science that has yet been composed. After a very judicious and instructive introduction, the work presents a Table of the Homœopathic Medicines, with their names in Latin, English, and German; the order in which they are to be studied, with their most important distinctions, and clinical illustrations of their symptoms and effects upon the various organs and functions of the human system. The second volume embraces an elaborate Analysis of the indications in disease, of the medicines adapted to cure, and a Glossary of the

technics used in the work, arranged so luminously as to form an admirable guide to every medical student. The whole system is here displayed with a modesty of pretension, and a scrupulosity in statement, well calculated to bespeak candid investigation. This laborious work is indispensable to the students and practitioners of Homœopathy, and highly interesting to medical and scientific men of all classes. Complete Repertory, one volume, bound, \$3.

Jahr's New Manual: originally published

under the name of Symptomen-Codex. (Digest of Symptoms.) This work is intended to facilitate a comparison of the parallel symptoms of the various Homœopathic agents, thereby enabling the practitioner to discover the characteristic symptoms of each drug, and to determine with ease and correctness what remedy is most Homœopathic to the existing group of symptoms. Translated, with important and extensive additions from various sources, by Charles Julius Hempel, M. D., assisted by James M. Quin, M. D., with revisions and clinical notes by John F. Gray, M. D.; contributions by Drs. A. Gerald Hull, George W. Cook, and Dr. B. F. Joslin, of New-York; and Drs. C. Hering, J. Jeanes, C. Neidhard, W. Williamson, and J. Rokytansky's Pathological Anatomy. Translated from the German, with additions on Diagnosis, from Schönlein, Skoda, and others, by Dr. John C. Peters. 1844. 75 cts.

Opinions of the Press.—"Dr. Rokytansky's book is no more than it professes to be: it is morbid Anatomy in its densest and most compact form, scarcely ever alleviated by histories, cases or hypotheses. It is just such a work as might be expected from its author, who is said to have written in it the result of his experience gained in the careful examination of over 12,000 bodies, and who is possessed of a truly marvellous power of observing and amassing facts. In the course of our analysis we have said comparatively little of its merits, the best evidence of which is found in the length to which our abstracts have been carried without passing beyond the bounds of what is novel and important. Nor would this fault have been committed though much more had been borrowed, for no modern volume on morbid Anatomy contains half so many genuine facts as this; it is alone sufficient to place its author in the highest rank of European medical observers."—*British and Foreign Medical Review*, January, 1843.

Enchiridion Medicum, or the Practice of Medicine; the result of fifty years' experience, by C. W. Hufeland, counsellor of state, physician in ordinary of the late King of Prussia, Professor in the University of Berlin. From the sixth German edition; translated by C. Bruckhausen, M. D. P R E F A C E .

THIS little work contains, beside the skin symptoms, a number of symptoms which do not strictly belong to this class of diseases, such as *sprains* and *pains as if sprained*, *affections of the bones* and *glands*, *disorganizations of the mucous membrane* of the inner mouth, fauces, sexual organs, &c. Although, logically speaking, these affections do not strictly belong to the diseases of the skin, yet no practitioner will object to finding these various maladies arranged side by side in this volume; he will even think that I might have taken a wider scope than I have done, though it is but just to say, that I have endeavoured to make this little work as complete as possible.

The plan which I have pursued in this work, will facilitate the comparison of analogous symptoms and the finding the desired information. This facility is afforded not only by the *alphabetic arrangement* of the symptoms, but also by the *twofold indication* of the remedies: first according to the *sensations and symptoms*, and secondly according to the *organs and parts of the body*, so

that, in the former the parts of the body, and in the latter the symptoms, constitute the subdivisions. In order to afford practitioners the means of instituting comparisons in accordance with their own judgment, I have arranged under every leading or alphabetical word or name all that which belongs to this division, and have not only chosen nouns, but also adjectives, as such leading alphabetical words or names, so that *red*, *blue*, &c. swelling, for example, will not only be found under *swelling*, but also, in conjunction with other *red*, *blue*, &c. things, under *red* and *blue appearances* generally, in order to be enabled to compare with each other all the morbid phenomena the characteristic distinction of which is *red*, *blue*, &c. colour. In the divisions by organs and parts, these appearances will be found mentioned again in the adjective form, so that "*red swelling of the face*," in the article "*face*," should not be looked for as a subdivision under "*swelling*," but under "*red*," (*red* and *swollen* meaning *red-swollen*,) &c. Upon the same principle we have constantly distinguished *itching* and *itching parts*, tumours, eruptions, &c., *inflammations* and *inflamed parts*, tumours, eruptions, &c., the former to be understood in the general sense, as a main division, the latter being mentioned as a secondary symptom characterizing a more general morbid state.

It has been deemed unnecessary, in this work, to copy the text of the symptoms from the *Materia Medica*, which every one is at liberty to consult at any time, either in the original form or as modified in my "*Symptomen-Codex*." It should be mentioned, however, that this work has been enriched with a number of additional symptoms and indications, from *unprinted papers* and other sources. The signs which I have used in my *Symptomen-Codex*, asterisks and ciphers (*°), have likewise been employed in this little work, and have been arranged with as much care as possible; they have only now and then been omitted in the general paragraphs at the commencement of a new article. These omissions have been deemed proper, and, in some cases, even necessary, for this reason, that those general paragraphs, though constituting, for the most part, a résumé of the local symptoms which follow, are, nevertheless, to be considered in many respects as an independent and self-existing whole; it will be for the reader to judge whether a remedy which refers exclusively to a local symptom should have been mentioned in the résumé in a general sense, particularly when such omissions are easily supplied by the subsequent detailed arrangements of the local symptoms. This will, in every instance, be found so complete, that the reader will be enabled either to accept

or reject my own general conclusions, provided he will remember that, if a remedy should be enumerated among the general remedies without being mentioned again among the local symptoms, it had not yet been used in their treatment.

One word about the pathological definitions. When Rückert published his repertory of the cutaneous diseases, the work was considered defective, because the diseases had not been classified agreeably to the systems of *Willan* or *Bateman*. But this is by no means so easy. If the cutaneous symptoms had been recorded by the provers with reference to established systems of dermatology, it would not be a difficult task to arrange them agreeably to any other definitive plan; but considering the unsatisfactory and confused state of this portion of our *Materia Medica*, the most accomplished dermatologist would not be able to produce a satisfactory arrangement of the skin-symptoms according to some definite pathological system. I have, therefore, like my predecessors, retained the expression of the symptoms as we find them in our *Materia Medica*, and have endeavoured to remedy the defect by appending to this preface a list of the most important pathological names of the cutaneous diseases, mentioning at the same time the remedies which, according to the pure provings and my own observations, correspond to their re-

spective forms. In arranging this list I have endeavoured to simplify it by mentioning the synonyma which have been used for the same disease by the different authors of dermatological systems. This list is arranged alphabetically, and, in defining the particular forms of the different cutaneous diseases, I have, without reference to any particular system, chosen all the truly characteristic symptoms, leaving out, for the sake of brevity, all symptomatic secondary symptoms which were not absolutely necessary. This list is indeed not as complete as I desired it should be, because I have not yet been able to discover, in every case, the exact correspondence between the different names used by different pathologists. It is to be hoped, however, that even this incomplete list will contribute, in a measure, to simplify and render more precise our terminology of the cutaneous diseases, and to lead to more satisfactory results in practice. *Willan* and *Bateman* being almost entirely contained in *Bielt*, there are, strictly speaking, only three systems to which I have had occasion to refer; these are the systems of *Bielt*, *Alibert* and *Hebra*. All the other systems only serve to create confusion.

To every pathological form the reader will find appended the remedies which have been used for it with more or less success in practice, or, if the pathological name was evidently identical with

the symptoms of the *Materia Medica*, reference has been made to these symptoms. At the conclusion of the list will be found a résumé of Hebra's system, which, after all, shows more clearly than others, the internal, pathological relationship of the different cutaneous diseases, thereby enabling the practitioner to infer with a tolerable degree of certainty, that a certain remedy which cured one disease, will cure another analogous one. Unfortunately, the system not yet being printed and having been communicated to me in manuscript, I have not been able to mention all the varieties belonging to a class; the omissions, however, are trifling, and would not have justified a suppression of those parts of the system which are really important.

The author of this work offers it to his professional brethren with all due humility, and hopes that, even if it should not prove satisfactory in all respects, it will advance the cause of Homœopathy at least one step farther.

FRAMBOESIA, LEPRO FUNGIFERA, LUES INDICA, RUBULA.—*Fungous eruption* first consisting of pustules which appear in the face, groins, axillæ and around the anus, and become afterwards covered with more or less thick scurfs; these, on falling off, leave fungous, more or less red ulcers, which, on account of their cauliflower or raspberry-shaped appearance, on account of the diseases of the bones with which these ulcers are frequently accompanied, and the fork-shaped cicatrices which they frequently leave behind, have been considered a variety of syphilis by many authors. *Framboesia* is, beyond doubt, contagious; but it is not easily communicated by an embrace, and the sexual organs are never affected by it first.—Remedies?

Framboesia SYCOTICA, SYCOSIS INDICA, YAWS. Generally in the face, on the neck, chest and extremities less on the sexual parts, with large, more or less red pustules, secreting a thick, tenacious,

white pus; the hair which is near these pustules is disposed to grow gray.—Remedies?

Framboesia THYMOTICA, THYMOSIS INDICA, PIANIS.

Generally first appearing on the sexual parts in the shape of small pimples which, on breaking, secrete a yellowish water but no pus; nor does the hair turn gray.—Remedies?

Framboesia SCOTICA, LUES SCOTICA, SIWNENS.—

Whitish, bleeding, fungous excrescences in the mouth and corners of the mouth, originating in small raised, white spots, and either drying up, in which case they change to dark-brown scurfs, or else changing to painful ulcers which frequently spread widely and destroy the parts rapidly.—Remedies?

Herpes IRIS. A species of herpes circinnatus, first consisting of red, circular spots each of which contains four concentric rings, the innermost of which alone becomes, in a few days, covered with vesicles until desquamation sets in, in about 10 or 12 days. They are generally seen on the dorsum of the hands and feet, on the ankles, &c.—Remedies ?

Herpes LABIALIS et *FACIALIS*. Small circular groups of vesicles which, after a few days, become confluent, moist, and finally are covered with brownish scurfs that fall off in the shape of scales.—Appears on the lips, cheeks, eyelids and ears.—Disappears frequently without any treatment, though we may sometimes require to use : *Acon. Ars. Bell. Cic. Dulc. Hep. Sulph.*

Herpes LICHENOÏDES Alibert, s. *Lichen*.

Herpes PHAGEDÆNICUS, s. *Lupus*.

Herpes PHLYCTÆNOÏDES seu MILIARIS. Groups of small, millet-sized, hard vesicles, full of a

brown or lemon-coloured fluid, upon a red base, arising from small, red, burning, tingling and smarting dots; the vesicles break afterwards and become covered with yellow or blackish crusts.—Remedies: *Acon.* *Ars.* *Bell.* *Bov.* *Calc.* *Lyc.* *Merc.* *Rhus t.* *Sep.* *Sil.* *Sulph.*

Herpes ZOSTER, *ZONA*.—Groups of *vesicles* upon a red base, surrounding the trunk like a belt, increasing in a few days to pea-sized pustules which finally become covered with scurfs.—*Bateman*, *Bielt*, and *Hebra*, number the *zona* among the varieties of herpes, and very properly so, for it is just as little related to vesicular erysipelas as to itch.—Remedies: *Ars.* *Graph.* *Merc.* *Rhus t.* *Puls.*—*Bry.* ? *Cham.* ? *Natr.* ? *Selen.* ? *Sil.* ? *Sulph.* ?

tissue of the skin which prevents all secretion,
with scales like those of the fishes, falling off
with great difficulty, frequently covering the

eruptions which are not accompanied with fe-
ver.

mid yellow or green scurfs, arising from small
pustules the largest of which is of the size of a
millet-seed; they are crowded together, yel-
low, upon red, circular or oval spots; on fall-
ing off they either leave red, scaly spots, or
else a red, porous surface which secretes an
ichor.—Remedies: Alum. Amm. Ant. *Ars.*

Some authors consider it a variety of ichthyosis, others of lepra ; according to *Biett* it is an independent disease, and *Hebra* numbers it among his *hypertrophies*.—First we perceive a redness on uncovered parts which are exposed to the heat of the sun, especially on the face and back of the hand, with scaly desquamation, and afterwards, often repeated returns of the disease, with claw-shaped nails, bristle-shaped hairs, aphthous ulcers in the mouth. Psoriasis GUTTATA. Single, rather large, not inflamed spots, mostly on the chest, nape of the neck, arms, loins, thighs, with scales which are easily detached, leaving a red, shining base. Remedies?

* This is too sweeping. Syphilitic gonorrhœa may be accompanied with intolerable itching of the glans, which is increased by pressure and scratching. It is this itching which is frequently the principal and most characteristic indication for the administration of Mercury. (Hempel.)

Purpura SYPHILITICA, s. ROSEOLA SYPHILITICA.

Purpura TYPHODES, PETECHIÆ IDIOPATHICÆ, FEBRIS PETECHIALIS. This is no more nor less than typhus, the petechiæ being a mere symptom. The accidental absence or presence of a particular symptom in typhus is no sufficient reason why we should consider it a particular variety of this disease. Such a symptom frequently depends upon the constitution of the patient, the intensity of the disease, the particular portion of the nervous system which is principally involved, &c. If, however, petechiæ should be present, we may give: *Ars.* *Bry.* *Rhus t.*

Purpura URTICANS *Willan.* Seems to be identical with *purpura scorbutica*, but occurs very rarely in this form.

ROSEOLÆ. Intermediate eruption between measles and scarlatina, so that, if the eruption should resemble the measles, the secondary symptoms frequently resemble the symptoms of scarlatina, and, if the eruption should be like scarlatina, the accompanying symptoms are like the catarrhal symptoms of the measles.—Remedies: *Acon.* *Bell.* *Nux v.* *Puls.*

Roseolæ SYPHILITICÆ. Dark, violet-red spots, mostly on the abdomen, arms, forehead, &c.; in constitutional syphilis these spots generally are the first symptom, even when the primary chancre is still existing.—Remedies: *Merc.*

RUBEOLÆ. See MEASLES in the Repertory.

RUPIA, RHYPIA. Small, isolated vesicles, upon a red, inflamed base, first containing a serous, afterwards a purulent fluid, generally on the extremities or loins, afterwards covered with brown crusts; the subjacent skin is sore. Is not to be confounded with ECTHYMA, the primary form of which is not vesicular, but pustulous; the scurfs of ecthyma are less broad and more firmly adhering than those of RHUPIA.—Remedies: Alum. Ars. Borax. Calc. Cham. Clem. Graph. Hep. Merc. Natr. Nitr. ac. Petr. Rhus t. Sep. Sil. Staph. Sulph.

Rupia HEBRA; this is the syphilitic rupia with pyramidal scurfs, and probably identical with the RUPIA PROEMINENS BATEMAN.

Rupia PROEMINENS, with conical scurfs consisting of several layers, and probably of a syphilitic nature.—Remedies: Alum.? Clem. Merc. Nitr. ac.? Sassap.? Sulph. Thuj.?

Rupia SIMPLEX, BULLA PHAGEDÆNICA HAHNE-MANNI, PHAGEDENIC ULCER of some authors.—Remedies: See BULLA PHAGEDÆNICA in the Repertory.

SCABIES, ITCH. According to modern authors the *acarus* is supposed to be the characteristic diagnostic of the true itch. It is doubtful, however, whether the ancients meant by scabies the *acarus*-scabies exclusively. Lice, and

other kinds of vermin, may likewise cause a species of scabies which is very much like the *acarus-scabies*, and is likewise characterized by the peculiar voluptuous itching. Though this kind of scabies has been termed *SPURIOUS SCABIES*, yet it is by no means certain what is the true diagnostic of the real itch.

SCABIES SPURIA. Eruptions which resemble the itch, without being the disease. The different forms of *PRURIGO*, *IMPETIGO*, and *VESICLES*, also *HYDRARGYRA* and syphiloïd forms of eruption, have been termed *SPURIOUS SCABIES*.

Sycosis *INDICA*, s. *FRAMBOESIA SYCOTICA*.

Sycosis *LABIALIS*, principally affecting persons who take snuff; small, painful blisters changing to ulcers with yellowish lymph; they become covered with scurfs which keep forming, and they are surrounded by hardness and redness.—Remedies: *Acon. Ars. Bell. Cic. Dulc. Hep. Sulph.*

Sycosis *MENTI*, s. *MENTAGRA*.

Sycosis PALPEBRARUM. Thick, granular, pustulus elevations on the margin and the inner surface of the eyelids.—Remedies?

Syphilis BULLOSA, RUPIA HEBRA, see RUPIA PROE-MINENS.

Syphilis MACULOSA, ROSEOLA SYPHILITICA, see SYPH. BULLOSA.

Syphilis PUSTULOSA, at times resembling the pustules of smallpox, at others those of acne; in the former case they generally appear on the face and trunk, with brown, thick crusts, beneath which the ulcerative process continues and which leave a round, white, deep cicatrix; whereas, if the pustules resemble acne, they scarcely ever occur on the forehead or in the face, but rather on the rest of the body, and almost without scurfs, and leave only superficial cicatrices and always livid spots.—Remedies: *Merc. Nitr. ac. Thuj.*

Syphilis SQUAMOSA, only in the palms of the hands and on the soles of the feet. See PSORIASIS SYPHILITICA.

Syphilis TUBERCULOSA. The form varies. Sometimes semi-globular, flattened, with ulcerative surface, in which case the disease frequently breaks out primarily at the anus and on the sexual organs; frequently, however, the tubercles are larger, rounder, especially on the neck,

forehead and face; sometimes the eruptions are granular and cracked, in which case they appear principally in the corners of the mouth.

Principal remedy : *Merc.*

Syphilis ULCEROSA, CUTANEA. Secondary *syphilitic cutaneous ulcers*. Very rare unless the previously mentioned forms are numbered among this class. There is a variety of these ulcers arising from deep-seated cutaneous tubercles, resembling a number of small cutaneous buboes, with semi-globular, sunken, lardaceous base. Always secondary, and existing only in constitutional syphilis. *Carbo veg.* acted as a specific in one case. *Merc.* is a specific for the ulcerated syphilitic rhagades between the toes.

Syphilis VEGETANS, VEGETATIONES SYPHILITICÆ, S. SYCOSIS VENEREA.

SYPHILONYCHIA EXULCERANS. Ulceration of the root of the nail.—Principal remedy : *Merc.*

Tinea c. GRANULATA, *IMPETIGO CAPITIS* seu *GRANULATA HERPES MILIARIS CAPILLATA*. Gray or brown, irregularly scattered crusts, not depressed at their tips as in favus, but arched, arising from small, yellow pustules which secrete a thick, speedily drying humour.—Remedies: Ars. Calc. Hep. Merc. Phosph. Rhus t. Sulph.
