P R E F A C E.

THE favorable reception of the previous editions of this little book, together with its rapid sale, has encouraged the author to prepare this edition.

In compiling this little work, the author has endeavored to keep ever in view the fact that it is simply to serve as a *reminder*, to be referred to in emergencies and cases of doubt, and by its timely hints to aid in further investigation of cases and treatment thereof.

The author has endeavored to so place and classify the contents, as to be of easy reference, and comprehensible.

To his friend, NICHOLAS LEHNEN, PH. D., he is greatly indebted for much valuable aid and advice.

In this compilation he must also acknowledge his indebtedness to the following works: The Pharmacopoeia of the United States; The United States Dispensatory; Handbook of Therapeutics—*Ringer*; Medical and Surgical Therapeutics—*Naphey*; Headland on the Actions of Medicines; Materia Medica and Therapeutics and Hypodermic Medication—*Bartholow*; Guide to Therapeutics—*Farquarson*; Materia Medica and Therapeutics—*Pereira*; Manual of Materia Medica—*Boyle*; Science and Practice of Medicine—*Aitkin*; Die Pflanzenstoffe—Drs. Aug. and Theo. Husemann; National Dispensatory; Phillips' Materia Medica; Troussseau's Materia Medica.

Detroit, June 1, 1882.

INTRODUCTORY.

PRESCRIPTION WRITING.

In commencing a prescription a certain order shall be observed—the most important symptoms and indications dictating the kind and position of the articles to be used.

Every word should be plainly and fully written, so that the dispenser may not be confused by hieroglyphics or senseless abbreviations.

After the ingredients are arrang'd in proper order, decide upon the number of doses to be made up, then take each article separately and determine the single dose; this done, multiply the single dose by the whole number and express it in the appropriate symbols opposite the drug in question.

The ingredients should be blended so far as possible to secure an agreeable appearance, taste and smell, and the avoidance of incompatibles.

Combination of drugs in a prescription is generally intended to assist or mitigate the action of another. Posology is a very important consideration in a prescription, and the

physiological effect of the drug is largely determined by the dose.

Accuracy in dose is of prime importance, and no medicine should be given until the physician is satisfied as to the dose, both maximum and minimum. No guessing at doses, even of comparatively harmless medicines, should be allowed, else the habit of thinking lightly of this subject, and dependence on a mere guess may result in a serious case of poisoning. A knowledge of both maximum and minimum doses is essential, since it often determines a special action, and in the dose do we alone find a poison differing from a medicine.

For instance, take Ipicac, which in gr. $\frac{1}{6}$ to $\frac{1}{3}$ is an anti-emetic and stomachic, and in $\frac{1}{2}$ to $1\frac{1}{2}$ grs. it is an expectorant and diaphoretic, and in still larger doses is an emetic. This affords a striking illustration of the desirability of correct posological information, since the dose that is to be employed should be in accordance with the desired specific action.

Doses are divided into three kinds: Maximum is one capable of producing a full, strong, physiological action; a medium dose produces an action just short of a full one, and a minimum dose will produce the slightest evidence, often requiring a considerable period of time to manifest even this.

A difficulty in laying down absolute minimum and maximum doses often exists, and is influenced, not by the drug alone, but by a peculiar idiosyncrasy or condition of the person taking. Thus a dose which in one will produce no appreciable effect will in another produce marked and alarming activity.

The doses in these idiosyncreal cases must then be determined by personal observation, and the dose regulated in accordance.

Repetition in the use of a drug has much to do with its future action, and by a frequent and prolonged an habituation is established, and a dose which in the first place would produce full effect will later on have no effect.

Soluble Salts may be given in solution.

Insoluble Salts and Powders, if given in the form of a mixture, should be suspended by the aid of *Mucilage* or *Syrup*.

Powders or Salts may be given in the powder or in pills, the latter not to exceed 4 or 5 grains and made up with *Conf. of Rose*, *Mucilage* (except where Iron), *Starch*, *Extracts*, etc.

Correctives may be added to disagreeable medicines, to prevent the nauseating properties, viz: *Comp. Tinct. of Cardamon*, *Tinct. of Ginger*, *Peppermint Water*, *Fl. Ext. of Liquorice*, *Oil of Wintergreen*, *Comp. Cinnamon Powder*, *Ginger*, etc.

Gelatine Capsules make good carriers for disagreeable medicines.

— FORM OF A PRESCRIPTION.—

List of Abbreviations Used in Prescriptions.

- āā = *Ana* = Of each.
Ad = *Adde* = Add.
Ad lib. = *Ad libitum* = At pleasure.
Aliquot = Several, some.
Bis in die = Twice a day.
Chart. = *Chartula* = Small paper.
Coch. = *Cochleare* = Spoonful.
" { *Amplum*, or { *Magnum* } = Tablespoonful.
" *Medium* = Dessertspoonful.
" *Minimum* = Teaspoonful.
Cochleatim = By spoonful.
Collyr. = *Collyrum* = Eyewater.
Cyanth. = *Cyanthus* = Wineglassful.
D. = *Dosis* = Dose.
Div. = *Divide* = Divide.
Don. = *Donec* = Until.
Ejusdem = Of the same.
Fl. = *Fluidum* = Fluid.
Ft. = *Fiat* = Make.
Guttatim = Drop by drop.
Haus. = *Haustus* = A draught.
Hor. alt. = *Horis alternis* = Every other hour.
H. S. = *Hora Somni* = At bed time.
Ind. = *Indies* = Daily.
Lag. = *Lagena* = A bottle.
M. = *Misce* = Mix.
Mass. = *Massa* = Mass.
Manip. = *Manipulus* = Handful.
Mist. = *Mistura* = Mixture.
Phiala = A vial or phial.
Pil. = *Pilula* = Pill.
Post cibum = After eating.
Q. S. = *Quantum Sufficit* = { Sufficient quantity.
Q. V. = *Quantum Vis* = { As much as you choose.
Q. in d. = *Quater in die* = Four times a day.
Quotidie = Daily.

R = *Recipe* = Take.

Semihora = Half an hour.

Sesquihora = An hour and a half.

Sig. = *Signa* = Write.

ss. = *Semis* = Half.

Statim = Immediately.

Subinde = Now and then.

T. in d. or T. d. = *Ter in die* = { Three times a day

Table of Doses Graded by the Age of Patient.

20 to 60 years, 1; 20 years, $\frac{2}{3}$; 14 years, $\frac{1}{2}$;
7 years, $\frac{1}{3}$; 4 years, $\frac{1}{4}$; 3 years, $\frac{1}{6}$: 2 years,
 $\frac{1}{8}$; 1 year and under, one-twelfth to one-sixteenth.

Abbreviations, Genitive Endings and English Meanings.

The prefixes *Bi.* *Hypo.* *Per,* *Pyro,* *Sesqui* and *Sub* do not alter the genitive ending; the English meaning taking the prefix.

*.—These nouns take the *Genitive* of the medicine. *Any noun not an opposite qualifying the meaning of another noun is put in the genitive*, as Quiniaæ Sulphas, Tinctura Aloes, Vinum Colchici Ferri Chloridum.

†.—These adjectives or participles agree with their nouns in gender, number and case, as *Tinctura* (noun, feminine gender, singular number), *Ammoniata* (participle, same), *Cuprum* (noun, neuter gender, singular number), *Ammoniatum* (participle, same).

a. — These nouns always follow, as *Lithia Citras*, *Potassii Tartras*.

b. — The nouns always precede, as *Aqua Ammoniae*. *Tinctura Arnicae*, *Infusum Digit alis*.

c. — These adjectives and participles are always placed after the medicine they limit but before the quantity taken, as *Pilulae Ferri Compositae*, *Liquor Iodonii Compositus*, *Hydrargyri Sulphuretum Rubrum*.

The verb **R**=Recipe (*active verb, imperative myod, second person singular*); *Quinia* (any noun not an opposition qualifying the meaning of another noun is put in the genitive); *Sulphatis* (the partitive genitive designates the whole of which a part is taken); *Unum* (the numeral adjective agreeing in gender, number and case with *Serpulum*); **M.**=Misce (*active verb, imperative mood, second person singular*).

Number of Drops to a Fluid Drachm.

Acids. — Acetic. 120; Hydrocyanic Dil., 45; Muriatic, 54; Nitric, 84; Nitric Dil., 51; Sulphuric, 90; Sulphuric Arom., 120; Sulphuric Dil., 51.

Aether.—Sulphuric, 150.

Alcohol, 138; **Alcohol Dil.**, 120; **Fowler's Solution**, 57; **Oils**, Essential Oils of Vegetables. 120; **Tinctures**, of Vegetables, 120; of Iron, 132.

Vinegars, 78; *Waters*. distilled, 45; *Ammonia*, strong, 54; *Ammonia*, weak, 45.

Wines, 78; *Antimony*, 72; *Colchicum*, 75; *Opium*, 78.

The number of drops, however, depends largely on what kind of a receptacal dropped from.

Symbols Used in Prescription Writing.

gr. = Grain; gtt. = Drop; m = Minim: ℥ = Scruple; ʒ = Drachm; ʒ = Ounce; ℥ = Pint; C = Gallon; lb = Pound.

The Roman Numerals are Used :

ss. = $\frac{1}{2}$; I. = 1; II. = 2; III. = 3; IV. = 4;
V. = 5; VI. = 6; VII. = 7; VIII. = 8; IX. = 9;
X. = 10; XX. = 20; XXX. = 30; XL. = 40;
L. = 50; LX. = 60; LXX. = 70; LXXX. = 80;
XC. = 90; C. = 100.

The increase above ten is usually expressed by adding the symbols for the corresponding notation to X, thus: "13" = XIII; "18" = XVIII; twenties. thirties etc , are expressed in a corresponding manner.

Table of Apothecaries' Weight.

gr., Granum, (<i>Grain</i>)	= a grain.
℥, Scrupulum, (<i>Scruple</i>)	= 20 grains.
ʒ, dr., Drachma, (<i>Drachm</i>)	= 60 grains.
ʒ, oz., Uncia, (<i>Ounce Troy</i>)	= 8 drachms.
lb, Libra, (<i>Pound</i>)	= 12 Troy ounces.

Measures by Capacity.

m., Minimum, (<i>Minim</i>)	= one-sixtieth part of fl. drachm.
gtt., Gutta, (<i>Drop</i>)	= usually $\frac{1}{2}$ minim.
fl. ʒ Fluidrachma, (<i>Fluid Drachm</i>)	= 60 minims.

INTRODUCTORY.

fl $\frac{3}{4}$	Fluiduncia, (<i>Fluid Ounce</i>)	= 8 fluid drachms.
O, Octarius, (<i>Pint</i>)		= 16 fluid ounces.
C, Congins, (<i>Gallon</i>)		= 8 pints.

Metric Weights.

1	<i>Myriagramme</i>	= 10,000 grammes.
1	<i>Kilogramme</i>	= 1,000 "
1	<i>Hectogramme</i>	= 100 "
1	<i>Decagramme</i>	= 10 "
1	Gramme	= the weight of a cubic centimeter of water at 4° C.
1	<i>Decigramme</i>	= one-tenth part of a gramme.
1	<i>Centigramme</i>	= one - hundredth part of a gramme.
1	<i>Milligramme</i>	= one - thousandth part of a gramme.

To make *Decagrammes*, move the *decimal point one place to the left*; *Hectogrammes*, move it *two places to the left*; *Kilogrammes*, move it *three places to the left*; *Myriagrammes* move it *four places to the left*.

To make *Decigrammes*, move the *decimal point one place to the right*; *Centigrammes*, move it *two places to the right*; *Milligrammes*, move it *three places to the right*.

Relation of the Metrical Measures to the Measures of the U. S. P.

One	<i>Myrialitre</i>	= 2641.9	gallons.
"	<i>Kilolitre</i>	= 264.19	"
"	<i>Hectolitre</i>	= 26.419	"
"	<i>Decalitre</i>	= 2.6419	"
"	<i>Litre</i>	= 2.113	pints.
"	<i>Decilitre</i>	= 3.381	fluid ounce.
"	<i>Centilitre</i>	= 2.705	fluid drachms.
"	<i>Millilitre</i>	= 16.231	minims.

 Tumblerful = 3*x-xii*.

MODES OF MEDICINAL INTRODUCTION.

Medicines whose actions are to be manifested at distant parts, require introduction into the *blood* or *internal fluids* of the body. The *solvability* of a medicine is the first requirement for its *absorption*, and without it a medicine can only act mechanically on a certain spot of contact.

Some medicines have a purely local action independent of absorption.

Medicines are introduced into the *blood* and *internal fluids* through :

I. **The External Integument**, by *friction*, as in Mercurial Inunction; by *application to the derma*, the epidermis being first removed by blistering; by *vapor baths*; by *hypodermic injections*.

II. **The Internal Integument**, by *application to the Broncho-pulmonary mucous membrane* of atomized medicines, medicinal vapors, etc.; by *application to the Gastro-intestinal mucous membrane*.

III. **The Veins and Arteries**, by *injections* of medicines directly into the venous circulation; by *transfusion*, which consists in introducing health blood or milk into the venous or arterial circulation.

CLASSIFICATION OF MEDICINES.

Based upon Headland.

Medicines are divided primarily into five great classes, viz:

Class I.—Hæmatics—pass into and exert an influence over the blood itself, causing a change; thus promoting a curative action,

either by supplying a deficiency, or destroying a morbid influence in the blood; counteracting chronic disorders.

The disease in which Hæmatics are used originate in the blood, either from a deficiency of some one or more of its constituents, or the presence of some morbid material causing a morbid process, the former illustrated by *Anæmia*, the latter by *Syphilis*, *Scrofula*, etc.

Hæmatics have both reconstructive and destructive action, both, however, tending towards a healthy blood standard.

Their effects are slowly produced, but are durable.

Class II.—Neurotics—pass through and from the blood (without causing a change in it, and being foreign it must pass out,) to the nerves or nerve centres, there exerting a marked but transitory influence.

They are rapid in their effects.

They act by contact with the nerves, but produce no lasting change in the nerve fibres.

They counteract the symptoms of temporary emergencies rather than the disease.

Class III.—Astringents—do not necessarily act in the blood, but passing to the muscular fibers cause their contraction, thus preventing hemorrhage, diminishing secretion, and giving tone to the muscular system, capillary vessels, circulatory vessels, glands, ducts, stomach, and intestines.

Their actions are plainly evinced.

They contract the involuntary as well as the voluntary muscular fibers; in the former their actions are slower but more durable. Mostly all have the power of coagulating albumen.

In large doses they are usually irritant and poisonous.

The same results of action may be obtained by direct application to the muscular fibers.

Class IV.—Eliminatives—pass into the blood and through it, to find exit by the glands, which they excite to the performance of their functions.

They include all medicines which tend in a direct manner to increase secretion, thus evacuating certain materials which should not remain in the system.

Powerful Eliminatives when given in excess may produce congestion and thus diminish secretion.

Class V.—Topicals—act locally wherever they are applied.

Class I.—Hæmatics

are divided into two great divisions, viz:

Div. A. — RESTORATIVES — are by nature in the blood, and in it may be found substances resembling them.

They supply or cause to be supplied a material wanting in the blood, and while remaining there cure, or tend to cure the disease dependent on the want.

Div. B. — CATALYTICS — are antagonistic to certain diseases by counteracting a morbid influence in the blood; but being foreign to the blood they must pass out of the system.

Class I. — Div. A. — Restoratives — are divided into six orders, viz:

Order 1. — Aliments — are all the substances naturally required by the animal body, to supply growth, repair waste, and maintain the various functions at a healthy standard, viz: Nitrogenous and Nonnitrogenous Foods.

Order 2. — Acids — are not unnatural to the blood existing there in a state of combination.

An acid on entering the blood combines with an alkali, thus reducing the basic and increasing the acid matter.

Acids if not sufficiently diluted act corrosively upon the mucous membrane, also have caustic and astringent actions.

They may remain in the blood after combination or may pass off in the urine, supplying the place of a natural acid which thus can be retained in the system.

They correct Phosphatic Urine.

Vegetable acids decompose in the system.

They embrace all Mineral, Vegetable and Animal Acids.

Order 3. — Alkalies — are Restoratives when there is an excess of acid in the system.

They preserve the neutrality of the blood, and prevent fibrine from coagulating.

They are useful in a tendency to lithic deposit.

They are: Ammonia, Calcium, Lithium, Magnesium, Potassium, Sodium, their Carbonates, neutral Acetates, Citrates, and Tartrates.

Order 4.—Tonics—increase the appetite and muscular strength, improve general health, and a curative action on marsh miasmas, and produce a marked excitement on all vital functions.

There is probably in the blood or system a substance identical with Quinine (*Animal Quinine*).

Quinine and other bitter principles are not excreted unless given in excessive doses.

They are: Apiol, Aletris, Absinthium, Bebeeria, Cascarilla, Columba, Cornus Florida, Cinchonia, Cinchonidia, Chiretta, Cusparia, Coptus, Cotula, Cimicifuga, Eucalyptus Glob., Frasera, Gentiana, Lupulus, Menyanthes, Quinia, Quinidia. Quassia, Quercus, Rheum, Sabbatia, Simaruba, Salicin, Taraxacum, Xanthorrhiza.

Order 5. — Chalybeates — are slow to act but lasting in their effects.

They supply a deficiency in the Hæmatosin or coloring matter of the blood corpuscles, one of the most important constituents of the blood.

They cure Anæmia and may benefit or cure other diseases where Anæmia is a prominent symptom; they also promote appetite.

Salts of Iron passing through a gland are more or less astringent, particularly the Sulphate and Chloride.

They are contra-indicated in Plethora, especially where hemorrhagic diathesis exists.

They are: Iron and its various preparations, and the Chalybeate Waters, except the Ferrocyanide which is not restorative.

Order 6. — Solvents — are agents which are employed to hold in solution insoluble substances, which are precipitated when there is a deficiency of solvent material in the system. They are divided into two divisions:

a) *Antilithics* — embrace all Carbonates and Neutral Salts; Vegetable Acids, Borate, Biborate and Phosphate of Sodium; Boracic Acid, and the Benzoate of Lithium.

b) *Antiphosphatics* — embraces all the Mineral and Vegetable Acids, Sour Fruits.

Class I. — Div. B. Catalytics — are divided into eight orders, viz:

CLASSIFICATION OF MEDICINES.

Order 1. — Antiphlogistics — counteract in a most direct way inflammatory processes, diminish fibrine in the blood, retard or prevent plastic lymph effusions, and impoverish the blood.

They are to be given in sthenic and acute but not in asthenic inflammations.

They are: Antimonials, Alkalies, Mercurials, and Salines.

Order 2.—Antisyphilitics — subdue or counteract a syphilitic poison in the system.

They are: Mercury and its various preparations, Iodide of Potassium and the various preparations of Iodine, preparations of Gold and Platinum.

Syphilitic Tonics are; Aralia Bark, Agave, Cinchona and its various preparations. Colotropis, Phytolacca, Sarsaparilla, Stillingia.

Order 3. — Antiscrofulitics — are medicines which subdue a scrofulitic toxæmia.

They are: Alnuin, Barium, Bromine, Broxides, Burdock, Chondrus, Chlorine, Chlorides, Gold, Iodine, Iodides, Mercury, Potassium, Yellow Parilla.

Order 4. — Antiarthritics — are medicines which subdue or tend to subdue an influence in the blood which causes Diabetis, Oxaluria, Lithic deposit in the Urine and articular disorders, *i. e.* Gout and Rheumatism.

They are: Colchicum, Cimicifuga, Citric Acid, Guaiac, Iodide of Potassium, Mercurials, Nitric and Nitro-Muriatic Acids, Salicylic Acid, Salicylates of Sodium or Potassium, Trimethylamine.

Order 5. — Antiscorbutics — are medicines which counteract the peculiar blood deterioration causing Scurvy or Purpura.

They are : Citric Acid, Calotropis Acetosella, Lactic Acid, Lemon Juice, Fresh Vegetables, Phosphoric Acid.

Order 6. — Antiperiodics— are antagonistic to the peculiar aërial or malarial poisons of the blood.

They are: Preparations of Arsenic, Alum, Cornin, *Cornus Florida*, Apiol, *Bebeeria Peruvian Bark* and its various alkaloids, Willow, Salicin, *Eucalyptus Globulus*.

Order 7. — Anticonvulsives— are correctives against certain convulsive disorders dependent upon blood deterioration.

They are: Preparations of Arsenic, Copper, Lead Silver and Zinc.

Order 8. — Antisquamics— are correctives to certain skin diseases due to the existence in the blood of certain poisons or peculiar morbid conditions which must either be eliminated or counteracted.

They are: Preparations of Arsenic, Sulphur and its combinations, Pitch, Tar, American Spikenard, Carbolic Acid.

Class II.—Neurotics.

are divided into three great divisions, viz:

Div. A. — STIMULANTS — pass into the blood and thence to the nerves or nerve centres, acting so as to exalt nerve force in general or particular.

Div. B. — NARCOTICS—first exalt nerve force and afterwards depress it.

They also have a special action on the intellectual part of the brain.

Div. C. — SEDATIVES — directly depress nervous force, either in general or particular.

Their action for a time is very energetic, deranging or destroying nervous power.

They have little or no effect upon the intellectual part of the brain, but act on the organic functions which are necessary to life.

Class II. — Div. A. — Stimulants — are divided into two orders, viz:

• *Order 1. — General Stimulants*—exalt nervous force in general, invigorate the circulation, and increase the force and frequency of the pulse.

In proper doses they stimulate the sympathetic nerves of the stomach, and other viscera, and thus improve digestion.

In large doses they may act as irritants.

They exalt the animal functions of the brain along with other nervous forces.

They are: a) *Mineral Substances*—Ammonia and its Carbonates, Phosphorus.

b) *Vegetable Substances*—*Volatile Oils* of Cloves, Nutmeg, Cinnamon, Cassia, Sassafras, Rue, Buchu, Canella, Valerian, Mustard, Hops, Cajuput, Pimenta, Juniper, Turpentine, Cardamom, Wintergreen, Penny Royal; *Acrid Principles* of Senega, Horse Radish, Cascarilla, Serpentaria, Pepper, Ginger, Contrayerva. Capsicum, Mezereum: *Resinous Principles* of Guaiac, Mastiche, Olibanum, Myrrh, Elemi, Copaiba, Peru, Tolu, Assafœtida, Ammoniacum, Storax, Pine, Benzoin.

c) *Animal Substances*—Musk. Castor.

Order 2. — Special Stimulants — do not affect the whole nervous system, but particular nerves or sets of nerves.

They are more energetic in their actions than General Stimulants.

They are: Strychnia, Veratrum Viride, Borax, Rue, Brucia, Toxicodendron, Ergot, Savine, Uva Ursi.

CLASSIFICATION OF MEDICINES.

Class II.—Div. B.—Narcotics—are divided into three orders, viz:

Order 1.—Inebriants — primarily resemble Stimulants.

They exhilarate the nervous system, quicken the pulse and enliven the mental faculties.

Secondarily, they depress the heart's action (except in the cases of Tobacco and Lobelia), and cause general disturbance of all the intellectual functions of the brain.

They are: Chloroform, Alcohol, Ether, Lobelia, Wine, Camphor, Indian Hemp, Tobacco.

Order 2.—Soporifics — at first quicken the pulse and excite the mental faculties, afterwards produce drowsiness and sleep in which the mind may remain active with the special senses entirely suspended in sleep.

They relieve pain, relax the muscular system, and may cause death by arresting respiration.

They are: Opium, Lactuca, Hops, Nutmegs.

Order 3.—Delirants—somewhat resemble Sedatives, having a sedative action on the heart and circulation.

They dilate the pupils of the eye, excite and derange the functions of the mind, volition and the five senses.

In large doses they produce delirium.

They are: Hyoscyamus, Belladonna, Stramonium.

Class II.—Div. C.—Sedatives - are divided into two orders, viz:

Order 1.—General Sedatives—exert a like depressing influence on all nerves or nerve centres.

They have no primary stimulating effect, nor any action upon the intellectual part of the brain.

They are: Prussic Acid, Creasote, Aconite, Conium, Woorara. Calabar, Bean, Colchicum, Bromide of Potassium.

Order 2.—Special Sedatives—are similar in action to the former, but their actions are more localized, affecting only certain parts of the nervous system.

They are: Ipecac, Antimonials, Digitalis.

Class III. — Astringents

are divided into two divisions, viz :

DIV. A — MINERAL ASTRINGENTS.— Many of these have been classed with Restoratives and Catalytics.

They also act as styptics, by being able to coagulate the albumen of the blood, when applied to bleeding surfaces.

They produce contraction of the muscular fibres and living tissues.

Most of them when in a concentrated form act as Eschatotics, therefore they should be diluted, thus stimulating instead of destroying vital action.

They are: Muriatic, Nitric, Nitro-Muriatic, and Sulphuric Acids; Acetate, Carbonate, Nitrate, Oxide, and Subacetate or Lead; Chloride and Sulphate of Iron, Acetate and Sulphate of Zinc, Alum, Sulphate of Copper, Corrosive Sublimate.

DIV. B.—VEGETABLE ASTRINGENTS—are Gallic and Tannic Acids, Catechu, Kino, Logwood, Galla, Pipsissewa, Cornus Florida, Geum, Frostwort, Rhatany, Bistort, Liverwort, Alum Root, Bugleweed, Blackberry, Quercus, Sumach, Black Alder, Tormentilla, Elm Bark, Willow.

Class IV.—Eliminatives

are divided into seven divisions, viz:

Div. A.—SIALAGOGUES—are medicines which increase the flow of saliva, but they are seldom employed for that purpose.

They are: Mercury, Iodine—its preparations and combinations, Chloride of Potassium, Tobacco, Blue Flag, Jaborandi, Beth Root, Xanthoxylum, Sweet Flag, Pellitory.

Div. B.—EMETICS—*Systemic*—produce vomiting.

They are: Apomorphia, Ipecac, Tartar Emetic, Senega, Bastard Ipecac.

Div. C.—EXPECTORANTS—promote the flow and ejection of fluids from the lungs.

They are: Antimony, Ipecac, Ammonia, Turpentine, Camphor, Assafoetida, Senega, Tolu, Squill, Milk Weed, Serpentaria, Benzoic Acid, Dragon Root, Ammoniacum, Pleurisy Root, Benzoin, Black Snakeroot, Inula, Lobelia, Sorax, Tar.

Div. D.—CATHARTICS—increase the secretions from the linings of the bowels, and the evacuations from the intestines.

They are: a) *Vegetable Cathartics*—Aloes, American Senna, Butterfly Weed, Milk Weed, Bear's Foot, Bael, Benne and Castor Oils, Black Hellebore, Balmony, Burdock, Butter-nut, Gamboge Senna, Cevadilla, Celandine, Elaterium, Elder, Jalap, Manna, Horehound, Menyanthes, Poke Root, Flax Seed Oil, Colocynth, Scammony, Croton Oil, Rhubarb, Taraxacum, Wahoo, Wild Potato, Podophyllum.

b) *Mineral Cathartics*—Acetates of Magnesium and Potassium, Sulphates of Sodium and Potassium; Carbonate, Citrate and Chloride of Magnesium; Sulphur, Rochelle Salts, Citrate of Sodium, Calomel, Blue Mass, Mercurial Chalk.

DIV. E.—CHOLAGOGUES—stimulate the action of the liver and increase the evacuation of bile: all cathartics act indirectly as cholagogues.

They are: Mercury, Taraxacum, Aloes, Rhubarb, Chrysophanic Acid, Culver's Root, Podophyllum.

DIV. F.—DIAPHORETICS—promote the secretion and exhalation from the surface of the skin.

They are: Opium, James' Powder, Button-Snakeroot, Jaborandi, Juniper, Aralia Bark, Camphor, Guaiac, Ammonia, Alcoholic Drinks, Boneset, Inula, Lobelia, Solution of Chloride of Lime; Citrate, Nitrate, and Ferrocyanide of Potassium; Burdock, Butterfly Weed, Saffron, Safflower, Sabina, Cajuput Oil, Serpentaria, Prickly Ash.

DIV. G.—DIURETICS — increase the flow of urine.

They are: Water, Digitalis, Broom, Squill; Acetate, Bicarbonate, and Bitartrate of Potassium; Sweet Spirits of Nitre, Liq. Ammoniæ Acetatis, Juniper, Cantharides, Colchicum, Belladonna, Pipsissiwa, Copaiba, Cubebs, Fleabane, Hemidesmus, Solution of Chloride of Lime, Mezereum, Pareira, Parsley, Turpentine, Tar Water, Senega; Acetate, Borate, and Sulphate of Sodium; Chimaphila, Taraxacum.

Class V. — Topicals

are divided into six divisions, viz:

DIV. A.—ANTISEPTICS—prevent putrifaction.

They are: Oxygen, Chlorine, Bromine, Creasote, Carbolic Acid, Salicylic Acids, Salicin; Thymic, Boracic, and Benzoic Acids; Benzoin.

DIV. B. — RUBEFACIENTS — cause heat and redness of the skin ; if prolonged may produce vesication.

CLASSIFICATION OF MEDICINES.

They are: White and Black Mustard, Arnica, Burgundy Pitch, Canada Pitch, Camphor, Ammonia, Euphorbium, Turpentine.

Div. C.—EPISPASTICS—excite inflammation and vesication of the skin.

They are: Cantharides, Mezereum.

Div. D.—ESCHAROTICS—destroy the tissues to which they are applied.

They are; Nitric, Sulphuric, and Muriatic Acids; Nitrate of Silver; Nitrate, Chloride, and Iodide of Zinc; Caustic Potash, Chromic Acid, Acid Nit. of Mercury, Carbolic Acid.

Div. E.—EMOLLIENTS, DEMULCENTS, and PROTECTIVES—soften or soothe irritated surfaces, protect abrasions, etc.

They are: Glycerine, Collodion, Liq. Guttæ Perchæ, Chondrus, Cetraria. Acacia, Tragacanth, Sassafras, Flax Seed, Slippery Elm Bark, Liquorice, Poultices.

Div. F.—ANTHELMINTICS—poison or debilitate worms in the alimentary canal, thus rendering them more easy of expulsion; or they may have a mechanical action in their removal.

They are; Absinthium, Areca Nut, Azedarach, Mugwort, White Indian Hemp, Koosso, Balmony, Chenopodium, Filix Mas, Bear's Foot, Sabadilla. Santonica, Santonin, Spigelia, Rottlera, Matricaria, Cowhage, Pepo, Powdered Tin, Tanacetum, Turpentine, Geoffroya Inermis.

Div. G.—ANTIPARASITICS—destroy parasites in the skin or vermin upon it.

They are: Mercurial Ointments, Chrysophanic Acid Ointment, Tobacco Lotions, Coccus Indicus, Sulphur Ointment.

Yellow Wash (Corros. Sublimate
grs. 18, Lime Water $\frac{3}{4}$ x.) Chronic
Black Wash (Calomel $3\frac{1}{2}$, Lime
Water $\frac{3}{4}$ x.) Skin Diseases. The
Oleate in various Joint Affec-
tions and superficial Inflamm-
ations.—In-
ternally, Alternative, Antisyph-
ilitic, Antiphlogistic, Chola-
gogue, Cathartic, Sialagogue.
Stimulates the hepatic cells
(5 p.ct., 10 p.ct., 20 p.ct. Solution.)
Blue Pill.] and causes a flow of
Cinnabar.] bile into the intes-
tines. Specific
first and second stages of Sy-
philis, where its employment
should be continued for a long
period, but anything like sal-
ivation avoided. Mercurial Chalk, Calomel and Blue Pill
act similarly, salivation most frequently coming from Blue
Pill, Calomel next; they are used as purgatives or adjuncts
to Purgative medicines, also as anthelmintics or adjuncts to

anthelmintics, in minute doses hourly for vomiting, where biliousness, torpor of liver and various hepatic derangements, inflammations of a serous membrane, early stages of inflammations, and Typhoid Fever, Glandular affections of throat and neck. -Corros. Sublimate, Red Iodide, and Cyanide are powerful irritants and corrosive poisons. Corros. Sublimate in doses of one-thirtieth to one-sixtieth of a grain three times a day before meals in Gastric Ulcers. The Yellow Sulphate is one of the best emetics in Croup, to be repeated every 15 or 20 minutes until emesis. Fumes of the Iodide, Sulphuret, or Calomel inhaled in Tertiary Ulcers. Mercurial Ointment, or the Oleate may be rubbed into the skin to produce constitutional effect. During the prolonged administration of Mercury the constitut'n should be kept up by tonics and good diet.

 $=\frac{1}{150}$ gr. Dose 5-20 m. (Prompt Emetic.)

Atropiæ Sulph. gr. i, Aquæ Font 3xv, one minim
 $=\frac{1}{900}$ gr. Dose 5-20 m.

Caffein grs. x, Alcohol, Aquæ Font aa 3iss, one
minim $=\frac{1}{18}$ gr. Dose 4-18 m.

Camphoræ grs. v, Alcohol 3i. Dose 6-30 m.

Coniæ gr. i, Alcohol, Aquæ Font aa 3v, one
minim $=\frac{1}{600}$ gr. Dose 5-15 m.

Chloral Hydrate 3i, Aquæ Font 3ii. Dose 4-16 m.

D: minim =

Digitalin gr. ss. Alcohol, Aquæ Font aa 3ii, one
minim $=\frac{1}{480}$ gr. Dose 4-8 m.

Ergotin grs. xv, Alcohol, Glycerine aa 3iiss, one
minim $=\frac{1}{20}$ gr. Dose 5-30 m.

Ext. Ergotæ Fl. Q. S. Filter carefully. Dose
10 m.

Hydrargyri Chloridi Corros., Ammonii Chloridi
aa grs. iii, dissolve in Aqua Font 3isss, then

add Albuminis Ovi 3iss, Aquæ Font 3v, filter and add Aquæ Font Q. S. 3x, one minim= $\frac{1}{200}$ gr. Dose 3-10 m.

Hydrargyri et Sodii Iodidi grs. iii. Aquæ Font 3iiiss, one minim= $\frac{1}{70}$ gr. Dose 10 m every other day.

Morphia et Atropia—Didama's Solution—Morphiæ Sulph. grs. xxiv, Atropiæ gr. i, Ol. Amygdalæ Am. gtt. 1, Aquæ Font 3ii. Ten minims contain $\frac{1}{4}$ gr. Morphia and $\frac{1}{96}$ gr. Atropia.

Pilocrapin, Mur. or Nit. grs. iii, Aquæ Font 3iv, one minim= $\frac{1}{80}$ gr. Dose 10-20 m.

Potassii Iodidi 3i, Aquæ Font 3iv. Dose 6-20 m.

Quiniæ Sulph. grs. xv, Acid. Sulphurici Arom. Q. S., Aquæ Font 3iiss, one minim= $\frac{1}{10}$ gr. Dose 5-30 m.

Strychniæ Sulph. gr. i, Aquæ Font 3i. Heat in a test tube, or triturate in a mortar until all the crystals disappear. one minim= $\frac{1}{480}$ gr. Dose 4-15 m.

Woorara gr. i, Aquæ Font 3iii, one minim= $\frac{1}{180}$ gr. Dose 5-10 m.

Notes.—After drawing the required amount of fluid into the syringe, expel the small globule of air, by inverting the syringe and pressing the piston upwards until a drop of the liquid appears at the point of the needle.

Draw the skin up and tense at the required place and press the needles through into the subcutaneous tissues, which done inject the fluid slowly into them; after the needle has

been withdrawn place the finger over the puncture for a short time.

Places to be avoided in puncturing: Veins, inflamed spots, bony prominences.

Places suitable for puncturing: Arm, thigh, abdomen, back and calves of the legs.

In hypodermic medication the dose is about one-half that required by the mouth, and the effects are more rapid, certain and exact.

This manner of medication should be resorted to when immediate and decided results are required; when medicines otherwise administered fail to do good; when medicines are required the patient refuses or cannot swallow; when there is an irritable state of the stomach precluding exhibition by the mouth.

Solutions intended for hypodermic use should be neutral without acid or alkaline reaction and non-irritating.

The medicines should be rendered perfectly soluble and the menstrum perfectly free from foreign matters.

Solution of the Alkaloids should be made fresh as required, since they spoil on long keeping.

Filtered rain or spring waters are preferable as a menstrum to distilled water which has been kept for some days.

DOSES FOR INHALATION.

Notes.—The first few inhalations from a steam atomizer should be short, to prepare the patient for their use, afterwards they may be continued for ten minutes.

The patient should not take more than six to eight inspirations per minute, and should breathe deeply if the remoter air passages wish to be reached.

Inhalations should never be performed after a hearty meal; and the patient should remain in-doors for thirty minutes after the operation.

The following are the quantities to be mixed with one ounce of distilled water, and used by means of an ordinary steam atomizer:

R_v Acidi Carbolici, grs. ii-x. In Phthisis.

" **Lactici**, 3 $\frac{1}{8}$ - $\frac{1}{2}$. Solvent of false membranes. In Croup and Diphtheria.

" **Tannici**, grs. ii-xx. In Chronic Catarrhal affections, Oedema of Glottis, and Laryngeal ulceration.

Aluminis, grs. v-xxx, In profuse secretion from bronchi, large doses in pulmonary hemorrhage.

Ammonii Chloridi, grs. ii-xii. To promote expectoration in acute or chronic laryngeal or bronchial Catarrh, and capillary Bronchitis.

Aquæ Amygdalæ Amaræ. 3 i (without addition of water). Sedative in painful affections of the upper air passages, and paroxysmal Cough.

Aquæ Assafœtidæ, 3 i (without addition of water). In Asthma and Emphysema.

Argenti Nitratis, grs. ss-x. Smaller doses in Follicular Pharyngitis, large in ulceration. A face shield should always be worn.

Cannabis Indicæ Extracti, gr. $\frac{1}{4}$ -i } In spasmodic and
" " " Fl., gtt. i-iv. } irritating
" " Tincturæ, gtt. x-xx. } Coughs, Phthisis.

Conii Extracti, gr. i-iv. } In irritating Coughs
" " Fl., gtt. v-xv } and Asthma.

Copaibæ, 3 $\frac{1}{8}$ - $\frac{1}{2}$. To diminish secretion.

Cubebæ Ext. Fl., 5 $\frac{1}{4}$ -i } In early stages of
" Tincturæ, 3 i-iii. } Bronchitis.

Cupri Sulphatis, grs. i-xx. In chronic inflammations and ulcerations.

Ferri Chloridi, grs. $\frac{1}{3}$ -ii-x. } In early stages of
“ **Tinct.**, gtt. xx- $\frac{1}{2}$ i. } Phthisis in smaller doses, larger doses in chronic Pharyngitis and Laryngitis, pulmonary Hemorrhage.

“ **Lactatis**, grs. i-iii. In Anæmia when iron by the stomach is not assimilated.

“ **Subsulph. Liq.**, gtt. x-xl. In pulmonary Hemorrhage.

Hyoscyami Extracti, gr. $\frac{1}{8}$ - $\frac{1}{2}$. } In Hooping
“ **Fl.**, gtt. v-xx. } and Spasmodic Coughs.

Infusi Picis Liquidæ, 5 i (without addition of water). In Phthisis, Gangrene of Lungs, Offensive Bronchial Secretions.

Iodinii Tincturæ, gtt. i-x. } In inflammatory
“ **Liq. Comp.**, gtt. ii-xv. } affections of the Larynx and Pharynx, Phthisis, Chronic Bronchitis.

Morphiæ, Acetatis, Muriatis, Sulphatis, gr. $\frac{1}{2}$ - $\frac{1}{6}$. In irritating Coughs, and for its constitutional effects.

Opii Extracti, gr. $\frac{1}{6}$ - $\frac{1}{2}$. } Same as Morphia.
“ **Tincturæ**, gtt. iii.x. }
“ “ **Camph.**, gtt. x- $\frac{1}{2}$ i. (Filter.) Do.

Plumbi Acetatis, grs. ii-x. In obstinate, troublesome Colds not yielding to other medication, Pulmonary Hemorrhages.

Potassii Arsenitis Liq., gtt. i-x. } In nervous
} Asthma.

“ **Carbonatis**, grs. x- $\frac{1}{2}$ i. } Same as Ammon.
} Murias.

“ **Chloratis**, grs. x-xx. In chronic and subacute Catarrhal affections, especially where dryness.

“ **Bromidi**, grs. v. xx. In laryngeal Croup.

“ **Iodidi**, grs. ii-xxx. In Emphysema and chronic Bronchitis.

“ **Permanganatis**, grs. ii-v. Antiseptic.

Sodii Chloridi, grs. v-xx. In Phthisis, used to promote expectoration.

“ **Liq. Chlorinatæ**, ʒss-i. In Phthisis, Offensive and copious expectoration of chronic Bronchitis.

Terebinthinæ, Olei, Rect., gtt. i-ii. (Mix with light Magnesium and Glycerine.) In chronic Bronchitis, Gangrene of Lungs.

Zinci Sulphatis, grs. ii-v. Astringent.

VAPOR INHALATIONS,

One teaspoonful of the following formulæ added to one pint of water at the designated temperatures will be the dose for inhalation:

Acid Hydrocyan. Dil. ʒii, Aquæ ʒii. (80° F.) Sedative in Cough, Laryngeal Cough of Phthisis.

Acidi Sulphurosi ʒi. (60°-100° F.) Stimulant.

Ammoniæ Aquæ, Aquæ ʒss. (100°-120 F.) Stimulant in Chronic Laryngitis, Functional Aphonia.

Amyl, Nitrite, ʒi, Alcohol ʒi. (100° F.) Antispasmodic in Asthma, and Spasm of the Glottis.

Benzoini Tinct. Comp. ʒii. (130°-150° F.) Sedative in Acute Pharyngitis and Laryngitis.

Cubebæ Olei ʒii, Magnes. Carb. Levis ʒi, Aquæ ʒiii. (150° F.) Stimulant.

Conii Succi ʒii, Sodii Carb. grs. x. (140° F.) For one inhalation. Sedative.

Creasoti ʒii, Magnes. Carb. Levis ʒiss, Aquæ ʒiii. (120°-150° F.) Stimulant in Chronic Congestion of the Larynx and Ozæna.

Terebinthine Canad. ʒii. Magnes. Carb. Levis ʒi,
Aquaæ ʒiii. (140° F.) Mild Stimulant and Re-
solvent, may be rendered more stimulating
by the addition of 5 grs. of Camphor.

NASAL DOUCHES.

Quantities which may be added to one pint
of water:

Chloral, Hydrate	dr. 1/4-1.
Potassii, Permang.	Do.
Sodii. Hyposulphis	dr. 1-4.
“ Carbonas	dr. ½-1.
“ Chloridi	Do.

Zinci, Sulpho-Carbol. grs. x-xl.

The above are used in Ozæna, Lupus of the
Nose, Nasal Eczema, and Acute Coryza.

The douche is more serviceable when the
disease is located in the posterior Nares; A-
stringents may be used in very small quantities
as the membrane is very sensitive; in all cases
the nasal douche should be used tepid at first,
and when astringents are used the tempera-
ture should be slightly decreased.

EYE WASHES.

The following are the amounts to be em-
ployed to one ounce of Water:

Aluminis grs. i-viii.	Eserine gr. i.
Argenti Nitratis grs. i-x.	Plumbi Acetatis grs. ii-iv.
Atropiæ grs. ii-iv.	“ Subacet. Liq. gtt. i.
Duboisin grs. i-ii.	Zinci, Acetatis, or Sul-
Daturiæ gr. ss-i	phasis, grs. ii-iv.

It must be borne in mind that while some substances are completely soluble in a hot or boiling solution, they are partially precipitated when the solution cools.

TABLE II.

**Insoluble (or nearly so) in both Water and Alcohol;
What Soluble in ?**

<i>Medicines.</i>	<i>Dissolved by</i>
Acidum Arsenic.	All Acids.
“ Benzoic.	Rdy. Sol. in Aqueoue Solution, $1\frac{1}{2}$ pts. Phosphate or 4 pts. Sulphate of Sodium.
Ammonii Arsen.	Ammonia Water.
Antimonii Oxidum.	Tartaric, Muriatic and Acetic Acids, Aqueous Sol. of Benzoic Acid.
“ Sulphas.	Strong Sulphuric Acid.
“ Sulphuret.	Boiling Muriatic Acid and Oxide of Antimony.
Amyli Iodid.	Diluted Acids, Acidulated Water, Acetic Acid best.
ArgentiCyanidum	Aqueous Solutions of Cyanide of Potass. or Sodium, Chloride of Ammonia, Hyposulphite of Sodium, Aqua Ammonia.
“ Iodidum.	Aqueous Solution of Cyanide of Potass., Alkaline Solution of Chlorides or Iodides.
“ Oxidum.	Aqueous Solution of Ammonia, Solutions of the Alkaline Hypophosphites, Chlorides, and Cyanides.
Auri Cyanid.	Aqueous Solution Cyanide Potass.
“ Oxidum.	Muriatic or Hydrobromic Acids
Barii Carbon.	Aqueous Solutions of the Chloride or Carbonate of Ammonia.
Bismuthi Cit.	Rdy. Sol. by addition of Aqueous Sol. of Ammonia, drop by drop.
“ Subcarb.	Aqueous Solution of Carbonate of Ammonia, Muriatic and Nitric Acids.
“ Subnit.	Dil. Nitric Acid.

T A B L E O F S O L U B I L I T Y .

<i>Medicines.</i>	<i>Dissolved by</i>
Bismuthi Valerian	Aqueous Sol. of Chloride Ammonia, Dil. Valerianic Acid.
Brucia.	Carbonic Acid Water. The Salts freely soluble in Glycerine.
Calx.	More readily dissolved by addition of Sugar.
Calcii Carb. Præc. " Phosphas.	Cold Aqueous Sol. Chlor. Ammon. Sol. Chloride. Ammonia, Dil. Phos- phoric Acid.
" Sulphis.	Solution of Sulphurous Acid.
" Sulphuret.	All Acids. Soluble in Glycerine.
Calumbin.	Addition of Alkalies.
Cantharidin.	Benzoic and Hot Acetic Acids, Boil- ing Oil of Turpentine.
Cerii Oxalas.	Aqueous Sol. of Chloride Ammonia, Excess of Muriatic Acid. De- composed by Nitric Acid.
Cinchonia.	Excess of Sulphuric Acid.
" Sulphas.	Do.
Cinchonidia.	Do.
" Sulphas.	Do.
Creta Præp.	Muriatic and other Acids.
Cubebin.	Acetic Acid, Fatty and Essential Oils.
Eupurpurin.	Sol. in Water by add'n of Alkalies.
Ferri Arsen.	Muriatic and Nitric Acids.
" Carbonas.	Aqueous Sol. of Chloride Ammonia, Carbonic Acid Water, Muriatic Acid.
" " Præc.	Do.
" " Sacch.	Muriatic and other Acids.
" Carburet.	Do.
" Ferrocyan.	Oxalic Acid, Concentrated Solution of Sulphuric Acid.
" Hypophos.	Muriatic Acid.
" Oxalas.	Oxalic and other Acids.
" Oxidum.	Hot Nitric and Muriatic Acids.
" Peroxid.	Hot Muriatic Acid.
" Phosphas.	Hot Muriatic Acid, Aq. Ammonia.
" Sulphuret.	Dil. Sulphuric and Muriatic Acids.
" Pyrophos.	Phosphoric and Citric Acids.

T A B L E O F S O L U B I L I T Y .

<i>Medicines.</i>	<i>Dissolved by</i>
Hydrargyrum.	All the Soluble Salts when rendered soluble become more or less decomposed, generally into a more poisonous salt.
" Ammoniat.	Nitric and Muriatic Acids, Aqueous Solutions of Nitrate, Acetate or Sulphate of Ammonia.
" Cum Cre. a.	Muriatic Acid.
" Iodid Rub.	Aqueous Solution Iodide Potass.
" " Vir.	Muriatic Acid, Partially (by decomposition) in Sol. of Iodide Potass.
" Nitras.	Muriatic, Nitric or Sulphuric Acid.
" Oxidum.	Aqueous Solution of Ammonia or Nitrate of Ammonia.
" Sulphas Flav	Muriatic Acid, Aqueous Solution of Chloride or Carbonate Ammonia.
" Sulphuret.	Dil. Sulphuric Acid, Sol. of Sulphate of Potass. or Sodium.
Ingluvin.	Decomposed by Dil. Nitric Acid, Boiling Concentrated Solution of Chloride of Copper.
Iodoformum.	Muriatic Acid added to Water.
Juglandin.	Soluble in 7 pts. Ether, Fixed Volatile Oils. Water precipitates it from Alcoholic solution.
Lithii Carbon.	Carbonic Acid Water, Aqueous Sol. of Ammoniacal Salts.
Magnesii Carbon.	Carbonic Acid Water, Cold Aqueous Sol. Chloride Ammonia.
" Phosphas.	Sulphuric and Phosphoric Acids.
" Tartras.	When fresh, Sol Chloride Ammon.
Manganesii Oxidum.	Acids, Heated Solution of Chloride of Ammonia
" Phosphas.	Sulphuric Acid.
Myricin.	Ether, Naptha, Oil of Turpentine.
Narcotina.	Soluble with combination in a Solution of Alcohol and Muriatic Acid, Cold Acetic Acid, Fatty and Essential Oils [Acid.
Pepsin.	Water, acidulated with Muriatic

T A B L E O F S O L U B I L I T Y .

<i>Medicines.</i>	<i>Dissolved by</i>
Phosphorus.	Sulphide of Carbon best, 1 in 20 absolute Ether.
Platini Bichlorid.	Muriatic Acid, Boiling Aqueous Sol. of Caustic Potash.
Plumbi Carbon.	Acetic Acid, Aqueous Sol. Acetate or Chloride Ammonia.
“ Iodidum.	Hydriodic Acid.
“ Nitras.	Dil. Nitric Acid.
“ Oxidum.	Nitric and Muriatic Acids, Boiling Sol. Acetate of Lead.
Podophyllin.	Dissolves with combinat'n in Aqueous Sol. of Caustic Alkalies.
Quinia.	Acidulated Waters.
“ Murias.	Do.
“ Sulphas.	Glycerine, Sulphuric Acid.
Quinidia.	Acidulated Waters.
Stanni Oxidum.	Acids, Slightly in Boiling Solution of Chloride Ammonia.
Strychnia.	Dil. and weak Acids, Essential Oils, Sol 1 in 100 pts. weak Alcohol.
Sulphur.	Chloroform, Naphtha, Oil of Turpentine.
“ Iodidum.	Glycerine.
Zinci Carbon.	Acids, Warm Aqueous Sol. Chloride of Ammonia.
“ Cyanid.	Dil. Mineral Acids, Alkalide Cyanides, Aqueous Sol. Coustic Ammonia or Petash.
“ Oxidum.	Acids.
“ Phosphas.	Phosphoric Acid.

Glycerine approaches very nearly to diluted Alcohol as a solvent, dissolving all deliquescent Salts several metallic Salts, as the Nitrates, Chlorides and Sulphates, the Alkalies and several metallic Oxides, and many vegetable Acids. A high temperature greatly increases its solvent power.

Alcohol is miscible in all proportions with Water, Wood Spirits, Chloroform and Ether. It is a good solvent for Resins, Ethers, Essential Oils,

Fats and Alkaloids, especially when hot in the case of the latter.

Ether dissolves many organic compounds, as Volatile Oils, Resins, Fats, Alcohol, and most of the Alkaloids.

INCOMPATIBLES AND ANTAGONISTS.

Incompatibles may be divided into three divisions, viz;

I.—**Chemical**—where substances so combine as to be inert (but may not be therapeutically so) or have distinct properties.

II.—**Pharmaceutical**—a combination of substances which are physically incapable of mixing.

III.—**Physiological and Therapeutical (Antagonists)**—a combination of substances which possess opposite therapeutic or physiological properties.

Absinthium—Acetates of Lead, Nitrate of Silver, Sulphates of Iron and Zinc, Tartar Emetic.

Acacia—Alcohol, Goulard's Extract, Nitric Acid, Tinct. Chloride of Iron.

Acidum Aceticum—Alkalies and their Carbonates, Alkaline Earths, Warm Water and Soap. Antagonists, Restoratives.

Acidum Arseniosum. See Arsenicum.

Acidum Citricum—Acetates of Lead, Alkalies, Alkaline Earthy Sulphurets and Carbonates, Acetate and Nitrate of Mercury. Antagonists, Restoratives.

Acidum Carbolicum—Chlorine, Mineral Acids, Metallic Salts, Red Oxide of Mercury, Sulphides, Saccharate of Lime, combined with Alkalies, lessens physiological actiuity.

Acidum Hydrocyanicum—Metallic Salts, Sulphides, Red Oxide of Mercury. Antagonists, Atropia, but it is too slowly diffused.

Acidum Lacticum—Alkalies, Mineral Salts.

Acidum Muriaticum, Nitricum, Nitro-Muriaticum—PHOSPHORIC AND SULPHURIC Alkalies, and their Carbonates; Salts of Lead, Lime, Mercury, and Silver.

Acidum Oxalicum—Magnesium and Calcium.

Acidum Salicylicum—loses its external anti-septic properties when combined with Alkalies Mineral Acids, Metallic Salts, Antagonized by arterial and cerebral stimulants.

Acidum Sulphurosum and Sulphites—Mineral Acids, including Sulphuric, Oxidizing substances; have great affinity for oxygen.

Acidum Tannicum—Alkalies, Albumen, Salts, Antimony, Lead and Silver, Persalts of Iron, Gelatin, Vegetable Alkaloids.

Acidum Tartaricum—Alkalies, Alkaline Earths and their Carbonates, Soaps. Antagonists, Restoratives.

Aconitum—Animal Charcoal, Tannin. Antagonists. Alcohol Ammonia, Ether, Digitalis, Turpentine and heat.

Aether—Its stimulating and anodyne properties are antagonized by Arterial Sedatives, Aconite, Antimony, Oxygen, Quinine, Strychnia, Tetanizing Alkaloids.

Alumen—Alkalies and their Carbonates, Acetate of Lead.

Ammonium its Preparations—*The Acetate, Vegetable and Mineral Acids, Potassium, Sodium, and their Carbonates; Salts of Lead and Silver, Metallic Sulphates; The Bromide, Acids, Acidulous and Metallic Salts. Antagonists, Cold, Ergot, Belladonna, Digitalis; The Benzoate, Acids, Liq. Potassæ, Persalts of Iron; Lime Water, Vegetable and Mineral Acids; The Chloride, Alkalies, Alkaline Earths and their Carbonates. Salts of Lead and Silver. Antagonists, Veratrum Viride, Aconite, Digitalis.*

Ammoniacum. *See Assafœtida.*

Amyl Nitrite — Antagonists, Belladonna, Brucia, Digitalis, Ergot, Strychnia, Picrotoxin.

Angustura — Acetates of Lead, Corros. Sublimate, Caustic Potash, Infus. of Galis. Nitrate of Silver, Sulphates of Copper and Iron.

Anthemis—Corros. Sublimate, Gelatin. Infus. of Galls, Nitrate of Silver, Salts of Iron and Lead.

Antimonium, its Preparations—Salts of Lead, Tannic and Gallic Acids, and Infusions containing them. Antagonists, Alcohol, Coffee, Ether, Opium, Tea.

Armoracia — Alkaline Carbonates, Corrosive Sublimate, Nitrate of Silver, Vegetable Bitters and Astringents.

Argenti Nitrás — Muriatic and Tannic Acids and their Salts, Soluble Chlorides and all substances containing them, Sulphuric, Muriatic, Tartaric and Sulphurous Acids and Salts of the same, Alkalies and their Carbonates, Antagonists, Restoratives.

Arnica—Acetates of Lead, Sulphates of Iron and Zinc: Antagonists, Ammonia, Alcoholic Stimulants, Camphor, Opium.

Arsenicum, its Preparations—Alkaline and Earthy Sulphurets, Astringents, Salts of Calcium, Iron and Magnesium.

Assafoetida—Acids, Neutral Salts, Arterial Sedatives.

Aurantii Gortex—Infus. of Bark, Lime Water, Sulphate of Iron.

Aurum, its Preparations—Milk, Eggs, Albumen, Flour.

Barii Chloridum—Alkalies, Alkaline Earths and their Carbonates, Alum, Nitrate of Silver.

Benzoinum—Acids, Alkalies.

Belladonna—Animal Charcoal, Caustic Alkalies, Tannin and Vegetable Astringents. Antagonists, Bromides, Calabar Bean, Conium, Digitalis, Gelsemium Jaborandi, Nitrite of Amyl, Opium, Tartar Emetic.

Bismuthi Nitratas—Alkalies, Vegetable Astringents.

Bistorta—Gelatin, Salts of Iron.

Bromides, of Ammonium, Calcium, Lithium, Potassium and Sodium—Acids, Acidulous and Metallic Salts Antagonists, Belladonna, Digitalis, Ergot, Hyoscyamus, Stramonium.

Caffein—Tannic Acid, Iodide of Potassium and Mercurial Salts, precipitate it from a watery solution. Antagonists, Antimony, Opium.

Calamus—Acetates of Lead.

Calcium, its Preparations. See Potassium.

Calumba—Ammonia, Acetates of Lead, Chloride of Iron, Lime Water, Mineral Acids, Nitrate of Silver. Antagonists, Catalytics.

Camphora—Alkaline and Earthy Salts, water precipitates it from a spirituous solution. Antagonists, Arnica, Coffee, Arterial Sedatives.

Cannabis, Americana and Indica—Acids, Caus-tic Alkalies. Antagonists, Strychnia, Far-a-dism.

Cantharis—No Chemical or Physiological An-tagonists.

Capsicum—Acetates of Lead, Alkaline Car-bonates, Corros. Sublimate, Nitrate of Silver, Sulphates of Copper, Iron and Zinc.

Cardamomum—Acids Corros. Sublimate, Sul-phate of Iron.

Caryophyllus—Sulphates of Iron and Zinc, Tartar Emetic.

Cascarilla—Infusions containing Tannic and Gallic Acids, Lime Water, Sulphate of Iron and Zinc.

Cassia Fistula—Alcohol.

Castanea Vesca—Alkalies, Mineral Acids, Persalts of Iron, Salts of Antimony, Lead and Silver, Vegetable Alkaloids from insoluble precipitates.

Catechu—Do.

Chloral—Alkalies decompose it. Antago-nists, Alcoholic Stimulants, Atropia, Belladon-na, Strychnia, Galvanism, Ammonia, Heat.

Chloroform—Separates from mixtures when prescribed with weak Spirits or Glycerine, Soluble in Alcohol 10 in 6, Ether 1 in 7, Water 1 in 200.

Cimicifuga—The preparation of it containing Tannic or Gallic Acids are incompatible with the Salts of Iron Antagonists, Gen. Stimu-lants as Alcohol and Ammonia.

Cinchona, its Alkaloids—Alkalies, Colchicum, Magnesium, Strong Acids, Sulphates of Iron

and Zinc, Substances containing Tartaric Acid in a free state should not be given in combination with the Decoction or Infusion, Tartar Emetic, Tincture and Compound Tincture of Iodine; Alkalies, Alkaline Carbonates and Earths, and the Carbonates will precipitate the Alkaloids from solution. Antagonists, Iodine, Iodides, Salts of Copper, Lead, Mercury and Zinc.

Coca—Metallic Salts and Muriatic Acid with the Infusion and Fluid Extract. Antagonists, Catalytics.

Coccus—Acetate and Sulphate of Zinc, Sulphate of Iron.

Colchicum—Acids which render the Tincture drastic, Alkalies render it milder in operation. Antagonists, Alcoholic Stimulants, Opium.

Colcoynth's—Acetates of Lead, Fixed Alkalies, Nitrate of Silver, Sulphate of Iron.

Conium—Caustic Alkalies, Tannic Acid. Antagonists, Atropia, Brucia, Nux Vomica, Strychnia, Picrotosin.

Contrayerva—*Tinct.* with water.

Copabla—Mineral Acids.

Coptis—Acetate of Lead, Nitrate of Silver, Antagonists, Catalytics.

Cornus Florida—Antagonists Catalytics.

Creasotum—See Acid, Carbolic.

Creta Präperata—Acids, Acidulous Salts, Alum, Chloride of Ammonium.

Cuprum, its Preparations—Alkalies, their Carbonates, Iodides. Lime Water. Mineral Salts (except the Sulphates), Vegetable Astringents.

Curara—Caustic Alkalies destroy; Antagonists Strychnia and Atropia.

Cydonium—Acids, Alcohol, Metallic Salts.

Digitalis—Cinchona, its various preparations; Sulphate and Tincture of the Chloride of Iron, Tannin, Acetate of Lead, Vegetable Astringents. Antagonists, Aconite, Atropia, Bromides, Gelsemium, Lobelia, Pulsatilla, Verat. Viride.

Duboisa—See Belladonna.

Ergota—Caustic Alkalies and Metallic Salts. Antagonists, Aconite, Bromides, Nitrate of Amyl, Verataum Viride, Tobacco, Lobelia.

Eucalyptus Globulus—Alkalies, Mineral Acids, Salts of Iron, Lead Mercury and Zinc. Antagonists, Catalytics.

Ferrum, its Preparations—*Carbonas*, Acids, Acidulous Salts, Vegetable Astringents; *Caloridi Tinct.*, Alkalies, their Carbonates; Solutions of Gum, Carbonate of Magnesium, Vegetable Astringents; *Citras and Tartras*, Alkalies and their Carbonates, Mineral Acids, Vegetable Astringents; *Sulphas*, Acetates of Lead, Alkalies and their Carbonates, Borate of Sodium, Iodide and Nitrate of Potassium, Lime Water, Nitric Acid, Nitrate of Silver.

Calla—Alkalies and their Carbonates, Corros. Sublimate Lime Water, Salts of Bismuth, Iron, Lead and Zinc, Tartar Emetic, Vegetable Alkaloids.

Gelsemtum—Caustic Alkalies, Tannin, Antagonists, Ammonia, Alcoholic Stimulants, Belladonna, Digitalis, Gen. Stimulants.

Gentiana—Salts of Lead and Silver, Sulphate of Iron. Antagonists, Alcohol, Opium, Strychnia.

Granatum—Sulphate of Iron.

Grindelia—Water precipitates the Oleoresine, Caustic Alkalies, Mineral Salts. Antagonists, Alcohol, Opium, Strychnia.

Guaiaci, Tinctura—Earthy and Metallic Salts, Mineral Acids, Sweet Spirits of Nitre, Water.

Hamamelis Virginica. See Castanea Vesca.

Heuchera. Do.

Hæmatoxylon. Do.

Hydrargyrum, its Preparations—*Ammoniatum*, Fixed Alkalies, Mineral and other Acids; *Chloridum Corros.*, Alkalies and their Carbonates, Acetates of Lead, Albumen, Fixed Oils, Glutin, Gelatin, Iodide of Potassium, Lime Water, Nitrate of Silver, Tartar Emetic, Vegetable Astringents; *Chloridum Mite.*, Alkalies, their Chlorides and Carbonates; Alkaline Earths, Salts of Copper, Iron or Lead; Iodine, Iodide of Potassium or Nitro-Muriatic Acid should not be prescribed in connection with it; *Oxidum, Flavum and Rubrum*, Mineral and Vegetable Acids; *Iodidum, Rubrum and Viride*, Mineral Acids, Soluble Chlorides and Iodides; *Cum Creta*. Acidulous Salts, Alum, Mineral and Organic Acids.

Hydrastis — Alkalies, Tannic and Organic Acids.

Hyoscyamus, See Belladonna.

Ingluvin. See Pepsin.

Iodinium, and Iodides—Alkalies Metallic Salts, Mineral Acids, Starch, Vegetable Alkaloids, Antagonists, Quinine, Digitalis, Restoratives and Vaso-Motor Tonics.

Ipecacuanha — Salts of Lead and Mercury, Vegetable Acids and Astringents. Carbolic and Prussic Acids Bismuth and Narcotics, hinder its action.

Jaborandi—Caustic Alkalies, Metallic Salts, Persalts of Iron. Antagonist, Belladonna.

Kino—Acetates of Lead. Gelatin, Mineral Acids, Salts of Iron, Tartar Emetic.

Krameria—Do.

Lithii Carbonas and Citras—Acids, Acidulous and Metallic Salts.

Lobelia—Caustic Alkalies. Antagonists, Alcohol, Ammonia, Belladonna, Digitalis, Ergot, Strychnia.

Magnesia, its Preparations—Acids, Acidulous and Metallic Salts, Chloride of Ammonium; *Carbonas*, the same, and Bitartrate of Potassium, Lime Water; *Sulphas*, Acetates of Lead, Ammonia, Carbonates of Potassium and Sodium, Chloride of Potassium, Lime Water.

Maganesium, its Preparations—Caustic Alkalies, Salts of Lead, Mercury and Silver, Vegetable Astringents.

Morphia, its Salts. See Opium.

Moschus—Corros. Sublimate, Infusions of Bark, Mineral Acids, Nitrate of Silver, Sulphate of Iron.

Muscaria—Antagonized by Atropia.

Myrica Cerifera. See Castanea Vesca.

Nitro-Glycerine—Antagonized by Strychnia, Ergot, Belladonna and Digitalis.

Nux Vomica—Tannin. American Hemp, Belladonna, Bromides, Calabar Bean, Chloral, Chloroform, Ether, Indian Hemp, Nitrite of Amyl, Opium, Tobacco, Woorara.

Opium—Acetate of Lead, Alkalies and their Carbonates, Astringent Infusions, Lime Water, Fowler's Solution, Nitrate of Silver, Salts of Copper, Iron, Lead, Mercury and Zinc. An-

tagonists, Antimony, Arnica, Atropia, Belladonna, Coffee, Colchicum, Pulsatilla, Sanguinaria, Strychnia, Tea.

Pepsin — Alkalies, Salts of Copper, Lead, Mercury and Zinc, which precipitate it from solution; Tannin and Gallic Acids, Creasote and Alcohol in sufficient strength to destroy its activity.

Pancreatinum— Do.

Phosphorus—Commercial Turpentine, Lime Water, Hydrated Magnesia, Charcoal, Cupri Sulph.

Physostigma—Caustic Alkalies, Tannin, Vegetable Astringents. Antagonists, Atropia, Datura, Chloral and Tetanizing agents.

Phytolacca—Antagonists, Alcohol, Ether, Digitalis, Strychnia, Opium.

Picrotoxin. See Nux Vomica.

Pimenta—Alum, Alkaline Carbonates, Ammonia, Salts of Copper, Iron, Silver and Zinc; Vegetable Astringents.

Piper—Vegetable Astringents.

Plumbum, its Preparations—Alkalies, Albuminous Solutions, Iodide of Potassium, Metallic Salts, Natural Waters containing Carbonates, Sulphates and Carbonic Acid, Vegetable and Mineral Acids. Preparations of Opium, Vegetable Astringents.

Potassium, its Preparations—*The Alkaline Preparations*, Acids. Acidulous Salts, Sulphates of Sodium and Magnesium; *Arsenitis Liquor*, Acids, Alum, Chloride of Alum and Calcium, Iodides of Iron, Lime Water, Nitrate of Silver, Sulphates of Copper, Iron and Magnesium, Vegetable Astringents; *The Bromide*. Acids, Acidulous and Metallic Salts. Antagonists,

Cold, Ergot, Digitalis, Belladonna; *Cyanidum*, Acids, decompose it and set free Hydrocyanic Acid; *Sulphas*, Acetates of Lead, Corros. Sublimate, Chloride of Calcium, Nitrate of Silver, Tartaric Acid; *Sulphide*. Mineral Acids, Solutions of Metals, Sulph. of Iron, Chlorides.

Pulsatilla—Caustic Alkalies, Metallic Salts, Tannin. Antagon., Alcohol, Digitalis, Opium.

Quassia—Acetates of Lead, Nitrate of Silver. Antagonists, Catalytics.

Quercus. See *Castanea Vesca*.

Quinia. See *Cinchona*.

Resorcin. See *Acid. Salicylicum*.

Rheum—Corros. Sublimate, Lime Water, Strong Acids, Sulphates of Iron and Zinc, Tartar Emetic.

Rosa Gallica—Gelatin, Lime Water, Sulphates of Iron and Zinc.

Rubus. See *Custanea Vesca*.

Salix—Alkaline Carbonates, Lime Water, Solution of Isinglass, Sulphate of Iron.

Sanguinaria. See *Pulsatilla*.

Sapo—Liniments containing it, Alum. Chloride of Calcium, Lime Water, Metallic Salts, Sulphates of Calcium and Magnesium.

Sarsaparilla—Acetates of Lead, Infusion of Galls, Lime Water; Free Iodine should not be prescribed with it; Alkalies favor decomposition of the Decoction and Fluid Extract.

Scilla—Acetates of Lead, Alkaline Carbonates, Lime Water, Nitrate of Silver.

Senna—Alkaline Carbonates, Lime Water, Strong Acids, Tartar Emetic.

INCOMPATIBLES AND ANTAGONISTS.

Serpentaria—Acetates of Lead, Salts of Iron with the preparations of it containing Tannin. Antagonists, Arterial Sedatives, Depressants, Ergot.

Sodium. See Potassium.

Spiritus Aetheris Nitrosi--Alkaline and Earthly Carbonates, Sulphates of Iron, Tincture of Guaiac.

Stramonium. See Belladonna.

Strychnia. See Nux Vomica.

Sulphides—Mineral Acids. Solutions of Metals generally, Chlorine Water.

Tabacum. See Lobelia.

Tamarindus—Alkaline Carbonates, Lime Water, Salts of Potassium, Tartar Emetic.

Taraxacum—Acetates of Lead, Corros. Sublimate, Infusion of Galls, Nitrate of Silver, Sulphate of Iron.

Thea—Gelatin, Lime Water, Salts of Iron. Antagonists, Antimony, Opium.

Tormentilla—Alkalies, Salts of Iron, Solution of Isinglass.

Tragacantha—Acetates of Lead, Alcohol, Sulphates of Copper and Iron.

Trimethylamine—Alkalies, Metallic Salts. Mineral Acids, Vegetable Astringents. Antagonists, Belladonna, Digitalis, Opium, Stimulants.

Ulmus—Alcoholic Tinctures if added in quantity.

Uva Ursi—Gelatin, Salts of Iron, Tartar Emet.

Valeriana—Antagonists, Digitalis, Ergot, Quinine.

Veratrum, Album and Viride—Antagonists, Alcoholic Stimulants, Ammonia, Digitalis, Opium and dry heat.

Zincum, its Preparations—Alkalies and their Carbonates, Lime Water; Acetates of Lead with a solution of the *Sulphate of Zinc*; Acids, many Metallic Salts and Soluble Carbonates, Vegetable Astringents with the *Valerianate of Zinc*; Milk, Mucilages, Common Soap, Tannic Acid.

Laws of Chemical Incompatibility.

I. Two salts in solution may form by the interchange of their acids and bases, two insoluble salts which are precipitated, or a soluble and insoluble salt, the latter will generally be precipitated, or may form with the soluble salt a double salt.

II. When two salts in solution do not give rise to an insoluble salt, no precipitate will result, though there may be decomposition.

III. An acid will decompose a salt—

(a) If the acid added be more fixed or more soluble than that of the salt.

(b) If the acid added can form an insoluble or less soluble compound with the base of the salt.

(c) If the acid added possesses a greater affinity for the base of the salt.

(d) If the acid of the salt be gaseous.

ERUPTIVE FEVERS. —

<i>Names.</i>	<i>Incubation.</i>	<i>Day of Rash.</i>	<i>Character of Rash.</i>	<i>Rash fades.</i>	<i>Duration.</i>
Measles. <i>Rubeola.</i>	10 to 14 days.	4th day of fever, after 72 hours' illness.	Small red like dots, resembling flea bites, first appearing on temples and forehead, forming blotches with semilunar borders.	On 7th day of fever.	6 to 10 days.
Scarlet Fever. <i>Scarlatina.</i>	1 to 6 days, occasionally 21 days.	2nd day of fever, after 24 hours' illness.	Bright scarlet, rapidly diffused, first on chest and upper extremities.	On 5th day of fever.	8 to 9 days.
Typhus Fever. <i>Ship Fever.</i>	1 to 12 days.	4th to 7th day.	Mulberry colored maculæ general and abundant over abdomen, extending to extremities.		14 to 21 days.
Typhoid Fever. <i>Enteric Fever.</i>	10 to 14 days, or suddenly.	7th to 14th day.	Rose colored papules elevated, few in number limited to trunk, fresh spots persisting to occur during career.		22 to 30 days.

ERUPTIVE FEVERS.

<i>Names.</i>	<i>Incubation.</i>	<i>Day of Rash.</i>	<i>Character of Rash.</i>	<i>Rash fades.</i>	<i>Dura-tion.</i>
Small Pox. <i>Variola.</i>	10 to 14 days.	3d day of fever, after 48 hours' illness.	Small round red hard pimplies forming vesicles (<i>umbilicated</i>), then pustules, first appearing on face and wrists.	9th d'y scabs form and about 14th day fall off.	14 to 21 days.
Chicken Pox. <i>Varicella.</i>	4 days.	2d day of fever, after 24 hours' illness.	Small rose vesicles which do not become pustular.	Slight scab of short duration.	6 to 7 days.
Erysipelas.	3 to 7 days.	2d or 3d	Diffused redness either of a dusky or yellowish hue with swelling.		
Roseola.	6 to 10 days.	After 12 or 36 hours' illness.	Rose colored spots not elevated, occurring irregularly at different points.	From 24 to 48 hours.	

Period of Isolation—of persons infected with these diseases : Diphtheria, Measles, Scarlet Fever, Small Pox, 40 days; Chicken Pox and Mumps, 25 days. These periods count from the inception of the disease, including the period of incubation. Before pronouncing the isolation over, the patient should be bathed.

INDEX OF DISEASES AND APPROPRIATE REMEDIES.

Abscess.—Belladonna; Camphorated Oil and Alcohol; Carbolic Acid; Counter-irritation; Leeches; Nit. of Silver; Oleate of Mercury and Morphia; Poultice; Permanganate of Potassium; Salicylic and Boracic Acids; Sulphides, Sulphites and Phosphates; Tr. Iodine.

Acidity.—Acids, before meals; Alkalies; Bismuth; Lactic and Sulphurous Acids; Ipecac and Nux Vomica; Lime Water.

Acne.—Arsenic; Alkaline Lotions; Bismuth; Corrosine Sublimate; Hot Sponging; Iodide or Sublimed Sulphur; Saline Waters; Sulphurous Acid.

After Pains.—Chloral; Camphor; Gelsemium; Morphia and Atropia; Cimicifuga.

Ague, Intermittent Fever. — Arsenic; Apiol; Cinchona and its preparations; Eucalyptus; Hydrastis; Cornus Flor.; Salicin; Iodide of Potassium.

Albumenuria. See Bright's Disease.

Alcoholism.—Bromides; Chloral; Cinchona; Capsicum; Hyoscyamus; Opium; Oxide of Zinc; Lupulin; Nux Vomica.

Amenorrhœa.—Aconite; Aloes; Apiol; Arsenic; Cimicifuga; Ergot. Guaiac; Hot Sitz Bath; Iron; Rue; Pennyroyal; Pulsatilla; Savin; Sanguinaria; Serpentaria.

Anæmia.—Acids; Arsenic; Cold Sponging; Cod Liver Oil; Chalyheate Waters; Hypophosphites; Iron; Manganese; Malt Liquors;

Nux Vomica; Pepsin; Quinine; Phosphorus; Pure Air; Phosphates and Lacto-Phosphates.

Anæsthetics.—Morphia Hypodermically facilitates inhalation, lessens danger and prolongs anaesthesia; Whisky before inhalation sustains heat.

Aneurism.—Aconite; Acet. Lead.; Denutrition; Ergot; Electrolysis; Iodides; Veratrum Viride.

Angina Pectoris.—Aetherization; Amyl Nitrite; Arsenic; Colchicum; Electricity; Mustard Plasters; Opiates; Nitro-Glycerine; Phosphorus; Prussic Acid Dil.

Aphonia.—Atropia; Blisters; Camphor Liniments or Mustard Plasters; Electricity; Vitric Acid; Shower Bath.

Aphthæ.—Bismuth; Borax; Coptis; Chlorate or Iodide of Potassium; Muriatic, Carbolic or Sulphurous Acid; Quinine; Sulphides.

Apoplexy.—Aconite; Bleeding; Calomel; Colocynth; Croton Oil, gtt. $\frac{1}{4}$ -1, every hour until movement; Cold to head; Cool, airy room; Head moderately raised; Stimulants; Stimulating and warming applications to extremities.

Ascites.—Apocynum Cannabinum; Copaiba Resin; Comp. Jalap Powder; Elaterium; Dry Diet; Jaborandi; Stillingia; Tap Abdomen.

Asthma.—Aconite; Amyl Nitrite; Aether or Chloroform; Arsenic; Alum; Assafœtida; Belladonna; Chloral; Cimicifugia; Coffee; Cod Liver Oil; Eucalyptus; Grindelia Robusta; Gelsemium; Ipecac; Indian Hemp; Iodide of Potassium; Hyoscyamus; Lobelia; Narcotics; Cigarettes of Stramonium. Arsenic, etc., Nitro-Glycerine; Pilocarpin; Quinine; Strych-

nia; Medicated Sprays; Stramonium; Turpentine Stupes; Zinic Oxid and Tartar Emetic.

Asphyxia of Infant after labor.—If cord pulsates it should not, as a rule, be tied for at least one quarter of an hour; but if the child appears to be in an apoplectic condition, as shown by great swelling and lividity of countenance, the cord should be divided at once, and two or three teaspoonsful of blood allowed to escape; expose the face to the air, sprinkle it with cold water. Wet trunk and limbs with brandy, then rub them briskly with flannels. Artificial respiration; Galvanism; Remove mucous or clog of any kind from the mouth; Tickle the fauces; Dip child into cold, then into warm bath.

Astigmatism.—Atropia; Duboisia.

Balanitis.—Cleanliness, and cover sores with cotton wool; Solutions of Alum, Nit. of Silver and Tannin; Bismuth and Starch.

Barber's Itch.—See Tinea Sycosis.

Bed Sores.—Alcohol Wash to shin; Alum with Tr. Camphor and White of Eggs; Charcoal Application; Remove pressure.

Biliousness.—See Hepatic Disorders.

Bites, Poisoned.—Alcohol and Ammonia internally; Caustic Potash, Nit. Silver and Bromine locally.

Blad'er, Diseases of.—**Cystitis.**—Alkalies; Buchu; Belladonna; Copaiba; Cubebs; Eucalyptus; Hydrastis; Juniper; Hot Enema; Ice in rectum; Suppositoris; Tr. Cantharidis; Turpentine; Uva Urisi. **Irritable.**—Alkalies; Belladonna; Benzoate of Ammonia; Camphor; Cantharis; *Fir*ealyp*tus*; *Hyos*cym*amus*. **Boils.**—Arsenic; Phosphates; Sulphides; Sulphurous Washes.

*Cystitis
vegetal or alpine best of
potassium muriatic*

Brain.—**Diseases of.**—**Anæmia.**—Eucalyptus; Guarana; Phosphorus; Serpentaria and Camphor; Valerian; Horizontal position. **Hyperæmia.**—Bleeding; Bromides; Chloral; Cold to Head; Colchicum; Derivatives to skin and bowels; Gelseminum. **Inflammation.**—Bleeding; Blisters; Cold to Head; Cupping; Cathartics. **Over-Taxed.**—Bromides; Chloral; Phosphorus. **Softening.**—Phosphorus.

Bright's Disease.—**Albumenuria.**—aconite; Cannabis Indica; Chloride of Gold; Diaphoresis; Digitalis; Ergot; Elaterium for Dropsy; Hydrastis; Iron; Jaborandi; Lead; Gallic Acid; Iodide of Potassium; Nitro-Glycerine; Quinine; Scoparius.

Bronchitis.—Arsenic; Amber Oil; Balsams of Fir, Peru or Tolu; Brown Mixture; Cimifuga; Carbonate or Chloride of Ammonia; Co. Iron Mixture; Cod Liver Oil; Copaiva; Digitalis; Dover's Powder; Hot Grog, at bed time, and good sweat; Expectorants; Ipecac; Lobelia; Nitric Acid, Dil. in 10 drop doses in Chronic; Opiates; Phosphates; Iodides; Quinine; Senega; Serpentaria; Squill; Tar; Tartar Emetic; Yerba Santa.

Bronchorrhœa.—Carbolic Acid; Carbonate and Chloride, Ammonia; Copaiba; Benzoin; Cod Liver Oil; Alcoholic Stimulants; Grindelia Rob.

Bubo.—Ice to part; Iodine; Iodoform to broken; Nitric Acid; Poultices; Sulphides.

Burns and Scalds.—Carbolic Acid, 1 per cent. solution; Collodion Flexile; Boracic Acid; Carbonate of Lead; Lime Water and Sweet Oil; Palm Oil; Phytolacca; Solutions of Carbonate of Sodium or Potash; Turpentine.

Calculi.—**Renal.**—Alkalies; Benzoate of Ammonia for Phosphatic; Pleuritics; Fomenta-

tions; Hydrastis; Mineral Acids; Narcotics; Nitric and Tartaric Acids when phosphatic.
Biliary.—Anæsthetics; Carbonates; Ice Bag; Hot Fomentations; Morphia and Atropia hypodermically; Phosphate of Sodium persistently; Turpentine and Ether; Avoid starchy, sweet and fatty foods.

Cancer.—Anodynes; Arsenic; Bismuth; Bisulphide of Carbon and Pepsin when of stomach; Caustic Potash; Carbolic Acid; Conium with poultice; Chromic Acid; Iodoform; Sulphate or Chloride of Zinc.

Carbuncle.—Belladonna. Free radiating incisions; Iodine; Phosphates; Sulphides. Sulphites.

Caries.—Cod Liver Oil; Carbonate and Chloride of Calcium; Stimulating Injections in Sinus; Phosphates; Sulphuric Acids.

Catarrh.—**Coryza.**—Hot Alcoholic drinks at bed time; Alum; Ammonia and Camphor inhaled; Arsenic; Assafœtida; Aconite; Cod Liver Oil; Belladonna; Chloride of Ammonia; Dover's Powder; Ipecac; Pulsatilla; Quinine; Tartar Emetic.

Cerebro-Spinal Meningitis.—Aconite; Ergot; Gelsemium; Mercury; Opium in full doses; Pulsatilla; Quinine; Cold Baths; Veratrum Viride.

Chancroid, Soft Chancre.—Black and Yellow washes; Caustics to destroy Nitric Acids the best; Iodoform; Iodide of Iron internally when sloughing; Poultices; Wash frequently; Rx Cubri Sulph. 3*i.* Sage 3*i.* Boiling Water Oil apply to chronic form.

Chicken Pox.—Abstention from animal foods; Regulate functions of bowels and keep patient cool; Treat symptoms on general principles.

Chilblains.—Bals. Peru; Carbolic Acid; Cooling Ointments and Lotions; Sulphurous Acid; Turpentine.

Chlorosis.—Arsenic; Chalybeate Waters; Iron; Manganese; Nux Vomica; Oils and Fats; Pepsin; Pancreatin; Wines.

Cholera. — Asiatic. — Astringents; Atropia; Camphor; Calomel; Chloroform; Carbolic Acid; Chloral; Cardial Stimulants; Hot Applications to Abdomen; Opiates; Small pieces of Ices frequently sucked; Hypodermic injections of Morphia, Tea and Coffee; Strychnia. **Infantum.** — Acetate of Lead; Bismuth; Bromide of Potassium; Calomel; Camphor; Coffein; Creasote; Carbolic Acid; Chloral; Hot Applications and Warm Baths; Ipecac; Opium; Nit. of Silver; Oxide of Zinc; Sulphate of Copper; Vegetable Astringents; Avoid excessive nursing or drinking. **Morbus**—Acetate of Lead; Arsenic; Bismuth; Chloral; Carbolic Acid; Calomel; Emetics; Morphia and Atropia hypodermically; Opium; Restrict Liquid; Spinal Ice Bag.

Chordee. — Aconite; Belladonna and Camphor; Bromides; Cannabis Indica; Chloral; Colchicum; Cantharis; Lactuearium; Lupulin; Morphia and Atropia.

Chorea. — Aconite; Arsenic; Anthelmintics where worms; Assafœtida; Calabar Bean; Camphor, especially the monobrom; Cerium Oxal; Chloral; Conium; Cimicifuga; Cannabis Indica; Eucalyptus; Iron; Picrotoxin; Oxide, Sulphate and Valerianate of Zinc; Strychnia.

Colic, — Bilious. — Anodynes and Anæsthetic; Calomel; Emetics; Morphia and Atropia Hypodermically; Nitro-Glycerine. **Flatulent.** — Assafœtida; Carminatives; Camphor; Chloroform; Opiates; Friction and warm applica-

tions to Abdomen. **Lead, or Painter's.**—Anodynes; Alum; Croton Oil; Iodides or Bromides; Sulphuric Acid Lemonade, Sulphurous baths: Epsom Salts.

Coma.—Blisters and Mustard Plasters; Cathartics; Croton Oil; Diaphoretics; Diuretics in urarmia; Cold Douche when from Opium or drunkenness.

Condylomata. — Alum; Black or Yellow washes: Calomel; Chromic, Carbolic or Nitric Acids; Iodoform.

Confinement, Labor. — Cimicifuga, Cotton Root, Ergot or Quinine to strengthen uterine contractions; Opiates, Chloral and Gelsemium for after pains.

Conjunctivitis.—Atropia; Alum; Bismuth; Calomel dusted in; Cleanse eye frequently; Ergot Ext. Fl. applied; Solution of Sulph. Zinc; Nit. Silver, Sulph. Copper, Tannin.

Constipation.—Aloes, Colocynth, Physostigma, Podophylin where there is torpor; Arsenic; Assafœtida; Belladonna; Castor Oil; Croton Oil; Enemata; Salts laxative; Gamboge; Jalap; Juglans; Nux Vomica as adjuvant.

Consumption.— See Phthisis.

Convulsions. — Assafœtida; Aetherization; Bromides; Chloral; Enemata; Ice to head; Mustard baths; Morphia; Spinal Ice Bag, Verat. Viride.

Cough. — Assafœtida; Alum Spray. Belladonna; Chloral; Chloroform; Cod Liver Oil; Castanea Vesca; Gelsemium; Grindelia Rob.; Hydrocyanic Acid. Dil; Ipecac; Opiates; Senega; Tonics; Wild Cherry Bark.

Croup.—See also **Laryngismus Stridulus.**—Aconite, 5ss.; Cold Compresses; Emetics; Lactic Acid by Atomizer; Leeches 2 to 5 in early stages;

Mercurials; Turpeth Mineral; Steam vapor in room; Poultices; Quinine; Stimulants; Tar-tar Emetic, Sulph. of Copper or Zinc.

Cystitis.—See Bladder, Diseases of.

Debility.—Alcoholic Stimulants; Cinchona; Cod Liver Oil; Eucalyptus Glob.; Hypophosphites; Phosphorus; Iron; Quinine; Strychnia; Vegetable Bitters.

Delirium.—Belladonna; Bromides; Chloral; Chloroform; Digitalis; Opiates; Hyoscyamus; Quinine; Cannabis Indica.

Diabetes—Abstinence from all amylaceous foods; Alkaline Waters; Arsenic; Belladonna; Bromides; Colchicum; Chloride of Gold; Ergot; Lactic Acid; Nux Vomica; Opium.

Insipidus.—Ergot; Jaborandi; Iodide of Potassium; Valerian; Nux Vomica;

Diarrhoea.—Alkalies when acidity; Alum; Acet. of Lead; Camphor; Capsicum; Chalk; Bismuth; Calomel and Gray Powder in Infants; Coto Bark; Columbo; Catechu; Ergot; Iron; Nitrate of Silver; Oxide and Sulph. of Zinc; Sulphate Copper; Tannic; Sulphuric Acid in profuse watery stools.

Diphtheria.—Alcoholic Stimulants; Belladonna; Chlorate of Potassium; Benzoate of Sodium; Lactic Acid or Tannin Spray; Quinine, Salicylic Acid and Resorcin internally; Sulphur and Alum in equal parts applied; Ice, sucked or applied; Strychnia for paralysis; Vapor of slackening Lime; Iron.

Dropsy.—Acet. or Bitart. of Potassium; Blisters; Copaiba, the resin; Colchicum; Dry Diet; Digitalis; Elaterium; Erigeron; Jaborandi; Juniper; Iron; Squill; Scoparius.

Dysentery.—Acet. Lead; Arsenic; Alum; Catechu; Calomel and Opium; Bismuth; Ergot;

Emollients; Fomentations; Hamamelis; Ipecac; Opium and Sweet Oil; Rhatany; Sulphate of Copper or Zinc; Turpentine; Vegetable Astringents.

Dysmenorrhæa. — Aconite; Arsenic; Amyl Nit.; Apiol; Belladonna; Camphor; Cannabis Indica; Cimicifuga; Ergot; Guaiac; Galvanism; Gelsemium; Hyoscyamus; Iron; Nux Vomica; Opiates.

Dyspepsia. — Alcoholic drinks; Absinthium; Alkalies; Alteratives; Arsenic; Aletris; Bitters Simple; Bismuth; Charcoal; Chalybeate waters; Creasote; Cod Liver Oil; Eucalyptus, Hydrastis; Hops; Mineral Acids; Nux Vomica; Pepsine; Oxide of Silver; Quinine; Sulphurous Acid Dil.

Ear, Diseases of. — Inflammation, Aconite; Syringing with hot water 100° to 110°. **Ache.** — Solution of Morphin and Atropia in Ear.

Ecthyma. — Cod Liver Oil; Iodide of Iron or Potassium; Black or Yellow wash; Quinine.

Eczema. — Boracic, Carbolic or Salicylic Acids locally; Arsenic, in Chronic; Alteratives; Sulphur baths and Sulphides, after acute stage; Applications of Sulph. of Copper or Zinc, Tannin and Nit. Silver; Oleate of Zinc.

Emphysema. — Arsenic; Chloral; Chlorate or Bromide of Potassium; Cod Liver Oil; Grindelia Rob; Hypophosphitis; Prussic Acid Dil.; Strychnia.

Empyema. — Iodine, Carbolic Acid and Chlorine solution to wash out cavity; Quinine; Stimulants.

Epididymitis. — Antimonials; Brisk Cathartic; Cooling Lotion of Ammon. Chl. or Acet. Lead

and Opium; Rest and support testicle; Ice; Leeches.

Epilepsy.—Arsenic; Amyl Nit.; Bromides; Belladonna; Cannabis Indica; Chloral; Salts of Copper, Zinc and Silver; Strychnia; Iron; Physostigma; Musk.

Epistaxis. — Plug Anterior and Posterior Nares; Digitalis; Ergot; Applications of Tannin, Turpentine or Astringent Salts of Iron; Insufflation of powdered Tannin.

Erysipelas.--Aconite; Belladonna; Benzoates, Salicylates and Resorcin; Carb. Ammon. as Stimulant; Iron, large doses; Oily inunctions; Salines; Sulphides; Quinine.

Erythema.—Belladonna; Bismuth; Mineral Acids; Quinine; Lotions of Alum and Lead.

Excoriations.—Bismuth, Chalk, Lycopodium and Starch applied to surface.

Faintings, Syncope. — Alcohol; Ammonia or Volatile Stimulants when enfeeblement of Heart; Cold Water thrown on face, patient leaning forward, head low.

Feet, Fetur of.—Bicarb. Sodium; Permang. Potassium, Saticylic Acid dusted over feet.

Felon.—See Whitlow.

Fissure of Anus.—Hydrastis, Iodoform and Iodo-Tannin applied. **Of Nipples.**—Lig. Ferri. Subsul. et Glycerine, Tannin, Tr. Benzoin, Brandy and Collodion applied.

Flatulence.—Abstinence from fatty and starchy Foods; Bismuth; Belladonna; Charcoal; Creasote; Carbolic Acid; Calumbo; Chloroform; Camphor; Essential Oils; Hoffman's Anodyne; Nux Vomica; Physostigme; Turpentine.

Gangrene.—Carbolic, Salicylic and Chromic Acids: Bromine, Chloride Zinc and Nitric Acid as Escharotics; Caustic Potash and Sulphurous Acid; Turpentine.

Gastralgia.—Alum; Atropia; Arsenic; Bismuth; Blisters; Ether; Chloroform; Morphia; Nux Vomica; Nitro-Glycerine; Oxide of Zinc; Prussic Acid Dil.; Pepsin; Sulph. Manganese.

Gastric Catarrh.—Alum; Arsenic; Acetate of Lead, Columbo; Cinchona; Chloride of Ammonia; Eucalyptus; Oxide and Nitrate of Silver; Nux Vomica; Quassia; Tannin.

Gastric Ulcer.—Arsenic; Acetate of Lead; Atropia; Bismuth; Corros. Sublimate; Oxide of Silver; Morphia.

Glands, Lymphatic.—**Affections of.**—Cod Liver Oil; Iodides; Chloride of Calcium; Red Iodide of Mercury; Iodide of Lead Ointment; Sulphides; Jaborandi.

Gleet.—Copaiba; Cod Liver Oil; Dilate by Sounds; Iron; Irrigation; Storax; Turpentine; Injections of Urethra.

Goitre.—Dil. Biniodide of Mercury Ointment; Iodide locally; Iodine of Potassium.

Gonorrhœa.—Alkalies to render the urine neutral or slightly alkaline; Buchu; Copaiba in chronic; Cubebs in large doses combined with the Bitart of Potassium at the beginning; Colchicum; Cannabis Indica diminishes local inflammation and lessens pain and irritation; Hydrastis after acute stage; Kava Kava; Matrico; Oil of Sandalwood or Red Saunders; Rest and quiet; Turpentine; Injections of Rx Acidi Tannic, grs. ii-x, Tinet. Iodinii gtt. x, Aquæ ʒi.—Rx Aluminis ʒss i, Aquæ, ʒiv.—Rx Argenti Nitratis gr. 1. Aquæ ʒi-vi.—Rx Bismuthi Subnit. ʒss-i, Pulv. Acaciæ ʒiss, Aquæ

3 vi. — **R** Cupri Sulphatis grs. iv, Morphiæ Sulph. grs. viii, Liq. Plumbi Subacet. 3i, Aquæ Rosæ 3iv, after acute stage.—**R** Ferri Sulphatis grs. xii, Tinct. Opii 3ss, Aquæ 3viii.—**R** Olei Copaibæ 3ii, Pulv. Acaciæ 3iii, Aquæ 3iss, in subacute stage.—**R** Potassii Permang. grs i-iv Aquæ 3i. — **R** Tinct. Ferri Chlor. 3ss, Tinct. Opii 3i, Aquæ Oi.—**R** Zinci Sulphatis grs. i-iii, Aquæ 3i. — **R** Zinci Sulphatis grs. viii, Liq. Plumbi Subacet. dil. 3iv.—**R** Acid Boracic, grs. 8-15, Aq. 31.—**R** Zinci Permang. grs. 1/4-1 Aq. 3i.—**R** Zinci Sulph. gr. iv, Plumbi Acet. grs. viii, Tr. Catechu 3i, Aq. 3ii. Urethral suppositories of Oil of Eucalyptus, Iodoform and Morphia; Irrigation of Urethra with water of temperature of 100° to 112° F., or medicated solution of Zinci Sul. 3i, Tr. Catechu 3ii p, Aq. 110° F., 3 20.

Gout.—Alkalies; Aconite; Colchicum; Salts of Lithium or Manganese; Light Diet; Iodide of Potassium; Salicylic Acid; Sulphurous Waters or Baths; Keep part warm and elevated.

Gums, Spongy or Bleeding of.—Alum; Glycerite of Tannin; Benzoin; Resorcin.

Hæmatemesis.—Astringents: Alum; Acet. Lead; Ergot; Gallic or Tannic Acids; Monsel's Solution; Turpentine.

Hæmaturia.—Citrate of Potassium; Ergot; Gallic or Tannic Acids; Hamamelis; Rhatany; Quinine; Turpentine.

Hæmoptysis.—Aconite; Alum; Acet. Lead; Common Salt; Digitalis; Ergot; Chloride of Barium; Gallic Acid; Hamamelis; Iron; Morphia; Ipecac; Verat. Vir.; Astringent Sprays.

Hæmorrhoids.—Alum; Aloes; Belladonna; Calomel Ointment; Castor Oil; Cold Injections; Ergot; Hamamelis locally; Hyoscyam-

us; Ice; Ung. Gallic; Senna; Sulphides or Alteratives; Suppositories of Ergotin, Iodoform or Tannin.

Hay Fever.—Arsenic; Atropia; Ammonia or Carbolic Acid inhaled; Grindelia Rob.; Bromide or Iodide of Potassium; Quinine.

Headache.—Aconite; Arsenic; Amyl Nitrite; Ammonia; Bromides; Correct Digestive disturbances; Cannabis Indica; Cold affusions; Chloride of Ammonia; Ergot; Galvanism; Hot sponging of temples; Mustard plaster to nape of neck; Tea or Coffee; Valerian; Nitro-Glycerine; Picrotoxine.

Heart, Diseases of.—**Valvular Lesions.**—Aconite; Belladonna; Cimicifuga; Coffee; Digitalis; Hyoscyamus; Opium. **Hypertrophy.**—Avoid plethor, alcoholic drinks and keep bowels open; Bromides; Verat. Vir.; Nitrite of Amyl. **Dilatation.**—Ergot; Digitalis; Iron; Nitrite of Amyl. **Fatty.**—Iron; Mineral Acids; Avoid mental or physical excitement. **Pericarditis.**—Aconite, where violent throbbing; Alcoholic stimulants in second stage acute; Blisters; Cold over heart; Leeches along sternum; Iodine and Iodides in Chronic; Opium; Poultices; Saline Purgatives. **Palpitation.**—Aconite; Biomides; Belladonna; Cactus Grandiflora; Camphor; Chloroform; Eucalyptus; Prussic Acid Dil.

Hectic Fever.—Anodynes; Dislodge sources of irritation; Nutritious diet; Phosphate of Calcium; Quinine; Tonics.

Hemorrhages.—**Diathesis.**—Arterial sedatives; Ergot; Digitalis; Turpentine Verat. Viride; Sulphuric. Tannic or Gallic Acids; Iron; Vegetable Astringents.

Hemorrhage.—**Intestinal.**—Ergot; Hamamelis; Iron; Ice to Abdomen; Sulphuric Acids;

Sugar of Lead; Tannin; Turpentine in full doses. **Uterine**.—Barium Chloride; Contract uterus by mechanical means; Digitalis; Ergot; Hamamelis; Ipecac; Sulphuric Acids; Strychnia; Tampon, when not following delivery.

Hepatic Diseases. — ACUTE INFLAMMATION, Aconite; CATARRH OF BILE DUCTS.—Chloride or Iodide of Ammonia, Hydrastis and Phosphate of Sodium; CONGESTION, Alkaline and Sulphurous Mineral waters, Nitro-Muriatic Acid baths, Colchicum and Mercurials; TORPOR, Enonymus, Ipecac, Mercury, Podophyllin, Rhubarb.

Herpes.—Acetic Acid and Acet. of Copper in Ointment; Collodion, Calomel Ointment, Nitrate of Silver, Belladonna internally, Zinc Ointment, Galvanism.

Hiccough.—Arrest the attention; Camphor; Chloroform.

Hoarseness.—Alum; Borax; Horse-Radish; Sulphurous Acid spray; Tannin locally.

Hooping Cough.—Alum; Belladonna; Bromides; Castanea; Cannabis Indica; Chloroform; Cod Liver Oil; Ergot; Grindelia Rob.; Valerian; Squill; Tannin; Musk.

Hydrocele.—Evacuate Tumor; Galvanopuncture; Carbolic Acid or Tr. Iodine injected after evacuation.

Hydrothorax.—Dry Diet; Iodine injections; Jaborandi; Resin Copabia; Paracentesis.

Hydrocephalus.—Purgatives; Mercury; Reulsive; Moxas.

Hypocondriasis.—Arsenic; Assafœtida; Bromides; Caffein; Cimicifuga; Opium.

Hysteria.—Arsenic; Assafœtida; Ammonia; Bromides; Chloroform; Cold Douche; Iron;

Musk; Quinine; Tonics; Valerian; Volatile Oils.

Impetigo.—Arsenic; Acet. of Lead; Glycerate of Tannin; Zinc Oxide; Quinine; Mineral Acids.

Impotence.—Arsenite of Iron; Can. Indica; Chloride of Gold; Electricity; Ergot; Nux Vomica; Phosphorus; Serpentaria.

Incontinence of Urine.—Belladonna; Bromides; Buchu; Cantharis; Chloral; Ergot; Iodide of Iron; Nux Vomica.

Insomnia.—Bromides; Alcohol; Belladonna; Hyoscyamus; Opiates; Phosphorus.

Intermittent Fever.—See Ague.

Intertrigo.—Bismuth; Glycerate of Tannin; Oxide of Zinc; Carbonate of Lime.

Intestinal Catarrh.—Acet. of Lead; Ammonia Chloride; Eucalyptus; Hydrastis; Nitrate of Silver; Sulphate of Copper; Tannin.

Intussusception.—Belladonna; Effervescent Enemata; Irrigation of Bowels; Enemata of Infus. Lobelia or Tobacco.

Iritis.—Atropia; Blisters behind ears; Iodides where of Syphilis; Leeches; Mercury; Arsenic, not in early stage.

Jaundice.—Arsenic; Aloes; Alkalies; Cathartics; Chloride of Ammonia; Iodine; Hydrastis; Manganese; Mercurials; Nitro-Muriatic Acid; Podophyllin; Rhubarb; Irisin; Euonymin; Juglandin.

Kidneys, Diseases of.—Spinal Ice Bag; Eucalyptus; Jaborandi; Gallic Acid; Pipsissewa.

Lactation, Excessive.—Belladonna; Camphorated Oil; Quinine.

Laryngismus Stridulus.—Bromides; Conium; Chloral; Cod Liver Oil; Ice Bag; Tartar Emetic; Hive Syrup; Squill.

Lentigo.—Tr. Iodine; Lotions of Carbolic Acid; Borax; Corrosive Sublimate.

Leucocythemia.—Iron; Phosphorus.

Leucorrhœa.—Alkaline washes of Bicarb. of Potash or Soda. Alum, 3*i* to Aq. Oi; Injections of Potassium Permang., Tannin, Lime Water, Hydrastis and Sulph. of Copper; Phosphites; Phosphatits; Tonics.

Lichen.—Alkalies; Arsenic; Chloroform Ointment or solution of Cyanide of Potassium or Prussic Acid for itching; Mercurial Ointments; Sulphureted Baths.

Locomotor Ataxia, Progressive.—Phosphorus; Calabar Bean.

Loins, Pain.—Bellad., Lead or Pitch Plasters.

Lumbago.—Bellad. or Pitch Plasters; Cimicifuga; Guaiac; Galvanism; Iodide of Potassium; Salicylic Acid; Morphia; Verat. Viride.

Mammary Inflammation and Absesses.—Belladonna Ointment. Oleate of Mercury and Morphia applied; Strap the Breasts; Hot Poultices frequently.

Mania, Acute.—Anæsthetics; Chloral; Conium; Galvanism; Hyoscyamus; Verat. Viride.

Chronic.—Ergot; Bromides; Morphia; Iron; Coffein. **Puerperal.**—Anæsthetics; Bromides; Chloral; Cimicifuga; Ergot; Evacuate Bowels speedily.

Measles.—Carb. of Ammonia; Dover's Powder; Purgatives; Phosphorus; Quinine; Mustard Bath; Fat rubbed over the skin.

Melancholia.—Arsenic; Gold; Bromides; Chloral; Colchicum; Camphor; Cannabis Indica; Iron; Musk; Morphia.

Meningitis. — Aconite; Bromides; Active Cathartics; Gelsemium; Ice Cap; Iodide Potassium; Morphia; Pulsatilla; Ergot.

Menorrhagia. — Arsenic; Bromides; Aloes; Cannabis Indica; Cimicifuga; Chloride of Ammonia; Ergot; Digitalis; Iron; Ipecac; Phosphate of Calcium; Quinine.

Metritis. — Blisters; Ointment of Verat. Viride; Iodoform to cervix; Ergot; Bromides; Chloride of Ammonia; Gold; Saline Waters.

Micturition, Painful. — Alkalies; Camphor; Cannabis Indica; Colchicum; Cantharis.

Milk Leg. — Envelope limb in Cotton, Wool and oiled Silk; Hamamelis; Iron; Iodine; Opium; Rub limb towards body; Turpentine Stupes or Blisters; Tonics; Stimulating Liniments.

Mumps. — Leeching in severe cases; Hot Fomentations; Constant but gentle action of the bowels; Grey Powder $\frac{1}{3}$ gr. every 3 or 4 hours; Avoid exposure to colds.

Myalgia. — Aconite or Belladonna Liniments; Chloride of Ammonium; Cimicifuga; Electricity; Gelsemium; Iodine; Salicylates and Iodides.

Myelitis. — Belladonna and Electricity in chromic; Ergot in large doses; Chloride of Barium; Iodides; Stychnia.

Nævi. — Collodion; Caustics; Ergot injected; Hot needles; Galvano-Cantroy; Ligation.

Necrosis. — Cod Liver Oil; Sulphuric Acid, 1 part water 6 parts applied; Phosphates.

Nephritis. — See Kidneys, diseases of.

Nettle Rash. — Alkalies; Lotion of Potassium Cyanide for itching; Tr. Bengoin Co; Chloroform Ointment; Colchicum; Warm Baths.

Nervousness. — Bromides; Chloral; Chloroform; Cypripedium; Cold Sponging; Valerian.

Neuralgia. — Aconite; Arsenic; Atropia; Belladonna; Bromides; Blisters; Anæsthetics; Cimicifuga; Conium; Cannabis Indica; Chloral; Gelsemium; Counter-irritation; Ergot; Hydrocyanic Acid Dil.; Electricity; Hyoscyamus; Iron; Iodoform; Nitrite of Amyl; Nitro-Glycerine; Opium; Phosphorus; Salicylic Acid; Strychnia; Quinine; Veratrum Viride; Chloral, Camphor and Atropia to seat of pain.

Night Sweats. — Acetic Acid Dil.; Atropia; Ergot; Oxide of Zinc; Quinine; Acid Sponging.

Nipples, Sore. — Lotion of Brandy and water, or Lime water; Collodion; Monsel's solution to fissured; Zinc Shield.

Nodes. — Iodide of Potassium, int. and ext.; Iodine or Oleate or Mercury locally.

Nose, Diseases of. — Bleeding, See Epistaxis, Ammonia inhaled for pain and inflammations of nose and frontal bones; Glycerate of Tannin or Zinc Ointment when excoriated.

Nymphomania. — Bromides; Camphor; Cannab. Indica; Conium in vaginal pessary.

Onychia. — Chloral, Iodoform or Nitrate of Silver applied as ointments or powders.

Orchitis. — Ammonia Chloride in solution with Alcohol; Belladonna Ointment; Ice bag; Lead and Opium; Oleate of Mercury; Support testis; Strapping after acute; Tr. Iodide; Tar-tar Emetic.

Oxaluria. — Nitric and Nitro-Muriatic Acids.

Ozæna. — Glycerates of Alum, Acet. Aluminum; Bismuth or Tannin; Creasote or Bromine inhaled; Carbolic Acid or Permang. Pot-

assium solutions; Hydrastis; Iodide Potassium in Syphilitic.

Paralysis.—Belladonna; Calabar Bean; Cannabis Indica; Counter-irritation; Ergot; Electricity; Phosphorus; Strychnia.

Peritonitis.—Aconite; Blisters; Bleeding; Chloral; Mercurial; Opiates; Poultices; Rubefacients.

Pharyngitis.—Tr. Capsici 3*i.* Aq. Oi. as gargle in early stage; Hydrastis; Alum; Spray of Nit. Silver; Tr. Chlor. Iron or Iodine in Chronic.

Phlebitis.—Blisters, Tr. Iron or Iodine along course of vein; Poultices; Quinine.

Phthisis, Pulmonary Consumption, Tuberculosis.—Arsenic to reduce temperature; Atropia for night sweats; Bismuth and Coto Bark for diarrhoea; Blisters in chronic and fibroid; Brandy or rum with milk or egg before breakfast; Chloral, Codia or Croton Chloral to allay cough and check sweating; Creasote, Carbolic Acid or Tar to check expectoration; Cod Liver Oil especially valuable; Enema of starch and laudanum for diarrhoea; Gelsemium to control cough; Glycerine in last stage as wash for shiny mouth; Guarana in incipient, Hypophosphates of Calcium or Sodium; Iron; Iodine applied under clavicle in chronic, to arrest secretion, allay cough; Mercury, the $\frac{1}{100}$ of a grain of Corros. Sublimate every two or three hours for diarrhoea; Opium or Morphia for cough; Phosphate of Calcium for diarrhoea, and in chronic form with little or no fever; Pancreatised fats; Quinine in acute to reduce temperature, and in chronic to check sweating; Sprays of Carbolic Acid, Chloride of Iron or Sodium, Benzoin, Iodine, Sulphuric Acid; Sulphuric Acid with Sulph. of Zinc

to check perspiration; Very hot sponging for excessive perspiration.

Pityriasis.—Local applications of Acetic Acid, Borax, Corrosive Sublimate, Citrine Ointment, Oleate of Mercury, Subacet. of Lead, Sulphurous Acid, Warm Baths.

Placenta Previa.—When the bleeding occurs early, before the term, place the woman in the recumbent position, apply cold to abdomen or vulva, give cold drinks and anemata, also Opium gr. $\frac{1}{2}$ - $\frac{1}{3}$, Sugar of Lead grs. 2-3, Infus. of Rose $5\frac{1}{2}$; if bleeding persists and you find the os uteri dilated to the size of your finger, tampon, at once; a tampon should not remain longer than from 10 to 12 hours; after tamponing await the dilation of the os, which when sufficiently accomplished put your hand into the womb separating as much of the placenta as necessary, get hold of the child's feet, turn, bring it down feet foremost and deliver as soon as possible; immediately afterwards clear away the placenta and make the uterus contract.

Pleurisy.—Blisters after inflammation and fever; Chloral; Cold Pack; Digitalis; Gelsemium; Tr. Iodine to chest; Iodide of Potassium or Iron; Leeches or Cups when sthenic; Opiates; Poultices; Tartar Emetic; Veratrum Viride.

Pleurodynia.—Belladonna, or Chloral and Camphor equal parts, locally; Carb. Ammonia; Ether Spray; Iodine; Mustard Plaster; Opiates; Poultices; Quinine.

Pneumonia.—Carb. Ammonia in later stages thins and promotes expectoration; Aconite; Blisters in moderation; Cetraria; Diaphoretics; Digitalis; Gelsemium diminishes respiratory activity and allays cough; Iodide of Ammonium to prevent caseation of inflammatory product; Mercury in second stage where ef-

fusion of fibrine; Morphia hypodermically for pain; Opiates in early stages; Packs cold to the chest renewed hourly; Poultices encircling the whole chest; Phosphorus, especially where typhoid symptoms; Quinine to reduce temperature; Senga in more chronic conditions; Serpentaria as stimulating tonic when of a low grade; Tartar Emetic gr. $\frac{1}{8}$ - $\frac{1}{4}$ every two or three hours during febrile state; Turpentine, the Oil in chronic interstitial to suppress secretion, and when vital powers are depressed with purulent infiltration; Veratrum Viride; Venesection early.

Prolapsus Ani.—Alum, Ice, Tannin locally; Injections of Catechu, Kino, Rhatany; Sulphur, Strychnia internally.

Prostatitis — Buchu; Cantharis; Hot rectal injections; Opiates; Pareira; Poultices; Suppositories of Opium. *citrato best or v.*

Prurigo. — Alkaline lotions; Borax; Belladonna; Chrysophanic Acid, Chloroform Ointment, Cyanide of Potassium or Camphor for itching; Iodoform; Sulphur with tar; Sulphides; Warm Baths.

Psoriasis. — Alkalies; Arsenic; Carbolic Acid; Creasote, Tar or Mercurial Ointments; Phosphorus; Sulphurated baths after acute.

Puerperal Fever.—Antimony as Tartar Emetic for peritonitis and mania; Bromide of Potassium or Chloral for mania and convulsions; Bleeding general at early period; Chlorine Solution to wash out vagina; Leeches; Mercury to affect the system; Opiates; Poultices large and hot; Sustain vital powers with nourishing broths, wine and other stimulants.

Purpura.—Ergot; Nux Vomica; Citric, Sulphuric, and Lactic Acids; Fresh Vegetables; Turpentine; Tr. Iron.

Pyæmia. — Alcoholic Stimulants; Quinine; Salicylic and Carbolic Acids.

Pyrosis. — Bismuth; Mineral Acids; Nux Vomica; Oxide of Manganese or Silver; Tannin; Sulphurous Acid.

Rheumatism, Acute. — **Rheumatic Fever.** — Acid steam bath relieves pain and checks perspiration; Aconite, Digitalis or Veratrum Viride where much fever, also subdue pain; Antimony; Acetic Acid; Alkalies; Blisters to inflamed joint; Bromide of Ammonium; Bicarbonate or Citrate of Potassium; Cimicifuga quells pain speedily; Cold compresses; Colchicum; Conium or Chloral for pain; Lime or Lemon juices; Mineral Acids; Nitrate of Potassium in large doses; Poultices very hot to painful part; Quinine if any rise of temperature; Salicylic Acid; Salicin; Tepid or cold sponging; Trimethylamine; Tinct. Chlor. of Iron; Wet cups if possible. **Chronic.** — Alkaline waters; Arsenic; Capsicum, a strong infusion applied; Chloral for pain; Colchicum; Cod Liver Oil; Cimicifuga very useful; Galvanism for pains remaining after acute; Guaiac; Induced current by means of electric brush; Iodides especially when pains are worse at night; Iodine painted around joint; Oils of Monarda, Sassafras and Mezereon; Oleate of Mercury and Morphia; Pilocarpin; Rubefacients; Saline Waters; Sulphur baths; Sulphur applied locally; Turkish bath; Veratria ointment; Xanthoxylum.

Rheumatoid Arthritis. — Arsenic; Bromides; Cimicifuga; Cod Liver Oil; Colchicum; Iodide of Potassium; Iodine; Lithium; Sulphureted baths.

Rickets. — Cod Liver Oil; Cure intestinal catarrh if present; Plenty of vegetable and animal diet; Iron; Lime Water; Phos-

phates; Phosphorus; Sponging with hot or cold water, according to condition of child.

Ringworm.—Chrysophanic, Mercurial or Sulphurous Ointments; Iodine applied.

Salivation.—Alcohol and Astringent mouth washes; Belladonna; Chloral; Chlorate of Potassium; Opium.

Scald Head.—Mercurial, Sulphurous or Tar Ointment; Poultice, then grease head; Oil of Turpentine; Tar Ointment.

Scarlet Fever, Scarlatina.—Aconite where much rise of temperature; Bitartrate of Potassium as a diuretic; Belladonna; Carb. of Ammonium in doses of from 3 to 5 grs. every 2 or 3 hours; Cold effusions during first few days when skin is hot and red; Chlorine Water for sloughing throat; Cathartics to prevent sore throat and sequæ; Chlorate of Potassium; Cold wet compresses to throat throughout the whole course; Elaterium; Infus. of Digitalis with Nitre, or Juniper for anasarca; Fats rubbed in hands and feet to remove sense of tightness; Grey Powder. $\frac{1}{6}$ to $\frac{1}{3}$ gr. every hour for tonsillitis; Ice sucked for inflamed throat, especially at beginning; Mercury; Mustard Bath or Phosphorus where rash is insufficient or prematurely fades; Quinine; Salicylic Acid in 5 to 10 gr. doses every two hours until abatement of throat symptoms; Sharp purging with Drastics followed by Vapor Baths after fever has subsided, and anasarca is present; Sulphurous Acid Spray for malignant sore throat; Strychnia for after paralysis: Temperature of room not to exceed 65° F., drafts to be avoided; Veratrum Viride for high fever; Pilocarpus in nephritis.

Sciatica.—Atropia; Aconite or Belladonna Ointments; Counter-irritation; Colchicum; Galvanism; Guaiac; Gelsemium; Iodides;

Morphia and Atropia hypodermically near nerve; Poultices; Turpentine electuary.

Scrofula.—Alkalies; Bromides; Burdock; Chloride of Calcium for diarrhoea and glandular enlargements; Cod Liver Oil and Fats; Iron long continued; Iodides; Iodide of Lead Ointment; Phosphate Calcium; Sulphides.

Scurvy.—Acetosella; Citric, Lactic, and Phosphoric Acids; Calotropis; Atropia; Ergot; Fresh Vegetables; Lemon Juice; Dil. Alcohol as gargle.

Sea Sickness.—Atropia; Bromide of Ammonia; Calumba; Chloral; Chloroform; Champagne.

Small Pox.—Cold Baths when high temperature; Carb. Ammonia; Quinine; Sulphides; Treat fever on general principles and support constitution.

Spermatorrhœa.—Arsenic; Alkalies where uric acid is present; Belladonna; Bromides; Cold sponging of scrotum and perineum, Cannabis Indica; Camphor; Ergot; Hydrastis; Iron; Nux Vomica; Phosphorus; Quinine; Spinal Ice bag; Bladder to be emptied after first deep sleep.

Strangury.—Cannabis Indica; Alkalies; Hot and prolonged hip bath; Enema of Opium; Warmth to perineum.

Stricture of Urethra.—Dilate with sounds; Conium; Laxatives and Alkalies when urine is acid; Opium; Warm hip bath.

Sun Stroke.—Cold affusions when patient struck down unconscious, strip off clothing and placed in semi-recumbent position; Stimulants by mouth and rectum; Blisters to head; Electricity along side of neck, chest, and epigastrium; Sinapisms to chest and ex-

tremities; Enema of a strong purgative nature.

Synovitis.—Cod Liver Oil; Iodine applied; Flying Blisters; Oleate of Mercury and Morphia around joints; Phosphates

Syphilis — Gold, its preparations; Cinchona, its various preparations and Calotropis as tonics; Iodide of Potassium and the various preparations of Iodine in the advanced secondary and tertiary stages; Mercury the various preparations, given from the beginning and continued from 3 to 10 months; Salivation to be avoided by discontinuing use of mercury for from 7 to 10 days every two or three weeks; Mixed treatment consists of Mercury, the Corros. Sublimate or Biniodide, combined with Iodide of Potassium and a tonic as Cinchona, and may be used to advantage in the secondary stage; Nitro-Muriatic Acid; Phytolacca, Sarsaparilla and Stillingia make good tonics and can be used to advantage combined with Mercury and Iodide of Potassium in the various skin disorders; Cod Liver Oil, Syr. Iodide of Iron after mercurials, Phosphates where debility.

Tetanus.—Bromides; Calabar Bean; Chloral; Conia; Gelsemium; Nicotia; Nitrite of Amyl; Strychnia in full doses; Tobacco.

Thrush. — Glycerate of Honey of Borax; Chlorate of Potassium; Eucalyptus; Hydrastis; Mineral Acids; Wash mouth well.

Tonsillitis.—Aperient; Aconite; Eucalyptus; Guaiac; Grey Powder $\frac{1}{6}$ - $\frac{1}{3}$ gr. every hour; Ice sucked; Quinine; Solutions of Nitrate of Silver or Iodine to tonsils; Tartar Emetic; Wine of Ipecac; Steam vapor.

Toothache.—Local applications of Alum, Aconite, Carbolic Acid; Creasote; Chloroform; Camphor and Chloral equal parts; Conia, Opium, and Volatile Oils.

Typhoid Fever.—Stimulants in feeble heart's action, irregular pulse wakefulness; Alum for Diarrhoea; Arsenic in typho-malarial; Bismuth for diarrhoea; Calomel in small doses at commencement; Cold Affusions to reduce temperature; Cold Packing when fever runs high; Digitalis slows pulse and lowers fever; Ergot or Turpentine for intestinal hemorrhage; Lead with Opium for purging; Ice cap to head in delirium; Jaborandi for its diaphoretic action; Quinine to reduce temperature; Veratrum Viride with Hyoscyamus; Turpentine emulsion or granules.

Typhus Fever.—Antimony in delirium with wakefulness; Chloral; Belladonna; Cold affusions; Mineral Acids; Opiates; Quinine.

Ulcers.—Bismuth; Carbolic and Salicylic Acids; Chlorate of Potassium as a wash to cleanse and stimulate foul ulcers; Cinchona dusted over foul, indolent and sloughing; Conium or Opium applied with poultice to allay pain; Iodoform, serviceable in all; Mercurial preparations as alteratives to sore; Nitrate of Silver to unhealthy; Nitric Acid to destroy foul, unhealthy surface and as lotion to indolent and painful ulcers; Position of limb to assist passive circulation in chronic ulcers of the leg; Strapping for the same; Transplantation of skin.

Uræmia.—Cathartics; Colchicum; Caffein; Croton Oil; Diuretics; Diaphoretics; Jaborandi; Mustard plasters.

Varicocele.—Cold Douche to perineum; Suspension of the testicle; Hamamelis.

Varicose Veins.—Elastic stocking or rubber bandage; Tr. Iron painted over.

Vomiting, and Nausea.—Alum in phthisical when excited by cough; Belladonna, Bismuth,

Bromides, Creasote, Columbo, Ingluvin, Oxalate of Cerium, Pepsin, Prussic Acid Dil., Tinct. Nux Vomica in pregnancy; Acids, Ipecac, Oxalate of Cerium in sympathetic; Arsenic, Capsicum, Carbonic Acid Waters. Hydrastis, Nux Vomica, Quinine in vomiting of drunkards; Lime Water in chronic forms; Chloroform or Sparkling Wines in sea sickness; Calomel or Grey Powder in minute doses; Bromides in cerebral congestion; Camphor in drinking water; Sulphides in acid fermentations.

vomiting Pregnancy

• **Vulvitis.**—Alum; Glycerite of Tannin; Lead and Opium lotions; Lime water as wash.

Worms, Tænia.—**Round Worm** (*Ascaris lumbricoides*) resembles the common earth worm, most common of all intestinal worms, of a whitish or yellowish color, round tapering towards each extremity, mouth surrounded by three tubercles, from 6 to 16 inches long, inhabits small intestine. Brisk Cathartic; Pink Root, Santonin, Wormseed, Wormwood and Tansy; the administration of anthelmintics to be kept up for several days, followed by a brisk cathartic. **Thread or Pin Worm** (*Oxyuris vermicularis*) found in the large intestine, are very small and numerous, are sometimes crowded in masses or balls agglomerated by mucus. Injections of Common Salt, Alum, Iron, Lime Water, Eucalyptus, Wormwood, Vinegar, Weak Solution of Carbolic Acid; Scammony by mouth; Iron internally. **Tape Worm** (*Tænia solium*) inhabit the small intestines. Areca Nut, Kamala, Koosso, Powdered Tin, Pepo, Felix Mas. given on an empty stomach best; Oil of Turpentine.

These remedies kill, but do not necessarily expel worms. consequently a cathartic is required for this purpose.

SIGNS OF PREGNANCY.

1. Suppression of the menses.
2. Nausea, vomiting and digestive disturbances up to the fifth month, then disappearing to appear again for the first fortnight of the ninth month.
3. Enlargement of the abdomen, at three or three and a half months the hypogastric region becomes pouting and a small protuberance perceptible growing regularly and more voluminous during the remaining term of pregnancy.
4. The Fundus uteri, at the end of the third month, is on a level with the superior strait; at the end of the fourth month the uterine tumor can be clearly perceived through the abdominal walls, the fundus being midway between the pubis and umbilicus; end of fifth month, one finger's breath below the umbilicum; at the end of sixth month, same distance above it; in the seventh month, four fingers above it; in the eighth month, five or six fingers above it; at the beginning of the ninth month, reaches the epigastric regions, gaining the boarders of the false ribs on the right side, but in the last fortnight of the last month sinks a little lower.
5. Tumefaction of the breasts, accompanied with a sensation of prickling and tenderness sets in about the second month, and at the fourth month is much augmented, at which time the nipple becomes prominent, with discoloration of the areola, the latter increases and the breasts present a spotted appearance.
6. Glandiform tubercles form in the breasts about the fifth month and are fully developed about the eighth, when flow of milk sets in.

7. Uterus has descended and is less movable in the first two months, the neck inclining towards the left.

8. The umbilical ring is depressed, its bottom drawn downwards and backwards, the circumference the seat of a distressing, dragging sensation in the first two months; less so in the fourth and fifth months; less hollow than before conception in the fifth and sixth months; the depression is wholly affected and on a level with the skin of the abdomen in the seventh month; the navel pouts out in the last two months and there are streaks and stains on the abdomen, a brown line extending from pubis to umbilicus.

9. Varicose and œdematos condition of the vulva and lower extremities, from the seventh month and increasing until term.

10. Quickening, or fœtal movements, sounds of the fœtal heart and abdominal soufle, and fœtal irregularities can be detected about the fifth month.

11. Ballotement can be detected in the sixth month, but more readily in the seventh, and obscurely during the eighth month.

12. Difficult respiration in the latter part of the eighth and first part of the ninth months, but less oppressed during the last fortnight.

13. Difficulty in walking during the last month.

14. Frequent desire to urinate, pains in loins and colic during last fortnight of the ninth month.

15. The orifice of the os is round in the primiparæ but more patulous in the multiparæ during the first two months; the periphery is at this time softened but more so during the third and fourth months, the extremity of the finger can be inserted in the os of the multiparæ

while that of the primiparæ is rounded and closed; the mucous membrane covering the lips becomes softened and oedematous, also the intravaginal portion of the neck.

**MARSHALL HALL'S
READY METHOD IN ASPHYXIA.**

I. Treat the patient instantly on the spot, in the open air, freely exposing the face, neck and chest to the breeze, except in severe weather.

II. In order to clear the throat, place the patient gently on the face with one wrist under the forehead, that all fluid and tongue itself may fall forward, leaving entrance to wind pipe free.

III. To excite respiration, turn the patient slightly on his side, and apply some irritating or stimulating agent to the nostrils, as Veratrine, Dil. Ammonia, etc.

IV. Make the face warm by brisk friction; then dash cold water upon it.

V. If not successful lose no time, to imitate respiration; place the patient on his face, and turn the body gently but completely, on one side and a little beyond; then again on the face, and so on alternately. Repeat these movements deliberately, and perseveringly, fifteen times only in a minute. (When patient lies on the thorax, this cavity is compressed by the weight of the body and expiration takes place; when he is turned on the side, this pressure is removed and respiration occurs.)

VI. When the prone position is resumed, make uniform and efficient pressure along the spine, removing the pressure immediately before rotation on the side. (The pressure augments the expiration, and rotation commences inspiration.) Continue these measures.

VII. Rub the limbs upward, with firm pressure, and with energy. (The object being to aid the return of venous blood to the heart.)

VIII. Substitute for the patient's wet clothing, if possible, such other covering as can be instantly procured. Meantime, and from time to time, to excite inspiration, let the surface of the body be slapped briskly with the hand.

IX. Rub the body briskly until it is dry and warm, then dash cold water upon it, and repeat the rubbing.

X. Avoid the immediate removal of the patient, as it involves a dangerous loss of time; also the use of the bellows or any forcing instrument; also the warm bath and all rough treatment.

GENERAL TREATMENT OF POISONING.

First eliminate if possible the poison from the stomach or tissues by **Emetics**, Sulph. of Zinc grs. 10-30; Tartar Emetic grs. 1-2, combined with Ipecac grs 20; Sulph. of Copper grs. 2-5; or hypodermic injection of Apomorphia.

Stomach Pump, or Tube used on the syphon principle where vomiting can not be induced by Emetics, except in the cases of irritant poisoning where its use requires great caution. After the accomplishment of the above gentle Cathartics and Diuretics may be given to aid in the elimination; also Iodide of Potassium where metallic substances.

Counteract the morbid vital processes induced by the poison,—as in Cardiac Syncope, give stimulants; in threatened Paralysis of the Respiratory Movements, excite respiration by cold affusions, irritation of the skin, artificial respiration, Atropia to excite the pneumo-gastric nerve; in Narcosis of the Brain endeavor to arouse it, Allay any particular organic irritation.

Antidotal Measures are (1) Chemical. which directly neutralize the action of the poison by destroying its properties; (2) Physiological, which have antagonistic properties to the poison.

General Antidote where nature of the poison is unknown. Rx Calcined Magnesia, Pv. Charcoal, Sesqui Oxid. of Iron &c with a sufficient quantity of water.

POISONS.—SYMPTOMS, ANTIDOTES, TREATMENT.
See also Table of Incompatibles and Antagonists.

<i>Poisons.</i>	<i>Symptoms.</i>	<i>Antidote, Treatment.</i>
Acid, Acetic.	Great heat and burning pain in stomach; convulsions; death. Great drowsiness; giddiness; difficult respiration; loss of muscular power and sensibility; coma; face and body swollen and livid; eyes prominent.	Magnesia, its Carbonates, with cream or water; Soap; Alkalies. Remove patient to fresh air; Elevate the head; Cold affusions; Stimulating frictions to thorax and extremities; Artificial respiration.
Acid, Carbonic.	Burning sensation from mouth to stomach; gastric pain; vomiting of frothy mucus; cold, clammy skin; difficult, rapid and superficial breathing; insensibility; pupils contracted; odor perceptible in breath.	Venesection if cerebral oppression. Strong solution of Saccharated Calcium; Calcinated Magnesia diffused in Lime Water; Demulcents; Carbonate of Calcium; Alkalies; Soap; Fixed Oils. Symptomatic treatment for nervous symptoms. Alkalies; Plaster from the walls; Common Soap, followed by copious draughts of tepid water or flax seed tea, except where sulphuric acid has been taken; Demulcents;
Acid, Carbolic.	Sense of burning in throat and stomach; styptic taste in mouth; thirst; eyes red and sparkling; frequent, tense pulse; hot, dry skin; tongue red and glazed; lips	(Hydrochloric.)
Acid, Muriatic.		Nitric. “ Nitro-Muriatic.

Toxins.

Symptoms.

Antidotes, Treatment.

Acid, Sulphuric

black; croupy cough; great inflammation of abdominal viscera; vomiting of blood and yellow matter; smelling of acid; cold sweats; delirium.

Acid, Prussic.
(Hydrocyanic, Cyanide of Potassium.)

In large dose immediate death; in smaller pain in head, stupor, nausea, faintness, vertigo, dilated pupils, loss of sight, difficult respiration, vibrating pulse, syncope, which will end in death if curative measures are not employed. The odor of the acid is strongly exhaled; death from paralysis of respiratory centre.

Burning heat of stomach: sometimes vomiting or retching; great prostration; spasmodic respiration; convulsions.

Acid, Oxalic.
" Tartaric.

In large doses causes much excitement; confusion of the intellect; respiratory movements slow, irregular and sterorous; gastric

Carbonates of Magnesium or Calcium; If patient survives first effects use antiphlogistic remedies for inflammation.

A chemical antidote is Sulphate of Iron grs. 10 Tinct. Chlorid. Iron dr. 1, dissolve in water oz. 1, take immediately, followed by Carb. of Potassium grs. 20; Chlorine Water; Inhalation of Chlorine Gas; Dil. Sol. of Ammonia; Cold affusions to head, chest and spine; Mustard to stomach; Artificial respiration; Hypodermic injection of atropia.

Mixtures of Magnesia. Whiting; Chalk, or Plaster from the walls; Carbonates of Magnesium or Calcium.

Animal Charcoal; Opium; Stimulants, by mouth and rectum; Warmth; Friction; Vegetable Astringents; Tannin; Digitalis; Gal-

pain; nausea; great muscular weakness; cold body, tongue and breath; skin covered with a profuse sweat; vomiting and retching with Veratrum; pulse almost indistinguishable.

Alcohol.

In small quantities mere excitement; in large much excitement, confusion of intellect, followed by somnolence, even coma and apoplexy; may be mistaken for epilepsy or apoplexy.

Excoriation of mouth and fauces; burning in stomach; vomiting and purging often of bloody matter; surface cold and clammy; pulse quick and feeble; sense of strangulation.

Nausea; severe vomiting; hic-cough; cardialgia; burning heat at epigastrium; colic and purging; small rapid pulse; cold skin; syncope; difficult respiration; vertigo; great prostration.

vanism; Stomach to be carefully washed out and the subsequent symptoms met and combated; keep patient in recumbent position; give cathartics; ammonia and morphia hypodermically; warmth and friction to body.

Evacuate stomach by emetics, warm water and salt the best, repeated at short intervals; Aromatic Spirits of Ammonia; Cold douche; Galvanism; Stimulate respiratory movements; Strong Coffee. Dil. Acetic Acid; Vinegar; Oil; Demulcents copiously; when vapor of ammonia has been inhaled fumes of vinegar should be inspired; Opium and stimulants.

Alkalies. (Ammonia, Potash, Soda.)

Antimony. its Salts.

Astringent infusions containing Tannin, Oak Bark, Peruvian Bark; Strong Tea or Coffee; Oily warm liquids; Galls; Emetics; Stimulants; Albumen; Mucilage; Opium; use the stomach pump if necessary

Toxins.

Symptoms.

Antidotes, Treatment.

Arsenic and its Compounds.

Metallic, austere taste; great flow of saliva; nausea and vomiting; fainting; great thirst; sense of heat in stomach; much griping, tenesmus, and purging; stool dark and offensive; urine scanty, high colored; pulse small, frequent; labored respiration; cold sweats; prostration; delirium; convulsions.

Barium and its Salts.

Those of irritation combined with an affection of the brain and nervous system, as vertigo, convulsions, paralysis; Burning in stomach, griping and vomiting.

Belladonna and Atropia.

Dryness and redness of the mucous membrane of the throat, mouth, nose, larynx and tongue; pupil dilated; impaired vision; thirst; feverishness; flushed face; great weakness; hurried breathing; de-

Abundant draughts of Sweet Milk, Gruel, Decoctions of Starch, Oil, and Lime Water; Tickle the fauces to induce vomiting; Light Magnesia; Oils or Fats; Alummen; Animal Charcoal; Hydrated Oxide of Iron given frequently; Dialyzed Iron; Ferric Salts where Fowler's Solution; Afterwards combat inflammatory symptoms, opium and alcoholic stimulants.
Epsom and Glauber Salts; Dil. Sulphuric Acid; Oils; Emetics; Vinegar and water; Stomach Pump. Phosphate of Sodium; Hydrated Magnesia.

Opium; Morphia in small hypodermic injections, frequently repeated; Vegetable Astringents; Tartar Emetic; Calabar Bean; Tannin; Animal Charcoal; Apomorphia as emetic with a cathartic; Sulphate

Bismuth, its
Bromine.

lirious excitement; convulsions; coma.
Burning pain in throat; nausea, vomiting and diarrhoea; coldness of extremities; spasms.
Irritation and inflammation of the parts with which it comes in contact; violent gastritis; depression; collapse.
Respiration becomes slower and shallower; death from asphyxia, heart continuing to beat for some time afterwards.

Calabar Bean,

Induces cataleptic state; pupil dilated; delirium; vertigo; stupor. Burning sensation in throat; violent pain in stomach and bowels; nausea; vomiting; purging; ejections frequently blood and purulent; great heat and irritation of urinary organs; painful priapism; pulse quick and hard; convulsions; tetanus; delirium and syncope.

of Copper; Iodine; Cauatic Alkalies destroy the active principle. Albumen; Milk and sweetened mucilaginous drinks; Induce vomiting by tickling fauces. Immediate and free use of starch; sulphureted Hydrogen inhaled; Ammonia; Magnesium.

Stimulants; Artificial respiration; Cathartics; Atropia to antagonize the respiratory depression; subcutaneous injection of ether; Emetics; Tannin; Faradigation of chest.
See Opium.

Promotion of vomiting by means of warm demulcents; Copious dilution; Bleeding; Warm bath; Opium; Camphor; Enema of Mutton Broth; Laudanum; Antiphlogistic treatment.

Cannabis Indica. Cantharis.

Toxins.

Symptoms.

Antidote, Treatment.

Chloral.

Gastric irritation; nausea; vomiting; profound narcotism; respirations slow and shallow; pulse weak, rapid, and irregular; complete muscular relaxation. Sudden pallor of face; lividity and gasping of breath; pulse feeble and irregular; great muscular relaxation; death occurs very suddenly in the form of asphyxia; relaxation of sphincters; stoppage of flow of blood.

Chloroform.]

Chlorine.

Great and painful constriction of the glottis; sensation of suffocation, alternating with asphyxia; if protracted, laryngitic and pneumatic inflammation; odor of gas perceptible in breath and vomited matter.

Colchicum.

Heat in epigastrium; nausea; vomiting; depression of circulation; acute abdominal pain; watery

Evacuants, as Emetics, Cathartics; Counter-irritants; Stimulants to maintain heart's action, and bodily heat; Ammonia. Galvanism. (See Opium.)

Artificial respiration; Lower head; Elevate the legs; Inhalation of Ammonia; Hypodermic injection of Brandy or Digitalis; Surface of chest to be smartly slapped with fringe of towel dipped in ice water; Ice in rectum; Electricity; Nitrite of Amyl.

Free use of Albumen; Magnesia with mucilagenous drinks; Inhalations of Ammonia; vapor of warm Ether inhaled, even Sulphured Hydrogen, but avoid excess of it.

Digitalis, Stimulants, Emetics and Purgatives freely administered; Opium, Demulcents freely given.

discharges; suppression of urine; feeble pulse; cold sweats and coldness of extremities.

Paralysis of voluntary muscles, those of the inferior extremities first affected; vertigo; respiration slow and labored; bodily temperature lowered.

Violent headache; vomiting; pain in bowels; cramps of lower extremities; a peculiar coppery taste; diarrhoea; convulsions; palsy; insensibility; quick pulse, cold extremities.

Sense of heat pain and nausea, followed by tormina, watery stools, violent catharsis, prostration, collapse, acute inflammation of intestines.

Violent headache and determination of the blood to head; weariness; pulse more frequent and increased respirations; loss of mobility; finally respiration slower and weaker, then ceases. In poisonous dose arrests the heart

Conium.

Stimulants; Artificial respiration; Cathartics; Atropia has been recommended as an antidote; Tannin; Cold affusions; Caustic Alkalies.

Vomiting to be promoted by copious draughts of Warm Water, Milk. Mucilagenous fluids; Milk; Albumen; Tea; Coffee; Oak Bark infusion; Ferrocyanide of Potassium followed by Emetics.

Emetics; Demulcent drinks; after cleaning the stomach give cathartics; chemical antidote is Tannin; Alcohol; Ether; Camphor and Nitrite of Amyl.

Tannin; Caustic Alkalies; Emetics; Cold affusions; Artificial respiration; Hypodermic use of Atropia and Strychnia; Free stimulation with alcohol and ammonia.

Vegetable Astringent infusions; Ca-

Copper, its Salts.

Croton Oil.

Curara.

Digitalis.

Toxins.

Symptoms.

in systole and induces tetanic state of heart's muscles; number of pulsations reduced; rise of arterial tension succeeded by quick feeble pulse and fall of blood pressure.

See Belladonna.

Duboisia.
Ergot and Ergotine.

Has an irritant action on the intestinal tract causing pain, vomiting and occasionally purging; pupil dilated; dimness of vision; stupor; giddiness. In chronic poisoning it is of a gangrenous form.

Gelsemium.

Gait at first staggering, afterwards loss of muscular movement; confused numbness over body; eyelids closed; pupils widely dilated and do not respond to light; respirations shallow, labored and irregular; heart's action weak, feeble and intermittent; death from asphyxia; consciousness is

Carbonates of sodium, potassium, calcium, and magnesium are all antidotes. In the case of sulphuric acid, water should not be drunk, as the union of the two produces great heat. Subsequent inflammation may be treated in the ordinary manner.

Carbonates of calcium and magnesium alone should be employed; see above.

Ammonia is an antidote, but it should not be employed in a very concentrated form. Liquid chlorine has also been found efficacious. The cold *douche* to the head has been recommended.

Vomiting should be produced by tickling the fauces and giving large draughts of warm water. Astringent infusions, as galls, oak bark, Peruvian bark, act as antidotes, and should be given at once. Powdered yellow bark may be given until the infusion is prepared.

Hydrated peroxide iron, diffused through water, or the precipitated carbonate in very fine powder, should be given every five or ten minutes until relief is obtained. This is particularly efficacious where white arsenic has been swallowed.

Dialysed iron solution has come much into vogue at the present time and been highly recommended as an antidote, but the recent experiments of E. Hirschsohn, Russia, prove that, when used alone, it has no value whatever in this respect, and, when used in connection with ammonia or magnesia, the resulting insoluble compound formed with the arsenic is decomposed much more readily in the presence of acids than when the hydrated peroxide of iron is employed.

Albumen in form most readily obtained, as milk, white of eggs, etc. Vinegar should not be given. The inflammatory and nervous symptoms to be treated on general principles.

Matches, etc.

Sulphate magnesium and phosphate sodium are both good antidotes for the soluble salts. For the solid forms, give dilute sulphuric acid. The use of strychnia for the paralysis, and of iodide potassium for the *chronic* forms generally, has been recommended.

Albumen, such as white of eggs, milk and wheat flour beaten with water, must be promptly administered. Counteract inflammation by ordinary means. Gold finely mixed in dust with iron filings. The iron filings and *ferri pulvis* have been given enclosed in gold leaf.

The vomiting may be relieved by copious draughts of warm water. Carbonate sodium in solution will decompose the sulphate. Milk and albumen act as antidotes. General principles to be observed in the subsequent treatment.

Is immediately coagulated by albumen.

An emetic promptly; give copious draughts containing magnesia in suspension; mucilaginous drinks; general treatment for inflammatory symptoms.

Evacuate the stomach with four or five grains of tartar emetic, or ten to twenty of sulphate zinc, repeated every quarter hour until the full effect is produced; assist by tickling the throat with a feather. Large and strong clysters of soap dissolved in water, or of salt and gruel, should be speedily administered, to clear the bowels and assist in getting rid of the poison. Active purgatives may be given after vomiting has ceased. When as much as possible of the poison has been expelled, give alternately a teacupful of strong hot coffee and of diluted vinegar. If the drowsiness or insensibility be not relieved by these means, blood may be taken from the jugular vein, blisters applied to the neck and legs, and the attention roused by every means possible. If the heat declines, warmth and frictions must be perseveringly used. Vegetable acid should on no account be given before the poison is expelled, and it is desirable that but little fluids of any kind should be administered.
