

The medical formulary : being a collection of prescriptions derived from the writings and practice of many of the most eminent physicians in America and Europe, together with the usual dietetic preparations and antidotes for poisons : to which is added an appendix, on the endermic use of medicines, and on the use of ether and chloroform : the whole accompanied with a few brief pharmaceutical and medical observations / by Benjamin Ellis.

THE
MEDICAL FORMULARY:

BEING

A COLLECTION OF PRESCRIPTIONS DERIVED FROM THE
WRITINGS AND PRACTICE OF MANY OF THE MOST
EMINENT PHYSICIANS IN AMERICA
AND EUROPE,

TOGETHER WITH THE

USUAL DIETETIC PREPARATIONS AND ANTIDOTES FOR POISONS.

TO WHICH IS ADDED

AN APPENDIX,

ON THE

ENDERMIC USE OF MEDICINES, AND ON THE USE OF ETHER AND CHLOROFORM.

THE WHOLE ACCOMPANIED WITH A FEW BRIEF

PHARMACEUTICAL AND MEDICAL OBSERVATIONS,

BY

BENJAMIN ELLIS, M. D.,

LATE PROFESSOR OF MATERIA MEDICA AND PHARMACY IN THE PHILADELPHIA
COLLEGE OF PHARMACY.

TWELFTH EDITION,

CAREFULLY REVISED AND MUCH IMPROVED.

BY

ALBERT H. SMITH, M. D.,

FELLOW OF THE COLLEGE OF PHYSICIANS OF PHILADELPHIA; LECTURER ON OBSTETRICS
TO THE PHILADELPHIA LYING-IN CHARITY, ETC.

"Morbus autem, non eloquentiâ sed remediis curari."—CELS. DE MED. LIB. I.

PHILADELPHIA:
HENRY C. LEA.
1868.

MEDICAL JOURNAL

Mrs. A. B. Bancroft.

June 16. 1883.

Entered according to Act of Congress, in the year 1868, by

HENRY C. LEA,

in the Clerk's Office of the District Court of the United States in and for the
Eastern District of Pennsylvania.

TO
N. CHAPMAN, M. D.,
PROFESSOR OF THE INSTITUTES AND PRACTICE OF MEDICINE AND
CLINICAL PRACTICE

IN THE
University of Pennsylvania,
ETC. ETC.

WHOSE TALENTS AND URBANITY
HAVE RAISED HIM TO THE FIRST RANK IN THE PROFESSION, AND HAVE ACQUIRED
FOR HIM THE CONFIDENCE AND ESTEEM
OF A LARGE AND ENLIGHTENED COMMUNITY,

THIS WORK
IS VERY RESPECTFULLY DEDICATED
BY HIS OBLIGED FRIEND,

THE AUTHOR.

ELLIS'S FORMULARY.

THE first and second editions were issued by the author. The third, fourth, fifth, sixth, seventh, eighth, and ninth editions were revised by the late SAMUEL G. MORTON, M. D. The tenth and eleventh editions have been issued under the editorial charge of the late ROBERT P. THOMAS, M. D., and the twelfth under that of ALBERT H. SMITH, M. D.

PREFACE TO THE TWELFTH EDITION.

IN revising the present edition of the Formulary, the progress of medical science in the departments of *Materia Medica* and *Therapeutics* has rendered necessary the addition of a considerable amount of new matter; and in order that the bulk of the work might not be too much increased, the editor has selected for omission such formulæ as seemed of least value, most of them containing remedies long since fallen into disuse, and scarcely obtainable by the class of physicians for whom the work is intended.

The table of doses has been very carefully corrected; the doses of some articles being divided in reference to their therapeutic application, and all calculated for the administration of pure pharmaceutical preparations of standard strength, and for adult patients.

It has been thought best to inclose in brackets the new formulæ, that the attention of young practitioners may be called to them, as illustrating the practice of recent authorities in therapeutics.

In addition to the new formulæ, the editor has

added to the work the new classes of Antemetics and of Disinfectants; besides making insertion under the proper classes of brief references to the inhalation of Atomized fluids, the nasal douche of Thudichum, suggestions upon the method of hypodermic injection, the administration of anæsthetics, and some other minor matters, all of which he hopes will add to the value of the work.

A new feature of the Formulary will be found in a full index of diseases, with reference to the numbers and principal ingredients of the particular formulæ applicable to each.

PHILADELPHIA, October, 1868.

P R E F A C E .

THE elegant and judicious formation of prescriptions is one of the difficulties which the young practitioner in medicine is obliged to encounter. While a student, he is compelled, from the circumstances under which he is placed, to confine his attention to the leading principles of the science. Consequently, the minor points (and the art of directing medicines is considered one of them) are postponed to that period when he shall have undertaken the practical duties of his profession.

To obviate, in some measure, the inconvenience which the graduate at first experiences, the volume now offered the public was undertaken and executed. It contains, in a condensed form, and we think advantageously arranged, many of the most important prescriptions employed in modern practice, and which, though most of them may be already recorded, are scattered through various medical works.

The arrangement framed by Professor Chapman for his Therapeutics, appearing to combine greater advantages than any other, we have taken the liberty of adopting it as the basis of this Formulary.

Each Class has been subdivided into Powders, Pills, and Liquids, without any attempt to preserve the different preparations of the same article together, but only with a view to convenience. A few concise rules will be found prefixed to each Class, and observations have been attached to those prescriptions which possess peculiarities either in their composition or effects.

The application of the remedies to diseases has been generally left to the judgment of the practitioner, and therapeutical detail as much as possible avoided, as it would have been inconsistent with the nature and design of the work.

The object is to furnish models for extemporaneous formulas, the proportions of which may be either increased or diminished, according to the age, sex, constitution, or idiosyncrasy of the patient, all of which are to be taken into consideration when a prescription is directed, as well as the climate and peculiar epidemic which may be prevailing.

The prescriptions have been couched in the Latin language, and the names of the several articles will be found regularly terminated. The design was to furnish something like a Medical Grammar to those unacquainted with the dead language; and even those versed in the classics may occasionally find words used in prescriptions which are new to them.

A series of Dietetic Preparations and the principal Poisons have been placed in BOOK III. The former are written in the English language, and it is hoped

that they may be found useful in furnishing directions necessary to be given to the nurse.

The latter are those Poisons which are usually taken by accident or design, with their appropriate antidotes and some practical observations.

Appendix No. I contains some concise remarks on the mode of using remedies on the "*Endermic plan*," as well as the quantities employed, and the effects produced by several of the most potent remedial agents.¹

The materials for the work have been collected from various sources—the writings of different authors, periodical journals, manuscripts, and the contributions of our friends. It is hoped, therefore, that the difficulties which have attended its progress will form some apology for the errors which it may possibly be found to contain. As a reason for not more frequently attaching the names of authors to the prescriptions, it may be observed that they are a kind of common medical property, which every physician feels himself privileged not only to employ, but modify as may best correspond with his own views. It is, therefore, difficult to say to whom many of them belong: they have been touched and retouched till they have lost their identity.

In conclusion, we beg leave to present our acknowledgments to some of our friends for the en-

¹ Appendix No. II. is a concise and able article on the use of Ether and Chloroform, drawn up by the late Dr. Morton, to which the attention of the reader is directed.

couragement they have given to the undertaking. To Dr. Chapman we are particularly indebted for the kindness and interest he has manifested in its publication, and offer to him (the only return we can make) our warmest thanks.

It is with particular pleasure we embrace this opportunity of expressing our obligations to our friend Dr. S. G. Morton, whose intimate acquaintance with the subject, and classical knowledge, are only equalled by the kindness and industry he has displayed in facilitating the work.

There are others whose names it would gratify us to mention, but who, we know, will be more pleased by our silence. The countenance they gave us on the present occasion has only increased the debt previously incurred.

INTRODUCTION.

BEFORE entering upon the main object of this work, it is necessary to notice a few circumstances which pertain more especially to Pharmaceutic Chemistry, yet appear to be called for in this place; and, though they are familiar to every educated physician, may be useful to the student who has not yet turned his attention to prescriptions.

In the first place, it is requisite to be well acquainted with the *signs of quantity*, or those symbolic characters which are used in writing prescriptions. In the ancient practice of medicine, there were very many of these symbols, not only for the purpose of denoting the quantity of the ingredient, but the ingredient itself. Most of these, however, have become obsolete; and a few only are retained as indispensable to the convenience of the practitioner. These will be found in the following table, which is adopted in the Pharmacopœias for the regulation of *weights*.

English name.	Latin name.	Symbol.	Contains.
A pound,	Libra,	℔,	12 ounces,
An ounce,	Uncia,	ʒ,	8 drachms,
A drachm,	Drachma,	ʒ,	3 scruples,
A scruple,	Scrupulus,	ʒ,	20 grains.

In the manipulation of *liquid substances*, measures have, in most countries, superseded the use of *weights*. Particular names and symbols are given to the parts forming a gallon, in order to prevent their being confounded with those denoting weights; as in the following table:—

English name.	Latin name.	Symbol.	Contains.
A gallon,	Congius,	C, or Cong.,	8 pints.
A pint,	Octarius,	O,	16 fluidounces.
A fluidounce,	Fluiduncia,	f℥,	8 fluidrachms.
A fluidrachm,	Fluidrachma,	fʒ,	60 minims (℥).

The *minims* used in the table have been adopted in the United States Pharmacopœia in place of *drops*; and although we have only partially employed this measure in our prescriptions, yet we can readily perceive it to possess some important advantages over the ancient practice. The symbol (℥) is sometimes used by medical writers, though very improperly, to denote both minims and drops. The size of a drop varies according to the greater or less fluidity and gravity of the liquid, and the shape of the vessel from which it is dropped; but, as a general rule, we cannot do better on these occasions than use a small vial with a thin edge. Dr. Dorsey observes that, whenever great precision is necessary, it is easy to dilute the active medicine, and give it in the form of a mixture.

Elias Durand, Prof. Procter, and Edward Parrish, of this city, have made various experiments to ascer-

tain the number of drops of different liquids equivalent to a fluidrachm; and the results, which are of practical importance, are partly given in the following table:—

	DROPS.
Acid, acetic (crystallizable)	120
Acid, hydrocyanic (medicinal)	45
Acid, muriatic	54
Acid, nitric	84
Acid, sulphuric	90
Acid, sulphuric, aromatic	120
Alcohol (rectified spirit)	138
Alcohol, diluted (proof spirit)	120
Arsenite of potassa, solution of	57
Chloroform	200-260
Ether, sulphuric	150
The essential oils	90-110
Syrup of acacia	58
Syrup of squill	88
Tincture of assafetida, of foxglove, of guaiac, of opium	120
Tincture of chloride of iron	132-150
Vinegar, distilled	78
Vinegar of colchicum	78
Vinegar of opium (Black Drop)	78
Vinegar of squills	78
Water, distilled	45
Water of ammonia (strong)	54
Water of ammonia (weak)	45
Wine, Teneriffe	78
Wine, antimonial	72
Wine of colchicum	75
Wine of opium	78

Now it is evident from the preceding facts, that in giving one hundred and fifty drops of sulphuric ether (and proximately of any ethereal tincture), we give but a fluidrachm; whereas the same number of drops of medicinal hydrocyanic acid (one of the most poisonous preparations of the *Materia Medica*), would be equal to something more than three fluidrachms. The same remark, it will be observed, is applicable to various other preparations, which suggests a caution in rapidly increasing the dose of such medicines by drops.

Whenever a *tablespoonful* of any liquid is ordered, it is considered to be equal to *half an ounce* by measure; and in the same way a *teaspoonful* is used for a *fluidrachm*. These measures are sufficiently accurate where no great precision is requisite.

The prescriptions contained in this work are given in the Latin language, without other abbreviations than those in common use to denote the *quantity* of an ingredient. The directions for the administration of medicines are expressed in English.

Prescriptions, as usually sent to the apothecaries, are much abbreviated, and the same course may be pursued with regard to those contained in this collection. For the information of students who have not been in the practice of writing prescriptions, a Table of Abbreviations is subjoined.

TABLE OF ABBREVIATIONS.

Abbreviations.	Latin word.	English word.
āā.	Ana, ¹	Of each.
Ad saturand.	Ad saturandum,	Until saturated.
Ad lib.	Ad libitum,	At pleasure.
Aq. tepid.	Aqua tepida,	Warm water.
Aq. ferv.	Aqua fervens,	Hot water.
C.	Congius,	A gallon.
Chart.	Chartula,	A small paper.
Coch.	Cochlear,	A spoonful.
Coch. mag.	Cochlear magnum,	A tablespoonful.
Coch. parv.	Cochlear parvum,	A teaspoonful.
Colent.	Colentur,	Let them be strained.
Collyr.	Collyrium,	An eye-water.
Contus.	Contusus,	Bruised or broken.
F. vel Ft.	Fiat vel fiant,	Let there be made.
Fol.	Folium, vel folia,	A leaf, or leaves.
Garg.	Gargarysma,	A gargle.
Gr.	Granum, vel grana,	A grain, or grains.
Gtt.	Gutta, vel guttæ,	A drop, or drops.
Haust.	Haustus,	A draught.
Infus.	Infusum,	An infusion.
M.	Misce,	Mix.
Mass.	Massa,	A mass.
Mist.	Mistura,	A mixture.
O.	Octarius,	A pint.
Pil.	Pilula, vel pilulæ,	A pill, or pills.
Pulv.	Pulvis, vel pulveres,	A powder, or powders.
Q. S.	Quantum sufficit,	A sufficient quantity.
R.	Recipe,	Take.
Rad.	Radix,	A root.
S.	Signa,	Write.
Ss.	Semis,	The half.
Tinct.	Tinctura,	A tincture.

The *doses* throughout this work are applicable to adult age, unless the contrary is specified.

For the convenience of young practitioners, the rules furnished by Gaubius and Dr. Young, for

¹ This is not properly a Latin word, but the Greek preposition *ana*.

ascertaining the proper doses of medicines for children, are given below.

Gaubius takes the dose for an adult as unity, and for other ages, as follows:—

One year old	$\frac{1}{13}$	Seven years old	$\frac{1}{3}$
Two years old	$\frac{1}{8}$	Fourteen years old	$\frac{1}{2}$
Three years old	$\frac{1}{6}$	Twenty years old	$\frac{2}{3}$
Four years old	$\frac{1}{4}$	From 20 to 60 years old	1

Dr. Young says: "For children under twelve years, the doses of most medicines must be diminished in the proportion of the age, to the age increased by 12." Thus for a child of two years, $2 : 2+12 ::$ the adult dose, or 1 : to the child's dose, or $\frac{2}{14}$. Or to state it more simply, $\frac{2}{2+12} = \frac{1}{7}$. Hence,

$$\text{For one year, } \frac{1}{1+12} = \frac{1}{13}$$

$$\text{" two years, } \frac{2}{2+12} = \frac{1}{7}$$

$$\text{" three " } \frac{3}{3+12} = \frac{1}{5}$$

$$\text{" four " } \frac{4}{4+12} = \frac{1}{4}$$

$$\text{" six " } \frac{6}{6+12} = \frac{1}{3}$$

etc. etc.

At twelve, the dose is one-half that of the adult.

An exception should be made in the administration of opiates to very young children, the dose requiring to be diminished in greater proportion than that of the table.

In the case of mercurials, on the other hand, the dose is greater, the susceptibility to their impression being less, proportionately, than in adults.

TABLE OF THE DOSES OF MEDICINES,

ARRANGED IN ALPHABETICAL ORDER.

IN preparing the following Table, a great object has been to present, at a glance, the minimum and medium doses of each medicine; or, as sometimes happens in respect to the more familiar articles, the ordinary dose, as in many of the infusions and tinctures. It is necessary to premise that these preparations are adapted to adult age; nor can any precise rule be laid down which will be applicable to all the periods of life between that period and early infancy. Nothing but the cautious observation and judgment of the physician can possibly supply this deficiency. The best mode of giving active medicines to infants is in solution or suspension, so that the dose may be readily and safely graduated in reference to age, constitution and disease.

We would also impress upon every practitioner, the vital importance of knowing the properties and strength of a medicine before prescribing it; and this caution is especially requisite in directing those preparations which, in an overdose, produce distressing and sometimes fatal effects. No prescription of this kind should ever be copied at random, and without

first satisfying one's self, by a little calculation, whether the proportions directed in it are safe and consistent; and we would farther insist that the use of every poisonous medicine should be commenced in a *minimum* dose, and gradually increased according to its effects on the system. It is often necessary, also, in these instances, to put the patient on his guard in case any inordinate or unusual symptoms should arise, with a request that the prescription, in such contingency, may be taken in less quantity, at longer intervals, or discontinued. This precaution is all-important, for example, in the administration of alterative doses of the mercurial preparations; for the same quantity that would have little or no effect on one person, might, and often does, produce a violent and deleterious effect on another. This remark is also equally applicable to the whole class of narcotic medicines.

In giving the doses of the narcotic extracts, reference is had to the best preparations recognized by pharmacutists as having a standard strength and purity, as, for example, the well-known extracts of Squire, of London, between whose preparations and those of some other manufacturers there may be a difference of strength, and therefore of dose amounting to three or four times the weight.

In truth, nothing but *habitual circumspection* in prescribing medicines, can render this art beneficial to the patient or honorable to the physician.

OF

INTERNAL REMEDIES.

BOOK I

1840

THE HISTORY OF THE

CLASS I.

EMETICS.

EMETICS are medicines which excite vomiting, independently of any effect arising from the mere quantity of matter introduced into the stomach.

In the administration of Emetics a few simple rules are worthy of attention. Whatever may be the apparant necessity for emptying the stomach, we must take into consideration all the circumstances of the case, and more particularly if there be much arterial excitement with determination to the head; for where these symptoms are present, bloodletting should be sometimes premised.

When it is required, as in cases of poisoning, a full dose of the emetic substance is to be administered; but in the generality of instances, it is better to give it in divided doses, frequently repeated, until the desired effect is produced. In cases of torpor or congestion, it is sometimes requisite to arouse the system by retching or vomiting, which may be done by administering the emetic with only a small quantity of fluid; but when the object is to empty the stomach and duodenum merely, free draughts of tepid water or weak chamomile tea ought to be given as soon as nausea takes place.

When *poisons* have been taken, our object is to evacuate the stomach as speedily as possible, and for this purpose we select an emetic which is prompt in its action. But where the excitability of the stomach is greatly diminished by a *Narcotic*, it is necessary to assist the emetic by the addition of some excitant. When such an effect is caused by opium, the system may be generally rendered susceptible by the use of vinegar, mustard, or ammonia. In these cases, however, the stomach-tube is our best resource.

The evacuation of the stomach may be greatly facilitated by tickling the fauces with a feather, or introducing the point

of the finger as far back as possible and titillating the parts. If this fails, a resort to another article of the same class will often accomplish the object.

There are a few cases in which emetics are obviously inadmissible, as in apoplexy, or where there is great determination of blood to the head, depending upon constitutional causes, pregnancy, hernia, prolapsus uteri, active hemorrhage from the lungs and uterus, acute gastritis, etc. If emetic medicines are ever allowable in these diseases, it is for the most part in nauseating doses only.

By the frequent use of emetics the stomach acquires an increased susceptibility to their action; hence persons of delicate habits should use them cautiously.

Powders, etc.

1. *Powder of Ipecacuanha.*

R. Pulveris Ipecacuanhæ ℥ij.

Divide in pulveres ij.

Signa.—One powder to be taken in a little molasses, or sugar and water, and to be followed by a draught of tepid water.

If one powder does not produce the desired effect, the second is to be taken in like manner.

2. *Lozenges of Emetia.*

R. Emetiæ Impuræ gr. xxxij;

Sacchari ℥ij;

Mucilaginis Acaciæ q. s. ut fiat massa, in trochiscos singulos grana xvij pendentes, dividenda.

Each lozenge will contain about one-half of a grain of commercial emetia, sufficient to vomit a child, or to produce nausea in an adult.

MAGENDIE.

3. *Powder of Ipecacuanha with Tartarized Antimony.*

R. Pulveris Ipecacuanhæ ℥ss;

Antimonii et Potassæ Tartratis gr. j.

Misce, et divide in pulveres ij.

Let one powder be taken in water, and if vomiting does not ensue in fifteen minutes, give the second in a similar manner.

Tartar emetic increases the efficacy of ipecacuanha, producing a more prompt and certain effect than the latter drug. This combination is an eligible one in most cases where emetics are indicated. When tartar emetic is given alone, it is generally in solution, a formula for which will be found below. (*See* Formula 10.)

4. *Powder of Alum.*

R. Aluminis ʒj.

Fiat pulvis.

The dose is a teaspoonful, mixed with honey, syrup, or molasses, to be repeated every fifteen minutes until free emesis is produced.

C. D. MEIGS.

5. *Powder of Mustard.*

R. Pulveris Sinapis Nigræ ʒj.

Signa.—Take a teaspoonful in a teacupful of tepid water every ten minutes.

This is a very prompt and safe emetic.

In cases of narcotic poisoning it is necessary to resort to the most prompt and certain means of evacuating the stomach. Ipecacuanha was formerly thought to be a specific for poisoning by opium, but experience has shown that mustard, salt, alum, turpeth mineral, and the sulphates of zinc and copper are more reliable.

[6. *Powder of Ipecacuanha and Sulphate of Zinc.*]

R. Pulveris Ipecacuanhæ,

Zinci Sulphatis, āā ʒij.

Misce, et div. in chart. iv.

Signa.—Take one every fifteen minutes until vomiting.

7. *Powder of Ipecacuanha and Calomel.*

R. Pulveris Ipecacuanhæ gr. viij;

Hydrargyri Chloridi Mitis gr. v.

Misce.

This powder generally proves both emetic and purgative. It is often indicated in the commencement of the eruptive and other diseases of childhood in doses of 2 or 3 grains.

8. *Powder of Ipecacuanha and Rhubarb.*

R. Pulveris Ipecacuanhæ,

Pulveris Rhei, āā ʒj.

Misce.

Signa.—To be taken in syrup.

More or less purging will generally follow the emetic operation of this dose. It is used in congestive and other fevers.

Solutions and Mixtures.

9. *Wine of Ipecacuanha and Tartarized Antimony.*

R. Vini Ipecacuanhæ f̄3j;
Antimonii et Potassæ Tartratis gr. j.

Fiat solutio.

Signa.—A teaspoonful to be taken every ten or fifteen minutes, until vomiting is induced, which may be assisted with tepid drinks.

10. *Mixture of Tartrate of Antimony.*

R. Antimonii et Potassæ Tartratis gr. ij;
Sacchari ʒj;
Aquæ destillatæ f̄3ij.

Misce, et fiat solutio.

Signa.—A tablespoonful to be given every ten or fifteen minutes, until it vomits freely.

11. *Mixture of Sulphate of Zinc and Alum.*

R. Zinci Sulphatis ʒjss;
Aluminis ʒss;
Aquæ ferventis Oss.

Misce, et cola.

Signa.—A tablespoonful for adults, and a teaspoonful for a child of six months old (and so on in proportion to the strength and age of the patient), every morning upon an empty stomach.

This is the celebrated *solutio vitriolica* of Dr. Mosely, who principally employed it in dysentery and phthisis pulmonalis.

12. *Mixture of Emetia.*

R. Emetiæ impuræ gr. iv;
Aquæ destillatæ f̄3ij;
Syrupi f̄3ss.

Fiat solutio.

Signa.—Give a dessert-spoonful every half hour.

Emetia is destitute of the peculiar odor and nauseous taste of ipecacuanha, and may, therefore, be preferable in some cases.

It will be observed that we have introduced the impure or commercial emetia, which is much less energetic than the perfectly white alkaloid. The best antidote for an overdose is a strong infusion of nutgalls.

MAGENDIE.

13. *Mixture of Ipecacuanha, Tartar Emetic, and Squill.*

- R. Pulveris Ipecacuanhæ ʒss;
 Antimonii et Potassæ Tartratis gr. j;
 Tincturæ Scillæ fʒj;
 Aquæ destillatæ fʒviij.

Fiat mistura.

Signa.—Four tablespoonfuls at first; afterwards two table-
 spoonfuls every ten minutes until vomiting is induced.

This mixture is recommended in dropsies previously to
 giving digitalis.

14. *Mixture of Syrup and Wine of Ipecacuanha.*

- R. Syrupi Ipecacuanhæ fʒj;
 Vini Ipecacuanhæ fʒij.

Signa.—Give a teaspoonful to a child three years old, every
 fifteen minutes until it proves emetic.

The syrup of ipecacuanha, by itself, is too mild to act as an
 emetic, being rather designed as an expectorant. But in
 combination with the wine it provokes free emesis.

CLASS II.

A N T E M E T I C S.

UNDER this head may be embraced all remedies having a tendency to diminish irritability of the stomach, and thereby prevent vomiting and nausea. Inasmuch as nausea and vomiting are only symptoms, and not in themselves a disease, attention must be given to removing the cause, if it is ascertainable, at the same time that palliatives are administered to remove the symptom.

Practitioners will bear in mind the sympathetic disturbances of the stomach resulting from cerebral, hepatic, renal, and intestinal diseases, and investigate the condition of those organs as possible cause of the nausea.

If an overloaded stomach or the presence of undigested or indigestible food is a probable cause, the effort of nature to get rid of it should be aided by a gentle emetic, as ipecacuanha in dose of 20 grains, powdered mustard in teaspoonful dose, or common salt in the same dose in a tumblerful of tepid water.

The simple means to be resorted to to check nausea are as follows:—

Small pieces of ice, swallowed without being previously melted.

A tablespoonful of lime-water, or a teaspoonful of the syrup of lime in two tablespoonfuls of iced milk, every ten minutes.

A teaspoonful of iced brandy, every ten or fifteen minutes.

An infusion of camphor (made with boiling water), given cold, in teaspoonful doses frequently repeated.

Inhaling the fumes of laudanum heated to a rapid evaporation, or the vapor of spirits of camphor, or of chloroform, *carefully used*.

External applications may be made with advantage, anodyne or rubefacient, such as hot cloths, hot fomentations,

mustard cataplasms, and spice plasters. For the latter application an exceedingly convenient method, especially for travellers, is furnished in the beautiful preparation of portable sinapisms and spice plasters introduced by B. J. Crew, pharmacist, of this city.

The application of pounded ice to the spine, along the cervical and dorsal regions, either in narrow bladders or folded in a napkin, or in the bags of Chapman, will often be useful.

In obstinate vomiting, suppositories of powdered opium, containing one grain each, or more if needed, are often very efficient.

In the nausea and vomiting sometimes attending the administration of opium internally, the editor has found a strong decoction of Java or Laguayra coffee, given in tablespoonful doses, pure, to give immediate relief:

Under the head of tonics will be found many remedies, which, under certain circumstances, will prove antemetic by stimulating the depressed gastric function and removing irritability of the stomach.

Powders and Pills.

[15. *Pills of Calomel and Bismuth.*]

R. Hydrargyri Chloridi Mitis gr. iij;
 Bismuthi Subnitratis ʒss;
 Syrupi q. s. ut fiat massa, in pilulas xij dividenda.

Signa.—One pill every two hours.

In nausea from gastric irritability, or hepatic derangement.

[16. *Powder of Calomel and Morphia.*]

R. Hydrargyri Chloridi Mitis gr. iij;
 Morphiæ Sulphatis gr. j;
 Pulveris Sacchari gr. xij;

Misce, et divide in chartulas xij.

Signa.—One powder placed upon the tongue every two hours.

In gastric irritation, chronic gastritis.

[17. *Pills of Strychnia and Bismuth.*]

R. Strychniæ gr. j;
 Bismuthi Subnitratis ʒiv;
 Syrupi q. s.

Misce, et divide in pilulas xx.

Signa.—Take a pill before each meal.

In nausea from chronic gastric depression, with pyrosis.

[18. *Pills of Oxalate of Cerium.*]

R. Cerii Oxalatis gr. xv;

Extracti Gentianæ gr. v;

Misce, et divide in pilulas x.

Signa.—One pill an hour after each meal.

Recommended by Sir J. Y. Simpson in nausea of pregnancy.

[19. *Pills of Cerium, Nux Vomica, and Iron.*]

R. Cerii Oxalatis gr. xxiv;

Extracti Nucis Vomicae gr. xij;

Ferri redacti gr. xxiv;

Syrupi q. s.

Misce, et divide in pilulas xxiv.

Signa.—One pill at each meal.

In the nausea of pregnancy, with general atony.

Solutions and Mixtures.[20. *Brandy and Chloroform Mixture.*]

R. Chloroformi ℥xv;

Spiritûs Vini Gallici f̄j̄jss.

Misce.

Signa.—A teaspoonful every half hour, in water.

In nausea from nervous depression.

[21. *Prussic Acid and Morphia.*]

R. Acidi Hydrocyanici diluti gtt. xxiv;

Morphiæ Sulphatis gr. j;

Elixir Curaçoæ f̄j̄jss.

Misce.

Signa.—A teaspoonful every two hours, in a little pounded ice.

In the nausea of cardiac irregularity.

[22. *Sulphuric Acid and Morphia Mixture.*]

R. Morphiæ Sulphatis gr. j;

Acidi Sulphurici Aromatici gtt. lx.

Elixir Curaçoæ

(vel Syrupi Aurantii) f̄j̄jss.

Misce.

Signa.—A teaspoonful every two hours, in cold water.

In nausea from gastric depression, or intestinal irritation.

[23. *Mixture of Chloroform and Soda.*]

R. Chloroformi ℥x;
 Alcoholis puri f̄ss;
 Sodæ Bicarbonatis ℥ij;
 Aquæ Menthæ Piperitæ f̄ijss.

Misce.

Signa.—A tablespoonful every half hour.

In nausea attending bowel complaints; also, in the nausea of pregnancy with acidity of stomach.

[24. *Mixture of Pyroxylic Spirit.*]

R. Spiritûs Pyroxylici Rectificati f̄j;
 Tincturæ Cardamomi Compositæ f̄ijss.

Misce.

Signa.—A teaspoonful every four hours.

For the nausea of pregnancy.

H. E. EASTLAKE.

[25. *Creasote and Bismuth Mixture.*]

R. Creasoti gtt. xij;
 Bismuthi Subnitratis ℥j;
 Pulveris Tragacanthæ gr. xxx;
 Syrupi Aurantii f̄ij;
 Aquæ f̄iv.

Misce.

Signa.—A tablespoonful every hour or two.

In nausea from indigestion.

CLASS III.

CATHARTICS.

As a general rule it may be observed of cathartics that they are capable of fulfilling three different indications: 1. Simply to evacuate the bowels; 2. To excite an increased discharge from the mucous coat of the intestines; and 3. To stimulate the neighboring viscera, and cause them to secrete a greater quantity of their peculiar fluids. It seldom or perhaps never happens that the same article will produce these three different effects; and in order to accomplish them, we must combine different substances in one formula.

There are some, as magnesia, that produce their effect by absorbing the acid generated in the alimentary canal, and thus becoming converted into a purgative salt. There are others, as aloes, that expend their principal force upon the rectum and large intestines, and for this reason are very advantageously employed in diseases of the lower bowels, and of the uterus and its appendages.

These remedies should always be given on an empty stomach. If administered immediately after a full meal, they arrest the digestive process, are liable to produce nausea, if not vomiting, and do not open the bowels with the same certainty or effect. When simple costiveness is to be removed, the evening may be selected for the exhibition of a cathartic.

If this should not prove sufficient, we can repeat the dose in the morning and at regular intervals through the day until the effect is produced. "The principle," says Dr. Paris, "which should govern our conduct in the administration of purgatives, may be briefly stated: *The excitement is to be repeated till the requisite action is induced, yet no single excitement being such as may provè an irritant to the organ.*"

But in the treatment of many diseases it is preferable to purge through the day, in order that the sleep of the patient may not be disturbed at night.

The operation of these remedies may be very much accelerated by the free exhibition of diluent drinks, such as gruel, barley-water, etc. etc.

By combination we are enabled to modify and control the action of many remedies, and some of the most drastic purgatives may be made to operate mildly and certainly by uniting small quantities of several of them in the same dose.

The addition of an emetic substance, such as tartar emetic, or ipecacuanha, in small quantities, gives activity to the combination, while it modifies the harshness of the drastic purgatives.

Finally, the operation of a cathartic may often be promoted by judicious venesection; and if spasm of the intestines be present, opium may be advantageously joined with the purgative.

Powders.

26. *Powder of Calomel and Jalap.*

R. Hydrargyri Chloridi Mitis gr. v;
Pulveris Jalapæ gr. x.

Misce.

Signa.—To be given in molasses or syrup.

27. *Powder of Calomel and Rhubarb.*

R. Hydrargyri Chloridi Mitis,
Pulveris Rhei, āā gr. v;
Olei Cinnamomi gtt. j.

Misce.

Signa.—To be given in molasses.

28. *Powder of Calomel and Soda.*

R. Hydrargyri Chloridi Mitis gr. viij;
Sodæ Bicarbonatis gr. xij.

Misce.

Signa.—To be given in molasses.

This combination forms a safe and mild purgative. Nausea seldom follows its administration.

29. *Powder of Calomel, Jalap, and Rhubarb.*

R. Hydrargyri Chloridi Mitis,
Pulveris Jalapæ,
Pulveris Rhei, āā gr. v;
Olei Cinnamomi gtt. j.

Misce.

Signa.—To be given in syrup or molasses.

30. *Powder of Rhubarb and Magnesia.*

R. Pulveris Rhei ℥j;
Magnesiæ ℥ss;
Olei Cinnamomi gtt. j.

Misce.

Signa.—To be given in syrup or molasses.

• 31. *Calcined Magnesia.*

R. Magnesiæ ℥j.
R. Magnesiæ (HENRY) ℥j.
R. Magnesiæ (HUSBAND) ℥j.
R. Magnesiæ (ELLIS) ℥j.

Magnesia is an antacid, and laxative, much used in the diseases of women and children. The lightness and consequent bulk of the officinal powder, constitute serious objections to its use. To obviate these, Henry, of England, and Thomas J. Husband, and Charles Ellis & Co., of this city, have severally prepared a heavy magnesia as a substitute. Henry's magnesia has long been favorably known; Husband's and Ellis's are entitled to equal consideration with the imported article, since the experiments of Prof. Procter have shown that, for forming liquid mixtures, and for rapidity of antacid action, they are equal if not preferable to it.

Dose of either, from thirty grains to a drachm, in milk or water. The operation of magnesia, when it meets with no acid in the bowels, is promoted by giving the patient lemonade.

32. *Powder of Jalap and Cream of Tartar.*

R. Pulveris Jalapæ ℥j;
Potassæ Bitartratis ℥vj.
Misce, et divide in pulveres vj.

Signa.—Give one powder every three hours in molasses.

This powder is a hydragogue cathartic. "It constitutes one of the best medicines which I have ever tried, as well in dropsical as in all other cases, where long-continued purging is demanded."
N. CHAPMAN.

33. *Compound Powder of Jalap and Gamboge.*

R. Pulveris Jalapæ Compositi ℥iij;
Pulveris Gambogiæ gr. vj.

Misce, et divide in pulveres vj.

Signa.—Give one powder every two hours in molasses or syrup.

The compound powder of jalap has long been celebrated in dropsical affections; but it also forms a very convenient purge in many inflammatory cases. In order to increase its certainty and activity, we may conveniently add gamboge, as in the above formula.

34. *Powder of Sulphur and Cream of Tartar.*

R. Sulphuris loti $\bar{3}$ ss;
Potassæ Bitartratis $\bar{3}$ j.

Misce.

Signa.—Mix in a sufficient quantity of molasses, and give a teaspoonful three or four times a day to children. Used in various diseases of the skin.

It should be always recollected that sulphur promotes insensible perspiration in a very marked degree, and hence renders the patient more liable to be affected by vicissitudes of climate.

35. *Powder of Sulphur and Calcined Magnesia.*

R. Sulphuris præcipitati,
Magnesiæ, $\bar{a}\bar{a}$ $\bar{3}$ ss.

Misce.

Signa.—A teaspoonful to be taken three or four times a day.

This preparation is better adapted to delicate stomachs than the former. Either of them forms a good aperient during an alterative course of medicine.

N. CHAPMAN.

36. *Seidlitz Powders.*

R. Potassæ et Sodæ Tartratis $\bar{3}$ ij;
Sodæ Bicarbonatis $\bar{3}$ ij.

Fiat pulvis.

Signa.—To be dissolved in a wineglassful of cold water.

R. Acidi Tartarici pulverisati gr. xxxv.

Signa.—Dissolve in a wineglassful of water and mix the two solutions. To be taken while in a state of effervescence.

This is a very popular medicine, and justly so, as it is a gentle aperient, and may be taken by persons whose stomachs would reject any of the ordinary saline preparations.

37. *Stevens's Saline Powders.*

- R. Sodæ Bicarbonatis ℥ss;
 Sodii Chloridi ℥j;
 Potassæ Chloratis gr. viij.
 Misce.

This powder was administered by Dr. Stevens in half a tumblerful of tepid water, or a little thin beef tea, in cholera, and repeated every half hour until the patient recovered from the collapse.

Pills.

38. *Griffitts's Cathartic Pills.*

- R. Pulveris Jalapæ,
 Pulveris Rhei,
 Saponis, āā ℥ss;
 Hydrargyri Chloridi Mitis gr. xxv;
 Antimonii et Potassæ Tartratis gr. jss;
 Aquæ destillatæ, quantum sufficit ut fiat massa.
 Divide in pilulas xxv.

Signa.—Two of these pills may be taken at once, and repeated in two hours if not sufficient.

This combination of purgatives with the tartrate of antimony forms an excellent antibilious remedy; and, in cases of fever, prepares the alimentary canal for the reception of other remedies.

S. P. GRIFFITTS.

39. *Pills of Blue Mass, Jalap, and Aloes.*

- R. Pilulæ Hydrargyri,
 Pulveris Jalapæ,
 Pulveris Aloës Socotrinæ, āā gr. xv;
 Syrupi, q. s. ut fiat massa.
 Divide in pilulas xij.

Signa.—Three may be taken at night, and the same dose be repeated in the morning, if the first is ineffectual.

40. *Pills of Blue Mass, Rhubarb, and Soda.*

- R. Pilulæ Hydrargyri gr. ix;
 Pulveris Rhei,
 Sodæ Bicarbonatis, āā gr. xij;
 Syrupi Rhei Aromatici q. s. ut fiat massa, in pilulas xij
 dividenda.

Signa.—One pill to be taken twice or three times a day, as an alterative, in derangement of the liver.

JOS. HARTSHORNE.

41. *Pills of Calomel and Colocynth.*

R. Extracti Colocynthidis Compositi ℥ij;
Hydrargyri Chloridi Mitis ℥j.

Misce, et divide in pilulas xx.

Two or three of these pills will generally act as a cathartic.

42. *Pills of Colocynth and Podophyllin.*

R. Extracti Colocynthidis Compositi ℥ss;
Resinæ Podophylli gr. iij.

Misce, et divide in pilulas xij.

Signa.—One or two pills at bedtime.

This is an excellent substitute for the officinal compound cathartic pill. One pill acts usually as a laxative, and three pills produce free purgation.

R. P. THOMAS.

43. *Pills of Aloin and Podophyllin.*

R. Aloin gr. xxiv;
Resinæ Podophylli gr. xij;
Oleoresinæ Zingiberis ℥iv;

Fiat massa, et divide in pilulas xxiv.

Signa.—Dose, one pill as a laxative, two or three pills as a purgative.

“The experience of numerous practitioners here and in Europe confirms the utility of aloin as a mild though pretty certain cathartic in doses of two to three grains.”

E. PARRISH.

44. *Anti-Gout Pill.*

R. Extracti Colchici Acetici,
Extracti Colocynthidis Compositi, āā gr. x;
Morphiæ Acetatis gr. ijss.

Fiat massa, in pilulas x dividenda.

This is a useful anti-gout pill, adapted to mitigate an actual paroxysm. One pill should be given every two hours, until the bowels and kidneys are acted on.

ROBERT DICK.

45. *Becquerel's Anti-Gout Pill.*

R. Quiniæ Sulphatis ℥ij;
Extracti Digitalis 'Alcoholici gr. xv;
Extracti Colchici Acetici ℥ij.

Fiat massa, et divide in pilulas l.

Signa.—Take one pill every three hours.

These pills are highly recommended by M. Trousseau, of Paris, in the treatment of gout.

46. *Pills of Extract of Butternut and Jalap.*

R. Extracti Juglandis ℥ss;
Pulveris Jalapæ ℥j;
Saponis gr. x.

Misce, et fiant pilulæ xv.

Signa.—Three of these may be taken for a dose, and if they do not operate, two more may be safely administered.

The extract of butternut, either alone or in combination, is highly recommended as a cathartic in fevers, dysentery, etc., from its tendency to act on the liver.

47. *Fothergill's Pills.*

R. Extracti Colocynthis Compositi ℥jss;
Antimonii Oxidi ℥ss.

Misce, et divide in pilulas xxx.

One of these pills will generally produce a free evacuation; but two or more may be taken when required.

During the last century, the antimonial preparations were held in high repute by the London physicians, and this combination of an antimonial with active cathartics is still regarded with favor.

[48. *Lartigue's Gout Pill.*]

R. Extracti Colchici Acetici gr. viij;
Extracti Digitalis gr. iv;
Colocynthis Compositi ℥iv.

Misce, et divide in pilulas xx.

Signa.—One pill at bedtime.

In gout or chronic rheumatism.

49. *Mitchell's Aperient Pills.*

R. Pulveris Rhei ℥iv;
Pulveris Aloës Socotrinæ ℥ij;
Hydrargyri Chloridi Mitis gr. iv;
Antimonii et Potassæ Tartratis gr. ij.

Fiat pulvis, et adde—

Saponis, in pulverem contriti ℥ij;

Aquæ q. s. ut fiat massa.

Divide in pilulas xl.

Signa.—Take one pill every night as a laxative, or three pills as a purgative.

J. K. MITCHELL.

50. *Pills of Elaterium.*

R. Elaterii gr. ij;

Extracti Gentianæ gr. xiv.

Misce, et divide in pilulas xvj.

Signa.—Give one pill every three hours, until free purging takes place.

Elaterin, the active principle of this drug, can now be procured in a state of purity; and as it is more certain in its effects, a formula is subjoined under the head of purgative wines and tinctures.

51. *Pills of Croton Oil.*

R. Olei Tiglii gtt. ij;

Micæ Panis q. s. ut fiant pilulæ iv.

Signa.—One every hour until they operate.

This powerful remedy has lately been restored to the *Materia Medica*. One drop is a full dose, and frequently less will answer every purpose.

The following is a more certain and less drastic mode of exhibiting the oil.

52. *Pills of Croton Oil and Colocynth.*

R. Olei Tiglii gtt. ij;

Extracti Colocynthidis Compositi gr. x.

Misce, et divide in pilulas iv.

Signa.—Give one pill every two hours, until a purgative effect is produced.

53. *Chapman's Peristaltic Persuaders.*

R. Pulveris Rhei ʒj;

Pulveris Ipecacuanhæ gr. x;

Olei Cari gtt. x;

Pulveris Acaciæ q. s. ut fiat massa.

Divide in pilulas xx.

Signa.—Take two pills at bedtime, in obstinate constipation.

N. CHAPMAN.

54. *Chapman's Anti-dyspeptic Pills.*

R. Pulveris Aloës Socotrinæ,

Mastiches, āā ʒss;

Pulveris Ipecacuanhæ gr. x;

Olei Fœniculi ℥viiij.

Fiat massa, et divide in pilulas xx.

Signa.—Take one pill every night at bedtime.

These are indicated in cases of dyspepsia attended by habitual constipation.

N. CHAPMAN.

55. *Pills of Aloes and Gentian.*

R. Pulveris Aloës Capensis ʒj;
 Extracti Gentianæ ʒss;
 Olei Cari gtt. x;
 Syrupi q. s. ut fiat massa, in pilulas singulas grana quatuor pendentes, dividenda.

Signa.—Take two or three pills for a dose.

The addition of a tonic increases the purgative action of aloes, and diminishes its tendency to griping.

56. *Pills of Aloes, Guaiac, and Rhubarb.*

R. Pulveris Guaiaci Resinæ ʒj;
 Pulveris Aloës Capensis gr. xxxvj;
 Pulveris Rhei ʒij;
 Terebinthinæ Canadensis quantum sufficit ut fiat massa in pilulas xlvij dividenda.

Signa.—One to be taken every three hours.

This combination forms a highly stimulating cathartic.

57. *Pills of Rhubarb and Sulphate of Iron.*

R. Pulveris Rhei ʒjss;
 Ferri Sulphatis exsiccatae ʒss;
 Saponis ʒij.
 Aquæ destillatæ q. s. ut fiat massa in pilulas xl dividenda.

The intention of these pills is to remove costiveness, and impart tone to the bowels. Three may be taken for a dose at bedtime.

S. P. GRIFFITS.

58. *Pills of Ox Gall.*

R. Fellis Bovini inspissati ʒij;
 Olei Cari gtt. x;
 Magnesiae Carbonatis q. s. ut fiat massa in pilulas xxxvj dividenda.

Signa.—Take two pills three times daily.

CLAY.

Confections and Electuaries.59. *Lenitive Electuary and Cream of Tartar.*

- R. Confectionis Sennæ $\bar{3}$ ij;
 Confectionis Aurantii Corticis $\bar{3}$ ij;
 Potassæ Bitartratis $\bar{3}$ ij.

Misce, et fiat electuarium.

Signa.—Take a piece the size of a marble, night and morning.

Used in habitual constipation.

60. *Confection of Senna, Sulphur, and Nitre.*

- R. Sulphuris loti $\bar{3}$ jss;
 Confectionis Sennæ $\bar{3}$ ij;
 Potassæ Nitratis $\bar{3}$ j;
 Syrupi Aurantii Corticis q. s. ut fiat confectio.

Signa.—One or two drachms to be taken twice a day. Used in hemorrhoidal affections.

61. *Electuary of Jalap, Nitre, etc.*

- R. Pulveris Jalapæ,
 Potassæ Bitartratis,
 Potassæ Nitratis, $\bar{a}\bar{a}$ $\bar{3}$ ss;
 Confectionis Sennæ $\bar{3}$ j;
 Syrupi q. s. ut fiat electuarium.

Signa.—A bolus the size of a hazel-nut may be taken three times a day.

This preparation once gained considerable celebrity as a popular remedy for hemorrhoids.

Emulsions and Mixtures.62. *Castor Oil, or "Oleaginous" Mixture.*

- R. Pulveris Acaciæ,
 Pulveris Sacchari, $\bar{a}\bar{a}$ $\bar{3}$ ij;
 Aquæ $\bar{f}\bar{3}$ ij.
 Tere simul, et adde gradatim—
 Olei Ricini $\bar{3}$ j.
 Dein adde,
 Aquæ Cinnamomi $\bar{f}\bar{3}$ j.

Misce secundum artem.

Signa.—Take a tablespoonful every two hours.

This is one of the least disagreeable modes of administering this nauseous but valuable medicine.

63. *Another Form for Children.*

R. Olei Ricini ℥ij;
 Vitellum unius ovi;
 Aquæ Fœniculi,
 Aquæ Menthæ Viridis, āā f℥j.

Fiat emulsio.

Signa.—Give a teaspoonful morning and night to a child three months old.

64. *Mixture of Oil of Turpentine.*

R. Olei Terebinthinæ f℥j;
 Pulveris Acaciæ,
 Sacchari, āā ℥ss;
 Aquæ Menthæ Piperitæ f℥iv.

Misce.

Signa.—A tablespoonful every two hours until it operates.

This preparation must be made in the same manner as the oleaginous mixture.

65. *Oleaginous Mixture with Oil of Turpentine.*

R. Olei Ricini ℥jss;
 Vitellum unius ovi;
 Sacchari ℥ij;
 Olei Terebinthinæ ℥ss;
 Aquæ Menthæ Piperitæ f℥iv.

Misce secundum artem.

Signa.—A large tablespoonful may be taken every hour or two.

This preparation is much used by some of our best practitioners in cases requiring a brisk and stimulating cathartic. It has also been recommended as a purgative after the effects of an overdose of opium have been partially subdued by preliminary remedies.

B. ELLIS.

66. *Mixture of Croton Oil.*

R. Olei Tiglii ℥ij;
 Mucilaginis Acaciæ,
 Aquæ destillatæ, āā f℥j.

Misce.

Signa.—Take a teaspoonful every two hours until it operates.

67. *Saponaceous Mixture of Croton Oil.*

R. Olei Tiglii ℥viij;
 Potassæ gr. vj;
 Aquæ destillatæ f℥ij.

Fiat solutio.

Signa.—From three to six drops may be given for a dose.

This is a substitute for the soap of croton oil proposed by the French, which is more troublesome to make.

Mr. Conwell states that four drops of croton oil rubbed on and around the umbilicus, will produce a cathartic effect; even the odor of it has been known to excite the alimentary canal, either as an emetic or purgative.

68. *Solution of Epsom Salt and Tartar Emetic.*

R. Magnesiæ Sulphatis ℥j;
Antimonii et Potassæ Tartratis gr. ss;
Aquæ destillatæ f℥iij;
Succi Limonis recentis f℥j.

Misce, et fiat solutio.

A tablespoonful to be given every two hours until it operates. Or one-half may be taken as a purgative dose.

69. *Solution of Epsom Salts with Jalap and Nitric Acid.*

R. Magnesiæ Sulphatis ℥ss;
Tincturæ Jalapæ f℥j;
Acidi Nitrici gtt. ij;
Aquæ Menthæ Viridis f℥ij.

Misce.

Signa.—To be taken for a draught. The nitric acid destroys in part the bitter taste of the salt.

70. *Mixture of Magnesia and Rhubarb.*

R. Magnesiæ ℥ss;
Pulveris Rhei gr. ij;
Sacchari ℥j;
Spiritûs Menthæ Piperitæ gtt. vj;
Aquæ destillatæ f℥jss.

Fiat mistura.

Signa.—A teaspoonful to be given every two hours to children, until it operates.

This preparation is designed for the bowel complaints of children, in which it is very serviceable. Laudanum can be added according to the age and condition of the patient.

71. *Mixture of Magnesia and Colchicum.*

R. Magnesiæ ℥j;
Sacchari,
Pulveris Acaciæ, āā ℥j;
Aquæ destillatæ f℥iv;
Vini Colchici Radicis gtt. xl.

Fiat mistura.

Signa.—Take a tablespoonful every two hours until it operates.

This preparation is much used in gouty and rheumatic affections. Laudanum can be added if requisite.

72. *Scudamore's Mixture.*

R. Magnesiæ ℥iv ;
Magnesiæ Sulphatis ℥j ;
Aquæ Menthæ Viridis f℥v ;
Aceti Colchici f℥ss ;
Syrupi f℥j.

Fiat mistura.

Dose, a tablespoonful every two hours. Chiefly used in gouty paroxysms. SIR C. SCUDAMORE.

73. *Acid Solution of Veratria.*

R. Veratriæ gr. j ;
Acidi Sulphurici Aromatici gtt. v ;
Aquæ destillatæ f℥ij.

Fiat solutio.

Dose, a teaspoonful. This solution is said to be a good substitute for the Eau Médicinale of Husson, in gouty affections. MAGENDIE.

74. *Mixture of Fluid Extract of Butternut.*

R. Extracti Juglandis Fluidi (*Thayer*) f℥ij ;
Syrupi Zingiberis f℥ij ;
Aquæ f℥ss.

Misce.

Signa.—Take one-half as a draught.

The butternut is a mild cathartic, operating usually without pain or griping. It is adapted to cases of habitual constipation.

75. *Purgative Mineral Water.*

R. Liquoris Magnesiæ Citratis f℥xij.

Signa.—Take a teacupful every two hours until it operates.

From its resemblance to lemonade in taste, this constitutes one of the most pleasant laxatives now in use. A child five years old, may take a wineglassful as a dose.

The country practitioner can make a good approximation by neutralizing carbonate of magnesia with citric acid, in the proportion of fourteen parts of the former to twenty parts of the latter, and flavoring the solution with lemon syrup.

Half an ounce of the neutral salt of citrate of magnesia constitutes a dose.

76. *Purgative Soda Water.*

R. Sodæ Carbonatis Crystallinatæ ℥ix;
 Acidi Tartarici ℥vj;
 Aquæ f℥x;
 Syrupi Limonis f℥jss.

Misce in ampulla vitrea et adjice—
 Sodæ Bicarbonatis ℥ss.

Signa.—To be taken by draughts of a wineglassful every two hours.

Prof. J. Lawrence Smith published a formula for purgative soda water, as prepared by him on a large scale, from which the above is condensed. As a purgative, it is mild and certain, producing watery evacuations.

77. *Fluid Extract of Senna, Ginger, etc.*

R. Extracti Sennæ fluidi f℥ij;
 Extracti Rhei fluidi f℥j;
 Syrupi Zingiberis f℥v;
 Aquæ f℥j.

Misce.

Signa.—Dose, a tablespoonful.

This is an efficient mixture, operating without much pain. The dose should be repeated every four hours until a purgative effect is produced.

Infusions and Decoctions.78. *Infusion of Senna and Salts.—Black Draught.*

R. Sennæ,
 Menthæ Viridis, āā ℥ss;
 Aquæ bullientis Oj.

Macera per horam unam, cola, et adde—
 Magnesiae Sulphatis ℥ij.

Solve.

Signa.—Administer a wineglassful every two hours, until purgation is produced. GUY'S HOSP.

79. *Infusion of Senna and Manna.*

R. Sennæ ℥vj;
 Mannæ ℥ss;
 Cardamomi ℥ij;
 Aquæ bullientis f℥viiij.

Macera per horam unam et cola.

Signa.—One-half to be taken at a draught; and if insufficient, the remainder in two or three hours.

80. *Decoction of Prunes and Senna.*

R. Pruni \bar{z} ijj;
 Infusi Sennæ Ojss.

Coque ad Oj, et cola.

Signa.—Dose, a wineglassful at bedtime.

In making this decoction, the coriander seed, directed in the officinal infusion of senna, had better be omitted until near the close of the process. This forms a good laxative for pregnant women. Sugar enough to make a syrup improves the taste.

81. *Infusion of Senna, Rhubarb, and Manna.*

R. Sennæ \bar{z} vj;
 Mannæ \bar{z} iv;
 Rhei contusi,
 Cardamomi, $\bar{a}\bar{a}$ \bar{z} ij;
 Aquæ bullientis Oj.

Macera per horam unam et cola.

Signa.—Dose, a wineglassful every two hours, until it operates.

82. *Alkaline Mixture of Aloes.*

R. Aloës Capensis \bar{z} ijss;
 Sodæ Bicarbonatis \bar{z} vj;
 Aquæ Oiv;
 Spiritûs Lavandulæ Compositi f \bar{z} ij.

Misce. Macera per dies quatuordecim et cola.

Signa.—Dose, a teaspoonful after each meal.

This is an excellent preparation for Hospital or Dispensary practice. It is particularly serviceable in cases of dyspepsia, attended with acidity of the stomach and torpor of the liver and bowels.

J. P. METTAUER.

Wines and Tinctures.83. *Wine of Colchicum Root and Laudanum.*

R. Vini Colchici Radicis f \bar{z} jss;
 Tincturæ Opii f \bar{z} ij.

Misce.

Signa.—Give twenty drops every three hours.

The preparations of colchicum often occasion vomiting and purging, if given alone; but when combined with small quantities of opium or morphia, as above, these effects are

prevented, while the specific property of colchicum to control gout and rheumatism seems to be increased. EISENMAN.

84. *Tincture of Elaterin.*

R. Elaterin gr. j;
 Alcoholis f̄j.
 Solve; dein adde—
 Acidi Nitrici gtt. iv.
 Misce.

Signa.—Dose, twenty to forty drops in a tablespoonful of cinnamon water. Used as a hydragogue cathartic in drops. MORRIES.

Enemata.

Enemata, used either as auxiliaries to, or substitutes for cathartics, very properly succeed that class of remedies.

They are employed to fulfil other indications, and the different preparations will be noticed under their appropriate heads. It is usual to direct three times the quantity of the medicine to be given for an enema that is required for a dose by the mouth. For the purpose of procuring a discharge from the bowels, this rule may generally be observed; but in some of the powerful remedies occasionally administered, as opium and tobacco, it might be attended with serious consequences. When using these active drugs, it is better to give only double the quantity.

The bulk of the enema also varies according to the object we have in view. If purgation is to be effected, the subjoined proportions afford a good rule; but if the remedial agent is to be retained for some time, a small amount is obviously indicated, lest the mere bulk of the injection cause an immediate discharge.

The following are the proportions recommended by Professor Chapman in the ordinary enemata for persons of different ages: A child between the ages of one and five years, from f̄iv to f̄vj. A youth of ten or fifteen years, half a pint; and an adult, from a pint to a quart, according to circumstances.

In all cases, a warm folded towel should be firmly pressed against the anus for fifteen minutes after the injection is thrown up.

The facility with which an enema is administered may be very much increased by attending to certain precautions, viz:
 1. Introduce the finger, thoroughly lubricated with soap or

lard, into the rectum, as a guide to the pipe. 2. Pass the pipe backward and toward the left side, in the course of the rectum. 3. Introduce the injection slowly, so as not to surprise the bowel by a sudden distension, causing it to contract as suddenly and eject the fluid.

85. *Castor Oil, Molasses, and Salt Enema.*

R. Olei Ricini f̄ij;
Syrupi Fusci f̄ij;
Sodii Chloridi ʒj;
Infusi Lini tepidi Oj.

Fiat enema.

One-half to be administered at once, and the remainder in half an hour, if the first produces no evacuation. The chloride of sodium is an active ingredient. In fact, there is no better enema than simple salt and water at the ordinary temperature; and sea-water fresh from the ocean answers the same purpose.

86. *Soap Enema.*

R. Saponis Vulgaris incisi ʒj;
Infusi Lini tepidi Oss.
Misce pro enemate.

This is an effectual clyster in cases of flatulence and impacted feces.

87. *Ox Gall Enema.*

R. Fellis Bovini spissati ʒij;
vel
Fellis Bovini recentis f̄ij;
Aquæ tepidæ Oj.

Misce.

Signa.—Use for an injection, in cases of obstinate constipation and hardened feces.

88. *Enema of Oil of Turpentine.*

R. Olei Terebinthinæ f̄ss;
Vitellum unius ovi.
Terre simul, et adde, gradatim,
Decocti Hordei tepidi f̄x.

Used as a stimulating injection. GUY'S HOSPITAL PHARM.

89. *Enema of Senna and Epsom Salts.*

R. Infusi Sennæ Oj;

Magnesiæ Sulphatis ℥ij.

Misc.—One-half to be exhibited as an enema, and the remainder, if necessary, in half an hour.

90. *Enema of Tobacco.*

R. Tabaci ℥j;

Aquæ bullientis Oj.

Macera per sextam horæ partem et cola.

One-quarter or one-half of this infusion may be used as an injection; and, if necessary, the same quantity may be given in half an hour. Employed for strangulated hernia, obstinate colic, spasm of the urethra, and for the reduction of dislocations.

GUY'S HOSPITAL PHARM.

Suppositories.(From *Supponere*, to put under.)

Suppositories constitute a class of remedies that has hitherto been little used by American practitioners. They are solid; round, cylindrical, or conical in form; and intended for introduction into the anus. They are prepared by mingling sedative, astringent, or purgative medicines with cocoa-butter, suet, soap, or thick honey.

When made with suet or cocoa-butter, these substances should be melted, at a gentle heat, with an eighth or a twelfth of white wax, according to the season of the year. The medicinal agent is added, and the fluid mass poured into metallic cones to cool and become solid. A suppository should weigh from twenty grains to two drachms, and be as large as the end of the little finger. Purgative suppositories are larger than those of an anodyne character. By the heat of the body, the suet or cocoa-butter is softened, and the remedial agent is thus permitted to develop its effects.

Soap suppositories are formed by cutting soap into convenient shapes. Suppositories with honey are prepared by boiling down this substance till it becomes sufficiently thick to retain its shape when cool.

Laxative suppositories being rarely, if ever, used for adults, formulæ for this purpose are unnecessary; for other indications they will be found in their appropriate places. For children, suppositories of soap or molasses candy are often of great use.

CLASS IV.

DIURETICS.

THE rules for the administration of this class of remedies are few and simple.

Where there is much arterial excitement, a judicious use of the lancet may precede the employment of diuretics, and the patient be kept cool to avoid perspiration.

In order to insure the full effect of diuretics, diluent drinks should be freely given, and especially those containing some diuretic medicine.

Powders.

91. *Powder of Squill and Nitre.*

R. Pulveris Scillæ gr. vj;
Potassæ Nitratis ʒj.

Misce, et fiant pulveres vj.

Signa.—One to be given three times a day in sugar and water.

Some aromatic, such as cinnamon, may be added to this preparation if the stomach is irritable. Employed in dropsies.

92. *Powder of Nitre, Cream of Tartar, and Tartar Emetic.*

R. Potassæ Nitratis ʒss;
Potassæ Bitartratis ʒiv;
Antimonii et Potassæ Tartratis gr. j.

Tere simul et fiat pulvis.

Signa.—Take a teaspoonful three times daily.

This combination is designed for cases of acute gonorrhœa. The free administration of saline diuretics in this disease often effects permanent cures.

J. NEILL.

93. *Powder of Uva Ursi and Soda.*

R. Pulveris Uvæ Ursi ʒjss;
Sodæ Bicarbonatis ʒj.

Misce, et divide in chartulas xij.

Signa.—One three times a day in sugar and water.

In nephritic complaints and affections of the bladder.

94. *Powder of Ergot and Cubebs.*

R. Pulveris Ergotæ ʒij;
Pulveris Cubebæ ʒj;
Pulveris Cinnamomi ʒss;
Sacchari ʒj.

Divide in pulveres viij.

Signa.—One may be given three times a day. In leucorrhœa
and gleet. DR. RYAN.

95. *Powder of Squill, Cream of Tartar, etc.*

R. Antimonii et Potassæ Tartratis gr. ij;
Pulveris Scillæ ʒj;
Potassæ Bitartratis ʒjss;
Potassæ Sulphatis ʒss.

Fiat pulvis, et divide in pulveres xx.

Signa.—Take one powder four times daily.

This combination produces copious watery stools, together with a considerable flow of urine; properties that render it valuable in cases of general dropsy. EBERLE.

96. *Powder of Colchicum and Cream of Tartar.*

R. Pulveris Colchici radice ʒss;
Potassæ Bitartratis ʒij.

Misce, et divide in pulveres vj.

Signa.—One powder every four hours.

This combination is very serviceable in acute rheumatism. Purging usually results from its employment. Sometimes the pulse becomes slow or irregular. J. JACKSON.

Pills.97. *Pills of Squill and Calomel.*

R. Hydrargyri Chloridi Mitis,
Pulveris Scillæ, āā gr. xij;
Confectionis Rosæ q. s. ut fiant pilulæ xij.

Signa.—One night and morning, in dropsies depending upon visceral derangement.

This preparation is one of the most celebrated of the diuretics, especially when disease of the liver is the cause of effusion. When the calomel affects the mouth it should be omitted, and the squill combined with some other diuretic.

[98. *Pills of Digitalis, Podophyllin, and Iron.*]

R. Digitalis Pulveris gr. xij;
Podophyllin gr. j;
Ferri Perchloridi gr. xij.
Syrupi Acaciæ q. s.

Misce, et divide in pilulas xij.

Signa.—One pill to be taken every three or four hours.

In the dropsy following intermittent fever or in anæmic conditions.

99. *Pills of Digitalis, Calomel, and Opium.*

R. Pulveris Digitalis gr. xij;
Hydrargyri Chloridi Mitis gr. vj;
Pulveris Opii gr. iv;
Confectionis Rosæ q. s. ut fiant pilulæ xij.

Signa.—One to be taken every eight hours.

In hydrothorax and ascites.

100. *Pills of Copaiba and Cubebs.*

R. Ceræ flavæ gr. xv.
Liquefac cum leni calore, dein adde—
Copaibæ gr. xxx;
Pulveris Cubebæ ʒj.

Misce intime, et divide in pilulas xxx.

Signa.—Two pills every four hours.

This furnishes a good mode of exhibiting copaiba and cubebs in small quantities, as in chronic diseases of the bladder, or irritability of the urethra.

J. M. MAISCH.

101. *Pills of Extract of Dandelion and Blue Mass.*

R. Extracti Taraxaci ʒss;
Pilulæ Hydrargyri gr. x.

Misce, et fiant pilulæ x.

Signa.—One to be taken morning, noon, and night. In dropsy complicated with disease of the liver.

102. *Granules of Digitalin.*

R. Digitalini gr. j;
 Sacchari ʒj;
 Aquæ q. s.

Fiat massa, et divide in pilulas lx.

Signa.—Take one granule four times daily.

Prescribed in dropsy as a substitute for digitalis.

HOMOLLE.

103. *Pills of Digitalis, Squill, and Juniper.*

R. Pulveris Digitalis ʒj;
 Pulveris Scillæ ʒss;
 Olei Juniperi gtt. viij;
 Syrupi q. s. ut fiat massa, in pilulas xij dividenda.

Signa.—Take one pill three times daily.

Used in dropsy.

PEARSON.

104. *Pills of Digitalis, Squill, and Blue Mass.*

R. Pulveris Digitalis gr. v;
 Pulveris Scillæ gr. x;
 Pilulæ Hydrargyri ʒss.

Fiat massa, et divide in pilulas x.

Signa.—Take one pill three times daily.

This combination was highly recommended by the late Dr. Baillie, of London, as an alterative and diuretic in anasarca.

Infusions and Decoctions.105. *Infusion of Digitalis and Sweet Spirit of Nitre.*

R. Digitalis ʒj;
 Aquæ bullientis Oss.

Macera per horas tres, cola, et adde—

Spiritûs Ætheris Nitrosi, f ʒj.

Signa.—Dose, for an adult, half a tablespoonful three times a day.

The prostrating effect of digitalis should always be kept in mind by the practitioner; and the rule, that when it acts upon the *stomach*, the *bowels*, the *pulse*, or the *kidneys*, it should be discontinued, cannot, when we consider the power of the article, be too scrupulously observed.

B. ELLIS.

106. *Infusion of Juniper Berries and Cream of Tartar.*

R. Juniperi contusi $\bar{\text{z}}\text{iv}$;
 Aquæ bullientis $\text{f}\bar{\text{z}}\text{xij}$;
 Spiritûs Juniperi (Holland Gin), $\text{f}\bar{\text{z}}\text{iv}$.

Macera per horas duodecim et exprime.

Signa.—Take a wineglassful, mixed with a teaspoonful of cream of tartar, three times a day.

This is an excellent mode of administering a favorite diuretic, in cases of dropsy, in which a little stimulation would be admissible.

W. PROCTER, JR.

107. *Infusion of Parsley Root.*

R. Petroselini $\bar{\text{z}}\text{j}$;
 Aquæ bullientis Oj.

Fiat infusum et cola.

A teacupful may be taken with a teaspoonful of sweet spirit of nitre, every three or four hours.

A popular and very useful remedy for strangury, arising from blisters. It is also an efficient diuretic in dropsies.

108. *Infusion of Dandelion, etc.*

R. Infusi Taraxaci $\text{f}\bar{\text{z}}\text{iv}$;
 Extracti Taraxaci $\bar{\text{z}}\text{ij}$;
 Sodæ Carbonatis $\bar{\text{z}}\text{ss}$;
 Potassæ Tartratis $\bar{\text{z}}\text{iiij}$;
 Tincturæ Rhei $\text{f}\bar{\text{z}}\text{iiij}$;
 Tincturæ Hyoscyami gtt. xx.

Fiat mistura.

Signa.—One-third part to be taken three times a day. In dropsical and visceral affections.

C. D. MEIGS.

109. *Decoction of Indian Hemp.*

R. Apocyni Cannabini $\bar{\text{z}}\text{ss}$;
 Aquæ Ojss.

Coque ad Oj, et cola.

Signa.—Take a wineglassful three times a day.

This has been found useful in general dropsy, acting as a hydragogue cathartic, and as a diuretic. The diuretic properties of the decoction will be increased by the addition of an ounce of juniper berries to each pint.

GRISCOM.

The young practitioner must carefully distinguish between preparations of the native drug under consideration (*Apocy-*

num Cannabinum), and the powerful, imported extract of *Cannabis Sativa*; as, unfortunately, they both bear the same trivial name of *Indian Hemp*.

110. *Decoction of Pareira Brava Root.*

R. Pareiræ contusæ ʒss;
 Aquæ bullientis Oij.
 Coque, leni calore, ad Oj, et cola.
Signa.—Take a wineglassful every two hours.

“Pareira Brava has a great influence over chronic inflammation of the bladder, lessening very materially the secretion of the ropy mucus, which is itself a very great evil, and, I believe, diminishing the inflammation and irritability of the bladder also.”

SIR B. BRODIE.

Solutions and Mixtures.

[111. *Liquor Potassæ in Milk.*]

R. Liquoris Potassæ gtt. xx;
 Lactis recentis fʒij.
 Fiat haustus.
 To be taken every two or three hours until relieved.

In dysury, irritation of bladder, and frequent micturition from acrid and concentrated urine; useful in the albuminuria of pregnancy.

112. *Cider Mixture.*

R. Juniperi contusi,
 Sinapis,
 Zingiberis, āā ʒss;
 Armoraciæ contusæ,
 Petroselini, āā ʒj;
 Succi fermenti pomorum Oij.
 Macera per diem unam, et cola.
Signa.—A wineglassful may be taken three or four times a day.

The above compound was recommended by the late Dr. Jos. Parrish, in cases of general dropsy which admit of stimulation, and in which the urinary secretion is deficient. The cider should be old and sound.

113. *Mixture of Oil of Juniper.*

R. Olei Juniperi f̄ss;
 Spiritûs Ætheris Nitrosi,
 Tincturæ Digitalis, āā f̄iij.

Misce.

Signa.—Give thirty drops every three hours.

This is the formula of the "*diuretic drops*," celebrated in Germany as a diuretic remedy, and used in all cases in which medicines of this class are indicated. HUFELAND.

114. *Diuretic Wine.*

R. Juniperi contusi ̄x;
 Pulveris Digitalis ̄ij;
 Pulveris Scillæ ̄j;
 Vini Xerici Oj.

Macera per dies quatuor, et adjice—

Potassæ Acetatis ̄iij.

Exprime et cola.

Signa.—Dose, a tablespoonful three times daily.

This preparation is employed in "l'Hôtel Dieu de Paris," and is found to be an efficient diuretic. TROUSSEAU.

115. *Mixture of Juniper, Squill, etc.*

R. Potassæ Acetatis ̄v;
 Potassæ Bicarbonatis ̄j;
 Aquæ f̄xij;
 Tincturæ Scillæ f̄j;
 Spiritûs Juniperi Compositi f̄j.

Fiat mistura.

Signa.—Take two tablespoonfuls three times a day.

Employed in dropsy.

BROWN.

116. *Mixture of Digitalis, Acetate of Potassa, etc.*

R. Infusi Digitalis f̄iv;
 Potassæ Acetatis ̄ij;
 Spiritûs Ætheris Nitrosi f̄ij;
 Aquæ Cinnamomi f̄jss.

Fiat mistura.

Signa.—Take a tablespoonful every four hours.

Recommended in the treatment of dropsy supervening upon cardiac disease. KILGOUR.

117. *Mixture of Cantharides and Sweet Spirit of Nitre.*

- R. Tincturæ Cantharidis,
 Spiritûs Ætheris Nitrosi, āā gtt. lx;
 Sacchari ʒj;
 Aquæ Menthæ Viridis fʒij.

Fiat mistura.

Signa.—A teaspoonful may be taken every three hours, de-
 sisting if strangury should supervene.

A stimulant diuretic. Used in atony of the bladder.

118. *Mixture of Oil of Turpentine.*

- R. Olei Terebinthinæ ꝑc;
 Pulveris Acaciæ,
 Sacchari, āā ʒj;
 Aquæ Menthæ Viridis fʒiv.

Fiat mistura.

Signa.—A tablespoonful four or five times a day, aided by
 some diuretic drink.

This remedy is used with great benefit in nephritic com-
 plaints, and especially in the passage of calculi through the
 ureters.

119. *Mixture of Benzoic Acid, etc.*

- R. Acidi Benzoici ʒiv;
 Spiritûs Juniperi Compositi fʒss;
 Syrupi Tolutani fʒjss;
 Aquæ fʒij.

Fiat mistura.

Signa.—Give a dessert-spoonful every four hours.

This combination is recommended in the phosphatic variety
 of gravel. It is also useful in the treatment of diabetes.

[120. *Another Form.*]

- R. Acidi Benzoici ʒij;
 Potassæ Bicarbonatis ʒss;
 Spiritûs Ætheris Nitrosi fʒj;
 Syrupi Limonis fʒij;
 Liquoris Ammoniae Acetatis fʒiij.

Misce.

Signa.—A tablespoonful to be taken four or five times daily.

An excellent combination in the albuminuria of preg-
 nancy.

121. *Mixture of Elaterium, Colchicum, etc.*

R. Elaterii gr. j;
 Spiritûs Ætheris Nitrosi f ʒij;
 Tincturæ Scillæ f ʒss;
 Aceti Colchici f ʒij;
 Syrupi f ʒj.

Fiat mistura.

Signa.—Take a teaspoonful four times a day in a little water.

Dr. Ferriar recommends the above in the several forms of dropsy, and more especially in hydrothorax.

122. *Tincture of Colchicum and Digitalis.*

R. Tincturæ Colchici,
 Tincturæ Digitalis,
 Spiritûs Ætheris Nitrosi, āā f ʒj.

Misce.

Signa.—Dose, twenty drops on a lump of sugar.

Given as a diuretic in dropsy and hydrothorax.

HILDENBRAND.

123. *Mixture of Citrate of Potassa, Squill, etc.*

R. Potassæ Carbonatis Puræ ʒj;
 Succi Limonis q. s. ad saturandum;
 Tincturæ Scillæ f ʒss;
 Tincturæ Opii ℥xxx;
 Aquæ Cinnamomi f ʒiv.

Misce.

Signa.—A tablespoonful every three hours throughout the day.

The vinegar or oxymel of squill, if preferred, may be substituted in this preparation. We use the tincture because it is more uniform, and less liable to spontaneous changes.

124. *Mixture of the Acetate of Potassa, and Spirit of Mindererus.*

R. Liquoris Ammoniaë Acetatis f ʒij;
 Potassæ Acetatis ʒij.

Misce.

Signa.—A tablespoonful every three hours for a dose.

Recommended for gravel and lithic acid deposits.

125. *Mixture of Buchu and Acetate of Potassa.*

R. Extracti Buchu Fluidi f̄ss;
 Potassæ Acetatis ʒij;
 Syrupi f̄jss;
 Aquæ f̄iv.

Misce.

Signa.—A tablespoonful every four hours.

This is an excellent diuretic combination, and its value may be farther enhanced by the addition of sweet spirit of nitre.

MORTON.

126. *Mixture of Buchu and Uva Ursi.*

R. Extracti Buchu Fluidi,
 Extracti Uvæ Ursi Fluidi, āā f̄ij;
 Syrupi Acaciæ f̄ss;
 Aquæ Menthæ Viridis f̄j.

Misce.

Signa.—A dessert-spoonful every three hours.

Used in blennorrhœa, atony, and paralysis of the bladder.

127. *Mixture of Copaiba.*

R. Copaibæ ʒss;
 Spiritûs Ætheris Nitrosi f̄ss;
 Pulveris Acaciæ ʒij;
 Sacchari ʒj;
 Aquæ destillatæ f̄iv;
 Spiritûs Lavandulæ Compositi f̄ij;
 Tincturæ Opii f̄j.

Fiat mistura secundum artem.

Signa.—A tablespoonful three times a day.

CHAPMAN.

This remedy is more especially used in gonorrhœa, and is considered by Professor Chapman as a specific in that disease. A preferable mode of exhibiting balsam copaiba, consists in dropping the quantity prescribed for a dose in a wineglass of water, and then adding to it a small quantity of the compound tincture of gentian. The balsam collects into a globule and is surrounded by the tincture, which, leaving its taste in the mouth, covers that of the nauseous balsam.

B. ELLIS.

128. *Mixture of Copaiba, Cubebs, etc.*

R. Copaibæ,
 Pulveris Cubebæ, āā ʒss;
 Acaciæ,
 Sacchari, āā ʒij;
 Aquæ fʒvij;
 Tincturæ Opii Camphoratæ fʒss.

Misce secundum artem.

Signa.—A tablespoonful every three hours.

We have found this remedy, in some obstinate cases of gonorrhœa, more efficacious than the preceding formula. The tincture of cubebs may be substituted for the powder, if desirable. Balsam copaiba is sometimes given by the French physicians in the form of enema, for the cure of gonorrhœa. Capsules containing it are also in common use.

S. G. MORTON.

129. *Another Form.*

R. Copaibæ ʒjss;
 Mucilaginis Acaciæ fʒv;
 Olei Limonis, gtt. vj;
 Tincturæ Cubebæ fʒj;
 Spiritûs Ætheris Nitrosi fʒss.

Fiat mistura.

Signa.—Take a tablespoonful three times a day, in gonorrhœa.

J. RANDOLPH.

130. *Compound Mixture of Copaiba.*

R. Olei Copaibæ fʒj;
 Alcoholis,
 Aquæ Menthæ Piperitæ,
 Syrupi, āā fʒss;
 Spiritûs Ætheris Nitrosi fʒss.

Fiat mistura.

Signa.—To be taken during the day in four doses, followed by demulcent drinks.

In chronic gonorrhœa.

131. *Another Form. (Lafayette Mixture.)*

R. Copaibæ ℥j;
 Liquoris Potassæ fʒij.
 Tere simul et adjice—
 Spiritûs Ætheris Nitrosi fʒj;
 Spiritûs Lavandulæ Compositi fʒij;
 Syrupi Acaciæ fʒiv.

Misce.

Signa.—A tablespoonful three times a day.

Used in gonorrhœa.

132. *Mixture of Fluid Extract of Cubebs.*

R. Oleoresinæ Cubebæ fʒij;
 Syrupi Acaciæ,
 Syrupi Tolutani, āā fʒss;
 Spiritûs Ætheris Nitrosi fʒij.
 Aquæ fʒijss.

Fiat mistura.

Signa.—Give a tablespoonful every three hours.

Used in gonorrhœa.

THOMAS.

CLASS V.

ANTILITHICS AND LITHONTRIPTICS.

ANTILITHICS are those substances which arrest or prevent the formation of stone in the kidneys or bladder. Lithontriptics are supposed to possess the power of dissolving calculous concretions, by acting on the substance which serves as the bond of union to the saline or acid particles composing the stone.

To administer these remedies with any degree of success, requires a chemical knowledge of the ingredients which enter into the formation of the different kinds of stone; attention must also be given to the properties of the urine.

As derangement of the digestive organs almost always co-exists with these foreign bodies in the urinary apparatus, we shall gain a very considerable advantage by combining the remedies of this class with those which have a tendency to restore the healthy action of the stomach and bowels.

When lithic or uric acid abounds in the urine, the alkalies will be found to produce the greatest benefit; but where the salts are evidently of the phosphatic or magnesian character, the muriatic acid, or some one of the mineral acids, will constitute the most appropriate remedy.

Powders and Pills.

133. *Powders of Uva Ursi, Bark, and Opium.*

R. Pulveris Uvæ Ursi,
Pulveris Cinchonæ Flavæ, āā ʒij;
Pulveris Opii gr. iij.

Misce, et divide in chartulas vj.—Of which one may be taken three or four times a day.

The above is the original prescription of Dr. Ferriar, for urinary deposits, who advises the patient to drink two ounces of lime-water after each dose. It is designed to give tone to the digestive and urinary apparatus, and thereby to prevent the further formation of stone.

134. *Pills of Carbonate of Soda and Soap.*

R. Sodæ Carbonatis exsiccatae,
Saponis, āā ʒj;
Extracti Glycyrrhizæ,
Aquæ, āā q. s. ut fiat massa in pilulas xxx dividenda.
Signa.—Take three pills, three times a day.

Prescribed when uric acid deposits are found in the urine.
BEDDOES.

Solutions, Mixtures, etc.

135. *Solution of Potassa, Tincture of Hops, etc.*

R. Liquoris Potassæ fʒss;
Tincturæ Humuli fʒjss;
Infusi Calumbæ fʒiv;
Syrupi Aurantii Corticis fʒij.
Fiat mistura.

Signa.—Take a tablespoonful three times daily.

Employed in cases where the urine indicates an excess of uric acid.
H. GREEN.

136. *Solution of Bicarbonate of Soda, etc.*

R. Sodæ Bicarbonatis ʒj;
Infusi Quassiaæ fʒiv;
Tincturæ Calumbæ fʒj.
Misc.

Signa.—A tablespoonful four times a day.

Used in the same cases as the preceding.

137. *Mixture of Bicarbonate of Soda, etc.*

R. Sodæ Bicarbonatis ʒj;
Misturæ Amygdalæ fʒiv;
Copaibæ fʒij;
Tincturæ Opii gtt. lx.

Fiat mistura secundum artem.

Signa.—A tablespoonful every three hours.

In acute pain of the bladder.

In combination with each of these alkaline preparations, demulcent drinks may with benefit be freely employed.

138. *Fluid Extract of Hydrangea Arborescens.*

R. Radicis Hydrangeæ contusi ℥xvj;

Aquæ bullientis Ovj.

Coque ad Oss, cola, et adjice—

Mellis Oij.

Coque ad Ojss, et adjice—

Spiritûs Vini Gallici Oss.

Signa.—Dose, a teaspoonful three times daily.

This formula is furnished by Mr. Edward Parrish, based on one devised by Dr. S. W. Butler, who first called the attention of the profession to the valuable properties of this root. In chronic catarrh of the bladder and gravel it has proved highly beneficial, as also in cases of stone. Indeed, in some instances, small stones have been passed during its employment. Dr. W. L. Atlee, of Philadelphia, and Dr. J. C. S. Monkur, of Baltimore, report favorably of its use in cases of earthy deposits in the urine.

139. *Mixture of Carbonate of Magnesia and Gentian.*

R. Magnesiæ Carbonatis ℥j;

Infusi Gentianæ Compositi f℥vj.

Fiat mistura.

Signa.—A wineglassful to be taken three times a day.

This mixture is recommended by Mr. Brande, of London, as superior to the alkalies, in cases where uric acid abounds.

[140. *Mixture of Nitro-hydrochloric Acid.*]

R. Acidi Nitro-hydrochlorici diluti f℥ij;

Tincturæ Gentianæ f℥iij;

Tincturæ Aconiti foliorum ℥xxx;

Syrupi Aurantii f℥j;

Infusi Aurantii ad f℥viij.

Misce.

Signa.—Take one-sixth part three times daily.

In oxaluria.

T. H. TANNER.

[141. *Mixture of Iron and Hydrochloric Acid.*]

R. Tincturæ Ferri Chloridi fʒij;
 Acidi Hydrochlorici diluti fʒss;
 Syrupi fʒijss;
 Aquæ fʒiij.

Misce.

Signa.—A tablespoonful four times daily, rinsing the mouth well after it.

Oxaluria, with anemia and nervous atony.

142. *Mixture of Muriatic Acid.*

R. Acidi Hydrochlorici diluti fʒj;
 Decocti Hordei fʒviij.

Misce.

Signa.—Dose, a tablespoonful largely diluted three times a day.

Prescribed for the prevention of phosphatic deposits in the urine.

Nitric acid has been given with the same intention, but appears to be less useful than muriatic.

143. *Mixture of Phosphoric Acid.*

R. Acidi Phosphorici diluti fʒss;
 Infusi Calumbæ fʒvij;
 Tincturæ Cardamomi Compositæ fʒss.

Fiat mistura.

Signa.—A tablespoonful in sweetened water every four hours.

Used to correct phosphatic deposits in the urine.

NELIGAN.

144. *Mixture of Oil of Turpentine and Ether.*

R. Olei Terebinthinæ,
 Ætheris, āā fʒiv.

Misce.

Signa.—A large teaspoonful to be taken on sugar every half hour until relief is obtained.

Oil of turpentine has been frequently given of late in the passage of urinary concretions down the ureters. It is stated by Dr. Physick that this remedy, proportioned in its dose to the degree of suffering, affords more prompt relief than any other.

145. *Injection of Carbonate of Soda.*

R. Sodæ Carbonatis ʒj;
Saponis ʒij;
Aquæ destillatæ fʒxij.

Fiat solutio et cola.

Signa.—Use as an urethral injection, for softening uric acid deposits.

HÔPITAL DE MONTPELLIER.

146. *Injection of Carbonate of Lithia.*

R. Lithiæ Carbonatis ʒj;
Aquæ Oj.

Solve.

Signa.—Use as an urethral injection.

Mr. Alexander Ure recommends the carbonate of lithia as an injection into the bladder for the solution of uric acid deposits. He suggests its special use for removing the sharp angular points and asperities of the broken fragments, where the practice of crushing is adopted.

Dr. Garrod recommends the internal employment of carbonate of lithia in the uric acid diathesis, two to three grains being given in free solution three times a day.

CLASS VI.

DIAPHORETICS.

DURING the exhibition of this class of medicines the patient must be confined to his bed; and when diaphoresis is once excited, every precaution should be taken lest it be suddenly checked.

When the skin continues steadily hot and dry, all external warmth must be removed, and cold water freely applied to the temples, hands, feet, etc., while the room is to be kept cool by a free current of fresh air. Under these circumstances, cold water may be frequently and plentifully drunk by the patient. Diaphoretics given in conjunction with these general means, will act with much more certainty than if great heat of the surface is maintained by covering the patient with heavy bedclothes. If it be desirable to produce perspiration when the heat of the skin is not above the natural standard, we shall obtain our object most readily by placing the patient in a warm bed, giving him warm drinks freely, placing his feet in warm water, or applying hot bottles, or bags of sand, to the different parts of his body. The bags of sand accommodate themselves to the inequalities of the surface, and therefore form an excellent mode of applying heat externally. Warm bricks, covered with cloths, and wetted with vinegar, may also be used advantageously. Employed in this way they form a steam-bath. The same effect may be produced by conducting the vapor of alcohol through a tube, under the bedclothes of the patient.

In a few words, then, we have described the manner of producing diaphoresis under opposite states of the system. In the first instance we solicit, in the second we rather extort it.

It may be proper to observe, that in the febrile affections the frequent change of linen about the patient is not only

warrantable, but absolutely necessary, whilst employing this class of remedies.

Where, however, we are desirous of producing what is emphatically termed "*a sweat*," we should envelop the patient in a flannel shirt or gown, and avoid, as was before observed, every cause which may suddenly check the cutaneous discharge, and more especially purging and diuresis.

In the treatment of ordinary fevers, we usually resort to articles recognized by the profession as being capable of producing perspiration or sweating, soon after their exhibition; while in chronic diseases, as syphilis, scrofula, and the cachectic state following the use or abuse of mercury, others are employed which combine an alterative property with their tendency to the skin. It is therefore deemed advisable to make two sub-classes, viz., 1. Ordinary Diaphoretics, and 2. Alterative Diaphoretics.

SUB-CLASS I.—ORDINARY DIAPHORETICS.

Powders.

147. *Dover's Powder, Camphor, and Saltpetre.*

R. Camphoræ, redactæ in pulverem gr. v;
Potassæ Nitratis gr. xx;
Pulveris Ipecacuanhæ Compositi gr. x.

Tere simul et fiant pulveres ij.

Signa.—One powder to be taken at bedtime.

This excellent diaphoretic is serviceable in febrile cases complicated with irregular nervous action. SIMPSON.

[148. *Tyson's Antimonial Powder.*]

R. Antimonii Oxidi gr. j.

Calcis Phosphatis gr. ix.

Misce, fiat pulvis subtilissimum; divide in chartulas x.

Signa.—Dose as a diaphoretic, one powder every two or three hours.

From long use of this preparation the editor regards it as the most efficient and reliable of all the antimonials. If properly prepared, the dose usually given in the books, three to five grains, is too large, except as an emetic.

149. *James's Powder.*

R. Pulvis Antimonialis, *Ed.* ʒj.

Divide in chartulas vj.

Signa.—One every two or three hours in syrup or molasses.

Employed in febrile conditions.

150. *Nitrous Powders.*

R. Potassæ Nitratis ʒj;

Antimonii et Potassæ Tartratis gr. ss;

Hydrargyri Chloridi Mitis gr. vj.

Fiant pulveres vj.

Signa.—One to be taken every two hours in syrup or molasses.

In febrile affections.

The calomel may be omitted or diminished, at the discretion of the practitioner.

151. *Powders of Opium, Ipecacuanha, Calomel, and Saltpetre.*

R. Pulveris Opii gr. iij;

Pulveris Ipecacuanhæ gr. vj;

Hydrargyri Chloridi Mitis gr. jss;

Potassæ Nitratis ʒss.

Fiant pulveres vj.

Signa.—One to be taken every three or four hours.

This is a valuable anodyne and alterative diaphoretic.

152. *Powders of Calomel, Opium, and Ipecacuanha.*

R. Pulveris Opii gr. iv;

Hydrargyri Chloridi Mitis gr. ij;

Pulveris Ipecacuanhæ gr. viij.

Divide in pulveres viij.

Signa.—One to be taken every two hours.

This combination is recommended by Professor Chapman in dysentery. From its evident diaphoretic tendency we have been induced to place it under this head.

153. *Powders of Sulphuret of Antimony, Calomel, etc.*

R. Antimonii Sulphurati,

Hydrargyri Chloridi Mitis, āā gr. vj;

Pulveris Guaiaci Resinæ ʒj.

Fiant pulveres vj.

Signa.—One to be taken morning and evening.

Double or even triple proportion of the ingredients may be used if necessary.

Given in cutaneous diseases.

154. *Soda Powder of Guy's Hospital.*

R. Sodæ Carbonatis exsiccatae ℥j;
Hydrargyri Chloridi Mitis gr. xij;
Pulveris Cretæ Compositi, Lond. ℥ij.

Misce.

Signa.—Give three to eight grains at night for a week, in infantile gastric fever; followed in the morning by five grains of rhubarb mixed with ten grains of the sulphate of potassa. Dr. Fordyce says of the above: "Had I been more ambitious of dying a rich man than of living a useful member of society, the powers of our antihectic powder in curing, as if by miracle, the hectic fever and the swelled bellies of children in London, would have remained a secret while I lived."

GOLDING BIRD.

155. *Compound Powder of Guaiacum.*

R. Pulveris Guaiaci Resinæ,
Potassæ Nitratis, āā ℥j;
Pulveris Ipecacuanhæ gr. iiij;
Pulveris Opii gr. ij.

Fiant pulveres vj.

Signa.—One to be taken every three hours in a little jelly or molasses.

A stimulating diaphoretic, and particularly serviceable in acute rheumatism after the reduction of inflammatory symptoms.

Solutions and Mixtures.

156. *Solution of Morphia and Wine of Ipecacuanha.*

R. Morphiæ Acetatis ℥j;
Acidi Acetici diluti f℥j.

Solve; dein adde—

Alcoholis diluti f℥vij;
Vini Ipecacuanhæ f℥ij.

Misce.

Signa.—Dose, from fifteen to thirty drops.

157. *Neutral Mixture.*

- R. Succi Limonis recentis f̄jss;
 Potassæ Carbonatis q. s. ad saturandum;
 Sacchari ʒij;
 Antimonii et Potassæ Tartratis gr. ss;
 Aquæ destillatæ f̄ij.

Misce.

Signa.—A tablespoonful to be taken every two hours.

This preparation is one of our most agreeable diaphoretics. Its powers are decidedly increased by the addition of tartar emetic, which, however, may be omitted, and the sweet spirit of nitre be substituted, if preferred.

158. *Solution of Citrate of Potassa.*

- R. Potassæ Citratis ʒij;
 Olei Limonis gtt. ij;
 Sacchari ʒij;
 Aquæ destillatæ f̄iv.

Misce.

Signa.—A tablespoonful to be taken every two hours.

This preparation is a good substitute for the preceding, and is in several respects to be preferred. Spirit of nitre may be added when indicated.

159. *Effervescing Draught.*

- R. Potassæ Carbonatis ʒij;
 Aquæ destillatæ f̄iv.

Solve.

- R. Succi Limonis recentis,
 Aquæ destillatæ, āā f̄ij.

Misce.

Signa.—Mix two tablespoonfuls of the lemonade with one of the alkaline solution, and let the mixture be drunk while effervescing. To be repeated every two hours.

This preparation differs from the neutral mixture more in the mode of exhibition than in any other important particular. It is of great value when irritability of the stomach precludes the use of ordinary diaphoretics.

160. *Mixture of Spirit of Mindererus and Antimonial Wine.*

R. Liquoris Ammoniae Acetatis f̄ij;
 Aquæ Cinnamomi f̄ij;
 Vini Antimonii f̄ij;
 Aquæ destillatæ f̄ij.

Fiat mistura.

Signa. A tablespoonful every two or three hours.

The excellent diaphoretic known as the spirit of Mindererus, appears to have been first used by Boerhaave, in 1732. With us it is generally prescribed in combination, as in the preceding or the following form.

161. *Spirit of Mindererus, Sweet Spirit of Nitre, etc.*

R. Liquoris Ammoniae Acetatis f̄vj;
 Syrupi Limonis f̄ij;
 Vini Antimonii f̄jss;
 Spiritûs Ætheris Nitrosi f̄ij;
 Tincturæ Opii gtt. xlv.

Fiat mistura.

Signa.—Take a tablespoonful every two hours. EBERLE.

[162. *Mixture of Morphia and Nitre, etc.*]

R. Morphia Acetatis gr. j;
 Spiritûs Ætheris Nitrosi f̄ss;
 Syrupi Limonis f̄ijss;
 Liquoris Ammoniae Acetatis f̄ij.

Misce.

Signa. Give a tablespoonful every two hours.

As a diaphoretic in fevers, attended with pain or nervous irritability.

163. *Sweet Spirit of Nitre and Antimonial Wine.*

R. Spiritûs Ætheris Nitrosi f̄j;
 Vini Antimonii f̄ij.

Misce.

Signa.—A teaspoonful may be taken every hour or two hours, in barley-water, during the hot stage of intermittent and other fevers.

164. *Sweet Spirit of Nitre with Antimonial Wine and Laudanum.*

R. Tincturæ Opii gtt. xxv;
 Spiritûs Ætheris Nitrosi f̄ 3j;
 Vini Antimonii gtt. xx;
 Aquæ destillatæ f̄ 3ss.

Fiat mistura.

Signa.—To be given at once, and the dose to be repeated every three hours.

Dr. Chapman observes, in his *Therapeutics*, that “this combination very frequently acts as a diuretic in dropsy, and has more than once, within my knowledge, removed the effusion in this disease, under circumstances the least to be expected.”

165. *Mixture of Guaiacum, Saltpetre, etc.*

R. Pulveris Guaiaci Resinæ 3ij;
 Potassæ Nitratiss 3jss;
 Antimonii et Potassæ Tartratis gr. j;
 Pulveris Acaciæ,
 Pulveris Extracti Glycyrrhizæ, āā 3j;
 Aquæ destillatæ f̄ 3viij.

Fiat mistura.

Signa.—A tablespoonful three or four times a day.

This preparation, if made without the liquorice, is disposed to turn green, which gives it an unpleasant appearance, and sometimes induces the patient to refrain from it until the physician arrives. It is employed principally in rheumatic cases.

B. ELLIS.

166. *Mixture of Nitrate of Potassa.*

R. Decocti Hordei Oj;
 Potassæ Nitratiss 3ij;
 Succi Limonis f̄ 3j.

Fiat potus.

To be used warm as a common drink in doses of a wine-glassful.

Administered in this way, saltpetre proves an excellent diaphoretic; but if given in cold infusion its action is chiefly manifested on the kidneys.

167. *Mixture of Tolu with Wine of Antimony.*

- R. Tincturæ Tolutanæ f̄3v;
 Pulveris Acaciæ,
 Sacchari, āā 3j;
 Vini Antimonii f̄3j;
 Aquæ Cinnamomi f̄3ij.

Fiat mistura.

Signa.—A tablespoonful three or four times a day.

This is a stimulating diaphoretic, and will be found serviceable in pectoral diseases accompanied with an excessive mucous discharge depending on debility of the bronchial membrane.

168. *Mixture of Gelsemium.*

- R. Extracti Gelsemii Fluidi (*Thayer*), f̄3j;
 Syrupi Limonis f̄3ij;
 Aquæ f̄3xiiij.

Misce.

Signa.—Give a teaspoonful every two hours.

The yellow jessamine (*Gelsemium sempervirens*) has a depressing and sedative influence upon the nervous centres, and it diminishes the force and frequency of the heart's action. It has been employed by practitioners in various parts of the United States with benefit in febrile diseases and rheumatism. In full doses it causes vertigo and impaired vision.

169. *Mixture of Aconite and Wine of Colchicum.*

- R. Extracti Aconiti Alcoholici gr. xij;
 Syrupi f̄3j;
 Vini Colchici Seminis f̄3ss.

Fiat mistura.

Signa.—Take fifteen drops every three hours.

Used in acute and chronic rheumatism, gradually increasing the dose.

WEBER.

170. *Mixture of Aconite and Spirit of Mindererus.*

- R. Tincturæ Aconiti Radicis ℥_{xxx};
 Liquoris Ammoniacetatis f̄3ij;
 Syrupi Limonis f̄3ss.

Misce.

Signa.—Give a dessert-spoonful every three hours.

Employed beneficially in acute rheumatism and pleurisy. In the latter disease, aconite often relieves the peculiar lancinating pain in a surprising manner. Its action should be carefully watched.

R. P. THOMAS.

171. *Mixture of Aconite and Veratrum Viride.*

R. Tincturæ Aconiti Folii f3v;
 Extracti Veratri Viridis Fluidi f3j.
 Misce.

Signa.—Give twelve drops every two hours.

Under the combined influence of aconite and veratrum viride, the force and frequency of the pulse in fevers or inflammations can be reduced with safety and rapidity. It is necessary, however, to watch the effects of these remedies.

Infusions.

172. *Infusion of Boneset.*

R. Eupatorii ʒj;
 Aquæ bullientis Oj.

Macera per horam dimidiam in vase leviter clauso et cola.

Signa.—Take a wineglassful every hour, till perspiration is freely induced. The infusion must be taken as hot as it can be drunk; otherwise it may produce vomiting.

Used in colds, influenza, and intermittent fever.

173. *Infusion of Pleurisy Root.*

R. Radicis Asclepiadis, contritæ ʒj;
 Aquæ bullientis Ojss.

Fiat infusum.

Signa.—A teacupful to be taken warm, as frequently as the stomach will bear it.

N. CHAPMAN.

Professor Chapman observes of this plant: "As a diaphoretic, I think it is distinguished by great certainty and permanency of operation, and has this estimable property, that it produces its effects without increasing much the force of the circulation, raising the temperature of the surface, or creating inquietude and restlessness."—*Therapeutics*, vol. i. p. 347.

SUB-CLASS II.—ALTERATIVE DIAPHORETICS.

Pills.174. *Pills of Cinnabar and Serpentaria.*

R. Hydrargyri Sulphureti Rubri,
Pulveris Serpentariæ, āā ʒss;
Syrupi q. s.

Fiant pilulæ xij.

Signa.—Two of these to be taken three times a day.

They are alterative as well as diaphoretic, and are useful in herpetic and other obstinate cutaneous complaints.

175. *Plummer's Pills.*

R. Hydrargyri Chloridi Mitis,
Antimonii Sulphurati, āā ʒss;
Pulveris Guaiaci Resinæ ʒj;
Syrupi fuscii q. s. ut fiant pilulæ lx.

Signa.—Three pills to be taken night and morning.

These pills were recommended by Professor Plummer, in leprosy, secondary syphilis affecting the skin, gleet, old ulcers, etc. etc. The decoction of guaiacum generally accompanies their use.

Decoctions.176. *Decoction of Burdock.*

R. Radicis Lappæ ʒiij;
Aquæ Oij.

Coque ad Oij, et cola.

Signa.—A teacupful may be taken five or six times a day.

Used in syphilis, scurvy, arthritic affections, and rheumatism.

177. *Decoction of Mezereon.*

R. Mezerei ʒvj;
Aquæ Ovj;

Coque ad colaturæ Oiv.

Sub finem coctionis, adde—

Extracti Glycyrrhizæ ʒj, et cola.

Signa.—Give a wineglassful several times daily.

Given in scrofula complicated with syphilis, and in various skin diseases.

178. *Compound Decoction of Sarsaparilla.*

R. Sarsaparillæ contritæ ℥iij;
Mezerei concisi ℥ij;
Aquæ Oij.

Coque ad colaturæ Oij.

Sub finem coctionis, adde—

Extracti Glycyrrhizæ ℥ss.

Signa.—A teacupful four times daily.

This preparation or its equivalent, the “Decoctum Sarsaparillæ Compositum” of the Pharmacopœia, has long been celebrated in the secondary forms of syphilis, and the diseases produced by the improper exhibition of mercury. It is also much employed in rheumatism and chronic skin diseases.

SWEDIAUR.

Mixtures.

179. *Mixture of Muriate of Baryta and Iron.*

R. Barii Chloridi ℥ss;
Aquæ Menthæ Piperitæ f℥ijss;
Tincturæ Ferri Chloridi f℥ss;
Syrupi Aurantii Corticis f℥j.

Fiat mistura.

Signa.—Take a teaspoonful every three hours.

Used in obstinate scrofulous diseases. Each dose contains about one grain of the chloride of barium, and seventeen drops of the muriated tincture of iron. This corresponds in strength with a prescription by

FISCHER.

180. *Mixture of Buchu and Iodide of Potassium.*

R. Infusi Buchu f℥vijj;
Liquoris Potassæ f℥j;
Potassii Iodidi ℥ss;
Spiritus Ætheris Nitrosi f℥iij.

Fiat mistura.

Signa.—Take two tablespoonfuls three times a day.

Used in chronic and syphilitic rheumatism. S. WRIGHT.

181. *Sarsaparilla Beer.*

- R. Sarsaparillæ contusæ ℥ij;
 Pulveris Guaiaci Corticis ℥viiij;
 Guaiaci Ligni concisi,
 Anisi,
 Radicis Glycyrrhizæ contusæ, āā ℥iv;
 Mezerei ℥j;
 Syrupi fusci Oij;
 Caryophylli contusi ℥ss;
 Aquæ bullientis, Congios iv.

Mix these ingredients, and agitate the vessel thrice a day. When a fermentation has well begun it is fit for use, and may be taken in the dose of a small tumblerful twice or thrice a day.

“This is the Spanish recipe for the Jarave, or diet drink, somewhat modified. If intended for old and obstinate complaints, as leprous affections, elephantiasis, various anomalous ulcerations and foul disorders of the skin, there may be added to the jug, *after fermentation has well begun*, tartrate of antimony twelve grains, corrosive sublimate eight or ten grains, muriate of ammonia one drachm, dissolved previously in a little water. These remedies greatly increase the alterative powers of the vegetable infusion, and so effectually prevent its decomposition that it may be kept for a long time unaltered, *even in a hot climate.*”—See *Hancock on Sarsaparilla. Journal of the Philadelphia College of Pharmacy*, vol. i. No. 4.

CLASS VII.

EXPECTORANTS.

DURING the administration of Expectorants the patient should be kept warm, and, if the complaint be violent, in bed. The dose of all the Expectorants should be repeated sufficiently often to allay the irritation as much as possible; for it is obvious that the act of coughing increases that very irritation which originally gave rise to it.

Powders, Pills, and Lozenges.

182. *Powders of Myrrh, Ipecacuanha, etc.*

R. Pulveris Myrrhæ gr. xij;
Pulveris Ipecacuanhæ gr. vj;
Potassæ Nitratis ℥ss.

Misce, et divide in partes iv.

Signa.—One to be taken every fourth hour.

A stimulating expectorant used in chronic bronchitis, and the catarrh of elderly persons.—PARIS'S *Pharmacologia*.

183. *Powders of Nitrate of Potassa, Calomel, Opium, etc.*

R. Potassæ Nitratis gr. xxx;
Hydrargyri Chloridi Mitis,
Pulveris Opii,
Pulveris Ipecacuanhæ, āā gr. iij.

Misce, et divide in chartulas vj.

Signa.—One every three hours in syrup or molasses.

All powders containing calomel, or other metallic preparations, should be given in syrup, as they sink when water is employed as the vehicle.

Used in acute bronchitis.

184. *Pills of Sulphate of Zinc and Myrrh.*

R. Zinci Sulphatis gr. x;
 Pulveris Myrrhæ ʒjss;
 Confectionis Rosæ q. s. ut fiant pilulæ xx.

This prescription is taken from the Pharmacologia of Dr. Paris, who recommends two of the pills to be taken twice a day.

It is principally used in pertussis; but a more efficient direction would be to reduce the myrrh to a drachm, on account of the size of the pills, and to give a pill every two hours. Dr. Paris remarks, that the principal nostrums for whooping-cough are formed either of opium or sulphate of zinc, or a combination of the two.

185. *Pills of Hemlock and Dover's Powder.*

R. Extracti Conii,
 Pulveris Ipecacuanhæ Compositi, āā gr. x.
 Misce, et fiant pilulæ v.
Signa.—Two may be taken at bedtime.

In pulmonary irritation, attended with rheumatic and other local pains.

186. *Pills of Tartar Emetic and Opium.*

R. Antimonii et Potassæ Tartratis,
 Pulveris Opii, āā gr. jss;
 Pulveris Tragacanthæ gr. x;
 Confectionis Rosæ q. s. ut fiant pilulæ xxv.
Signa.—Two to be taken night and morning.

In chronic pulmonary catarrh.

DR. PARISET.

[187. *Pills of Antimony, Dover's Powder, and Calomel.*]

R. Hydrargyri Chloridi Mitis gr. iij;
 Pulveris Antimonialis, *Tyson* (formula 148) gr. xij;
 Pulveris Ipecacuanhæ Compositi gr. xxiv;
 Syrupi q. s.
 Misce, et divide in pilulas xij.
Signa.—Give one pill every two hours.

A very efficient expectorant and anodyne in the early stages of pneumonia, pleurisy, or acute bronchitis.

188. *Pills of Squill, Ammoniac, and Hemlock.*

R. Pulveris Scillæ,
 Extracti Conii, āā ʒss;
 Ammoniaci ʒj.
 Fiat massa, et divide in pilulas xxx.
Signa.—One pill every four hours.

Like the officinal "Pilulæ Scillæ Compositæ," this is an efficient expectorant combination, which may be prescribed with great benefit in chronic bronchitis, catarrh, and asthma.

189. *Pills of Calomel, Squill, Ammoniac, etc.*

R. Hydrargyri Chloridi Mitis gr. iij;
 Scillæ recentis,
 Ammoniaci, āā ʒj;
 Pulveris Ipecacuanhæ Compositi ʒss;
 Confectionis Rosæ q. s. ut fiat massa, in pilulas xxx dividenda.
Signa.—One four times a day.

This formula is recommended by the celebrated Dr. Latham, of London, for the relief of troublesome cough. In this country it will generally be necessary to substitute dried squill in half of the quantity, owing to the difficulty of obtaining the fresh article.

190. *Pills of Calomel, Squill, Tartar Emetic, etc.*

R. Hydrargyri Chloridi Mitis gr. xxiv;
 Pulveris Scillæ ʒss;
 Antimonii et Potassæ Tartratis gr. vj;
 Pulveris Opii gr. xvij;
 Syrupi q. s.
 Fiant pilulæ xxiv.
Signa.—One every night.

In chronic catarrhal affections.

191. *Pills of Tar and Gentian.*

R. Picis liquidæ ʒj;
 Pulveris Gentianæ q. s. ut fiat massa.
 Fiant pilulæ xxx.
Signa.—Take a pill morning, noon, and night.

Tar is a mild, stimulant expectorant; and is often employed, in different forms, in chronic bronchial affections and consumption.

192. *Pills of Myrrh, Squill, and Henbane.*

R. Myrrhæ ʒj;
 Pulveris Scillæ,
 Extracti Hyoscyami, āā ʒss;
 Aquæ destillatæ q. s. ut fiat massa in pilulas xxx dividenda.

Signa.—Two to be taken night and morning.

These pills are recommended by Dr. Paris in phthisis and catarrh attended with great debility of the pulmonary organs.

193. *Wistar's Cough Lozenges.*

R. Pulveris Acaciæ,
 Extracti Glycyrrhizæ,
 Sacchari, āā ʒij;
 Pulveris Opii gr. vj;
 Olei Anisi gtt. iv.

Misce et adde—

Aquæ destillatæ q. s. ut fiant trochisci lx.

Signa.—One of these may be dissolved in the mouth three or four times a day.

These lozenges, which were originally prescribed by the late Prof. C. Wistar, have long been highly esteemed for their demulcent and anodyne properties, and have been much employed both in general and domestic practice for the relief of cough. Mr. Edward Parrish recommends the substitution of sulphate of morphia, in equivalent quantity, for the opium. He also directs the lozenges when dry to be varnished with tincture of Tolu. These changes improve their flavor without impairing their efficiency.

194. *Spitta's Lozenges.*

R. Pulveris Cubebæ ʒij;
 Balsami Peruviani gr. vj;
 Syrupi Tolutani fʒj;
 Extracti Glycyrrhizæ ʒj;
 Acaciæ q. s. ut fiat massa, in trochiscos singulos grana x pendentis, dividenda.

These lozenges are celebrated for the relief they afford in hoarseness and coughs.

SPITTA.

195. *Jackson's Pectoral Lozenges.*

R. Pulveris Ipecacuanhæ gr. x;
 Antimonii Sulphurati gr. v;
 Morphiæ Muriatis gr. vj;
 Pulveris Acaciæ,
 Sacchari,
 Pulveris Extracti Glycyrrhizæ, āā ʒxj;
 Olei Sassafras gtt. iv;
 Tincturæ Tolutanæ fʒiv;
 Syrupi q. s.

Fiat massa, in trochiscos cc dividenda.

Each lozenge, weighing ten grains, contains of ipecacuanha gr. $\frac{1}{2}$; of the precipitated sulphuret gr. $\frac{1}{4}$; and of the muriate of morphia gr. $\frac{1}{3}$.

Signa.—One of these to be dissolved in the mouth, when the cough is troublesome. S. JACKSON.

Syrups.

As cough medicines have to be repeated at short intervals for the purpose of maintaining a gentle impression upon the pulmonary organs, it is desirable to administer them in the most agreeable form. Hence they are generally prescribed as syrups, the sugar in which serves the double purpose of covering the taste and acting as a demulcent to the mucous membrane.

The officinal syrups of garlic, squill, and seneka are given in a dose of a teaspoonful each. They are all slightly stimulant, and in large doses nauseant.

The syrup of wild cherry bark is tonic, astringent, and sedative. Its dose is a tablespoonful.

The syrups of gum Arabic, of almonds (orgeat), and of Tolu, are used chiefly as demulcents and flavoring agents.

The compound syrup of squill (Coxe's hive syrup) exhibits the anomalous association of a sedative (tartar emetic) with two valuable stimulant expectorants—squill and seneka. It is more often employed as an emetic for croup, than as an ordinary expectorant.

196. *Syrup of Squill, Seneka, and Ipecacuanha.*

R. Syrupi Scillæ,
 Syrupi Senegæ,
 Syrupi Ipecacuanhæ, āā fʒj.

Misce.

Signa.—A teaspoonful every three hours.

This is a favorite combination with many physicians, as it combines the expectorant qualities of the squill and seneka, with the relaxing effect of the ipecacuanha. MORTON.

197. *Syrup of Squill and Ipecacuanha, with Paregoric.*

R. Syrupi Scillæ,
Syrupi Ipecacuanhæ,
Tincturæ Opii Camphoratæ, āā f̄j.

Misce.

Signa.—A teaspoonful every three hours.

This preparation is more relaxing and soothing than the last, and may be given beneficially when the patient has a troublesome cough, with deficient expectoration.

198. *Syrup of Ipecacuanha, American Hellebore, etc.*

R. Syrupi Ipecacuanhæ,
Spiritus Ætheris Nitrosi, āā f̄ss;
Tincturæ Veratri Viridis ℥xv.

Misce.

Signa.—Fifteen drops every three hours.

This formula was employed in a large number of cases of pneumonic and bronchial diseases in children, and found to be a most efficient sedative and expectorant. The above dose may be given to a child one or two years old. The pulse must always be watched during the administration of American hellebore.

B. F. SCHNECK.

199. *Syrup of Assafetida.*

R. Assafoetidæ ʒj;
Aqua bullientis Oj;
Sacchari lbij.

Triturate the assafetida in a mortar with a portion of the boiling water, until a uniform paste is formed; then gradually add the remainder of the water, strain, and add the sugar, applying a gentle heat to dissolve it.

Dose, a teaspoonful every three hours, for a child five years old.

Each fluidounce contains fifteen grains of assafetida. This preparation will keep a month in the hottest weather. Its taste is less nauseous than the milk of assafetida, and, altogether, it is one of the very best modes of administering the fetid drug to children, in hooping-cough, I am acquainted with.

R. PELTZ.

200. *Another Form.*

R. Assafoetidæ ℥ss;
 Magnesiæ Carbonatis ℥vj.
 Tere simul et adde gradatim—
 Aquæ bullientis f℥x.
 Cola et adde—
 Sacchari ℥xv.
 Solve cum leni calore.
Signa.—Dose, a teaspoonful.

As this preparation should measure a pint, each fluidounce will contain fifteen grains of the fetid drug.

J. A. HEINTZELMAN.

201. *Syrup of Wild Cherry Bark and Prussic Acid.*

R. Syrupi Pruni Virginianæ f℥iij;
 Syrupi Tolutani f℥j;
 Acidi Hydrocyanici diluti ℥xvj.
 Misce.

Signa.—Dose, a dessert-spoonful every three hours.

When well prepared, this syrup represents the tonic and sedative properties of the wild cherry, which render this bark so peculiarly applicable to the treatment of phthisis. The addition of the prussic acid renders the preparation more sedative.

R. P. THOMAS.

202. *Syrup of Garlic and Tolu with Paregoric.*

R. Syrupi Allii,
 Syrupi Tolutani, āā f℥j;
 Tincturæ Opii Camphoratae f℥ij.

Misce.

Signa.—Dose, half a teaspoonful every three hours for a child five years old.

In general properties, garlic bears a close resemblance to squill. This combination may be given with great advantage in the advanced stages of catarrhal complaints of children.

203. *Jackson's Pectoral Syrup.*

R. Sassafras Medullæ ℥j;
 Acaciæ ℥j;
 Aquæ Oj.
 Macera per horas duodecim, dein adde—
 Sacchari ℥xxj.
 Et solve sine calore, cola, et adde—
 Morphię Muriatis gr. viij.

Signa.—Take a teaspoonful every three hours.

It is intended that this preparation, when completed, shall measure two pints, and if it does not, the operator is to add the complement of water, so that each fluidounce shall contain one-fourth of a grain of the muriate of morphia. It is much employed in Philadelphia. SAMUEL JACKSON.

204. *Another Form.*

R. Syrupi Acaciæ f̄iv;
Morphiæ Muriatis gr. j;
Olei Sassafras gtt. j.

Misce.

Signa.—Dose, a teaspoonful every three hours.

This is a convenient form for the extemporaneous preparation of Jackson's Pectoral Syrup.

205. *Substitute for Aubergier's Syrup.*

R. Syrupi Lactucarii f̄ij;
Syrupi Acaciæ f̄jss;
Syrupi Aurantii Florum f̄jss.

Misce.

Signa.—A teaspoonful every three hours.

This is a mild anodyne syrup, and is useful in bronchitis, catarrhus senilis, and consumption.

Mixtures.

206. *Mixture of Syrup of Squill, etc.*

R. Syrupi Scillæ f̄jss;
Tincturæ Opii Camphoratae f̄ij;
Vini Antimonii f̄j;
Aquæ destillatæ f̄ij.

Misce.

Signa.—A teaspoonful every three hours.

This is more particularly designed for children.

207. *Mixture of Squill, Morphia, and Prussic Acid.*

R. Morphæ Muriatis gr. j;
Acidi Muriatici diluti ℥v;
Acidi Hydrocyanici diluti ℥xxx;
Syrupi Scillæ,
Aquæ, āā f̄j.

Misce.

Signa.—Dose, a teaspoonful when the cough is troublesome.

Used in phthisis.

T. THOMPSON.

208. *Mixture of Seneka, Squill, Tartar Emetic, etc.*

- R. Decocti Senegæ f̄iv ;
 Syrupi Ipecacuanhæ f̄ij ;
 Syrupi Scillæ f̄ss ;
 Antimonii et Potassæ Tartratis gr. j.

Fiat mistura.

Signa.—A teaspoonful for children of two years of age and upwards.

In croup.

209. *Mixture of Seneka, Ammoniac, and Tolu.*

- R. Decocti Senegæ f̄vj ;
 Syrupi Tolutani f̄ij ;
 Ammoniaci ̄ss.

Misce secundum artem.

Signa.—A tablespoonful every two hours.

In catarrh.

210. *Mixture of Ammoniac and Squill.*

- R. Ammoniaci,
 Extracti Glycyrrhizæ, āā ̄ss ;
 Aceti Scillæ f̄ss ;
 Aquæ Fœniculi f̄vss.

Fiat mistura.

Signa.—A tablespoonful every two hours.

This is a stimulant preparation, useful in chronic bronchitis and senile catarrh.

211. *Mixture of Hemlock, Paregoric, and Tolu.*

- R. Extracti Conii Fluidi f̄ij ;
 Tincturæ Opii Camphoratae,
 Syrupi Tolutani, āā f̄ss ;
 Aquæ Rosæ f̄iv.

Misce.

Signa.—Thirty drops may be given once in four hours to a child a year old, watching the effect.

Dr. Pearson, in his work on pertussis, recommends the above as a valuable formula.

212. *Almond Emulsion, Ipecacuanha, etc.*

R. Misturæ Amygdalæ f̄v;
 Vini Ipecacuanhæ,
 Tincturæ Scillæ, āā f̄ij;
 Syrupi Tolutani f̄ss.

Misce.

Signa.—Take a tablespoonful whenever the cough is urgent.

Used in chronic bronchitis and consumption.

213. *Mixture of Sal Ammoniac, Squill, etc.*

R. Ammoniā Muriatis f̄ss;
 Pulveris Acaciā f̄ij;
 Pulveris Extracti Glycyrrhizæ f̄iij;
 Aquæ f̄vjss;
 Spiritûs Ætheris Nitrosi f̄jss;
 Aceti Scillæ f̄iij.

Fiat mistura.

Signa.—A dessert-spoonful every two hours.

A stimulating expectorant and alterative, useful in the advanced stages of bronchial disease.

GOEDEN.

214. *Mixture of Naphthaline.*

R. Naphthalinæ gr. xvj.
 Alcoholis q. s. ut fiat solutio.

Dein adde—
 Syrupi f̄iv.

Misce.

Signa.—Take a tablespoonful every two hours.

This is a stimulating expectorant, useful in chronic catarrh, humoral asthma, etc.

DUPASQUIER.

215. *Mixture of Oil of Amber and Tolu.*

R. Olei Succini rectificati f̄j;
 Pulveris Acaciā,
 Sacchari, āā f̄ss;
 Aquæ destillatæ f̄iv;
 Tincturæ Tolutanæ f̄ij.

Fiat mistura secundum artem.

Signa.—A tablespoonful every two or three hours.

In spasmodic cough.

216. *Mixture of Bloodroot, Wild Cherry Bark, etc.*

- R. Morphiæ Acetatis gr. iij;
 Tincturæ Sanguinariæ fʒij;
 Vini Antimonii,
 Vini Ipecacuanhæ, āā fʒiij;
 Syrupi Pruni Virginianæ fʒiij.

Misce.

Signa.—Dose, a teaspoonful.

Used in catarrhal affections, bronchitis, and influenza.

J. C. AYER.

217. *Mixture of Wild Cherry, Morphia, etc.*

- R. Morphiæ Acetatis gr. ij;
 Acidi Acetici diluti fʒj;
 Syrupi Pruni Virginianæ,
 Syrupi Ipecacuanhæ,
 Syrupi Tolutani, āā fʒj.

Misce.

Signa.—A teaspoonful every three hours.

This is an excellent combination for the treatment of catarrhal affections and chronic bronchitis.

218. *Mixture of Tartar Emetic and Laudanum.*

- R. Antimonii et Potassæ Tartratis gr. j;
 Aquæ destillatæ fʒiij;
 Tincturæ Opii ℥xx.

Misce.

Signa.—Give a teaspoonful at bedtime to a child five years old.

Prescribed in hooping-cough.

SIR W. M. WATSON.

219. *Mixture with Bicarbonate of Soda, etc.*

- R. Sodæ Bicarbonatis gr. xij;
 Vini Ipecacuanhæ ℥xx;
 Tincturæ Opii ℥iv;
 Syrupi,
 Aquæ destillatæ, āā fʒss.

Misce.

Signa.—Give a teaspoonful every three hours.

This preparation is designed for children, and is chiefly used in hooping-cough.

[220. *Mixture of Bromide of Ammonium.*]

R. Ammonii Bromidi ℥ij;
Syrupi Aurantii f̄jss.

Misce.

Signa.—Give a teaspoonful every four hours.

In whooping-cough, for a child.

221. *Cochineal Mixture.*

R. Potassæ Carbonatis ℥j;
Pulveris Cocci ℥ss;
Sacchari ℥j;
Aquæ destillatæ f̄iv.

Fiat solutio.

Signa.—Dose for children, a teaspoonful every two or three hours.

An effectual remedy in whooping-cough. N. CHAPMAN.

222. *Mixture of Lobelia, Squill, and Belladonna.*

R. Tincturæ Lobeliæ,
Syrupi Scillæ, āā f̄j;
Extracti Belladonnæ gr. iv.

Misce.

Signa.—Dose, thirty drops four times daily.

This combination has afforded great relief in whooping-cough, especially during the second stage. The dose specified is for a child five or six years old.

W. HERBST.

223. *Mixture of Assafetida, etc.*

R. Assafœtidæ ℥j;
Aquæ f̄iv.
Fiat mistura, et adde—
Tincturæ Tolutanæ f̄ss;
Tincturæ Opii ℥xl.

Signa.—A teaspoonful to a child every two hours, and a dessert-spoonful (or more) as frequently to an adult.

This preparation is of great value in pertussis and other spasmodic diseases of the chest.

S. G. MORTON.

224. *Mixture of Bloodroot, Naphtha, etc.*

- R. Tincturæ Sanguinariæ f̄j;
 Tincturæ Opii Camphoratae f̄ij;
 Spiritûs Pyroxilici, *Dub.* f̄ss;
 Potassæ Nitratiss̄;
 Aquæ f̄j.

Misce.

Signa.—A teaspoonful every two hours.

This is a modification of a formula of Dr. E. H. Sholl, who speaks in the most favorable terms of the value of bloodroot in pneumonia, croup, hooping-cough, etc. It is one of the most powerful medicinal agents. It is violently emetic in large doses, but in the quantity recommended is said to produce diaphoresis and effects analogous to those of digitalis.

225. *Mixture of Wood Naphtha and Morphia.*

- R. Spiritûs Pyroxilici, *Dub.* f̄ij;
 Liquoris Morphiæ Muriatis, *Ed.* f̄ij;
 Aquæ destillatæ f̄v, f̄ij.

Fiat mistura.

Signa.—Dose, a tablespoonful three times daily.

Prescribed in bronchitis with profuse expectoration, and in phthisis.

LAYCOCK.

226. *Mixture of Ammoniac, Squill, and Paregoric.*

- R. Ammoniaci ʒj;
 Aquæ destillatæ f̄iv.
 Fiat mistura, et adde—
 Syrupi Scillæ f̄ij;
 Tincturæ Opii Camphoratae f̄ss.

Misce.

Signa.—A tablespoonful may be given every two hours.

A stimulating expectorant, useful in chronic bronchitis, senile catarrh, etc.

227. *Mixture of Assafetida and Acetate of Ammonia.*

- R. Assafetidæ ʒss;
 Liquoris Ammoniacæ Acetatis,
 Aquæ Menthæ Viridis, āā f̄ij.

Fiat mistura.

Signa.—A teaspoonful to children, and a tablespoonful to adults, in coughs.

This simple solution of assafetida was frequently employed by the elder physicians, and was found to answer every purpose of more complicated prescriptions.

228. *Mixture of Copaiba and Balsam of Tolu.*

R. Copaibæ,
Balsami Tolutani,
Pulveris Acaciæ, āā ʒss;
Aquæ destillatæ fʒvj;
Acidi Sulphurici Aromatici ℥xx.

Fiat mistura secundum artem.

Signa.—Dose, a tablespoonful.

In chronic catarrh and hooping-cough. When there is hectic excitement, digitalis may be added.

229. *Mixture of Balsam of Peru.*

R. Balsami Peruviani ʒss;
Pulveris Acaciæ,
Sacchari, āā ʒij;
Aquæ Cinnamomi,
Aquæ destillatæ, āā fʒiij.

Misce.

Signa.—A tablespoonful four times a day.

The different *balsams* were at one time almost proscribed from the class of expectorants, on account of their stimulating qualities; but they are now much employed in diseases of the pulmonary mucous membrane.

230. *Tar Water.*

R. Picis liquidæ Oij;
Aquæ Cong. j.

Mix and stir them together with a wooden rod for an hour; then let the tar subside, strain the water, and keep it in well-corked bottles.—A pint, or even two pints, may be taken daily in divided doses; but in cases of bronchial irritation, the dose must be greatly diminished.

231. *Mixture of Oil of Tar.*

R. Olei Picis liquidæ fʒij;
Magnesiæ Carbonatis ʒij.
Tere simul, et adde gradatim—
Aquæ fʒxiv.
Cola et adde—
Syrupi fʒij.

Misce.

Signa.—A wineglassful to be taken four times daily.

This is probably the most effectual of the tar preparations, and may be resorted to beneficially in cases of senile catarrh, chronic bronchitis, and consumption. B. J. CREW.

232. *Mixture of Gum Ammoniac and Nitric Acid.*

R. Ammoniaci ℥ijss;
Acidi Nitrici diluti f℥ij;
Aquæ f℥viiij.

Misce.

Signa.—A tablespoonful to be taken four times a day.

This preparation is strongly recommended in protracted catarrh and phthisis pulmonalis, by Dr. J. Stuart, author of a treatise on COLDS.

233. *Spermaceti Mixture.*

R. Cetacei ℥ij;
Sacchari ℥iiij;
Vitellum unius ovi.
Tere simul, et adde gradatim—
Tincturæ Opii Camphoratae f℥ss;
Aquæ f℥viiij.

Misce.

Signa.—A tablespoonful for a dose, four or five times a day.

Used in catarrh.

234. *Syrup of Tolu with Belladonna, etc.*

R. Tincturæ Belladonnæ,
Vini Ipecacuanhæ, āā f℥ij;
Syrupi Senegæ f℥ss;
Syrupi Tolutani f℥iiij.

Misce.

Signa.—Take a teaspoonful three or four times a day, freely using gum-water acidulated with lemon-juice.

In coughs.

235. *Flaxseed Tea.*

R. Lini ℥j;
Radicis Glycyrrhizæ contusæ ℥ss;
Aquæ bullientis Oj.
Macera per horas duas in vase leviter clauso, cola et adde—
Succi Limonis f℥j.

Misce.

This may be given as a common drink in catarrh.

236. *Decoction of Iceland Moss.*

R. Cetrariæ ʒj;
 Aquæ Ojss.
 Coque ad Oj, et cola.

This article once acquired great celebrity in coughs; but was overrated, and lost its reputation. It contains a bitter principle, which is sometimes an advantage in dyspepsia and phthisis. If freed from this, by macerating before boiling, and throwing the first liquor away, as is sometimes done, the preparation is reduced to a mere demulcent, and has no advantages over other members of that class.

237. *Mixture of Prussic Acid.*

R. Acacia ʒss;
 Aquæ fʒvijss.
 Fiat mistura, et adde—
 Syrupi Tolutani fʒss;
 Acidi Hydrocyanici diluti, gtt. xij.
 Fiat mistura.

Signa.—Take a tablespoonful every three hours.

Used to allay cough in consumption.

This is "a medium dose," which I prefer in commencing the use of so powerful a medicine.—S. G. MORTON, *Illustrations of Pulmonary Consumption*, p. 132.

We cannot enjoin too much caution in the use of all the preparations of prussic acid, some of which are extremely variable in themselves, and all produce very unequal effects on different constitutions. It is questionable whether the practice of medicine has gained anything by their adoption into the *Materia Medica*.

238. *Mixture of Cyanide of Potassium.*

R. Potassii Cyanidi gr. j;
 Aquæ destillatæ fʒijss;
 Syrupi Limonis fʒss.

Misce.

Signa.—Dose, a tablespoonful every two hours.

In this formula by Mr. Donavan, of Dublin, the lemon syrup is added for the purpose of securing the formation of hydrocyanic acid, by its chemical action on the cyanide. Employed to check vomiting, and allay cough; and, in much smaller doses, in the whooping-cough of children.

339. *Mixture of Lobelia and Prussic Acid.*

R. Tincturæ Lobeliæ f̄ss;
Acidi Hydrocyanici diluti gtt. j.

Misce.

Signa.—To be taken at a dose, three or four times a day.

Highly serviceable in asthma and (in very small doses) in
hooping-cough. LIVEZEY.

240. *Mixture of Gum Ammoniac, Castor, etc.*

R. Misturæ Ammoniaci f̄iij;
Tincturæ Castorei f̄ss;
Syrupi Tolutani f̄ss;
Tincturæ Opii ℥xxx;
Aquæ Cinnamomi f̄j.

Fiat mistura.

Signa.—A small tablespoonful every four hours, in trouble-
some cough. C. D. MEIGS.

[241. *Mixture of Morphia, Turpentine, etc.*]

R. Morphiæ Acetatis gr. j;
Olei Terebinthinæ gtt. cxx;
Spiritus Ætheris Nitrosi f̄ss;
Acaciæ pulveris ʒss;
Syrupi Pruni Virginianæ f̄j;
Liquoris Ammoniac Acetatis f̄iv.

Misce secundum artem.

Signa.—Give a tablespoonful every two hours.

An effectual stimulating expectorant in pneumonia.

242. *Mixture of Morphia, Squill, and Tolu.*

R. Syrupi Scillæ f̄jss;
Syrupi Tolutani f̄ss;
Morphiæ Acetatis gr. j.

Misce.

Signa.—A teaspoonful may be taken every three hours.

In phthisis and other diseases attended with cough.

243. *Mixture of Tolu, Morphia, and Tartar Emetic.*

R. Mucilaginis Acaciæ Oj;
Syrupi Tolutani, f̄ij;
Morphiæ Sulphatis, gr. ij;
Antimonii et Potassæ Tartratis, gr. ij.

Misce.

Signa.—A tablespoonful to be given every two hours.

S. G. MORTON on Consumption, p. 123.

244. *Glycerine with Morphia and Iodide of Iron.*

R. Morphiæ Sulphatis gr. iij;
 Syrupi Ferri Iodidi f̄ss;
 Glycerinæ f̄ijss.

Misce.

Signa.—A teaspoonful every four hours.

This is particularly serviceable in the advanced stages of consumption, to arrest the emaciation, and allay the cough.

N. S. DAVIS.

245. *Syrup of the Hypophosphites of Lime, Soda, etc.*

R. Calcis Hypophosphitis ʒvj;
 Sodæ Hypophosphitis,
 Potassæ Hypophosphitis, āā ʒij;
 Aquæ ferventis f̄xx.

Solve, cola et adde—

Sacchari ʒxiv.

Solve leni calore, cola et adde—

Aquæ Aurantii Florum f̄ss.

Misce.

Signa.—Dose, a teaspoonful every three hours.

Dr. Churchill has directed the attention of the profession to the value of the hypophosphites in the treatment of consumption. A glycerole could be readily formed by substituting glycerine for a portion of the water and sugar in this formula. Each dose contains about five grains of the mixed salts.

E. PARRISH.

246. *Infusion of Tar and Hops.*

R. Infusi Picis liquidæ Oij;
 Humuli ʒss.

Misce, macera per horas duas, et cola.

Signa.—Dose, a wineglassful morning, noon, and night.

This is a useful tonic and expectorant in consumption.

Inhalation.

Inhalation is a means of applying remedies directly to the lungs. A good instrument for this purpose is the inhaler of Mudge; but as a substitute the common teapot may be used, or a funnel inverted over a bowl. The substances usually

selected for inhalation are, the steam of warm water; the steam of vinegar, produced by pouring it into boiling water; and various other articles next to be enumerated.

An excellent inhaler may be made by taking an ordinary wide-mouthed bottle, such as contains sulphate of quinia, for example—fitting a cork accurately; then boring two holes about three-eighths of an inch in diameter, and inserting into each a tube of glass, of which one passes to the bottom of the liquid, rising only a little above the cork, the other simply passing through the cork without reaching the liquid, but upon the outside, bent into a long mouthpiece. When the medicated solution requires to be warmed to obtain the benefit of volatilization of its ingredients, the bottle may be set into a vessel of hot water.

247. *Inhalation of Balsam of Tolu.*

R. Balsami Tolutani $\bar{\text{ʒ}}\text{j}$;
Aquaë bullientis Oj.

Misce.

Signa.—Inhale the vapor through an inverted funnel.

248. *Inhalation of Tolu and Ether.*

R. Balsami Tolutani, partem j;
Ætheris, partes iij.

Solve.

Signa.—The solution should be placed in a wide-mouthed bottle, from which the patient is to inhale freely several times a day, in chronic catarrh, aphonia, and chronic affections of the chest.

ROZIERE.

249. *Ethereal Tincture of Iodine and Hemlock for Inhalation.*

R. Iodini gr. viij;
Pulveris Conii gr. xvj;
Ætheris $\bar{\text{ʒ}}\text{ij}$.

Misce, et macera per horas viginti quatuor.

Signa.—Half a teaspoonful at a time is to be breathed from a wineglass grasped in the warm hand, and repeated twice or thrice a day. If it does not affect the head, the quantity inhaled may be gradually increased to a teaspoonful.

Used in chronic bronchitis and consumption.

S. G. MORTON.

250. *Scudamore's Iodine Mixture for Inhalation.*

R. Iodinii,
Potassii Iodidi, āā gr. vj;
Aquæ destillatæ f̄v, f̄vj;
Alcoholis f̄j.

Misce.

I usually commence with a drachm of this mixture, proceeding gradually to the extent of half an ounce (rarely more), putting two-thirds the dose for the first half of the time (10, 15, or 20 minutes), and the other third for the remainder, always adding thirty minims of a saturated tincture of conium, with an increase, if the cough be very irritable. Occasionally, I add some saturated tincture of ipecacuanha; and when the respiration is spasmodically affected, some ethereal tincture of lobelia inflata.

SIR C. SCUDAMORE.

251. *Mixture of Lugol's Solution and Hops for Inhalation.*

R. Liquoris Iodinii Compositi f̄ij;
Tincturæ Humuli f̄iv.

Misce.

Signa.—A tablespoonful is added to two fluidounces of hot water in an inhaler, or in a cup covered with an inverted funnel. The amount of inhalation will have to be determined in each case by the sensations produced. In some instances great relief is afforded, but in others a sense of suffocation may occur, if the inhalation be prolonged.

252. *Inhalation of Tar.*

R. Picis liquidæ f̄xvj;
Liquoris Potassæ f̄j.

Misce.

“The two ingredients being well mixed, should be first boiled for a few minutes in the open air, in order to disengage any impurities, and then be kept at a simmer in the room of the patient. This is effected by putting the mixture in an iron vessel, and placing the latter over a spirit-lamp, or some analogous contrivance. In this way, not only a chamber, but an entire house, is speedily pervaded by a most agreeable vapor, which, although it may at first excite some disposition to cough, both in healthy and sick persons, very soon, in a

majority of cases, allays this symptom, and with it a great proportion of the patient's distress."—*Morton on Consumption.*

SIR A. CRICHTON.

253. *Rosin Inhalation.*

The fumes of rosin were much employed by the late Dr. Joseph Parrish, of this city; he directed it to be put on a hot shovel or coals, and allow the patient gradually to inhale them. To some persons, rosin is very agreeable, while the lungs of others cannot tolerate it.

254. *Arsenical Inhalation.*

R. Sodæ Arseniatis ʒss;

Aquæ destillatæ fʒv.

Solve.

Signa.—Arsenical solution.

Thirty slips of bibulous paper of a determinate size (about six inches by four inches), are dipped into the arsenical solution, and are then dried and rolled into the form of cigars. Thus prepared, each cigar represents a known weight of the arseniate, about one grain.

"The patient, having lighted a cigar, draws the smoke into his mouth, and, by a gentle inspiration, permits it to enter the lungs. At first, he may take four or five inspirations, thrice daily; and, as he becomes accustomed to the impression, he increases their number.

"If there be much oppression, stramonium leaves may be rolled up with the arsenicated papers."

This inhalation has been of some service in consumption, but it is in old catarrhs, chronic bronchitis, and laryngeal disease, that its effects are the most striking.

TROUSSEAU.

255. *Mercurial Inhalation.*

R. Hydrargyri Oxidi rubri ʒj.

Heat gradually on the point of a spatula, over a spirit-lamp, and conduct the fumes to the mouth or nostrils by means of an inverted glass funnel.

Used in ozæna and syphilitic affections of the mouth or throat, as well as in chronic diseases of the air-passages.

256. *Stramonium Inhalation.*

Stramonium inhalation is particularly serviceable in asthma. The leaves, deprived of their midribs, are dried, cut, and smoked in a common tobacco pipe. Persons unaccustomed to the remedy find one pipe sufficient, while others can bear three or four in the course of a day, during a fit of the asthma.

The Parisian pharmacutists prepare anti-asthmatic cigarettes, by moistening the stramonium leaves with a strong infusion of opium. The leaves are then dried, cut, and rolled in strips of paper, and the ends are twisted.

Some patients are annoyed by the copious production of smoke in the combustion of stramonium. To obviate this inconvenience, M. Dannecy, of Bordeaux, waters the leaves (previously dried and spread out) with a solution of nitrate of potassa, in the proportion of three ounces of the salt to two pounds avoirdupois of the plant.

By this process the combustion is rendered more complete and less annoying, and the patient experiences additional benefit from the fumes of the saltpetre.

In fact, many asthmatics have learned by practical experience that no remedy affords more certain and prompt relief for their sufferings than the ignition in their chamber of slips of paper previously saturated with nitrate of potassa and dried.

R. P. T.

257. *Inhalation of Chlorine.*

Chlorine gas has also been much used by inhalation, not pure, however, but mixed or diluted with atmospheric air. For this purpose, a little acid of any kind may be dropped gently on a mixture of chloride of lime, by which means the chlorine is gradually disengaged, and is inhaled as it rises; or the air of a room may be pervaded with it in like manner. It has been much commended in bronchitis and the kindred affections, but it is getting into disuse from its manifest inefficiency.

[258. *Inhalation of Cubebs and Carbolic Acid.*]

R. Tincturæ Cubebæ f̄ss;
Acidi Carbolici liquidi gtt. xx.

Misce.

Signa.—Add to half pint of hot water in an inhaler, and use every three or four hours, taking full inspirations until tired.

Found to be a very efficient relief in the dry cough and pain of phthisis.

[259. *Atomization of Fluids for Inhalation.*]

The most important improvement which has been made in the topical application of remedies to the respiratory mucous membrane is in the inhalation of atomized liquid, or liquid broken into a fine spray by means of a simple apparatus for the purpose, and diffused through the air which is drawn into the lungs. The atomizers used for this purpose are now so well known to the profession that a description of them is not necessary, and if it were desirable, the limits of this work would not warrant it. For a full description and history of this method of medication the reader is referred to the valuable little monogram upon this subject by Dr. J. M. Da Costa.

From that work I would simply extract the following formulæ for fluids to be used in the atomizer:—

The doses given are calculated for the fluidounce of water.

Alum { 10 to 20 grs.—In chronic catarrh of pharynx and
air tubes.
30 grs.—In pulmonary hemorrhage.

Tannin 1 to 20 grs.—In same condition as alum.

Ferri Perchloridum gr. $\frac{1}{8}$ –ij.—Earliest stages of phthisis.

Argenti Nitras gr. j–x.—In ulcerations of the pharynx and larynx (a face shield to be used always).

Zinci Sulphas gr. j–vj.—In bronchial catarrh and aphonia.

Sodii Chloridum gr. v–xx.—In free expectoration of phthisis.

Liquor Sodæ Chlorinatæ fʒss–j.—In gangrene, and offensive bronchitis and phthisis.

Potassæ Chloras gr. x–xx.—In chronic laryngitis with dryness.

Extractum Opii Aquosum gr. $\frac{1}{4}$ – $\frac{1}{2}$.—In irritative coughs, and for general anodyne.

Tincturæ Opii gtt. iij–x.—In irritative coughs, and for general anodyne.

Morphiæ Acetas gr. $\frac{1}{2}$ – $\frac{1}{8}$.—For same; large doses require caution.

Extractum Conii Fluidum ℥iij–viij.—Irritative cough; asthma.

Extractum Hyoscyami Fluidum ℥iij–x.—Spasmodic coughs, pertussis.

Tincturæ Cannabis Indicæ ℥v–x.—Spasmodic coughs, phthisis.

Liquor Iodini Compositus ℥ij–xv.—Chronic bronchitis, phthisis.

Liquor Potassæ Arsenitis ℥j-xx.—Nervous asthma(Trouseau).

Aqua Picis Liquidæ fʒj-ij of officinal solution.—As antiseptic.

Olei Terebinthinæ ℥j-ij.—In bronchorrhœa, gangrene of lungs.

Liquor Calcis } ordinary strength.—In diphtheria, mem-
Syrupus Calcis } branous croup.

Aquæ Destillatæ.—In hæmoptysis, to be used cold.

CLASS VIII.

EMMENAGOGUES AND UTERINE REMEDIES.

EMMENAGOGUES are those medicines which promote the menstrual discharge, or restore it when entirely suppressed. Although by some authors the specific action of these medicines on the uterus has been questioned, if not denied; yet by others, of equal authority, it has been fully acknowledged.

It must, however, be observed, that amenorrhœa occurs under opposite states of the system; and when general debility appears to be the cause of the local disease, it may be advisable to accompany the emmenagogue with an active course of tonics. While, on the contrary, if the obstruction be the effect of a plethoric habit, bleeding, cathartics, etc., are essential preliminaries to the successful exhibition of a specific remedy.

Powders and Pills.

260. *Powder of Aloes, Canella, and Serpentaria.*

R. Pulveris Aloës Barbadosis ℥j;
Pulveris Canellæ gr. xvij;
Pulveris Serpentariæ gr. xij.

Misce, et divide in pulveres vj.

Signa.—One every night, at bedtime, in syrup.

This compound, which is one form of the *hiera picra* of the shops, forms a very good purgative, and is usually employed as an emmenagogue.

261. *Powder of Savin, Sulphate of Potassa, etc.*

R. Pulveris Sabinæ,
 Pulveris Zingiberis, āā ʒj;
 Potassæ Sulphatis ʒij.

Fiant pulveres vj.

Signa.—One to be taken thrice a day.

Savin is an excellent stimulant emmenagogue, and when administered just before the menstrual period, often aids in producing the flow.

262. *Powder of Savin and Cantharides.*

R. Pulveris Sabinæ ʒj;
 Pulveris Cantharidis gr. ij.
 Misce, et divide in pulveres iv.

Signa.—One to be taken every night on going to bed, watching its effects.

Used in amenorrhœa.

263. *Powder of Savin and Ergot.*

R. Pulveris Ergotæ,
 Pulveris Sabinæ, āā ʒij.
 Misce, et divide in chartulas iv.

Signa.—One may be taken morning and night.

This is a good combination for aiding in the restoration of the menstrual discharge.

264. *Powder of Savin, Borax, and Ginger.*

R. Pulveris Sabinæ,
 Pulveris Zingiberis, āā gr. vij;
 Sodæ Boratis gr. xv.
 Fiat pulvis.

This powder is to be taken twice a day, in amenorrhœa with a languid pulse.

THOMSON.

265. *Compound Pills of Iron and Myrrh.*

R. Myrrhæ ʒij;
 Potassæ Carbonatis ʒj.
 Tere simul, dein adde—
 Ferri Sulphatis,
 Sacchari, āā ʒj.

Fiat massa, et divide in pilulas lxxx.

Two or three pills are given three times a day in amenorrhœa and chlorosis.

HULSE.

266. *Hooper's Pills.*

- R. Ferri Sulphatis exsiccatae ʒj;
 Pulveris Jalapæ gr. xv;
 Pulveris Aloës et Canellæ ʒj;
 Myrrhæ gr. viij;
 Syrupi q. s.

Fiat massa, et divide in pilulas l.

Of these pills two or three are taken at bedtime, for several nights successively. They purge smartly, and I presume it is by virtue of this property they operate so beneficially as an emmenagogue.

N. CHAPMAN.

[267. *Pills of Phosphoric Acid and Opium.*]

- R. Acidi Phosphorici glacialis gr. xij;
 Pulveris Opii gr. iv;
 Syrupi q. s.

Misce, et divide in pilulas xij.

Signa.—Give one pill every two or three hours.

In menorrhagia or uterine hemorrhage.

268. *Pills of Digitalis, Myrrh, and Iron.*

- R. Pulveris Digitalis gr. x;
 Myrrhæ gr. xx;
 Ferri Sulphatis exsiccatae gr. x;
 Syrupi q. s.

Fiat massa, et divide in pilulas x.

Signa.—Take one pill three times daily.

Dr. S. Ashwell recommends these pills in amenorrhœa combined with epilepsy.

269. *Pills of Aloes, Sulphate of Iron and Cloves.*

- R. Ferri Sulphatis exsiccatae ʒj;
 Pulveris Aloës Socotrinæ ʒij;
 Pulveris Caryophylli gr. v;
 Terebinthinæ Venetæ q. s. ut fiant pilulæ xx.

Signa.—One to be taken three times a day.

In amenorrhœa.

270. *Pills of Citrate of Iron and Strychnia.*

- R. Ferri et Strychniæ Citratis gr. l;
 Extracti Gentianæ gr. x.

Fiat massa, et divide in pilulas xxx.

Signa.—One pill three times daily.

This double salt is not officinal, and therefore liable to vary in strength. As made in Philadelphia, fifty grains of the compound salt contain one grain of strychnia. It is an exceedingly valuable remedy in chlorosis and amenorrhœa.

Fluid Preparations.

271. *Decoction of Seneca Snakeroot.*

R. Senegæ contusæ ʒj;
 Aquæ Oj.
 Coque ad fʒxij, dein adde—
 Aurantii Amari Corticis ʒss.
 Macera per horam dimidiam, et cola.

Dr. Chapman observes: "My rule in the administration of this medicine in amenorrhœa is, to give about four ounces of the decoction, more or less, during the day, according to the circumstances of the case. But at the time when the menstrual effort is expected to be made, and until the discharge is actually induced, I push the dose as far as the stomach will allow, having given as much as two ounces every hour."—*Therapeutics*, vol. ii. p. 38.

272. *Mixture of Oil of Erigeron.*

R. Pulveris Acaciæ,
 Sacchari, āā ʒij;
 Aquæ fʒj.
 Tere simul, et adde gradatim—
 Olei Erigerontis Canadensis, fʒj;
 Aquæ Menthæ Viridis, fʒij.
 Fiat mistura.
Signa.—A dessert-spoonful every two hours.

Dr. E. Wilson and others report favorably of the use of this oil in menorrhagia, uterine hemorrhage, and irritable bladder.

A. C. BOURNONVILLE.

273. *Decoction of Cotton Root.*

R. Gossypii Radicis contusi ʒiv;
 Aquæ bullientis Oij.
 Misce, coque ad Oj, et cola.
Signa.—Dose, a wineglassful.

When employed to promote uterine contraction, as a substitute for ergot, Dr. Bouchelle directs this dose to be repeated every twenty minutes. Dr. T. J. Shaw administers the same quantity every hour in dysmenorrhœa. He has great confidence in the emmenagogue properties of cotton root.

274. *Mixture of Camphor.*

R. Camphoræ ℥j;
Alcoholis q. s. ut fiat pulvis.

Dein adde—

Pulveris Acaciæ,
Sacchari, āā ℥j;
Aquæ Cinnamomi f℥j.

Fiat mistura.

This mixture would more properly appear under the head of Narcotics; but as Dr. Dewees considers it particularly efficacious in dysmenorrhœa, we have given it a place with Emmenagogues. He directs "one-half the above draught to be given the instant pain is experienced, and if not relieved in an hour or two, the remainder to be given."—*Syst. of Midwifery*, p. 158.

275. *Mixture of Ergotine.*

R. Extracti Ergotæ Aquosi gr. xv;
Syrupi Aurantii Corticis f℥j;
Aquæ f℥iij.

Misce.

Signa.—Dose, a tablespoonful.

In uterine hemorrhage this dose should be given every ten or fifteen minutes, until arrested. The remedy has also proved serviceable in other forms of hemorrhage.

BONJEAN.

276. *Mixture of Cantharides, Ammonia, and Gentian.*

R. Tincturæ Gentianæ Compositæ f℥jss;
Tincturæ Cantharidis f℥j;
Spiritûs Ammoniaë Aromatici f℥iij.

Misce.

Signa.—Give a teaspoonful three times daily.

Useful in chlorosis and hysterical depression.

S. ASHWELL.

277. *Tinctures of Black Hellebore, Myrrh, and Cantharides.*

- R. Tincturæ Hellebori f̄ss;
 Tincturæ Myrrhæ f̄j;
 Tincturæ Cantharidis f̄ij.

Fiat mistura.

Signa.—Dose, thirty drops, three times a day, in a little sugar and water.

Recommended in amenorrhœa.

278. *Dewees's Tincture of Guaiacum.*

- R. Pulveris Guaiaci Resinæ ̄iv;
 Sodæ vel Potassæ Carbonatis ̄jss;
 Pulveris Pimentæ ̄j;
 Alcoholis diluti Oj.

Misce. "Digest for a few days. The volatile spirit of ammonia to be added *pro re nata*, in the proportion of a drachm or two, to every four ounces of tincture."

The above formula is different from that adopted in the Pharmacopœias, for which reason we have inserted it here. Dr. Dewees remarks that, after nearly thirty-five years' experience with this tincture, he has never known it to fail in restoring the *suppressed catamenia*, when the suppression was an *idiopathic disease*. He gives it morning, noon, and night, in doses of a teaspoonful in a little sweetened milk; and sometimes in a little Madeira, Sherry, or Teneriffe wine. It is occasionally necessary to continue the medicine for some weeks, on which occasion, the dose must be judiciously augmented.—*Syst. of Midwifery*, p. 149.

279. *Volatile Tincture of Guaiacum and Copaiba.*

- R. Tincturæ Guaiaci Ammoniatae f̄j;
 Copaibæ f̄ss.

Misce.

Signa.—A teaspoonful two or three times a day.

In cases of amenorrhœa connected with general debility.

280. *Tinctures of Iron, Aloes and Myrrh, and Castor.*

- R. Tincturæ Ferri Chloridi,
 Tincturæ Aloës et Myrrhæ, āā f̄ss;
 Tincturæ Castorei f̄ij.

Misce.

Signa.—Take thirty drops three times a day.

This combination of iron and castor, with the elixir proprietatis, is indicated in general debility and chlorosis, and

the attendant suppression of the menses. It may be given in sweetened water, or in cold chamomile tea.

281. *Tincture of Hiera Picra.*

R. Pulveris Aloës et Canellæ ʒjss;
Spiritûs Vini Gallici Oj.

Macera per dies decem et cola.

Signa.—A teaspoonful may be taken three times a day in sugar and water.

A popular and most efficient remedy in amenorrhœa.

282. *Emmenagogue Suppository.*

R. Olei Theobromæ ʒij;
Pulveris Aloës Capensis ʒss;
Castorei,
Assafœtidæ, āā ʒij.

Fiant suppositoria xxv.

One to be employed daily for several days at the expected period of the menses.

RICHARD.

[283. *Liniment of Iodide of Potassium.*]

R. Potassæ Iodidi ʒj;
Glycerinæ fʒj.

Misce.

In chronic endometritis with uterine hypertrophy; to be applied to the cervix uteri.

SCANZONI.

[284. *Liniment of Iodide of Potassium and Opium.*]

R. Extracti Opii Aquosi gr. xx;
Potassæ Iodidi ʒij;
Glycerinæ fʒj.

Misce.

To be used as the last in cases attended with hyperæsthesia of the uterus and vagina; may be applied by patient herself through a very small sized speculum.

[285. *Collodion of Iodine and Tannin.*]

R. Iodini ʒss;
Acidi Tannici ʒij;
Collodii fʒj.

Misce.

An efficient application to the granular surface of an indurated and hypertrophied cervix uteri.

CLASS IX.

ANTHELMINTICS.

ANTHELMINTICS are medicines employed to destroy and bring away worms from the alimentary canal. They are also termed Vermifuges.

The only unequivocal proof of the existence of worms in the alimentary canal, is the ejection of some of them *per anum*, or, as sometimes happens, by the mouth. When, in such cases, vermifuges are resorted to, they must be persevered in for several days, with the occasional intervention of an active cathartic. The best vermifuges in many cases are the chalybeate tonics with some bitter extract.

Powders, Pills, and Lozenges.

286. *Calomel with Gamboge.*

R. Hydrargyri Chloridi Mitis gr. v ;
Pulveris Gambogiæ gr. iiij.

Misce.

Signa.—For an adult. To be taken in syrup at bedtime.

Gamboge is sometimes given in doses of fifteen or twenty grains for the tapeworm, and is highly spoken of in such cases.

287. *Calomel with Pinkroot.*

R. Hydrargyri Chloridi Mitis gr. iv ;
Pulveris Spigeliæ gr. x.

Misce.

Signa.—To be taken two mornings in succession, and on the afternoon of the second day, followed by a dose of castor oil, or senna and manna.—For children upwards of four years old.

288. *Powders of Pinkroot, Savine, and Senna.*

R. Pulveris Spigeliæ,
 Pulveris Sennæ, āā ʒij;
 Pulveris Sabinæ gr. xij.

Fiant chartulæ vj.

Signa.—One every morning till three are taken, then give a dose of castor oil; if the effect is not produced, the remainder may be exhibited after the same manner.

289. *Powders of Common Salt and Cochineal.*

R. Sodii Chloridi ʒiij;
 Cocci in pulverem redacti gr. xv.

Fiant pulveres vj.

Signa.—One every morning for six days, following the last dose with some purgative medicine.

Dr. Rush speaks in high terms of this preparation for the expulsion of the long round worms.

290. *Powders of Santonin.*

R. Santonini gr. vj;
 Sacchari gr. xv.

Misce, et divide in pulveres vj.

Signa.—Give one powder night and morning to a child five years old, for worms.

[291. *Powders of Podophyllin, Santonin, and Iron.*]

R. Podophyllin gr. $\frac{1}{4}$;
 Santonini gr. iv;
 Ferri redacti gr. vj.

Misce, et divide in chartulas iv.

Signa.—Take one every night in syrup.

For ascarides and lumbrici, in children two or three years old.

292. *Lozenges of Santonin.*

R. Santonini ʒj;
 Sacchari ʒj;
 Mucilaginis Tragacanthæ q. s. ut fiat massa, in trochiscos lx dividenda.

Signa.—Give one lozenge night and morning.

293. *Powder of Male Fern.*

R. Pulveris Filicis Maris ʒj.

Signa.—Dose, a teaspoonful.

The following is Madame Nouffer's plan of treating cases of tapeworm:—

“Give of the powder of the Male Fern root, from one to three drachms, in a large cupful of any distilled water, early in the morning. If the stomach should reject it, the powder must be repeated again, as soon as the sickness has gone off, in the same quantity. When it has been upon the stomach about two hours, a strong cathartic bolus (consisting of five grains of gamboge, twelve grains of calomel, and twelve of scammony) must be taken, and worked off with a draught of green tea every now and then; and its operation may be still farther promoted, if necessary, by half an ounce of salts, dissolved in warm water. Until the worm comes away, which generally happens on the same day, the patient is to take nothing but broth. If, however, the worm should not be discharged, either wholly or in part, the powder is to be repeated with the same regimen the next day.”

It has been suggested, and with some probability, that the purge directed to follow this medicine is the more efficient of the two.

294. *Powder of Kameela.*

R. Rottleræ ʒij.

Divide in pulveres iv.

Signa.—Take one powder every hour, in syrup or aromatic water.

Kameela is a powder brushed off the capsules of an East Indian shrub, the *Rottlera tinctoria*. It is used in India as a dye for silks, imparting to them a fine yellow color. Dr. McKinross, in 1853, made known its powers in the treatment of tapeworm. Many British practitioners have since tried it, and confirm his favorable testimony. It may be given in powder, in doses of thirty to sixty grains; or one or two teaspoonfuls of a tincture made by displacing four ounces of the powder in a pint of alcohol. In full doses, it causes purging, with some nausea or even vomiting.

295. *Lozenges of Precipitated Carbonate of Iron.*

R. Vanillæ ʒj;

Sacchari ʒxv.

Tere simul et adde—

Ferri Subcarbonatis ʒv;

Mucilaginis Tragacanthæ q. s.

Contunde in massam, et divide in trochiscos singulos gr. xx pendentes.

Signa.—One lozenge may be taken several times daily.

This formula, devised by Mr. E. Parrish, furnishes to the practitioner a mode of administering the subcarbonate of iron to children in an agreeable and effectual form.

Of this remedy, as an anthelmintic, the late Professor Rush had a very favorable opinion. He gave it in doses of from five to thirty grains to children of from one year old to ten, and sometimes in half ounce doses, with safety and success.—See *Observ. and Inquiries*, p. 243.

296. *Pills of Venice Turpentine, Calomel, etc.*

R. Terebinthinæ Venetæ ℥j;
 Extracti Jalapæ ℥ss;
 Extracti Hyoscyami gr. iv;
 Hydrargyri Chloridi Mitis gr. viij.

Fiat massa, et divide in pilulas singulas gr. ij pendentes.

Signa.—Of these, four are to be taken every three hours; and during the entire period of their use, the patient is to take only weak broth, tea, or coffee.

Used in tapeworm.

HUFELAND.

Infusions, Decoctions, etc.

297. *Compound Infusion of Pinkroot, or Worm-tea.*

R. Spigeliæ contusæ ℥ss;
 Sennæ ℥ij;
 Mannæ ℥j;
 Sabinæ ℥ij;
 Fœniculi ℥ij;
 Aquæ bullientis Oj.

Macera per horas duas et cola.

Signa.—Dose, a tablespoonful three times daily, for three days, for a child four or five years old. If it purge too actively, it should be discontinued.

Worm tea has stood the test of many years' experience in Philadelphia, and has proved itself one of the most efficient agents for the expulsion of the long round worm.

298. *Decoction of the Bark of Pomegranate Root.*

R. Granati Radicis Corticis, ℥jss;
 Aquæ, Ojss.

Coque ad Oj, et cola.

Signa.—Take a wineglassful every two hours.

This decoction is employed, almost exclusively, for the destruction of tapeworm.

“The efficacy of the bark of the root of the pomegranate, as a remedy for the tapeworm, is now well established in India.”

PARIS, vol. ii. p. 173.

299. *Infusion of Kouso.*

R. Brayeræ \bar{z} ss;

Aquæ bullientis $f\bar{z}$ x.

Macera per horam dimidiam.

Signa.—Dose, a teacupful every half hour.

To be used for tapeworm.

The only preparation necessary is, that the last meal of the preceding evening should be slight. The previous evacuation of the bowels, by a mild purgative or a lavement, is also desirable. The mode of administering the remedy is as follows: “A little lemon-juice is to be swallowed, and the infusion being stirred up, the whole is taken, liquid and powder, at two or three draughts, at short intervals, being washed down by cold water and lemon-juice. To promote the operation, tea (without sugar or milk) may be taken. In three or four hours, if the remedy has not operated, a dose of castor oil or a saline purgative should be administered.”

JON. PEREIRA.

Electuaries, Mixtures, etc.

300. *Electuary of Tin.*

R. Pulveris Stanni \bar{z} j;

Syrupi fusci $f\bar{z}$ iv.

Misce.

Signa.—Two tablespoonfuls may be given early in the morning, to be repeated every two hours until the whole be taken, and then followed by an active cathartic.

The efficacy of this substance is said to be increased by combination with sulphur, by which means sulphuretted hydrogen is generated, and the worm destroyed by the offensive gas. Larger doses are sometimes prescribed.

301. *Electuary of Cowhage.*

R. Mucunæ \bar{z} j;

Mellis despumati q. s. ut fiat electuarium.

Signa.—Dose, a teaspoonful to a child two or three years old; to be given before breakfast in the mornings of three successive days, and then followed by a brisk cathartic.

In lumbrici.

[302. *Mixture of Wormseed and Rhubarb.*]

- R. Potassæ Carbonatis puræ ʒjss;
 Extracti Rhei fluidi fʒjss;
 Olei Chenopodii gtt. xxv;
 Liquoris Calcis fʒiv.

Misce.

Signa.—Give a teaspoonful every two hours until purged.

A very efficient vermifuge.

L. C. HEYL.

303. *Mixture with Oil of Wormseed.*

- R. Olei Chenopodii fʒjss;
 Olei Ricini ʒiij;
 Olei Anisi gtt. x.

Misce, et adde—

Syrupi Rhei Aromatici, fʒj.

Fiat mistura.

Signa.—Shake the bottle well before using. Give a teaspoonful night and morning to a child two years old.

This mode of exhibiting the oil has been extensively tried in Baltimore, and has proved effectual.—*Am. Journ. Pharmacy*, p. 306, 1850.

304. *Another Form.*

- R. Olei Chenopodii fʒj;
 Sacchari,
 Pulveris Acaciæ, āā ʒij;
 Aquæ Menthæ Piperitæ fʒijss.

Misce secundum artem.

Signa.—A teaspoonful of this preparation may be given four times a day for two days in succession, and then be purged off with castor oil or salts, for children of three to eight years old.

This is a vermifuge of considerable reputation in this country. It is generally used in lumbrici and ascarides; though we have heard of its having been successfully given for tænia, but in much larger doses.

S. G. MORTON.

305. *Fluid Extract of Pinkroot and Senna with Santonin.*

- R. Extracti Spigeliæ et Sennæ Fluidi fʒij;
 Santonini gr. xvj.

Misce.

Signa.—Give a child, two years old, a teaspoonful night and morning, until purging takes place.

This fluid extract, originally devised by Prof. Procter, has been used successfully in Philadelphia for the last ten years in the treatment of lumbrici.

306. *Mixture of the Extract of Male Fern.*

R. Olei Filicis Maris ℥ss;
Mellis Rosæ ℥ss.

Misce.

Signa.—Take one-half at bedtime, and the remainder early in the morning, on an empty stomach.

Used for tapeworm. If the worm does not come away in six or eight hours after the last dose, administer some mild purgative. The oil indicated in this prescription is in reality a fluid extract prepared with ether. RADIUS.

307. *Linctus of Oil of Turpentine.*

R. Olei Terebinthinæ ℥ij;
Mellis despumati ℥j.

Misce, et fiat linctus.

Signa.—Dose, a dessert-spoonful.

The late Prof. Chapman had great confidence in the oil of turpentine as a remedy for tapeworm, and was in the habit of giving it in large doses at brief intervals. B. ELLIS.

308. *Emulsion of Pumpkin Seeds.*

R. Peponis ℥ij.

Decortica et contunde in massam cum

Sacchari ℥j.

Dein adde gradatim—

Aquæ f℥viij.

Misce.

Signa.—The whole to be taken in two or three draughts, at short intervals, fasting.

The efficacy of an emulsion of pumpkin seeds in expelling tapeworm is now established beyond doubt, as it has been administered repeatedly and successfully, both in the West Indies and this country. The above is the formula of the late Dr. H. S. Patterson, who was among the first to introduce the remedy to the notice of American practitioners.

The expressed oil of the seeds has also been tried in the dose of half an ounce, with a degree of success.

Clysters.

Enemata are the most certain of all remedies in ascarides; they may be made of various substances, such as solution of assafetida, of common salt, sulphur, pure olive oil, soap, aloes, etc. etc. For children, thirty grains of aloes should be dissolved in half a gill of water; to this add a tablespoonful of sweet oil, and administer the half of the mixture on going to bed. The other half the next night, if necessary. Or aloes may be given in mucilage, as in the following formula:—

309. *Aloetic Enema.*

R. Aloës Capensis ʒj;
Mucilaginis Ulmi Oj.

Fiat enema.

Signa.—The half of this may be given to a child eight or ten years old.

In ascarides.

310. *Enema of Camphor and Sweet Oil.*

R. Camphoræ ʒj;
Olei Olivæ ʒij.

Misce pro enemate.

This preparation is particularly adapted to ascarides, and should be freely thrown up the rectum for three or four successive nights. No remedy is more effectual than this in relieving the intolerable itching caused by those worms.

311. *Anthelmintic Clyster.*

R. Hydrargyri Iodidi Rubri gr. $\frac{3}{4}$;
Potassii Iodidi gr. viij.

Tere simul, et adde gradatim—

Aquæ destillatæ Oj.

Signa.—Inject a wineglassful night and morning.

The injections should be continued for two or three days, and be repeated once or twice at the end of two weeks. When thus employed, the remedy seldom fails in the removal of seat-worms (ascarides). The dose prescribed is for a child.

TROUSSEAU.

CLASS X.

STIMULANTS.

IN the use of stimulants, it is for the most part advisable to begin with small doses, and augment them as circumstances may require. There are cases, however, in which it is necessary to give them plentifully from the first.

It will be often requisite to change not only the stimulating substance, but the part of the body to which it is applied; thus, when the stomach fails, the rectum and skin may be acted upon with advantage.

Pills, Powders, etc.

312. *Pills of Camphor, Cantharides, and Opium.*

R. Pulveris Cantharidis gr. xvij;
Pulveris Opii,
Camphoræ, in pulverem cum alcohole redactæ, āā gr. xxxvj;
Confectionis Rosæ q. s. ut fiant pilulæ xxxvj.

Signa.—One may be taken every night on going to bed.

In impotency from general debility.

313. *Pills of Turpentine and Guaiacum.*

R. Pulveris Guaiaci Resinæ ℥j;
Terebinthinæ Venetæ q. s. ut fiant pilulæ xv.

Signa.—One three times a day.

These pills have a powerful effect upon the urinary organs. They are employed in gleet and leucorrhœa, but frequently produce strangury.

314. *Pills of Cayenne Pepper.*

R. Pulveris Capsici gr. xxiv;
 Extracti Gentianæ gr. xvj.

Misce, et fiant pilulæ xij.

Signa.—One, four times a day.

Used in debility of the stomach, from intemperance.

ST. BART. HOSPITAL.

315. *Creasote Pills.*

R. Creasoti ℥iij;
 Pulveris Hyoseyami Folii gr. xij;
 Confectionis Aromaticæ q. s.

Fiat massa in pilulas xij dividenda.

Signa.—Take one pill three times daily.

Used to allay the morning sickness in pregnancy.

PITSCHAFT.

316. *Pills of Valerianate of Quinia.*

R. Quiniæ Valerianatis gr. xij;
 Pulveris Tragacanthæ gr. vj;
 Aquæ q. s. ut fiat massa in pilulas viij dividenda.

Signa.—Give one pill every hour.

Used in hemicrania.

The late Dr. Joseph Parrish was in the habit of treating hemicrania successfully, by a combination of Peruvian bark and valerian. This formula contains the active constituents of both remedies in a concentrated form. It has afforded prompt relief in numerous instances.

Mixtures and Infusions.317. *Mixture of Carbonate of Ammonia.*

R. Ammoniæ Carbonatis ℥j;
 Sacchari,
 Pulveris Acaciæ, āā ℥jss;
 Aquæ Menthæ Viridis f℥iv.

Fiat mistura.

Signa.—A tablespoonful every two hours.

As carbonate of ammonia sustains the action of the heart,

without stimulating the brain, it is resorted to whenever the vital powers begin to fail, in diseases of nearly every type.

[318. *Effervescing Ammonia Mixture.*]

R. Ammoniae Carbonatis ℥ij;
Acidi Hydrocyanici diluti ℥xx;
Tincturae Cardamomi Compositae f℥vj;
Infusi Aurantii q. s. ut fiat mistura f℥viiij.

Signa.—Put two tablespoonfuls into one third of a tumbler of water; add a tablespoonful of fresh lemon-juice, and drink while foaming, three or four times daily.

In acidity of stomach, with depression. TANNER.

319. *Draught with Valerian and Carbonate of Ammonia.*

R. Olei Valerianæ gtt. iij;
Ammoniae Carbonatis gr. x;
Aquæ Cinnamomi f℥jss;
Syrupi f℥ss.

Fiat haustus.

Signa.—One-half to be taken every fourth hour.

In nervous headache, and depression of spirits.

320. *Draught of Carbonate of Ammonia and Ginger.*

R. Pulveris Zingiberis gr. xv;
Ammoniae Carbonatis gr. viij;
Tincturae Cinnamomi f℥ij;
Aquæ f℥jss.

Misce.

Signa.—To be taken at once.

In gout or cramp of the stomach.

321. *Elixir of Valerianate of Ammonia.*

R. Ammoniae Valerianatis ℥j;
Aquæ Aurantii Florum f℥ij;
Syrupi,
Spiritûs Curaçoa, āā f℥j.

Misce.

Signa.—Dose, a teaspoonful.

Used in hysterical affections and disorders of the nervous system.

322. *Mixture of Valerian and Cajeput Oil.*

R. Extracti Valerianæ Fluidi f̄3ij;
 Olei Cajuputi ℥xvj.
 Tere simul et adjice—
 Syrupi Acaciæ f̄3vj;
 Aquæ Aurantii Florum f̄3j.

Misce.

Signa.—Dose, a teaspoonful.

This is a mild and effectual stimulant, with a specific tendency to the nervous system. It may be used beneficially to correct hiccough, twitchings of the muscles, restlessness. It is also employed in hysteria.

323. *Mixture of Oil of Turpentine.*

R. Olei Terebinthinæ ʒj;
 Pulveris Acaciæ,
 Sacchari, āā ʒij;
 Tincturæ Opii gtt. lx;
 Spiritûs Lavandulæ Compositi f̄3ij;
 Aquæ Menthæ Viridis f̄3v.

Fiat mistura.

Signa.—A tablespoonful for a dose, every two hours.

This remedy has gained great reputation in some of the low forms of fever. The author once employed it in the dose prescribed above, in passive hemorrhage from the bowels, with complete success; and in hemorrhage from the bladder, resulting from low fever, it has been given with equal advantage.

B. ELLIS.

324. *Camphor Mixture.*

R. Camphoræ, in pulverem cum Alcohole redactæ ʒj;
 Pulveris Acaciæ,
 Sacchari, āā ʒjss;
 Tincturæ Opii gtt. xl;
 Aquæ Menthæ Viridis f̄3iv.

Fiat mistura.

Signa.—A tablespoonful to be given every two hours.

Used in typhoid and nervous fevers.

B. ELLIS.

325. *Camphor Julep.*

R. Camphoræ, in pulverem redactæ ℥ss;
 Aquæ bullientis f℥viij.

Macera per horam dimidiam, in vase leviter clauso, et cola.

Signa.—A tablespoonful for a dose.

Many of the older practitioners were in the habit of using a hot camphor tea, in dysmenorrhœa, under an impression that its virtues are better developed. It certainly is stronger hot than cold, but in neither case is it equal to the officinal camphor-water (aquæ camphoræ) which contains three grains to the fluidounce when properly prepared.

326. *Camphor and Myrrh Mixture.*

R. Camphoræ ℥j;
 Myrrhæ ℥ss.
 Tere simul et adde gradatim—
 Sacchari ℥j;
 Aquæ f℥vj.

Misce.

Signa.—A tablespoonful to be given every two hours.

Chiefly used in dysmenorrhœa.

327. *Mixture of Camphor and Chloroform.*

R. Camphoræ ℥ij;
 Chloroformi purificati ℥j;
 Vitelli unius ovi;
 Aquæ f℥iv.

Fiat mistura.

This mixture affords us the means of administering large doses of camphor, in as concentrated a form as it would be safe to give a local irritant. It can be diluted with water without precipitation. Each teaspoonful contains four grains.

SMITH.

328. *Solution of Camphor in Ether.*

R. Camphoræ ℥ss;
 Ætheris f℥j.

Solve.

Signa.—Take ten drops every twenty minutes.

Used in cholera morbus and cholera.

“I have found nothing so effectual in giving relief to the nausea and vomiting of the early stages of cholera as small doses of this solution, frequently repeated.”

JOHN EBERLE.

329. *Mixture of Paregoric and Ammoniated Guaiacum.*

R. Tincturæ Opii Camphoratæ,
Tincturæ Guaiaci Ammoniatæ, āā f̄j.

Fiat mistura.

Signa.—Two teaspoonfuls in sweetened water every two hours.

In misplaced and retrocedent gout.

330. *Yeast Mixture.*

R. Fermenti f̄x;
Camphoræ ʒss;
Spiritus Ætheris Nitrosi f̄ss.

Fiat mistura.

Signa.—Take a tablespoonful every two hours.

This was extensively used in the late typhus epidemic in Ireland, as a stimulant and antiseptic, and with the happiest results.

LAMPREY.

331. *Assafetida and Spirit of Ammonia.*

R. Spiritus Ammoniae Aromatici f̄ij;
Tincturæ Assafœtidæ f̄vj.

Misce.

Signa.—Give a teaspoonful, in sweetened water, every four hours.

An excellent stimulus in nervous debility and hysteria.

332. *Emulsion of Phosphorus.*

R. Phosphori gr. ij;
Mucilaginis Acaciæ f̄j.
Tere simul, et adde gradatim—
Aquæ f̄v.
Fiat emulsio, dein adde—
Syrupi f̄j;
Spiritus Ætheris Compositi ℥xxx.

Fiat mistura.

Signa.—The usual dose is a tablespoonful every three or four hours.

Used in amaurosis, palsy, epilepsy, etc. HUFELAND.

As the violence of phosphorus as a remedy, and its very great power, are generally known to physicians, we need hardly repeat the necessity there is for the greatest caution in its administration.

The subjoined is one of the many formulas adopted in Europe.

333. *Lobstein's Phosphorated Ether.*

R. Phosphori gr. ij;
Solve in Ætheris f̄ss.

Dein adde—

Spiritûs Menthæ Piperitæ f̄ss.

Signa.—Take six drops on sugar every three hours.

The bottle should be carefully stoppered, and covered with dark paper. Used in epilepsy, paralysis, and amaurosis.

FOY.

334. *Phosphorated Oil.*

R. Phosphori concisi gr. vj;
Olei Amygdalæ Dulcis ̄j.

Liqua cum leni calore. Post refrigerationem, cola.

Signa.—Dose, ten drops every three hours in mucilage.

Advised in chronic rheumatism and gout. It is also used externally by friction in the same complaints, and for contracted tendons.

PH. BORUSSICA.

335. *Glycerole of Phosphorus.*

R. Phosphori concisi gr. ij;
Glycerinæ f̄j.

Solve cum leni calore.

Signa.—Dose, ten minims.

Used for the same purposes, and proposed as a substitute for the above phosphorated oil.

J. L. CRAWCOUR.

336. *Mixture of Arnica.*

R. Arnicæ ̄ij;
Aquæ bullientis Oss.

Macera per horas duas et cola. Dein adde—

Tincturæ Arnicæ f̄ij;

Tincturæ Cardamomi f̄vj.

Misce.

Signa.—A tablespoonful three times a day.

Recommended for the relief of tinnitus aurium. The dose to be gradually increased. It is also useful as a stimulant in atonic gout.

WILDE.

337. *Mixture of Chlorinated Lime.*

R. Calcis Chlorinatæ ℥j;
 Aquæ f̄iij.
 Solve et cola. Dein adde—
 Syrupi Zingiberis f̄j.
 Fiat mistura.

Signa.—Take a tablespoonful every three hours.

Chlorinated lime is stimulant and antiseptic, and has been used beneficially in typhoid, typhus, and scarlet fevers.

REID.

338. *Infusion of Cayenne Pepper and Salt.*

R. Pulveris Capsici ʒss;
 Sodii Chloridii ʒj;
 Aceti bullientis,
 Aquæ bullientis, āā f̄viiij.
 Macera per horam unam et cola.

Signa.—Dose, a tablespoonful every two hours.

This combination was employed in an epidemic of malignant scarlet fever in the West Indies with the happiest results. It was used both internally and as a gargle.

STEPHENS.

339. *Mixture of Soda and Cubeb.*

R. Pulveris Cubebæ ʒij;
 Sodæ Carbonatis ʒss;
 Mucilaginis Acaciæ f̄vj;
 Aquæ Menthæ Viridis f̄vj.
 Fiat mistura.

Signa.—Take a tablespoonful every hour and a half.

Useful as an antacid and carminative.

FOSBROKE.

340. *Mixture of Bismuth and Cubeb.*

R. Pulveris Cubebæ ʒij;
 Bismuthi Subnitrat̄is ʒss;
 Mucilaginis Acaciæ f̄ss;
 Syrupi f̄vj;
 Aquæ f̄vj.
 Fiat mistura.

Signa.—Take a tablespoonful four times a day.

We have extracted this and the preceding prescriptions from a paper of Mr. John Fosbroke, surgeon, Chittenham. (See *Medical Recorder* for April, 1825.)

They are recommended in various affections of the mucous membranes, viz., of the bowels, bladder, trachea, etc.

341. *Mustard Whey.*

R. Lactis Vaccinæ Oj;
 Sinapis Albæ contusæ ʒj.
 Coque cum leni calore, ad perfectam casei separationem, cola
 et adde—
 Vini Xerici fʒvj.
Signa.—A draught of this whey may be taken every hour or
 two in low fever and in debilitated stomach.

342. *Wine Whey.*

R. Lactis Vaccinæ bullientis Oss;
 Vini Xerici fʒiv.
 Misce, cola, et adde—
 Sacchari ʒj;
 Myristicæ rasuræ q. s. ad gratum saporem.
 Misce.

There are few mild stimulants more employed, or more useful than wine whey. Dr. Chapman speaks of it as possessing a kindred action with carbonate of ammonia. The dose to be regulated by the circumstances of the case; from four ounces to a pint during the day.

343. *Wine and Egg Mixture.*

R. Vitellum unius ovi;
 Olei Cinnamomi gtt. x.
 Contunde simul, et adde—
 Vini Xerici,
 Aquæ Cinnamomi, āā fʒjss;
 Sacchari ʒj;
 Aquæ destillatæ fʒj.
 Fiat mistura.
Signa.—Give a wineglassful, at short intervals, in convalescence from low fevers.

344. *Egg-Nogg.*

R. Albumen et Vitellum unius ovi;
 Sacchari Albi ʒij.
 Misce, et contunde in spumam. Dein adde—
 Vini Xerici fʒss;
 Aquæ fʒj;
 Myristicæ rasuræ q. s. ad gratum saporem.
 Misce.

This delightful mixture is both stimulant and nutritious. In the formula, both the white and the yelk of the egg are directed to be beaten with the sugar; but if it be desirable to have the preparation very light and delicate, it is better to beat the yelk to a froth and mix with the wine, sugar, and nutmeg, and then add to the mixture the white of the egg, previously beaten to a froth in a separate vessel.

345. *Milk Punch.*

R. Spiritûs Vini Gallici f̄ij;
Lactic Vaccinæ f̄iv;
Sacchari ̄ss;
Myristicæ rasuræ q. s. ad gratum saporem.

Signa.—Take a tablespoonful every hour or two in low fevers.

346. *Oleo-Saccharoles.*

Under the name of oleo-saccharum, M. Beral has introduced into European pharmacy a convenient mode of exhibiting the volatile oils. It is simply a combination of any volatile oil with sugar, the latter serving the double purpose of rendering the former soluble in water, and covering its taste. The proportions are, one drop of oil to one drachm of sugar. They are to be carefully mixed by trituration. They act as mild carminatives.

CLASS XI.

NARCOTICS.

NARCOTICS have been denominated *sedatives*, from their power of diminishing action; *anodynes*, from their capability of alleviating pain; and *hypnotics*, or *soporifics*, from their power of inducing sleep. A few words only will be necessary as general rules for their administration, and any peculiarities that individuals of the class may possess will be noticed under the appropriate prescriptions. It is well known they possess the power of fulfilling two indications; namely, of exciting and depressing the nervous energy.

To obtain the first of these results, it is necessary to begin with small doses, and repeat them frequently; while in order to arrive at the second, a full dose must be given, and not resorted to again for a considerable length of time. We should also bear in mind that the system very soon becomes habituated to their action, and the doses must be continually enlarged when it is necessary to maintain their impression. The difference between the susceptibility to their action when the body is in a morbid or healthy condition, should not be overlooked.

Pills.

347. *Pills of Opium.*

R. Pulveris Opii gr. xij;

Saponis gr. iij.

Misce, et divide in pilulas xij.

Signa.—One is the ordinary dose to produce sleep.

In equal weights of powdered and soft opium, the former is much the more powerful, the latter containing a considerable proportion of water. This should be recollected in directing the medicine in the form of pills.

An opium pill that has been made long enough to become perfectly hard and dry, will be retained by an irritable stomach when a fresh one would be rejected.

348. *Pills of Lupulin.*

R. Lupulinæ ʒss;

Contunde in mortario, et divide in pilulas x.

Signa.—Two pills may be given for a dose, and the quantity be doubled if necessary.

This substance, we are told by Dr. Ives, contains all the active properties of the hop. It is slightly narcotic, and is serviceable in irritable stomach, and as a preventive of nocturnal erections in different forms of acute venereal disease.

349. *Pills of Sulphate of Morphia.*

R. Morphiæ Sulphatis gr. ij;

Confectionis Rosæ q. s. ut fiant pilulæ xij.

Signa.—One may be given for a dose.

One grain of either of the salts of morphia is usually estimated as equal to six of opium; so that a pill of the above prescription will be equivalent to a grain of opium.

350. *Pills of Lactucarium and Hemlock.*

R. Lactucarii gr. xij;

Extracti Conii Alcoholici gr. vj.

Misce, et divide in pilulas vj.

Signa.—One for a dose, to be repeated in two hours, if sleep be not procured.

The inspissated juice of the garden lettuce is said to act as a direct sedative, lessening the frequency of the pulse, diminishing the natural heat, and procuring sleep, without inducing the subsequent distressing effects which follow the use of opium.

The *thridace* of the French appears to be prepared by a different process from that employed in the preparation of the British lactucarium. The former is not so highly esteemed in this country as the latter.

351. *Pills of Henbane and Ipecacuanha.*

R. Extracti Hyoscyami Alcoholici gr. x;

Pulveris Ipecacuanhæ gr. v.

Misce, et divide in pilulas x.

Signa.—One every two hours until relief is procured, watching the effect.

Used in flatulence and irritability of the bowels.

352. *Pills of Opium and Henbane.*

R. Pulveris Opii gr. v;
 Extracti Hyoscyami gr. xv.
 Fiat massa, in pilulas x dividenda.

Signa.—One every night when an anodyne is required.

Henbane is a favorite anodyne remedy with English practitioners. When given in combination with opium, it modifies the unpleasant effects experienced by some persons from the use of the latter alone.

[353. *Pills of Opium and Colocynth.*]

R. Pulveris Opii gr. vj;
 Extracti Colocynthidis Compositi gr. xxiv;
 Syrupi Acaciæ q. s. ut fiat massa in pilulas xij dividenda.

Signa.—One every hour till purging is produced.

In lead colic, and obstruction from impaction of feces.

J. F. MEIGS.

354. *Pills of Camphor and Opium.*

R. Camphoræ in pulverem redactæ ℥ij;
 Extracti Opii gr. viij.
 Mucilaginis Tragacanthæ q. s. ut fiat massa in pilulas xvj dividenda.

Signa.—Take two pills every night at bedtime.

Used for spasm of the urethra, and to prevent nocturnal erections.

RICORD.

355. *Pills of Opium and Digitalis.*

R. Pulveris Opii,
 Pulveris Digitalis, āā gr. vj.
 Confectionis Rosæ q. s. ut fiant pilulæ xij.

Signa.—One to be taken every four hours.

In asthma.

[356. *Compound Anodyne Pill.*]

R. Extracti Cannabis Indicæ,
 Extracti Belladonnæ,
 Extracti Nucis Vomicae, āā gr. ij;
 Extracti Valerianæ,
 Quiniæ Sulphatis, āā gr. xij.

Misce, et divide in pilulas xij.

Signa.—Take one pill every two hours until relieved.

A very efficient pill in simple neuralgia, especially cephalalgia, from cerebral irritation or excessive mental activity. The extracts of the narcotics should be carefully selected.

[357. *Anæsthetic Pill.*]

R. Morphiæ Sulphatis gr. viij;
 Camphoræ gr. xx;
 Olei Cajuputi gtt. x;
 Pulveris Tragacanthæ gr. v;
 Extracti Gentianæ gr. xv;
 Syrupi Acaciæ q. s.

Misce, et divide in pilulas c.

Signa.—Take two or three at a dose, to be repeated every half hour till relieved.

For abdominal pain, colic, or cholera. J. F. MEIGS.

358. *Pills of Extract of Conium and Calomel.*

R. Extracti Conii ʒss;
 Hydrargyri Chloridi Mitis gr. v.

Fiant pilulæ xv.

Signa.—One three times a day.

Used in painful syphilitic affections.

359. *Pills of the Extract of Nux Vomica.*

R. Extracti Nucis Vomicae Alcoholici,
 Pulveris Extracti Glycyrrhizæ, āā ʒj.

Misce, et fiant pilulæ xl.

Signa.—Take one pill three times daily.

Recommended in general and local palsies, in paralysis of the sphincters, and for incontinence of urine. RADIUS.

360. *Pills of Camphor, Assafetida, etc.*

R. Camphoræ,
 Assafœtidæ, āā ʒj;
 Extracti Belladonnæ ʒss;
 Extracti Opii gr. x.

Contere in massam, et divide in pilulas lx.

Signa.—One pill is given night and morning, or at shorter intervals, according to the urgency of the case.

Used in hysteria. DEBREYNE.

361. *Pills of Aconite and Dover's Powder.*

R. Extracti Aconiti Alcoholici gr. vj;
 Pulveris Ipecacuanhæ Compositi gr. xij;
 Syrupi q. s. ut fiat massa, in pilulas vj dividenda.

Signa.—Take one pill three times a day.

Used in chronic rheumatism.

Mixtures, etc.362. *Laudanum.*

R. Tincturæ Opii f̄j.

Signa.—Dose, twenty-five drops.

As the regulation of doses for children is, to the young practitioner, one of the most difficult parts of prescribing, and as laudanum is an article so universally employed in their diseases, we subjoin the following graduated table from Dr. Dorsey's *Syllabus*, page 36, 1817, giving the *maximum* doses for all ordinary conditions:—

For a child at birth or within a month after	$\frac{1}{2}$ to 1 drop.
Under a year old	$\frac{1}{2}$ to 3 drops.
From one to two years of age	1 to 5 "
From two to five "	2 to 8 "
From five to ten "	5 to 15 "
From ten to fifteen "	10 to 20 "
At fifteen years	15 to 20 "
For an adult	25 to 30 "

It is important in the employment of laudanum that it should be of the proper strength and perfectly transparent. For these reasons, it should be obtained from the apothecary in small quantities, as it is liable to deposit part of the opium; hence the liquid near the surface is weaker, and the dregs correspondingly stronger. Infants have been destroyed by the exhibition of *thick laudanum*. Physicians, therefore, should never trust a nurse to administer a dose to a child, except under circumstances of extreme urgency, carefully examining the bottle previously. B. E.

363. *Officinal Preparations of Opium.*

As each of the numerous preparations of opium presents some peculiarities, which, at times, renders it preferable to all others for internal exhibition, the following statement of the

opium-strength of each may prove valuable as a guide in prescribing:—

13 minims	or 25 drops	of laudanum (<i>Tinctura Opii</i>);
13 "	or 25 "	of the elixir of opium (<i>Tinctura Opii Deodorata</i>);
7 "	or 10 "	of black drop (<i>Acetum Opii</i>);
10 "	or 20 "	of the acetated tincture (<i>Tinctura Opii Acetata</i>);
80 "	or 80 "	of ammoniated tincture (<i>Tinct. Opii Ammoniata</i> , Ed.);
8 "	or 15 "	of wine of opium or Sydenham's laudanum (<i>Vinum Opii</i>);

A tablespoonful of paregoric (*Tinct. Opii Camphorata*);

Thirty-six grains of the confection (*Confectio Opii*);

Half a grain of the extract (*Extractum Opii*); and

Ten grains of Dover's powder (*Pulvis Ipecacuanhæ Compositus*),

contain, respectively, one grain of opium.

About five grains of opium, or a small teaspoonful of laudanum, may be considered as equivalent to one grain of morphia, or of any of its salts.

R. P. T.

364. *Solution of Sulphate of Morphia.*

R. Morphiæ Sulphatis gr. j;

Aquæ destillatæ f̄j.

Fiat solutio.

Signa.—Dose, one teaspoonful.

Used in the same cases as opium.

When morphia and its salts were first introduced, the formulas given by Magendie were generally adopted, and are still retained in New York, and some other places. These contain sixteen grains of the sulphate or the acetate of morphia in a fluidounce of water; whereas the officinal solution has but one grain to the ounce. Practitioners should avoid confounding the two solutions.

365. *Syrup of Sulphate of Morphia.*

R. Morphiæ Sulphatis gr. viij;

Aquæ destillatæ f̄iiv.

Solve, et adde—

Syrupi f̄iiv;

Spiritûs Ætheris Compositi f̄j.

Misce.

Signa.—Dose, a teaspoonful.

This is, virtually, of the same strength as the officinal solution, and has the advantage of being more durable as well as more palatable.

J. T. PLUMMER.

366. *Mixture of Laudanum and Oil of Turpentine.*

R. Tincturæ Opii f̄j;
 Olei Terebinthinæ f̄ss.

Misce.

Signa.—A teaspoonful, diluted, every hour or two may be given in delirium tremens, its effect being closely watched.

The turpentine may be added or omitted at the discretion of the physician, and the quantity of laudanum in some cases may be doubled. We have successfully given two teaspoonfuls every hour until two ounces of laudanum were taken. We do not believe in the doctrine, however, that opium in this disease may be administered almost *ad libitum* without danger. On the contrary, we feel assured that death has been caused by its excessive use in delirium tremens.

S. G. MORTON.

367. *Mixture of Lupulin.*

R. Tincturæ Lupulinæ f̄j;
 Syrupi Amygdalæ f̄j;
 Aquæ f̄ij.

Misce.

Signa.—Dose, a tablespoonful every two hours.

Dr. G. B. Wood recommends the tincture of lupulin in the treatment of delirium tremens, both as an adjuvant to opium, and as a substitute for it. By checking vomiting, and quieting restlessness, it promotes sleep.

368. *Mixture of Camphor Water and Hoffman's Anodyne.*

R. Aquæ Camphoræ f̄ij;
 Spiritûs Ætheris Compositi,
 Syrupi Amygdalæ, āā f̄ss.

Misce.

Signa.—Dose, a dessert-spoonful every two hours.

Used in nervous affections, and the sleeplessness of fever.

369. *Mixture of Chloride of Propylamin.*

R. Propylamini Chloridi gr. xxxvj;
 Sacchari ʒij;
 Aquæ Ment hæ Piperitæ f̄vj.

Fiat solutio.

Signa.—A tablespoonful every two hours.

370. *Elixir of Propylamin.*

R. Propylamini Chloridi ℥ij;
 Aquæ f̄ijss.
 Solve et adde—
 Syrupi f̄ss;
 Spiritûs Curaçoaë f̄j.

Misce.

Signa.—Dose, a teaspoonful.

Given in rheumatism.

In this preparation the unpleasant odor and taste of the propylamin are overcome by the use of syrup and Curaçoa cordial. Each fluidrachm contains one grain of the chloride of propylamin.

R. H. STABLER.

371. *Mixture of Iodide of Propylamin.*

R. Propylamini Iodidi gtt. xxv;
 Sacchari ℥ij;
 Aquæ Menthæ Piperitæ f̄vj.

Misce.

Signa.—A tablespoonful every two hours.

Used, like the other preparations of propylamin, in the treatment of rheumatism. The presence of iodine is claimed as an important element in this combination. B. J. CREW.

372. *Strychnia Mixture.*

R. Strychniæ gr. j;
 Acidi Acetici gtt. ij;
 Sacchari ℥ij;
 Aquæ destillatæ f̄ij.

Fiat solutio.

Signa.—A teaspoonful morning and evening.

Prescribed in palsies. It has also proved beneficial in the vomiting of pregnant women, when given in smaller quantities and at shorter intervals.

MAGENDIE.

373. *Solution of Extract of Belladonna.*

R. Extracti Belladonnæ gr. iij;
 Syrupi fʒj;
 Aquæ Cinnamomi fʒviij.

Fiat solutio.

Signa.—Give three drops thrice a day, to a child under a year old, and an additional drop for every additional year.

Belladonna has been recently used in Germany as a preventive of scarlatina. The extract, if given for several days, produces a scarlet eruption and affection of the fauces, analogous to those of scarlatina; and it is pretended that this factitious disease is sufficient to prevent the access of the real one.

S. G. MORTON.

374. *Mixture of Chloric Ether.*

R. Ætheris Chlorici fʒjss;
 Aquæ Camphoræ fʒij;
 Syrupi Amygdalæ fʒss.

Misce.

Signa.—A dessert-spoonful in water every three hours.

As prepared by the manufacturing chemists of Philadelphia, chloric ether is of a uniform strength, and a reliable article. It is less narcotic than chloroform, but more stimulating. It has proved of great service in the treatment of many nervous and painful affections unattended by active inflammation.

C. EVANS.

375. *Chloroform Mixture.*

R. Chloroformi purificati ʒij;
 Olei Cinnamomi gtt. viij;
 Spiritûs Camphoræ,
 Tincturæ Opii, āā fʒjss;
 Alcoholis fʒiij.

Misce.

Signa.—The dose ranges from five to thirty drops, in sweetened water.

This preparation has proved highly serviceable in the relief of the pains and cramps of colic, cholera morbus, and cholera asphyxia.

H. HARTSHORNE.

[376. *Chlorodyne.*]

- R. Chloroformi f̄3vj;
 Ætheris Chlorici f̄3j;
 Tincturæ Capsici f̄3ss;
 Olei Menthæ Piperitæ gtt. ij;
 Morphiæ Hydrochloratis gr. viij;
 Acidi Hydrocyanici diluti gtt. xxiv;
 Acidi Perchlorici gtt. xx;
 Tincturæ Cannabis Indicæ f̄3j;
 Syrupi fusci f̄3j.

Misce.

Signa.—Give 20 drops as a soporific, and 30 drops to a fluidrachm as an anodyne in cholera or violent paroxysms of pain.

This remedy has acquired a great reputation from its first introduction as a nostrum under the above name. COOLEY.

[377. *Another Form.*]

- R. Chloroformi f̄3iv;
 Ætheris f̄3j;
 Alcoholis f̄3iv;
 Syrupi fusci f̄3iv;
 Extracti Glycyrrhizæ 3ijss;
 Morphiæ Hydrochloratis gr. viij;
 Olei Menthæ Piperitæ ℥xvj;
 Syrupi f̄3xvijss;
 Acidi Hydrocyanici diluti f̄3ij.

Misce secundum artem.

Signa.—Dose, from five to ten minims.

In pain, diarrhœa, or spasmodic affections. Known also as
 the compound tincture of chloroform. P. SQUIRE.

378. *Chloroform Mixture.*

- R. Chloroformi 3j;
 Vitellum unius ovi.
 Tere simul et adde—
 Sacchari 3ij;
 Aquæ f̄3ij.

Fiat mistura.

Signa.—Dose, a dessert-spoonful every two hours.

Prescribed in gastrodynia, flatulent colic, and cholera mor-

bus. Owing to the antiseptic properties of the chloroform, this mixture keeps well.

It is used in the same cases as the preceding formulæ.

[379. *Chloroform and Tincture of Cardamom.*]

R. Chloroformi ℥xv.

Tincturæ Cardamomi Compositæ fʒjss.

Misce.

Signa.—Take a teaspoonful every half hour in water.

In pain where opiates are not desirable.

SIR J. Y. SIMPSON.

[380. *Emulsion of Chloroform.*]

R. Chloroformi fʒj;

Pulveris Tragacanthæ gr. v;

Pulveris Sacchari,

Syrupi Orgeat,

(vel Syrupi Amygdalæ, U. S. P.),

Aquæ, āā fʒss.

Misce secundum artem.

This emulsion makes an admirable means of producing an extemporaneous solution of chloroform; it may be diluted to any proportion required, and yet by a little gentle agitation is easily suspended. The flavor makes it a delightful addition to other mixtures.

ISRAEL J. GRAHAME.

381. *Mixture of Magnesia, Assafetida, and Laudanum.*

R. Magnesiæ Carbonatis ʒss;

Tincturæ Assafoetidæ gtt. lx.

Tincturæ Opii gtt. xx;

Sacchari ʒj;

Aquæ destillatæ fʒj.

Fiat mistura.

Signa.—Twenty-five drops may be given to an infant of two to four weeks old.

In flatulent colic, diarrhoea, etc.

This preparation was strongly recommended by the late Dr. Dewees, and it is now much employed in this city under the name of *Dewees's Carminative*.

If the *calcined* magnesia be used, it unites with the resin of the assafetida, forms an almost solid mass at the bottom of

the vessel, and defeats the object of the prescription, consequently the carbonate should be preferred.

382. *Carminative for Infants.*

R. Magnesiæ Carbonatis ℥j;
Vini Opii gtt. xv;
Syrupi Acaciæ fʒiij;
Aquæ Cinnamomi fʒv.

Misce.

Signa.—Shake well before using. Dose, ten drops for a child three days old.

Used to relieve colicky pains, and to correct the green alvine discharges of infants.

383. *Tincture of Hemp.*

R. Extracti Cannabis purificati, gr. xxiv;
Alcoholis fʒj.

Fiat solutio.

Signa.—Take three to ten drops every two hours.

The above is the formula of Dr. O'Shaughnessy, of Calcutta, who has had much experience with the gunjah or Indian hemp. In cholera, he gave ten drops every half hour to check the vomiting; in tetanus, a drachm of the tincture, with the same interval, until the paroxysms ceased, or catalepsy was induced; and in acute rheumatism, twenty drops until symptoms of intoxication were manifested.

384. *Alcoholic Solution of Oil of Bitter Almonds.*

R. Olei Amygdalæ Amaræ ℥xx;
Alcoholis fʒiij.

Fiat solutio.

Signa.—Take ten drops four times daily.

Used in neuralgia, tic douloureux, and other painful complaints.

HORN.

Clysters and Suppositories.

385. *Laudanum Enema.*

R. Tincturæ Opii gtt. l;
Infusi Lini Compositi fʒij.

Fiat enema.

Used for obstinate vomiting, chronic dysentery, and painful affections of the pelvic viscera.

[This formula is the one generally adopted for the laudanum enema, sometimes substituting starch water for the flaxseed tea. It has always seemed to the editor that this was a very bad method of using a most valuable remedy. The purpose of the opiate enema being to act as an anodyne by its absorption, the object will be best attained by having as little as possible of the diluent to relieve the irritant impression of the alcoholic solution, and to have this diluent of such material as will be most readily taken up by the bowel; and instead of two ounces of flaxseed tea, I have always been in the habit of ordering about three fluidrachms of warm water. The syringe should work accurately, as any air forced through it into the rectum causes tenesmus, and very often the ejection of the anodyne.]

It is generally supposed that three times the quantity of a medicine may be thrown into the rectum that may be taken into the stomach. As regards opium, however, we believe it to be too much, particularly in children. Indeed, it is an unsettled point in therapeutics, whether remedies in relative doses, act more powerfully upon the rectum or upon the stomach.

386. *Opium Suppository.*

R. Pulveris Opii gr. ij;
Saponis gr. iv.

Misce bene.

Signa.—Introduce into the rectum when a local anodyne is indicated.

387. *Another Form.*

R. Olei Theobromæ $\bar{\text{z}}$ ss;
Pulveris Opii gr. xij.

Liquefac cum leni calore. Misce, et fiant suppositoria xij.

Signa.—One to be introduced into the bowel.

This is a good form for securing the effects of opium, when the remedy cannot be borne by the mouth.

S. W. MITCHELL.

388. *Suppository of Opium and Rhatany.*

R. Olei Theobromæ $\bar{\text{z}}$ ss;
Extracti Krameriaë $\bar{\text{z}}$ ij;
Pulveris Opii gr. v.

Misce secundum artem, et fiant suppositoria x.

Used in piles, relaxation or descent of the bowel, fissure of the anus, etc.

J. PANCOAST.

389. *Suppository of Morphia.*

R. Olei Theobromæ \bar{z} ss;
 Morphiæ Sulphatis gr. iij.
 Liquefac, et fiant suppositoria xij.

The introduction of one of these into the bowel, every three or four hours, affords much relief in painful affections of the pelvic viscera, and, especially, in dysmenorrhœa, and cancer of the womb. Chordee can usually be controlled by the use of one at bedtime. They have also proved highly beneficial in arresting the pain attendant upon a threatened abortion.

R. P. THOMAS.

390. *Suppository of Hemlock.*

R. Olei Theobromæ \bar{z} j;
 Extracti Conii gr. x.
 Misce, et fiat suppositorium.

Used in cancer of the rectum, womb, or bladder.

External Use of Narcotics.391. *Mixture of the Extract of Belladonna.*

R. Extracti Belladonnæ,
 Glycerinæ, āā \bar{z} j.
 Tere simul.

Used for dilating the pupil in cataract, by rubbing around the eyebrow and on the temples.

392. *Solution of Atropia.*

R. Atropiæ gr. ij;
 Acidi Acetici gtt. vj;
 Aquæ destillatæ f \bar{z} j.
 Fiat solutio.

Signa.—Let a drop or two fall into the eye to dilate the pupil.

This is equally efficacious in its action, and more elegant than the ordinary preparations of belladonna. It is also much more prompt, a healthy iris being acted upon in ten to twenty minutes.

W. W. COOPER.

Three minims of this solution, containing one-eightieth of a grain of atropia, may be considered equivalent in activity to one-third of a grain of the extract, or fifteen drops of the tincture of belladonna, for internal administration. R. P. T.

[393. *Solution of Sulphate of Atropia.*]

R. Atropiæ Sulphatis gr. $\frac{1}{2}$ -ij;
 Aquæ destillatæ f̄3j.

Fiat solutio.

Signa.—Apply one or two drops to the eye.

For the relief of irritation of the conjunctiva or cornea, the weaker solution will answer; for active and prompt dilatation of the pupil, the stronger. This formula is preferable to those in which the alkaloid is extemporaneously dissolved in acetic or other acid, the latter form being often irritating and painful, whereas the solution of the salt is not.

[394. *Solution of the Extract of Calabar Bean.*]

R. Extracti Physostigmæ Alcoholici gr. j;
 Aquæ destillatæ f̄3j.

Fiat solutio.

Used as an application to the conjunctiva for its remarkable effect in contracting the pupil when dilated abnormally, whether from previous use of belladonna or otherwise. To be applied with a camel's-hair brush. T. G. MORTON.

395. *Mixture of Opium, Lime-water, etc.*

R. Extracti Opii gr. j;
 Liquoris Calcis,
 Olei Amygdalæ Dulcis, āā f̄5iij.

Fiat mistura.

Recommended by Dr. Sibergundi, of Dorsten, in the treatment of sore nipples. It is to be applied on dossils of lint.

396. *Dental Anæsthetic.*

R. Tincturæ Aconiti Radicis,
 Chloroformi purificati,
 Alcoholis, āā f̄3j;
 Morphiæ gr. vj.

Misce.

Signa.—Moisten two pledgets of cotton with the liquid, and apply to the gums for a minute or two, around the tooth.

Employed to diminish the pain of extraction of teeth, and to deaden sensibility in the gums. TEFT.

To be used with caution on account of the aconite.

397. *Decoction of Stramonium in Milk.*

R. Stramonii Folii ʒij;
Lactis recentis Ojss.
Coque ad Oj.

Employed for gouty, rheumatic, and other painful swellings, by applying both the boiled leaves and the milk to the affected part.

398. *Sedative Application.*

R. Extracti Belladonnæ, ʒjss;
Tincturæ Opii ꝑ℥xl.
Tere simul, et adde—
Chloroformi Venalis ʒj.

Misce.

Signa.—For local application.

A portion of this mixture is to be smeared over the seat of pain in neuralgia, or other local painful affections.

DIDAY.

399. *Lotion of Atropia.*

R. Atropiæ gr. vj;
Acidi Acetici gtt. x;
Glycerinæ fʒiij.

Misce.

Forty or fifty drops are to be applied by friction over the track of the nerve, three times daily, in facial neuralgia.

400. *Anodyne Plaster.*

R. Emplastri Plumbi ʒij;
Liquefac lento igne, et adde gradatim—
Pulveris Opii,
Pulveris Camphoræ, āā ʒss.
Fiat emplastrum.

Used for enlarged joints, rheumatism, and local pains. The officinal "Emplastrum Opii" is employed for the same purposes.

401. *Plaster of Opium and Camphor.*

R. Pulveris Opii ʒij;
Camphoræ ʒss;
Picis Burgundicæ ʒj;
Emplastri Plumbi q. s. ut fiat emplastrum iv×vj.

This plaster is highly recommended in neuralgia.

GRAVES.

402. *Plaster of Opium and Belladonna.*

R. Extracti Opii gr. xv;
 Extracti Belladonnæ ʒj;
 Glycerinæ ℥xx vel q. s.

Misce.

Signa.—Spread on adhesive plaster 3×4 inches, leaving an adhesive margin all round.

This is an excellent application to the face for toothache, or to other parts for the relief of neuralgia.

403. *Liniment of Belladonna, Bitter Almond Water, etc.*

R. Extracti Belladonnæ ʒij;
 Aquæ Amygdalæ Amaræ fʒij.

Tere simul, dein adde—

Ætheris fʒj.

Misce.

Signa.—Rub the liniment on the affected part, and apply a flannel moistened with it, the whole to be covered with a piece of oiled silk.

Useful in neuralgia, in gouty and rheumatic pains, and for gathered breasts. RANQUE.

404. *Camphor and Chloroform Liniment.*

R. Camphoræ ʒjss;
 Chloroformi Venalis ʒij;
 Olei Olivæ ʒij.

Fiat linimentum.

Useful in rheumatic and neuralgic affections.

W. B. PRICE.

405. *Chloroform and Soap Liniment.*

R. Linimenti Saponis fʒij;
 Chloroformi Venalis fʒj.

Misce.

Employed like the preceding in rheumatic pains. The quantity of chloroform may be advantageously increased.

TUSON.

406. *Compound Chloroform and Aconite Liniment.*

R. Olei Ricini ℥ij;
Chloroformi Venalis,
Spiritûs Ammoniaë,
Tincturæ Aconiti Radicis, āā f℥ij;
Linimenti Saponis f℥j.

Misce.

Employed in rheumatic pains, bruises, etc.

W. PROCTER, JR.

CLASS XII.

ANTISPASMODICS.

ANTISPASMODICS are those medicines which allay spasm, and compose the irregular actions of the nervous system. Some of the most powerful of them are derived from the class of Narcotics.

Pills, etc.

407. *Pills of Assafetida and Soap.*

R. Assafœtidæ ℥j;
Saponis gr. x.

Contunde in massam, et fiant pilulæ xx.

Signa.—Two of these pills may be taken for a dose.

Used in hysteria, and as a mild laxative.

408. *Pills of Castor and Succinic Acid.*

R. Castorei ℥j;
Acidi Succinici ℥ss;
Extracti Gentianæ q. s. ut fiant pilulæ xxiv.

Signa.—Dose, three pills night and morning.

In hysteria.

409. *Pills of Musk, Camphor, &c.*

R. Moschi ℥ss;
Camphoræ ℥j;
Ammoniaci ℥ij;
Opii gr. iv.

Misce, et fiant pilulæ singulæ gr. iv pendentēs.

Signa.—One pill to be given every three hours.

In nervous diseases.

M. A. RICHARDS.

410. *Pills of Valerianate of Zinc.*

R. Zinci Valerianatis gr. xij;
Confectionis Rosæ q. s. ut fiat massa in pilulas xij dividenda.

Signa.—Give one pill every three hours.

Used in neuralgia, epilepsy, and anomalous nervous affections.

Mixtures, Etc.411. *Musk Mixture.*

R. Moschi optimi ʒij;
Sacchari ʒj;
Pulveris Acaciæ ʒj;
Aquæ destillatæ fʒvj.

Fiat mistura et adde—

Tincturæ Opii Camphoratæ fʒss;
Tincturæ Valerianæ Ammoniatæ fʒj.

Misce.

Signa.—A teaspoonful three or four times a day.

For children in pertussis.

412. *Mixture of Sumbul and Valerian.*

R. Tincturæ Sumbuli (Rad. Sumb. ʒij ad Alcoholis Oj),
Tincturæ Valerianæ, āā fʒj.

Misce.

Signa.—Dose, a teaspoonful every two hours, in sweetened water.

The sumbul, or musk-root of Asia, has attracted some attention in Europe as a mild stimulant, suited to the low forms of fever, controlling the nervous symptoms that arise during convalescence from fevers. It has been prescribed also for the relief of cramps, spasms, and hysteria. GRANVILLE.

413. *Mixture of Assafetida, Castor, and Ammonia.*

R. Tincturæ Assafoetidæ,
Tincturæ Castorei, āā fʒj;
Spiritus Ammoniae Aromatici fʒj.

Misce.

Signa.—A teaspoonful may be taken in a glass of sweetened water for a dose.

414. *Hoffman's Anodyne and Laudanum.*

R. Spiritûs Ætheris Compositi f̄3iij;
 Tincturæ Opii gtt. lxxx;
 Aquæ Cinnamomi f̄3vj.

Fiat mistura.

Signa.—A tablespoonful every two hours.

Given in hysteria, and to quiet restlessness and morbid vigilance.

415. *Mixture of Assafetida, Valerian, and Castor.*

R. Assafœtidæ ʒj;
 Aquæ Menthæ Piperitæ f̄3iij.

Fiat mistura, et adde—

Tincturæ Valerianæ Ammoniatæ f̄3ij;
 Tincturæ Castorei f̄3iij;
 Ætheris f̄3j.

Signa.—A tablespoonful for a dose, largely diluted, every second hour.

In hysteria.

416. *Mixture of Nitric Acid.*

R. Acidi Nitrici ℥xxxij;
 Syrupi f̄3iijss;
 Tincturæ Cardamomi Compositæ f̄3ss.

Misce.

Signa.—Dose, half a teaspoonful every three hours.

Prescribed in pertussis, the quantity to be augmented in proportion to the age of the patient, and the severity of the paroxysms.

H. HOLMES.

417. *Mixture of Cimicifuga.*

R. Extracti Cimicifugæ Fluidi,
 Syrupi Acaciæ, āā f̄3ss;
 Aquæ Amygdalæ Amaræ f̄3iij.

Misce.

Signa.—A teaspoonful every three hours.

Black snakeroot is a remedy of much value in the treatment of diseases of the nervous system, and especially in chorea and hooping-cough.

418. *Assafetida Enema.*

R. Tincturæ Assafœtidæ f̄3ij;
Mucilaginis Ulmi f̄5vj.

Misce pro enemate.

Administered in hysteria, spasmodic colic, etc. A third, or even one-half of this quantity may be safely and beneficially given to a young child in convulsions.

CLASS XIII.

SIALAGOGUES.

THOSE medicines which increase the salivary secretion are denominated Sialagogues. In forming these into a *class* in this place, we trespass on the arrangement of Dr. Chapman, but merely from a motive of convenience; for we agree with him that such a class would be better expunged from the *Materia Medica*, at the same time that it appears necessary to introduce it here, in order to place the mercurial preparations in stronger relief than could otherwise be done.

419. *Powders of Calomel.*

R. Hydrargyri Chloridi Mitis gr. ij;
Sacchari lactis ℥j.
Terre simul et divide in pulveres viij.
Signa.—Take one powder every two hours.

When the practitioner wishes to obtain the alterative effects of mercury, it is better to administer very small doses, at short intervals. A larger quantity would probably act upon the liver, and secondarily, upon the bowels.

420. *Pills of Corrosive Sublimate.*

R. Hydrargyri Chloridi Corrosivi gr. vijss;
Amyli ℥j;
Syrupi Acaciæ q. s. ut fiant pilulæ lx.
Signa.—Give one pill three times a day.

Prescribed in constitutional syphilitic affections.

TROUSSEAU.

421. *Dupuytren's Antisyphilitic Pills.*

R. Hydrargyri Chloridi Corrosivi gr. ss;
 Extracti Cinchonæ gr. x;
 Extracti Opii gr. ss.

Fiant pilulæ ij.

Signa.—The two pills may be taken, one in the morning, and the other at night; but as each contains a quarter of a grain of corrosive sublimate, their action must be very closely watched.

M. Dupuytren was partial to these pills in the treatment of syphilis. He thought the opium and cinchona promoted and beneficially modified the action of the sublimate.

422. *Pills of Corrosive Sublimate and Hemlock.*

R. Hydrargyri Chloridi Corrosivi gr. vj;
 Extracti Conii ʒj;
 Pulveris Conii q. s. ut fiat massa, in pilulas xlvij dividenda.

Signa.—Give one pill three times a day.

Used in lues venerea.

The effect of the mercurial preparations upon children is sometimes very serious and even fatal. So powerful upon them is the action of this medicine, that a profuse or even gentle salivation will sometimes produce mortification and destruction of the jaw, cheek, and lip. This, however, does not often happen; but to avoid it, the gums should be frequently and carefully examined. It is, nevertheless, a fact, that a disease precisely similar in all its features occasionally attacks children who are badly clothed and fed, though no mercury has been given to them.

B. ELLIS.

423. *Pills of Iodide of Mercury.*

R. Hydrargyri Iodidi Viridis gr. v;
 Confectionis Rosæ q. s. ut fiant pilulæ xxx.

Signa.—Each pill will contain the sixth of a grain, which may be given three times a day. Double the quantity (two pills) is sometimes administered at first, but care should be taken not to push the remedy too far.

424. *Compound Pills of Iodide of Mercury.*

R. Hydrargyri Iodidi Viridis,
Lactucarii, āā ʒss;
Extracti Opii gr. ix;
Resinæ Guaiaci ʒj.

Misce, et fiant pilulæ xxxvj.

Signa.—Take one pill three times daily.

Highly recommended both in primary and secondary syphilis, the treatment being continued until mercurialization appears.

RICORD.

425. *Pills of Calomel, Camphor, and Opium.*

R. Hydrargyri Chloridi Mitis,
Camphoræ, āā ʒj;
Pulveris Opii gr. x;
Syrupi q. s. ut fiant pilulæ xx.

Signa.—One to be taken morning, noon, and night, when calomel by itself causes purging.

B. ELLIS.

426. *Pills of Blue Mass.*

R. Pilulæ Hydrargyri ʒss.

Divide in pilulas x.

Signa.—One to be taken night and morning.

When used as thus prescribed, blue mass is one of our best alteratives in the treatment of syphilitic disease, and all other complaints where the mercurial impression is indicated.

If eight or ten grains be taken at bedtime, one or two evacuations of the bowels will occur during the next day.

427. *Pills of the Red Oxide of Mercury.*

R. Hydrargyri Oxidi Rubri gr. j;
Pulveris Opii gr. j;
Olei Caryophylli gtt. ij.

Fiant pilulæ iiij.

Signa.—One pill every night for a week.

In venereal cases.

This preparation, in a stronger formula, was used and highly recommended by the celebrated John Hunter; but from its harshness it is now generally superseded by milder medicines.

428. *Solution of Cyanide of Mercury.*

R. Hydrargyri Cyanidi gr. viij;
Aquæ Oj.

Fiat solutio.

Signa.—A teaspoonful of the solution, containing one-sixteenth of a grain of the cyanuret, may be given morning, noon, and night, watching its effects.

This is the *Liquor Anti-syphilitique* of Chaussier, who prefers it to corrosive sublimate, on account of its greater solubility and more speedy action.

429. *Powder of Mercury and Chalk with Ipecacuanha.*

R. Hydrargyri cum Cretâ ℥j;
Pulveris Ipecacuanhæ ℥ss.

Fiant chartulæ vj.

Signa.—One night and morning in syrup.

Commended by Dr. Paris, in dyspepsia, in which the biliary secretion is impaired. He prefers it under these circumstances to every other form of mercury.

430. *Masticatory of Pellitory and Mastich.*

R. Pulveris Pyrethri,
Mastiches, āā ʒj.

Signa.—Let these be mixed together by a moderate application of heat; then divide the mass into two equal parts. One of these lumps may be chewed at pleasure.

Used in toothache and paralytic affections of the tongue.

WALTHER.

CLASS XIV.

T O N I C S.

TONICS are those medicines which impart strength to the system, without subjecting it to any preternatural excitement during their operation. They stimulate, however, in a secondary manner, by gradually increasing the force of the circulation, and by restoring the digestive and secretory functions to a more healthy state. Considerable perseverance is often necessary in giving any one of this class a fair trial; and when one fails, we may often resort with success to another. Much also may sometimes be gained by alternating them.

It is a well-known fact that some medicines possessed of tonic properties, in small or ordinary doses, have the singular power, when administered more freely, of producing such changes in the economy as to render them applicable to the cure of intermittent disease. The numerous remedies of this class, and their varied modes of exhibition, render it advisable, in a work of this kind, to have some mode of distinguishing them from ordinary tonics. For convenience of reference, therefore, two sub-classes have been made, viz., 1. Of Anti-Intermittents, and 2. Of Ordinary Tonics.

SUB-CLASS I.—ANTI-INTERMITTENTS.

At the head of this class stand, confessedly, Peruvian Bark and its numerous preparations.

Powders and Pills.

431. *Powder of Peruvian Bark.*

R. Pulveris Cinchonæ Rubræ ʒj.

Signa.—A teaspoonful to be taken every hour in port wine, water, or milk, during the intermission of fever.

Some practitioners suspend the bark till within a few hours of the expected paroxysm; and others administer it during the hot stage of the disease. It is better to commence immediately after the paroxysm has ended, and give a dose every hour, until the expected period of its return; and to continue it in smaller quantities for several days.

If the bark should purge when given alone, a little opium may be added; when it oppresses the stomach, cloves, as in the next prescription; if costiveness should follow, rhubarb, or sulphate of magnesia.

432. *Powder of Peruvian Bark, Cloves, and Cream of Tartar.*

R. Pulveris Cinchonæ Rubræ,
Potassæ Bitartratis, āā ʒj;
Pulveris Caryophylli ʒj.

Misce.

Signa.—Dose, a teaspoonful in syrup every second hour.

This compound will sometimes succeed in arresting miasmatic disease when the bark alone fails.

433. *Powder of Peruvian Bark, Virginia Snakeroot, and Soda.*

R. Pulveris Cinchonæ ʒss;
Pulveris Serpentariæ ʒj;
Sodæ Bicarbonatis ʒij.

Divide in chartulas iv.

Signa.—One to be given every two hours.

In obstinate intermittents.

434. *Powder of Prussian Blue and Guaiac.*

R. Ferri Ferrocyanidi,
Pulveris Guaiaci Resinæ, āā ʒj.

Misce, et divide in chartulas xij.

Signa.—One three times a day.

In obstinate intermittents.

435. *Pills of Sulphate of Quinia.*

R. Quiniæ Sulphatis gr. xx;
Acidi Sulphurici Aromatici ℥xv.

“Drop the acid into the sulphate of quinia on a tile or slab, and triturate it with a bone spatula until it assumes a pilular consistence; then divide rapidly into the required

number of pills." Made in this way a three-grain pill is not inconveniently large.

E. PARRISH.

In prescribing quinia in the apyrexia of intermittents, and especially in that of neuralgia, it is often necessary to increase the dose beyond the officinal formula, which is one grain in each pill. For example, three, four, or five grains may be requisite in those cases in which the neuralgic paroxysms are violent, and the intermission short; and this quantity must be repeated every two or three hours, or even every hour. The principal inconveniences arising from the free exhibition of quinia are a painful sense of fulness, noise, and dizziness of the head, constriction of the chest, and purging. The latter may be checked by accompanying each pill with a few drops of laudanum, or by a tablespoonful of the simple aqueous infusion of camphor. If the affection of the head or chest becomes severe, the medicine must be suspended or diminished in quantity.

436. *Pills of Quinia, Opium, and Black Pepper.*

R. Quiniæ Sulphatis gr. xx;
 Pulveris Opii gr. ij;
 Oleoresinæ Piperis ℥v;
 Syrupi Acaciæ q. s. ut fiat massa in pilulas xx dividenda.
Signa.—Give two pills every hour in the morning of an expected chill.

In ordinary intermittents the sulphate of quinia retains the first rank for promptness and efficiency in arresting the paroxysm; but in chronic cases it frequently fails. In the treatment of the latter, the present prescription will prove an excellent agent.

437. *Powders of Sulphate of Quinia and Tartar Emetic.*

R. Quiniæ Sulphatis gr. x;
 Antimonii et Potassæ Tartratis gr. iij.
 Misce, et divide in partes vj æquales.
Signa.—Give one powder every two hours.

This preparation is commended as having been successful in intermittent fever, when quinia alone produced no favorable result. It causes vomiting and purging, and prevents the recurrence of the paroxysm. It should be given during the intermission.

GOLA.

438. *Pills of Sulphate of Quinia and Carbonate of Ammonia.*

R. Quiniæ Sulphatis gr. xij;
 Ammoniæ Carbonatis gr. xxiv;
 Syrupi Acaciæ q. s.

Fiant pilulæ xij.

Signa.—One every hour, beginning six hours before the expected paroxysm.

These pills are large, but they will act when quinia alone proves unavailing.

439. *Pills of Chinoidine.*

R. Chinoidini ℥ij;
 Extracti Gentianæ gr. x.
 Tere simul, et fiant pilulæ xl.

Signa.—Take two pills every three hours.

Dr. Gemmil has tried chinoidine for two or three years, and has found it an effectual substitute for quinia. He gives two grains every three hours during the intermission, until twelve to sixteen pills are taken, and on the sixth, thirteenth, and twentieth days, eight or ten pills in the same way.

J. M. GEMMILL.

440. *Pills of Sulphate of Cinchonia.*

R. Cinchoniæ Sulphatis ℥ss;
 Pulveris Acaciæ gr. x;
 Acidi Sulphurici Aromatici ℥x.

Fiat massa, et divide in pilulas xx.

Signa.—Take two pills every hour in the apyrexia of intermittent fever, until eight are taken.

Experiments made in several public institutions of Philadelphia prove the sulphate of cinchonia to be an efficient substitute for quinia, in a somewhat larger dose.

441. *Pills of Sulphate of Quinidia.*

R. Quinidiæ Sulphatis ℥j;
 Pulveris Acaciæ gr. xij;
 Mellis q. s. ut fiat massa in pilulas lx dividenda.

Signa.—Take two pills every hour, until eight are taken.

Used in intermittent disease in the same way as the sulphate of quinia. There seems to be little difference in the strength and effect of the two salts.

442. *Powders of Salicine.*

R. Salicini gr. xxiv;
Sacchari ℥iv.

Misce, et divide in partes viij æquales.

Signa.—A powder to be taken three times a day.

Salicine possesses decided anti-intermittent powers. It has to be used, however, in doses double or treble those of the sulphate of quinia. KROMBHOLZ.

443. *Pills of Arsenic and Opium.*

R. Acidi Arseniosi gr. j;
Pulveris Opii gr. iv;
Saponis gr. xj.

Fiat massa, et divide in pilulas xvj.

Signa.—Give one pill three times a day, and increase gradually, according to circumstances, watching the effect.

In intermittent fever, and local diseases of an intermittent character. MARCUS.

444. *Pills of Sulphate of Copper and Extract of Bark.*

R. Cupri Sulphatis gr. iv;
Extracti Cinchonæ gr. xxxij;
Syrupi q. s. ut fiat massa, in pilulas xvj dividenda.

Signa.—One to be taken three times a day.

In obstinate intermittents. CHAPMAN.

445. *Pills of Sulphate of Copper and Opium.*

R. Cupri Sulphatis gr. iij;
Pulveris Opii gr. iv;
Syrupi Acaciæ q. s. ut fiat massa, in pilulas xij dividenda.

Signa.—Give one pill every three hours in obstinate intermittents.

This combination is sometimes serviceable, when quinia fails. CHAPMAN.

446. *Pills of Sulphate of Bebeerine.*

R. Bebeerinæ Sulphatis ʒj;
Pulveris Acaciæ gr. xv;
Mellis q. s.

Fiat massa, et divide in pilulas xxx.

Signa.—Give one pill every two hours.

This article has attracted attention in Edinburgh and Paris, and the experiments, thus far reported, warrant a more extended trial of its powers, in intermittent diseases, such as periodical headache and neuralgic affections.

Decoctions, Solutions, and Mixtures.

447. *Decoction of Cinchona.*

R. Cinchonæ Rubræ contusæ ʒj;

Aquæ bullientis Oj.

Coque per sextam horæ partem, et adde—

Serpentariæ ʒss;

Aurantii Corticis ʒij.

Macera per horam dimidiam in vase leviter clauso et cola.

Signa.—Dose, a wineglassful.

If the bark is boiled longer than ten minutes, it deposits extractive and resinous matter, becomes paler, and is less efficient. The last ingredients are directed to be infused, because their aromatic properties would be dissipated by decoction.

448. *Peruvian Bark Mixture.*

R. Decocti Cinchonæ Rubræ fʒvj;

Tincturæ Cinchonæ Compositæ fʒj;

Acidi Sulphurici Aromatici ℥x.

Misce.

Signa.—A tablespoonful may be taken every two hours.

Used in obstinate intermittents.

449. *Solution of the Sulphate of Quinia.*

R. Quiniæ Sulphatis gr. viij;

Acidi Sulphurici Aromatici gtt. x;

Aquæ fʒj.

Fiat solutio.

A teaspoonful contains one grain of the salt. The strength of this solution can be increased by adding three drops of elixir of vitriol for every two grains of the salt.

450. *Mixture of Sulphate of Quinia.*

R. Quiniæ Sulphatis gr. xx;

Acidi Sulphurici Diluti ℥xx;

Sacchari ʒij;

Aquæ Cinnamomi fʒijss.

Misce.

Signa.—A teaspoonful for a dose, every hour during the apyrexia of intermittents.

By the addition of sulphuric acid, a super-sulphate of quinia is formed, which is soluble in the aqueous menstruum.

[451. *Another, for Children.*]

R. Quiniæ Sulphatis gr. vj;
Syrupi Acaciæ,
Aquæ Cinnamomi, āā f̄3vj.

Misce.

Signa.—Shake well before using. Give a teaspoonful for a dose.

This combination has the advantage of the taste being less developed, the salt being only in suspension and not in solution, each dose containing half a grain.

452. *Sulphate of Quinia in Syrup.*

R. Quiniæ Sulphatis gr. xvj;
Syrupi Zingiberis f̄3ij.

Misce.

Signa.—A teaspoonful to be given every hour during the apyrexia.

The French physicians employ a wine and tincture of quinia, which, however, are not superior to the compound used in this country. Both in Europe and America, and especially in Italy, the dose is carried to a much greater extent than we have directed. Eight, ten, fifteen, twenty, and even thirty grains have been given by the Italians, without manifest injury and with successful results. Such doses, however, are seldom admissible in this country; and a cure can generally be accomplished by giving sixteen or twenty grains in twenty-four hours, repeated in half doses for three or four successive days.

S. G. MORTON.

453. *Mixture of Ferrocyanate of Quinia.*

R. Quiniæ Ferrocyanatis gr. iv;
Alcoholis f̄3j.

Solve et adde—

Aquæ Camphoræ f̄3vij.

Misce.

This preparation is said to be more active than the sulphate, whence it should be given in less doses; a teaspoonful of the solution (which will contain half a grain of the salt) may be taken every hour or two hours, according to circumstances. Pills of the ferrocyanate of quinia are prepared with simple mucilage, and administered like the sulphate.

454. *Mixture of Sulphate of Quinia and Tartaric Acid.*

R. Quiniæ Sulphatis gr. vj;
Acidi Tartarici gr. iij;
Syrupi f̄j̄j.

Misce.

Signa.—Dose, a teaspoonful.

The advantages of this preparation are increased solubility and diminished bitterness of the quinine salt. CASORATI.

455. *Mixture of Sulphate of Quinidia and Tannic Acid.*

R. Quinidiæ Sulphatis gr. xvj;
Acidi Sulphurici Aromatici ℥xvj;
Aquæ f̄j̄jss;
Acidi Tannici gr. iv;
Syrupi Aurantii Corticis f̄j̄jss.

Fiat mistura.

Signa.—A dessert-spoonful every three hours.

From experiments made in the Pennsylvania Hospital and other public institutions, the sulphate of quinidia has been found as active as the corresponding salt of quinia, and may be substituted for it in most cases, without disadvantage.

456. *Mixture of Sulphate of Cinchonia and Iron.*

R. Cinchonæ Sulphatis gr. xxxij;
Tincturæ Ferri Chloridi f̄j̄jss;
Aquæ f̄j̄iijss.

Misce.

Signa.—A teaspoonful every three hours in sweetened water.

This mixture has been prescribed with great benefit at the Philadelphia Dispensary in cases of intermittent fever attended with anæmia. G. MARTIN.

Prepared with syrup instead of water, the taste is much less nauseous, and also less persistent.

457. *Mixture of Tincture of Bark and Citrate of Potassa.*

R. Succii Limonis f̄j̄jss;
Potassæ Carbonatis ʒj;
Tincturæ Cinchonæ f̄j̄j;
Aquæ Cinnamomi f̄j̄iij.

Misce.

Signa.—A tablespoonful every two hours.

Used to promote insensible perspiration while taking the bark. B. ELLIS.

458. *Mixture of Fluid Extract of Bark and Cardamom.*

R. Extracti Cinchonæ Fluidi f̄j;
Tincturæ Cardamomi Compositæ f̄ij;
Syrupi Zingiberis f̄j.

Misce.

Signa.—A dessert-spoonful for a dose.

Used both as a tonic, and as an anti-intermittent remedy.

459. *Mixture of Fowler's Solution and Elixir of Opium.*

R. Liquoris Potassæ Arsenitis f̄j;
Tincturæ Opii Deodoratæ ℥xxx;
Aquæ Cinnamomi f̄iv.

Fiat mistura.

Signa.—A tablespoonful for an adult, a teaspoonful for a child; to be administered every two or three hours, during the apyrexia of intermittents, watching the effect.

460. *Enema of Quinia and Morphia.*

R. Quiniæ Sulphatis gr. xv;
Morphiæ Sulphatis gr. ¼;
Mucilaginis Amyli f̄ij.

Misce pro enemate.

When administered in this way, quinia exerts an immediate and powerful effect on miasmatic diseases. It is particularly indicated in cases of intermittent or remittent fever, attended with irritability of the stomach.

[461. *Solution of Quinia for Hypodermic Injection.*]

R. Quiniæ Sulphatis ʒj;
Acidi Sulphurici diluti f̄ss;
Aquæ destillatæ f̄vijss.

Fiat solutio.

Thirty minims of this solution, containing 3¼ grains, injected beneath the skin, will give the effects of about 7½ grains by the mouth, and may be repeated as required without danger from nausea, or the inconvenience resulting from the possible ejection when given in the ordinary way. (See the section on Hypodermic Injection.)

SUB-CLASS II.—ORDINARY TONICS.

Powders and Pills.462. *Powders of Columbo, Ginger, etc.*

R. Pulveris Calumbæ,
 Ferri Subcarbonatis,
 Pulveris Rhei,
 Pulveris Zingiberis, āā ʒj.

Misce, et fiant pulveres xij.

Signa.—One to be taken three times a day, in molasses.

Used in dyspepsia, anæmia, and chlorosis.

463. *Powders of Iron reduced by Hydrogen.*

R. Ferri Redacti ʒss;
 Sacchari ʒj.

Misce, et divide in pulveres xij.

Signa.—Take one powder three times a day in syrup or molasses.

This has been much used in anæmia and chlorosis. It is one of the best preparations of iron.

464. *Powders of Ipecacuanha, Iron, and Mercury.*

R. Ferri Subcarbonatis gr. xlvij;
 Pulveris Ipecacuanhæ gr. vj;
 Hydrargyri cum Cretâ gr. xij.

Misce, et divide in pulveres vj.

Signa.—Take one powder twice a day.

Used with decidedly good effect in chlorosis.

S. ASHWELL.

465. *Powder of Columbo and Potassio-tartrate of Iron.*

R. Ferri et Potassæ Tartratis ʒij;
 Pulveris Calumbæ ʒss.

Fiant pulveres iv.

Signa.—One every three or four hours, in syrup.

An excellent tonic, used in dyspepsia and chlorosis.

466. *Powders of Subnitrate of Bismuth.*

R. Bismuthi Subnitratis ʒss;
Sacchari ʒj.

Misce, et divide in pulveres x.

Signa.—Give one powder three times daily.

Used in gastrodynia, chronic vomiting, and chronic diarrhoea. RECAMIER.

[467. *Powder of Bismuth and Iron.*]

R. Ferri Redacti gr. vj;
Bismuthi Subnitratis gr. xxiv.

Misce, et divide in chartulas xij.

Signa.—One powder every three or four hours.

In the atonic diarrhoea of tuberculosis, or following cholera infantum.

468. *Pills of Vallet's Mass.*

R. Pilulæ Ferri Carbonatis ʒj;
Ferri Subcarbonatis q. s. ut fiant pilulæ xx.

Signa.—A pill to be taken morning, noon, and night.

This is one of the best of the chalybeate preparations, and may be used whenever it is desirable to introduce iron into the system.

469. *Pills of Lactate of Iron.*

R. Ferri Lactatis ʒj;
Extracti Glycyrrhizæ ʒss;
Mellis q. s. ut fiat massa in pilulas xl dividenda.

Signa.—Take one pill three times daily.

Used in dyspepsia, anæmia, chlorosis, etc.

This salt is well suited to the diseases of childhood, as its taste is not unpleasant, and it can be administered in the form of a syrup. TROUSSEAU.

470. *Pills of Ammoniated Copper.*

R. Cupri Ammoniati ʒj;
Confectionis Rosæ q. s. ut fiant pilulæ xl.

Signa.—One to be taken morning and evening.

Prescribed in epilepsy.

471. *Pills of Iron and Strychnia.*

R. Strychniæ gr. j;
 Ferri Redacti gr. xxx;
 Mucilaginis Tragacanthæ, q. s. ut fiat massa in pilulas xxx
 dividenda.

Signa.—One pill three times daily.

This is an efficient combination, serviceable in the treatment of chlorosis and dyspepsia.

472. *Pills of Extract of Ignatia, Aloes, and Opium.*

R. Extracti Ignatiæ Alcoholici gr. viij;
 Pulveris Aloës purificatæ gr. vj;
 Pulveris Opii gr. ij;
 Mucilaginis Acaciæ q. s. ut fiat massa in pilulas xxiv
 dividenda.

Signa.—One pill three times daily.

Recommended in dyspepsia.

If attended with constipation, the opium can be omitted.

R. P. THOMAS.

473. *Compound Pills of Ammoniated Iron.*

R. Ferri Ammoniatum,
 Galbani, āā ʒj;
 Assafœtidæ ʒij;
 Castorei ʒj;
 Tincturæ Valerianæ q. s.
 Contunde in massam, et divide in pilulas singulas gr. iij pen-
 dentes.

Signa.—Let two pills be given night and morning.

Used successfully in a variety of chronic nervous diseases, hysteria, and anomalous nervous symptoms. BERENDS.

474. *Pills of Citrate of Iron and Quinia.*

R. Ferri et Quiniæ Citratis ʒss;
 Pulveris Acaciæ gr. x;
 Mellis despumati q. s.
 Fiat massa et divide in pilulas xx.

Signa.—Take one pill every four hours.

This preparation has been much employed in hemicrania, chlorosis, and anæmia. It is one of the most valuable tonics.

475. *Pills of Sulphate of Iron and Quinia.*

R. Quiniæ Sulphatis gr. xij;
 Ferri Sulphatis exsiccatae gr. xxiv;
 Pulveris Opii gr. iij;
 Syrupi q. s.

Misce, et fiant pilulæ xij.

Signa.—Take two pills three times daily.

Used in chlorosis and anæmia.

KIRKBY.

476. *Pills of Vallet's Mass and Quinia.*

R. Pilulæ Ferri Carbonatis ℥ss;
 Quiniæ Sulphatis gr. x.
 Fiat massa, et divide in pilulas xv.

Signa.—One pill every four hours.

Given in hemicrania, and as a tonic in anæmia.

THOMAS.

[477. *Bretonneau's Iron Pill.*]

R. Ferri Redacti gr. cxxv;
 Quiniæ Sulphatis gr. viijss;
 Extracti Cinchonæ gr. xxviij;
 Pulveris Zingiberis gr. vij;
 Extracti Rhei Compositi gr. xxviij;
 Aloës Socotrinæ gr. iv;
 Syrupi q. s.

Misce, et divide in pilulas l.

Signa.—Take three or four pills daily.

In anæmia with constipation.

[478. *Pills of Podophyllin, Aloes, and Iron.*]

R. Podophyllin gr. iij;
 Aloës Socotrinæ,
 Extracti Nucis Vomicae, āā gr. xv;
 Ferri Sulphatis Exsiccati gr. xlv;
 Olei Caryophyllæ gtt. x;
 Syrupi Acaciæ q. s.

Misce, et divide in pilulas xxx.

Signa.—Take one pill immediately before each meal.

An efficient tonic laxative pill, in indigestion with costiveness.

479. *Pills of Iron, Red Pepper, &c.*

R. Pulveris Aloës Socotrinæ,
 Ferri Sulphatis exsiccatae, āā ʒj;
 Mastiches gr. x;
 Pulveris Capsici ʒj;
 Syrupi q. s.

Fiat massa in pilulas xx dividenda.

Signa.—Take one pill every four hours.

In chlorosis.

COPLAND.

480. *Mitchell's Tonic Pills.*

R. Extracti Quassiae ʒij;
 Extracti Conii gr. x;
 Ferri Subcarbonatis gr. x;
 Liquoris Potassæ Arsenitis gtt. x.

Fiat massa in pilulas xl dividenda.

Signa.—Take one pill three times daily.

Used in dyspepsia.

J. K. MITCHELL.

481. *Pills of Nitrate of Silver.*

R. Argenti Nitratis gr. iv;
 Avenæ Farinæ gr. iv;
 Syrupi q. s.

Fiat massa, et divide in pilulas xij.

Signa.—Take one pill every three hours.

Given in epilepsy, gastrodynia, chronic gastritis, and obstinate vomiting.

482. *Compound Pills of Nitrate of Silver.*

R. Argenti Nitratis gr. v;
 Pulveris Opii ʒss;
 Pulveris Camphoræ,
 Pulveris Myristicæ, āā ʒj;
 Mucilaginis Acaciæ q. s. ut fiat massa, et divide in pilulas xx.

Signa.—Dose, a pill morning and evening.

In chorea and epilepsy.

483. *Pills of Iodide of Potassium and Manganese.*

R. Potassii Iodidi,
Manganesii Sulphatis exsiccatae, āā ʒj;
Mellis q. s.

Fiat massa in pilulas xxx dividenda.

Signa.—To be kept in a well-stopped bottle. Take one pill morning and night.

The salts of manganese have recently been introduced as substitutes for the corresponding preparations of iron.

HANNON.

484. *Pills of Iron and Gentian.*

R. Ferri Redacti ʒj;
Extracti Gentianæ ʒij.

Fiat massa et divide in pilulas xx.

Signa.—Take one pill three times a day.

An excellent combination for anæmic conditions of the system.

485. *Pills of the Sulphate of Iron and Quassia.*

R. Ferri Sulphatis ʒj;
Extracti Quassiae ʒj.

Fiat massa et divide in pilulas xl.

Signa.—One to be taken morning, noon, and night.

In dyspepsia, etc.

486. *Pills of Oxide of Zinc.*

R. Zinci Oxidi ʒij;
Confectionis Rosæ q. s. ut fiant pilulæ x.

Signa.—One three or four times a day.

In epilepsy, chorea, etc.

Dr. Chapman speaks favorably of this medicine, and recommends us to begin with the above dose, and gradually to increase it.

487. *Pills of Lactate of Zinc.*

R. Zinci Lactatis gr. xxx;
Syrupi Acaciæ q. s. ut fiat massa in pilulas xx dividenda.

Signa.—Take one pill three times daily.

Lactate of zinc has recently been introduced as an efficient agent in the treatment of diseases of the nervous system. It is particularly recommended in epilepsy.

HERPIN.

488. *Electuary of Cinchona, Rust of Iron, etc.*

R. Pulveris Cinchonæ Rubræ,
 Ferri Subcarbonatis, āā ʒj;
 Mellis q. s. ut fiat electuarium.

Signa.—To be made into pills of the ordinary size, of which four may be taken three times a day.

489. *Pills of the Oxide of Silver.*

R. Argenti Oxidi gr. vj;
 Pulveris Acaciæ gr. vj;
 Aquæ q. s. ut fiat massa in pilulas xij dividenda.

Signa.—Take one pill three times daily.

Used with much success in pyrosis. Also highly recommended in menorrhagia. B. LANE.

[490. *Pills of Pepsin and Aloes.*]

R. Pepsinæ Porci gr. xxxij;
 Ext. Aloës Barbadosensis gr. viij;
 Glycerinæ q. s.

Fiat massa, et divide in pilulas viij.

Signa.—Take one every day at dinner.

Useful in indigestion with costiveness.

TANNER.

[491. *Pills of Arsenic, Nux Vomica, and Iron.*]

R. Acidi Arseniosi gr. j;
 Podophyllin gr. iij;
 Extracti Nucis Vomicae gr. xv;
 Ferri redacti gr. xlv;
 Olei Caryophylli gtt. x;
 Syrupi Acaciæ q. s.

Misce, et divide in pilulas xxx.

Signa.—Take one pill after each meal.

In anemia, with hepatic torpor and asthenia.

[492. *Pills of Strychnia and Bismuth.*]

R. Strychniæ gr. j;
 Bismuthi Subnitratiss ʒjss;
 Syrupi Acaciæ q. s.

Misce, et divide in pilulas xx.

Signa.—One before each meal.

In dyspepsia with pyrosis and nausea.

Infusions and Decoctions.493. *Infusion of Sage, Boneset, and Cascarilla.*

R. *Salviæ*,
Eupatorii, āā ̄ss;
Cascarillæ ̄j;
Aquæ bullientis Oj.

Digere per horas duas et cola.

Signa.—Dose, a wineglassful every three or four hours.

Used in hectic fever.

494. *Infusion of Columbo and Ginger.*

R. *Calumbæ contusæ* ̄j;
Zingiberis contusæ ̄ij;
Aquæ bullientis Oj.

Fiat infusum et cola.

Signa.—Give a wineglassful every two hours.

This infusion, freely used, is adapted to chronic diarrhoea.

495. *Infusion of Columbo, Rhubarb, etc.*

R. *Cari*,
Calumbæ contusæ,
Rhei contusi, āā ̄j;
Aquæ ferventis f̄iv.

Digere per horas duas, cola, et adde—

Tincturæ Rhei f̄j;
Syrupi Zingiberis f̄ij.

Misce.

Signa.—Dose, a teaspoonful to a tablespoonful for children, according to their age.

In diarrhoea.

496. *Compound Infusion of Wild Cherry Bark.*

R. *Pruni Virginianæ* ̄j;
Aurantii Corticis ̄ij;
Aquæ Oj.

Macera per horas sex et cola.

Signa.—A wineglassful may be taken every hour or two in consumptive cases, asthma, etc.

497. *Compound Infusion of Virginia Snakeroot.*

R. *Serpentariæ*,
Contrayervæ contusæ, āā ʒv;
Aquæ bullientis Oj.
 Digere per horas duas, cola, et adde—
Tincturæ Serpentariæ fʒij.
 Misce.
Signa.—Dose, a tablespoonful.

Used in the convalescence of typhoid fever and other diseases of an asthenic type. GUY'S HOSPITAL PHARM.

498. *Compound Infusion of Quassia.*

R. *Quassiaë*,
Serpentariæ,
Aurantii Corticis, āā ʒss;
Aquæ bullientis, Oij.
 Fiat infusum et cola.
Signa.—A teacupful to be taken cold, three times a day.

499. *Infusion of Chamomile and Orange Peel.*

R. *Anthemidis* ʒss;
Aurantii Amari Corticis ʒij;
Aquæ Oj.
 Macera per horas decem et cola.
Signa.—Dose, a wineglassful four times a day.

The infusion of chamomile made with cold, is in general more grateful to the patient than when made with boiling water. The same remark applies to infusions generally, and they are also less liable to ferment. B. ELLIS.

500. *Infusion of Hops.*

R. *Humuli* ʒj;
Aquæ ferventis Oj.
 Digere per horas duas et exprime.
Signa.—A wineglassful may be taken three or four times a day.
 In dyspepsia.

501. *Compound Infusion of Gentian.*

R. *Gentianæ contusæ* ʒss;
Aurantii Dulcis Corticis,
Cardamomi, āā ʒj;
Aquæ bullientis Oj.
 Fiat infusum.

Gentian is an excellent bitter. The above preparation is given in wineglassful doses, in debility of the digestive organs, &c.

[502. *Tonic Laxative Infusion.*]

R. Gentianæ contusæ ʒj;
Rhei Contusi ʒij;
Sodæ Bicarbonatis ʒjss;
Zingiberis contusæ ʒss.

Misce.

Signa.—Put into 1½ pint of boiling water and boil to a pint, strain, and take a wineglassful at each meal.

Very useful in dyspepsia with acidity and costiveness.

503. *Compound Decoction of Angustura Bark.*

R. Angusturæ contusæ ʒss;
Aquæ fʒxij.
Coque ad fʒvj, et adde—
Tincturæ Cinnamomi fʒij;
Syrupi Aurantii Corticis fʒj.

Misce.

Signa.—Dose, a tablespoonful every three hours.

This may be used in all cases in which a tonic and mild stimulant remedy is indicated. BERENDS.

504. *Decoction of Dogwood Bark.*

R. Cornûs Floridæ contusæ ʒj;
Aquæ Oj.

Coque per horam dimidiam, et cola.

Signa.—A wineglassful may be given every hour as a substitute for Peruvian bark in intermittents, or as an ordinary tonic every two hours.

505. *Decoction of Peruvian Bark and Valerian.*

R. Cinchonæ Rubræ contusæ ʒj;
Aquæ Ojss.

Coque per sextam horæ partem, cola, et adjice—
Valerianæ contusæ ʒj.

Macera per horam unam et cola.

Signa.—Dose, a wineglassful four times daily.

This was a favorite prescription with the late Dr. Joseph Parrish, in rheumatic and nervous headache and hemicrania.

506. *Infusion of Acorns.*

R. Pulveris Glandis Quercûs torrefactæ ʒj;
 Aquæ bullientis Oj.

Fiat infusum.

Signa.—Three or four teacupfuls may be taken during the day, and be augmented according to circumstances.

The above is a favorite remedy with the Germans. "It is one of the most successful in mesenteric atrophy, commencing rachitis, glandular swellings, asthma, and cough. Continued for a long time, it is one of the most powerful means we possess for destroying the scrofulous disposition."—HUFELAND, *Treatise on Scrofula*, p. 215.

Mixtures, Tinctures, etc.507. *Griffith's Myrrh Mixture.*

R. Myrrhæ ʒj;
 Sacchari ʒij;
 Potassæ Carbonatis gr. xxv.

Tere simul, et adde gradatim—

Aquæ Rosæ fʒviijss;
 Spiritûs Lavandulæ fʒss.

Dein adde—

Ferri Sulphatis crystallizati, in pulverem contriti, ʒj.

Fiat mistura.

Signa.—Dose, a tablespoonful every four hours.

This preparation was formerly much used as a tonic in phthisis.

508. *Mixture containing Protoxide of Iron.*

R. Ferri Sulphatis ʒj;
 Magnesiæ gr. x;
 Sacchari ʒj;
 Aquæ Cinnamomi fʒviij.

Misce.

Signa.—Take a tablespoonful every three hours.

An efficient tonic in phthisis.

DONOVAN.

509. *Mixture of Ammonio-Tartrate of Iron.*

R. Ferri et Ammoniaë Tartratis ʒij;
 Syrupi Aurantii Corticis fʒij;
 Tincturæ Cardamomi fʒj;
 Aquæ fʒv.

Fiat mistura.

Signa.—A dessert-spoonful every four hours.

Used in chlorosis and debility. The ammonio-tartrate is one of the most valuable of the ferruginous preparations. Its pleasant taste and ready solubility render it available in the treatment of the diseases of childhood.

510. *Mixture of Sulphate of Iron and Elixir of Vitriol.*

R. Ferri Sulphatis gr. iv;
 Acidi Sulphurici Aromatici ℥xx;
 Aquæ destillatæ fʒj.

Fiat mistura.

Signa.—A teaspoonful to be taken three times a day in a wineglassful of water.

511. *Mixture of Sulphuric Acid.*

R. Acidi Sulphurici Diluti fʒiv;
 Syrupi Aurantii Corticis fʒjss;
 Aquæ Cinnamomi fʒj.

Fiat mistura.

Signa.—Take a teaspoonful three times a day in a wineglassful of water.

Used in anæmia and debility.

SIR JAMES CLARK.

512. *Mixture of Sulphuric and Nitric Acids.*

R. Acidi Sulphurici Diluti fʒij;
 Acidi Nitrici Diluti fʒj;
 Syrupi fʒij;
 Aquæ Menthæ Piperitæ fʒiv.

Misce.

Signa.—Take a dessert-spoonful in water every three hours.

Dr. W. J. Anderson and several other English practitioners have found the acid treatment effectual in arresting the watery discharges in diarrhœa, cholera morbus, and cholera. In the last disease, the doses should be larger, and more frequently administered.

513. *Vinegar Draught.*

R. Aceti f̄j;
 Tincturæ Cardamomi Compositæ,
 Syrupi, āā f̄ss;
 Aquæ f̄x.

Misce.

Signa.—To be taken in such portions as the stomach can bear.

Used in sick headache.

514. *Wine of Gentian and Orange Peel.*

R. Pulveris Gentianæ,
 Aurantii Corticis Dulcis, āā f̄ss;
 Vini Portensis Oj.

Macera per dies tres, et cola.

Signa.—Give a wineglassful two or three times a day.

In dyspepsia.

515. *Mixture of Cinchona, Valerian, etc.*

R. Tincturæ Cinchonæ,
 Tincturæ Valerianæ, āā f̄j;
 Tincturæ Cardamomi Compositæ f̄ij;
 Aquæ Menthæ Piperitæ f̄iv.

Fiat Mistura.

Signa.—A tablespoonful may be given every third hour.

This is especially designed as a tonic in nervous temperaments.

516. *Elixir of Aloes, Zedoary, Gentian, etc.*

R. Pulveris Aloës Socotrinæ f̄j;
 Pulveris Zedoariæ,
 Pulveris Gentianæ,
 Croci,
 Pulveris Rhei,
 Agarici, āā f̄j;
 Spiritus Vini Gallici Oij.

Macera per dies septem, cola, et adde—

Syrupi f̄ij.

Misce.

Signa.—Dose, a tablespoonful three times a day, in water.

This is the celebrated Baume de Vie, or Elixir of Life. It is a powerful tonic, and one of the most effectual febrifuge medicines. In intermittents, especially, it is justly celebrated.

[517. *Elixir of Cinchona.*]

R. Quiniæ Sulphatis gr. xxv ;
 Quinidiæ Sulphatis,
 Cinchonæ Sulphatis, āā gr. x ;
 Sacchari ʒxx ;
 Olei Anisi,
 Olei Fœniculi, āā gtt. ij ;
 Olei Cinnamomi Zeylandici gtt. vj ;
 Olei Cari gtt. j ;
 Olei Aurantii ℥xl ;
 Spiritûs Curaçoæ fʒvj ;
 Alcoholis deodorati,
 Aquæ,
 Aquæ Rosæ, āā Oj ;
 Caramel fʒiij.

Misce secundum artem.

Dissolve the sulphates in the alcohol ; rub together the oils and sugar, and dissolve them in the water and rosewater, and add the alcoholic solution and Curaçoa ; lastly, add a solution of carmine in aqua ammoniæ, just sufficient to color properly, and then the caramel. Mix thoroughly, and filter through paper until perfectly clear.

ISRAEL J. GRAHAME.

[518. *Ferrated Elixir of Cinchona*]

is made as the last, except that instead of the carmine solution there is to be added, before filtration, one hundred and twenty-eight grains of ammonio-citrate of iron to each pint of the fluid.

I. J. GRAHAME.

The advantage of these elixirs of cinchona is in having the active principles of the cinchona bark in the form of its salts, without the extractive matter, tannic acid, etc. They form very beautiful and palatable forms for administration.

[519. *Elixir of Bismuth.*]

R. Bismuthi Ammonio Citratis ʒij gr. xvj.
 Aquæ destillatæ fʒij ;
 Aquæ Rosæ fʒjss ;
 Alcoholis deodorata fʒiij ;
 Syrupi fʒij ;
 Aquæ Ammoniæ q. s. ;
 Olei Aurantii ℥x ;
 Olei Cinnamomi Zeylandici,
 Olei Caryophylli, āā gtt. j ;
 Olei Anisi gtt. ij.

Misce.

Dissolve the oils in f̄jss of the alcohol, add the syrup, and agitate the mixture well. Dissolve the bismuth salt in the distilled water and rosewater, adding sufficient aqua ammoniæ to produce a perfect solution. Add this to the first mixture, and lastly the remainder of the alcohol; let it stand a short time, and filter until perfectly clear and bright; if not so, add about f̄ij more of alcohol.

An elegant method of administering bismuth; each teaspoonful containing about two grains of the salt.

I. J. GRAHAME.

[520. *Mixture of Bismuth.*]

R. Bismuthi Subnitratis gr. cc;
 Pulveris Tragacanthæ gr. xxv;
 Misce, et adde secundum artem,
 Syrupi Orgeat,
 (vel Syrupi Amygdalæ *U. S. P.*)
 Aquæ, āā f̄ij;
 Elixir Bismuthi (Formula 519),
 Alcoholis, āā f̄jss.

Misce.

Signa.—A teaspoonful for a dose.

Each dose of this delightful preparation contains five grains of the salt of bismuth; with a little agitation it is suspended thoroughly, and the taste entirely covered.

I. J. GRAHAME.

521. *Mixture of Nitrate of Silver.*

R. Argenti Nitratis gr. j;
 Aquæ destillatæ f̄ij;
 Sacchari ʒij.

Fiat mistura.

Signa.—A teaspoonful every two hours.

Used in the diarrhœa of newly-weaned infants. This is accompanied by the occasional injection of one-fourth of a grain of the salt in mucilage.

HIRSCH.

522. *Fowler's Solution and Potassio-Tartrate of Iron.*

R. Ferri et Potassæ Tartratis gr. xvj;
 Aquæ Cinnamomi f̄j.

Solve, et adde—

Syrupi f̄j;
 Liquoris Potassæ Arsenitis ℥xxxij.

Fiat mistura.

Signa.—A teaspoonful three times daily, for a child one or two years old.

Used in eczema infantile, and other skin diseases of early life.

ERASMUS WILSON.

523. *Mixture of Muriated Tincture of Iron.*

R. Tincturæ Ferri Chloridi f̄ij;
 Glycerinæ f̄xiv.

Misce.

Signa.—Dose, a teaspoonful every three hours.

This old and valuable tincture still retains the first rank among the chalybeates. Its ferruginous taste is so much modified by combination with glycerine as to remove the chief objection to its use.

Recommended as an astringent in diarrhœa, and other exhausting discharges; and as a tonic, by Bell and Velpeau, in erysipelas.

524. *Mixture of Ammonio-Citrate of Iron.*

R. Ferri et Ammoniaë Citratis ʒij;
 Syrupi Limonis f̄j;
 Aquæ f̄ij.

Fiat mistura.

Signa.—Take a teaspoonful every four hours.

Employed in amenorrhœa and chlorosis. It may be given, also, in less quantity, in the anæmia of childhood.

525. *Mixture containing Peracetate of Iron.*

R. Tincturæ Ferri Chloridi f̄ij;
 Liquoris Ammoniaë Acetatis f̄ij;
 Syrupi Aurantii Corticis f̄j;
 Acidi Acetici ℥x.

Misce.

Signa.—A dessert-spoonful four times daily.

Prescribed as a ferruginous tonic for children, and for anæmia in adults. It has slight diuretic properties.

J. F. MEIGS.

526. *Mixture of Perchloride of Iron and Nitric Acid.*

R. Tincturæ Ferri Chloridi,
Acidi Nitrici Diluti, āā f̄3j;
Syrupi Zingiberis f̄3xiv;
Aquæ Menthæ Viridis f̄3iv.

Misce.

Signa.—A tablespoonful every four hours.

Recommended as an astringent and tonic in phthisis.

R. BENNETT.

557. *Steel Wine.*

R. Ferri et Potassæ Tartratis ̄3ss;
Vini Xerici Oj.

Solve, et cola.

Recommended as a uniform and effectual substitute for the officinal vinum ferri. The dose is a tablespoonful, containing about four grains of the potassio-tartrate of iron.

J. C. POOLEY.

[528. *Mixture of Arsenic and Iron.*]

R. Liquoris Potassæ Arsenitis f̄3j;
Ferri Ammonio Citratis ̄3ij;
Elixir Cinchonæ f̄3iij.

Misce.

Signa.—A dessert-spoonful after each meal.

In anæmia with neuralgic tendency, or as a tonic after malarial affections.

529. *Mixture of Bestucheffe's Tincture and Valerian.*

R. Spiritûs Ferri Chlorati Ætherei (*Ph. Borus.*) f̄3ij;
Aquæ Cinnamomi,
Syrupi Aurantii Corticis, āā f̄3j;
Infusi Valerianæ f̄3v.

Misce.

Signa.—Shake well, and take a tablespoonful every two hours.

“Bestucheffe's Nervine Tincture,” or “Lamotte's Golden Drops,” as the preparation is variously called, is a favorite in Germany in the treatment of chlorosis, anæmia, and hysteria.

SOBERNHEIM.

530. *Mixture of Pernitrate of Iron.*

R. Liquoris Ferri Nitratis f̄3j;
 Syrupi f̄3ij;
 Aquæ f̄3v.

Fiat mistura.

Signa.—Give a teaspoonful every three hours.

This preparation is very serviceable in all forms of diarrhoea, but more especially in chronic mucous diarrhoea, hemorrhage from the bowels, uterine hemorrhage, &c.

NELIGAN.

531. *Mixture of Pyrophosphate of Iron.*

R. Ferri Pyrophosphatis 3j;
 Syrupi,
 Aquæ Cinnamomi, āā f̄3ij.

Misce.

Signa.—Take a teaspoonful an hour after each meal.

M. Robiquet called attention to the superior advantages of the pyrophosphate over other salts of iron. Its taste is less unpleasant, it is freely soluble in water, it agrees well with the stomach, and is easily assimilated.

532. *Mixture of Iodide of Iron and Manganese.*

R. Liquoris Ferri et Manganesiæ Iodidi f̄3ss;
 Glycerinæ f̄3jss.

Misce.

Signa.—Take a teaspoonful every three hours.

This is used as a tonic, alterative, and emmenagogue. The salts of manganese are beginning to attract attention. The formulas for their preparation, by Prof. Procter, will be found in the *American Journal of Pharmacy*, vol. xxv. p. 198.

[533. *Syrup of Iron, Quinia, and Strychnia.*]

R. Ferri Phosphatis precipitatæ 3j, gr. iv;
 Quiniæ gr. xxxij;
 Strychniæ gr. j;
 Acidi Phosphorici diluti q. s.;
 Sacchari pulveris q. s.;
 Aquæ ad f̄3iv;
 Olei Aurantii gtt. v.

Misce secundum artem.

The iron, quinia, and strychnia should be carefully dis-

solved in the dilute phosphoric acid, the water added, and sugar sufficient to make a syrup by agitation or gentle heat. The syrup contains in each fluidrachm 2 grains of the iron salt, 1 of quinia, and $\frac{1}{2}$ of a grain of strychnia. In anæmia with nervous debility.

T. A. LANCASTER.

534. *Elixir of Pepsine.*

R. Pepsini (*Boudault*) ʒjss;
Aquæ fʒvjss;
Vini Xerici fʒxijss;
Alcoholis fʒiij;
Sacchari ʒj.

Solve et cola.

Signa.—A tablespoonful, containing fifteen grains of pepsine, is administered immediately after each meal, in cases of indigestion.

MIALHE.

CLASS XV.

ALTERATIVES.

ALTERATIVES are medicines that re-establish the healthy functions of the animal economy, without producing any active evacuation. This class of remedies, therefore, embraces numerous preparations which produce a slow but decided effect on the various secreting organs, sometimes without any sensible increase of the secretions themselves, but in other instances obviously augmenting or magnifying them. Such is the action of minute doses of mercury, iodine, and other substances upon the glandular apparatus. These medicines are generally classed with stimulants and tonics, some of them with narcotics, and others have been placed with those preparations to which they seem most allied when given in an overdose—sialagogues, for example. Without attempting to investigate this question farther than regards practical convenience, we proceed in this place to indicate the more active and important Alteratives; merely premising the familiar truth, that medicines of almost every class of the *materia medica* become alteratives by being administered in very small doses at intervals of a few hours.

Pills and Powders.

535. *Calomel Pills.*

R. Hydrargyri Chloridi Mitis gr. ij;
Confectionis Rosæ q. s. ut fiant pilulæ xij.
Signa.—One may be taken every two hours.

The use of calomel in minute doses has become very general, and deservedly so. In the hepatic and intestinal complaints of children it is productive of the happiest results when carefully managed.

In infants, for example, the sixteenth or the eighth of a grain, repeated every hour or two hours, according to age and circumstances, will often check diarrhoea, cholera infantum, and dysentery, which have resisted every other treatment. If the discharges are attended by pain and tenesmus, small doses of powdered opium or laudanum may be added; but, as a general rule, the anodyne had better be given by injection.

The preparation called blue pill (*pilulæ hydrargyri*) is indicated in similar conditions, and is especially beneficial whenever an alterative is called for. A grain given at bedtime, or even a grain in divided portions through the day, will often produce the desired effect. Hence its extensive use in chronic and obscure derangements of the digestive organs, especially of the stomach and liver; in the whole class of syphilitic affections; glandular enlargements, etc.

In like manner, all the mercurial preparations mentioned under the head of *SIALAGOGUES*, become alteratives by cautious administration in doses more or less minute, and especially when they are given in conjunction with the preparations of sarsaparilla.

536. *Pills of Calomel, Quinia, and Opium.*

R. Hydrargyri Chloridi Mitis gr. vj;
 Pulveris Opii gr. iij;
 Quiniæ Sulphatis gr. xij;
 Syrupi q. s. ut fiat massa in pilulas xij dividenda.
Signa.—One night and morning.

537. *Pills of Blue Mass, Quinia, and Aloes.*

R. Pilulæ Hydrargyri,
 Quiniæ Sulphatis,
 Pulveris Aloës Socotrinæ, āā gr. xij;
 Syrupi Rhei q. s. ut fiant pilulæ xij.
Signa.—One three times a day.

Either of the above prescriptions is adapted to the condition that follows bilious intermittent, or remittent fever. They may be denominated tonic alteratives.

538. *Pills of Red Iodide of Mercury.*

R. Hydrargyri Iodidi Rubri gr. ss;
 Extracti Glycyrrhizæ gr. viij.
 Misce, et divide in pilulas viij.
Signa.—Two in the morning and two at night; dose to be gradually and cautiously augmented.

539. *Corrosive Sublimate Pills.*

R. Hydrargyri Chloridi Corrosivi gr. j.
Solve in aquâ destillatâ, dein adde—

Micæ Panis,

Sacchari, āā gr. x vel q. s. ut fiant pilulæ xx.

Signa.—Take one pill every four hours as an alterative.

DZONDI.

540. *Pills of the Arseniate of Iron.*

R. Ferri Arseniatis gr. iij;

Lupulinæ ʒj.

Fiat massa, et divide in pilulas xlvij.

Signa.—Give one pill night and morning.

Prescribed by Dr. Biett in scrofulous, cancerous, and herpetic diseases.

Arsenic is a powerful alterative, and should be administered with the utmost circumspection.

541. *Asiatic Pills.*

R. Acidi Arseniosi gr. j;

Piperis gr. xij.

Tere simul in pulverem subtilissimum, et adde—

Pulveris Acaciæ gr. ij;

Extracti gentianæ q. s.

Misce, et divide in pilulas xxiv.

Signa.—Take one pill morning and night.

Much used by Biett for tuberculous lepra.

PAR. CODEX.

542. *Iodide of Arsenic and Hemlock Pills.*

R. Arsenici Iodidi gr. j;

Extracti Conii ʒij.

Fiat massa, et divide in pilulas xvj.

Signa.—Take one pill morning and night.

Given in lepra, impetigo, and cancerous disease.

543. *Pills of Iodide of Silver, etc.*

R. Argenti Iodidi,

Potassæ Nitratis, āā gr. x.

Tere simul in pulverem subtilissimum, dein adde—

Pulveris Glycyrrhizæ ʒss;

Sacchari ʒj;

Mucilaginis Acaciæ q. s.

Fiant pilulæ xl.

Signa.—Take one pill three times daily.

Used successfully in the gastric affections of the Irish peasantry.

C. PATTERSON.

544. *Pills of Bromide of Iron.*

R. Ferri Bromidi gr. xij;
Confectionis Rosæ gr. xviii.

Misce, et fiant pilulæ xx.

Signa.—Two pills to be taken in the morning, and two in the evening, or one three times a day.

In hypertrophy of the heart and scrofulous affections.

Dr. Robert Dick strongly recommends the use of the bromide of iron in dyspeptics with strumous habits.

545. *Pills of Calomel and Ox Gall.*

R. Hydrargyri Chloridi Mitis ℥j;
Fellis Bovini inspissati gr. xv.
Saponis gr. x, vel q. s.

Fiat massa, in pilulas xx dividenda.

Signa.—Take two pills at bedtime.

These pills are alterative and deobstruent.

546. *Burnt Sponge.*

R. Spongix Ustæ ℥j;
Sacchari ℥j.

Misce, et divide in chartulas vj.

Signa.—One three times a day, gradually augmenting the dose.

In bronchocele.

It is well known that iodine was first discovered in seaweed and sponges; and the latter having long had the reputation of being a cure for goitre, it was found that iodine was the active remedial agent. We give above a prescription for the use of sponge, as formerly in vogue, but now nearly superseded by the preparations of pure iodine.

[547. *Pills of Tar.*]

R. Picis Liquidæ ℥ij;
Pulveris Glycyrrhizæ q. s.

Misce, et divide in pilulas lx.

Signa.—Two pills to be taken thrice daily, and the dose gradually increased for an adult.

In chronic eczema.

MCCALL ANDERSON.

Tinctures, Mixtures, etc.548. *Preparations of Iodine.*

That iodine is one of the most powerful alteratives at present known, there can be no question. There are few diseases dependent upon or connected with morbid secretion of the glandular structures, that are not more or less modified by its use, while in others it acts as a direct curative agent. It is chiefly, however, in scrofulous, glandular, and cutaneous affections that it acts most beneficially, dispersing indurations of the glands, and restoring the secretions of the cutaneous and mucous apparatus; whence its advantages in eruptive diseases, bronchitis, leucorrhœa, amenorrhœa, etc. It has been found to restore suppressed hæmorrhoidal and catamenial discharges, and, when pushed too far, has even produced alarming hemorrhage of the lungs, nose, and uterus. These facts should make the practitioner extremely cautious in its administration, beginning with small doses, and watching their effects. Should it produce any of the inconveniences already mentioned, or dizziness, nausea, purging, burning of the skin or swelling of the gums, it should be at once suspended, or given less frequently and in smaller doses.

549. *Ethereal Tincture of Iodine.*

R. Iodini gr. vj;
Ætheris fʒij.

Misce.

Signa.—Dose, ten drops two or three times a day, largely diluted. Fifty drops contain one grain of iodine.

Given in cutaneous and glandular diseases. MAGENDIE.

The author of *Illustrations of Pulmonary Consumption* strongly recommends this formula in catarrh, phthisis, etc. It has a powerful effect in glandular disease, and all affections of the mucous membranes.

S. G. MORTON.

550. *Mixture of Iodide of Potassium and Sarsaparilla.*

R. Potassii Iodidi ʒij;
Aquæ fʒiij;
Sacchari ʒj;
Extracti Sarsaparillæ Fluidi fʒss.

Misce.

Signa.—Dose, a tablespoonful three times daily.

This valuable combination may be used in scrofula, secondary syphilis, and obstinate skin diseases. In fact, it may be given advantageously in most cases requiring an alterative.

551. *Mixture of Tincture of Iodine.*

R. Tincturæ Iodini fʒj;
Mucilaginis Acaciæ fʒij;
Aquæ destillatæ fʒvj.

Fiat mistura.

Signa.—A tablespoonful every two hours.

Employed in cases of ulceration accompanied by purulent discharge from the meatus auditorius, and in the scrofulous diathesis.

552. *Solution of Iodide of Iron.*

R. Ferri Iodidi ʒj;
Aquæ destillatæ fʒj;
Sacchari ʒij.

Fiat solutio.

Signa.—Dose, six to ten drops, morning, noon, and night, in a wineglassful of cold water.

The officinal solution—"Syrupi Ferri Iodidi"—keeps much better than an aqueous solution of the pure salt, and is therefore generally preferred. Ten to twenty drops are given, diluted with water.

553. *Lugol's Solutions.*

Dr. Lugol, one of the first experimenters with iodine, announced that its solubility in water could be increased to any desired extent by the addition of iodide of potassium. He devised three preparations of different strengths, viz:—

No. 1. Or the solution for internal use, contains of iodine, 1 part; iodide of potassium, 2 parts; and water, 20 parts.

No. 2. The rubefacient solution, contains of iodine, 1 part; iodide of potassium, 2 parts; and water, 12 parts.

No. 3. The caustic solution, contains of iodine, 1 part; iodide of potassium, 1 part; and water, 2 parts.

The first of these has retained his name, and it alone should be dispensed upon a prescription calling for Lugol's solution. It is the compound iodine solution of the Pharmacopœia, viz:—

R. Liquoris Iodini Compositi f̄ss.

Signa.—Give ten drops, in sweetened water, three times a day.

Used in goitre and scrofulous diseases.

554. *Magendie's Anti-epileptic Iodine Solution.*

R. Potassii Iodidi ʒiv ;

Iodini gr. ij ;

Aquæ Menthæ Piperitæ f̄vj.

Fiat solutio.

Signa.—Dose, a teaspoonful thrice daily.

Used in epilepsy and catalepsy.

555. *Mixture of Iodide of Potassium.*

R. Potassii Iodidi ʒj ;

Syrupi Zingiberis f̄ʒj ;

Aquæ f̄v.

Fiat mistura.

Signa.—Take a tablespoonful three times a day.

Prescribed in secondary syphilis, lupus, and various cutaneous diseases.

556. *Mixture of Iodo-hydrargyrate of Potassa.*

R. Potassii Iodidi gr. iijss ;

Aquæ destillatæ f̄ʒj.

Solve, dein adde—

Hydrargyri Iodidi Rubri gr. ivss.

The compound salt in this solution may be assumed at eight grains, although there is a small excess of the iodide of potassium. The dose is from two to five drops, containing from the thirtieth to the twelfth part of a grain, which may be repeated three times a day, much diluted. DR. CHANNING.

557. *Another Form.*

R. Hydrargyri Iodidi Viridis gr. iij ;

Potassii Iodidi ʒij ;

Tincturæ Gentianæ Compositæ,

Syrupi Sarsaparillæ Compositi, āā ʒij.

Fiat mistura.

Signa.—A teaspoonful three times daily.

An invaluable remedy in secondary syphilis, and various

skin diseases, as well as an excellent alterative in follicular laryngitis and ulcerations of the epiglottis.

HORACE GREEN.

558. *Syrup of Ioduretted Biniiodide of Mercury.*

R. Hydrargyri Iodidi Rubri gr. j;
Potassii Iodidi ℥j;
Aquæ f℥j;
Syrupi f℥v.

Misce.

Signa.—A tablespoonful three times a day.

This is employed like the two preceding formulas in secondary syphilis and obstinate skin diseases.

HÔPITAL SAINT LOUIS.

559. *Iodine Waters.*

The physicians of Europe, and especially of Paris, have made extensive and salutary use of iodine waters, both internally and externally. In these the iodine is very much diluted, and generally with the addition of more or less common salt. These waters are prepared on a large scale and with great precision by the pharmacutists of Paris; but they have been but partially introduced into this country. M. Magendie, however, gives formulas for some extemporaneous iodine waters, which may answer all the purposes of the more elaborate preparations. The following is an example:—

R. Potassii Iodidi gr. vj;
Iodinii gr. j;
Aquæ Oij.
Fiat solutio.

This solution is to be taken at meals, in place of common water.

560. *Another Form.*

R. Syrupi Ferri Iodidi f℥ss;
Syrupi Acaciæ f℥ij;
Aquæ Acidi Carbonici f℥viij.

Misce.

Signa.—Take one-half at a draught, and then carefully cork the bottle to retain the gas in the remainder.

DUPASQUIER.

561. *Mixture of Donovan's Solution.*

R. Liquoris Arsenici et Hydrargyri Iodidi f̄ij;
 Syrupi Zingiberis f̄ss;
 Aquæ f̄iijss.

Misce.

Signa.—A dessert-spoonful an hour after each meal.

DONOVAN.

Donovan's solution affords a simple and efficient means of introducing into the system the three great alteratives. It has been found effectual in eradicating various chronic diseases, and especially the skin diseases of the scaly character, and venereal affections.

562. *Solution of Bromine.*

R. Brominii f̄ss;
 Syrupi Amygdalæ f̄ss;
 Aquæ f̄ij.

Misce.

Signa.—Dose, five drops three times daily.

Given in scrofula.

POURCHE.

563. *Bibron's Antidote.*

R. Brominii ʒv;
 Potassii Iodidi gr. iv;
 Hydrargyri Chloridi Corrosivi gr. ij.

Misce.

Signa.—Take ten drops in a tablespoonful of wine or brandy.

As these salts are but slowly soluble in bromine, there would be no objection, in cases of emergency, to dissolving them in a little water before the addition of the bromine.

According to the experiments of Prof. Bibron, Prince Paul of Wurtemberg, Dr. W. A. Hammond, and others, this bromine mixture has proved a valuable antidote to the bite of the rattlesnake. The dose should be repeated every fifteen or twenty minutes, until relief is obtained.

564. *Solution of Bromide of Potassium.*

R. Potassii Bromidi ʒij;
 Syrupi Aurantii Corticis f̄j;
 Aquæ f̄iij.

Fiat mistura.

Signa.—Give a tablespoonful three times a day.

The bromide of potassium is prescribed like the iodide, as an alterative, but is less efficacious. Huette and Thielmann recommend it in priapism, nymphomania, and satyriasis. Sir Charles Locock commends its efficiency in hysterical epilepsy, and directs it to be given in doses of five to ten grains, three times daily, for a week previous to, and during each menstrual period.

565. *Solution of Bromine and Bromide of Potassium.*

R. Potassii Bromidi ℥ij + ℥ij;
 Aquæ f℥ij.
 Solve. Dein adjice—
 Brominii ℥j;
 Aquæ ad f℥iv.
 Misce.

This is recommended as a convenient standard formula for the use of bromine. It can readily be diluted to any extent by the addition of water.

Each fluidrachm contains five grains of the bromide of potassium and fifteen grains of bromine.

Bromine is an excellent remedy in the treatment of hospital gangrene.

J. LAWRENCE SMITH.

566. *Mixture of Lugol's and Fowler's Solutions.*

R. Liquoris Iodini Compositi,
 Liquoris Potassæ Arsenitis, āā f℥ij.
 Misce.

Signa.—Take ten drops three times daily.

Used in chorea, psoriasis, pityriasis, and lepra.

[567. *Solution of Iodide and Bromide of Potassium.*]

R. Potassii Bromidi,
 Potassii Iodidi, āā ℥ij;
 Syrupi,
 Aquæ Cinnamomi, āā f℥iij.
 Misce.

Signa.—A tablespoonful four times daily.

In syphilitic neuralgia, nodes, etc.; also chronic rheumatism.

[568. *Arsenic with Morphia and Cascarilla.*]

- R. Liquoris Potassæ Arsenitis fʒjss;
 Morphiæ Hydrochloratis gr. ½;
 Syrupi Limonis,
 Tincturæ Cocci, āā fʒss;
 Infusæ Cascarillæ ad fʒxij.

Misce.

Signa.—A tablespoonful after each meal.

In chronic eczema, attended with feeble digestion.

McCALL ANDERSON.

[569. *Solution of Arsenic and Iodine.*]

- R. Liquoris Potassæ Arsenitis ℥lxxx.
 Potassæ Iodidi gr. xvj;
 Iodini gr. iv;
 Syrupi Aurantii fʒij.

Misce.

Signa.—A teaspoonful in a wineglass of water, thrice daily after meals.

In chronic eczema.

NELIGAN.

570. *Pearson's Solution.*

- R. Sodæ Arseniatis gr. j;
 Aquæ fʒj.

Fiat solutio.

Signa.—Dose, twenty drops three times a day.

Used in the scaly and other skin diseases. It has less tendency than Fowler's solution to offend the stomach.

An arseniate of ammonia was introduced by Biett, and employed by him in the same strength as the foregoing solution, *i. e.*, one grain to the fluidounce, and given in the dose of twenty drops. Its virtues are similar to those of Fowler's and Pearson's solutions.

571. *Mixture of De Valangin's Solution and Iron.*

- R. Liquoris Arsenici Chloridi (*Lond.*) fʒv;
 Tincturæ Ferri Chloridi fʒiij;
 Aquæ destillatæ fʒj.

Misce.

Signa.—Take forty drops three times daily, after meals.

Arsenic in its various forms has long been held in repute

as an alterative in lupus and cancerous affections. This combination secures both a tonic and an alterative effect. In strength, De Valangin's solution is intermediate between Pearson's and Fowler's solutions, five fluidrachms containing nearly one grain. T. HUNT.

572. *Mixture of Sal Ammoniac.*

R. Ammoniaë Muriatis ʒij;
Sacchari ʒj;
Aquæ Menthæ Viridis fʒiijss.

Fiat mistura.

Signa.—A tablespoonful every three hours.

The German writers describe sal ammoniac as an excellent alterative and resolvent. Dr. Watson, of London, recommends it in facial neuralgia; and Dr. Ebden, of Bengal, speaks highly of its use in nervous headache, clavus hystericus, and neuralgic affections generally.

573. *Solution of Phosphate of Ammonia.*

R. Ammoniaë Phosphatis ʒss;
Aquæ destillatæ fʒvj.

Fiat solutio.

Signa.—A tablespoonful to be taken every four hours.

This is a formula of Dr. Buckler, who recommends it in those cases of gout and rheumatism in which lithic acid is present in the urine; as well as in all the modifications of those diseases, especially when they are associated with chronic thickening of the white tissues.

574. *Cod-liver Oil (Oleum Morrhuæ).*

This preparation, which is now divested in a great measure of its nauseous smell and taste, is given in doses of half an ounce, three or four times a day. To children, a teaspoonful.

The peculiar flavor which the best oil retains can be rendered less perceptible by introducing equal bulks of the oil and cherry-laurel water into a bottle, and shaking them well together. After subsidence the water is to be separated from the oil.

It is of much service in all strumous affections, and in the chronic forms of gout and rheumatism. It may be taken alone, or in milk, or on the froth of porter. Some persons swallow it in coffee, in lemon-juice, or with some of the aromatic waters.

Dr. Bradshaw recommends a weak infusion of flaxseed, flavored with lemon-peel, and sweetened to please the taste. He says: "I pour a small quantity of infusion into a glass, on which is added the oil, and again another small quantity of infusion upon it. In this manner, the dose may be swallowed, and will slip down without offending the palate, and generally is well retained even by irritable stomachs." The same author says: "Another mode has been successful when many have failed, and will be found equally valuable: It is the yolk of an egg beat up with boiling water and sugar, with which may be mixed a dessert-spoonful of brandy; and on this, the dose may be given without producing that nausea so frequently experienced when conveyed by other vehicles."

In the Editor's experience, the form of emulsion has proved to be one of the least satisfactory modes of exhibiting this article. He is in the habit of administering it in the pure state, directing the patient to chew a piece of orange peel or take a mintdrop before and after each draught; or, what is equally effectual, to rinse the mouth and gargle the throat with vinegar, before and after the dose.

575. *Mixture of Cod-liver Oil.*

R. Olei Morrhuæ f̄ss;
Liquoris Potassæ gtt. xl;
Aquæ Menthæ Piperitæ f̄ss.
Misce, et fiat haustus.

The draught to be washed down with a teaspoonful of lemon-juice, to liberate the oil on the stomach. DUNGLISON, *New Rem.*, 6th ed., p. 557. PERCIVAL.

576. *Another Form, for Children.*

R. Olei Morrhuæ f̄j;
Vitellum unius ovi.
Tere simul et adde gradatim—
Syrupi Aurantii Corticis f̄j;
Aquæ Aurantii Florum f̄ijss.
Fiat emulsio.

Signa.—Give a tablespoonful three times daily.

Used in scrofulous affections, and in rickets.

TROUSSEAU.

577. *Mixture of Cod-liver Oil and Quinia.*

R. Quiniæ gr. xvj;
 Alcoholis f̄ij.
 Fiat solutio. Dein adde—
 Olei Morrhuæ Oss.
 Solve cum leni calore.

The quinia indicated in the prescription can be readily procured from a solution of the sulphate by the addition of ammonia. If the oil and quinia be gently heated in a water-bath, the solution takes place as the alcohol evaporates.

LYMAN.

578. *Mixture of Cod-liver Oil and Iodine.*

R. Iodini gr. jss;
 Olei Morrhuæ f̄v.
 Tere simul.
Signa.—Dose, a tablespoonful three times a day.

The quantity of iodine can be increased without materially changing the appearance of the solution. FLEISCHMANN.

579. *Mixture of Corrosive Sublimate.*

R. Hydrargyri Chloridi Corrosivi gr. ij;
 Aquæ destillatæ f̄v;
 Aquæ Cinnamomi f̄ij;
 Syrupi f̄j.

Misce.

Signa.—Dose, a tablespoonful thrice a day.

This excellent alterative is often administered in compound syrup of sarsaparilla. It is better, however, to give it in a simpler form, to prevent any chemical change. It is particularly serviceable in the secondary forms of syphilis, and in syphilitic rheumatism.

580. *Mixture of Nitro-muriatic Acid.*

R. Acidi Nitromuriatici f̄j;
 Aquæ f̄viiij.
 Misce, et adde—
 Spiritûs Ætheris Nitrosi f̄ij.

Fiat mistura.

Signa.—From twenty drops to half a teaspoonful to be given every three hours, in a wineglassful of sweetened water.

This acid is also employed as a bath in hepatic derangements. For this purpose, put a teaspoonful of the acid into a quart of warm water, and apply it to the region of the liver night and morning, by means of a soft sponge.

581. *Diluted Nitric Acid.*

R. Acidi Nitrici fʒj;
Aquæ Oij;
Sacchari ʒj.

Fiat mistura.

Signa.—One-eighth of this quantity may be taken daily, in divided doses.

In lues venerea.

Nitric acid may be prescribed both as a tonic and an alterative in the above form. It is best taken through a quill, as the teeth suffer when it comes in contact with them. It sometimes arrests the colliquative sweats of hectic fever when other remedies fail.

FERRIAR, *Med. Hist.*

582. *Mixture of Hyposulphite of Soda.*

R. Sodæ Hyposulphitis ʒij;
Infusi Quassiae fʒvj.

Fiat solutio.

Signa.—A tablespoonful three times daily.

In France the hyposulphite is employed in chronic cutaneous and scrofulous affections. It has likewise been used with advantage in rheumatism. This particular formula was resorted to successfully in an obstinate case of yeasty vomiting, accompanied with *sarcinæ ventriculi*.

R. NEALE.

583. *Artificial Harrowgate Water.*

R. Potassæ Sulphatis cum Sulphure (*Ed.*) ʒj;
Potassæ Bitartratis ʒss;
Magnesiæ Sulphatis ʒvj;
Aquæ destillatæ Oij.

Solve.

Signa.—One-half, taken in draughts, constitutes a full dose.

The above ought to be taken in the morning, before breakfast, and be followed by a walk, to produce the desired effect.

DUFFIN.

584. *Falk's Antacid Tincture.*

R. Pulveris Guaiaci Resinæ ʒj;
Terebinthinæ Canadensis ʒj;
Olei Sassafras fʒij;
Alcoholis fʒviij.

Misce, macera per dies septem, et cola; dein adde—
Hydrargyri Chloridi Corrosivi ʒj.

Misce.

Signa.—Take twenty drops in wine or sweetened water, night and morning.

Dr. E. D. Fenner, of New Orleans, recommends this preparation in dysmenorrhœa and the consequent sterility.

Dr. G. Emerson, of Philadelphia, has found it a valuable alterative in secondary syphilis.

CLASS XVI.

ASTRINGENTS.

DOCTOR CULLEN describes astringents to be "such substances as, applied to the human body, produce contraction and condensation in the soft solids, and thereby increase their density and force of cohesion." "And by the operation of this corrugating power," adds Dr. Murray, "either directly exerted on a part, or extended by sympathetic action, the morbid affections arising from a state of relaxation are supposed to be removed."

In the use of this class of medicines a caution suggests itself, namely, that they should not be given to arrest evacuations that are critical, and designed by nature to relieve a plethoric state of the system, unless such evacuations exist to an alarming extent.

Under this head are introduced, as a matter of convenience, many remedies which have the property of arresting morbid discharges, not from any inherent astringency, but from some alterative influence or stimulant impression upon the secreting organ from which the discharge takes place, as is the case with a large number of the remedies for diarrhoea which follow.

Powders and Pills.

585. *Compound Powder of Alum.*

R. *Aluminis* ℥j;
Pulveris Kino gr. v.

Fiant pulveres v.

Signa.—One to be given every two hours.

This compound, though much employed by some practitioners, contains substances which would be incompatible

with each other if given in solution. Used in menorrhagia, obstinate diarrhoea, etc.

586. *Oxide of Silver and Aromatic Powder.*

R. Argenti Oxidi gr. xij;
 Pulveris Aromatici gr. xxx.
 Misce, et fiant pulveres xij.
Signa.—One powder every three hours.

Sir James Eyre and Dr. Butler Lane extol highly the use of the oxide of silver in the various forms of passive hemorrhage, and particularly in menorrhagia.

587. *Powders of Sugar of Lead and Calomel.*

R. Hydrargyri Chloridi Mitis,
 Plumbi Acetatis, āā gr. j.
 Fiant pulveres iv.
Signa.—Give one powder every three hours.

In cholera infantum.

The above dose is adapted to any period between ten and twenty months of age.

T. D. MITCHELL.

588. *Powders of Sugar of Lead, Calomel, and Ipecacuanha.*

R. Hydrargyri Chloridi Mitis,
 Pulveris Ipecacuanhæ, āā gr. ij;
 Plumbi Acetatis gr. viij.
 Misce, et divide in pulveres viij.
Signa.—Give one powder every three hours.

Used in cholera infantum. The quantity of sugar of lead appears large, but experience proves that it may be given, both with safety and benefit, to a child from one to three years old.

D. F. CONDIE.

589. *Powders of Alum and Opium.*

R. Aluminis ʒss;
 Pulveris Opii gr. iij.
 Fiant pulveres vj.
Signa.—One to be taken every three hours.

In diarrhoea.

590. *Powders of Subnitrate of Bismuth and Magnesia.*

R. Bismuthi Subnitratis ʒj;
 Pulveris Acaciæ ʒss;
 Magnesiæ ʒj;

Misce, et divide in pulveres xij.

Signa.—Give one powder every four hours.

Used in the diarrhœa of phthisis.

T. THOMSON.

[591. *Powders of Calomel, Opium, and Bismuth.*]

R. Hydrargyri Chloridi Mitis gr. j;
 Pulveris Ipecacuanhæ Compositi gr. iv;
 Bismuthi Subnitratis gr. xvij.

Misce, divide in chartulas xij.

Signa.—Give one powder every two hours.

In cholera infantum in its early stage, and in the inflammatory diarrhœa of children, to be followed after the diarrhœa is arrested by a mild laxative of castor oil or syrup of rhubarb.

592. *Powders of Subnitrate of Bismuth.*

R. Bismuthi Subnitratis gr. vj;
 Sacchari gr. xij.

Fiant pulveres vj.

Signa.—Place a powder on the tongue of a child (one year old), three or four times daily.

Used in the diarrhœa of children.

RECAMIER, TROUSSEAU.

593. *Powders of Subcarbonate of Bismuth.*

R. Bismuthi Subcarbonatis gr. viij;
 Sacchari Lactis gr. xvj.

Fiant pulveres viij.

Signa.—Administer one powder every three hours.

Recommended both for the mucous diarrhœa of children and for gastrodynia in adults, the properties of the subcarbonate being analogous to those of the subnitrate of bismuth.

594. *Pills of Sugar of Lead and Calomel.*

R. Plumbi Acetatis ʒss;
 Hydrargyri Chloridi Mitis gr. v;
 Confectionis Rosæ q. s.

Fiant pilulæ x.

Signa.—One to be given every two hours.

In hemorrhage, and especially in hæmatemesis.

595. *Pills of Sugar of Lead and Opium.*

R. Plumbi Acetatis gr. xij;
 Pulveris Opii gr. vj;
 Confectionis Rosæ q. s. ut fiat massa in pilulas vj dividenda.

Signa.—One to be taken every hour.

Used in hæmoptysis and other hemorrhages. It is also useful for checking the profuse perspiration in consumption.

596. *Pills of Alum, Catechu, and Opium.*

R. Aluminis,
 Catechu, āā gr. vj;
 Extracti Opii gr. j.
 Fiat massa, et divide in pilulas vj.

Signa.—Give one pill every three hours.

In passive hemorrhage, and in atonic mucous discharges.

597. *Pills of Rhatany and Rhubarb.*

R. Extracti Krameriæ ʒj;
 Extracti Rhei Alcoholici ʒj;
 Syrupi Zingiberis q. s.
 Fiat massa, et divide in pilulas xxx.

Signa.—Take one pill every two hours.

Prescribed in diarrhœa and chronic dysentery.

598. *Pills of Creasote and Opium.*

R. Creasoti gtt. v;
 Pulveris Opii gr. iij;
 Pulveris Acaciæ gr. vij.
 Tere simul, et divide in pilulas x.

Signa.—One pill to be taken every three hours.

Used in chronic diarrhœa, and in chronic bronchitis; also employed for the relief of toothache, by pressing a pill into the cavity of a carious tooth.

BLASIUS.

[599. *Pills of Creasote and Opium.*]

R. Creasoti ʒiij;
 Opii Turcici ʒij;
 Pulveris Capsici ʒij;
 Pulveris Krameriæ q. s. ut fiant pilulæ cxx.

Signa.—Two pills every two hours till relieved.

For the treatment of acute diarrhœa.

J. JOHNSON.

600. *Pills of Kino and Opium.*

R. Pulveris Kino gr. xx;
 Pulveris Opii gr. ij;
 Mucilaginis Acaciæ q. s. ut fiant pilulæ vj.

Signa.—Take one every four hours.

In diarrhœa, pyrosis, &c.

601. *Pills of Opium and Tannic Acid.*

R. Acidi Tannici gr. xx;
 Pulveris Opii gr. v;
 Glycerinæ q. s. ut fiat massa in pilulas x dividenda.

Signa.—One pill every four hours.

Glycerin is a good excipient for tannic acid, reducing it in bulk, and thus enabling the prescriber to combine it with other articles in pills of a moderate size. This combination is very serviceable in affections of the bowels.

602. *Pills of Tannin and Morphia.*

R. Acidi Tannici ℥j;
 Morphiæ Sulphatis gr. j;
 Mucilaginis Acaciæ q. s.

Divide in pilulas x.

Signa.—One to be given every two hours.

Blue mass may be added according to circumstances. In diarrhœa and dysentery.

603. *Pills of Gallic Acid.*

R. Acidi Gallici ℥j;
 Extracti Gentianæ gr. x.
 Fiat massa, in pilulas x dividenda.

Signa.—Give one pill every three hours.

Used in hæmaturia, and other hemorrhages.

Gallic acid is also employed beneficially in pyrosis, and in the night-sweats of consumption.

Mixtures, Infusions, etc.604. *Infusion of Matico.*

R. Piperis Angustifolii ℥j;
 Aque bullientis Oj.
 Macera per horas duas et cola.

Signa.—Take a wineglassful every two hours.

This has been used to check the discharge in hæmoptysis, hæmatemesis, and dysentery, as well as in leucorrhœa and gonorrhœa.

605. *Parrish's Camphor Mixture.*

R. Aquæ Camphoræ f̄ij;
 Spiritûs Lavandulæ Compositi f̄ij;
 Sacchari ʒj.

Fiat mistura.

Signa.—Give a tablespoonful every two hours in diarrhœa and cholera morbus, adding ten drops of laudanum when there is much pain. JOS. PARRISH.

606. *Hope's Mixture.*

R. Aquæ Camphoræ f̄iv;
 Acidi Nitrici ℥iv;
 Tincturæ Opii ℥xl.

Fiat mistura.

Signa.—Dose, a tablespoonful every two hours.

In diarrhœa and dysentery.

This is a well-known and very efficacious preparation analogous to *Hope's Mixture*. If the nitric acid is added in larger proportion, it is liable to defeat the object of the prescription. The original formula contained a fluidrachm of nitrous acid, forty drops of laudanum, and eight fluidounces of camphor-water, and was given in doses of two fluidounces every three hours. THOS. HOPE.

607. *Chalk Mixture.*

R. Cretæ Præparatæ ʒjss;
 Sacchari,
 Pulveris Acaciæ, āā ʒj;
 Aquæ destillatæ f̄iv;
 Olei Cinnamomi ℥ij;
 Tincturæ Opii ℥xl.

Misce.

Signa.—Dose, a tablespoonful every two hours.

In diarrhœa and dysentery.

When a strongly astringent mixture is desirable, we add to the above formula two fluidrachms of the tincture of kino, or the same quantity of the tincture of krameria, catechu, or nutgalls.

In the Children's Hospital of this city the prepared oyster-shell is substituted in this mixture for the chalk, with the addition of one fluidrachm of paregoric and three of tincture of rhatany, and given in teaspoonful doses every two or three hours.

T. HEWSON BACHE.

[608. *Cholera Mixture.*]

R. Pulveris Aromatici ℥iij;
 Tincturæ Catechu f℥x;
 Tincturæ Cardamomi Compositæ f℥vj;
 Tincturæ Opii f℥j;
 Misturæ Cretæ ad f℥xx.

Misce.

Signa.—For an adult two tablespoonfuls after each evacuation; for a child seven years old a dessert-spoonful.

In diarrhœa and cholera.—*London Board of Health.*

609. *Jackson's Cholera Mixture.*

R. Spiritûs Lavandulæ Compositi,
 Spiritûs Camphoræ, āā f℥ss;
 Tincturæ Opii,
 Spiritûs Ætheris Compositi, āā f℥ij.

Misce.

Signa.—Give twenty drops at short intervals in cholera morbus, and the early stages of cholera, to allay nausea and relieve pain.

This prescription was frequently used in the cholera of 1832 by Professor Samuel Jackson with the most satisfactory results.

610. *Decoction of Galls.*

R. Gallæ contusæ ℥ij;
 Aquæ bullientis f℥x.

Coque per sextam horæ partem, et cola.

A wineglassful of this is given every few minutes as an antidote, in cases of poisoning by any of the vegetable alkaloids, or by tartar emetic, sulphate of copper, sulphate of zinc, etc. etc. It may be rendered more agreeable by the addition of an aromatic, and some sugar, for administration in diarrhœa. Dose, a tablespoonful.

611. *Mixture of Extract of Logwood and Catechu.*

R. Extracti Hæmatoxyli ℥iij;
Tincturæ Catechu f℥ij;
Sacchari ℥j;
Aquæ f℥vij.

Misce.

Signa.—A tablespoonful to be given once in three hours.

In the advanced stages of diarrhœa and dysentery.

612. *Blackberry Syrup with Aromatics.*

R. Syrupi Rubi f℥ij;
Spiritus Lavandulæ Compositi f℥ij;
Aquæ Cinnamomi f℥vj;
Aquæ f℥j.

Misce.

Signa.—Dose, a teaspoonful for a child.

Employed with much benefit as a mild astringent and stimulant in cholera infantum, and the bowel complaints of children.

R. P. THOMAS.

613. *Mixture of Ergot and Cinnamon.*

R. Extracti Ergotæ Fluidi,
Tincturæ Cinnamomi, āā f℥ss;
Syrupi f℥j;
Aquæ f℥ij.

Misce.

Signa.—Give a teaspoonful every three hours.

Recommended in menorrhagia, and other hemorrhages.

614. *Mixture of Geranium Maculatum.*

R. Extracti Geranii Fluidi (*Thayer*) f℥vj;
Tincturæ Cinnamomi f℥ij;
Syrupi Rosæ Gallicæ f℥ij.

Misce.

Signa.—Take a dessert-spoonful every two hours.

The geranium is the best of the indigenous astringent roots, and may be beneficially employed in cases of diarrhœa and chronic dysentery. Its freedom from unpleasant taste renders it particularly valuable in the diseases of childhood.

615. *Mixture of Tincture of Catechu and Laudanum.*

R. Tincturæ Catechu f ʒj;
 Tincturæ Opii f ʒj;
 Pulveris Acaciæ ʒij;
 Aquæ Cinnamomi f ʒvj.

Misce.

Signa.—A tablespoonful every two hours.

In diarrhœa.

616. *Creasote Mixture.*

R. Creasoti gtt. vj;
 Alcoholis f ʒj;
 Syrupi Amygdalæ f ʒss;
 Aquæ f ʒijss.

Fiat mistura.

Signa.—Dose, a dessert-spoonful diluted, every two or three hours.

Used in hemorrhages and to allay sick stomach.

[617. *Another Form.*]

R. Creasoti ℥xvj;
 Acidi Acetici Glacialis ℥xvj;
 Olei Juniperi ℥ij;
 Alcoholis f ʒss;
 Syrupi f ʒj;
 Aquæ destillatæ f ʒxv.

Misce.

Signa.—Take one to two tablespoonfuls.

In chronic diarrhœa, nausea of pregnancy, and some forms of dyspepsia.—*British Pharmacopœia.*

618. *Alcoholic Solution of Creasote.*

R. Creasoti,
 Olei Caryophylli, āā gtt. j;
 Alcoholis f ʒj.

Misce.

A drop or two of this solution dropped into the cavity of an aching tooth, is said to afford immediate relief.

[619. *Mixture of Nitrate of Silver.*]

R. Argenti Nitratis gr. j;
 Syrupi Acaciæ f ʒjss.

Misce.

Signa.—A teaspoonful every two or three hours.

In the exhaustive stage of cholera infantum. Great care should be taken to have the syrup perfectly pure and clear; a syrup made extemporaneously, or a thick mucilage, not being adapted to preserve the salt from rapid change.

[620. *Mixture of Sulphate of Soda and Opium.*]

R. Sodæ Sulphatis gr. xvij;
Tincturæ Opii gtt. vj;
Aquæ Cinnamomi f̄ss;
Syrupi Acaciæ f̄j.

Misce.

Signa.—Give a teaspoonful every two hours.

In the diarrhœa or summer complaint of children; this formula being adapted for a child about one to one and a half year old.

L. D. HARLOW.

[621. *Mixture of Chloroform and Sulphate of Soda.*]

R. Chloroformi ℥x;
Alcoholis deodorati f̄ss;
Sodæ Sulphatis ʒss;
Aquæ Menthæ Piperitæ f̄ijss.

Misce.

Signa.—Take a tablespoonful every hour until relieved.

An effectual remedy in the diarrhœa of hot weather or from relaxation of the bowels. If much pain be present, a few drops of laudanum, or if acidity, five grains of bicarbonate of soda may be added to each dose.

622. *Solution of the Perchloride of Iron.*

R. Ferri Chloridi ʒij;
Aquæ f̄j.

Solve.

Signa.—Apply with a brush.

Used to arrest gangrene or hemorrhage resulting from disease, or accident, or in consequence of surgical operations. If the solid perchloride of iron be kept in a bottle, a small portion of it, after a time, deliquesces into a thick brown liquid, which is constantly kept in a state of supersaturation, by the undeliquesced portions of the salt. This liquid, applied by means of a spun-glass brush to a bleeding surface, arrests the flow of blood almost immediately.

J. ZACHARIAH LAURENCE.

623. *Monse's Solution.*

R. Liquoris Ferri Subsulphatis f̄iv.

Signa.—Apply as an astringent lotion.

Like the solution of the perchloride of iron, this is a powerful styptic and antiseptic. It has been extensively employed for arresting hospital gangrene, and for checking hemorrhages and abnormal discharges.

624. *Alum Whey.*

R. Lactis Vaccinæ bullientis Oj;

Pulveris Aluminis ʒij.

Coque per sextam horæ partem, et cola.

Signa.—A cupful to be taken occasionally.

In diabetes and passive hemorrhages.

FOY.

625. *Mixture of Gallic Acid and Morphia.*

R. Acidi Gallici ʒj;

Morphiæ Acetatis gr. j;

Alcoholis f̄ʒj;

Syrupi Tolutani f̄ʒiij;

Aquæ f̄ʒiijss.

Misce.

Signa.—Dose, a tablespoonful.

Used in the London City Hospital for checking night-sweats in consumption.

HUTCHINSON.

626. *Aromatic Syrup of Galls.*

R. Pulveris Gallæ ʒss;

Pulveris Cinnamomi,

Macis, āā ʒij;

Spiritûs Vini Gallici f̄ʒviiij.

Misce, et macera per horas viginti quatuor.

Having been allowed to stand twenty-four hours, the resulting tincture is filtered into a saucer. Then two ounces of sugar, in lumps, are suspended on wire gauze just above the surface of the liquid. The latter is set on fire, and the flame melts the sugar and converts it partly into caramel, which drops into the liquid beneath. When the combustion stops, the syrup is stirred and filtered for use. The dose is a tablespoonful for an adult.

It is used in diarrhœa and chronic dysentery.

JOS. PARRISH.

[627. *Mixture of Hydrochloric Acid and Galls.*]

R. Acidi Hydrochlorici diluti ℥xxxvj;
 Syrupi Gallæ Aromatici (Formula 626) f̄ss;
 Syrupi Acaciæ f̄j.

Misce.

Signa.—Give a teaspoonful every two or three hours.

In the diarrhœa of young children, following cholera infantum. If a great deal of debility is present, Huxham's tincture or one of the elixirs of bark may be substituted for the syrup of gum.

628. *Mixture of Extract of Rhatany, &c.*

R. Extracti Krameriæ ʒj;
 Syrupi Papaveris (*Lond.*),
 Aquæ Rosæ, āā f̄ij.

Fiat mistura.

Signa.—A teaspoonful for a dose.

Given in passive hemorrhage and chronic dysentery.

M. FOUQUIER.

629. *Solution of Acetate of Lead.*

R. Plumbi Acetatis gr. v;
 Aceti gtt. v;
 Sacchari ʒj;
 Aquæ f̄j.

Fiat mistura.

Signa.—Give a teaspoonful to a child every hour or two, to allay the vomiting in cholera infantum. D. F. CONDIE.

630. *Enema of Acetate of Lead, etc.*

R. Plumbi Acetatis ʒj;
 Tincturæ Opii gtt. lx;
 Aquæ tepidæ f̄ij.

Fiat mistura.

Signa.—To be thrown up the rectum in uterine hemorrhage.

W. DEWEES.

631. *Tannin Suppository.*

R. Acidi Tannici ʒj;
 Olei Theobromæ ʒss.

Misce cum leni calore, et fiant suppositoria iv.

Employed in cases of bleeding piles, fissures of the anus, and mucous discharges from the rectum. TROUSSEAU.

CLASS XVII.

ABSORBENTS, OR ANTACIDS.

ABSORBENTS or Antacids form a class of remedies for correcting acidity in the stomach and bowels. As a general rule they should be preceded by an emetic or cathartic, or both. When a permanent effect is desired, they are usually combined with tonics and aromatics, and sometimes with narcotics. When given alone, they too frequently afford but transient relief.

Powders and Pills.

632. *Compound Cretaceous Powder with Opium.*

R. Cretæ Præparatæ ʒjss;
Pulveris Cinnamomi ʒj;
Pulveris Piperis Longi gr. viij;
Pulveris Opii gr. vj.

Divide in chartulas xij.

Signa.—One three or four times a day.

In diarrhœa.

The above formula, with a slight alteration, is from the *London Pharmacopœia*.

633. *Powder of Crab's Claws and Rhubarb.*

R. Chelæ Cancrorum ʒj;
Pulveris Rhei ʒij.

Misce, et divide in pulveres iv.

Signa.—One may be taken once or twice a day, according to circumstances.

In acidity of the primæ viæ.

This preparation is called by the several names of crab's claws, eyes, and stones. It is a carbonate of lime united with some animal gelatine.

634. *Powder of Magnesia, Fennel-seed, and Cinnamon.*

R. Magnesiæ ʒss;
 Pulveris Fœniculi,
 Pulveris Cinnamomi, āā ʒj.

Fiat pulvis.

Signa.—Dose, a small teaspoonful three or four times a day.

Given in dyspepsia, attended with acid eructations.

635. *Powder of Magnesia, Soda, and Ginger.*

R. Magnesiæ ʒss;
 Sodæ Bicarbonatis,
 Pulveris Zingiberis, āā ʒj.

Misce.

Signa.—A small teaspoonful occasionally.

In cardialgia.

636. *Powder of Magnesia and Columbo.*

R. Magnesiæ ʒjss.
 Pulveris Calumbæ ʒj.

Misce, et divide in chartulas vj.

Signa.—One may be taken three times a day, in sugar and water.

In cardialgia.

637. *Powder of Charcoal, Carbonate of Magnesia, and Ginger.*

R. Carbonis Ligni ʒj;
 Magnesiæ Carbonatis ʒij;
 Pulveris Zingiberis ʒj.

Misce, et divide in pulveres iv.

Signa.—One powder to be taken three times daily.

Used in dyspepsia, accompanied with acidity.

R. DUNGLISON.

638. *Pills of Soda, Rhubarb, etc.*

R. Pulveris Rhei,
 Sodæ Carbonatis exsiccatae,
 Extracti Gentianæ, āā ʒj;
 Hydrargyri Chloridi Mitis gr. iij.

Fiant pilulæ xx.

Signa.—One pill an hour after each meal.

Given in dyspepsia, attended with constipation.

Mixtures, Solutions, etc.639. *Compound Chalk Mixture.*

R. Misturæ Cretæ f̄v;
 Tincturæ Catechu,
 Tincturæ Opii Camphoratae, āā f̄ss.

Misce.

Signa.—A tablespoonful every three hours.

Prescribed in diarrhœa, accompanied by acidity or flatulence.

640. *Mixture of Salt of Tartar.*

R. Potassæ Carbonatis Puræ ʒj;
 Sacchari ʒij;
 Aquæ Menthæ Piperitæ f̄iv;
 Spiritûs Lavandulæ Compositi f̄ij;
 Tincturæ Opii ℥xl.

Misce.

Signa.—A tablespoonful every two hours.

In sickness of the stomach, attended with acidity.

641. *Mixture of Salt of Tartar and Ammonia.*

R. Spiritûs Ammoniaë Aromatici f̄ij;
 Potassæ Carbonatis Puræ ʒij;
 Syrupi Zingiberis f̄vj;
 Aquæ f̄iv.

Misce.

Signa.—A large teaspoonful for a dose.

In pyrosis and acid eructations.

642. *Mixture of Lime-water and Milk.*

R. Liquoris Calcis,
 Lactis recentis, āā f̄iij.

Misce.

Signa.—One or two tablespoonfuls for a dose.

In sickness of the stomach few remedies are more prompt in their effect.

[643. *Syrup of Lime.*]

R. Calcis Hydratae ʒj;
 Sacchari Pulveris ʒij;
 Aquæ destillatæ Oj.

Misce, et digere per horas duas et cola.

This preparation contains over seven grains of lime in each fluidounce, and may be given in doses of two or three fluidrachms to adults, or half a drachm to a young child, as an antacid in nausea.

P. SQUIRE.

644. *Magnesia-water.*

R. Magnesiæ ʒij;
Aquæ bullientis fʒiv.

Misce.

Signa.—Give a dessert-spoonful of the clear fluid every two hours.

This is an excellent antacid remedy, adapted to children. It is highly aperient.

B. ELLIS.

645. *Mixture with Ammonia, Magnesia, etc.*

R. Magnesiæ ʒj;
Spiritûs Ammoniaë Aromatici fʒj;
Spiritûs Cinnamomi fʒiij;
Aquæ fʒvj.

Misce.

Signa.—A tablespoonful every two hours.

In the sickness accompanying pregnancy.

646. *Decoction of Columbo, Salt of Tartar, etc.*

R. Calumbæ ʒss;
Aquæ fʒviiij.
Coque ad fʒv, cola, et adde—
Potassæ Carbonatis Puræ gr. x;
Succi Limonis fʒiij;
Tincturæ Opii gtt. xij.

Misce.

Signa.—From a teaspoonful to a tablespoonful may be given every hour. Anti-emetic.

647. *Tonic Mixture with Carbonate of Soda.*

R. Sodæ Carbonatis ʒiv;
Infusi Gentianæ Compositi,
Aquæ Cinnamomi, āā fʒiij;
Tincturæ Cardamomi fʒss.

Fiat mistura.

Signa.—A tablespoonful every two or three hours.

In acidity, flatulence of the stomach, etc.

[648. *Soda Mint.*]

R. Sodæ Bicarbonatis ʒij;
 Spiritûs Ammonix Aromatici gtt. xl;
 Aquæ Menthæ Piperitæ fʒviiij.

Misce.

Signa.—Dose, a teaspoonful for an infant.

An effectual carminative antacid in the colic of new-born children; useful also in larger doses in acidity and flatulence of adults.

649. *Dyspeptic Lye.*

Take of

Hickory ashes	1 quart.
Soot	6 ounces.
Boiling water	1 gallon.

Mix, and let them stand for twenty-four hours, frequently stirring the ingredients. A teacupful may be given of this liquor (decanted) three times a day. It should be decanted always at the end of twenty-four hours, for, by standing on the materials a long time, the water acquires *caustic properties*, and may do serious injury.

This domestic remedy we have thought best to give, as we received it, in the English language. It deserves an insertion, from the circumstance that it was employed by the late Dr. P. S. Physick, in his own case, and was of decided advantage when the usual alkaline remedies had failed.

B. ELLIS.

BOOK II.

OF

EXTERNAL APPLICATIONS.

1808

EXTERNA

CLASS XVIII.

CAUSTICS, OR ESCHAROTICS.

CAUSTICS or cauteries are divided into the actual and potential. The first consists of fire itself; and the second, of those substances which destroy the living solids, either by excessive stimulation, or, as some suppose, by producing a chemical decomposition.

650. *Actual Cautery.*

The use of iron heated to a white heat as a cautery extends back to the most ancient times. It is still occasionally employed in the treatment of diseases of the spine and joints; and also to arrest hemorrhage by searing incised or wounded surfaces. But the particular modes of its application belong more properly to the regular treatises on surgery than to a work of this kind.

651. *Firing.*

A modified form of the actual cautery has attracted some attention in Europe, from its great efficacy in the relief of neuralgic and other pains, paralysis, sciatica, and chronic rheumatism.

Dr. Corrigan, of Dublin, uses a simple instrument, consisting of a thick iron-wire shank, two inches long, inserted in a small wooden handle, and having on its extremity, which is slightly curved, a button of iron a quarter of an inch thick and half an inch in diameter, the whole instrument being only six inches long. The face of the button for application is *quite flat*. If the instrument be larger than this, it will require too much time to heat it; if smaller, it will not retain the heat a sufficient length of time. In using the instrument, it is necessary to hold the button over the flame of a spirit-lamp, keeping the forefinger, which holds the wire, at the

distance of half an inch from the button. As soon as the finger feels uncomfortably hot, the instrument is ready for use. It is applied as quickly as possible, the skin being tipped successively, at intervals of half an inch, over the whole affected part, as lightly and rapidly as possible, always taking care to bring the flat surface of the button fairly in contact with the skin. In this way the process of firing a whole limb or the loins, making about one hundred applications, does not occupy a minute. You can ascertain at once whether the heat be sufficient. If you look sideways at the spots as you touch them, you will observe that each spot the iron has touched immediately becomes of a glistening white. The iron is never red-hot, and does not make an eschar.—BRAITHWAITE'S *Retrospect*, No. 13, p. 55.

652. *Caustic Potassa.*

The *Causticum commune acerrimum* is the pure potassa. When mixed with lime, its activity is lessened, and it is then called *Causticum commune mitius*. For the best mode of applying this substance, see the remarks on Issues. As this caustic spreads rapidly and eats deeply, care should be taken not to leave it on too long, when in the neighborhood of large bloodvessels. When, however, we wish to arrest its effects, they may be neutralized at once by vinegar, or vinegar and water.

653. *Vienna Paste (Potassa cum Calce).*

R. Potassæ ℥v;
 Calcis ℥vj;
 Alcoholis q. s. ut fiat magma.

The paste is spread on the part to be cauterized, and is allowed to remain for ten or fifteen minutes, while the surrounding skin is protected by adhesive plaster.

654. *Vienna Paste with Opium.*

R. Potassæ cum Calce ℥ij;
 Pulveris Opii ℥ss;
 Saponis Mollis q. s.
 Misce.

This preparation is employed for the same purpose as the common caustic.

655. *Vienna Paste with Morphia.*

R. Potassæ cum Calce partes iij;
Morphiæ Muriatis partem j;
Aquæ q. s. ut fiat magma.

Misce.

The addition of the morphia modifies the painfulness of the caustic, without materially diminishing its activity.

656. *Caustic of Filhos.*

R. Potassæ partes ij;
Calcis partem j.

Misce.

The caustic is fused, and run into leaden tubes like nitrate of silver. It is a convenient form for the application of a powerful caustic to uterine growths or ulcers.

657. *Lunar Caustic.*

This caustic is the nitrate of silver (*Argenti nitras fusa*) deprived of its water of crystallization, fused and cast into moulds. Its mode of application varies with the object in view. If designed as an antiphlogistic, or as a stimulant to old ulcers, it should be passed lightly and rapidly over the affected part. If used as a caustic, it should be pressed against the surface for a few seconds. The valuable and peculiar property of this caustic is the limitation of its action to the part to which it may be applied.

658. *Burnt Alum.*

The *Alumen Exsiccatum* is made by depriving alum of its water of crystallization by heat. It is applied in powder to the fungous granulation of ulcers; and, mixed with an equal part of powdered sugar, is used to remove specks from the cornea.

659. *Chloride of Zinc.*

This is a powerful escharotic, and is safe and certain in cases that require the destruction of a considerable thickness of the living tissues; "never causing violent pain in the affected parts, or any kind of irritative fever, or disorder of the digestive organs."

"The epidermis having been removed by nitrate of silver, the chloride of zinc may be applied as a caustic by means of a moistened hair pencil, either alone or mixed with an equal

portion of oxide of zinc, or sulphate of lime, or according to the following form:—

660. *Canquoin's Caustic Paste.*

R. Zinci Chloridi partes ij;
 Farinæ partes iij;
 Antimonii Terchloridi partem j;
 Aquæ q. s. ut fiat pasta."

This paste should be spread thickly on the diseased part.
 DUNGLISON'S *New Remedies*, 6th ed. p. 694.

661. *Caustic Paste of Chloride of Zinc.*

R. Zinci Chloridi,
 Calcis Sulphatis, āā ʒss.
 Misce.

This preparation is very liable to deliquescence, to prevent which a little flour may be added at the time of application.

662. *Caustic Collodion.*

R. Hydrargyri Chloridi Corrosivi ʒj;
 Collodii ʒj.
 Solve.

When this solution is applied with a camel's hair brush to the surface of nævi materni, warts, condylomata, etc., the ether evaporates and leaves a film of the caustic firmly attached to the nævus; ulceration occurs in a few days, a superficial slough separates and thus destroys the nævus without disfigurement.

MACKE.

663. *Sulphuric Acid.*

The mineral acids are all escharotic, though seldom employed, on account of the difficulty of managing fluids when used in this way.

Sulphuric Acid, mixed with saffron, is proposed by Velpeau as one of the most effectual caustics. Mr. James Syme directs it to be mixed with an equal weight of sawdust to obtain a proper consistence to prevent spreading; the surrounding parts being protected by the application of a solution of gutta percha in chloroform.

Mr. Syme has also employed a saturated mixture of sulphuric acid and dried sulphate of zinc. An ordinary quill pen is charged with the mixture and drawn over the tumor in different directions, by which means the skin is soon corroded.

The application is continued from day to day until the whole sloughs out.

664. *Acid Nitrate of Mercury.*

R. Liquoris Hydrargyri Nitratis f̄j.

This is a powerful caustic, and is much employed in England and on the Continent to destroy malignant ulcerations, particularly those of a cancerous character. It is applied by means of a camel-hair pencil, and the parts are then covered with lint.

665. *Ointment of Arsenic.*

R. Acidi Arseniosi ʒj;
Adipis,
Cerati Cetacei, āā ʒvj.

Signa.—Melt the cerate and lard over a slow fire, and then stir in the white oxide of arsenic, and triturate carefully in a glass mortar.

Used to destroy cancerous tumors. PHARM. CHIRURG.

In hot weather, arsenic may be advantageously rubbed up with basilicon ointment, to prevent its spreading on the sound parts. A scruple of the former, to half an ounce of the latter, makes a strong ointment.

666. *Arsenical Paste for Dentists.*

R. Acidi Arseniosi gr. ij;
Morphiæ Sulphatis gr. j;
Creasoti q. s.
Misce, fiat massa.

Used to destroy the sensibility of a carious tooth before plugging. Having cleansed the cavity, fill it with a portion of the paste, secured with a pledget of cotton or a bolus of wax.

J. D. WHITE.

667. *Dubois's Arsenical Powder.*

R. Acidi Arseniosi ʒss;
Hydrargyri Sulphureti Rubri ʒj;
Sanguinis Draconis ʒss.
Fiat pulvis.

Chiefly used in the French hospitals as a caustic to cancerous affections.

Arsenic is sometimes applied in the form of a paste made with water, which is carefully laid over the part to be re-

moved, and renewed according to circumstances. When the slough forms, it should be dressed with a poultice, or with cerate spread on lint. It acts rapidly and requires watching, a remark that applies equally to all these pastes.

668. *Caustic Glycerole of Iodine.*

R. Potassii Iodidi partem j;
 Glycerinæ partes ij.
 Solve et adde—
 Iodini partem j.
 Fiat solutio.

Employed in lupus, by painting the solution over the diseased part, and applying oiled silk or gutta percha paper to prevent evaporation. The application is attended by pain of variable intensity and duration. It has proved successful in obstinate cases, after other remedies had failed. RICHTER.

Lugol's "caustic solution of iodine" corresponds in strength with the foregoing glycerole, water being substituted for the glycerin. It has long been a favorite remedy in lupus, and in tuberculous and hypertrophied conditions of the skin.

669. *Solution of Sal Ammoniac.*

R. Ammoniaë Muriatis ʒj;
 Aceti destillati fʒij;
 Aquæ fʒiv.
 Fiat solutio.

To be applied to venereal warts. BELL on Venereal.

670. *Chromic Acid.*

This acid has lately been employed in Germany as an escharotic. It is said to be efficient, manageable, and less painful than the ordinary applications. A concentrated solution (ʒj-ij in water fʒj) is applied by means of a glass rod. The solid chromic acid has to be used with care, on account of its penetrating action.

671. *Moxa.*

This is another method of using the actual cautery; and, as it is engaging the attention of physicians, we insert the usual mode of applying it. The Chinese employ this remedy by means of the mugwort. They separate this soft, lanuginous substance by beating, and form it into a cone; the base of this is attached, by being wetted, to the skin, and the point set on fire.

Dr. Boyle recommends dipping cotton in a strong solution of nitrate of potassa, and inclosing pieces of it, thoroughly dried, in paper cylinders, about one inch in diameter, and an inch in height. Dr. Burne employs wood in a state of dry rot—touchwood. This only requires to be shaped properly, and it burns, he says, with certainty and steadiness, and is preferable to the other modes suggested; some of which, as common cotton or lint, requiring the use of the bellows, and, when they have been dipped in nitre, demanding care to prevent the scintillations from injuring the surrounding parts.

Gun cotton, steeped in chlorate of potassa, and then thoroughly dried and formed into cylinders, has also been recommended.

The cylinders or cones of touchwood may be confined to the skin by a little adhesive plaster fixed to the edges.

It has been proposed to place pieces of cold iron in the neighborhood of the part while the moxa is burning, in order to render the sensations more vague, and therefore less painful.

Moxa is used in diseases of the spine, paralysis, etc. etc.

SUB-CLASS.—ISSUES AND SETONS.

These remedies are employed as substitutes for blisters, especially when a permanent discharge is desired.

There are three kinds of issues in common use, by either of which a discharge of purulent matter may be procured for any length of time that may be requisite. They are applied in different situations, according to circumstances, and some one of the following parts is generally chosen: the nape of the neck, the hollow of the deltoid muscle, and between the shoulders or over the ribs in front. In the inferior extremities they are most conveniently formed in the inside of the leg, either above or below the knee.

672. *Blister Issue.*

To form this issue, it is merely necessary to apply a blister to any part in the usual manner; the skin being thus removed, the discharge must be promoted by means of stimulating applications, as the cantharidal ointment, or the savin, or compound resin cerate. These may be alternated with mild liniments, in order to prevent the ulceration and consequent discharge from becoming excessive.

673. *The Pea Issue.*

There are two modes of forming this issue; the first is made by means of a lancet. The part is merely taken in the thumb and finger, and an incision made by passing the lancet through the skin. The wound should be kept open by means of orange peas, the common pea, a bean, or a piece of orris root.

The second is formed with caustic potassa.

The following extracts from the *Surgeon's Vade Mecum* will exemplify the manner of forming the issue with caustic:—

“The part is first to be covered with a piece of adhesive plaster, in the centre of which a circular hole has been cut of the size of the intended issue; in this hole the caustic potassa, made into a paste with soap, is to be placed. The whole is then to be covered with another plaster, secured by a bandage, and suffered to remain for *ten* or *twelve* hours. Generally, in two or three days, an eschar begins to separate, when the opening should be filled with the substance made choice of.” These substances are enumerated above.

674. *The Seton.*

To form this artificial discharge, take the seton-needle, to which is attached a skein of silk, the latter being partially anointed with some oleaginous substance. The needle is to be passed completely through the part chosen for the operation, after which it is removed, and the ends of the silk left hanging from the wound. It should be dressed every day, or twice a day, with some mild ointment; and if this be not sufficient to keep up the discharge, the more stimulating unguents may be used, as mentioned when speaking of the blister issue.

CLASS XIX.

EPISPASTICS.

“BY the ancients, all the external applications which redden or inflame the skin were called *Epispastics*, and these were designated according to the several degrees of effect: the slightest, entitled *phænigmoi*; the next, *sinapismi*; the more active, *vesicatorii*; and the strongest, *caustici*.”

At the present day, the term is restricted to those articles which produce a serous discharge beneath the cuticle—the blister of common language.

As a general rule, blisters should remain on the patient six or eight hours, in order to insure their full effect. There are individuals, however, whose skins are so delicate that a shorter application will answer every purpose; in children, it is seldom necessary to leave them on longer than three or four hours. When they are applied to the scalp, twelve hours are almost universally required; and Dr. Chapman directs the hair to be shaved, if possible, some hours before the application is made.

The usual dressing, when the blister is taken off, is basilicon ointment, or simple cerate, according to the urgency of the case, or irritability of the system. In order to keep it open, the weak epispastic, or savin ointment, will be found sufficient.

When the system is very prostrate, blisters should be applied to the inside of the thighs, or over the spine; for, when the circulation is languid in the extremities, they seldom draw well, and are even liable to produce gangrene by exhausting the little vitality that remains.

In diseases attended with an asthenic condition, when there is essentially a depression of the vital powers, as in most cases of eruptive fevers, blisters should be used with very great caution, and, generally, avoided altogether. This is

especially the case in the exanthemata of children, where the application of a blister often causes a deep slough, adding greatly to the previously existing prostration, and, in some cases, turning the balance against recovery. In such cases the rubefacients and superficial irritants are much to be preferred.

When, from peculiarity of constitution, *strangury* is produced, we must take them off after three or four hours, and bathe the part with sweet oil, or apply a poultice, giving at the same time diluent drinks, such as flaxseed tea or barley water, with the sweet spirit of nitre, camphor, or parsley tea; bladders, also, half filled with warm water, should be applied to the pubes. An opium suppository or injection will be found very advantageous. A poultice of ground flaxseed or starch is often serviceable, and a warm bath affords prompt relief. Prevention, however, is better than cure; and in irritable constitutions, or in persons disposed to strangury, the blistering ointment, before being spread, should be rubbed up with three or four grains of opium, and three or four times as much camphor. This preventive seldom fails. Blisters are rendered much less irritating by covering them with a fine gauze, which, if pressed in close contact with the plaster, will not prevent or materially retard its operation. It is seldom necessary to keep a blister on longer than to *redden the skin*, when a simple poultice will complete the vesication. In children this precaution is imperative.

675. *Blistering Plaster.*

R. Cerati Cantharidis q. s. ut fiat super alutam, emplastrum epispasticum, 6 × 6.

676. *Blistering Ointment.*

R. Ceræ Flavæ,
Resinæ,
Adipis, āā ʒvj.
Liquefac cum leni calore, et adde gradatim—
Pulveris Cantharidis ʒvijss.
Misce, et fiat unguentum.

In employing this ointment, or the preceding cerate, the margin of the blister should be covered with adhesive plaster, in order to confine it to its place, and prevent its creating unnecessary irritation. Another mode is to draw straps across it diagonally, which plan we generally prefer; it prevents the blister from rising in the middle, and thereby partially defeating its object.

677. *Instantaneous Vesication.*

The French practitioners have a process for raising an instant blister. A piece of linen or paper, being cut to the requisite size, is immersed in spirit of wine or brandy, Cologne water, oil of turpentine, or spirit of camphor, whichever is most readily obtained. It is then laid on the part to be blistered, taking care that the moisture does not wet the surrounding surface. The flame of a lighted taper is then applied quickly over the surface of the paper so as to cause ignition, which is almost instantaneous. At the conclusion of this operation, the cuticle is found detached and raised from the true skin beneath.

678. *Cantharidin.*

This substance, more or less impure, has been used during the last few years as a substitute for the common blistering cerate. The pure cantharidin is too expensive for general use, but an impure article, sufficiently concentrated for ordinary purposes, can be readily obtained. The cantharidin blistering tissues and vesicating taffetas, now offered for sale, are of this character:—

679. *Cantharidal Ether or Green Oil of Flies.*

R. Pulveris Cantharidis partem unam;

Ætheris partes duas.

Macara per dies tres et exprime.

If this extract be applied undiluted twice, by means of a hair pencil, it produces, in children, free vesication in an hour or two; and if applied three times in an adult, the same effect takes place in three or four hours. The ether evaporates, and the remaining green fixed oil operates like the cantharides in substance.

OETTINGER.

680. *Blistering or Cantharidal Collodion.*

R. Ætheris Cantharidalis (prepared as above),

Collodii, partes æquales.

Misce.

It is computed that two scruples of this collodion are equal to four drachms of common blistering plaster. It is applied by a brush two or three times over the affected part.

OETTINGER.

681. *Extract of Cantharides.*

During the winter of 1853, a simple aqueous extract of Spanish Flies, prepared by Professor Procter, was used extensively in the Pennsylvania Hospital, and found to be a most efficient substitute for the blistering cerate. The application of it for six hours raised as free a blister as the cerate did in eight.

Since the discovery, by the same gentleman, that cantharidin is soluble in oil, oleaginous extracts have been devised, thus proving the general correctness of Galen's plan of preparing an ointment by macerating the entire insect in melted lard for twenty four hours, and then straining by expression. An oleaginous extract, prepared by digesting the powdered flies in melted lard, is a most efficient substitute for the official cerate.

CLASS XX.

RUBEFACIENTS.

THE substances called Rubefacients not unfrequently vesicate on very delicate skins. The term, therefore, is relative. They are employed for the same purposes as blisters, and are often good substitutes for them.

682. *Mustard Plaster.*

R. Pulveris Sinapis Nigræ ʒij;
Aquæ q. s. ut fiat cataplasma.

It is a very general practice to use vinegar in making this plaster, but if the mustard be pure, the chemical reactions, on which the irritant properties chiefly depend, are better developed with water than vinegar. In fact, a high heat, or the use of a strong acid solution, materially checks the process.

The uses of the mustard poultice are too well known to require description. It is frequently made by adding an equal quantity of wheat or rye flour; this should always be done for children, or other persons of delicate skins. It cannot generally be borne longer than half an hour or an hour.

Great care should be taken to caution ignorant persons against too long-continued use of mustard in contact with the skin, as the slough produced by it is very deep and intractable. Persons not unfrequently have gone to sleep under the soothing effect of a mustard plaster, to awaken in agony from this dangerous burn.

If a mild rubefacient effect be desired, the mustard may be mixed with syrup or molasses, instead of water. When thus made, the plaster may be borne two or three hours.

683. *Garlic Cataplasma.*

The garlic cataplasma is employed with the same intention as the mustard, though much less active. It may be made by

bruising the cloves of garlic, and mixing them in a common poultice of bread and milk.

684. *Onion Poultice.*

Onions are often used in cases of croup, and in diseases of the chest in children, as revulsives and antispasmodics. Having been partially roasted, mashed, and spread between the folds of thin muslin, they are applied over the chest, and are permitted to remain as long as they retain their warmth and moisture.

Another onion poultice may be prepared by boiling thoroughly corn-meal until a soft mush is produced; then cutting the raw onions very fine, and stirring the onion and juice into the hot mush; allowing to heat through, and then spreading upon cloths. Onion poultices make a most valuable application to the legs and arms of children threatened with convulsion.

685. *Cataplasm of Mustard, Pepper, and Ginger.*

R. Sinapis Nigræ contusæ ℥ss;
 Pulveris Piperis,
 Pulveris Zingiberis, āā ʒj;
 Aquæ bullientis q. s. ut fiat cataplasma.

Signa.—To be applied to the region of the stomach in severe pain or sickness, or to the soles of the feet when revulsion is required.

686. *Spice Plaster.*

R. Pulveris Caryophylli,
 Pulveris Piperis,
 Pulveris Capsici,
 Farinæ, āā ʒj;
 Aquæ bullientis q. s. ut fiat cataplasma.

Signa.—Let the plaster, thus prepared, be applied hot to the epigastric region.

Employed for the relief of flatulence and sick stomach.

687. *Clove Plaster.*

Quilt some powdered cloves in flannel, and wring them out in hot whiskey or alcohol. Thus prepared, they form an excellent external application in colic, and in irritability of the stomach, etc.

688. *Mercurial Ointment, Camphor, etc.*

R. Unguenti Hydrargyri ʒj;
 Olei Terebinthinæ,
 Camphoræ, āā ʒij;
 Cerati Adipis ʒj.

Misce, et fiat unguentum secundum artem.

Used as a rubefacient over the hypochondriac region, when blisters are precluded.

689. *Tartar-emetie Plaster.*

This may be made by sprinkling the powdered tartar emetic on the surface of a Burgundy pitch or adhesive plaster, or on one made by spreading basilicon, or simple ointment, on soft leather or linen. In either way the margin should be left clean.

Tartar emetic requires a longer time to produce its effect than the ordinary blister; the irritation is of a peculiar and very painful kind, and its effects must be watched with extreme care.

690. *Tartar-emetie Ointment.*

R. Antimonii et Potassæ Tartratis ʒj;
 Adipis ʒj.
 Tere simul.

This ointment, when applied to the skin, is a slow but certain means of exciting an eruption. The officinal formula is two drachms to the ounce, a better strength for ordinary purposes.

Dr. Kramer speaks highly of its use in acute inflammation of the tympanic membrane. It is to be rubbed over the mastoid process.

HANNAY.

691. *Lotion of Tartar-emetie and Corrosive Sublimate.*

R. Antimonii et Potassæ Tartratis ʒj;
 Hydrargyri Chloridi Corrosivi gr. v;
 Aquæ f ʒj.

Solve, et adde—

Spiritûs Lavandulæ Compositi f ʒj.

This solution is applied by rubbing it on the part. The rubbing should be continued for five or ten minutes, and after some hours a pustular eruption will appear.—Dr. Hannay's essay, *De Tartratis Antimonii usu externo*, p. 26.

It has been used in pertussis, dyspncea, catarrh, etc., and in the removal of incipient tumors.

It has been ascertained by the illustrious Jenner and others, that tartar emetic, employed for an undue length of time externally, will produce violent effects on the system.

We find in a note in Beck's *Medical Jurisprudence*, vol. ii. p. 283, that Dr. Francis mentions two cases wherein tartar emetic ointment, excessively used, produced effects similar to those at times arising from the outward application of arsenic. Magendie and Brodie ascertained by experiments upon animals, that, inserted into wounds, its effects resemble those produced by its internal exhibition.

692. *Granville's Antidynous Lotions.*

These preparations act with great celerity. They are formed of *three ingredients*, mixed in certain proportions, according to the urgency of the case, viz:—

1. Of a saturated solution of ammonia; 2. Of the spirit of rosemary; and 3. Of spirit of camphor.

1. *The milder Ammoniated Lotion.*

R. Aquæ Ammoniaë Fortioris f̄j;
 Spiritûs Rosmarini (*Phar.* 1850) f̄vj;
 Spiritûs Camphoræ f̄ij.

Misce.

2. *The stronger Ammoniated Lotion.*

R. Aquæ Ammoniaë Fortioris f̄x;
 Spiritûs Rosmarini (*Phar.* 1850) f̄iv;
 Spiritûs Camphoræ f̄ij.

Misce.

The only point in which these formulas differ from the original by Dr. Granville is in the preparation of the spirit of rosemary. Our Pharmacopœia directs the oil of rosemary to be dissolved in alcohol. Dr. Granville had it prepared "by taking two lbs. of the tips or small leaves of fresh rosemary, and eight pints of alcohol, which are infused together for twenty-four hours in a covered vessel, and after adding as much water as will first prevent the empyreumatic smell, distil over *seven* pints."

As to the method of applying these counter-irritants, we shall use the words of their inventor, Dr. Granville. "First impregnate with the colorless and transparent liquid, either a piece of linen folded six or seven times to the size of the part intended to be covered, or a piece of thick and coarse flannel;

and, secondly, lay either of them on the spot, pressing with the hand at the same time, very steadily and firmly, the said linen or flannel, over which there should be placed a thick towel, doubled several times, so that not only the evaporation of the lotion may be impeded, but the hand employed in pressing the application to the part may not suffer damage from any evaporation, or from contact with the liquid. In some parts of the body more convenient than the others, the readiest and most effectual mode of pressing down the application is, by tying over it a towel or thick bandage; but to this mode there is the objection that we cannot, under certain circumstances, inspect the part as quickly and as often as required, so as to judge, from the effect of the application, when to stop, or how long to persevere in using it."¹

When applied to the temples, forehead, jaws, or chin, great care must be taken to prevent the effluvia from affecting the eyes and nostrils. The skin should be examined in a minute or two after the application, in order to see the effect produced. When the pain is severe after the lotion is removed, simple diluent washes, and warm water, which is perhaps the best, will speedily allay it. Vesication will generally take place in from two to five minutes, and even in a minute in some persons; but where cauterization is requisite, ten or twelve minutes may be necessary. The irritated or denuded surface may be dressed, according to existing indications, with a simple poultice, tepid fomentations, cerate, or irritating ointments.

693. *Gondret's Pommade Ammoniacale.*

R. Adipis partes xxxij;
 Olei Amygdalæ Dulcis partes ij;
 Aquæ Ammoniæ Fortioris partes xvij.

Melt the lard, mix the oil with it, and pour them into a wide-mouthed vial with a glass stopper; then add the ammonia, close the bottle, mix the contents together by shaking, and keep the mixture in a cool place. If the skin is to be excited, perspiration to be re-established, or some subcutaneous engorgement to be dissipated, the pommade is applied by friction with the fingers. But if a rubefacient effect is desirable, spread the ointment thickly on linen, and apply it for one or two minutes. For vesication, continue the application for five or six minutes; and, by a farther continuance, absolute cauterization is speedily produced.

¹ Granville: Counter-Irritation, its Principles and Practice, p. 39.

This, and the preceding ammoniacal preparations, are used in a great variety of diseases, and in all cases when speedy and powerful counter-irritation is demanded; as in neuralgia and rheumatic affections generally, both acute and chronic; spasms, convulsions, gout, paralysis, inflammatory diseases of internal organs, diseases of the heart, sprains, amaurosis, diseases of the eyes, etc. etc.

694. *Caustic Solution of Potassa.*

R. Potassæ ʒjss;
 Aquæ fʒij.
 Fiat solutio.

Applied to the spine in tetanus.

Dr. Joseph Hartshorne speaks in high terms of the beneficial effect of this solution in the above disease. The best mode of applying it, so as merely to produce a rubefacient action, is to tie a piece of sponge to a stick or common table fork, and apply it from the nape of the neck to the sacrum. When the solution is strong, the effect is powerful.

695. *Concentrated Tincture of Cayenne Pepper.*

R. Pulveris Capsici ʒiv;
 Alcoholis fʒxij.
 Macera per dies septem et cola.

This powerful rubefacient is recommended as an embrocation for toothache and neuralgic affections.

A. TURNBULL.

696. *Turpentine Liniment.*

R. Olei Terebinthinæ,
 Olei Olivæ, āā ʒij;
 Spiritûs Camphoræ fʒj;
 Aquæ Ammoniacæ fʒj.
 Fiat linimentum.

This is a good combination, and it may be used in most cases in which a prompt rubefacient is indicated. It is an effective agent for the relief of tympanitis, whether occurring after dysentery or diarrhoea, or arising in the progress of low fevers. For this purpose it should be well rubbed over the abdomen several times daily.

697. *Liniment of Cantharides.*

R. Pulveris Cantharidis ʒj;
 Olei Terebinthinæ fʒviij.
 Digere per horas tres in vase leviter clauso, et cola.

This liniment was first made by Dr. Jos. Hartshorne, of this city, who used it with great success in typhoid fever. It is merely rubbed over the surface of the body.

S. G. MORTON.

698. *Compound Liniment of Cantharides.*

R. Camphoræ ʒiij.
Solve in Linimenti Cantharidis fʒss; et adde—
Unguenti Hydrargyri,
Unguenti Adipis, āā ʒj.
Fiat linimentum.

This preparation is employed in low fever, when it is desirable to rouse the system, and at the same time affect it with mercury; also in tumors.

S. G. MORTON.

699. *Liniment of Croton Oil.*

R. Olei Tiglii,
Olei Olivæ, āā ʒj.
Fiat linimentum.

Croton oil is one of our safest and most efficient rubefacients. Rubbed for a few minutes, or sometimes even for a few seconds, on the skin, it produces irritation and redness, followed in some hours by a pustular eruption. If the effect is too severe at first, it is readily counteracted by a poultice, preceded by washing with mild soap and water to remove the oil. In some persons the oil may be applied pure.

[700. *Liniment of Croton and Oil of Amber.*]

R. Olei Tiglii gtt. xx ad xl.
Olei Succini rectificati fʒj.
Misce, et fiat linimentum.

A most efficient liniment for the throat or chest in croup, catarrh, or pneumonia.

ELLWOOD WILSON.

701. *Volatile Liniment.*

R. Olei Olivæ,
Aquæ Ammoniacæ, āā fʒj.
Misce.

Applied to the neck in inflammation of the throat. It is also used for sprains and bruises, and for enlarged glands.

702. *Ammoniated Soap Liniment.*

R. Linimenti Saponis f̄ij;
 Aquæ Ammoniacæ f̄j;
 Tincturæ Opii f̄ss.
 Fiat linimentum.

This may be beneficially employed in the same class of diseases as the volatile liniment.

Iodine.

Iodine is used in different forms as a rubefacient and counter-irritant. It produces local alterative effects when applied externally, and hence is much employed for the discussion of buboes, goitre, enlarged glands, and diseases of the joints. The officinal tincture is generally recommended, and is applied to the diseased part by a camel's hair pencil.

The following formulas furnish solutions of different strengths, which prove satisfactory in practice.

703. *Lugol's Rubefacient Solution.*

R. Iodini ʒss;
 Potassii Iodidi ʒj;
 Aquæ fʒvj.
 Misce.

Used for touching the free margins of the eyelids and nostrils in scrofulous ophthalmia, and strumous affections of the mucous membrane.

LUGOL.

704. *Iodine Paint.*

R. Iodini gr. lxiv;
 Potassii Iodidi gr. xxx;
 Alcoholis f̄j.
 Fiat solutio.

KING'S COLLEGE HOSPITAL.

705. *Ethereal Solution of Iodine.*

R. Ætheris f̄j;
 Potassii Iodidi gr. xv;
 Iodini q. s. ad saturandum.
 Misce.

"It is applied in the same way as the tincture, by means of a camel's hair pencil rubbed over the part, until it begins to produce a burning sensation; then cover it with a pledget of wadding, so as to prevent evaporation."

R. THOMSON.

706. *Liniment of Croton Oil and Potassa.*

R. Olei Tiglii,
Liquoris Potassæ, āā ℥xv.
Misce, et adde—
Aquæ Rosæ fʒj.
Fiat linimentum.

This may be rubbed on the affected part twice or three times a day, until minute pustules appear.

JAMES ALLEN.

707. *Cowhage Ointment.*

R. Mucunæ gr. viij;
Adipis ʒj.
Fiat unguentum.

The ointment must be rubbed in from ten to twenty minutes. The immediate effect is a sensation resembling stinging with nettles, but this passes off in less than half an hour. The skin generally becomes covered with white papules, which soon disappear.

It is used in the same cases as the tartar emetic, or the Croton oil liniment.

BLATIN.

CLASS XXI.

ANOMALOUS EXTERNAL APPLICATIONS.

IT was the original intention of the author of this work to arrange all the prescriptions, whether for internal or external use, under their appropriate therapeutic heads, and a few of the earlier editions conformed, more or less, to this view. But the introduction of a great number of new remedies, the true value of which can only be determined by careful trials, has caused much difficulty in arranging them properly in that respect. This remark is particularly applicable to the host of articles used, under various forms, in the skin diseases. To remedy this, and to facilitate reference as much as possible, the Editor has added the present class, which is arranged on a pharmaceutical, rather than a therapeutical basis, and its subdivisions are named according to the form of preparation employed, viz: Collyria, Injections, Gargles, Liniments, Ointments, Cataplasms, Baths, Fomentations, and Fumigations.

A.—COLLYRIA.

These are preparations applied to the eyes. They are sometimes dry, but generally liquid—consisting of infusions, decoctions, or distilled waters, with the addition of various medicinal substances.

Powders.

708. *Dry Collyrium of Oxide of Zinc and Sugar.*

R. Sacchari,
Zinci Oxidi, āā partes æquales.
Tere in pulverem.

The ends of a quill having been cut off, a small quantity of the powder is placed in the barrel, and is gently blown into the eye.

M. RECAMIER.

709. *Dry Collyrium of Red Precipitate and Oxide of Zinc.*

R. Sacchari ʒij;
Hydrargyri Oxidi Rubri gr. x;
Zinci Oxidi ʒj.

Fiat pulvis subtilissimus.

This, like the preceding powder, is used in opacities of the cornea, by blowing into the eye through a quill.

DUPUYTREN.

710. *Dry Collyrium of Opium and Calomel.*

R. Pulveris Opii gr. iv;
Hydrargyri Chloridi Mitis,
Sacchari, āā ʒj.

Tere bene.

This compound is blown into the eye for the removal of specks on the cornea resulting from inflammation.

711. *Lapis Divinus.*

R. Aluminis,
Potassæ Nitratiss,
Cupri Sulphatis, āā ʒj;
Camphoræ ʒss.

The alum, nitre, and sulphate of copper are to be fused together, in a glazed earthen crucible, to drive off the water of crystallization, and the camphor is to be added near the end of the process. The cold mass is to be broken in pieces, and preserved in a closely stoppered bottle.

This article is much employed on the Continent as an eye-wash, in the strength of two grains and upwards to a fluid-ounce of distilled water.

Solutions and Mixtures.

712. *Alum Collyrium.*

R. Pulveris Aluminis gr. viij;
Aquæ Rosæ fʒj.

Fiat solutio.

To be applied to the eye in chronic inflammation, as well as in the purulent ophthalmia of infants.

MOORFIELD'S HOSP. *Pharm.*

713. *Collyrium of Iodine and Iodide of Potassium.*

R. Aquæ Rosæ f̄vj;
Potassii Iodidi gr. xxiv;
Iodini gr. ij.

Fiat collyrium.

Signa.—To be applied to the eyes three or four times in the day.

In scrofulous ophthalmia and ulcerations of the cornea and conjunctiva. It is also serviceable in removing metallic specks from the cornea, by forming a soluble iodide with the metal.

RYAN.

714. *Collyrium of Green Vitriol.*

R. Ferri Sulphatis gr. ij;
Aquæ f̄j.

Fiat solutio.

Used in chronic ophthalmia.

715. *Collyrium of Subacetate of Lead and Wine of Opium.*

R. Liquoris Plumbi Subacetatis ℥xij;
Vini Opii ℥xl;
Aquæ Rosæ f̄iiv.

Fiat collyrium.

This is an excellent eye-water, but it should not be used when there are ulcers on the cornea, as the lead might combine chemically with the base of the ulcer and form an indelible mark.

716. *Collyrium of Vinegar and Alcohol.*

R. Aceti destillati f̄j;
Alcoholis f̄ss;
Aquæ Rosæ f̄viiij.

Fiat mistura.

Signa.—To be applied to weak eyes.

In chronic ophthalmias after depletion.

717. *Collyrium of Acetate of Zinc.*

R. Zinci Acetatis gr. ij;
Aquæ Rosæ f̄j.

Fiat solutio.

This is one of the best eye-waters in common use.

It may be employed with great benefit in recent cases of

inflammation of the eyes. It should be dropped into the eye twice daily.

718. *Alum Curd.*

R. Pulveris Aluminis ℥ss;
Albumen unius ovi.

Fiat coagulum.

Signa.—To be applied on a linen rag to inflamed eyes. It should be removed in three or four hours.

719. *Collyrium of Nitrate of Silver.*

R. Argenti Nitratis gr. j;
Aquæ destillatæ f℥j.

Fiat solutio.

Signa.—Used by dropping into the eye.

In acute ophthalmia, and to promote the absorption of specks upon the cornea.

720. *Collyrium of Sulphate of Cadmium.*

R. Cadmii Sulphatis gr. iij;
Aquæ Rosæ f℥ij;
Vini Opii f℥j.

Fiat mistura.

Used for opacities of the cornea, and in chronic ophthalmia.

The quantity of sulphate of cadmium is gradually increased to four grains in an ounce.

FRONMULLER.

721. *Camphorated Collyrium of Sulphate of Copper.*

R. Cupri Sulphatis gr. vj;
Aquæ Camphoræ f℥viij.

Solve.

Signa.—To be dropped into the eye.

This is nearly the same as the formula recommended by Mr. Ware in the treatment of purulent ophthalmia.

[722. *Collyrium of Borax and Opium.*]

R. Sodæ Biboratis gr. xx;
Vini Opii gtt. x;
Aquæ Rosæ f℥j.

Misce.

In cases of chronic conjunctival congestion.

T. G. MORTON.

723. *Collyrium of Prussic Acid.*

R. Acidi Hydrocyanici diluti fʒj;
 Aquæ destillatæ fʒviij.

Misce.

A few drops are placed in the eye in irritable ophthalmia, as also to remove the conjunctival stains made by nitrate of silver.

MOORFIELD'S HOSPITAL *Pharm.*

724. *Collyrium of Gallic Acid and Opium.*

R. Acidi Gallici gr. x;
 Glycerinæ ʒij;
 Extracti Opii gr. x;
 Aquæ fʒij.

Misce et cola.

Signa.—Apply a few drops to the eye night and morning.

This is a mild astringent lotion, useful in cases of chronic ophthalmia.

725. *Strychnia Collyrium.*

R. Strychniæ gr. ij;
 Acidi Acetici diluti,
 Aquæ destillatæ, āā fʒj.

Fiat solutio.

Signa.—A drop or two, diluted or not according to circumstances, to be applied to the eye several times a day.

DR. RYAN on *Amaurosis.*

[726. *Collyrium of Atropia and Tannin.*]

R. Atropiæ Sulphatis gr. j;
 Acidi Tannici gr. v-xx;
 Glycerinæ puræ fʒj;
 Aquæ Rosæ fʒj.

Misce.

In chronic, irritable, granular conjunctivitis.

T. G. MORTON.

727. *Collyrium of Corrosive Sublimate.*

R. Hydrargyri Chloridi Corrosivi gr. ij;
 Ammoniæ Hydrochloratis gr. vj;
 Aquæ destillatæ fʒviij.

Fiat solutio.

The above may be advantageously used in gonorrhœal or scrofulous ophthalmia, as also to remove opacity of the cor-

nea, after the subsidence of inflammation. Known as Mackenzie's wash.

728. *Collyrium of Opium and Camphor.*

R. Extracti Opii gr. x;
Camphoræ gr. vj;
Aquæ ferventis f̄xij.

Tere simul et cola.

The anodyne nature of this preparation is supposed to afford some advantage over ordinary lotions, in painful affections of the eye.

[729. *Decoction of Quince Seed.*]

R. Cydonii Seminum ʒij;
Aquæ destillatæ Oj.

Coque lente, per sextam partem horæ et cola.

A mild soothing application in acute ophthalmia.

London Pharmacopœia.

730. *Conrad's Collyrium.*

R. Hydrargyri Chloridi Corrosivi gr. j;
Decocti Cydonii (Formula 729) f̄ʒj;
Aquæ Rosæ f̄vj;
Vini Opii f̄ʒj.

Fiat mistura.

This collyrium is praised by most of the German oculists in cases of chronic ophthalmia.

731. *Bates's Camphorated Water.*

R. Cupri Sulphatis,
Boli Armeniæ, āā gr. viij;
Camphoræ gr. ij;
Aquæ bullientis f̄viiij.

Fiat infusum et cola.

This is used as a lotion in the purulent ophthalmia of infants.

732. *Collyrium of Spirit of Mindererus and Camphor Water.*

R. Liquoris Ammoniæ Acetatis f̄ʒij;
Aquæ Camphoræ f̄vj.

Misce.

Signa.—For eyes requiring a mild astringent and stimulant application.

733. *Collyrium of Spirit of Mindererus with Opium.*

R. Extracti Opii gr. x;
 Aquæ ferventis f̄vj.
 Solve, cola, et adde—
 Liquoris Ammoniaë Acetatis f̄ij.

Used in acute ophthalmia, when considerable pain remains after depletion.

[734. *Collyrium of Corrosive Sublimate, Opium, etc.*]

R. Hydrargyri Chloridi Corrosivi gr. $\frac{1}{2}$;
 Extracti Opii Aquosi gr. viij;
 Decocti Cydonii f̄ss;
 Aquæ Rosæ f̄iv.

Misce.

For application after the removal of the foreign bodies, or in superficial burns.

T. G. MORTON.

735. *Emollient Collyrium.*

R. Altheæ contusæ ʒij;
 Aquæ destillatæ Oj.
 Macera per horas tres, et cola.

In inflammation of the conjunctiva accompanied with violent irritation.

736. *Collyrium of Poppies and Camphor.*

R. Decocti Papaveris, Lond. f̄iv;
 Aquæ Rosæ,
 Aquæ Camphoræ, āā f̄ij.

Misce.

This is adapted to the early stages of ophthalmia.

737. *Collyrium of Wine of Opium.*

R. Vini Opii,
 Aquæ destillatæ, āā f̄ss.

Misce.

This is found beneficial in rheumatic ophthalmia, when all the febrile symptoms are gone, and little more than lingering redness with weakness of the eye remains, by being dropped into the eye twice daily.

MACKENZIE.

738. *Collyrium of Conia.*

R. Coniæ partes ij;
 Alcoholis partes xiiij;
 Aquæ destillatæ partes cc.
 Fiat solutio.

Employed in scrofulous ophthalmia, with intolerance of light, by rubbing it around the orbits, or dropping it in the eye several times a day.

Conia, the active principle of conium maculatum, is a virulent poison, and therefore care is requisite, even in its external use. FRONMULLER.

739. *Guthrie's Ointment.*

R. Argenti Nitratis gr. ij;
 Liquoris Plumbi Subacetatis ℥xv;
 Unguenti Cetacei, *Lond.*, ʒj.
 Fiat unguentum.

“The manner of using the ointment, is by introducing between the lids a portion, larger or smaller, as the case may seem to require, from the size of a large pin’s head to that of a garden pea.” GUTHRIE.

[740. *Collyrium of Nitrate of Silver and Atropia.*]

R. Argenti Nitratis gr. ij;
 Atropiæ Nitratis gr. j;
 Aquæ destillatæ fʒj.
 Misce.

In atonic ulceration of the cornea. T. G. MORTON.

741. *Ointment of Red Precipitate and Sulphate of Zinc.*

R. Hydrargyri Oxidi Rubri gr. x;
 Zinci Sulphatis ʒj;
 Adipis ʒij.
 Fiat unguentum.

Recommended by Professor Dupuytren in obstinate chronic ophthalmia depending on a scrofulous diathesis.

B.—INJECTIONS.

Injections are liquid compositions of emollient, astringent, or stimulating substances. The parts into which they are

thrown are the external auditory passages, the nostrils, the canal of the urethra, the bladder, and the vagina; and also into fistulous cavities, and into the tunica vaginalis in the case of hydrocele.

A.—FOR THE EAR.

742. *Camphorated Injection of Cajeput Oil.*

R. Camphoræ ℥iv;
 Olei Cajuputi f℥vij;
 Olei Amygdalæ Dulcis f℥xv.

Tere simul.

Signa.—A few drops to be dropped into the ear, in cases of dulness of hearing, from hardened wax, or dryness of the membrane.

RADIUS.

743. *Goulard's Extract and Rose Water.*

R. Liquoris Plumbi Subacetatis f℥j;
 Aquæ Rosæ f℥j.

Misce.

Signa.—This is to be dropped into the ear until the meatus is full, and be allowed to remain there for a few minutes.

Used in otorrhœa.

WILDE.

744. *Mixture with Bates's Alum Water.*

R. Liquoris Aluminis Compositi, *Lond.*, f℥j;
 Aquæ Rosæ f℥j.

Misce.

Used in otorrhœa, in the same way as the preceding.

WILDE.

745. *Mixture with Aqua Sappharina.*

R. Liquoris Cupri Ammonio-Sulphatis, *Lond.*, f℥j;
 Aquæ destillatæ f℥j.

Misce.

Like the preceding, this is used as an astringent in otorrhœa.

WILDE.

746. *Solution of Nitrate of Silver.*

R. Argenti Nitratis gr. x;
 Aquæ destillatæ f℥j.

Fiat solutio.

Used in simple otorrhœa by painting the meatus and membrana tympani with a fine camel's hair pencil, dipped in the

solution, every second or third day; and one of the three foregoing solutions is used in the interim, night and morning.

WILDE.

747. *Another Form.*

R. Argenti Nitratis ʒss;
Aquæ destillatæ fʒj.

Fiat solutio.

This is recommended to be applied every third day to the outer half of the meatus, and adjacent portion of the concha, in chronic inflammation or thickening of the membrane lining the tympanic cavity.

J. TOYNBEE.

[748. *Injection of Sulphite of Soda.*]

R. Sodæ Sulphitis ʒj;
Aquæ destillatæ fʒj.

Fiat solutio.

For injection into the meatus in otorrhœa, connected with ulceration of the tympanum, and disease of the bones.

749. *Injection of Pyroligneous Acid.*

R. Acidi Pyrolignei, *Dub.* fʒij;
Aquæ destillatæ fʒvj.

Fiat injectio.

Signa.—To be injected twice a day with a silver syringe, in purulent discharge from the ear.

BUCHANAN.

750. *Injection of Catechu.*

R. Catechu gr. xij;
Aquæ bullientis fʒvj.

Infunde et cola.

Signa.—To be used four or five times a day.

BUCHANAN.

751. *Pyroligneous Acid, Ether, and Turpentine.*

R. Acidi Pyrolignei, *Dub.*,
Spiritûs Ætheris Sulphurici, *Ed.*,
Olei Terebinthinæ, āā partes æquales.

Misce.

Signa.—Introduce two drops into the meatus auditorius externus every night, when the cerumen is deficient in quantity.

BUCHANAN.

752. *Injection of Creasote.*

R. Creasoti gtt. ij;
 Alcoholis gtt. x;
 Syrupi f̄3j;
 Aquæ f̄3vij.

Misce.

To be used like the foregoing.

753. *Solution of Sulphate of Cadmium.*

R. Cadmii Sulphatis gr. viij;
 Aquæ f̄3j.

Fiat solutio.

Used in otorrhœa, as an alterative and astringent to arrest the discharge. LINCKE.

B.—FOR THE NOSTRILS.

Injection into the nostrils may be made by an ordinary glass or metallic syringe, pressed firmly into the anterior nares, the pipe of the syringe being directed backward, parallel with the roof of the mouth. The most efficient means, however, of bringing medicinal solutions in contact with the nasal membranes, is the use of the Thudichum douche, consisting of a bottle or other reservoir, having an aperture near its bottom, to which is attached a rubber tube, having at its extremity a plug capable of completely stopping the external nostril. In using it the medicated fluid is put into the bottle, the plug of the tube inserted tightly into the nostril, the mouth opened wide, and forcible respiration made through it; when the bottle is raised above the level of the head, the liquid passes by gravitation into one nostril, filling the maxillary sinuses upon that side, and, not being able to pass into the pharynx from the closure of the posterior nares, is carried around the septum into the meatus of the other side, and passes from the other nostril, thus washing out the whole nasal apparatus, with its connecting sinuses, maxillary and frontal, without running down the throat. It is necessary to use great care in keeping the mouth open wide, and breathing forcibly, otherwise the fluid will run down the throat, and cause suffocation.

The ordinary injection used by Dr. Thudichum in ozaena or nasal catarrh, consists of a tablespoonful or two of common

table salt in a pint of tepid water. Other formulas are as follows, all of which I have used with good results:—

[754. *Douche of Permanganate of Potassa.*]

R. Potassæ Permanganatis gr. xvj;
Aquæ puræ Oj.

Misce.

Signa.—Use, three or four times daily, about two or three tablespoonfuls at a time.

[755. *Douche of Iodide of Zinc and Permanganate of Potassa.*]

R. Potassæ Permanganatis gr. xvj;
Zinci Iodidi ʒss;
Tincturæ Myrrhæ fʒij;
Aquæ Oj.

Signa.—Use three or four times daily.

In ozæna, offensive nasal discharge, and frontal pain from disease of the sinus.

[756. *Douche of Hyposulphite of Soda.*]

R. Sodæ Hyposulphitis ʒiij;
Aquæ Oj.

Misce.

Signa.—As above, for the same conditions.

[757. *Douche of Alum.*]

R. Aluminis ʒiv;
Aquæ Oss.

Misce.

For epistaxis.

[758. *Douche of Perchloride of Iron.*]

R. Ferri Perchloridi ʒiv;
Aquæ Oss.

Misce.

For epistaxis; also catarrh.

C.—FOR THE URETHRA.

When injections are employed in the cure of gonorrhœa, two circumstances merit especial attention, viz., the manner of injecting them and the frequency of using them. When the common syringe is used, the pipe should be perfectly smooth,

short, and conical, so that it cannot pass more than a quarter of an inch into the urethra. The patient should oil the pipe before using it, seat himself on the edge of a chair, so as to avoid pressing the perineum, draw the penis forward on the syringe with the left hand, and throw up the injection to the seat of disease (previously ascertained) with the other. As respects the frequency of injecting, it may be observed, that five or six times a day are not too often, and that the cure will be retarded by using these remedies at longer intervals. We cannot forbear remarking that gonorrhœal inflammation, situated near the extremity of the penis, can be often cured by a *routine plan*; but when seated higher up the canal, and affecting Cowper's glands or the prostate, it becomes a serious disease, the cure of which ought not to be undertaken by persons ignorant of the structure of the parts and the nature of morbid action.

759. *Nitrate of Silver.*

This article is extensively used, both in gonorrhœa and gleet. Some practitioners employ a weak solution, of two or three grains to the ounce of rosewater, twice a day. Others prefer ten grains to the ounce, and employ the injection every second or third day. Another class prefer an ointment of ten or twenty grains to the ounce, and smear this over a bougie, which is then passed into the urethra. In acute gonorrhœa, either of the latter plans will frequently arrest the disease in a few days. In gleet, perhaps, the first plan is preferable.

760. *Injection of Opium.*

R. Extracti Opii ℥j;
Glycerinæ f̄3j;
Aquæ f̄3iij.

Misce.

Signa.—Use after every passage of urine.

This affords great relief to the local pain and uneasiness, and causes a diminution of the discharge in gonorrhœa.

F. J. BUMSTEAD.

761. *Injection of Corrosive Sublimate, etc.*

R. Zinci Sulphatis gr. x;
Hydrargyri Chloridi Corrosivi gr. ij;
Aquæ Rosæ f̄3viij.

Fiat injectio.

In gleet.

This powerful remedy should be employed with great caution.

762. *Injection of Sulphate of Zinc and Laudanum.*

R. Zinci Sulphatis gr. x;
 Pulveris Acaciæ ʒij;
 Tincturæ Opii fʒj;
 Aquæ destillatæ fʒviij.
 Fiat injectio.

In gonorrhœa virulenta.

763. *Injection of Sulphate of Zinc and Acetate of Lead.*

R. Zinci Sulphatis,
 Plumbi Acetatis, āā gr. xx;
 Aquæ Rosæ fʒiv.

Misce.

Signa.—Shake the bottle before using.

Although mutual decomposition of the salts takes place, the resulting mixture forms an excellent injection for gonorrhœa.

RICORD.

764. *Injection of Muriate of Ammonia, etc.*

R. Ammoniæ Muriatis gr. j;
 Hydrargyri Chloridi Corrosivi gr. ij;
 Aquæ destillatæ fʒiv.
 Fiat injectio.

In chronic gonorrhœa.

765. *Injection of Acetate of Zinc.*

R. Zinci Acetatis gr. viij;
 Aquæ Rosæ fʒiv.
 Fiat injectio.

In gonorrhœa virulenta.

For all these preparations, rosewater is an admirable menstruum; it possesses the advantages of being slightly astringent and rendered pure by distillation, and is therefore particularly applicable to the formation of injections and collyria.

766. *Injection of Chloride of Zinc.*

R. Zinci Chloridi gr. j;
 Aquæ fʒj.
 Fiat solutio.

This injection has been used in St. Bartholomew's Hospital, London, with much success, by Mr. Lloyd, in cases of gonorrhœa. Mr. Weeden Cooke recommends the simultaneous employment of the alkaline carbonates internally.

767. *Injection of Monsel's Salt.*

R. Liquoris Ferri Subsulphatis f̄3ss;
 Aquæ f̄3vj.
 Solve.

Signa.—Use for an injection.

Recommended in gleet.

BUMSTEAD.

768. *Injection of Sulphate of Iron.*

R. Ferri Sulphatis gr. viij;
 Aquæ f̄3j.
 Fiat solutio.

Used in gleet.

769. *Injection of Iodide of Iron.*

R. Ferri Iodidi ̄3ss;
 Aquæ f̄3viij.
 Fiat solutio.

Used in blennorrhœa.

RICORD.

770. *Injection of Sulphate of Quinia.*

R. Quiniæ Sulphatis gr. viij;
 Aquæ f̄3j;
 Acidi Sulphurici diluti q. s. ut fiat solutio.

Used in gonorrhœa.

GODDARD.

771. *Injection of Chlorate of Potassa.*

R. Potassæ Chloratis ̄3ss;
 Aquæ f̄3v.
 Fiat solutio.

This has been used in a number of cases of gonorrhœa, speedily effecting a cure.

A. S. PALMER.

[772. *Injection of Permanganate of Potash.*]

R. Potassæ Permanganatis gr. j-ij;
 Tincturæ Myrrhæ f̄3ij;
 Aquæ f̄3vj.

Misce.

In gonorrhœa.

773. *Injection of Calomel, etc.*

R. Hydrargyri Chloridi Mitis ʒj;
 Acaciæ ʒij;
 Tincturæ Opii fʒss;
 Aquæ fʒviij.

Fiat injectio.

For gonorrhœa or gleet.

774. *Injection of Sulphate of Copper.*

R. Cupri Sulphatis gr. vj;
 Aquæ destillatæ fʒvj;
 Tincturæ Opii fʒj.

Fiat solutio.

To be thrown up the urethra in chronic gonorrhœa.

775. *Injection of Yellow Root (Hydrastis Canadensis).*

R. Radicis Hydrastidis contusæ ʒj;
 Aquæ bullientis Oj.

Macera per horas duas, et cola.

Signa.—Inject an ounce three times daily.

Dr. D. M. McCann, of Martinsburg, recommends highly this injection in gonorrhœa.

Dr. U. E. Ewing also speaks favorably of it; but he directs a drachm of sulphate of copper to be dissolved in the infusion.

776. *Injection of Tea.*

R. Folii Theæ Viridis ʒj;
 Aquæ ferventis fʒvj.

Fiat infusum et cola.

For an injection in gonorrhœa virulenta.

777. *Injection of Copaiba.*

R. Copaibæ ʒv;
 Vitellum unius ovi;
 Extracti Opii gr. j.
 Tere simul, et adde gradatim—
 Aquæ fʒvij.

Misce.

Signa.—Inject a portion several times daily.

This is an efficacious mode of treating gonorrhœa.

DALLAS.

778. *Injection of Ammoniated Copper.*

R. Cupri Ammoniatī gr. v;
 Aquæ Rosæ f̄viiij.

Fiat solutio.

In chronic gonorrhœa.

779. *Solution of Tannin.*

R. Acidi Tannici gr. xxxij;
 Aquæ destillatæ f̄viiij.

Solve.

Employed as a wash to chronic ulcers, and as an injection in obstinate blennorrhœa.—BERAL, in DUNGLISON'S *New Remedies*, 6th ed. p. 45.

780. *Injection of Strychnia.*

R. Strychniæ gr. j;
 Acidi Nitrici ℥ij;
 Aquæ f̄j.

Fiat solutio.

Signa.—Inject a drachm three times a day after urination.

Used in gleet.

JOHNSON.

C.—VAGINAL INJECTIONS.

781. *Injection of Permanganate of Potassa.*

R. Potassæ Permanganatis gr. xx;
 Aquæ Oj.

Solve.

Used in cancer of the womb for its alterant and deodorant effect, also in fetid lochial discharge in puerperal fever, a small quantity being injected several times daily.

D. F. GIRWOOD.

782. *Injection of Creasote.*

R. Creasoti ℥xij;
 Mucilaginis Tragacanthæ ℥ij;
 Aquæ ferventis f̄xxiv.

Fiat mistura.

Recommended for the removal of the fetid and vitiated secretions from the maternal passages in puerperal fever. Warm

water is thrown up to wash out the vagina, and the injection is then used. It is employed in the same way for cancer of the womb.

MACKENZIE.

783. *Injection of Labarraque's Solution.*

R. Liquoris Sodæ Chlorinatæ f̄ij;
 Aquæ f̄xx.
 Misce.

Prescribed as a vaginal wash in cases of infection produced by the decomposition of a retained placenta. TROUSSEAU.

784. *Injection of Mustard.*

R. Pulveris Sinapis Albæ ʒij;
 Aquæ ferventis Oj.
 Misce.

Signa.—Inject a third part three times daily.

Useful in amenorrhœa.

S. ASHWELL.

785. *Vaginal Pessary of Tannic Acid.*

R. Ceræ Albæ ʒv.
 Liquefac cum leni calore, et adde—
 Adipis ʒvj;
 Acidi Tannici ʒij.
 Tere bene et divide in pessos iv.

Used in leucorrhœa and gonorrhœa of females.

SIMPSON.

786. *Vaginal Pessary of Alum and Catechu.*

R. Olei Theobromæ ʒij;
 Aluminis,
 Pulveris Catechu, āā ʒj.
 Misce secundum artem et divide in pessos vj.

Useful in chronic vaginitis and leucorrhœa.

Inoculation and Subcutaneous Injection of Medicines.

INOCULATION.—The introduction of medicines into the skin by inoculation was proposed in 1836 by M. Lafargue, and has since been practised by M. Solon and M. Langenbeck. The latter has tried a number of experiments, whereby the value of this mode of medication has been fully proved. Inoculation is effected by making a number of punctures with a small

lancet through the skin—including both the epidermis and the dermis—and rubbing the medicine, previously dissolved in the smallest possible quantity of fluid, into the punctured part. Some local irritation follows the operation. In this way, solutions of morphia, strychnia, quinia, iodine, corrosive sublimate, and of the various narcotic extracts, have been employed with much success. The quantity of medicament used is about double of what would be administered by the mouth. Inoculation has proved effectual in sciatica, neuralgia, and local pains; but it has not, however, attracted much attention from practical physicians.

SUBCUTANEOUS INJECTION of medicines is more efficacious than inoculation, as in this way remedies can be more readily and certainly introduced. The operation is performed by means of a syringe capable of holding a fluidrachm, and having its perforated nozzle drawn to a point, by which the skin can be penetrated by a gentle rotary motion. Or a delicate trocar and canula may be used. The trocar having been withdrawn, the injection is made by a syringe through the canula. After the operation there are usually some swelling, tenderness, or pain, and a diffused redness of the skin. These local phenomena soon pass away, and the symptoms characteristic of the medicine are manifested on the system. No unpleasant local results need be anticipated, unless the quantity employed be large, or the remedy be of an acrimonious character. In all cases strong solutions are used, with a view of combining efficiency with smallness of bulk.

A source of trouble in giving hypodermic injections exists in the occasional introduction of air through the syringe beneath the skin, the effect of which is generally to produce an abscess, very small usually, but still painful, and preventing the introduction of the fluid at the same point, or even in its vicinity, for a considerable time after. To avoid this, great care must be used to get the instrument to work perfectly air-tight, which can be tested by drawing up the fluid, and then discharging it under the surface without withdrawing it from the vessel in which the fluid is held; if no air-bubbles are expelled from the nozzle, it is in proper working order.

The following method of introduction has been found by the editor to answer better than the usual one, viz: having drawn the proper quantity of fluid into the syringe, with the nozzle applied, pinch up the skin, as far as possible, *tightly* between the thumb and forefinger of the left hand; then *instantly* plunge the needle of the instrument deep down into the cel-

lular tissue, at an oblique angle, nearly to the hilt of the syringe; then *slowly* expelling the fluid, press the finger upon the skin over the needle as it is withdrawn, to prevent any escape of the fluid. This has been found to be much less painful than when the needle is slowly and gently insinuated, and much less likely to be followed by swelling and redness than when the fluid is inserted very near the surface.

Saturated solutions of tannin, and of the peracetate, perchloride, and persulphate of iron, have been injected for the destruction of nævi and small aneurisms.

Dr. Alexander Wood, of Edinburgh, reported nine cases of neuralgia, in 1855, treated by injections of a strong solution of opium, over the seat of pain. In all relief was afforded, and in most a cure was effected.

Dr. Horatio R. Storer injected, successfully, ten drops of a solution of the bimeconate of morphia (bimeconate gr. x, alcohol fʒj, and water fʒxiiij), beneath the mucous membrane of the gum for the relief of toothache in pregnant women. Dr. Scanzoni speaks favorably of the same preparation for neuralgia, and even for puerperal convulsions.

Mr. Charles Hunter, of London, employed concentrated solutions of the acetate of morphia in cases of chorea, tic douloureux, delirium tremens, and hemicrania. The doses ranged from a half to three-fourths of a grain of the acetate. In every instance the peculiar effects of morphia were soon manifested.

Drs. Courty and Cowdell report, severally, the injection of atropia, or its sulphate, in doses ranging from one-thirty-third to one-eighth of a grain in asthma, sciatica, and severe neuralgias. If the atropia be pure, these quantities are too large for ordinary use.

Dr. Ignatius Langer, of Iowa, refers to twenty-three cases of intermittent fever cured by injections of sulphate of quinia. "He administered a solution of two to ten grains of sulphate of quinia in fifteen to thirty grains of water (with an addition of two to six drops of diluted sulphuric acid), according to age, constitution, duration of disease, and former treatment."

D.—GARGLES AND MOUTH WASHES.

Gargles, like injections, are astringent and stimulating, and to be of any service must be frequently applied, and persevered in for some time.

[787. *Gargle of Sage and Flaxseed.*]

R. *Salviæ* ʒij;
Seminis Lini ʒj;
Aquæ bullientis Oj.
 Macera cum leni calore per duas horas; cola.

An excellent gargle in the acute stage of pharyngitis or tonsillitis, when irritating and astringent applications are injurious. To be used cold. J. F. MEIGS.

788. *Gargle of Brandy.*

R. *Spiritûs Vini Gallici*,
Aquæ, āā partes æquales.

Brandy and water form an excellent gargle for some cases of inflamed fauces.

789. *Gargle of White Oak Bark and Alum.*

R. *Quercûs Albæ contusæ* ʒj;
Aquæ Ojss.
 Coque ad Oj, cola, et adde—
Aluminis ʒss;
Spiritûs Vini Gallici fʒij.
 Misc.

Used in sore throat and chronic ulceration of the fauces.

790. *Gargle of Sulphate of Quinia, etc.*

R. *Quiniæ Sulphatis* gr. xij;
Cupri Sulphatis gr. xvj;
Acidi Sulphurici Aromatici fʒj;
Aquæ fʒviij.

Fiat mistura.

Signa.—To be used three or four times a day in obstinate sore throat. JOS. HARTSHORNE.

791. *Gargle of Borax and Myrrh.*

R. *Sodæ Boratis* ʒj;
Tincturæ Myrrhæ fʒss;
Mellis despumati fʒj;
Aquæ Rosæ fʒiv.

Fiat gargarysma.

To be used as a gargle or mouth wash, in ptyalism or scorbutic affections of the gums.

[792. *Mouth Wash of Borax and Honey.*]

- R. Sodæ Biboratis ʒj;
 Glycerinæ fʒj;
 Mellis despumati fʒvj.
 Misce.

For application in aphthous ulceration of the mouth.

P. SQUIRE.

793. *Gargle of Sulphate of Zinc, etc.*

- R. Zinci Sulphatis ʒj;
 Mellis fʒss;
 Tincturæ Myrrhæ fʒj;
 Spiritûs Vini Gallici fʒj;
 Aquæ Rosæ fʒvj.

Fiat gargarysma.

To be applied to ulcerated gums, occasioned by excessive salivation. Water can be added if it be too strong.

794. *Dr. Blake's Toothache Solution.*

- R. Aluminis (in pulverem subtilissimum tritrandi) ʒij;
 Spiritûs Ætheris Nitrosi fʒvij.
 Fiat mistura.

Said by Dr. Blake, of London, to be an infallible cure for *toothache*, when not connected with rheumatism.

795. *Gargle of Alum.*

- R. Aluminis ʒij;
 Aquæ fʒiv.
 Solve.

This is Dr. Cavarra's gargle for *fætor oris*, or offensive breath.

796. *Gargle of Pomegranate and Alum.*

- R. Granati Fructûs Corticis ʒss;
 Rosæ Gallicæ ʒij;
 Aquæ bullientis fʒvj.
 Fiat infusum. Cola et adde—
 Mellis despumati fʒj;
 Aluminis ʒij.
 Fiat gargarysma.

For inflammation of the throat and fauces.

[797. *Gargle of Pomegranate, Chlorate of Potash, etc.*]

R. Corticis Granati Fructûs ʒss;
 Potassæ Chloratis ʒij;
 Quercûs Albæ contusæ ʒj;
 Aluminis ʒss;
 Aquæ bullientis Oij.
 Fiat infusum. Cola.

In subacute and chronic pharyngitis.

L. C. HEYL.

798. *Gargle of Rhatany.*

R. Pulveris Krameriæ,
 Pulveris Cinnamomi, āā ʒj;
 Aquæ bullientis fʒvij.
 Macera per horas duas, cola, et adde—
 Sacchari ʒij.
 Fiat gargarysma.

A valuable astringent gargle in ordinary sore throat.

799. *Muriatic Acid and Peruvian Bark Gargle.*

R. Infusi Cinchonæ Rubræ fʒiv;
 Mellis despumati fʒj;
 Acidi Muriatici ℥x.
 Fiat gargarysma.

In chronic inflammation, when the pain and swelling have been reduced by depletion.

RATIER'S *Formulary*.

800. *Detergent Gargle of Sulphuric Acid, etc.*

R. Decocti Hordei fʒiv;
 Mellis despumati fʒss;
 Acidi Sulphurici ℥x.
 Fiat gargarysma.

RATIER.

801. *Mercurial Gargle.*

R. Hydrargyri Chloridi Corrosivi gr. j;
 Mellis despumati fʒss;
 Aquæ destillatæ fʒiv.
 Fiat solutio.

For venereal sore throat.

RATIER.

802. *Sal Ammoniac and Acetic Acid Gargle.*

R. Acidi Acetici f̄ij;
 Ammoniāe Muriatis ʒj;
 Mellis f̄jss;
 Aquæ f̄xij.
 Fiat gargarysma.

For inflamed fauces.

RATIER.

803. *Gargle of Acetate of Lead.*

R. Plumbi Acetatis ʒss;
 Syrupi f̄j;
 Decocti Hordei Oj.
 Fiat solutio.

In mercurial sore mouth, etc.

RATIER.

804. *Chloride of Lime Gargle.*

R. Calcis chlorinatæ ʒij;
 Aquæ Oj.
 Solve et cola. Dein adde—
 Mellis f̄j.
 Misce.

Used in ulceration of the mouth and throat.

805. *Disinfecting Mouth Wash.*

R. Calcis Chlorinatæ ʒiij;
 Aquæ destillatæ f̄ij.
 Tere simul et filtra. Dein adde—
 Olei Rosæ ℥v;
 Alcoholis f̄ij;
 Mellis Rosæ f̄ss.
 Misce.

Used in mercurial sore mouth.

806. *Cayenne Pepper Gargle.*

R. Tincturæ Capsici f̄ss;
 Aquæ Rosæ f̄viij.
 Misce.

A stimulating gargle used in scarlet fever. GRIFFITHS.

807. *Mel Ægyptiacum.*

R. Linimenti Æruginis (*Lond.*) f̄ḡj.

This is applied with a brush to venereal ulcers of the throat. Diluted with water (one drachm to the ounce), it forms a detergent gargle.

808. *Gargle with Iodine and Opium.*

R. Tincturæ Iodini,
Tincturæ Opii, āā f̄ḡj;
Aquæ f̄ḡvj.

Fiat gargarysma.

Signa.—To be well shaken when used.

This is employed three or four times daily in ulcerated sore throat.

809. *Lotion of Iodide of Zinc.*

R. Zinci Iodidi gr. x;
Aquæ destillatæ f̄ḡj.

Fiat solutio.

Applied daily to enlarged tonsils, by a piece of sponge tied to a quill. J. J. ROSS.

810. *Mixture of Sulphuric Acid and Honey.*

R. Acidi Sulphurici f̄ḡss;
Mellis f̄ḡj.

Fiat linimentum.

Used for aphthæ, by touching the ulcerated surfaces frequently with a soft pencil.

811. *Wash of Sulphate of Copper, etc.*

R. Cupri Sulphatis ḡij;
Pulveris Cinchonæ Pallidæ ḡss;
Aquæ destillatæ f̄ḡiv.

Misce.

Signa.—In the gangrenous sore mouth of children, applied to the full extent of the ulceration and excoriation.

B. H. COATES.

Sulphate of zinc is often employed in like doses in this affection.

812. *Gargle of Alum, Sage Tea, and Honey.*

R. *Salviæ* ʒss;
Aquæ bullientis Oss.
 Fiat infusum, et cola. Dein adde—
Aluminis ʒss;
Mellis fʒj.
 Fiat mistura.

This domestic remedy is very effectual in cases of sore throat.

813. *Lotion of Muriatic Acid, etc.*

R. *Acidi Muriatici* fʒss;
Mellis,
Aquæ Rosæ, āā fʒj.
 Misce.

Signa.—To be applied with a brush to scorbutic gums three or four times a day.

E.—LINIMENTS, LOTIONS, ETC.

814. *Lotion of Lime-water, Zinc, etc.*

R. *Zinci Oxidi* gr. xij;
Cupri Sulphatis gr. iij;
Mellis fʒj;
Liquoris Calcis fʒij.

Fiat lotio.

Signa.—To be applied to phagedenic ulcers of the genitals.
Vide SWEDIAUR on Syphilis.

.815. *Liniment of Lime-water and Linseed Oil (Carron Oil).*

R. *Olei Lini* fʒiij;
Liquoris Calcis fʒvj.

Fiat linimentum.

Signa.—To be applied to burns and scalds by means of a feather or soft rag.

[816. *Liniment of Carron Oil and Carbolic Acid.*]

R. *Acid Carbolicum liquidum* fʒj;
Ol. Lini,
Liq. Calcis, āā fʒiij.

Misce, et ft. linimentum.

For application in the sloughing stage of deep burns and carbuncles, or any phagedenic ulcer.

[817. *Liniment of Carron Oil, Aconite, etc.*]

R. Liquoris Calcis,
 Olei Lini, āā f̄ss;
 Tincturæ Aconiti foliorum,
 Tincturæ Opii deodoratæ, āā f̄ij;
 Liquoris Plumbi Subacetatis f̄j.
 Fiat linimentum.

A very efficient application to a recent burn or blister, or any erythematous condition of skin. L. C. HEYL.

818. *Gum and Molasses Mixture.*

R. Pulveris Acaciæ ʒij;
 Pulveris Tragacanthæ ʒj;
 Tere simul, et adde gradatim—
 Aquæ f̄x;
 Syrupi Fusci f̄ij.

Misce.

Signa.—Apply over the burnt surface.

Dr. T. H. Bache furnishes this, as the formula used in the Pennsylvania Hospital. By some of the surgeons this mixture is highly prized in the treatment of burns and extensive scalds.

819. *Lotion of Permanganate of Potassa.*

R. Potassæ Permanganatis ʒss;
 Aquæ Oj.
 Solve.

Under the name of "Condy's Fluid" a solution of the permanganate has been extensively employed in the London hospitals in cases of burns, ulcers, and extensive suppurating surfaces, with relief to the pain and a total prevention of any fetor.

820. *Liquid Deodorant.*

R. Spiritûs Camphoræ,
 Tincturæ Myrrhæ, āā f̄ij;
 Linimenti Saponis f̄ij;
 Acidi Acetici Glacialis ℥xx;
 Olei Picis Liquidæ f̄j.
 Misce.

This preparation, properly diluted, is an excellent application to sloughing or gangrenous parts, in consequence of its

deodorizing properties. It is also of service in cases of diarrhoea or dysentery, for purifying the air of the chamber. A teaspoonful added to each liquid stool is sufficient to remove the odor, especially if a towel moistened with the lotion be waved for a few minutes in the room. T. SKINNER.

821. *Lotion of Goulard's Extract and Camphor.*

R. Liquoris Plumbi Subacetatis fʒj;
 Spiritûs Camphoræ fʒiij;
 Aquæ Oj.
 Fiat lotio.

This compound is much recommended by some of the French surgeons. Applied by means of lint to old ulcers and burns.

822. *Another Form.*

R. Confectionis Rosæ ʒj;
 Mellis,
 Liquoris Plumbi Subacetatis, āā fʒss;
 Tincturæ Opii ℥lx.

Misce.

Signa.—Applied to painful venereal ulcers, and to chancres after the use of lunar caustic.

823. *Lotion of Chloride of Zinc.*

R. Zinci Chloridi gr. ij;
 Aquæ destillatæ fʒj.

Misce.

Signa.—Applied on lint to chronic and indolent ulcers.

HANCKE.

[824. *Lotion of Potassa and Hydrocyanic Acid.*]

R. Potassæ Fusæ gr. v;
 Acidi Hydrocyanici diluti ℥xl;
 Aquæ Rosarum fʒj.

Misce.

Signa.—Sponge the parts night and morning.

In the itching pain of chronic eczema.

McCALL ANDERSON.

825. *Lotion of Sulphuret of Potassium.*

R. Potassii Sulphureti ʒij;
 Aquæ Oj.

Solve.

This lotion proves almost magical in its effects in cases of pityriasis. It may be applied with a brush or sponge.

J. NEILL.

826. *Lotion of Sulphuret of Potassium, Lime-water, etc.*

R. Potassi Sulphureti $\bar{3}$ ss;
Saponis $\bar{3}$ j;
Alcoholis $f\bar{3}$ iv;
Tincturæ Myrrhæ $f\bar{3}$ ss;
Liquoris Calcis Oj.

Fiat mistura secundum artem.

Signa.—To be applied to the head night and morning, in tinea capitis. The hair must be shaved previous to its employment.

827. *Lotion of Phosphoric Acid.*

R. Acidi Phosphorici Glacialis $\bar{3}$ j;
Aquæ destillatæ $f\bar{3}$ viiij.

Fiat solutio.

Dr. Lentin, a German physician, has employed this solution on compresses applied to ulcers situated over carious bones.

SPILLAN'S *Supplement to the British Pharmacopœias.*

828. *Lotion of Corrosive Sublimate, etc.*

R. Hydrargyri Chloridi Corrosivi $\bar{3}$ j;
Aquæ $f\bar{3}$ vj.
Solve et adde—
Ammoniaë Muriatis $\bar{3}$ ij;
Potassæ Nitratis $\bar{3}$ ss.

Fiat lotio.

Principally used as a wash in itch.

GOOD'S *Study of Med.*, vol. iv.

829. *Yellow Wash.*

R. Hydrargyri Chloridi Corrosivi gr. j;
Liquoris Calcis $f\bar{3}$ j.

Fiat solutio.

For ordinary purposes, one grain to the ounce will be sufficient.

In phagedenic and venereal ulcers.

830. *Black Wash.*

R. Hydrargyri Chloridi Mitis ʒj;
Liquoris Calcis fʒiv.

Misce.

Signa.—The bottle to be well shaken before using.

This prescription is used in the same cases as the other. The red oxide in that, and the black oxide of mercury in this, are precipitated by the lime-water. They are sometimes administered in the form of injections in gleet and gonorrhœa.

831. *Lotion of Cyanide of Potassium.*

R. Potassii Cyanidi gr. xij;
Misturæ Amygdalæ fʒvj.

Fiat lotio.

In lichen, and other chronic eruptions.

832. *Liniment of Chlorine.*

R. Aquæ Chlorinii fʒj;
Olei Olivæ fʒj.

Fiat linimentum.

Applied externally to itch, herpes, and tinea capitis.

DUNGLISON'S *New Remedies*, 6th ed., p. 195.

833. *Iodine Liniment.*

R. Linimenti Saponis fʒj;
Tincturæ Iodinii fʒj.

Misce.

834. *Creasote Liniment.*

R. Creasoti ʒx.
Olei Olivæ fʒj.

Fiat linimentum.

In herpes, etc.

835. *Creasote Lotion.*

R. Creasoti ʒx;
Aceti fʒij;
Aquæ destillatæ fʒij.

Fiat lotio.

Applied in phagedenic ulceration.

836. *Camphorated Oil.*

R. Camphoræ ℥j;
 Olei Olivæ f℥iv.

Fiat solutio; tunc adde—

Olei Terebinthinæ f℥ss.

Misce.

Signa.—To be applied by rubbing with a piece of flannel.

Used in deep-seated rheumatic pains.

837. *Stokes's Liniment.*—*Linimentum Album.*

R. Olei Terebinthinæ f℥iij;
 Olei Limonis f℥j.

Misce, et adde, secundum artem—

Vitellum unius ovi;

Aquæ Rosæ f℥iij;

Acidi Acetici f℥ss.

Tere simul.

A stimulating liniment having been much prescribed in Baltimore under the above name, the College of Pharmacy of that city has adopted this formula. It is an efficient preparation.

838. *Liniment of Cantharides and Camphor.*

R. Tincturæ Cantharidis f℥iv.
 Camphoræ ℥ss.

Misce.

Signa.—To be rubbed on the parts affected.

In paralysis.

839. *Liniment of Camphor, Carbonate of Ammonia, Amber, etc.*

R. Spiritûs Camphoræ f℥iv;
 Ammoniaë Carbonatis ℥ss;
 Olei Juniperi,
 Olei Succini, āā f℥ij.

Misce.

To be employed in like manner, and in the same cases as the former.

840. *Liniment of Camphor and Acetic Acid.*

R. Spiritûs Camphoræ f℥iij;
 Acidi Acetici f℥j.

Fiat embrocatio.

To be applied to bruises, rheumatic parts, etc.

841. *Liniment with Ammonia and Olive Oil; vulgo, Volatile Liniment.*

R. Olei Olivæ,
 Aquæ Ammoniaë, āā f̄j̄j.
 Misce.

Applied to the neck in inflammation of the throat.

842. *Liniment of Ammonia and Tartarized Antimony.*

R. Linimenti Ammoniaë f̄j̄j;
 Antimonii et Potassæ Tartratis ʒj.
 Misce.

Applied to indolent tumors, and other swellings.

843. *Liniment of Oil of Amber, etc.*

R. Olei Succini f̄j̄ij;
 Olei Olivæ f̄ss;
 Tincturæ Opii f̄j̄ij;
 Spiritûs Vini Gallici f̄iij.

Fiat linimentum.

Signa.—To be rubbed between the shoulders.

In pertussis.

[844. *British Oil.*]

R. Olei Terebinthinaë,
 Olei Lini, āā f̄viiij;
 Olei Succini,
 Olei Juniperi, āā f̄iiv;
 Petrolei Barbadosensis f̄iij;
 Petrolei Americani f̄j̄j.

Misce.

An active rubefacient in sprains, etc.

[845. *Liniment for Scabies.*]

R. Petrolei,
 Alcoholis, āā f̄j̄j;
 Balsami Peruviani f̄j̄j;
 Olei Rosmarini,
 Olei Lavandulæ, āā ʒxv.

Misce.

To be applied several times daily, after bathing with soap and hot water, in cases of delicate skin.

HEBRA.

[846. *Sulphuretted Soap Liniment.*]

- R. Potassii Sulphureti ʒiij;
 Saponis ʒxij;
 Aquæ q. s.
 Misce cum calore; dein adde—
 Olei Olivæ fʒxij;
 Olei Origani fʒj.
 Misce.

A very efficient liniment for itch and other parasitic skin disease. JADELOT.

847. *Liniment of Oils of Cloves, Amber, and Olives.*

- R. Olei Caryophylli,
 Olei Succini rectificati, āā ʒss;
 Olei Olivæ ʒj.
 Tere simul.

Used as an embrocation in hooping-cough. ROCHE.

848. *Liniment with Nux Vomica.*

- R. Tincturæ Nucis Vomicae fʒj;
 Aquæ Ammoniaë fʒij.
 Misce.

This is applied by friction, in paralytic and nervous diseases. MAGENDIE.

849. *Anti-psoric Lotion of Dupuytren.*

- R. Potassii Sulphureti ʒiv;
 Aquæ Oj;
 Acidi Sulphurici diluti fʒiv.
 Misce.

Signa.—To be applied two or three times a day on the parts covered with pustules, and with this treatment the simple bath is conjoined.

850. *Compound Opiate Liniment.*

- R. Tincturæ Opii,
 Spiritûs Ætheris Sulphurici, *Ed.*;
 Spiritûs Camphoræ, āā fʒij.
 Fiat embrocatio.

Signa.—To be applied to rheumatic parts.

Also, in odontalgia, pain in the region of the ear, etc.

851. *Another Form.*

R. Tincturæ Opii,
 Spiritûs Camphoræ,
 Tincturæ Cantharidis,
 Ætheris, āā f̄ss.

Fiat embrocatio.

Useful in intercostal and other pains. S. ASHWELL.

852. *Liniment of Opium, Subacetate of Lead, etc.*

R. Olei Olivæ f̄ij;
 Tincturæ Opii f̄ij;
 Liquoris Plumbi Subacetatis f̄ss.

Misce.

853. *Compound Chloroform Liniment.*

R. Chloroformi,
 Ætheris,
 Spiritûs Camphoræ,
 Tincturæ Opii, āā f̄ij;
 Tincturæ Capsici f̄ss.

Misce.

This forms an excellent embrocatio for rheumatic pains, sprains, etc.

854. *Liniment of Petroleum, Camphor, etc.*

R. Petrolei Barbadosensis, f̄ij;
 Camphoræ f̄ss;
 Alcoholis ℥xl.

Fiat linimentum.

Powder the camphor by adding the spirit, and then mix the whole in a mortar.

[855. *Liniment of Origanum, Camphor, etc.*]

R. Alcoholis Oj;
 Olei Olivæ f̄iiij;
 Olei Origani f̄iiij;
 Tincturæ Camphoræ f̄iiij;
 Olei Britannici (Formula 844) f̄ij.

Misce, et fiat linimentum.

A very efficient anodyne and stimulant application for bruises, sprains, etc.

L. C. HEYL.

Glycerin.

This principle, which is demulcent and antiseptic, forms a very useful addition to lotions and gargles. It has been used extensively by Mr. Startin, surgeon to the London Cutaneous Institution, and he has published several formulas for its employment. Two of them are subjoined, viz:—

856. *Lotion of Borax and Glycerin.*

R. Sodæ Boratis ʒss;
 Aquæ Rosæ fʒvijss;
 Glycerinæ fʒss.

Fiat mistura.

Used for chapped hands, fissures of the lips, sore nipples, and irritation of the skin of any kind. STARTIN.

857. *Lotion of Ammonia, Glycerin, etc.*

R. Spiritûs Ammoniaë Aromatici fʒj;
 Glycerinæ fʒss;
 Tincturæ Cantharidis fʒj;
¹Aquæ Rosmarini fʒvij.

Misce.

Signa.—To be used with a wet hair-brush once or twice a day.

Employed for alopecia following fevers, or for falling off of the hair, dryness or want of action of the scalp, thinness of the hair, etc. STARTIN.

[858. *Glycerin Cream.*]

R. Glycerinæ,
 Saponis Mollis puri,
 Aquæ Lauro-cerasi, āā fʒj.

Misce.

For chilblains, chaps, and excoriations. P. SQUIRE.

[859. *Liniment of Glycerin and Camphor.*]

R. Glycerinæ fʒj;
 Camphoræ ʒss;
 Alcoholis fʒss.

Misce secundum artem.

For superficial burns, irritable condition of the skin. P. SQUIRE.

¹ When aromatic waters are prescribed which are not officinal, the compounder can readily prepare them by rubbing two drops of the essential oil with a few grains of carbonate of magnesia and a fluidounce of water, and then filtering the solution through bibulous paper.

[860. *Lotion of Cantharidine and Castor Oil.*]

R. Cantharidine gr. j;
 Ætheris Acetici f̄ij;
 Solve et dein adde—
 Alcoholis f̄iij;
 Olei Ricini f̄ij;
 Olei Lavandulæ ℥xv.
 Misce.

For baldness; to be applied daily to the scalp, which is to be thoroughly washed with soap and water every few days, to prevent the accumulation of the cantharidine. This preparation is known as the "Linimentum Crinale."

P. SQUIRE.

[861. *Lotion of Quinia, Castor Oil, etc.*]

R. Quiniæ Sulphatis gr. xx;
 Alcoholis f̄ij;
 Solve et adde—
 Olei Ricini f̄iv;
 Aquæ Ammoniaë f̄iij;
 Tincturæ Cantharidis f̄ij.
 Misce.

A very successful application in alopecia, or falling out of the hair from any cause; to be used with the same precaution as the last formula. Any essential oils may be added to give it the odor which may be desired.

W. B. SMITH.

862. *Glycerin Lotion.*

R. Glycerinæ f̄ij;
 Aquæ Rosæ f̄ij.
 Misce.

This is an emollient and soothing lotion, useful in erythema, chaps, excoriations, etc.—*Druggists' Circular.*

863. *Lotion of Morphia and Glycerin.*

R. Morphiæ Acetatis gr. iij;
 Glycerinæ f̄ij.
 Solve.

This is an elegant mode of preparing an anodyne lotion, the quantity of the salt varying with the indications of the case. The salts of nearly all of the alkaloids are soluble in

glycerin, but the bases, or pure alkaloids, are insoluble in this fluid.

864. *Lotion of Lead-water and Glycerin.*

R. Liquoris Plumbi Subacetatis f̄3j;
Glycerinæ f̄3iij;
Aquæ f̄3vijss.

Fiat solutio.

This forms an astringent and sedative lotion, which is valuable in the treatment of many of the skin diseases.—*Lond. Hosp. for Skin Diseases.*

[865. *Lotion of Bismuth.*]

R. Bismuthi Subnitrat̄is gr. xij;
Hydrargyri Bichloridi gr. j;
Tincturæ Camphoræ ℥iij;
Aquæ ad f̄3ij.

Misce.

For application to chronic eczema, herpes, etc.

London Hospital.

866. *Lotion of Tannin and Glycerin.*

R. Acidi Tannici gr. xv;
Glycerinæ f̄3j.

Solve.

Used for sore nipples, by applying it to the part with a brush, or on lint covered with oiled silk. Some practitioners prefer a stronger solution, consisting of equal parts, by weight, of tannin and glycerin.

867. *Lotion of Green Vitriol.*

R. Ferri Sulphatis 3j;
Aquæ Oj.

Fiat lotio.

Used in erysipelas, by applying it to the part every two or three hours.

VELPEAU.

868. *Lotion of Borax and Morphia.*

R. Sodæ Boratis 3ss;
Morphiæ Sulphatis gr. vj;
Aquæ Rosæ f̄3viiij.

Fiat lotio.

Used in pruritus vulvæ.

Wash the surfaces with soap and tepid water, and dry them before applying the lotion, which is to be done three times daily.

C. D. MEIGS.

869. *Lotion of Sulphite of Soda, etc.*

R. Sodæ Sulphitis,
Aluminæ Sulphatis, āā ʒj;
Aquæ Rosæ fʒviijss.

Fiat lotio.

To the above a tablespoonful of some flavoring ingredient, as the Eau de Cologne, may be added.

Used in acne by washing the part with a linen rag dipped in the solution twice or thrice a day.

STARTIN.

870. *Substitute for Aromatic Wine.*

R. Vini Rubelli (*Claret Wine*),
Spiritûs Lavandulæ Compositi, āā fʒv;
Tincturæ Opii fʒss;
Aquæ fʒiijss;
Acidi Tannici ʒij.

Misce.

The aromatic wine of the Paris Codex is employed by Ricord and others as a stimulating lotion to buboes and chancres, and, when diluted, as an injection in leucorrhœa and gonorrhœa. The above is an efficient substitute for the original complex formula, and may be employed in similar cases.

F. J. BUMSTEAD.

F.—OINTMENTS.

Ointments are usually prepared by rubbing together the medicinal agent and a sufficient quantity of lard to give a smooth uniform consistence. If intended for immediate use, no better excipient than lard can be found. But if kept on hand for some time, an ointment, thus made, becomes rancid or acrid. To prevent this chemical change, a number of plans have been proposed, the following among others:—

871. *Benzinated or Benzoated Lard,*

As an excipient, is used instead of pure lard. It is prepared by digesting at a moderate heat two drachms of powdered benzoin with a pound of lard.

E. MOUCHON.

872. *Plasma*,

Is the name applied to a mixture of seventy grains of starch and a fluidounce of glycerin. These articles are mixed and gradually heated to 240° F., constantly stirring. This mixture is used as a basis for ointments. It dissolves most materials which are soluble in water, and it can be washed readily from tender surfaces.

G. F. SHACHT.

Mr. Startin's formula for a similar preparation is:—

R. Tragacanthæ electæ ʒss;
 Glycerinæ fʒj;
 Liquoris Calcis fʒij;
 Aquæ Rosæ q. s. ut fiat gelatina.
 Misce.

This jelly is employed both as a basis for ointments and as an emollient application in various skin diseases.

[873. *Glycerin Ointment*.]

R. Cetacei ʒij;
 Ceræ albæ ʒss;
 Olei Amygdalæ fʒij.
 Misce cum calore, et dein adde—
 Glycerinæ fʒj.
 Et misce celeriter.

An admirable emollient for chaps and excoriations.

P. SQUIRE.

[874. *Spermaceti Ointment*.]

R. Cetacei ʒv;
 Ceræ albæ ʒij;
 Olei Amygdalæ fʒijss vel q. s.
 Fiat unguentum.

A cooling application to burns, or excoriations, or irritable ulcers.—*British Pharmacopœia*.

875. *Ointment of Red Precipitate*.

R. Hydrargyri Oxidi Rubri ʒj;
 Terebinthinæ Venetæ ʒj.
 Misce.

This preparation is applied to indolent sores, and is thought by some practitioners to be a specific in itch.

876. *Iodine Ointment.*

R. Iodinii gr. iij;
 Adipis ʒij;
 Fiat unguentum.

Used in enlargements, painful joints, nodes, etc.

877. *Iodine and Collodion.*

R. Iodinii,
 Terebinthinæ Canadensis, āā ʒj;
 Collodii fʒiv.

Solve.

Signa.—Paint over the diseased part with a brush.

This preparation has proved very efficient in the discussion of tumors, swellings, painful joints, etc. It acts as a rubefacient, and even as a vesicant if the skin is tender.

J. T. SHINN.

878. *Ointment of Iodide of Potassium.*

R. Potassii Iodidi ʒj;
 Cerati Adipis ʒj.
 Fiat ceratum.

Applied to scrofulous swellings when the skin is unbroken. It may also be used for tetter, and kindred eruptions.

879. *Lugol's Ointment of Ioduretted Iodide of Potassium.*

R. Iodinii gr. xij;
 Potassii Iodidi ʒiv;
 Adipis ʒij.
 Fiat unguentum.

Used in scrofulous ophthalmia, ulcers, etc.

880. *Ointment of Iodide of Zinc.*

R. Zinci Iodidi ʒj;
 Adipis ʒj.
 Fiat unguentum.

Signa.—A drachm to be rubbed on twice a day.

In tumors.

Dr. Ure recommends the above as a substitute for the ointment of iodide of potassium in glandular swellings.

881. *Ointment of Iodide of Barium.*

R. Barii Iodidii gr. iv ;
Adipis $\bar{3}$ j.

Fiat unguentum.

For serofulous swellings.

BIETT.

882. *Ointment of Iodide of Cadmium.*

R. Cadmii Iodidi $\bar{3}$ ss ;
Ætheris μ xl.

Tere simul, et adde—

Adipis $\bar{3}$ j.

Misce, fiat unguentum.

Used in cases of enlarged glands, and nodes, and for chronic inflammation of the joints. This does not stain the skin like iodine or iodide of lead, and is not gritty like the ointment of iodide of potassium.

A. B. GARROD.

883. *Ointment of Iodide of Iron.*

R. Ferri Iodidi $\bar{3}$ jss ;
Adipis $\bar{3}$ j.

Fiat unguentum.

884. *Ointment of Iodide of Sulphur.*

R. Sulphuris Iodidi gr. xxv ;
Adipis $\bar{3}$ j.

Fiat unguentum.

Used in diseases of the skin, acne, eczema, and scabies.

MAGENDIE.

885. *Ointment of Iodide of Arsenic.*

R. Arsenici Iodidi gr. iij ;
Adipis $\bar{3}$ j.

Fiat unguentum.

Used in lepra, impetigo, and other cutaneous affections.

BIETT.

886. *Ointment of Iodine and Calomel.*

R. Iodinii gr. x ;
Hydrargyri Chloridi Mitis gr. xv ;
Adipis $\bar{3}$ j.

The iodine to be first united to the lard, and then the calomel added.

MM. Planck and Soubeiran, by whom this ointment is proposed, state that these are the only proportions that can be used, without leading to decomposition.

[887. *Ointment of Mercury with Muriate of Ammonia.*]

R. Ammoniā Hydrochloratis ʒj;
Unguenti Hydrargyri ʒij.

Misce, fiat unguentum.

In chronic glandular enlargements.

DUPUYTREN.

888. *Ointment of Iodide of Mercury and Morphia.*

R. Hydrargyri Iodidi Viridis gr. vj;
Morphiā Acetatis gr. viij;
Adipis ʒj.

Fiat unguentum.

Recommended by the French physicians in glandular swellings. The morphia is supposed by them to prevent the unpleasant effects of iodine when used as an ointment.

PELLETAN.

889. *Ointment of Red Iodide of Mercury.*

R. Hydrargyri Iodidi Rubri ʒj;
Adipis ʒjss.

Fiat unguentum.

Used to accelerate the cicatrization of inveterate venereal ulcers.

890. *Another Form.*

R. Hydrargyri Iodidi Rubri gr. xv;
Adipis ʒij;
Olei Limonis ℥xx.

Fiat unguentum.

Employed as a curative application to syphilitic tubercles, chronic ulceration, and venereal eruptions. Its great activity requires caution in its use.

RATIER.

891. *Compound Ointment of Red Iodide of Mercury.*

R. Hydrargyri Iodidi Rubri gr. vij;
Potassii Iodidi ʒj;
Adipis ʒj.

Fiat unguentum.

Used for the discussion of glandular and other tumors.

C. C. HILDRETH.

892. *Ointment of Ioduretted Iodide of Potassium with Opium.*

R. Iodinii gr. xvj;
 Potassii Iodidi ʒj;
 Tincturæ Opii fʒij;
 Adipis ʒij.

Fiat unguentum.

Applied to scrofulous and other ulcers.

LUGOL.

893. *Ointment of Cyanide of Mercury.*

R. Hydrargyri Cyanidi gr. xij;
 Adipis ʒj.

Fiat unguentum.

Used in herpes attended by inflammation and itching.

894. *Mercurial Ointment with Camphor.*

R. Unguenti Hydrargyri ʒj;
 Camphoræ ʒj.

Misce.

Signa.—One drachm of this ointment to be rubbed on the inside of the thighs, before the fire.

Used for buboes and venereal diseases.

Some physicians recommend the warm bath before using the ointment, while others consider it useless. We think the practice occasionally beneficial. The hands of the person rubbing it on should be enveloped in a bladder, or gloves made of oiled silk.

B. ELLIS.

895. *Ointment of White Precipitate, Sulphur, etc.*

R. Hydrargyri Ammoniati gr. xv;
 Potassæ Nitratis ʒss;
 Sulphuris Sublimati ʒj.

Tere simul et adde—

Adipis ʒij.

Fiat unguentum.

This ointment has long been celebrated in the cure of itch.

896. *Compound Sulphur Ointment.*

R. Sulphuris Sublimati ʒviiij;
 Hydrargyri Ammoniati ʒss;
 Hydrargyri Sulphureti Rubri ʒss.

Tere simul et adde—

Olei Olivæ ʒiv;

Adipis ℥j;

Creasoti ℥xx.

Misce.

This ointment is employed in the London Hospital for Diseases of the Skin, in the treatment of scabies, favus, and ringworm.

STARTIN.

897. *Anti-herpetic Ointment.*

R. Hydrargyri Sulphatis Flavæ ʒj;
Tincturæ Opii fʒj;
Sulphuris Sublimati ʒss;
Adipis ʒj.

Fiat unguentum.

In herpes, alternated with the simple water-bath.

898. *Sulphur Ointment.*

R. Adipis ℥j;
Olei Bergamii fʒij;
Sulphuris Sublimati ʒviij.

Fiat unguentum.

Used by friction, three to six drachms at a time, in itch.

899. *Mercurial Cerate.*

R. Unguenti Hydrargyri ʒiv;
Cerati Adipis ʒx.

Fiat ceratum.

A dressing for venereal ulcers.

RATIER.

900. *Ointment of Cyanide of Potassium and Chloroform.*

R. Potassii Cyanidi partes x;
Chloroformi Venalis partes xij;
Adipis partes lx.

Fiat unguentum.

Recommended in hemicrania and facial neuralgia.

A portion to be well rubbed into the skin over the seat of suffering.

CAZENAVE.

901. *Ointment of Belladonna.*

R. Extracti Belladonnæ ʒij;
Glycerinæ fʒij;
Adipis ʒij.

Misce.

Employed as a direct application to the neck of the uterus, in cases of rigidity.

902. *Ointment of Alum, Calomel, etc.*

R. Hydrargyri Chloridi Mitis ʒij;
 Aluminis exsiccati,
 Plumbi Oxidi, āā ʒss;
 Olei Terebinthinæ fʒij;
 Unguenti Adipis ʒjss.

Fiat unguentum.

This ointment is particularly adapted to *tinea capitis*. It should be applied every night going to bed, and washed off in the morning. As soon as the child's head is dry, dust it over with powdered starch, which, in the evening, is again to give place to the ointment. The hair must be cut off previous to the application of the ointment. S. G. MORTON.

903. *Ointment of Calomel and Sulphate of Zinc.*

R. Hydrargyri Chloridi Mitis,
 Zinci Sulphatis, āā ʒij;
 Adipis ʒj.

Fiat unguentum.

Used in the Royal Free Hospital, London, in the treatment of condylomata. V. DE MERIC.

904. *Ointment of Oxide of Zinc.*

R. Zinci Oxidi ʒj;
 Adipis Benzoati ʒj.

Fiat unguentum.

This is a mild and very useful ointment for scalds, superficial inflammations, ulcers, etc.

905. *Kentish's Ointment.*

R. Cerati Resinæ ʒij;
 Olei Terebinthinæ fʒij.

Fiat unguentum.

This preparation has long been celebrated in burns and scalds. Care is requisite to avoid touching the sound skin, for turpentine occasionally inflames it severely.

906. *Ointment of Bromide of Potassium.*

R. Potassii Bromidi gr. xxx;
 Adipis ʒj.

Fiat unguentum.

Used for scrofulous tumors.

907. *Ointment with Goulard's Cerate, Calomel, etc.*

R. Cerati Plumbi Subacetatis,
 Cerati Adipis, āā ̄ss;
 Hydrargyri Chloridi Mitis,
 Pulveris Opii, āā ̄j.

Misce.

Useful in various cutaneous eruptions.

JOSEPH PARRISH.

908. *Ointment of Rhubarb, Opium, etc.*

R. Pulveris Rhei gr. x;
 Pulveris Opii gr. v;
 Unguenti Adipis ̄jss.

Fiat unguentum.

In indolent ulcers.

909. *Ointment of Tar, and Citrine Ointment.*

R. Unguenti Picis Liquidæ ̄j;
 Unguenti Hydrargyri Nitratis ̄ss.

Fiat unguentum.

In tinea capitis.

[910. *Ointment of Coal Tar.*]

R. Picis Mineralis ̄ij;
 Glycerinæ puræ f̄ij;
 Adipis Benzoati (Formula 866) ̄jss.

Misce, fiat unguentum.

For application to chronic eczema. To be melted a little,
 and rubbed in three or four times daily. ANDERSON.

[911. *Ointment of Mercury and Carbolic Acid.*]

R. Hydrargyri Ammoniati ̄j;
 Adipis Benzoati (Formula 866),
 Plasmatis (Formula 867), āā ̄vj;
 Acidi Carbolicæ ʒxx.

Fiat unguentum.

In chronic eczema. To be applied three or four times daily.

[912. *Olive Ointment.*]

R. Ceræ Flavæ ℥iv;
 Olei Olivæ f℥viiij;
 Mellis ℥j.
 Emplastri Galbani Compositi ℥iv.

Fiat unguentum.

This should be melted, strained, and stirred till cold.

A stimulant application for indolent ulcers and boils.

913. *Ointment of Tar and Opium.*

R. Pulveris Opii ℥ij;
 Unguenti Picis Liquidæ ℥j.

Fiat unguentum.

For hæmorrhoids.

914. *Ointment of Oil of Cade.*

R. Olei Juniperi Oxycedri Pyrolignei ℥j;
 Olei Anisi gtt. iiij;
 Adipis ℥ij.

Fiat unguentum.

The oil of cade is an empyreumatic product obtained by the destructive distillation of the *Juniperus Oxycedrus*.

It has proved highly beneficial in many forms of skin disease, especially in eczema and tinea.

DEVERGIE.

[915. *Chloroform Ointment.*]

R. Chloroformi ℥j;
 Adipis Benzoati (Formula 866) ℥ij;
 Cocci gr. $\frac{1}{4}$.

Misce, fiat unguentum.

For eczema, with burning heat of skin.

MCCALL ANDERSON.

[916. *Benzoic Acid and Lead.*]

R. Acidi Benzoici ℥j;
 Cerati Plumbi Subacetatis ℥j.

Misce, fiat unguentum.

For application to erythematous affections of the skin, or erosions.

917. *Kirkland's Neutral Cerate.*

- R. Emplastri Plumbi $\bar{\text{z}}\text{iv}$;
 Olei Olivæ,
 Cretæ Præparatæ,
 Acidi Acetici diluti, $\bar{\text{a}}\bar{\text{a}}$ $\bar{\text{z}}\text{ij}$;
 Plumbi Acetatis $\bar{\text{z}}\text{jss}$.

The plaster and oil are first to be melted over a gentle fire. The prepared chalk is then to be briskly stirred in, and when the mixture is sufficiently cooled, the acetic acid and acetate of lead are to be added, and the whole stirred until nearly cold.

This non-official cerate is well adapted to abraded irritable surfaces, and the later stages of burns.

918. *Aromatic Compound Sulphur Ointment.*

- R. Potassæ Carbonatis $\bar{\text{z}}\text{ss}$;
 Aquæ Rosæ $\text{f}\bar{\text{z}}\text{j}$;
 Hydrargyri Sulphureti Rubri $\bar{\text{z}}\text{j}$;
 Olei Bergamii $\text{f}\bar{\text{z}}\text{ss}$;
 Sulphuris loti,
 Adipis, $\bar{\text{a}}\bar{\text{a}}$ $\bar{\text{z}}\text{x}$.

Misce secundum artem.

Used in scabies.

BATEMAN'S *Synopsis*.

919. *Naphthaline Ointment.*

- R. Naphthalinæ $\bar{\text{z}}\text{ij}$;
 Adipis $\bar{\text{z}}\text{j}$.

Fiat unguentum.

Recommended by Dr. Lodge in the treatment of itch. Dr. Emery has found it effectual in cases of dry tetter, lepra, and psoriasis.

920. *Ointment of Carbonate of Ammonia.*

- R. Ammoniæ Carbonatis $\bar{\text{z}}\text{ss}$;
 Unguenti Adipis $\bar{\text{z}}\text{ss}$.

Fiat unguentum.

Applied to indolent ulcers of a serofulous character.

921. *Ointment of Verdigris, etc.*

- R. Cupri Subacetatis,
 Cupri Sulphatis,
 Hydrargyri Oxidi Rubri $\bar{\text{a}}\bar{\text{a}}$ $\bar{\text{z}}\text{ij}$;
 Hydrargyri Chloridi Corrosivi $\bar{\text{z}}\text{j}$;
 Adipis $\bar{\text{z}}\text{v}$.

Fiat unguentum.

This may be spread on lint, and one or two applications will be sufficient to destroy a very large mass of fungous granulations.

B. C. BRODIE.

922. *Ointment of Ipecacuanha.*

R. Pulveris Ipecacuanhæ ʒij;
Olei Olivæ fʒij;
Adipis ʒss.

Misce, et fiat unguentum.

Useful as a counter-irritant.

TURNBULL.

923. *Ointment of Calomel and Tar.*

R. Hydrargyri Chloridi Mitis ʒj;
Unguenti Cetacei, *Lond.* ʒj;
Unguenti Picis Liquidæ ʒss.

Fiat unguentum.

Used in lepra.

A. T. THOMSON.

924. *Ointment of Creasote and Charcoal.*

R. Creasoti fʒss;
Alcoholis fʒjss;
Carbonis Animalis purificati ʒj;
Unguenti Cetacei, *Lond.* ʒjss.

Fiat unguentum.

Used in cases of burns and scalds. "For children under five years, the ointment should be weakened by mixing it with four times its bulk of spermaceti; for children from five to ten years, with twice its bulk of spermaceti; and so on, gradually increasing the strength of the ointment according to the age of the patient."

S. SUTRO.

[925. *Ointment of Carbolic Acid and Castor Oil.*]

R. Ol. Ricini fʒj;
Balsami Abietis ʒss;
Ceræ Albæ ʒij.

Misce cum calore, dein adde—

Acidi Carbolicum liquidum fʒss.

Misce, fiat unguentum.

To be used in suppurating surface from burns, chronic ulceration, or wounds.

To the above may be added with advantage, sometimes, Zinci Oxidi puri ʒj.

926. *Oxide of Silver Ointment.*

R. Argenti Oxidi ʒj;
Unguenti Adipis ʒj.

Fiat unguentum.

Used for sore nipples.

927. *Ointment of Slaked Lime, Zinc, etc.*

R. Calcis Hydratis ʒj;
Camphoræ ʒj;
Unguenti Zinci Oxidi ʒj.

Fiat unguentum.

This is the "topique contre acne" of the
HÔPITAL S. LOUIS.

928. *Depilatory Ointment.*

R. Sodæ Carbonatis ʒij;
Calcis, ʒj;
Adipis ʒj.

Fiat unguentum.

Used in porrigo.

BIETT.

929. *Veratria Ointment.*

R. Veratriæ gr. x;
Acidi Acetici m̄x;
Adipis ʒj.

Fiat unguentum.

Veratria has been used externally in neuralgia, in twitching and drooping of the eyelids, and in other nervous disorders, with the most marked success.

930. *Veratria and Morphia Ointment.*

R. Veratriæ,
Morphiæ Sulphatis, āā gr. x;
Adipis ʒj.

Fiat unguentum.

Used in incontinence of urine, by rubbing a portion of the ointment on the perineum three times daily.

T. KENNARD.

931. *Ointment of Nitrate of Silver.*

R. Argenti Nitratis ʒss;
Adipis loti ʒss.

Fiat unguentum.

Used to smear over bougies in the treatment of gonorrhœa.

MACDONALD.

[932. *Ointment of Copper, Lead, and Copal Varnish.*]

R. Cupri Sulphatis gr. iij;
Plumbi Acetatis gr. x;
Spiritûs Resinæ Copal f̄3j;
Cerati Simplicis 3ij.

Misce, fiat unguentum.

An admirable application for chronic piles.

L. C. HEYL.

[933. *Ointment of Opium and Tannin.*]

R. Extracti Opii Aquosi gr. x;
Acidi Tannici 3j;
Cerati Plumbi Subacetatis 3j.

Misce, fiat unguentum.

For piles—to be introduced in quantity about size of a pea within the sphincter.

934. *Ointment of Tannin.*

R. Acidi Tannici 3j;
Glycerinæ ℥l;
Adipis 3j.

Fiat unguentum.

Used for the same purposes as the astringents generally.

935. *Ointment of Tannate of Lead.*

R. Plumbi Tannatis 3j;
Unguenti Aquæ Rosæ 3j.

Fiat unguentum.

A sedative and astringent application to sore nipples, chapped surfaces, etc.

M. LEON.

[936. *Discutient Plaster.*]

R. Olei Lini,
Olei Olivæ,
Plumbi Oxidi Rubri, āā partes equales.
Misce secundum artem, fiat emplastrum.

For rubefacient and resolvent effect.

C. D. MEIGS.

Powders.

Sometimes the practitioner prefers dusting medicinal agents directly upon diseased surfaces, instead of incorporating them

with lard in the form of an ointment. Hundreds of such formulas might be given, but we limit our selection to a few.

937. *Powder of Verdigris and Calomel.*

R. Cupri Subacetatis,
Hydrargyri Chloridi Mitis, āā ʒj.
Fiat pulvis subtilissimus.

For chancres and indolent ulcers.

938. *Powdered Rhubarb and Ipecacuanha.*

R. Pulveris Rhei,
Pulveris Ipecacuanhæ, āā ʒj.
Fiat pulvis.

To be dusted on sarcomatous and watery tumors.
Rhubarb alone forms an excellent application to indolent ulcers.

939. *Powder of Savin and Verdigris.*

R. Pulveris Sabinæ,
Cupri Subacetatis, āā ʒj.
Fiat pulvis.

To be dusted on sores accompanied with fungous excrescences.

[940. *Depilatory Powder.*]

R. Sodii Sulphureti ʒij,
Pulveris Calcis (non hydrata),
Pulveris Amyli, āā ʒx.
Misce.

To be mixed, when required for use, with a little water, applied to the skin, and removed in a few minutes with a *wooden* knife.

For the removal of hair.

P. SQUIRE.

941. *Powder of Sanguinarina.*

R. Sanguinarinæ Sulphatis ʒj.
Tere in pulverum.

Employed for the removal of venereal warts, by dusting the surface of the warts thickly with the powder, and then applying collodion to retain the powder in direct contact with the skin.

G.—CATAPLASMS.

942. *Bread-and-Milk Poullice.*

Remove the crust from a part of a loaf of stale bread, and crumble the bread into a bowl. Pour over it sufficient sweet milk to cover it, and simmer over a fire, occasionally stirring, until the bread is reduced to a pulpy consistence. The poullice is to be applied as warm as the patient can bear it.

Water may be substituted for the milk without much if any disadvantage.

943. *Flaxseed Meal and Bran Poullice.*

Take equal parts of ground flaxseed and bran. Pour boiling water upon them, and stir constantly until the poullice has a pulpy consistence.

In the Northern and Middle States it is customary to use the common flaxseed meal, which contains both the oily and mucilaginous principles; but in New York city and some other places, the ground oil-cake is preferred. Equal parts of the latter and bran form an elegant poullice.

944. *Mush Poullice.*

This is made by stirring Indian meal, in small quantities, into water kept boiling in a pan, until the whole has acquired the proper degree of consistence.

945. *Yeast Poullice.*

R. Farinæ, *Ed.*, ℥j;
Fermenti, Oss.
Misce.

This cataplasm is useful in stimulating foul ulcers and gangrenous wounds, and removing the unpleasant odor. It should be made with fresh yeast, and applied warm.

946. *Charcoal Poullice.*

This cataplasm is made by stirring into the common bread-and-milk poullice as much finely-powdered charcoal as it will bear, and then sprinkling upon the surface of the poullice, when ready for application, some more of the powder. It is a very useful application to offensive ulcers; removing in a short time the fetor, and giving them a more healthy aspect.

947. *Slippery Elm Poultice.*

This poultice is made from the inner bark of the slippery elm, ground into a fine powder, and moistened with hot water.

Cataplasms are also made of carrots or turnips, by simply boiling them to softness, and beating them to a pulpy mass. Either furnishes a good poultice for cancerous and other painful sores.

948. *Emollient Cataplasm.*

R. Lini Farinæ,
Hordei Farinæ, āā partes æquales;
Aquæ q. s. ut fiat cataplasma.

The water may be warmed if desirable. Applied to inflammatory tumors. HÔTEL DIEU.

[949. *Another Form.*]

R. Pulveris Lini,
Pulveris Fœnigrec, āā partes æquales;
Aquæ bullientis q. s. ut fiat cataplasma.

Applied very efficiently for the evacuation of slow abscesses.

950. *Antiseptic Cataplasm.*

R. Cataplasmatidis Emollientis (*vide supra*, 948) ʒviij;
Pulveris Kino,
Camphora, āā ʒij.
Fiat cataplasma.

Applied to unhealthy wounds and ulcers. HÔTEL DIEU.

951. *Resolvent Cataplasm.*

R. Cataplasmatidis Emollientis (*vide supra*, 948) ʒiv;
Plumbi Acetatis ʒj;
Ammoniaë Muriatis ʒss.
Fiat cataplasma.

Applicable to tumors that require gentle stimulation.
RATIER'S *Formulary*.

952. *Cataplasm of Common Salt, etc.*

R. Lini Farinæ,
Micæ Panis, āā partes æquales.
Misce, dein adde gradatim—
Liquoris Sodii Chloridi saturati q. s. ut fiat cataplasma.

To be applied to indolent strumous swellings, and enlargements of the joints. When it produces irritation or inflam-

mation the common bread-and-milk poultice must be substituted; and the other reapplied when circumstances permit.

953. *Iodine Cataplasm.*

R. Tincturæ Iodini f̄ss;
Lini Farinæ ʒj;
Avenæ Farinæ ʒiij;
Aquæ q. s. ut fiat cataplasma.

Applied to indolent ulcers (especially those of a scrofulous character), and to tumors of the same class.

H.—BATHS.

The ordinary application of cold, tepid, and shower-baths, is too well known to require any particular notice. The hot bath should be of a temperature of 93 to 96 degrees of Fahrenheit. It is designed to alleviate general or local irritation, and to induce repose and sleep. It is especially adapted to fevers with deficient capillary circulation, rheumatism, herpetic eruptions, paralytic affections, etc. The lower temperature is best adapted to cutaneous complaints, and to bring on relaxation of the skin during febrile irritation; the warmer temperature is suited to paralysis; and, as a general rule, more heat is desirable to act upon deep-seated than on superficial diseases.

Vapor Baths are produced by the evaporation of boiling water in a suitable apparatus. They are used, like ordinary warm baths, in rheumatic and cutaneous affections, and in every case wherein profuse perspiration is desirable. They are avoided in persons laboring under pulmonary or cardiac disease, and in exhaustion from any cause.

Local Baths are admirably adapted to parts which are swelled and painful, and may consist of tepid water only, or their strength may be increased by the addition of saline, emollient, narcotic, or stimulant substances. Among these salt and mustard are preferable.

954. *Sulphurous Water, or Artificial Bareges Bath.*

R. Potassii Sulphureti ℥j;
Aquæ Cong. xxx.
Solve.

In cutaneous eruptions.

955. *Sulphureo-gelatinous Bath.*

R. Potassii Sulphureti ℥iv;
 Aquæ Cong. xxx.
 Fiat solutio et adde—
 Ichthyocollæ ℥j.
 In Aquæ bullientis ℥x solutæ.

This bath, according to Dr. Green (*Diseases of the Skin*, p. 240), "is preferable to the artificial Bareges bath, as it is neither irritating nor apt to occasion feverishness, which the common sulphurous water-bath is. A cheaper and not less efficacious gelatine may be procured by dissolving from a pound and a half to two pounds of parchment-clippings in water by long boiling, or by using a neat's or a calf's foot for the purpose."

956. *Emollient Bath.*

R. Glycerinæ ℥j;
 Pulveris Tragacanthæ ℥j;
 Aquæ tepidæ Cong. xv.
 Misce.

Useful in prurigo eczema, lichen, impetigo, and other forms of cutaneous disease. HOSP. for Skin Diseases.

957. *Nitro-muriatic Acid Bath.*

R. Acidi Nitrici f℥ij;
 Acidi Hydrochlorici f℥iij;
 Aquæ Cong. ijss.
 Misce.

Used for syphilitic affections, and various obstinate skin diseases. ST. GEORGE'S HOSP.

958. *Corrosive Sublimate Bath.*

R. Hydrargyri Chloridi Corrosivi ℥ij;
 Aquæ tepidæ Cong. xxx.
 Solve.

Prescribed by the French physicians in syphilitic affections, when it is desirable to avoid the action of the medicine on the stomach. This plan is seldom resorted to, on account of the great risk of employing corrosive sublimate in such large quantity.

959. *Alkaline Baths.*

R. Potassæ Carbonatis Impuræ ℥viiij;
 Aquæ tepidæ Cong. xxx.

Solve.

For promoting desquamation from the skin, and to allay itching in various forms of prurigo.

960. *Ioduretted Baths.*

	No. 1.	No. 2.	No. 3.
R. Iodinii	℥ij.	℥iij.	℥iv.
Potassii Iodidi	℥iv.	℥v.	℥viiij.
Aquæ destillatæ	f℥vj.	f℥vj.	f℥vj.

Fiant solutiones.

One of these solutions, according to the strength required, is added to a tepid bath in a wooden tub. For children, the drachms may be reduced to scruples. Used in scrofula.

961. *Artificial Harrowgate Bath.*

R. Sodii Chloridi ℔ij;
 Magnesiæ Sulphatis ℥iij;
 Potassii Sulphureti ℔j;
 Aquæ Cong. xxx.

Solve.

I.—FOMENTATIONS.

Fomentation is a more restricted mode of applying fluids to the surface of the body, and is best accomplished by means of a sponge, flannel, or soft cloth. To be efficacious it should be often repeated.

962. *Stimulant Fomentation.*

R. Vini Portensis Oij;
 Mellis ℥iv.

Misce.

This is an active fomentation, adapted to parts in a low state of vitality. RATIER.

963. *Saponaceous Fomentation.*

R. Alcoholis Oij;
 Saponis ℥j.

Misce.

A resolvent in indolent tumors and in sprains.

RATIER.

964. *Anodyne Fomentation.*

R. Extracti Opii ʒj;
 Aquæ Oj.
 Solve.

For painful affections of the joints, as chronic rheumatism, etc. RATIER.

965. *Fomentation of Bitter Sweet and Poppy.*

R. Dulcamaræ ʒij;
 Papaveris ʒij;
 Aquæ ferventis Oj.
 Fiat infusum.

Employed as a soothing application to irritable surfaces.

966. *Mustard Fomentation.*

R. Sinapis Farinæ ʒiv;
 Aquæ ferventis Oj.
 Misce.

By wetting cloths in this fluid and applying them to the skin, irritation may be prolonged to any requisite degree.

967. *Tobacco Fomentation.*

R. Tabaci ʒij;
 Aquæ ferventis Oj.
 Misce.

Employed in psora, but is apt to produce nausea and vomiting. Its use requires great care.

K.—FUMIGATIONS.

Fumigations are for the most part used to purify infected air by absorbing or otherwise counteracting deleterious gases. They are also employed in diseases of the skin, and may be sometimes substituted for a local bath.

968. *Fumigation with Sulphur, Cinnabar, and Iodine.*

R. Sulphuris Præcipitati ʒiij;
 Hydrargyri Sulphureti Rubri ʒij;
 Iodini gr. x.
 Fiant pulveres vj.

One of the powders to be used in the following manner: "If the disease is seated on the limbs, a tin case, or even a common jar, should be procured. A heated iron is to be placed at the bottom of this apparatus, with a grating above it to protect the foot or hand. One of the powders being placed on this heated iron, the limb is to be instantly put into the bath, the top of which should be covered over, to prevent the vapor from escaping. The limb may be continued in the bath from fifteen to twenty minutes, according to circumstances." Used in lepra. T. H. BURGESS.

969. *Mercurial Vapor Bath.*

R. Hydrargyri Oxidi Nigri ʒj;
 vel
 Hydrargyri Oxidi Rubri ʒj;
 vel
 Hydrargyri Sulphureti Rubri ʒj.

Place the mercurial upon a plate suspended over a spirit-lamp; and suspend a small vessel containing boiling water over a second spirit-lamp. Both are to be deposited under a chair, on which the patient is seated, having an oil-cloth or a coverlet thrown around him in such wise as to envelop the apparatus, chair, and his entire person, excepting the face. When the lamps are lighted, mercurial fumes and steam are both generated, and mercury is thus directly applied to the whole surface of the body in a moist state. The bath should not continue longer than twenty minutes, when the patient should be rubbed dry and be removed to bed.

This plan of medication is particularly serviceable in the treatment of constitutional syphilis, and obstinate skin diseases. L. PARKER.

970. *Chlorine Fumigation.*

R. Calcis Chlorinatæ ʒiv;
 Aquæ fʒviiij.
 Misce, et adde gradatim—
 Acidi Sulphurici ʒj.

The irritant properties of chlorine preclude its employment in disease by inhalation, except in occasional cases of aphonia, but it is often used for disinfecting purposes. A small quantity may be set free in a sick-chamber, or the ward of an hospital, to remove offensive odors.

L.—DISINFECTANTS.

Under this head are included all substances which have the power of acting upon noxious effluvia in the atmosphere, and, either by combining with them chemically, or destroying the vitality of the germs of disease, neutralizing their influence upon living beings.

Apart from mere medicinal agents, as sold in the shops, there are natural and artificial means of purifying the atmosphere of more importance, and in themselves essential, without which all other means are futile. Ventilation, drainage, sunlight, and cleanliness are so intimately connected with pure air that they suggest themselves as necessary in all cases where disinfectants are needed. In hospital and private practice these conditions should be thoroughly looked into, and it will be found that seldom will chemical disinfectants be required if proper attention be paid to having a well regulated supply of fresh air; the rapid removal by sewage of all refuse matters, either in the form of discharges from patients or decaying animal or vegetable matters of any sort; a full supply of sunlight; the immediate removal from the person and from the room of all discharges of secreta or excreta, the protection of the bed against absorption of foul liquids, and the frequent change of clothing on the person and on the bed; the subjection of such clothing to a high heat in an oven, say 220° F., with their subsequent exposure to the direct rays of the sun; and frequent ablutions with soap and water of the patient's body, when practicable. The simple means of disinfection thus indicated should be aided by the use of purifying agents which will not in themselves contaminate the air.

Charcoal, recently burned, placed about a room; lime, in the form of whitewash, applied to the walls, especially where rooms are to be purified after the removal of patients with infectious diseases; clothes steeped in a strong solution of permanganate of potassa and hung about the bed, are all efficient means of preserving the freshness of the atmosphere in rooms containing patients with diseases of an offensive character, and in themselves means attended with no disagreeable accompaniments.

The preparations of chlorine, chloride of lime placed in saucers with a little dilute sulphuric acid poured over it, or Labarraque's solution of chlorinated soda placed in vessels around the room, will have the desired effect, and may be necessary in extreme cases attended with profuse fetid dis-

charges; but they are so offensive themselves that they often disgust the patient, and may, in some instances, act as Abernethy considered all disinfectants to do in his day, by driving the patient out of the room.

The importance of preventing exhalations from the excreta of patients is now well recognized, and even where they can be removed rapidly, it is very desirable that the vessels into which they are passed should be previously purified by some of the various disinfectants mentioned below. In some cases, however, the physician may desire to inspect the discharges unchanged by any chemical agent, in which case he should never forget to see that they are not retained in the patient's room, which is not unfrequently done, especially in the case of children's napkins, by people of otherwise good sense. They should be placed, if possible, out of doors, or, at any rate, where there is good ventilation.

Carbolic acid and creasote, while they are powerful antiseptics, have scarcely any claims to the place of disinfectants; their power of destroying the effects of putrefaction extending little, if any, beyond masking the smell by another, which, to many persons, is equally disagreeable. Sulphurous acid is applicable only to the disinfection of unoccupied places, and mainly useful in destroying the poison of contagious diseases.

Fumigations with balsamic substances, the burning of sugar or coffee, the diffusion of volatile perfumes, and all similar methods of deodorizing, have no influence whatever in neutralizing poisonous effluvia, merely covering the smell and concealing the presence of noxious matters; so that, if relied upon at all as a substitute for efficient disinfectants, they become rather dangerous than useful.

A number of combinations have been suggested of substances having the power of destroying effluvia.

M. Bonjean directs charcoal, well powdered, two pounds, sulphate of iron one pound, to be mixed; of which two or three tablespoonfuls are to be placed in the chamber vessels used by the sick.

Dr. Procter has great confidence in iodine placed in open saucers about the room, or gently volatilized by moderate heat.

Burnett's fluid consists of a saturated solution of chloride of zinc.

Collins's disinfecting powder contains dry chlorinated lime two parts, burnt alum one part; used dry or moistened with water.

Condy's fluid is a solution of the alkaline permanganates.

Ellermann's deodorizing fluid consists of a solution of the perchloride of iron and the chloride of manganese.

Ledoyen's disinfectant is a solution of two troyounces of nitrate of lead in a pint of water.

Siret's disinfecting compound (No. 1) is a mixture of sulphate of lime 53 lbs., sulphate of iron 40 lbs., sulphate of zinc 7 lbs., and peat charcoal 2 lbs., made into balls.

Siret's compound No. 2 contains sulphate of iron 20 parts, sulphate of zinc 10 parts, oak bark, powdered, 4 parts, tar and oil each one pint, made into balls. Used for deodorizing cesspools.

Professor R. E. Rogers advises a mixture of quicklime and sulphide of iron.

The *U. S. Army disinfectant* consists of a powder of common salt and binocide of manganese in packages, upon which is to be poured in a shallow dish a solution of sulphuric acid and water. The exact proportions and details are found in the last edition of *Parrish's Practical Pharmacy*.

The first of these is the fact that the
 government has been unable to
 secure a sufficient number of
 troops to maintain the
 peace in the interior of the
 country. This is due to the
 fact that the government has
 not been able to raise a
 sufficient number of troops
 to maintain the peace in the
 interior of the country. This
 is due to the fact that the
 government has not been able
 to raise a sufficient number of
 troops to maintain the peace
 in the interior of the country.

BOOK III.

OF

DIETETIC PREPARATIONS, AND POISONS.

BOOK III

THE HISTORY OF THE UNITED STATES

DIETETIC PREPARATIONS AND BEVERAGES FOR THE SICK.

THE importance of an acquaintance with those preparations of diet peculiarly designed for the patient during disease and convalescence, is so obvious that it requires little or no comment. It was remarked by the late Dr. Rush, in his lectures, that a physician should spend six months in a kitchen before entering upon his practical career. As the medical attendant, therefore, is called upon frequently to give directions and rules for preparing the diet of the sick, we have inserted a few formulas for those articles which are in daily use. However apparently trifling such a class may appear, the physician will find that an attention to it will place the patient more completely under his own control, and inspire greater confidence in the relations and attendants. The rules to be observed in giving nourishment to the sick, will generally present themselves; but there is one in particular which should not be overlooked. In all low diseases, the nurse should be directed never to give too much at once, but frequently to repeat a small proportion. The lapse of a very short time without food will frequently, in cases of great prostration, reduce the patient very low, and may endanger his life.

The rule is not intended to be applied to those chronic derangements of the digestive functions which are to be remedied principally by a regulation of diet, and in which the old adage, "a little and often," has too frequently, we are convinced, been perniciously advised.

971. *Barley Water.*

Take of

Pearl Barley	2 ounces,
Boiling Water	2 quarts.

Before adding the boiling water, let the barley be well washed. Then boil it to one-half, and strain the liquor. A little lemon-juice and sugar may be added, if desirable.

To be taken freely in inflammatory diseases.

972. *Rice Water.*

Take of
 Rice 2 ounces.
 Let it be well washed, and add to it—
 Water 2 quarts.

Boil for an hour and a half, and then add as much sugar and nutmeg as may be required. To be taken freely.

Rice, when boiled for a considerable time, assumes a gelatinous form, and, mixed with milk, is a very excellent diet for children. It possesses, in some measure, a constipating property, which may be increased by boiling the milk.

973. *Flaxseed Tea.*

Take of
 Flaxseed 1 ounce,
 Boiling Water 1 pint.

Pour the boiling water on the unbruised seed. Cover the vessel, and stand it near the fire for an hour or two. The seeds must not be crushed or boiled, lest the oil in the interior should be extracted.

Having strained the infusion, add to it a little lemon-juice, if no contra-indicating circumstances exist.

Flaxseed tea is a mild demulcent, and is much used in diseases of the throat, chest, and urinary passages.

974. *Toast Water.*

Cut a slice, half an inch thick, from a loaf of stale bread, remove the crust, and carefully toast the slice on both sides. Place the toast and a small piece of orange or lemon-peel in a suitable vessel, add a pint of boiling water, cover the vessel, and, when cold, strain off the water.

This forms an agreeable drink in febrile diseases.

975. *Apple Water.*

Slice two large apples, and pour over the slices a pint of boiling water. Infuse for an hour, decant, and sweeten with white sugar.

976. *Currant Jelly Water.*

Boil together equal weights of white sugar and the juice of ripe currants, until the mixture gelatinizes by cooling, as shown by dropping a few drops on a cold plate. Remove the scum, and form the jelly in suitable vessels.

A tablespoonful of this jelly, diffused through half a pint of cold water, makes a delightful acidulous drink, which is much relished by invalids.

977. *Mucilage of Gum Arabic.*

As an article of diet, the proper proportions are an ounce of Gum Arabic to a pint of boiling water. The solution is allowed to cool before it is used.

Gum Arabic is very nutritive, and life can be sustained on it alone for some time.

978. *Bran Tea.*

Take of

Fresh Wheat Bran	1 pint,
Water	3 quarts.

Boil to two quarts, strain off the liquor, and add sugar, according to the taste of the patient.

979. *Sage Tea.*

Take of

The dried leaves of Sage	half an ounce.
Boiling Water	1 quart.

Infuse for half an hour, and then strain. Sugar and lemon-juice may be added in the proportion required by the patient. In the same manner, balm and other teas may be made.

These infusions form very agreeable and useful drinks in fever, and their diaphoretic powers may be increased by the addition of sweet spirit of nitre or antimonial wine.

980. *Infusion of Malt.*

Take of

Ground Malt	1 pint.
Scalding Water	3 pints.

Infuse for two hours, and strain off the liquor, to which may be added sugar or lemon-juice, if required.

This was a favorite preparation with the late Dr. Joseph Parrish, in inflammatory fevers.

981. *Lemonade.*

Take of

Fresh Lemon Juice	4 ounces,
Fresh and very thin Peel of Lemon	half an ounce,
White Sugar	4 ounces,
Boiling Water	3 pints.

Let them stand until cold, then strain off for use. When employed in fevers, a little nitrate of potassa or sweet spirit of nitre may be added. It can be further diluted to the taste of the patient.

When fresh lemon-juice cannot be procured, an excellent lemonade can be prepared from lemon syrup made as follows: Dissolve ten drachms of tartaric or citric acid and eight pounds of loaf sugar in a gallon of water. Then rub twenty drops of fresh oil of lemon with a portion of the syrup, and afterwards carefully mix it with the remainder.

Lemonade, when freely taken, sometimes produces pain in the bowels. It must, therefore, be used with some reserve as a daily drink.

982. *Oatmeal Gruel.*

Rub two ounces of oatmeal into a paste with a little water, and gradually add a quart of boiling water. Let the whole boil for fifteen minutes, stirring frequently. Add a little salt, remove from the fire, and sweeten to the taste.

If no reason to the contrary exists, the flavor of the gruel is much improved by adding some nutmeg, with wine or brandy, or a few raisins.

983. *Cornmeal Gruel.*

Indian meal gruel is made in the same manner as oatmeal gruel. It is necessary, however, to boil it a few minutes longer.

984. *Rice Flour Gruel.*

Take of

Ground Rice	1 ounce,
Cinnamon	1 drachm,
Boiling Water	1 quart.

Having rubbed the rice flour into a paste with a portion of the water, add the remainder gradually, and boil for forty minutes, adding the aromatic near the conclusion. Strain and sweeten. Wine may be added, if necessary.

985. *Panado*.

Take of

Wheat Bread	1 ounce,
Cinnamon	1 drachm,
Water	1 pint.

Boil them until well mixed, then add a little grated nutmeg and sugar. Wine or butter may also be added, if desirable.

986. *Compound Salep Powders (Castanello's Powders)*.

Take of

Salep,
 Tragacanth,
 Sago, each four ounces;
 Cochineal thirty grains;
 Prepared Oyster-shells one ounce.

Mix carefully, and divide into powders of a drachm each. Stir one of these powders into a pint of milk, and boil them together for ten or fifteen minutes.

To be drunk freely in dysentery and diarrhœa.

These are the dysenteric powders of Dr. Castanello. A somewhat analogous preparation, sold under the same name, is prepared as follows:—

Take of

Gum Arabic,
 Tragacanth,
 Arrowroot,
 Sago,
 Tapioca, each two drachms.

Mix them well together, and boil in a pint of milk, flavored with nutmeg or cinnamon.

Used as a diet in dysentery, diarrhœa, etc. etc.

987. *Racahout des Arabes*.

Take of

Dried Cocoa, in powder ʒiv ;
 Potato Starch (or Arrowroot),
 Rice Flour, each ʒx ;
 Sugar ʒxv ;
 Vanilla ʒss .

Mix carefully.

This is prepared for the sick by pouring half a pint of boiling milk on a tablespoonful of the powders, and boiling for a few minutes.

988. *Diabetic or Bran Bread.*

Boil two or three quarts of wheat bran in two successive waters for ten minutes, each time straining through a sieve, and wash well with cold water until the water runs off clear. Squeeze the bran as dry as possible in a cloth, spread it thinly on a dish, and dry it in a slow oven. When perfectly dry, grind it in a mill, and sift it through a fine sieve.

Take six ounces of this ground bran, six eggs, three ounces of butter, and one pint of milk. Mix the eggs with a part of the milk, and warm the butter with the other portion. Then stir the whole well together, adding a little nutmeg or ginger, or any other agreeable spice. Immediately before putting into the oven, stir in seventy grains of bicarbonate of soda; and then six drachms of dilute hydrochloric acid. Bake for an hour, or until thoroughly done.

As thus prepared, bran bread contains but a small amount of starchy matter. It has the further advantage of being quite palatable.

CAMPLIN.

989. *Sago.*

Take of
Sago 2 tablespoonfuls,
Water 1 pint.

Boil gently until it thickens, frequently stirring. Wine, sugar, and nutmeg may be added, according to circumstances.

990. *Tapioca Jelly.*

Take of
Tapioca 2 tablespoonfuls,
Water 1 pint.

Boil it gently for an hour, or until it assumes a jelly-like appearance. Add sugar, wine, and nutmeg, with lemon-juice, to suit the taste of the patient and the nature of the case.

991. *Carrageen, or Irish Moss Blanc-mange.*

Take of
Carrageen half an ounce,
Fresh milk a pint and a half.

Boil them down to such a consistence as to retain a form when cold; remove any sediment by filtering, and then add the requisite quantity of sugar, with lemon-juice, or peach-water, to give an agreeable flavor.

The moss, before being used, should be well washed in cold water, to remove its saline taste.

992. *Iceland Moss Jelly.*

Take of

Iceland Moss	two parts,
Water	twenty parts.

Boil down to six parts and strain. Then add—

Sugar	four parts.
-----------------	-------------

Dissolve and set aside to cool.

In consequence of its bitter principle, Iceland moss is more tonic than the other mosses.

993. *Arrowroot.*

Take of

Arrowroot	1 tablespoonful,
Cold Water	sufficient,
Boiling Water	half a pint.

Mix the Arrowroot with just sufficient cold water to soften the lumps, then pour on the boiling water, and stir continually until the solution is gelatinous and transparent. Sweeten to the taste and grate in a little nutmeg.

994. *Tous les Mois, or Canna Starch.*

This article is prepared like arrowroot. It is very delicate and valuable as a dietetic agent.

When intended for infants, both this and the arrowroot are rendered more nutritious by the addition of fresh milk to the translucent jelly, made as directed above. In this case, however, it is better to make the jelly more stiff by using a larger quantity of arrowroot, and then reducing it by milk to the proper consistence.

995. *Maizena, or Corn Starch.*

To one quart of boiling milk add gradually four tablespoonfuls of the starch, previously rubbed into a paste with a little cold milk, add some salt and boil for five minutes, stirring briskly. Sweeten to the taste, and flavor with essence of vanilla, lemon, or orange. Then set aside to cool.

996. *Boiled Flour.*

Take of

Fine Flour a pound.

Tie it up in a linen cloth as tight as possible, and after frequently dipping it in cold water, dredge the outside with flour till a crust is formed round it, which will prevent the water soaking into it while boiling. It is then boiled until it becomes a hard dry mass.

Two or three tablespoonfuls of this may be grated and prepared in the same manner as arrowroot, for which it forms an excellent substitute.

This is an admirable food for children, nutritious and wholesome.

When the bowels are constipated, the editor has found great advantage in substituting for the white flour bran meal, or unbolted flour of fine quality, treating it in the same way; and by the continuous or even occasional use of this, the bowels are kept regular, with even more nourishment afforded. In the constipation of tubercular children, this latter is especially useful.

[997. *Meigs' Food for Infants.*]

"Is made by dissolving a small amount of prepared gelatine or Russian isinglass in water, to which is added milk, cream, and a little arrowroot or other farinaceous substance that may be preferred. The mode of preparation and the proportions are as follows: A scruple of gelatine (or a piece two inches square of the flat cake in which it is sold) is soaked for a short time in cold water, and then boiled in half a pint of water until it dissolves—about ten or fifteen minutes. To this is added, with constant stirring, and just at the termination of the boiling, the milk and arrowroot, the latter being previously mixed into a paste with a little cold water. After the addition of the milk and arrowroot, and just before the removal from the fire, the cream is poured in, and a moderate quantity of loaf-sugar added. The proportion of milk, cream, and arrowroot must depend upon the age and digestive power of the child; for a healthy infant within the month, I usually direct from three to four ounces of milk, half an ounce to an ounce of cream, and a teaspoonful of arrowroot to the half pint of water. For older children the quantity of milk and cream should be gradually increased to a half or two-thirds milk, and from one to two ounces of cream. I seldom increase the quantity of gelatine or arrowroot."

JNO. F. MEIGS.

998. *Vegetable Soup.*

Take one turnip, one carrot, two potatoes, and one onion. Let them be sliced, and boiled in one quart of water for an hour. Add as much salt as is agreeable, flavor with a small portion of potherbs, and pour the whole upon a piece of dry toast.

This preparation forms an agreeable substitute for animal food, and may be given when the latter is inadmissible.

999. *Mutton Broth.*

Select two tender mutton chops, put them into a saucepan, add one quart of cold water and a little salt, cover the pan, and cook slowly for two hours. Then skim off all the fat, and add one tablespoonful of rice, one white potato, one turnip, and a little parsley chopped fine. Simmer for three-quarters of an hour, then pour into a bowl and remove the chops and all of the remaining fat.

This broth is nutritious and palatable.

1000. *Beef Tea.*

Take of

Lean Beef, cut into shreds	1 pound,
Water	1 quart.

Boil for twenty minutes, taking off the scum as it rises. Strain the liquor, and add salt according to the taste.

This preparation is more nourishing than ordinary broths, and very palatable.

1001. *Liebig's Beef Tea.*

"One pound of lean beef, free of fat, and separated from the bones in the finely-chopped state in which it is used for mince-meat, is uniformly mixed with its own weight of cold water slowly heated to boiling, and the liquid, after boiling briskly for a minute or two, is strained through a towel, from the coagulated albumen and fibrin, now become hard and horny. Thus we obtain an equal weight of the most aromatic soup, of such strength as cannot be obtained even by boiling for hours from a piece of flesh." This is to be seasoned to taste.

DR. BENEKE.

1002. *Essence of Beef.*

Put a sufficient quantity of lean beef, sliced, into a porter bottle to fill up its body, cork it *loosely* and place it in a

pot of cold water, attaching the neck to the handle of the vessel by means of a string. Boil for an hour and a half or two hours, then decant the liquor and skim it.

To this preparation may be added spices, salt, wine, brandy, etc., according to the taste of the patient and nature of the disease.

[1003. *Marcet's New Process of Beef-tea.*]

Take one pound of lean beef, cut into small pieces; put into a pint of cold water.

To this add—

Hydrochloric Acid (sp. gr. 1.15) 58 grains,
or about 50 minims,

Boudault's Pepsine 15 grains.

Bring it up to about 100° Fahrenheit, and maintain it at that temperature in a water-bath until the meat becomes disintegrated; strain it then, and neutralize with 80 grains of bicarbonate of soda.

This makes a palatable and exceedingly digestible nourishment. In cases of fever, where the acid is rather desirable than not, the editor has found it quite agreeable to the patient, without the addition of the soda.

[1004. *Eggs, Cream, and Extract of Beef.*]

Wash two ounces of the best pearl sago, until the water poured from it is clear; then stew it in a half pint of water until it is quite tender and very thick; mix with it half a pint of good boiling cream and the yelk of four fresh eggs, and mingle the whole carefully with one quart of good beef-tea, which should be boiling. Let cool sufficiently, when it is ready for use.

T. H. TANNER.

The editor has used this elegant preparation among his patients when nothing else could be taken and retained.

[1005. *Preparation of Raw Beef.*]

“Take of

Fresh lean beef free from fat or bones	3 lbs. avoirdup.,
Water	8 fluidounces,
Inodorous Glycerine	6 fluidounces,
Pure Brandy	4 fluidounces,
Sulphate of Quiniæ	8 grains,
Oil of Ceylon Cinnamon	4 drops,
Dilute Phosphoric Acid	sufficient quantity.

Cut the beef finely, chopping or dividing in a sausage-cutter, add the water and expose the mixture to the heat of a water-bath, with constant stirring, till it attains a temperature of about 145° F.; transfer to a strong muslin drilling bag, and express the juice with powerful pressure; set this juice in a cool place until the floating fat solidifies, then skim carefully. Take of this juice about half a fluidounce, and add to it in a mortar the sulphate of quinia, rub it up smooth, and add sufficient dilute phosphoric acid to make a clear solution; then return this solution to the remainder of the juice, and pour in the glycerine, brandy, and oil of cinnamon previously mixed.

“If force has been used in the expression of the juice, the finished preparation will measure about 32 fluidounces, varying a little according to the juiciness of the beef. As thus prepared it is an agreeable article as respects appearance and taste, the raw flavor of the beef being effectually masked. It will keep perfectly sweet for two weeks, and probably longer.”

The above formula was furnished by my friend J. E. Carter, manufacturing chemist of this city, and I can say that I have used the preparation as a nutriment in advanced phthisis, when it was found acceptable to the stomach, and seemed to maintain vitality when it was at a very low ebb and all other food disgusted. It may be given in doses of a wineglassful after meals.

1006. *Hartshorn Jelly.*

Take of

Hartshorn Shavings	4 ounces,
Water	1 quart.

Boil over a gentle fire until one pint of the water be dissipated.

Strain, and add lemon-juice, sugar, and half a pint of wine.

This forms, either with or without the last-named ingredients, a very nourishing diet for convalescents; and, when mixed with an equal portion of milk, is well adapted to the bowel complaints of children.

Isinglass may be used instead of the hartshorn shavings, if preferred.

1007. *Calves' Feet Jelly.*

Take a set of four feet, break them in small pieces, add to them one gallon of water, and reduce by boiling to one quart. Strain, and when cold, skim the fat entirely off. Add to this the shells and white of six eggs, well beaten, a pint of wine, a pound of loaf sugar, and the juice of four

lemons, and let them be well mixed. Boil the whole for a few minutes, stirring constantly, and then pass the jelly through a flannel strainer.

This forms a very nutritious article of diet for the sick and convalescent.

1008. *Gelatine Jelly.*

Soak one ounce of gelatine for ten minutes in half a pint of cold water; then add the same quantity of boiling water, and stir till the gelatine is dissolved, applying heat, if necessary. Add half a pint of good wine, the peel and juice of two lemons, and sugar, according to the taste. Then add the shell and white of one egg, well beaten together; boil the jelly for five minutes, and strain while hot through a piece of felt or flannel. Set aside in a cool place until the jelly becomes stiff.

This is both palatable and nutritious.

1009. *Blanc Mange.*

Boil one ounce of shred gelatine in a quart of milk for ten minutes, stirring constantly. Sweeten to the taste, flavor with peach-water, or essence of vanilla, and strain into a mould.

1010. *Chicken Water.*

Take one half of a chicken divested of all fat, and break the bones; add to this half a gallon of water, and boil for half an hour. Strain, and season with salt.

This water is directed by some physicians in the early stages of cholera. Taken warm it promotes vomiting and washes out the stomach.

1011. *Chicken Broth.*

Clean half of a chicken, and pour on it one quart of cold water; add a little salt, and one tablespoonful of rice. Cover the vessel closely, and boil for two hours. Throw in near the end of the boiling a little parsley, chopped fine. Skim the broth before using.

This is one of the most valuable articles of diet at the command of the physician in the low stages of disease, when the patient's system requires support, but his digestive powers will not admit of solid food.

1012. *Suet Ptisan.*

Take of

Mutton Suet	2 ounces,
Milk	1 pint,
Starch	half an ounce.

Boil slowly for half an hour.

This may be used warm as a common drink in dysentery.

1013. *Mucilage of Starch, etc.*

Take of

Starch	1 ounce,
Powdered Cinnamon	1 drachm,
Gum Arabic	1 ounce,
Boiling Water	3 pints.

Boil until reduced one-third, and strain.

The above may be taken for a common drink in dysentery.

1014. *Mulled Wine.*

Take two drachms of bruised cinnamon, half a nutmeg, grated, ten bruised cloves, and half a pint of boiling water. Infuse one hour, strain, and add of hot port, or hot sherry wine (or of good domestic wine), one pint, and white sugar, one ounce. Mix.

This is a mild stimulant drink, used in the convalescence from low forms of disease.

Wine Whey.

(See Formula No. 342.)

Mustard Whey.

(See Formula No. 341.)

1015. *Rennet Whey.*

Take of

New Milk	1 quart,
Rennet	a large spoonful.

Heat the milk and then add the rennet. Boil until the curd separates and is all taken off.

To many persons this forms a very agreeable nutriment.

[1016. *Brandy Mixture.*]

Take of

Brandy	4 fluidounces,
Cinnamon Water	4 fluidounces,
The yolks of two eggs,	
Sugar	$\frac{1}{2}$ ounce,
Oil of Cinnamon	2 minims.

Beat the eggs perfectly light, add the sugar and cinnamon water; then the brandy with the oil of cinnamon in solution; beat the whole together.

A delightful nutriment in prostration or low fevers.

From one to three tablespoonfuls to be taken as required.

P. SQUIRE.

1017. *Vinegar Whey.*

Take of

Milk	1 pint,
Vinegar	half an ounce.

Boil for a few minutes, and separate the curd.

1018. *Tartar Whey.*

Take of

Milk	1 quart,
Cream of Tartar	half an ounce.

Boil until the curd separates.

OF POISONS.

CASES of poisoning are so sudden and so awful that no time is to be lost in administering relief. To do this with judgment and effect, it is requisite to be familiar with all the usual antidotes; and of these, we have accordingly selected some which possesses an acknowledged efficacy, omitting at the same time many others that are unworthy of confidence. For the purpose of convenience we have arranged the Poisons alphabetically, with the appropriate antidotes attached to each. But, as has been remarked when speaking of Emetics, our chief reliance in these cases is upon free vomiting, induced by those articles which are most speedy in their effect. Dr. Beck prefers sulphate of zinc, whenever it can be procured, and adds, "but if vomiting be present, we may aid it by diluents or a vegetable emetic. Tartrate of antimony should never be given." Yet, even from this treatment, little can be expected when the deleterious substance has remained long in the stomach; and the stomach-tube and syringe will be indispensable.

To protect the stomach and intestines from the direct operation of poisons, it is generally recommended to give milk, lime-water, soap, or drinks sweetened with sugar or honey. Oils and other fatty substances are found to be injurious.

When the vomiting has ceased, and retching and pain continue, Mr. Hume advises the free administration of carbonate of magnesia with tincture of opium, suspended in water.

A general antidote for poisoning, in which the nature of the poison is unknown, consists of equal parts of calcined magnesia, pulverized charcoal, and hydrated peroxide of iron, which are to be diffused in water, and be given freely. Although these articles are simple and innocent in their operation on the system, they will probably prove efficient, as one or another of them is an antidote to most of the mineral poisons.

The albumen of eggs and tannic acid are also general antidotes of great value. The former neutralizing corrosive sub-

limate and other salts, and the latter precipitating all of the vegetable alkaloids as tannates.

ALCOHOL.

Large quantities of alcoholic liquors, taken by persons unaccustomed to their use, often produce fatal effects.

The treatment in such cases is to evacuate the stomach as soon as possible; but from the rapidity of absorption this may not always be effectual. The patient must be kept roused and cold affusion plentifully used. Large draughts of tea or coffee ought to be taken until the stomach is thoroughly evacuated.

ALKALIES.

Ammonia, potassa, soda, and their carbonates, are seldom taken in poisonous quantities. When it so happens, the best antidote is common vinegar; it is always at hand, and its affinity for these substances is sufficiently strong to neutralize them. Also, a fixed oil, as olive oil, should be given in large quantity—several pounds being required where a large portion of the alkali has been taken; it acts partly by rendering the vomiting easy and free, and partly by converting the alkali into a soap.

ANTIMONY.

The preparation of this mineral, by which poisoning is most commonly produced, is *tartar emetic*. This of itself produces violent vomiting, and therefore our first efforts should be directed to keeping up the emesis by means of mild diluents and mucilaginous preparations. Its antidotes are the alkalies, tannin, and astringent vegetable infusions, such as common tea, Peruvian bark, infusion of galls, etc. These decompose the antimonial salt. When the vomiting is excessive, opium by injection will assist in allaying it.

ARSENIC.

Until the present century there was no known antidote to this deadly poison, and the sole dependence of the practitioner was upon mild diluents, albumen (such as the whites of eggs suspended in milk), or warm water and sugar. In the treatment of poisoning by arsenic, it is best first (if vomiting has

been delayed) to give an emetic of mustard, or of the sulphate of zinc, and milk should be drunk liberally both before and after vomiting has begun. The patient should never be allowed to exhaust his strength in retching, without some milk or other fluid in his stomach to act on. The Cornish miners rely upon olive oil as an emollient to the stomach.

THE HYDRATED PEROXIDE OF IRON, freshly prepared, was announced in the year 1834, by Dr. Bunsen, of Göttingen, as an antidote for poisoning by arsenic; and its efficacy has been confirmed by MM. Orfila, Lesueur, Soubeiran, and Miguel, and also in this city by various chemists, and by experiments upon the inferior animals. The antidote is now officinal, and should always be kept on hand.

The following direction will enable the most ignorant person to make use of this antidote until medical advice can be obtained. It must be administered as soon as possible after the discovery that arsenic has been taken, and as it causes no bad effect itself, should be given EVERY FIVE OR TEN MINUTES, UNTIL ENTIRE RELIEF IS OBTAINED. It is said that twelve parts of it are necessary to neutralize one of arsenic. The dose for a grown person is a tablespoonful; for children a teaspoonful. The bottle TO BE WELL SHAKEN BEFORE EACH DOSE. IN CASES OF EMERGENCY, IT MAY BE PREPARED BY SIMPLY PRECIPITATING THE MURIATED TINCTURE OF IRON, OR A SOLUTION OF THE PERSULPHATE OF IRON, BY AMMONIA, and washing the precipitate.

Should the patient survive (and the probability is in his favor if the antidote be given early and faithfully), the inflammatory symptoms must be combated on the general principles for treating inflammation. The diet should consist exclusively of milk, gruel, cream, rice, and similar bland articles for several days.

In a case of poisoning in this city, where half an ounce of the powdered arsenic had been taken, and was followed by extreme thirst and vomiting, all the symptoms were allayed by freely taking the hydrated peroxide of iron. Only a slight gastritis followed, which was readily subdued.

The hydrated oxide forms with the arsenious acid an insoluble salt.

In place of the hydrated oxide, the rust of iron and precipitated carbonate should be resorted to in cases of emergency, possessing as they do, to a certain extent, the power of antidotes. Magnesia, in the gelatinous or hydrated state, if given in large doses, acts also as an antidote, and in several cases lately reported was used with complete success. It can be

rapidly prepared by precipitating a solution of Epsom salts by ammonia.

When the poison has been taken in the form of Fowler's solution, Dr. Dunglison recommends copious draughts of lime-water to be used; but this should not preclude the employment of the hydrated oxide of iron.

B A R Y T A .

The carbonate of baryta and the chloride of barium are poisonous, and the latter has been taken by mistake for Glauber's salts. In cases of poisoning with either, the alkaline sulphates should be given freely, and resort be had to the stomach-pump and emetics. The true antidote is sulphate of magnesia or soda; with these a sulphate of baryta is formed, which is perfectly insoluble, and may be brought off by emetics and copious diluents, oleaginous or albuminous.

C O P P E R .

The sulphate (blue vitriol) and subacetate (verdigris) are the salts of this metal from which poisoning most frequently results; the latter often from the careless use of culinary vessels or mineral-water fountains.

Vomiting should be encouraged by the free use of tepid water, milk, and mucilages.

According to Orfila, albumen in the form of white of eggs is the best antidote, and sugar, formerly in much repute, acts only as an emollient. In the absence of eggs, milk or wheaten flour should be employed. Vinegar in all cases must be avoided. The French physicians have tried iron-filings, in consequence of the power possessed by this metal of reducing the salts of copper; and the results they obtained, in some experiments performed on animals, are such as to justify considerable confidence in the antidote. The iron decomposes the cupreous salt, and precipitates the copper in a metallic and consequently in an inert state.

G O L D .

The nitro-muriate or terchloride of gold is a powerful poison. Its antidotes are sulphate of iron (which throws down the gold in a metallic state), and albuminous substances, followed by the free use of mucilaginous drinks.

I O D I N E.

Ten or twenty grains of iodine sometimes, though not always, produce constriction of the fauces, nausea, vomiting, and severe colic pain. Larger doses endanger life. The best antidote for its preparations is starch freely given, or, what answers the same purpose, flour mixed with water. Magnesia is also recommended. Vomiting should be induced by mustard or some other prompt emetic.

L A U D A N U M.

Laudanum, when taken in large quantity, must be withdrawn from the stomach by active emetics, such as mustard, sulphate of zinc, sulphate of copper, or alum, or by tickling the fauces. The stomach-tube should then be used to remove whatever remains of the laudanum in the stomach. This should be followed by a purgative, to carry off any of the poison that may have entered the bowels. The free use of vegetable astringents and strong coffee will also be serviceable. An important part of the after-treatment is the maintenance of artificial respiration, besides which active stimulants are often required. Iodine, bromine, and chlorine are stated by M. Donné, of Paris, to be antidotes for poisoning by nux vomica and opium. M. Orfila thinks that the decoction of galls may with propriety be used as an imperfect antidote, until the narcotic can be evacuated from the stomach. (See *Opium*.)

L E A D.

The acetate is the only preparation which is resorted to as a poison. The sulphate of magnesia or soda is its true antidote, as it converts the poison into a sulphate, which is inert. The alkaline carbonates and bicarbonates and the phosphate of soda are also good antidotes. If the patient does not vomit, give an emetic of the sulphate of zinc, which will not only empty the stomach, but convert any remaining soluble lead into an insoluble sulphate.

Milk or albumen should also be given in large quantities, as it has been found that the albuminous principle of milk is a very effectual precipitant of the oxide of lead; a compound which, though not entirely inert, is far less active than the acetate, and tends to prevent the action of the poison as a corrosive on the stomach.

MERCURY.

All the preparations of this metal are poisonous, and corrosive sublimate in particular. Our chief and only dependence, according to M. Orfila, is upon the albumen of eggs, copiously swallowed, or introduced through the stomach-tube, which should be resorted to when the patient cannot swallow or vomit. Enemata of the same should also be used.

If the albumen be taken in sufficient quantities, it decomposes the sublimate, forming a triple compound of albumen, muriatic acid, and calomel. If the remedy excites fresh vomiting, so much the better; and if symptoms of gastritis appear, they are to be treated in the usual way. M. Orfila has also established that a fatal dose of corrosive sublimate may be swallowed by animals with impunity, provided the white of egg, or any other kind of fluid albumen, be introduced shortly before or after into the stomach. Cases are also upon record which establish that it possesses an equal efficacy in man.

The gluten of wheat flour is also strongly recommended on the same principle, as an antidote to corrosive sublimate. To administer it, nothing more is requisite than to mix the flour with water. The quantity taken must be very considerable. It is said to reduce the sublimate to the state of calomel.

Gluten of wheat flour is also given in the form of an emulsion with soft soap, by mixing partly in a mortar and partly with the hand 5 or six parts of fresh gluten with 50 parts of soft soap.

When neither albumen nor gluten is at hand, milk forms a good substitute.

The only other antidotes deserving of mention here are a mixture of two parts of iron filings and one of zinc, meconic acid, and the hydrated proto-sulphuret of iron. The first was recommended by Dumas, and must obviously operate by bringing the mercury to the metallic state. The meconic acid, particularly when combined with an alkaline base, affords, with corrosive sublimate, an insoluble and inert mercurate of mercury. The mercurates of the ordinary alkalies, however, can scarcely be obtained in sufficient quantity to be applied to such a purpose; and from the smallness of the saturating power of meconic acid, it would be hazardous to administer the quantity of opium which would be adequate to the decomposition of a few grains of corrosive sublimate, inasmuch as the muriate of morphia, which would be contemporaneously formed, is a narcotic medicine of very considerable energy.

The hydrated proto-sulphuret of iron was proposed by Mialhe, and confirmed by Orfila, who says that if it be taken *immediately* after the ingestion of the poison, it completely destroys the poisonous quality of corrosive sublimate.

MINERAL ACIDS.

The first, because the most ready method of counteracting the action of the mineral acids, is the copious use of water, warm or cold, milk, oil, or mucilage, which, by simply diluting them, renders them less acrid, and at the same time assists the stomach in rejecting them. This course should be followed until the proper antidotes are prepared. These are the alkalies, alkaline earths and soaps, common pearlash or carbonate of potassa, carbonate of magnesia, chalk, and soap in solution. Calcined magnesia, though advised by some authors, is objectionable, inasmuch as the rapidity with which it would combine with acid in the stomach, might alone produce inflammation of that organ.

The smallest quantity of nitric acid which is known to have destroyed life is two drachms; the smallest fatal dose of muriatic acid was one ounce.

NARCOTICS.

The remedies employed in all cases of poisoning from this class of substances, are nearly the same, viz., the most active emetics, as sulphate of zinc, alum, and mustard in large doses. In all cases where it is possible, the stomach-tube should be employed. After these evacuations, tannic acid or strong decoctions of tea, coffee, or the vegetable astringents, with cold affusion, are proper. Electro-magnetism is also serviceable, together with brandy, ammonia, and other powerful stimulants, and artificial respiration.

There is no positive antidote to any of the vegetable alkaloids. Tannic acid combines with all of them, and forms salts which are insoluble in water, but are soluble in vinegar and the gastric juice. Hence, the administration of this acid is beneficial, time being gained for the removal of the poison in the form of a tannate from the stomach. If not removed, the tannate will be dissolved by the gastric fluids. After emesis, charcoal may be given freely, as it possesses the singular property of absorbing and retaining coloring matters, vegetable acids, and the alkaloids.

NITRE (*Nitrate of Potassa*).

This salt is sometimes taken in mistake for Epsom or Glauber's salts. When this happens, vomiting should be excited as speedily as possible, followed by the free use of mucilaginous drinks, hot gin-toddy, brandy and water, etc.

As there is no antidote to this poison, in case these means should fail we must resort to the stomach-pump.

OPIUM.

We cannot do better in this place than transcribe what Dr. T. R. Beck, of Albany, says of the antidotes to opium.

"The experiments of Orfila have demonstrated that the administration of vinegar, or rather vegetable acids, previous to the evacuation of the poison by vomiting, will accelerate and aggravate the action of the opium; but that when the opium has previously been expelled, water acidulated with vinegar, or any other vegetable acid, will tend to diminish and correct the effects. Coffee, when prepared in strong decoction or infusion, rapidly lessens the symptoms, but cannot be considered as an antidote. The result of his experiments led him to give the following directions for the treatment of a person poisoned by opium. Induce vomiting, if possible, with sulphate of zinc, or sulphate of copper; but the administration of watery liquids with the view of promoting the vomiting, should be forbidden, as they dissolve the opium and promote its absorption. In order to insure the action of the emetic, the patient must be kept roused by discharging cold water over the head and breast; yet cold affusion must be avoided in the advanced stage, when the body is cold, and the breathing scarcely perceptible. To insure success, in every case the patient must be kept awake, either by dragging him up and down between two men, or by flagellation on the back and soles of the feet. Artificial respiration may be used in desperate cases with propriety. Bleed the patient immediately after the rejection of the poison, and repeat this if necessary. Afterwards administer alternately water acidulated with any vegetable acid and a strong infusion of coffee¹ warmed, and in ten or twelve hours exhibit an enema, and let the arms and legs of the patient be well rubbed. Purgative clysters should be continued, if it be

Dr. H. F. Campbell reports a case in which an injection of twenty grains of caffen in an infusion of coffee was attended with the happiest effect.

suspected that any of the opium still remains in the large intestines."—BECK, *Med. Jurisprudence*, vol. ii. p. 403.

These remarks are applicable to the poisonous effects induced by other articles of the Narcotic class, as belladonna, hyoscyamus, stramonium, etc. Yet as these are not often taken with suicidal intentions, the quantity is seldom inordinately large. Emetics, if given soon after the poison has been swallowed, will at least remove a part of it; after which the practitioner must necessarily be governed in the treatment by the nature of the peculiar poison, the amount taken, and the patient's constitution. Stimulants are occasionally necessary from the first; in other instances, depletion; but more frequently, each is in turn called for.

As belladonna and opium manifest a different, and in some respects an opposite effect upon the brain, they have been recommended as antidotes to each other in cases of poisoning. This recommendation, however, should not interfere with the measures above described. It may be received as an adjuvant, but not as a substitute for the usual plan of treatment.

OXALIC ACID.

Death from this poison is generally sudden. Lime-water, or a mixture of chalk and water, is recommended by Dr. Thompson, for the purpose of converting the acid into oxalate of lime. The carbonate of magnesia, also, has been found by experiment to counteract the poison; but the alkalies must be avoided, as they act with an energy little inferior to the acid itself.

It is advisable to avoid giving *warm water* with a view to accelerate vomiting; for dilution promotes the absorption of the poison.

PHOSPHORUS.

This substance acts so immediately and so powerfully in decomposing the animal tissues, that no available antidote has hitherto been suggested. A small portion is sufficient to destroy life. Nevertheless, large quantities of mild demulcent liquids should be exhibited to shield the alimentary canal, and magnesia to neutralize the phosphorous and phosphoric acids which may be formed.

PRUSSIC ACID.

This deadly poison, in its purity, acts with such rapidity as to leave no time for the administration of antidotes. When

taken in small quantities, much diluted, its action is less rapid, producing symptoms of excessive prostration, convulsions, and coma. Cold affusion to the head has been found very effectual in such cases, and when applied before the convulsive stage has passed, has often succeeded. The head should be kept elevated, and the water poured from a height upon the occiput and spine. The inhalation of ammonia is the antidote most to be relied on, many experiments having proved its efficacy. It should not be used of too great strength, which would endanger inflammation of the air-passages and stomach; the strong aqua ammonia, diluted with twelve parts of water, is recommended by Orfila.

Chlorine also possesses strong claims as an antidote, and, from the results of his experiments, is believed by Orfila to be the best which has yet been proposed.

In all cases, artificial respiration should be kept up while there is a hope of sustaining or restoring life.

Ether and chloroform have been recommended, and no doubt will eventually prove of great value from the rapidity with which they act.

Cases of poisoning with the oil of bitter almonds, cherry-laurel water, and other substances containing prussic acid, are not unfrequent, particularly among children. After evacuating the stomach, these require the same treatment as for prussic acid.

Poisoning by cyanide of potassium may be best treated, according to Dr. Alfred S. Taylor, by a strong solution of sulphate of iron.

SILVER.

The nitrate of this metal is sometimes taken by mistake; its antidote is comon salt, largely given, with copious draughts of mucilaginous drinks to promote vomiting. The salt produces an insoluble chloride, which has no power on the system.

TIN.

When any of the salts of tin are taken, albumen of eggs, flour, or milk, given freely, is the appropriate remedy. Milk forms a coagulum with the chloride of tin (*Dyer's spirit*), and renders it innoxious. Lime-water or the alkalies would decompose this salt, and thus render it inert.

VEGETABLE POISONS.

See "NARCOTICS" and "OPIUM."

ZINC.

The sulphate of this metal is occasionally taken in an overdose. Warm water and emollient drinks are proper in such cases; but milk is particularly useful, from its power of decomposing the sulphate; also albumen, magnesia, etc. Vegetable astringents may be beneficially used.

The crystallized sulphate of zinc very closely resembles the sulphate of magnesia, and has been mistaken for it—a fact to be borne in mind by apothecaries and physicians.

THE HISTORY OF THE

ROYAL SOCIETY OF LONDON

The history of the Royal Society of London, from its first institution in the year 1660, to the present time. In two volumes. The first volume contains the history of the society from its first institution to the year 1700. The second volume contains the history of the society from the year 1700 to the present time.

APPENDIX.

I. ON THE ENDERMIC USE OF MEDICINES.

"THE science of medicine," says Dr. Gerhard,¹ "has recently received an important auxiliary to its resources, by the discovery that remedial substances, when applied to the cutis, after the removal of the epidermis, produce their peculiar effects with nearly the same energy as if introduced into the alimentary canal. This mode of exhibition, which has received the name of the *endermic method* or *endermic medication*, is always found much more efficacious than the iatroleptic method of Christien, or the administration of medicines by means of frictions on the cuticle."

The endermic method requires the previous separation of the cuticle, which is best effected by a blister about four inches square. The cuticle should then be punctured or removed in very small patches, so that the medicine may come in contact with the vesicated surface. Substances used in this way must be applied in two or three times the quantity requisite when given by the mouth. "The remains of the substance applied are much less than the original quantity, and sometimes no trace of it can be perceived; the whole appearing to be absorbed or mingled with the secretions."

We avail ourselves of Dr. Gerhard's valuable paper for the following facts in relation to those medicines which act most effectually in the endermic method.

Sulphate of Quinia.—A blister to be applied to the epigastrium during the apyrexia; and if the paroxysm returns before the quinia can be used, defer it until the next apyrexia. Apply four grains of powdered sulphate of quinia (either alone or with an equal quantity of starch), four times a day, for two successive days. A less irritating plan, however, is

¹ North Amer. Med. and Surg. Journ., April, 1830.

to dissolve sixteen grains of the sulphate in two ounces of water, with which the blistered surface is to be repeatedly wet during the day by means of a soft linen cloth. There is no occasion to *remove* the loose epidermis; it is all-sufficient to *puncture* it in several places to allow the solution to touch the denuded surface.

Morphia.—The acetate and sulphate act readily and effectually; the latter is preferable, because more soluble and less irritating. It may be applied in powder, in solution, or in the form of cerate. The dose varies from half a grain to two grains, and its effects are speedily perceptible.

Digitalis.—Dose, two grains three times a day.

Aloes.—This medicine acts on the bowels with nearly the same certainty as if taken internally. Dose, ten grains, to be repeated, if necessary, in a few hours.

Gamboge, owing to its solubility, purges freely in the endermic method. Dose, from five to eight grains.

Rhubarb, *jalap*, *elaterium*, and *croton oil*, contrary to what might be expected, do not produce catharsis, although they excite severe local irritation.

Squills.—This medicine in powder, sprinkled on a blistered surface three times a day, in the quantity of four grains at each application, causes copious diuresis. Its power is increased by combination with *digitalis*, in the proportion of four grains of the former to one of the latter.

Emetics from the *vegetable* kingdom all produce their effect in the endermic method; and tobacco does so without any previous irritation of the skin. The same remark is applicable to mercury and iodine, which last is best applied in the form of ointment, made by rubbing a drachm with an ounce of cerate.

Emetics derived from the mineral kingdom exert no specific action. B. E.

II. ON THE USE OF ETHER AND CHLOROFORM.

THE employment of anæsthetic agents has now become so general, and their great value so fully attested by many eminent physicians and surgeons in all parts of the world, that we shall here give a brief account of their uses and mode of application.

Indeed, the discovery of a means by which to give complete insensibility to pain during the performance of tedious

surgical and dental operations, as well as to mitigate the spontaneous sufferings attendant on many diseases, must be considered one of the most important in the annals of medicine. That pain is useful in indicating the seat and progress of disease, cannot be denied; yet, on the other hand, its severity may exhaust life, and to allay it is often the most difficult and necessary part the physician is called upon to perform. The inhalation of ethereal substances now gives the practitioner more or less control over these "ills that flesh is heir to," enabling him to alleviate some, and wholly to prevent others.

Notwithstanding the benefit to be derived from its judicious use, the mode of inhalation is also capable of producing much evil in the hands of the unskilful and ignorant; and it should, therefore, be employed by those only who are acquainted with its diversified operation.

Ether and chloroform produce essentially the same effects, but the latter is much the more powerful and rapid in its action.

The progressive stages of etherization seem to be pretty much as stated by Mr. Sibson, viz:—

1. Cerebral excitement.
2. Cerebral derangement, staggering intoxication.
3. Cerebral sleep (sopor); pupils contracted; dreams; reflex functions of the brain and spinal marrow still active.
4. Cerebral death (coma); reflex functions of the medulla and spinal marrow still active.
5. Death of spinal marrow; cessation of respiration (heart's action generally still present).
6. Cessation of heart's action.

He also says: "It is very important to be able to tell easily when the stage of safety—sopor, is about to merge into that of danger—coma. The action of the pupils is the key to this knowledge. Inhalation should not be continued one instant after the pupils, previously contracted, have begun to dilate.

"If unconsciousness can be secured by sopor, the inhalation should not be carried on to produce coma. If complete muscular relaxation be sought for, as in hernia, to facilitate taxis; in dislocation, to make reduction easy; and in tetanus, then it will be needful, in general, to urge the patient from sopor into coma; but as soon as the muscular relaxation is secured, the inhalation should cease. When chloroform or ether is employed in chorea, delirium tremens, or other affections, it should never be urged beyond sopor. In neuralgia,

it is not usually needful to produce unconsciousness. Whenever the pain disappears, the inhalation ought to cease."

According to Dr. Snow, a necessary precaution for watching the effects of ether and chloroform is, that they possess an accumulative property; their influence sometimes increasing for twenty seconds after the inhalation is discontinued. It is seldom necessary to carry the process farther than the production of sopor; in this dreamy state insensibility to pain is perfect, and in some persons much earlier. Many patients seem to be perfectly awake to all mental impressions, and even take an interest in the progress of the operation, without feeling the slightest pain, and, indeed, in some instances, experiencing agreeable sensations.

The influence of these agents being transmitted by the blood, pervades the whole system simultaneously, and particularly excites the capillary circulation, as evinced by the injected conjunctiva, increased lachrymal and salivary secretions, and turgidity of the face and neck, the redness of which, however, soon gives place to pallor.

Although used heretofore only to produce general effects, it has lately been discovered by Mr. T. Nunneley, of Leeds, that local anæsthesia may be caused by these agents; and that the brain and other parts of the body not subjected to their influence remain unaffected. After an extensive series of experiments on different animals, he finds that, by immersion in a small quantity of the fluid, or by applying the vapor locally for a limited period, a limb may be rendered perfectly motionless and senseless, and, what may be an additional advantage, fixed in any desired position. The benefits likely to be derived from this new and valuable discovery promise to be very great.

As regards the mode of applying these vapors, the principal thing to be observed is, that they be freely diluted with atmospheric air. Many instruments for inhalation have been invented, but most of them have given place to a simple sponge; and in the case of chloroform, a towel or handkerchief is perhaps as good as anything yet proposed. The degree of etherization does not depend so much upon the amount respired, as upon the peculiar constitution of the individual, and the physician is thus better able to regulate the amount, and judge of its effect. A drachm of *chloroform*, or even half a drachm, poured upon a handkerchief, and gradually brought close to the mouth and nose, will, in about two minutes, more or less, produce the required effect. Of *ether*, half an ounce may be poured upon a sponge, and more

added from time to time if required. The full effect of ether is not generally obtained in less than four or five minutes. As regards their comparative merits, it may be said of chloroform that it is less pungent, and requiring a less amount is more easily inhaled; but it is also said to have a greater tendency to produce involuntary muscular contraction, and exerts a more direct and powerful action on the heart than ether. As far as present experience goes, ether has been found the milder and safer of the two; and in the case of children, from their greater susceptibility, should always be given in preference to chloroform; etherization, in them, occurring in about two minutes.

According to Dr. Snow, the immunity from pain does not correspond exactly with the degree of narcotism, but is greater as the patient is recovering from the effects of the vapor than in the corresponding degree as he is getting under its influence; this is more particularly the case with ether, which he considers to possess superior anæsthetic effects to chloroform in proportion to the narcotism produced. When ether is inhaled, the patient sometimes completely recovers his mental faculties, although insensibility to the operation still continues.

The use of ether or chloroform is contra-indicated by the existence of any disease of the heart, tendency to engorgement of the lungs, or aneurism of any of the great vessels; nor should it ever be used either during the existence of shock resulting from a severe injury.

The existence of extreme debility is not always a contra-indication; for, acting as a stimulant, the inhaled vapor seems to possess a sustaining power, and has been successfully used in a state of great collapse, as well as for its sedative influence in low cases of typhus fever.

Perhaps one of the most important uses of ether and chloroform is that for the relief of stricture, and to render easy the introduction of the catheter; here, in old and sensitive cases, as well as in retention of urine and the passage of calculi, they are invaluable.

The physician, in using these vapors, should bear in mind that he is administering an agent of great power, of which he must carefully observe the effect; for the life of the patient is in his hands. In some constitutions, six or seven inspirations of chloroform have produced complete insensibility, and we should always be on our guard lest alarming symptoms suddenly supervene. These are marked by suspended respiration, livid skin, widely dilated pupils, the eyes fixed, and the

iris immovable. The patient should be immediately laid upon the floor, cold water dashed upon the face, and the vapor of ammonia applied to the nostrils. These will generally restore animation; if, however, respiration has entirely ceased, it will be necessary to bring it about by artificial means. The abstraction of a few ounces of blood from the arm, or from the jugular vein, will also assist the renewal of the heart's action, by relieving distension.

We should be careful, also, not to endeavor to make the patient swallow anything while in this state of insensibility, as cough might induce suffocation and hasten death.

Besides sulphuric ether and chloroform, various other preparations have been found to possess anæsthetic properties; as Aldehyde, Benzoin, Acetic Ether, Bisulphuret of Carbon, etc., but sufficient experiments have not yet been made to determine their relative value.

As the action of chloroform depends upon its comparative purity, this may be tested by dropping it into the following mixture, viz: Sulphuric acid at 66° and distilled water, equal parts. When cool, this mixture will have a density by the areometer of 40° . (Sp. gr. 1.38.) Pure chloroform dropped into this liquid will fall to the bottom.¹ S. G. MORTON.

Dr. B. G. Richardson, of London, has recently brought to the notice of the profession a new anæsthetic, which he very highly extols as having all the good effect of chloroform, with greater safety and less disagreeable impressions subsequently; this is the Bichloride of Methylene, or, as it has been named by Spencer Wells, "Chloromethyl." Dr. R. says of it that, having tried it upon the lower animals, and very fully upon himself, he has arrived at the following conclusions, viz., that it is more rapid than chloroform in its effects, produces less prolonged second degree of narcotism, complete narcotism prolonged and easily reproduced, and the recovery from its effects very rapid; its power of destroying life in the lower animals much below that of chloroform. It is soluble in ether and chloroform in all proportions.

In the administration of anæsthetics, two very important points may be gained by proper attention to the method of its exhibition, viz., rapidity of action and economy of material. The former will be best insured by having a large evaporating surface, without much bulk of absorbing tissue,

¹ French Journal of Pharmacy, 1848.

upon which the liquid is poured for evaporation; the latter, by having the absorbing tissue completely covered by some impervious material, to prevent external evaporation. Both these ends may be very happily attained by a method which the editor has been in the habit of using for some time in his practice, as follows: Take a large India-rubber ball, such as are sold in the shops for foot-balls, say about six inches in diameter, and cut in it an opening large enough to receive the face from the chin to the bridge of the nose, shaping it so that when adapted to the face it will fit closely, there being a notch at the upper portion in which the upper part of the nose will rest, leaving the eyes clear of any contact with the inhaler; then take one or two thicknesses of patent lint, according to the quality or weight of it, and line the whole internal surface of the ball, within about an inch of the margin, fastening it by linen thread or silver sutures *partially* carried through the walls of the ball; the ridges of gum which are found upon the inside of these balls afford a good attachment for the lint. It is then ready for use, giving a portable inhaler which can be rolled up and put in the pocket, having a large evaporating surface, easily kept in position over the face without bringing the anæsthetic in contact with the skin (a point of no small importance in an irritable cuticle), allowing no more mixture of atmospheric air than you wish, no external evaporation; and giving great rapidity of action, with no waste of fluid. I have produced complete anæsthesia with a *fluidrachm* of a mixture of one to two of chloroform and ether, and believe half an ounce of *pure* ether will have the same effect in a very much shorter time than the old method of administration.

A. H. S.

The first part of the book is devoted to a general history of the United States from its discovery by Columbus in 1492 to the present time. It covers the early years of settlement, the struggle for independence, the formation of the Constitution, and the development of the nation as a great power. The second part of the book is devoted to a detailed history of the United States from 1789 to the present time. It covers the early years of the Republic, the struggle for the abolition of slavery, the Civil War, the Reconstruction period, and the development of the nation as a great power. The third part of the book is devoted to a detailed history of the United States from 1865 to the present time. It covers the Reconstruction period, the development of the nation as a great power, and the struggle for the abolition of slavery. The fourth part of the book is devoted to a detailed history of the United States from 1914 to the present time. It covers the development of the nation as a great power, the struggle for the abolition of slavery, and the development of the nation as a great power.

 sulphate of, pills, 349

- Morphia, sulphate of,—
 solution, 364
 syrup, 365
 squills and tolu, 242
 suppository, 389
 and tannic acid, 602
 tolu and tartar emetic, 243
 turpentine, etc., 241
 wild cherry, etc., 217
 and wine of ipecac, 156
 and veratria ointment, 930
- Moxa, 671
- Mucilage of gum arabic, 977
- Muriate of ammonia and acetic acid
 gargle, 802
- Muriatic acid mixture, 142
- Mush poultice, 944
- Musk and camphor, 409
 mixture, 411
- Mustard fomentation, 966
 injection, 784
 pepper and ginger cataplasm, 685
 plaster, 682
 powder of, 5
 whey, 341
- Mutton broth, 999
- Myrrh and borax gargle, 791
 and camphor, 326
 cantharides and hellebore, 277
 and ipecac, 182
 and iron, 265
 iron and digitalis, 268
 squill and henbane, 192
 and sulphate of zinc, 184
- N**APHTHA and bloodroot, 224
 and morphia, 225
- Naphthaline mixture, 214
 ointment, 919
- Neutral mixture, 157
- Nitrate of silver collyrium, 719
 and atropia collyrium, 740
 mixture, 521, 619
 solution, 746, 747, 759
 ointment, 931
 pills, 481, 482
- Nitre, calomel, and opium, 183
 opium, and ipecac, 151
 cream of tartar, and tartar emetic,
 92
 Dover's powder, and camphor, 147
 jalap, etc., electuary, 61
 spirit of, and morphia, etc., 162
 guaiacum, etc., 165
 senna, and sulphur electuary, 60
 and squill powders, 91
 tartar emetic, and calomel, 150
- Nitric acid, 581
- Nitric acid—
 and ammoniac, 232
 mixture, 416
- Nitric and sulphuric acids, 512,
 Nitro-muriatic acid, mixture, 140, 580
 bath, 957
- Nitro-hydrochloric acid mixture, 140
- Nitrous powders, 150
- Nux vomica, 359
 cerium and iron, 19
 iron, and arsenic, 491
 liniment, 848
- O**AK BARK and alum gargle, 789
- Oatmeal gruel, 982
- Odontalgic lotion, 794
- Oil of cade ointment, 914
- Oil of juniper mixture, 113
- Oleo-saccharoles, 346
- Oleaginous mixture, 62, 63
- Olive oil and camphor enema, 310
- Olive ointment, 912
- Onion poultice, 684
- Opiate liniment compound, 850, 851
- Opium and acetate of ammonia, 733
 aloes, and ignatia, 472
 and alum, 589
 alum, and catechu, 596
 and arsenic, 443
 and arsenite of potassa, 459
 and belladonna plaster, 402
 and bichloride of mercury, 734
 bismuth, and calomel, 591
 calomel, and nitre, 183
 and quinia, 536
 and ipecac, 152
 and calomel collyrium, 710
 and camphor, 354
 collyrium, 728
 plaster, 401
 and chalk, 632
 and colocynth, 353
 and creasote, 598, 599
 and digitalis, 355
 digitalis and calomel, 99
 and gallic acid, 724
 and hyoscyamus, 352
 and iodide of potassium liniment,
 284
 injection, 760
 and iodine ointment, 892
 ipecac, calomel, and nitre, 151
 and kino, 600
 lime-water, etc., 395
 and lead liniment, 852
 and phosphoric acid, 267
 pills, 347
 preparation of, 363

Opium—

- quinia and pepper, 436
- and rhatany suppository, 388
- suppository, 386, 387
- and subacetate of lead collyrium, 715
- and sugar of lead, 595
- and sulphate of copper, 445
- and sulphate of soda, 620
- and tannic acid, 601
- and tartar emetic, 186
- and tannic acid ointment, 935
- and tar ointment, 913
- uva ursi, and cinchona, 133
- wine of, collyrium, 737
- Origanum and camphor liniment, 855
- Oxalate of cerium pills, 18
- Oxide of silver and aromatic powder, 586
- Ox-gall and calomel, 545
 - enema, 87
 - pills, 58

PANADO, 985

- Paregoric and guaiacum, 329
- Paregoric, ipecac, and squill, 197
 - squill, and ammoniæ, 226
 - tolu, and conium, 211
- Pareira brava decoction, 110
- Parrish's camphor mixture, 605
- Parsley infusion, 107
- Pea issue, 673
- Pearson's solution, 570
- Pellitory and mastich, 430
- Pepsin and aloes, 490
- Pepsine, elixir of, 534
- Peristaltic persuaders, Chapman, 53
- Permanganate of potassa, douche, 754
 - injection, 772
 - lotion, 819
 - and iodide of zinc douche, 755
- Petroleum and camphor liniment, 854
- Phosphorated ether, Lobstein's, 333
 - oil, 334
- Phosphoric acid and columbo, 143
- Phosphorus, glycerole of, 335
- Phosphoric acid lotion, 827
 - and opium, 267
- Phosphorus emulsion, 332
- Plasma, 872
- Pleurisy root, infusion of, 173
- Plummer's pill, 175
- Podophyllin, aloes, and iron, 478
 - and alum pill, 43
 - and colocynth pill, 42
 - digitalis, and iron, 98
 - santonin, and iron, 291
- Pomegranate and alum gargle, 796
 - and chlorate of potassa gargle, 797

Pomegranate—

- decoction of, 298
- Poppy and bittersweet fomentation, 965
- Poppies and camphor, 736
- Potassa in milk, 111
 - carbonate, mixture, 640
 - caustic, solution, 694
 - citrate of, solution, 158
 - and squill, 123
 - and croton-oil liniment, 706
 - cum calce, 653
 - and hydrocyanic acid lotion, 824
 - nitrate of, mixture, 166
 - permanganate, injection, 781
 - and tincture of hops, 135
- Powders, Seidlitz, 36
- Propylamin, 369, 370, 371
- Prunes and senna, 80
- Prussic acid, 237
 - collyrium, 723
 - and lobelia, 239
 - and morphia, 21
 - squill, and morphia, 207
 - and wild cherry, 201
- Pumpkin seeds, emulsion, 308
- Pyroligneous acid, 749
 - ether, and turpentine, 751
- Pyroxylic spirit, 24

QUASSIA and bicarbonate of soda, 136

- infusion, 498
- and iron, 485
- Quinia and ammonia, 438
 - blue pill, and aloes, 537
 - calomel, and opium, 536
 - castor oil, etc., hair-wash, 861
 - and cod-liver oil, 577
 - digitalis, and colchicum pill, 45
 - ferrocyanate, 453
 - and iron, citrate of, 474
 - iron, and strychnia, syrup of, 533
 - opium, and pepper, 436
 - and morphia enema, 460
 - sulphate of, 435
 - sulphate of, gargle, 790
 - sulphate of, injection, 770
 - sulphate of, solution, 449, 450
 - and tartar emetic, 437
 - and tartaric acid, 454
 - and sulphate of iron, 475
 - solution for hypodermic injection, 461
 - valerianate of, 316
 - and Vallet's mass, 476
- Quinidia, sulphate of, 441
 - and tannic acid, 455
- Quince seed, decoction, 729

- R**ACAHOOT des Arabes, 987
 Raw beef preparation, 1005
 Rennet whey, 1015
 Resolvent poultice, 951
 Rhatany gargle, 798
 mixture, 628
 and opium suppository, 388
 and rhubarb, 597
 Rhubarb, aloes, and guaiac, 56
 blue pill, and soda, 40
 calomel, and jalap, 29
 and calomel powder, 27
 columbo, etc., 495
 and crabs' claws, 633
 and ipecac powder, 938
 and magnesia mixture, 70

 decoction of, 271
 squill, and ipecac, 196
 squill, and tartar emetic, 208
 Senna and Epsom salt, 78
 ginger, and rhubarb, 77
 and manna, 79
 pinkroot, etc., 297
 and prunes, 80
 rhubarb, and manna, 81
 savine, and pinkroot, 288
 spigelia, and santonin, 305
 sulphur, and nitre, electuary, 60
 Serpentaria, aloes, and canella, 260
 and cinnabar, 174
 infusion, 497
 Seton, 674
 Silver, iodide of, 543
 nitrate of, 619
 pills, 481, 482
 solution, 746, 747, 759
 mixture, 521
 ointment, 931
 and atropia, collyrium, 740
 oxide of, 489
 oxide of, ointment, 926
 Sinapism, 682
 Soap and carbonate of soda, 134
 liniment, sulphuretted, 846
 Soda, bicarbonate of, and copaiba, 137
 bicarbonate of, and quassia, 136
 carbonate of, and calomel, 154
 carbonate of, injection, 145
 carbonate of, and soap, 134
 and calomel powder, 28
 and chloroform, 23
 and cubebs, 339
 ipecac, etc., 219
 and gentian, 647
 mint, 648
 magnesia, and ginger, 635
 rhubarb, etc., 638
 rhubarb, and blue pill, 40
 taraxacum, etc., 108
 and uva ursi, 93
 water, purgative, 76
 Solutio vitriolica, Moseley's, 11
 Spermaceti mixture, 233
 ointment, 874
 Spice plaster, 686
 Spirit of mindererus and antimonial
 wine, 160

Spirit—

- of nitre and acetate of ammonia, 161
- of nitre and antimonial wine, 163
- of nitre, antimonial wine, and laudanum, 164
- of nitre and digitalis, 105
- of nitre, ipecac, and veratrum, 198
- pyroxylic, 24
- Spigelia and calomel, 287
- senna, and santonin, 305
- savin, and senna, 288
- senna, etc., 297
- Spitta's lozenges, 194
- Sponge, burnt, 546
- Squill and ammoniac, 210
 - ammoniac, and conium, 188
 - ammoniac, and paregoric, 226
 - and calomel, 97
 - calomel, and ammoniac, 189
 - and citrate of potassa, 123
 - digitalis, and blue mass, 104
 - digitalis, and juniper, 103
 - ipecac, and paregoric, 197
 - juniper, etc., 115
 - ipecacuanha, and tartar emetic, 13
 - lobelia, and belladonna, 222
 - morphia, and prussic acid, 207
 - morphia, and tolu, 242
 - mixture of, 206
 - myrrh, and henbane, 192
 - and nitre powders, 91
 - sal-ammoniac, etc., 213
 - senega, and ipecac, 196
 - tartar emetic, and cream of tartar, 95
 - tartar emetic, and senega, 208
- Starch mucilage, 1013
- Stevens' saline powders, 37
- Stimulant fomentation, 962
- Stokes' liniment, 837
- Stramonium inhalation, 256
 - in milk, 397
- Strychnia and bismuth, 492
 - and bismuth pills, 17
 - collyrium, 725
 - injection, 780
 - and iron, 270, 471
 - iron, and quinia, syrup of, 533
 - mixture, 372
- Succinic acid and castor, 408
- Suet ptisan, 1012
- Sulphate of copper and cinchona, 444
 - of copper and opium, 445
 - of iron and rhubarb, 57
 - of potassa and savin, 261
 - of soda and chloroform, 621
 - of soda and opium, 620

Sulphate—

- of zinc and alum mixture, 11
 - of zinc and ipecacuanha, 6
 - of zinc and myrrh, 184
 - Sulphite of soda, 748
 - wash, 869
 - Sulphur and cream of tartar powder, 34
 - and magnesia, 35
 - senna, and nitre, electuary, 60
 - mercury, and iodine fumigation, 968
 - ointment, 898
 - ointment, aromatic, 918
 - ointment, compound, 896
 - and white precipitate ointment, 895
 - Sulphureous bath, 954
 - Sulphureo-gelatinous bath, 955
 - Sulphuret of antimony and calomel, 153
 - of potassium and lime-water, 826
 - of potassium lotion, 825
 - Sulphuretted soap liniment, 846
 - Sulphuric acid, caustic, 663
 - gargle, 800
 - and honey gargle, 810
 - and iron, 510
 - mixture, 511
 - and morphia, 22
 - and nitric acid, 512
 - Sumbul and valerian, 412
- TANNATE** of lead ointment, 935
- Tannic acid and quinia, 455
 - Tannic acid and glycerin lotion, 866
 - and morphia, 602
 - and opium, 601
 - pessary, 785
 - and opium ointment, 933
 - ointment, 934
 - suppository, 631
 - and atropia collyrium, 726
 - Tannin injection, 779
 - and iodine, collodion of, 285
 - Tapioca jelly, 990
 - Tar and calomel ointment, 923
 - and citrine ointment, 909
 - and gentian, 191
 - and hops, 246
 - inhalation, 252
 - oil of, 231
 - and opium ointment, 913
 - pills of, 547
 - water, 230
 - Taraxacum and blue mass, 101
 - soda, etc., 108
 - Tartar emetic and opium, 186
 - nitre, and calomel, 150

- Tartar emetic—
 mixture, 10
 and ipecacuanha, wine of, 9
 and ammonia liniment, 842
 and quinia, 437
 ointment, 690
 and corrosive sublimate lotion, 691
 senega, and squill, 208
 and laudanum, 218
 nitre, and cream of tartar, 92
 morphia, and tolu, 243
 ipecacuanha, and squill, 13
 and ipecacuanha, powder of, 3
 plaster, 689
 squill, and cream of tartar, 95
- Tartaric acid and quinia, 454
 Tartar whey, 1018
 Tea injection, 776
 Tin, electuary of, 300
 Toast water, 974
 Tobacco enema, 90
 fomentation, 967

 and belladonna, 234
 and copaiba, 228
 conium, and paregoric, 211
 and ether inhalation, 248
 and garlic, 202
 inhalation of, 247
 morphia, and squill, 242
 and tartar emetic, 243
 and oil of amber, 215
 and wine of antimony, 167
- Tonic laxative infusion, 502
 Tous les mois, 994
 Turpentine and ether, 144
 and guaiac, 313
 linctus of, 307
 liniment, 696
 mixture, 64, 323
 morphia, etc., 241
 oil of, 118
- Tyson's antimonial powder, 148
- UVA URSI** and buchu, 126
 and soda, 93
 cinchona, and opium, 133
- VALERIAN**, assafoetida, and castor,
 415
 and Bestucheffe's tincture, 529
 and cinchona, 505
 cinchona, etc., 515
 and cajeput, 322
 and sumbul, 412
 and carbonate of ammonia, 319
- Valerianate of ammonia, elixir of, 321
- Valerianate—
 of quinia, 316
 of zinc pills, 410
- Vegetable soup, 998
 Venice turpentine, calomel, etc., 296
 Veratria, acid solution of, 73
 and morphia ointment, 930
 ointment, 929
- Veratrum and aconite, 171
 ipecac, and spirits of nitre, 198
- Verdigris and calomel powder, 937
 ointment, 921
 and savin powder, 939
- Vienna paste, 653
 with morphia, 655
 with opium, 654
- Vinegar and alcohol collyrium, 716
 draught, 513
 whey, 1017
- Volatile liniment, 701, 841
- WILD CHERRY** and bloodroot, 216
 infusion, 496
 and morphia, 217
 and prussic acid, 201
- Wine and egg mixture, 343
 mulled, 1014
 whey, 342
- Wistar's cough lozenges, 193
 Worm tea, 297

- Z** Zinc, acetate of, injection, 765
 Zinc, acetate of, collyrium, 717
 chloride of, caustic, 659, 661
 injection, 766
 iodide of, gargle, 809
 lactate of, 487
 and lime ointment, 927
 and lime-water lotion, 814
 oxide of, 486
 ointment, 904
 and red precipitate collyrium,
 709
 and sugar collyrium, 708
 sulphate of, and acetate of lead,
 763
 and calomel ointment, 903
 etc., gargle, 793
 and laudanum, 762
 and red precipitate ointment,
 741

INDEX OF DISEASES AND THEIR REMEDIES.

The figures indicate the number of the Formula.

- A**BSCESSSES, flaxseed and bran poultice, 943
indolent, resolvent poultice, 951
frontal, iodide of zinc and permanganate of potassa, 755
- Acidity of stomach, crabs' claws and rhubarb, 633
dyspeptic lye, 649
tonic laxative infusion, 502
of pregnancy, chloroform and soda, 23
- Acne, lime and zinc ointment, 927
sulphite of soda, 869
- Albuminuria of pregnancy, benzoic acid mixture, 120
- Alopecia, ammonia, glycerin, etc., 857
cantharidine and castor oil, 860
quinia, castor oil, etc., 861
- Amaurosis, phosphorus, 332, 333
strychnia collyrium, 725
- Amenorrhœa, aloes, canella, and serpentaria, 260
aloes, sulphate of iron, and cloves, 269
ammonio-citrate of iron, 524
decoction of senega, 271
digitalis, myrrh, and iron, 268
emmenagogue suppository, 282
guaiaicum and copaiba, 279
hellebore, myrrh, and cantharides, 277
hiera picra, 281
Hooper's pills, 266
iron, aloes, and castor, 280
iron and myrrh, 265
iron and strychnia, 270
mustard injection, 784
savin, borax, and ginger, 264
savin and cantharides, 262
savin and ergot, 263
savin and sulphate of potassa, 261
- Anæmia, ammonio-tartrate of iron, 509
sulphuric acid mixture, 511
steel wine, 527
pyrophosphate of iron, 531
iron and sulphuric acid, 510
sulphate of iron and quinia, 475
peracetate of iron, 525
arsenic, iron, and nux vomica, 491
Bretonneau's iron pill, 477
iron and gentian, 484
iodide of iron and manganese, 532
lactate of iron, 469
ferrated elixir of cinchona, 518
iron reduced, 463
Vallet's mass, 468
- Aphonia, atomized fluids, 259
- Apthous stomatitis, borax and honey, 792
sulphuric acid and honey, 810
- Arthritis, anodyne plaster, 400
chronic, anodyne fomentation, 964
iodide of cadmium, 882
- Ascarides, aloetic enema, 309
anthelmintic clyster, 311
enema of camphor and sweet oil, 310
- Ascites, digitalis, calomel, and opium, 99
- Asthma, atomized fluids, 259
lobelia and prussic acid, 239
opium and digitalis, 355
squill, ammoniac, and conium, 188
stramonium inhalation, 256
- Atony, elixir of aloes, zedoary, etc., 516
elixir of cinchona, 517
general, syrup of iron, quinia, and strychnia, 533
- B**ALDNESS, see Alopecia.
Bilious fever, Griffith's pill, 38
Bilious vomiting, calomel and bismuth, 15

- Bladder, irritation of, flaxseed tea, 973
irritability of, mixture of bicarbonate of soda, etc., 137
potassa in milk, 111
- Bronchial irritation, tar water, 230
conium and Dover's powder, 185
calomel, squill, and ammoniac, 189
Jackson's lozenges, 195
oil of amber and tolu, 215
Spitta's lozenges, 194
Wistar's cough lozenges, 193
- Bronchitis, atomized fluids, 259
sal ammoniac, squill, etc., 213
acute, antimony, calomel, and Dover's powder, 187
flaxseed-tea, 235
Jackson's pectoral syrup, 203, 204
ipecac, veratrum, and spirits of nitre, 198
Iceland moss, 236
nitre, calomel, and opium, 183
squill, ipecac, and paregoric, 197
squill, senega, and ipecac, 196
tolu and belladonna, 234
chronic, inhalation of ether and tolu, 248
inhalation of rosin, 253
inhalation of tar, 252
balsam of Peru, 229
ammoniac, castor, etc., 240
senega, ammoniac, and tolu, 209
oil of tar, 231
almond emulsion and ipecac, 212
ammoniac, squill, and paregoric, 226
tar water, 230
tar and gentian, 191
tartar emetic and opium, 186
syrup of lactucarium, 205
morphia and wild cherry, 217
myrrh, squill, and henbane, 192
squill, ammoniac, and conium, 188
bloodroot and wild cherry, 216
calomel, squill, and tartar emetic, 190
myrrh, ipecac, etc., 182
ammoniac and squill, 210
naphtha and morphia, 225
copaiba and tolu, 228
inhalation of iodine and hemlock, 249
arsenical inhalation, 254
inhalation of tolu, 247
- Bronchitis, chronic—
inhalation of chlorine, 257
inhalation of iodine, 250
inhalation of iodine and hops, 251
infantile, garlic and tolu, 202
mixture of squill, 206
senile, myrrh, ipecac, etc., 182
- Bronchocele, burnt sponge, 546
- Bruises, see Sprains.
- Buboes, mercury with opium, 894
- Burns, Kentish ointment, 905
creasote and charcoal, 924
spermaceti ointment, 874
oxide of zinc ointment, 904
Kirkland's cerate, 917
gum and molasses, 818
carron oil, 815
carbolic acid and castor oil, 925
sloughing, carron oil and carbolic acid, 816
recent, carron oil and aconite, 817
of the eye, corrosive sublimate and opium, 734
- CANCER, arseniate of iron, 540
arsenic and iron, 571
uterine, creasote injection, 782
permanganate of potassa, 781
- Cancrum oris, sulphate of copper, 811
- Carbuncle, carron oil and carbolic acid, 816
- Cardiac nausea, prussic acid and morphia, 21
- Catarrh, chronic, bloodroot and wild cherry, 216
ammoniac and nitric acid, 232
spermaceti mixture, 233
atomized fluids, 259
copaiba and tolu, 228
naphthaline, 214
morphia and wild cherry, 217
oil of tar, 231
infantile, croton oil and amber, 700
onion poultice, 684
nasal, perchloride of iron, douche, 758
senile, ammoniac and squill, 210
ammoniac, squill, and paregoric, 226
- Cerumen, deficient, pyroligneous acid, ether, and turpentine, 751
- Chaps, glycerin lotion, 862
glycerin ointment, 873
glycerin cream, 858
borax and glycerin, 856
- Chlorosis, ammonio-tartrate of iron, 509
iron, capsicum, etc., 479

- Chlorosis—
 cantharides, ammonia, and gentian, 276
 colombo and iron, 465
 ipecac, iron, and mercury, 464
 iron and myrrh, 265
 iron and strychnia, 471
 sulphate of iron and quinia, 475
- Cholera, anæsthetic pill, 357
 camphor and ether, 328
 cannabis, 383
 chloroform mixture, 375, 378
 Jackson's mixture, 609
 London mixture, 608
 Stevens' powders, 37
 infantum, acetate of lead, 629
 aromatic syrup of blackberry, 612
 bismuth and iron, 467
 calomel, opium, and bismuth, 591
 nitrate of silver, 619
 sugar of lead and calomel, 587
 sugar of lead, calomel, and ipecac, 588
 morbus, camphor and ether, 328
 Parrish's camphor mixture, 605
- Chordee, morphia suppository, 389
- Chorea, cimicifuga, 417
 Lugol's and Fowler's solution, 566
 nitrate of silver, 482
 oxide of zinc, 486
- Colic, anæsthetic pill, 357
 chloroform mixture, 375, 378
 infantile, carminative, 382
 Dewees' carminative, 381
 soda mint, 648
 nephritic, oil of turpentine, 118
 turpentine and ether, 144
- Colica pictonum, opium and colocynth, 353
- Condylomata, calomel and sulphate of zinc, 903
- Conjunctivitis, acute, emollient collyrium, 735
 granular, atropia and tannin, 726
- Constipation, atonic, rhubarb and sulphate of iron, 57
 habitual, tonic laxative infusion, 502
 aloes and gentian, 55
 Bretonneau's iron pill, 477
 mixture of butternut, 74
 podophyllin, aloes, and iron, 478
 lenitive electuary and cream of tartar, 59
- Constipation—
 obstinate, Chapman's peristaltic persuaders, 53
 croton oil and colocynth, 52
 of pregnancy, senna and prunes, 80
 with impaction, ox-gall enema, 87
 soap enema, 86
- Contagious diseases, hyposulphite of soda, 582
- Contusions, chloroform and aconite liniment, 406
- Convulsions, infantile, assafoetida enema, 418
 onion poultice, 684
- Corneal opacity, oxide of zinc and sugar, 708
 oxide of zinc and red precipitate, 709
 sulphate of cadmium, 720
 specks, opium and calomel, 710
 ulceration, iodine and iodide of potassium, 713
 nitrate of silver and atropia, 740
- Cough, atomized fluids, 259
 spasmodic, assafoetida mixture, 223
 assafoetida and acetate of ammonia, 227
- Cramp, camphor and chloroform, 327
 chloroform mixture, 375, 378
- Croup, atomized fluids, 259
 bloodroot and naphtha, 224
 senega, squill, and tartar emetic, 208
- Cystitis, soda and uva ursi, 93
 chronic, buchu and acetate of potassa, 125
 buchu and uva ursi, 126
 copaiba and cubebs, 100
 hydrangea arborescens, 138
- D**ELIRIUM TREMENS, laudanum and turpentine, 366
 lupulin, 367
- Depression, vital, carbonate of ammonia, 317
 stimulant fomentation, 962
- Diabetes, alum whey, 624
 Camplin's bread, 988
- Diarrhoea, opium and tannic acid, 601
 Parrish's camphor mixture, 605
 Castanello's powders, 986
 aromatic syrup of galls, 626
 kino and opium, 600
 tincture of chloride of iron, 523
 chalk mixture, 607
 decoction of galls, 610
 logwood and catechu, 611

Diarrhœa—

- catechu and laudanum, 615
- compound alum powder, 585
- rhatany and rhubarb, 597
- mixture of bismuth, 520
- chalk and opium, 632
- compound chalk mixture, 639
- sulphuric and nitric acids, 512
- alum and opium, 589
- acute, chloroform and sulphate of soda, 621
 - creasote and opium, 598, 599
- chronic, bismuth, 466
 - creasote mixture, 617
 - colombo and ginger, 494
 - colombo and rhubarb, 495
 - pernitrate of iron, 530
- infantile, bismuth, 592, 593
 - elixir of bismuth, 519
 - hydrochloric acid and galls, 627
 - flour food, 996
 - Meigs' food for children, 997
 - magnesia water, 644
 - magnesia and rhubarb, 70
 - sulphate of soda and opium, 620
 - nitrate of silver, 521
- tubercular, bismuth and iron, 467
 - bismuth and magnesia, 590
- Dilatation of pupil, Calabar bean, 394
- Diphtheria, atomized fluid, 259
- Dropsy, diuretic wine, 114
 - compound infusion of taraxacum, 108
 - ipecac, tartar emetic, and squill, 13
 - mixture of juniper, squill, etc., 115
 - decoction of apocynum, 109
 - digitalis, squill, and blue mass, 104
 - mixture of oil of juniper, 113
 - antimonial wine, spirit of nitre, and laudanum, 164
 - digitalin, 102
 - parsley infusion, 107
 - cream of tartar, tartar emetic, and squill, 95
 - digitalis and spirits of nitre, 105
 - jalap and cream of tartar, 32
 - tincture of elaterin, 84
 - squill and nitre, 91
 - jalap and gamboge, 33
 - abdominal, digitalis, calomel, and opium, 99
 - of anæmia, digitalis, podophyllin, and iron, 98
 - cardiac, digitalis and acetate of potassa, 116
 - digitalis, squill, and juniper, 103

Dropsy—

- with debility, cider mixture, 112
 - infusion of juniper and cream of tartar, 106
- hepatic, taraxacum and blue mass, 101
 - squill and calomel, 97
- thoracic, colchicum and digitalis, 122
 - digitalis, calomel, and opium, 99
 - elaterium and colchicum, 121
- Dysentery, matico infusion, 604
 - powders of calomel, opium, &c., 152
 - chalk mixture, 607
 - logwood and catechu, 611
 - gum water, 977
 - bran tea, 978
 - morphia and tannic acid, 602
 - laudanum enema, 385
 - sulphate of zinc and alum, 11
 - Hope's mixture, 606
 - butternut and jalap, 46
 - chronic, geranium, 614
 - rhatany mixture, 628
- Dysmenorrhœa, camphor, 274
 - camphor and myrrh, 326
 - camphor julep, 325
 - cotton root, 273
 - Dewees' tincture of guaiacum, 278
 - Falk's antacid mixture, 584
 - morphia suppository, 389
 - opium suppository, 386, 387
- Dyspepsia, angustura bark, 503
 - dogwood bark, 504
 - tonic laxative infusion, 502
 - colombo, ginger, etc., 462
 - chamomile and orange-peel, 499
 - charcoal, magnesia, and ginger, 637
 - soda, rhubarb, etc., 638
 - colombo and iron, 465
 - iron and quassia, 485
 - cinchona and iron, 488
 - iron and strychnia, 471
 - elixir of pepsin, 534
 - pepsin and aloes, 490
 - elixir of bismuth, 519
 - ignatia, aloes, and opium, 472
 - gentian and orange-peel, 514
 - hops, 500
 - infusion of gentian, 501
 - Chapman's antidyspeptic pills, 54
 - Mitchell's tonic pills, 480
 - magnesia, fennel, and cinnamon, 634
 - with acidity, Mettauer's aperient, 82

Dyspepsia—

bilious, hydrarg. cum cretâ and ipecac, 429

ECZEMA, chloroform ointment, 915

oil of cade, 914

iodide of sulphur, 884

chronic, arsenic, morphia, and cascarilla, 568

coal-tar ointment, 910

arsenic and iodine, 569

lotion of bismuth, 865

mercury and carbolic acid, 911

pills of tar, 547

potassa and hydrocyanic acid, 824

infantile, arsenic and iron, 522

Endometritis, chronic, iodine liniment, 283

liniment of iodine and opium, 284

Epilepsy, ammoniated copper, 470

bromide of potassium, 564

bromine and bromide of potassium, 565

lactate of zinc, 487

Magendie's solution of iodine, 554

nitrate of silver, 481, 482

oxide of zinc, 486

phosphorus, 332, 333

valerianate of zinc, 410

Epistaxis, alum douche, 757

perchloride of iron douche, 758

Erosions, Kirkland's cerate, 917

Erysipelas, elm poultice, 947

sulphate of iron, 867

tincture of chloride of iron, 523

sloughing, yeast poultice, 945

Erythema, benzoic acid and lead, 916

carron oil and aconite, 817

dulcamara and poppy fomentation, 965

oxide of zinc ointment, 904

plasma, 872

Excoriations, borax and glycerin, 856

glycerin lotion, 862

ointment, 873

and camphor, 859

FAVUS, compound sulphur ointment, 896

Fevers, currant-jelly water, 976

apple water, 975

malt infusion, 980

sage tea, 979

nitrate of potassa mixture, 166

toast water, 974

Fevers—

James's powder, 149

Tyson's antimonial powder, 148

acetate of morphia and nitre, etc., 162

aconite and veratrum viride, 171

antimonial wine, spirit of nitre, and laudanum, 164

and spirit of nitre, 163

acetate of ammonia and spirit of nitre, etc., 161

acetate of ammonia and antimonial wine, 160

compound powder of guaiacum, 155

effervescing draught, 159

Dover's powder, camphor, etc., 147

gelsemium mixture, 168

lemonade, 981

neutral mixture, 157

nitrous powders, 150

soda powder of Guy's Hospital, 154

solution of citrate of potassa, 158

of morphia and wine of ipecacuanha, 156

butternut and jalap, 46

asthenic, brandy mixture, 1016

camphor mixture, 324

egg-nogg, 344

infusion of quassia, 498

of serpentaria, 497

milk punch, 345

mustard whey, 341

oil of turpentine, 323

wine whey, 342

wine and egg mixture, 343

yeast mixture, 330

bilious, calomel, quinia, and opium, 536

Griffith's pill, 38

catarrhal, boneset, 172

pleurisy root, 173

tolu and wine of antimony, 167

congestive, ipecac and rhubarb, 8

eruptive, ipecac and calomel, 7

hectic, sage, boneset, and cascarilla, 493

inflammatory, powders of opium, ipecac, etc. etc., 151

intermittent, arsenic and opium, 443

cinchona and citrate of potassa, 457

chinoidine, 439

decoction of cinchona, 447

Fowler's solution and opium, 459

cinchonia, 440

cinchona, 431

cloves and cream of tartar, 432

- Fevers, intermittent—
 cinchona, serpentaria, and
 soda, 433
 boneset, 172
 prussian blue and guaiac, 434
 extract of cinchona and carda-
 mom, 458
 cinchonia and iron, 456
 cinchona mixture, 448
 quinia and ammonia, 438
 and tartaric acid, 454
 and morphia enema, 460
 and tartar emetic, 437
 opium and pepper, 436
 ferrocyanate of quinia, 453
 sulphate of quinia, 435, 449,
 450, 451, 452
 quinia hypodermically, 461
 quinidia, 441
 and tannic acid, 455
 sulphate of bebeerine, 446
 of copper and opium, 445
 and cinchona, 444
 salicine, 442
 malignant, chlorinated lime, 337
 nervous, sumbul and valerian, 412
 puerperal, creasote injection, 782
 permanganate of potassa, 781
- Flatulence, ipecac and henbane, 351
 oleo-saccharoles, 346
 soda and cubebs, 339
 and gentian mixture, 647
- Fœtor oris, alum gargle, 795
- G**ANGRENE, liquid deodorant, 820
 permanganate of potassa, 819
 yeast poultice, 945
 of lungs, atomized fluids, 259
- Gastric debility, capsicum and gentian,
 314
 depression, effervescing ammonia
 mixture, 318
 morphia and sulphuric acid, 22
 strychnia and bismuth, 17
 irritation, bismuth and cubebs, 340
 calomel, 535
 and morphia, 16
 irritability, calomel and bismuth, 15
- Gastritis, rice water, 972
 chronic, iodide of silver, 543
 nitrate of silver, 481
- Gastrodynia, bismuth, 466, 593
 elixir of bismuth, 519
 mixture of bismuth, 520
 magnesia and columbo, 636
 soda and ginger, 635
 nitrate of silver, 481
- Glandular swellings, iodide of barium,
 881
 iodide of iron, 552
 of mercury, 891
 of potassium, 878
 of zinc, 880
 iodine and collodion, 877
 morphia and iodide of mercury,
 888
 mercury and ammonia, 887
- Gonorrhœa, acetate of zinc, 765
 ammoniated copper, 778
 chlorate of potassa, 771
 calomel injection, 773
 copaiba injection, 777
 chloride of zinc, 766
 sulphate of iron, 668
 acetate of lead and sulphate of zinc,
 763
 chronic, Lafayette mixture, 131
 mixture of copaiba, 127
 cubebs, etc., 128, 129
 hydrastis, 775
 acute, nitre, cream of tartar, and
 tartar emetic, 92
 muriate of ammonia, 764
 nitrate of silver, 759
 ointment, 931
 sulphate of zinc and laudanum, 762
 of copper, 774
 iodide of iron, 769
 opium injection, 760
 Monsel's salt, 767
 strychnia injection, 780
 sulphate of quinia, 770
 mercury, bichloride of, and zinc,
 761
 tannic acid solution, 779
 turpentine and guaiacum, 313
 injection of tea, 776
 mixture of cubebs, 132
 permanganate of potassa, 772
 chronic, cubebs and ergot, 94
 compound mixture of copaiba,
 130
 female, tannic acid pessary, 785
- Gout, acid solution of veratria, 73
 Becquerel's pill, 45
 colchicum, colocynth, and mor-
 phia, 44
 colchicum and laudanum, 83
 glycerole of phosphorus, 335
 Lartigue's pill, 48
 magnesia and colchicum, 71
 paregoric and guaiacum, 329
 phosphate of ammonia, 573
 phosphorated oil, 334
 of stomach, ammonia and ginger,
 320

Gout—

- Scudamore's mixture, 72
- Granular uterus, collodion of iodine and tannin, 285

HHEADACHE, nervous, valerian and ammonia, 319

- Hectic fever, diluted nitric acid, 581
- Hematemesis, calomel and sugar of lead, 394
- Hematuria, gallic acid pills, 603
- Hemicrania, valerianate of quinia, 316
- Hemoptysis, atomized fluid, 259
 - ergot and cinnamon, 613
 - opium and sugar of lead, 595
- Hemorrhoids, confection of senna, sulphur, and nitre, 60
 - copper, lead, and copal varnish, 932
 - electuary of jalap, nitre, etc., 61
 - suppository of opium and rhatany, 388
 - opium, tannic acid, and lead, 933
 - tannic acid suppository, 631
 - tar and opium, 913
- Hemorrhage, calomel and sugar of lead, 594
 - creasote mixture, 616, 617
 - matico infusion, 604
 - Monsel's solution, 623
 - perchloride of iron, 622
 - passive, alum, catechu, and opium, 596
 - oxide of silver and aromatic powder, 586
 - uterine, acetate of lead, enema, 630
- Hepatic torpor, arsenic, podophyllin, and iron, 492
 - aloes, blue pill, and quinia, 537
 - calomel, 535
 - calomel and ox gall, 545
 - blue pill, rhubarb, and soda, 40
 - Harrowgate water, 583
 - nitro-muriatic acid, 580
- Hepatitis, mercurial ointment and opium, 688
- Herpes, anti-herpetic ointment, 897
 - chlorine, 832
 - creasote liniment, 834
 - cyanide of mercury, 893
- Hydrothorax, colchicum and digitalis, 122
 - digitalis, calomel, and opium, 99
 - elaterium and colchicum, 121
- Hysteria, assafoetida and ammonia, 331
 - assafoetida and soap pills, 407
 - assafoetida, valerian, and castor, 415

Hysteria—

- ammoniated iron, 473
- assafoetida enema, 418
- assafoetida and camphor, 413
- sumbul and valerian, 412
- Bestucheffe's tincture and valerian, 529
- castor and succinic acid, 408
- camphor, assafoetida, etc., 360
- Hoffman's anodyne and laudanum, 414
- valerianate of ammonia, 322

IMPACTION of the ear, cajeput oil, 742

- Impetigo, arsenic and hemlock, 542
 - iodide of arsenic, 885
 - Impotency, cantharides, camphor, and opium, 312
 - Incontinence of urine, morphia and veratria, 930
 - Indigestion, podophyllin, aloes, and iron, 478
 - Inflammation, poultice of bread and milk, 942
 - internal, caustics, epispastics, rubefacients, 650-707
 - ipecac ointment, 922
 - emollient poultices, 948, 949
 - mush poultice, 944
 - Influenza, bloodroot and wild cherry, 216
 - boneset infusion, 172
 - sal-ammoniac, 572
 - Insomnia, camphor and Hoffman's anodyne, 368
 - Hoffman's anodyne and laudanum, 414
 - lactucarium and hemlock, 350.
 - lupulin, 348
 - opium and henbane, 352
 - Internal irritations, discutient plaster, 936
 - mustard fomentations, 966
 - Intestinal irritations, barley water, 971
 - Iritis, atropia solution, 392, 393
 - belladonna mixture, 391
 - Irritation, bronchial, conium and Dover's powder, 185
- L**ARYNGITIS, atomized fluids, 259
- Croton oil and amber, 700
 - chronic, arsenical inhalation, 254
 - Spitta's lozenges, 194
 - Lead colic, opium and colocynth, 253
 - Lepra, arsenic and hemlock, 542
 - Asiatic pills, 541

Lepra—

- calomel and tar, 923
- fumigation of sulphur, mercury, and iodine, 968
- iodide of arsenic, 885

Leucorrhœa, cubebs and ergot, 94

- tannic acid pessary, 785

Lichen, cyanide of potassium, 831

Lithiasis, powder of uva ursi, etc., 133

- hydrangea arborescens, 138
- oxalic, nitro-hydrochloric acid mixture, 140

iron and hydrochloric acid, 141

- phosphatic, benzoic acid mixture, 119

mixture of muriatic acid, 142

mixture of phosphoric acid, 143

uric, acetates of potassa and ammonia, 124

injection of lithia, 146

injection of soda, 145

mixture of carbonate of magnesia, etc., 139

pills of carbonate of soda, etc., 134

solution of bicarbonate of soda, 136

solution of potassa, etc., 135

Lochia, fetid, permanganate of potassa, 781

Lumbrici, calomel and pinkroot, 287

- electuary of cowhage, 301
- electuary of tin, 300
- iron lozenges, 295
- male fern, 293
- oil of wormseed, 303, 304
- pinkroot, savine, and senna, 288
- pinkroot, senna, and santonin, 305
- pinkroot and worm-tea, 297
- podophyllin, santonin, and iron, 291
- salt and cochineal, 289
- santonin, 290, 292
- wormseed and rhubarb, 302

MALARIAL disease, arsenic and iron, 528

Mammary abscess, belladonna and bitter almond, 403

Menorrhagia, compound alum powder, 585

- ergot and cinnamon, 613
- ergotine, 275
- oil of erigeron, 272
- oxide of silver, 489
- oxide of silver and aromatic powder, 586
- phosphoric acid and opium, 267

NAUSEA, bismuth, 466

- clove plaster, 687
- columbo, salt of tartar, etc., 646
- calomel and bismuth, 15
- creasote mixture, 616, 617
- creasote and bismuth, 25
- chloroform and soda, 23
- lime-water and milk, 642
- mustard, pepper, and ginger cataplasm, 685
- mixture of salt of tartar, 640
- spice plaster, 686
- nitrate of silver, 481
- syrup of lime, 643
- strychnia and bismuth, 17
- morphia and sulphuric acid, 22
- cardiac, prussic acid and morphia, 21
- nervous, brandy and chloroform, 20
- of pregnancy, ammonia, magnesia, etc., 645
- cerium, nux vomica, and iron, 19
- oxalate of cerium, 18
- creasote, 315
- pyroxylic spirit, 24

Nephritic colic, oil of turpentine, 118

turpentine and ether, 144

Nephritis, soda and uva ursi, 93

flaxseed tea, 973

Nervous atony, bromide of iron, 544

- bromine, 562
- cinchona and valerian, 515
- depression, assafoetida and ammonia, 331
- camphor and Hoffman's anodyne, 368
- chloric ether, 374
- musk and camphor, 409
- valerianate of ammonia, 321

Neuralgia, arsenic and iron, 528

- atropia lotion, 399
- belladonna and bitter almond water, 403
- bitter almond, 384
- compound anodyne pill, 356
- camphor and chloroform liniment, 404
- opium and belladonna lotion, 398
- opium and belladonna plaster, 402
- opium and camphor plaster, 401
- valerianate of zinc, 410
- veratria ointment, 929
- cranial, cinchona and valerian, 505
- citrate of iron and quinia, 474
- Vallet's mass and quinia, 476
- vinegar draught, 513
- facial, compound opiate liniment, 850

- Neuralgia, facial—
 cyanide of potassium and chloroform, 900
 sal-ammoniac, 572
 dental, anæsthetic lotion, 396
 thoracic, compound opium liniment, 851
 ophthalmic, opium and camphor, 728
- Night-sweats, gallic acid and morphia, 625
- Nipples, sore, borax and glycerin, 856
 opium and lime-water, 395
 oxide of silver ointment, 926

injection of soda, 145

Urine, incontinence of, cantharides and spirits of nitre, 117

Uterus, rigidity of, belladonna ointment, 901

VAGINITIS, chronic, alum and catechu pessary, 786

Vomiting, laudanum enema, 385

WOUNDS, contused, carbolic acid and castor oil, 925

Wounds of the eye, corrosive sublimate and opium, 734

STILLE'S THERAPEUTICS—New Edition—Now Ready.

THERAPEUTICS AND MATERIA MEDICA:

A SYSTEMATIC TREATISE ON THE ACTION AND USES OF MEDICINAL AGENTS,
INCLUDING THEIR DESCRIPTION AND HISTORY.

By ALFRED STILLÉ, M. D.,

Professor of the Theory and Practice of Medicine in the University of Pennsylvania.

THIRD EDITION, REVISED AND ENLARGED.

In two large and handsome octavo volumes of about 1700 pages; extra cloth, \$10; leather, \$12.

That two large editions of a work of such magnitude should be exhausted in a few years, is sufficient evidence that it has supplied a want generally felt by the profession, and the unanimous commendation bestowed upon it by the medical press, abroad as well as at home, shows that the author has successfully accomplished his object in presenting to the profession a systematic treatise suited to the wants of the practising physician. Notwithstanding its enlargement, the present edition has been kept at the former very moderate price.

From the Preface to the Third Edition.

Although the second edition of this work had for many months been out of print, the author preferred to delay a new issue of it, rather than omit anything which appeared to be substantially valuable among the recent advances of the science and art of Therapeutics. The subjects now treated of for the first time are: CHROMIC ACID; PERMANGANATE OF POTASSA; THE SULPHITES OF SODA, ETC.; CARBOLIC ACID; NITROUS OXIDE; RHIGOLENE; and CALABAR BEAN. The article on BROMINE has been prepared entirely anew; and that on ELECTRICITY very materially enlarged by an account of the most recent improvements in electrical apparatus, and in the application of this agent to the cure of disease. The additions which have been mentioned, with much new matter besides, which will be found under the more important titles, occupy nearly one hundred pages.

April, 1868.

Dr. Stillé's splendid work on Therapeutics and Materia Medica.—*London Med. Times and Gaz.*, April 8, 1865.

He makes use of all these materials with a skill and discrimination which must give his work a classical position among the text books prepared for American students. . . . Being under the necessity of criticizing

it as though it were a French treatise on Therapeutics, our highest expression of praise is to record our regret that it is not among the manuals used in our own schools. . . . Dr. Stillé's book deserves to be classed among the best and most practical treatises on Therapeutics.—*Translated from the Archives Générales de Médecine*, Juin, 1860.

PEREIRA'S MATERIA MEDICA. By WOOD.—Just Issued.

MANUAL OF MATERIA MEDICA AND THERAPEUTICS;

BEING AN ABRIDGMENT OF THE LATE DR. PEREIRA'S ELEMENTS OF MATERIA MEDICA, ARRANGED
IN CONFORMITY WITH THE BRITISH PHARMACOPEIA, AND ADAPTED TO THE USE OF MEDICAL

PRACTITIONERS, CHEMISTS AND DRUGGISTS, MEDICAL AND PHARMACEUTICAL STUDENTS,

ETC. BY F. J. FARRE, SENIOR PHYSICIAN TO ST. BARTHOLOMEW'S HOSPITAL,

AND LONDON EDITOR OF THE BRITISH PHARMACOPEIA; ASSISTED BY RO-

BERT BENTLEY, M. R. C. S., PROFESSOR OF MATERIA MEDICA

AND BOTANY TO THE PHARMACEUTICAL SOCIETY OF GREAT

BRITAIN; AND BY ROBERT WARING, F. R. S.,

CHEMICAL OPERATOR TO THE SOCIETY OF

APOTHECARIES.

Edited, with numerous references to the United States Pharmacopœia, and many other Additions,

By HORATIO C. WOOD, JR., M. D.,

Professor of Botany in the University of Pennsylvania.

In one large and handsome octavo volume of 1030 closely printed pages, with 236 illustrations.

Extra cloth, \$7; leather, raised bands, \$8.

The reader cannot fail to be impressed, at a glance, with the exceeding value of this work as a compend of nearly all useful knowledge on the materia medica. We are greatly indebted to Professor Wood for his adaptation of it to our meridian. Without his emendations and additions it would lose much of its value to the American student. With them it is an American book.—*Pacific Medical and Surgical Journal*, December, 1866.

Altogether the work is a most valuable addition to the literature of this subject, and will be of great use to the practitioner of medicine and medical student. The work, as issued by the American publisher, is a handsome volume of 1030 pages, most amply illustrated, the wood-cuts being of superior finish, and clearly impressed.—*Canada Med. Journ.*, Nov. 1866.

The task of the American editor has evidently been no sinecure, for not only has he given to us all that is contained in the abridgment useful for our purposes, but by a careful and judicious embodiment of over a hundred new remedies has increased the size of the former work fully one-third, besides adding many

new illustrations, some of which are original. We unhesitatingly say that by so doing he has proportionately increased the value, not only of the condensed edition, but has extended the applicability of the great original, and has placed his medical countrymen under lasting obligations to him. The American physician now has all that is needed in the shape of a complete treatise on materia medica, and the medical student has a text-book which, for practical utility and intrinsic worth, stands unparalleled. Although of considerable size, it is none too large for the purposes for which it has been intended, and every medical man should, in justice to himself, spare a place for it upon his book-shelf, resting assured that the more he consults it the better he will be satisfied of its excellence.—*N. Y. Med. Record*, Nov. 15, 1866.

We have here presented, in a volume of a thousand pages, that which we sincerely believe the best work on materia medica in the English language. No physician, no medical student, can purchase this book, and make anything like a proper use of it, without being amply rewarded for his outlay.—*The Cincinnati Journal of Medicine*, November, 1866.

HENRY C. LEA—Philadelphia.

PARRISH'S PHARMACY—Third Edition.

A TREATISE ON PHARMACY.

DESIGNED AS

A Text-book for the Student, and as a Guide for the Physician and Pharmacist.

WITH MANY FORMULÆ AND PRESCRIPTIONS.

BY EDWARD PARRISH,

Professor of Materia Medica in the Philadelphia College of Pharmacy, &c.

Third Edition, greatly Improved.

In one handsome Svo. volume of 850 pages, with several hundred illustrations; extra cloth, \$5.

The thoroughness with which the very complete plan of this work has been carried out may be estimated by the fact that the Index contains about 4700 items. Under the head of Acids there are 312 references; under Emplastrum, 36; Extracts, 159; Lozenges, 25; Mixtures, 55; Pills, 56; Syrups, 131; Tinctures, 138; Unguentum, 57; &c. &c. It thus becomes a storehouse of pharmaceutical knowledge, to which the physician can at all times refer with the certainty of finding the latest practical information on all subjects coming within its scope.

In this connection, the very able work of Edward Parrish on "Practical Pharmacy," deserves most honorable mention, supplying as it does a real want, and in the most satisfactory manner. The profession has long needed a work which should contain the leading facts and principles of the science arranged for study, and with special reference to those features of the subject which possess a practical interest to the physician. Although medicines are mostly supplied to the profession ready prepared, yet there are thousands of practitioners in the United States to whom pharmacy is necessarily a collateral pursuit; to many of these, and to the numerous students under their charge, an elementary work designed as an introduction to pharmacy has long been a desideratum. This want no longer remains unsupplied.—*Report on Med. Literature, Trans. Am. Med. Assoc., 1866.*

We know of no work on the subject which would be more indispensable to the physician or student desiring information on the subject of which it treats. With Griffith's "Medical Formulary" and this, the practising physician would be supplied with nearly or quite all the most useful information on the subject.—*Charleston Med. Journal and Review.*

It is with reluctance and much regret that we are

compelled to give the above work only a book notice. It was our wish and intention to attempt an extended analysis of its contents, that our readers might judge somewhat for themselves of its great and numerous merits, but the subject-matter is of such a nature as to forbid anything like a review. All that we can say of it is, that to the practising physician, and especially the country physician, who is generally his own apothecary, there is hardly any book that might not better be dispensed with. It is at the same time a dispensatory and a pharmacy.—*Louisville Review.*

Of course, all apothecaries who have not already a copy of the first edition will procure one of this; it is, therefore, to physicians residing in the country and in small towns, who cannot avail themselves of the skill of an educated pharmacist, that we would especially commend this work. In it they will find all that they desire to know, and should know, but very little of which they do really know in reference to this important collateral branch of their profession; for it is a well-established fact, that, in the education of physicians, while the science of medicine is generally well taught, very little attention is paid to the art of preparing them for use, and we know not how this defect can be so well remedied as by procuring and consulting Dr. Parrish's excellent work.—*St. Louis Med. Journal.*

A UNIVERSAL FORMULARY,

Containing the methods of Preparing and Administering Official and other Medicines.

THE WHOLE ADAPTED TO PHYSICIANS AND PHARMACEUTISTS.

BY ROBERT E. GRIFFITH, M. D., &c.

SECOND EDITION, THOROUGHLY REVISED, WITH NUMEROUS ADDITIONS,

BY ROBERT P. THOMAS, M. D.,

Professor of Materia Medica in the Philadelphia College of Pharmacy.

In one large and handsome Svo. vol. of over 600 pages, double columns, extra cloth, \$4 00; leather, \$5 00.

It was a work requiring much perseverance, and when published was looked upon as by far the best work of its kind that had issued from the American press, being free of much of the trashy, and embracing most of the non-official formulæ used or known in American, English, or French Practice, arranged under the heads of the several constituent drugs, placing the receipt under its more important constituent. Prof. Thomas has certainly "improved," as well as added to this formulary, and has rendered it additionally deserving of the confidence of pharmacologists and physicians.—*American Journal of Pharmacy.*

We are happy to announce a new and improved edition of this, one of the most valuable and useful works that have emanated from an American pen. It would do credit to any country, and will be found of daily usefulness to practitioners of medicine; it is better adapted to their purposes than the dispensatories.—*Southern Med. and Surg. Journal.*

A new edition of this well-known work, edited by R. P. Thomas, M. D., affords occasion for renewing our commendation of so useful a hand-book, which ought to be universally studied by medical men of every class, and made use of by way of reference by office pupils, as a standard authority. It has been much enlarged, and now condenses a vast amount of needful and necessary knowledge in small compass. The more of such books the better for the profession and the public.—*N. Y. Med. Gazette.*

It is one of the most useful books a country practitioner can possibly have in his possession.—*Medical Chronicle.*

The amount of useful, every-day matter, for a practising physician, is really immense.—*Boston Med. and Surg. Journal.*

This is a work of six hundred and fifty one pages, embracing all on the subject of preparing and administering medicines that can be desired by the physician and pharmacist.—*Western Lancet.*

In short, it is a full and complete work of the kind, and should be in the hands of every physician and apothecary.—*O. Med. and Surg. Journal.*

We predict a great sale for this work, and we especially recommend it to all medical teachers.—*Richmond Stethoscope.*

This edition of Dr. Griffith's work has been greatly improved by the revision and ample additions of Dr. Thomas, and is now, we believe, one of the most complete works of its kind in any language. The additions amount to about seventy pages, and no effort has been spared to include in them all the recent improvements which have been published in medical journals and systematic treatises. A work of this kind appears to us indispensable to the physician, and there is none we can more cordially recommend.—*N. Y. Journal of Medicine.*

HENRY C. LEA, Philadelphia.

HENRY C. LEA'S

(LATE LEA & BLANCHARD'S)

CLASSIFIED CATALOGUE

OF

MEDICAL AND SURGICAL PUBLICATIONS.

In asking the attention of the profession to the works contained in the following pages, the publisher would state that no pains are spared to secure a continuance of the confidence earned for the publications of the house by their careful selection and accuracy and finish of execution.

The printed prices are those at which books can generally be supplied by booksellers throughout the United States, who can readily procure for their customers any works not kept in stock. Where access to bookstores is not convenient, books will be sent by mail post-paid on receipt of the price, but no risks are assumed either on the money or the books, and no publications but my own are supplied. Gentlemen will therefore in most cases find it more convenient to deal with the nearest bookseller.

AN ILLUSTRATED CATALOGUE, of 64 octavo pages, handsomely printed, will be forwarded by mail, postpaid, on receipt of ten cents.

HENRY C. LEA.

Nos. 706 and 708 Sanson St., PHILADELPHIA, June, 1870.

ADDITIONAL INDUCEMENT FOR SUBSCRIBERS TO

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES.

THREE MEDICAL JOURNALS, containing over 2000 LARGE PAGES,

Free of Postage, for SIX DOLLARS Per Annum.

TERMS FOR 1870:

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES, and } Five Dollars per annum,
THE MEDICAL NEWS AND LIBRARY, both free of postage, } in advance.

OR,

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES, published quar- } Six Dollars
terly (1150 pages per annum), with } per annum
THE MEDICAL NEWS AND LIBRARY, monthly (384 pp. per annum), and } in advance.
THE HALF-YEARLY ABSTRACT OF THE MEDICAL SCIENCES, published }
Feb. and August (600 pages per annum), all free of postage.

SEPARATE SUBSCRIPTIONS TO

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES, subject to postage when not paid for in advance, Five Dollars.

THE MEDICAL NEWS AND LIBRARY, free of postage, in advance, One Dollar.

THE HALF-YEARLY ABSTRACT, Two Dollars and a Half per annum in advance. Single numbers One Dollar and a Half.

It is manifest that only a very wide circulation can enable so vast an amount of valuable practical matter to be supplied at a price so unprecedentedly low. The publisher, therefore, has much gratification in stating that the rapid and steady increase in the subscription list promises to render the enterprise a permanent one, and it is

with especial pleasure that he acknowledges the valuable assistance spontaneously rendered by so many of the old subscribers to the "JOURNAL," who have kindly made known among their friends the advantages thus offered and have induced them to subscribe. Relying upon a continuance of these friendly exertions, he hopes to be able to maintain the unexampled rates at which these works are now supplied, and to succeed in his endeavor to place upon the table of every reading practitioner in the United States a monthly, a quarterly, and a half-yearly periodical at the comparatively trifling cost of SIX DOLLARS *per annum*.

These periodicals are universally known for their high professional standing in their several spheres.

I.

THE AMERICAN JOURNAL OF THE MEDICAL SCIENCES,

EDITED BY ISAAC HAYS, M. D.,

is published Quarterly, on the first of January, April, July, and October. Each number contains nearly three hundred large octavo pages, appropriately illustrated, wherever necessary. It has now been issued regularly for over forty years, during nearly the whole of which time it has been under the control of the present editor. Throughout this long period, it has maintained its position in the highest rank of medical periodicals both at home and abroad, and has received the cordial support of the entire profession in this country. Among its Collaborators will be found a large number of the most distinguished names of the profession in every section of the United States, rendering the department devoted to

ORIGINAL COMMUNICATIONS

full of varied and important matter, of great interest to all practitioners. Thus, during 1869, articles have appeared in its pages from one hundred and fifteen gentlemen of the highest standing in the profession throughout the United States.*

Following this is the "REVIEW DEPARTMENT," containing extended and impartial reviews of all important new works, together with numerous elaborate "ANALYTICAL AND BIBLIOGRAPHICAL NOTICES" of nearly all the medical publications of the day.

This is followed by the "QUARTERLY SUMMARY OF IMPROVEMENTS AND DISCOVERIES IN THE MEDICAL SCIENCES," classified and arranged under different heads, presenting a very complete digest of all that is new and interesting to the physician, abroad as well as at home.

Thus, during the year 1869, the "JOURNAL" furnished to its subscribers One Hundred and Forty-seven Original Communications, Eighty-eight Reviews and Bibliographical Notices, and Two Hundred and Eighty-seven articles in the Quarterly Summaries, making a total of over FIVE HUNDRED articles emanating from the best professional minds in America and Europe.

To old subscribers, many of whom have been on the list for twenty or thirty years, the publisher feels that no promises for the future are necessary; but gentlemen who may now propose for the first time to subscribe may rest assured that no exertion will be spared to maintain the "JOURNAL" in the high position which it has so long occupied as a national exponent of scientific medicine, and as a medium of intercommunication between the profession of Europe and America—in the words of the "London Medical Times" (Sept. 5th, 1868) "almost the only one that circulates everywhere, all over the Union and in Europe"—to render it, in fact, necessary to every practitioner who desires to keep on a level with the progress of his science.

The subscription price of the "AMERICAN JOURNAL OF THE MEDICAL SCIENCES" has never been raised, during its long career. It is still FIVE DOLLARS *per annum*; and when paid for in advance, the subscriber receives in addition the "MEDICAL NEWS AND LIBRARY," making in all about 1500 large octavo pages *per annum*,* free of postage.

II.

THE MEDICAL NEWS AND LIBRARY

is a monthly periodical of Thirty-two large octavo pages, making 384 pages *per annum*. Its "NEWS DEPARTMENT" presents the current information of the day, with Clinical Lectures and Hospital Gleanings; while the "LIBRARY DEPARTMENT" is devoted to publishing standard works on the various branches of medical science, paged

* Communications are invited from gentlemen in all parts of the country. Elaborate articles inserted by the Editor are paid for by the Publisher.

separately, so that they can be removed and bound on completion. In this manner subscribers have received, without expense, such works as "WATSON'S PRACTICE," "TODD AND BOWMAN'S PHYSIOLOGY," "WEST ON CHILDREN," "MALGAIGNE'S SURGERY," &c. &c. And with January, 1870, is commenced a series of monographs on Diseases of the Spinal Column and of the Nerves from "REYNOLDS'S SYSTEM OF MEDICINE," rendering this a very eligible period for the commencement of new subscriptions.

As stated above, the subscription price of the "MEDICAL NEWS AND LIBRARY" is ONE DOLLAR per annum in advance; and it is furnished without charge to all advance paying subscribers to the "AMERICAN JOURNAL OF THE MEDICAL SCIENCES."

III.

THE HALF-YEARLY ABSTRACT OF THE MEDICAL SCIENCES

is issued in half-yearly volumes, which will be delivered to subscribers about the first of February, and first of August. Each volume contains about 300 closely printed octavo pages, making about six hundred pages per annum.

"RANKING'S ABSTRACT" has now been published in England regularly for more than twenty years, and has acquired the highest reputation for the ability and industry with which the essence of medical literature is condensed into its pages. It purports to be "*A Digest of British and Continental Medicine, and of the Progress of Medicine and the Collateral Sciences,*" and it is even more than this, for America is largely represented in its pages. It draws its material not only from all the leading American, British, and Continental journals, but also from the medical works and treatises issued during the preceding six months, thus giving a complete digest of medical progress. Each article is carefully condensed, so as to present its substance in the smallest possible compass, thus affording space for the very large amount of information laid before its readers. The volumes of 1869, for instance, have contained

THIRTY-FOUR ARTICLES ON GENERAL QUESTIONS IN MEDICINE.
 ONE HUNDRED AND ELEVEN ARTICLES ON SPECIAL QUESTIONS IN MEDICINE.
 NINETEEN ARTICLES ON FORENSIC MEDICINE.
 NINETY-NINE ARTICLES ON THERAPEUTICS.
 THIRTY-SEVEN ARTICLES ON GENERAL QUESTIONS IN SURGERY.
 ONE HUNDRED AND SIXTY-SEVEN ARTICLES ON SPECIAL QUESTIONS IN SURGERY.
 NINETY-FIVE ARTICLES ON MIDWIFERY AND DISEASES OF WOMEN AND CHILDREN.

Making in all over five hundred and fifty articles in a single year. Each volume, moreover, is systematically arranged, with an elaborate Table of Contents and a very full Index, thus facilitating the researches of the reader in pursuit of particular subjects, and enabling him to refer without loss of time to the vast amount of information contained in its pages.

The subscription price of the "ABSTRACT," mailed free of postage, is Two DOLLARS AND A HALF per annum, payable in advance. Single volumes, \$1 50 each.

As stated above, however, it will be supplied in conjunction with the "AMERICAN JOURNAL OF THE MEDICAL SCIENCES" and the "MEDICAL NEWS AND LIBRARY," the whole *free of postage*, for SIX DOLLARS PER ANNUM IN ADVANCE.

For this small sum the subscriber will therefore receive three periodicals costing separately Eight Dollars and a Half, each of them enjoying the highest reputation in its class, containing in all over two THOUSAND PAGES of the choicest reading, and presenting a complete view of medical progress throughout both hemispheres.

In this effort to bring so large an amount of practical information within the reach of every member of the profession, the publisher confidently anticipates the friendly aid of all who are interested in the dissemination of sound medical literature. He trusts, especially, that the subscribers to the "AMERICAN MEDICAL JOURNAL" will call the attention of their acquaintances to the advantages thus offered, and that he will be sustained in the endeavor to permanently establish medical periodical literature on a footing of cheapness never heretofore attempted.

* * * Gentlemen desiring to avail themselves of the advantages thus offered will do well to forward their subscriptions at an early day, in order to insure the receipt of complete sets for the year 1870, as the constant increase in the subscription list almost always exhausts the quantity printed shortly after publication.

☞ The safest mode of remittance is by postal money order, drawn to the order of the undersigned. Where money order post-offices are not accessible, remittances for the "JOURNAL" may be made at the risk of the publisher, by forwarding in REGISTERED letters. Address,

HENRY C. LEA,

Nos. 706 and 708 SANSON ST., PHILADELPHIA, PA.

DUNGLISON (ROBLEY), M. D.,*Professor of Institutes of Medicine in Jefferson Medical College, Philadelphia.***MEDICAL LEXICON; A DICTIONARY OF MEDICAL SCIENCE: Con-**

taining a concise explanation of the various Subjects and Terms of Anatomy, Physiology, Pathology, Hygiene, Therapeutics, Pharmacology, Pharmacy, Surgery, Obstetrics, Medical Jurisprudence, and Dentistry. Notices of Climate and of Mineral Waters; Formulæ for Official, Empirical, and Dietetic Preparations; with the Accentuation and Etymology of the Terms, and the French and other Synonymes; so as to constitute a French as well as English Medical Lexicon. Thoroughly Revised, and very greatly Modified and Augmented. In one very large and handsome royal octavo volume of 1048 double-columned pages, in small type; strongly done up in extra cloth, \$6 00; leather, raised bands, \$6 75.

The object of the author from the outset has not been to make the work a mere lexicon or dictionary of terms, but to afford, under each, a condensed view of its various medical relations, and thus to render the work an epitome of the existing condition of medical science. Starting with this view, the immense demand which has existed for the work has enabled him, in repeated revisions, to augment its completeness and usefulness, until at length it has attained the position of a recognized and standard authority wherever the language is spoken. The mechanical execution of this edition will be found greatly superior to that of previous impressions. By enlarging the size of the volume to a royal octavo, and by the employment of a small but clear type, on extra fine paper, the additions have been incorporated without materially increasing the bulk of the volume, and the matter of two or three ordinary octavos has been compressed into the space of one not unhandy for consultation and reference.

It would be a work of supererogation to bestow a word of praise upon this Lexicon. We can only wonder at the labor expended, for whenever we refer to its pages for information we are seldom disappointed in finding all we desire, whether it be in accentuation, etymology, or definition of terms.—*New York Medical Journal*, November, 1865.

It would be mere waste of words in us to express our admiration of a work which is so universally and deservedly appreciated. The most admirable work of its kind in the English language. As a book of reference it is invaluable to the medical practitioner, and in every instance that we have turned over its pages for information we have been charmed by the clearness of language and the accuracy of detail with which each abounds. We can most cordially and confidently commend it to our readers.—*Glasgow Medical Journal*, January, 1866.

A work to which there is no equal in the English language.—*Edinburgh Medical Journal*.

It is something more than a dictionary, and something less than an encyclopædia. This edition of the well-known work is a great improvement on its predecessors. The book is one of the very few of which it may be said with truth that every medical man should possess it.—*London Medical Times*, Aug. 26, 1865.

Few works of the class exhibit a grander monument of patient research and of scientific lore. The extent of the sale of this lexicon is sufficient to testify to its usefulness, and to the great service conferred by Dr. Robley Dunglison on the profession, and indeed on others, by its issue.—*London Lancet*, May 13, 1865.

The old edition, which is now superseded by the new, has been universally looked upon by the medical profession as a work of immense research and great value. The new has increased usefulness; for medicine, in all its branches, has been making such progress that many new terms and subjects have recently been introduced: all of which may be found fully defined in the present edition. We know of no other dictionary in the English language that can bear a comparison with it in point of completeness of subjects and accuracy of statement.—*N. Y. Druggists' Circular*, 1865.

For many years Dunglison's Dictionary has been the standard book of reference with most practitioners in this country, and we can certainly commend this work to the renewed confidence and regard of our readers.—*Cincinnati Lancet*, April, 1865.

It is undoubtedly the most complete and useful medical dictionary hitherto published in this country.—*Chicago Med. Examiner*, February, 1865.

What we take to be decidedly the best medical dictionary in the English language. The present edition is brought fully up to the advanced state of science. For many a long year "Dunglison" has been at our elbow, a constant companion and friend, and we greet him in his replenished and improved form with especial satisfaction.—*Pacific Med. and Surg. Journal*, June 27, 1865.

This is, perhaps, the book of all others which the physician or surgeon should have on his shelves. It is more needed at the present day than a few years back.—*Canada Med. Journal*, July, 1865.

It deservedly stands at the head, and cannot be surpassed in excellence.—*Buffalo Med. and Surg. Journal*, April, 1865.

We can sincerely commend Dr. Dunglison's work as most thorough, scientific, and accurate. We have tested it by searching its pages for new terms, which have abounded so much of late in medical nomenclature, and our search has been successful in every instance. We have been particularly struck with the fulness of the synonymy and the accuracy of the derivation of words. It is as necessary a work to every enlightened physician as Worcester's English Dictionary is to every one who would keep up his knowledge of the English tongue to the standard of the present day. It is, to our mind, the most complete work of the kind with which we are acquainted.—*Boston Med. and Surg. Journal*, June 22, 1865.

We are free to confess that we know of no medical dictionary more complete; no one better, if so well adapted for the use of the student; no one that may be consulted with more satisfaction by the medical practitioner.—*Am. Jour. Med. Sciences*, April, 1865.

The value of the present edition has been greatly enhanced by the introduction of new subjects and terms, and a more complete etymology and accentuation, which renders the work not only satisfactory and desirable, but indispensable to the physician.—*Chicago Med. Journal*, April, 1865.

No intelligent member of the profession can or will be without it.—*St. Louis Med. and Surg. Journal*, April, 1865.

It has the rare merit that it certainly has no rival in the English language for accuracy and extent of references.—*London Medical Gazette*.

HOBLYN (RICHARD D.), M. D.**A DICTIONARY OF THE TERMS USED IN MEDICINE AND THE COLLATERAL SCIENCES.**

A new American edition, revised, with numerous additions, by ISAAC HAYS, M. D., Editor of the "American Journal of the Medical Sciences." In one large royal 12mo. volume of over 500 double-columned pages; extra cloth, \$1 50; leather, \$2 00.

It is the best book of definitions we have, and ought always to be upon the student's table.—*Southern Med. and Surg. Journal*.

NEILL (JOHN), M.D., and SMITH (FRANCIS G.), M.D.,
Prof. of the Institutes of Medicine in the Univ. of Penna.

AN ANALYTICAL COMPENDIUM OF THE VARIOUS BRANCHES OF MEDICAL SCIENCE; for the Use and Examination of Students. A new edition, revised and improved. In one very large and handsomely printed royal 12mo. volume, of about one thousand pages, with 374 wood cuts, extra cloth, \$4; strongly bound in leather, with raised bands, \$4 75.

The Compend of Drs. Neill and Smith is incomparably the most valuable work of its class ever published in this country. Attempts have been made in various quarters to squeeze Anatomy, Physiology, Surgery, the Practice of Medicine, Obstetrics, Materia Medica, and Chemistry into a single manual; but the operation has signally failed in the hands of all up to the advent of "Neill and Smith's" volume, which is quite a miracle of success. The outlines of the whole are admirably drawn and illustrated, and the authors are eminently entitled to the grateful consideration of the student of every class.—*N. O. Med. and Surg. Journal.*

There are but few students or practitioners of medicine unacquainted with the former editions of this unassuming though highly instructive work. The whole science of medicine appears to have been sifted, as the gold-bearing sands of El Dorado, and the pre-

vious facts treasured up in this little volume. A complete portable library so condensed that the student may make it his constant pocket companion.—*Western Lancet.*

In the rapid course of lectures, where work for the students is heavy, and review necessary for an examination, a compend is not only valuable, but it is almost a *sine qua non*. The one before us is, in most of the divisions, the most unexceptionable of all books of the kind that we know of. Of course it is useless for us to recommend it to all last course students, but there is a class to whom we very sincerely commend this cheap book as worth its weight in silver—that class is the graduates in medicine of more than ten years' standing, who have not studied medicine since. They will perhaps find out from it that the science is not exactly now what it was when they left it off.—*The Stethoscope.*

HARTSHORNE (HENRY), M.D.,
Professor of Hygiene in the University of Pennsylvania.

A CONSPECTUS OF THE MEDICAL SCIENCES; containing Handbooks on Anatomy, Physiology, Chemistry, Materia Medica, Practical Medicine, Surgery, and Obstetrics. In one large royal 12mo. volume of 1000 closely printed pages, with over 300 illustrations on wood, extra cloth, \$4 50; leather, raised bands, \$5 25. (*Now Ready.*)

The ability of the author, and his practical skill in condensation, give assurance that this work will prove valuable not only to the student preparing for examination, but also to the practitioner desirous of obtaining within a moderate compass, a view of the existing condition of the various departments of science connected with medicine.

This work is a remarkably complete one in its way, and comes nearer to our idea of what a Conspectus should be than any we have yet seen. Prof. Hartshorne, with a commendable forethought, intrusted the preparation of many of the chapters on special subjects to experts, reserving only anatomy, physiology, and practice of medicine to himself. As a result we have every department worked up to the latest date and in a refreshingly concise and lucid manner. There are an immense amount of illustrations scattered throughout the work, and although they have often been seen before in the various works upon general and special subjects, yet they will be none the

less valuable to the beginner. Every medical student who desires a reliable refresher to his memory when the pressure of lectures and other college work crowds to prevent him from having an opportunity to drink deeper in the larger works, will find this one of the greatest utility. It is thoroughly trustworthy from beginning to end; and as we have before intimated, a remarkably truthful outline sketch of the present state of medical science. We could hardly expect it should be otherwise, however, under the charge of such a thorough medical scholar as the author has already proved himself to be.—*N. York Med. Record,* March 15, 1869.

LUDLOW (J. L.), M.D.,

A MANUAL OF EXAMINATIONS upon Anatomy, Physiology, Surgery, Practice of Medicine, Obstetrics, Materia Medica, Chemistry, Pharmacy, and Therapeutics. To which is added a Medical Formulary. Third edition, thoroughly revised and greatly extended and enlarged. With 370 illustrations. In one handsome royal 12mo. volume of 816 large pages, extra cloth, \$3 25; leather, \$3 75.

The arrangement of this volume in the form of question and answer renders it especially suitable for the office examination of students, and for those preparing for graduation.

TANNER (THOMAS HAWKES), M.D., &c.

A MANUAL OF CLINICAL MEDICINE AND PHYSICAL DIAGNOSIS. Third American from the Second London Edition. Revised and Enlarged by TILBURY FOX, M.D., Physician to the Skin Department in University College Hospital, &c. In one neat volume small 12mo., of about 375 pages, extra cloth. \$1 50. (*Now Ready.*)

This favorite little work has remained out of print for some years in consequence of the pressing engagements which have prevented the author from giving it the thorough revision which it required. The great advance which has taken place of late in the means and appliances for observation and diagnosis has necessitated a very considerable enlargement of the work, so that it now contains about one-half more matter than the last edition. The Laryngoscope, Ophthalmoscope, Sphygmograph, and Thermometer have received special attention. The chapter on the diagnostic indications afforded by the Urine has been much enlarged, and a section has been inserted on the administration of Chloroform. Special attention has been given to the medical anatomy of regions and organs, and much has been introduced relative to pericardial, endocardial, abdominal, and cerebro-spinal diseases. On every subject coming within its scope such additions have been made as seemed essential to bring the book on a level with the most advanced condition of medical knowledge; and it is hoped that it will continue to merit the very great favor with which it has hitherto been received.

GRAY (HENRY), F. R. S.,

Lecturer on Anatomy at St. George's Hospital, London.

ANATOMY, DESCRIPTIVE AND SURGICAL. The Drawings by H. V. CARTER, M. D., late Demonstrator on Anatomy at St. George's Hospital; the Dissections jointly by the AUTHOR and DR. CARTER. A new American, from the fifth enlarged and improved London edition. In one magnificent imperial octavo volume, of nearly 900 pages, with 465 large and elaborate engravings on wood. Price in extra cloth, \$6 00; leather, raised bands, \$7 00. (*Just Ready.*)

The author has endeavored in this work to cover a more extended range of subjects than is customary in the ordinary text-books, by giving not only the details necessary for the student, but also the application of those details in the practice of medicine and surgery, thus rendering it both a guide for the learner, and an admirable work of reference for the active practitioner. The engravings form a special feature in the work, many of them being the size of nature, nearly all original, and having the names of the various parts printed on the body of the cut, in place of figures of reference, with descriptions at the foot. They thus form a complete and splendid series, which will greatly assist the student in obtaining a clear idea of Anatomy, and will also serve to refresh the memory of those who may find in the exigencies of practice the necessity of recalling the details of the dissecting room; while combining, as it does, a complete Atlas of Anatomy, with a thorough treatise on systematic, descriptive, and applied Anatomy, the work will be found of essential use to all physicians who receive students in their offices, relieving both preceptor and pupil of much labor in laying the groundwork of a thorough medical education.

Notwithstanding its exceedingly low price, the work will be found, in every detail of mechanical execution, one of the handsomest that has yet been offered to the American profession; while the careful scrutiny of a competent anatomist has relieved it of whatever typographical errors existed in the English edition. A few notices of previous editions are subjoined.

Thus it is that book after book makes the labor of the student easier than before, and since we have seen Blanchard & Lea's new edition of Gray's Anatomy, certainly the finest work of the kind now extant, we would fain hope that the bugbear of medical students will lose half its horrors, and this necessary foundation of physiological science will be much facilitated and advanced.—*N. O. Med. News.*

The various points illustrated are marked directly on the structure; that is, whether it be muscle, process, artery, nerve, valve, etc. etc.—we say each point is distinctly marked by lettered engravings, so that the student perceives at once each point described as readily as if pointed out on the subject by the demonstrator. Most of the illustrations are thus rendered exceedingly satisfactory, and to the physician they serve to refresh the memory with great readiness

and with scarce a reference to the printed text. The surgical application of the various regions is also presented with force and clearness, impressing upon the student at each step of his research all the important relations of the structure demonstrated.—*Cincinnati Lancet.*

This is, we believe, the handsomest book on Anatomy as yet published in our language, and bids fair to become in a short time the standard text-book of our colleges and studies. Students and practitioners will alike appreciate this book. We predict for it a bright career, and are fully prepared to endorse the statement of the *London Lancet*, that "We are not acquainted with any work in any language which can take equal rank with the one before us." Paper, printing, binding, all are excellent, and we feel that a grateful profession will not allow the publishers to go unrewarded.—*Nashville Med. and Surg. Journal.*

SMITH (HENRY H.), M.D., and

Prof. of Surgery in the Univ. of Penna., &c.

HORNER (WILLIAM E.), M.D.,

Late Prof. of Anatomy in the Univ. of Penna., &c.

AN ANATOMICAL ATLAS, illustrative of the Structure of the Human Body. In one volume, large imperial octavo, extra cloth, with about six hundred and fifty beautiful figures. \$4 50.

The plan of this Atlas, which renders it so peculiarly convenient for the student, and its superb artistic execution, have been already pointed out. We must congratulate the student upon the completion of this Atlas, as it is the most convenient work of

the kind that has yet appeared; and we must add, the very beautiful manner in which it is "got up" is so creditable to the country as to be flattering to our national pride.—*American Medical Journal.*

HARTSHORNE (HENRY), M. D.,

Professor of Hygiene, etc., in the University of Pennsylvania.

A HANDBOOK OF HUMAN ANATOMY AND PHYSIOLOGY, for the use of Students, with 176 illustrations. In one volume, royal 12mo. of 312 pages; extra cloth, \$1 75. (*Now Ready.*)

SHARPEY (WILLIAM), M.D., and **QUAIN (JONES & RICHARD).**

HUMAN ANATOMY. Revised, with Notes and Additions, by JOSEPH LEIDY, M.D., Professor of Anatomy in the University of Pennsylvania. Complete in two large octavo volumes, of about 1300 pages, with 511 illustrations; extra cloth, \$6 00.

The very low price of this standard work, and its completeness in all departments of the subject, should command for it a place in the library of all anatomical students.

ALLEN (J. M.), M.D.

THE PRACTICAL ANATOMIST; OR, THE STUDENT'S GUIDE IN THE DISSECTING ROOM. With 266 illustrations. In one very handsome royal 12mo volume, of over 600 pages; extra cloth, \$2 00.

One of the most useful works upon the subject ever written.—*Medical Examiner*

WILSON (ERASMUS), F. R. S.

A SYSTEM OF HUMAN ANATOMY, General and Special. A new and revised American, from the last and enlarged English edition. Edited by W. H. GOBRECHT, M. D., Professor of General and Surgical Anatomy in the Medical College of Ohio. Illustrated with three hundred and ninety-seven engravings on wood. In one large, handsome octavo volume, of over 600 large pages; extra cloth, \$4 00; leather, \$5 00.

The publisher trusts that the well-earned reputation of this long-established favorite will be more than maintained by the present edition. Besides a very thorough revision by the author, it has been most carefully examined by the editor, and the efforts of both have been directed to introducing everything which increased experience in its use has suggested as desirable to render it a complete text-book for those seeking to obtain or to renew an acquaintance with Human Anatomy. The amount of additions which it has thus received may be estimated from the fact that the present edition contains over one-fourth more matter than the last, rendering a smaller type and an enlarged page requisite to keep the volume within a convenient size. The author has not only thus added largely to the work, but he has also made alterations throughout, wherever there appeared the opportunity of improving the arrangement or style, so as to present every fact in its most appropriate manner, and to render the whole as clear and intelligible as possible. The editor has exercised the utmost caution to obtain entire accuracy in the text, and has largely increased the number of illustrations, of which there are about one hundred and fifty more in this edition than in the last, thus bringing distinctly before the eye of the student everything of interest or importance.

BY THE SAME AUTHOR.

THE DISSECTOR'S MANUAL; OR, PRACTICAL AND SURGICAL ANATOMY. Third American, from the last revised and enlarged English edition. Modified and rearranged by WILLIAM HUNT, M. D., late Demonstrator of Anatomy in the University of Pennsylvania. In one large and handsome royal 12mo. volume, of 582 pages, with 154 illustrations; extra cloth, \$2 00.

HEATH (CHRISTOPHER), F. R. C. S.,
Teacher of Operative Surgery in University College, London.

PRACTICAL ANATOMY: A Manual of Dissections. From the Second revised and improved London edition. Edited, with additions, by W. W. KEEN, M. D., Lecturer on Pathological Anatomy in the Jefferson Medical College, Philadelphia. In one handsome volume, with over 200 illustrations. (*In Press.*)

HODGES, (RICHARD M.), M. D.,
Late Demonstrator of Anatomy in the Medical Department of Harvard University.

PRACTICAL DISSECTIONS. Second Edition, thoroughly revised. In one neat royal 12mo. volume, half-bound, \$2 00. (*Just Issued.*)

The object of this work is to present to the anatomical student a clear and concise description of that which he is expected to observe in an ordinary course of dissections. The author has endeavored to omit unnecessary details, and to present the subject in the form which many years' experience has shown him to be the most convenient and intelligible to the student. In the revision of the present edition, he has sedulously labored to render the volume more worthy of the favor with which it has heretofore been received.

MACLISE (JOSEPH).

SURGICAL ANATOMY. By JOSEPH MACLISE, Surgeon. In one volume, very large imperial quarto; with 68 large and splendid plates, drawn in the best style and beautifully colored, containing 190 figures, many of them the size of life; together with copious explanatory letter-press. Strongly and handsomely bound in extra cloth. Price \$14 00.

As no complete work of the kind has heretofore been published in the English language, the present volume will supply a want long felt in this country of an accurate and comprehensive Atlas of Surgical Anatomy, to which the student and practitioner can at all times refer to ascertain the exact relative positions of the various portions of the human frame towards each other and to the surface, as well as their abnormal deviations. Notwithstanding the large size, beauty and finish of the very numerous illustrations, it will be observed that the price is so low as to place it within the reach of all members of the profession.

We know of no work on surgical anatomy which can compete with it.—*Lancet.*

The work of MacLise on surgical anatomy is of the highest value. In some respects it is the best publication of its kind we have seen, and is worthy of a place in the library of any medical man, while the student could scarcely make a better investment than this.—*The Western Journal of Medicine and Surgery.*

No such lithographic illustrations of surgical regions have hitherto, we think, been given. While the operator is shown every vessel and nerve where an operation is contemplated, the exact anatomist is

refreshed by those clear and distinct dissections, which every one must appreciate who has a particle of enthusiasm. The English medical press has quite exhausted the words of praise, in recommending this admirable treatise. Those who have any curiosity to gratify, in reference to the perfectibility of the lithographic art in delineating the complex mechanism of the human body, are invited to examine our specimen copy. If anything will induce surgeons and students to patronize a book of such rare value and everyday importance to them, it will be a survey of the artistic skill exhibited in these fac-similes of nature.—*Boston Med. and Surg. Journal.*

HORNER'S SPECIAL ANATOMY AND HISTOLOGY. Eighth edition, extensively revised and modified

In 2 vols. 8vo., of over 1000 pages, with more than 300 wood-cuts; extra cloth, \$6 00.

MARSHALL (JOHN), F. R. S.

Professor of Surgery in University College, London, &c.

OUTLINES OF PHYSIOLOGY, HUMAN AND COMPARATIVE.

With Additions by FRANCIS GURNEY SMITH, M. D., Professor of the Institutes of Medicine in the University of Pennsylvania, &c. With numerous illustrations. In one large and handsome octavo volume, of 1026 pages, extra cloth, \$6 50; leather, raised bands, \$7 50. (Just Issued.)

In fact, in every respect, Mr. Marshall has presented us with a most complete, reliable, and scientific work, and we feel that it is worthy our warmest commendation.—*St. Louis Med. Reporter*, Jan. 1869.

This is an elaborate and carefully prepared digest of human and comparative physiology, designed for the use of general readers, but more especially serviceable to the student of medicine. Its style is concise, clear, and scholarly; its order perspicuous and exact, and its range of topics extended. The author and his American editor have been careful to bring to the illustration of the subject the important discoveries of modern science in the various cognate departments of investigation. This is especially visible in the variety of interesting information derived from the departments of chemistry and physics. The great amount and variety of matter contained in the work is strikingly illustrated by turning over the copious index, covering twenty-four closely printed pages in double columns.—*Silliman's Journal*, Jan. 1869.

We doubt if there is in the English language any compend of physiology more useful to the student than this work.—*St. Louis Med. and Surg. Journal*, Jan. 1869.

It quite fulfils, in our opinion, the author's design of making it truly *educational* in its character—which is, perhaps, the highest commendation that can be asked.—*Am. Journ. Med. Sciences*, Jan. 1869.

We may now congratulate him on having completed the latest as well as the best summary of mod-

ern physiological science, both human and comparative, with which we are acquainted. To speak of this work in the terms ordinarily used on such occasions would not be agreeable to ourselves, and would fail to do justice to its author. To write such a book requires a varied and wide range of knowledge, considerable power of analysis, correct judgment, skill in arrangement, and conscientious spirit. It must have entailed great labor, but now that the task has been fulfilled, the book will prove not only invaluable to the student of medicine and surgery, but serviceable to all candidates in natural science examinations, to teachers in schools, and to the lover of nature generally. In conclusion, we can only express the conviction that the merits of the work will command for it that success which the ability and vast labor displayed in its production so well deserve.—*London Lancet*, Feb. 22, 1868.

If the possession of knowledge, and peculiar aptitude and skill in expounding it, qualify a man to write an educational work, Mr. Marshall's treatise might be reviewed favorably without even opening the covers. There are few, if any, more accomplished anatomists and physiologists than the distinguished professor of surgery at University College; and he has long enjoyed the highest reputation as a teacher of physiology, possessing remarkable powers of clear exposition and graphic illustration. We have rarely the pleasure of being able to recommend a text-book so unreservedly as this.—*British Med. Journal*, Jan. 25, 1868.

CARPENTER (WILLIAM B.), M. D., F. R. S.

Examiner in Physiology and Comparative Anatomy in the University of London.

PRINCIPLES OF HUMAN PHYSIOLOGY; with their chief appli-

cations to Psychology, Pathology, Therapeutics, Hygiene and Forensic Medicine. A new American from the last and revised London edition. With nearly three hundred illustrations. Edited, with additions, by FRANCIS GURNEY SMITH, M. D., Professor of the Institutes of Medicine in the University of Pennsylvania, &c. In one very large and beautiful octavo volume, of about 900 large pages, handsomely printed; extra cloth, \$5 50; leather, raised bands, \$6 50.

With Dr. Smith, we confidently believe "that the present will more than sustain the enviable reputation already attained by former editions, of being one of the fullest and most complete treatises on the subject in the English language." We know of none from the pages of which a satisfactory knowledge of the physiology of the human organism can be as well obtained, none better adapted for the use of such as take up the study of physiology in its reference to the institutes and practice of medicine.—*Am. Journ. Med. Sciences*.

We doubt not it is destined to retain a strong hold on public favor, and remain the favorite text-book in our colleges.—*Virginia Medical Journal*.

The above is the title of what is emphatically *the* great work on physiology; and we are conscious that it would be a useless effort to attempt to add anything to the reputation of this invaluable work, and can only say to all with whom our opinion has any influence, that it is our *authority*.—*Atlanta Med. Journal*.

BY THE SAME AUTHOR.

PRINCIPLES OF COMPARATIVE PHYSIOLOGY. New American, from the Fourth and Revised London Edition. In one large and handsome octavo

volume, with over three hundred beautiful illustrations. Pp. 752. Extra cloth, \$5 00.

As a complete and condensed treatise on its extended and important subject, this work becomes a necessity to students of natural science, while the very low price at which it is offered places it within the reach of all.

KIRKES (WILLIAM SENHOUSE), M. D.,

A MANUAL OF PHYSIOLOGY. A new American from the third

and improved London edition. With two hundred illustrations. In one large and handsome royal 12mo. volume. Pp. 586. Extra cloth, \$2 25; leather, \$2 75.

It is at once convenient in size, comprehensive in design, and concise in statement, and altogether well adapted for the purpose designed.—*St. Louis Med. and Surg. Journal*.

The physiological reader will find it a most excel-

lent guide in the study of physiology in its most advanced and perfect form. The author has shown himself capable of giving details sufficiently ample in a condensed and concentrated shape, on a science in which it is necessary at once to be correct and not lengthened.—*Edinburgh Med. and Surg. Journal*.

DALTON (J. C.), M. D.,*Professor of Physiology in the College of Physicians and Surgeons, New York, &c.*

A TREATISE ON HUMAN PHYSIOLOGY. Designed for the use of Students and Practitioners of Medicine. Fourth edition, revised, with nearly three hundred illustrations on wood. In one very beautiful octavo volume, of about 700 pages, extra cloth, \$5 25; leather, \$6 25. (Just Issued.)

From the Preface to the New Edition.

"The progress made by Physiology and the kindred Sciences during the last few years has required, for the present edition of this work, a thorough and extensive revision. This progress has not consisted in any very striking single discoveries, nor in a decided revolution in any of the departments of Physiology; but it has been marked by great activity of investigation in a multitude of different directions, the combined results of which have not failed to impress a new character on many of the features of physiological knowledge. . . . In the revision and correction of the present edition, the author has endeavored to incorporate all such improvements in physiological knowledge with the mass of the text in such a manner as not essentially to alter the structure and plan of the work, so far as they have been found adapted to the wants and convenience of the reader. . . . Several new illustrations are introduced, some of them as additions, others as improvements or corrections of the old. Although all parts of the book have received more or less complete revision, the greatest number of additions and changes were required in the Second Section, on the Physiology of the Nervous System."

The advent of the first edition of Prof. Dalton's Physiology, about eight years ago, marked a new era in the study of physiology to the American student. Under Dalton's skillful management, physiological science threw off the long, loose, ungainly garments of probability and surmise, in which it had been arrayed by most artists, and came among us smiling and attractive, in the beautifully tinted and closely fitting dress of a demonstrated science. It was a stroke of genius, as well as a result of erudition and talent, that led Prof. Dalton to present to the world a work on physiology at once brief, pointed, and comprehensive, and which exhibited plainly in letter and drawings the basis upon which the conclusions arrived at rested. It is no disparagement of the many excellent works on physiology, published prior to that of Dalton, to say that none of them, either in plan of arrangement or clearness of execution, could be compared with his for the use of students or general practitioners of medicine. For this purpose his book has no equal in the English language.—*Western Journal of Medicine*, Nov. 1867.

A capital text-book in every way. We are, therefore, glad to see it in its fourth edition. It has already been examined at full length in these columns, so that we need not now further advert to it beyond remarking that both revision and enlargement have been most judicious.—*London Med. Times and Gazette*, Oct. 19, 1867.

No better proof of the value of this admirable work could be produced than the fact that it has already reached a fourth edition in the short space of eight years. Possessing in an eminent degree the

merits of clearness and condensation, and being fully brought up to the present level of Physiology, it is undoubtedly one of the most reliable text-books upon this science that could be placed in the hands of the medical student.—*Am. Journal Med. Sciences*, Oct. 1867.

Prof. Dalton's work has such a well-established reputation that it does not stand in need of any recommendation. Ever since its first appearance it has become the highest authority in the English language; and that it is able to maintain the enviable position which it has taken, the rapid exhaustion of the different successive editions is sufficient evidence. The present edition, which is the fourth, has been thoroughly revised, and enlarged by the incorporation of all the many important advances which have lately been made in this rapidly progressing science.—*N. Y. Med. Record*, Oct. 15, 1867.

As it stands, we esteem it the very best of the physiological text-books for the student, and the most concise reference and guide-book for the practitioner.—*N. Y. Med. Journal*, Oct. 1867.

The present edition of this now standard work fully sustains the high reputation of its accomplished author. It is not merely a reprint, but has been faithfully revised, and enriched by such additions as the progress of physiology has rendered desirable. Taken as a whole, it is unquestionably the most reliable and useful treatise on the subject that has been issued from the American press.—*Chicago Med. Journal*, Sept. 1867.

DUNGLISON (ROBLEY), M. D.,*Professor of Institutes of Medicine in Jefferson Medical College, Philadelphia.*

HUMAN PHYSIOLOGY. Eighth edition. Thoroughly revised and extensively modified and enlarged, with five hundred and thirty-two illustrations. In two large and handsomely printed octavo volumes of about 1500 pages, extra cloth. \$7 00.

LEHMANN (C. G.)

PHYSIOLOGICAL CHEMISTRY. Translated from the second edition by GEORGE E. DAY, M. D., F. R. S., &c., edited by R. E. ROGERS, M. D., Professor of Chemistry in the Medical Department of the University of Pennsylvania, with illustrations selected from Funke's Atlas of Physiological Chemistry, and an Appendix of plates. Complete in two large and handsome octavo volumes, containing 1200 pages, with nearly two hundred illustrations, extra cloth. \$6 00.

BY THE SAME AUTHOR.

MANUAL OF CHEMICAL PHYSIOLOGY. Translated from the German, with Notes and Additions, by J. CHESTON MORRIS, M. D., with an Introductory Essay on Vital Force, by Professor SAMUEL JACKSON, M. D., of the University of Pennsylvania. With illustrations on wood. In one very handsome octavo volume of 336 pages extra cloth. \$2 25.

TODD (ROBERT B.), M. D. F. R. S., and BOWMAN (W.), F. R. S.

THE PHYSIOLOGICAL ANATOMY AND PHYSIOLOGY OF MAN. With about three hundred large and beautiful illustrations on wood. Complete in one large octavo volume of 950 pages, extra cloth. Price \$4 75.

BRANDE (WM. T.), D. C. L., and TAYLOR (ALFRED S.), M. D., F. R. S.

CHEMISTRY. Second American edition, thoroughly revised by Dr. TAYLOR. In one handsome 8vo. volume of 764 pages, extra cloth, \$5 00; leather, \$6 00. (*Lately Issued.*)

FROM DR. TAYLOR'S PREFACE.

"The revision of the second edition, in consequence of the death of my lamented colleague, has devolved entirely upon myself. Every chapter, and indeed every page, has been revised, and numerous additions made in all parts of the volume. These additions have been restricted chiefly to subjects having some practical interest, and they have been made as concise as possible, in order to keep the book within those limits which may retain for it the character of a Student's Manual"—*London, June 29, 1867.*

A book that has already so established a reputation, as has Brande and Taylor's Chemistry, can hardly need a notice, save to mention the additions and improvements of the edition. Doubtless the work will long remain a favorite text-book in the schools, as well as a convenient book of reference for all.—*N. Y. Medical Gazette, Oct. 12, 1867.*

For this reason we hail with delight the republication, in a form which will meet with general approval and command public attention, of this really valuable standard work on chemistry—more particularly as it has been adapted with such care to the wants of the general public. The well known scholarship of its authors, and their extensive researches for many years in experimental chemistry, have been long appreciated in the scientific world, but in this work they have been careful to give the largest possible amount of information with the most sparing use of technical terms and phraseology, so as to furnish the reader, "whether a student of medicine, or a man of the world, with a plain introduction to the science and practice of chemistry."—*Journal of Applied Chemistry, Oct. 1867.*

This second American edition of an excellent treatise on chemical science is not a mere republication from the English press, but is a revision and enlargement of the original, under the supervision of the surviving author, Dr. Taylor. The favorable opinion expressed on the publication of the former edition of this work is fully sustained by the present revision, in which Dr. T. has increased the size of the volume, by an addition of sixty-eight pages.—*Am. Journ. Med. Sciences, Oct. 1867.*

THE HANDBOOK IN CHEMISTRY OF THE STUDENT.—For clearness of language, accuracy of description, extent of information, and freedom from pedantry and mysticism, no other text-book comes into competition with it.—*The Lancet.*

The authors set out with the definite purpose of writing a book which shall be intelligible to any educated man. Thus conceived, and worked out in the most sturdy, common-sense method, this book gives in the clearest and most summary method possible all the facts and doctrines of chemistry.—*Medical Times.*

ODLING (WILLIAM),

Lecturer on Chemistry, at St. Bartholomew's Hospital, &c.

A COURSE OF PRACTICAL CHEMISTRY, arranged for the Use of Medical Students. With Illustrations. From the Fourth and Revised London Edition. In one neat royal 12mo. volume, extra cloth. \$2. (*Just Issued.*)

As a work for the practitioner it cannot be excelled. It is written plainly and concisely, and gives in a very small compass the information required by the busy practitioner. It is essentially a work for the physician, and no one who purchases it will ever regret the outlay. In addition to all that is usually given in connection with inorganic chemistry, there are most valuable contributions to toxicology, animal and or-

ganic chemistry, etc. The portions devoted to a discussion of these subjects are very excellent. In no work can the physician find more that is valuable and reliable in regard to urine, bile, milk, bone, urinary calculi, tissue composition, etc. The work is small, reasonable in price, and well published.—*Richmond and Louisville Med. Journal, Dec. 1869.*

BOWMAN (JOHN E.), M. D.

PRACTICAL HANDBOOK OF MEDICAL CHEMISTRY. Edited by C. L. BLOXAM, Professor of Practical Chemistry in King's College, London. Fifth American, from the fourth and revised English Edition. In one neat volume, royal 12mo., pp. 351, with numerous illustrations, extra cloth. \$2 25. (*Now Ready.*)

The fourth edition of this invaluable text-book of Medical Chemistry was published in England in October of the last year. The Editor has brought down the Handbook to that date, introducing, as far as was compatible with the necessary conciseness of such a work, all the valuable discoveries in the science

which have come to light since the previous edition was printed. The work is indispensable to every student of medicine or enlightened practitioner. It is printed in clear type, and the illustrations are numerous and intelligible.—*Boston Med. and Surg. Journal.*

BY THE SAME AUTHOR.

INTRODUCTION TO PRACTICAL CHEMISTRY, INCLUDING ANALYSIS. Fifth American, from the fifth and revised London edition. With numerous illustrations. In one neat vol., royal 12mo., extra cloth. \$2 25. (*Now Ready.*)

One of the most complete manuals that has for a long time been given to the medical student.—*Athenæum.*

It is by far the best adapted for the Chemical student of any that has yet fallen in our way.—*British and Foreign Medico-Chirurgical Review.*

We regard it as realizing almost everything to be desired in an introduction to Practical Chemistry.

The best introductory work on the subject with which we are acquainted.—*Edinburgh Monthly Jour.*

GRAHAM (THOMAS), F. R. S.

THE ELEMENTS OF INORGANIC CHEMISTRY, including the Applications of the Science in the Arts. New and much enlarged edition, by HENRY WATTS and ROBERT BRIDGES, M. D. Complete in one large and handsome octavo volume, of over 800 very large pages, with two hundred and thirty-two wood-cuts, extra cloth. \$5 50.

KNAPP'S TECHNOLOGY; or Chemistry Applied to the Arts, and to Manufactures. With American additions, by Prof. WALTER R. JOHNSON. In two

very handsome octavo volumes, with 500 wood engravings, extra cloth, \$6 00.

FOWNES (GEORGE), Ph. D.

A MANUAL OF ELEMENTARY CHEMISTRY; Theoretical and Practical. With one hundred and ninety-seven illustrations. A new American, from the tenth and revised London edition. Edited by ROBERT BRIDGES, M. D. In one large royal 12mo. volume, of about 850 pp., extra cloth, \$2 75; leather, \$3 25. (*Just Issued.*)

Some years having elapsed since the appearance of the last American edition, and several revisions having been made of the work in England during the interval, it will be found very greatly altered, and enlarged by about two hundred and fifty pages, containing nearly one half more matter than before. The editors, Mr. Watts and Dr. Bence Jones, have labored sedulously to render it worthy in all respects of the very remarkable favor which it has thus far enjoyed, by incorporating in it all the most recent investigations and discoveries, in so far as is compatible with its design as an elementary text-book. While its distinguishing characteristics have been preserved, various portions have been rewritten, and especial pains have been taken with the department of Organic Chemistry in which late researches have accumulated so many new facts and have enabled the subject to be systematized and rendered intelligible in a manner formerly impossible. As only a few months have elapsed since the work thus passed through the hands of Mr. Watts and Dr. Bence Jones, but little has remained to be done by the American editor. Such additions as seemed advisable have however been made, and especial care has been taken to secure, by the closest scrutiny, the accuracy so essential in a work of this nature.

Thus fully brought up to a level with the latest advances of science, and presented at a price within the reach of all, it is hoped that the work will maintain its position as the favorite text-book of the medical student.

This work is so well known that it seems almost superfluous for us to speak about it. It has been a favorite text-book with medical students for years, and its popularity has in no respect diminished. Whenever we have been consulted by medical students, as has frequently occurred, what treatise on chemistry they should procure, we have always recommended Fownes', for we regarded it as the best. There is no work that combines so many excellences. It is of convenient size, not prolix, of plain perspicuous diction, contains all the most recent discoveries, and is of moderate price.—*Cincinnati Med. Repertory*, Aug. 1869.

Large additions have been made, especially in the department of organic chemistry, and we know of no other work that has greater claims on the physician, pharmacist, or student, than this. We cheerfully recommend it as the best text-book on elementary chemistry, and bespeak for it the careful attention of students of pharmacy.—*Chicago Pharmacist*, Aug. 1869.

The American reprint of the tenth revised and corrected English edition is now issued, and represents the present condition of the science. No comments are necessary to insure it a favorable reception at the hands of practitioners and students.—*Boston Med. and Surg. Journal*, Aug. 12, 1869.

It will continue, as heretofore, to hold the first rank as a text-book for students of medicine.—*Chicago Med. Examiner*, Aug. 1869.

This work, long the recognized Manual of Chemistry, appears as a tenth edition, under the able editorship of Bence Jones and Henry Watts. The chapter on

the General Principles of Chemical Philosophy, and the greater part of the organic chemistry, have been rewritten, and the whole work revised in accordance with the recent advances in chemical knowledge. It remains the standard text-book of chemistry.—*Dublin Quarterly Journal*, Feb. 1869.

There is probably not a student of chemistry in this country to whom the admirable manual of the late Professor Fownes is unknown. It has achieved a success which we believe is entirely without a parallel among scientific text-books in our language. This success has arisen from the fact that there is no English work on chemistry which combines so many excellences. Of convenient size, of attractive form, clear and concise in diction, well illustrated, and of moderate price, it would seem that every requisite for a student's hand-book has been attained. The ninth edition was published under the joint editorship of Dr. Bence Jones and Dr. Hofmann; the new one has been superintended through the press by Dr. Bence Jones and Mr. Henry Watts. It is not too much to say that it could not possibly have been in better hands. There is no one in England who can compare with Mr. Watts in experience as a compiler in chemical literature, and we have much pleasure in recording the fact that his reputation is well sustained by this, his last undertaking.—*The Chemical News*, Feb. 1869.

Here is a new edition which has been long watched for by eager teachers of chemistry. In its new garb, and under the editorship of Mr. Watts, it has resumed its old place as the most successful of text-books.—*Indian Medical Gazette*, Jan. 1, 1869.

PARRISH (EDWARD),

Professor of Materia Medica in the Philadelphia College of Pharmacy.

A TREATISE ON PHARMACY. Designed as a Text-Book for the Student, and as a Guide for the Physician and Pharmacist. With many Formulæ and Prescriptions. Third Edition, greatly improved. In one handsome octavo volume, of 850 pages, with several hundred illustrations, extra cloth. \$5 00.

The immense amount of practical information condensed in this volume may be estimated from the fact that the Index contains about 4700 items. Under the head of Acids there are 312 references; under Emplastrum, 36; Extracts, 159; Lozenges, 25; Mixtures, 55; Pills, 56; Syrups, 131; Tinctures, 138; Unguentum, 57, &c.

We have examined this large volume with a good deal of care, and find that the author has completely exhausted the subject upon which he treats; a more complete work, we think, it would be impossible to find. To the student of pharmacy the work is indispensable; indeed, so far as we know, it is the only one of its kind in existence, and even to the physician or medical student who can spare five dollars to purchase it, we feel sure the practical information he will obtain will more than compensate him for the outlay.—*Canada Med. Journal*, Nov. 1864.

The medical student and the practising physician will find the volume of inestimable worth for study and reference.—*San Francisco Med. Press*, July, 1864.

When we say that this book is in some respects the best which has been published on the subject in the English language for a great many years, we do

not wish it to be understood as very extravagant praise. In truth, it is not so much the best as the only book.—*The London Chemical News*.

An attempt to furnish anything like an analysis of Parrish's very valuable and elaborate *Treatise on Practical Pharmacy* would require more space than we have at our disposal. This, however, is not so much a matter of regret, inasmuch as it would be difficult to think of any point, however minute and apparently trivial, connected with the manipulation of pharmaceutical substances or appliances which has not been clearly and carefully discussed in this volume. Want of space prevents our enlarging further on this valuable work, and we must conclude by a simple expression of our hearty appreciation of its merits.—*Dublin Quarterly Jour. of Medical Science*, August, 1864.

STILLÉ (ALFRED), M. D.,
Professor of Theory and Practice of Medicine in the University of Penna.

THERAPEUTICS AND MATERIA MEDICA; a Systematic Treatise
 on the Action and Uses of Medicinal Agents, including their Description and History.
 Third edition, revised and enlarged. In two large and handsome octavo volumes of about
 1700 pages, extra cloth, \$10; leather, \$12. (Just Issued.)

That two large editions of a work of such magnitude should be exhausted in a few years, is sufficient evidence that it has supplied a want generally felt by the profession, and the unanimous commendation bestowed upon it by the medical press, abroad as well as at home, shows that the author has successfully accomplished his object in presenting to the profession a systematic treatise suited to the wants of the practising physician, and unincumbered with details interesting only to the naturalist or the dealer. Notwithstanding its enlargement, the present edition has been kept at the former very moderate price.

Dr. Stillé's splendid work on therapeutics and materia medica.—*London Med. Times*, April 8, 1868.

Dr. Stillé stands to-day one of the best and most honored representatives at home and abroad, of American medicine; and these volumes, a library in themselves, a treasure-house for every studious physician, assure his fame even had he done nothing more.—*The Western Journal of Medicine*, Dec. 1868.

We regard this work as the best one on Materia Medica in the English language, and as such it deserves the favor it has received.—*Am. Journ. Medical Sciences*, July 1868.

We need not dwell on the merits of the third edition of this magnificently conceived work. It is the work on Materia Medica, in which Therapeutics are primarily considered—the mere natural history of drugs being briefly disposed of. To medical practitioners this is a very valuable conception. It is wonderful how much of the riches of the literature of Materia Medica has been condensed into this book. The references alone would make it worth possessing. But it is not a mere compilation. The writer exercises a good judgment of his own on the great doctrines and points of Therapeutics. For purposes of practice, Stillé's book is almost unique as a repertory of information, empirical and scientific, on the actions and uses of medicines.—*London Lancet*, Oct. 31, 1868.

Through the former editions, the professional world is well acquainted with this work. At home and

abroad its reputation as a standard treatise on Materia Medica is securely established. It is second to no work on the subject in the English tongue, and, indeed, is decidedly superior, in some respects, to any other.—*Pacific Med. and Surg. Journal*, July, 1868.

Stillé's Therapeutics is incomparably the best work on the subject.—*N. Y. Med. Gazette*, Sept. 26, 1868.

Dr. Stillé's work is becoming the best known of any of our treatises on Materia Medica. . . . One of the most valuable works in the language on the subjects of which it treats.—*N. Y. Med. Journal*, Oct. 1868.

The rapid exhaustion of two editions of Prof. Stillé's scholarly work, and the consequent necessity for a third edition, is sufficient evidence of the high estimate placed upon it by the profession. It is no exaggeration to say that there is no superior work upon the subject in the English language. The present edition is fully up to the most recent advance in the science and art of therapeutics.—*Leavenworth Medical Herald*, Aug. 1868.

The work of Prof. Stillé has rapidly taken a high place in professional esteem, and to say that a third edition is demanded and now appears before us, sufficiently attests the firm position this treatise has made for itself. As a work of great research, and scholarship, it is safe to say we have nothing superior. It is exceedingly full, and the busy practitioner will find ample suggestions upon almost every important point of therapeutics.—*Cincinnati Lancet*, Aug. 1868.

GRIFFITH (ROBERT E.), M. D.

A UNIVERSAL FORMULARY, Containing the Methods of Preparing and Administering Official and other Medicines. The whole adapted to Physicians and Pharmacutists. Second edition, thoroughly revised, with numerous additions, by ROBERT P. THOMAS, M. D., Professor of Materia Medica in the Philadelphia College of Pharmacy. In one large and handsome octavo volume of 650 pages, double-columns. Extra cloth, \$4 00; leather, \$5 00.

In this volume, the Formulary proper occupies over 400 double-column pages, and contains about 5000 formulas, among which, besides those strictly medical, will be found numerous valuable receipts for the preparation of essences, perfumes, inks, soaps, varnishes, &c. &c. In addition to this, the work contains a vast amount of information indispensable for daily reference by the practising physician and apothecary, embracing Tables of Weights and Measures, Specific Gravity, Temperature for Pharmaceutical Operations, Hydrometrical Equivalents, Specific Gravities of some of the Preparations of the Pharmacopœias, Relation between different Thermometrical Scales, Explanation of Abbreviations used in Formulæ, Vocabulary of Words used in Prescriptions, Observations on the Management of the Sick Room, Doses of Medicines, Rules for the Administration of Medicines, Management of Convalescence and Relapses, Dietetic Preparations not included in the Formulary, List of Incompatibles, Posological Table, Table of Pharmaceutical Names which differ in the Pharmacopœias, Official Preparations and Directions, and Poisons.

Three complete and extended Indexes render the work especially adapted for immediate consultation. One, of DISEASES AND THEIR REMEDIES, presents under the head of each disease the remedial agents which have been usefully exhibited in it, with reference to the formulæ containing them—while another of PHARMACEUTICAL and BOTANICAL NAMES, and a very thorough GENERAL INDEX afford the means of obtaining at once any information desired. The Formulary itself is arranged alphabetically, under the heads of the leading constituents of the prescriptions.

We know of none in our language, or any other, so comprehensive in its details.—*London Lancet*.

One of the most complete works of the kind in any language.—*Edinburgh Med. Journal*.

We are not cognizant of the existence of a parallel work.—*London Med. Gazette*.

DUNGLISON (ROBLEY), M. D.

NEW REMEDIES, WITH FORMULÆ FOR THEIR PREPARATION AND ADMINISTRATION. Seventh edition, with extensive additions. In one very large octavo volume of 770 pages, extra cloth. \$4 00.

PEREIRA (JONATHAN), M.D., F.R.S. and L.S.

MATERIA MEDICA AND THERAPEUTICS; being an Abridgment of the late Dr. Pereira's Elements of Materia Medica, arranged in conformity with the British Pharmacopœia, and adapted to the use of Medical Practitioners, Chemists and Druggists, Medical and Pharmaceutical Students, &c. By F. J. FARRE, M.D., Senior Physician to St. Bartholomew's Hospital, and London Editor of the British Pharmacopœia; assisted by ROBERT BENTLEY, M.R.C.S., Professor of Materia Medica and Botany to the Pharmaceutical Society of Great Britain; and by ROBERT WARINGTON, F.R.S., Chemical Operator to the Society of Apothecaries. With numerous additions and references to the United States Pharmacopœia, by HORATIO C. WOOD, M.D., Professor of Botany in the University of Pennsylvania. In one large and handsome octavo volume of 1040 closely printed pages, with 236 illustrations, extra cloth, \$7 00; leather, raised bands, \$8 00. (Lately Published.)

The task of the American editor has evidently been no sinecure, for not only has he given to us all that is contained in the abridgment useful for our purposes, but by a careful and judicious embodiment of over a hundred new remedies has increased the size of the former work fully one-third, besides adding many new illustrations, some of which are original. We unhesitatingly say that by so doing he has proportionately increased the value, not only of the condensed edition, but has extended the applicability of the great original, and has placed his medical countrymen under lasting obligations to him. The American physician now has all that is needed in the shape of a complete treatise on materia medica, and the medical student has a text-book which, for practical utility and intrinsic worth, stands unparalleled. Although of considerable size, it is none too large for the purposes for which it has been intended, and every medical man should, in justice to himself, spare a place for it upon his book-shelf, resting assured that the more he consults it the better he will be satisfied of its excellence.—*N. Y. Med. Record*, Nov. 15, 1866.

It will fill a place which no other work can occupy in the library of the physician, student, and apothecary.—*Boston Med. and Surg. Journal*, Nov. 8, 1866.

Of the many works on Materia Medica which have appeared since the issuing of the British Pharmacopœia, none will be more acceptable to the student and practitioner than the present. Pereira's Materia Medica had long ago asserted for itself the position of being the most complete work on the subject in the English language. But its very completeness stood in the way of its success. Except in the way of reference, or to those who made a special study of Materia Medica, Dr. Pereira's work was too full, and its perusal required an amount of time which few had at their disposal. Dr. Farre has very judiciously availed himself of the opportunity of the publication of the new Pharmacopœia, by bringing out an abridged edition of the great work. This edition of Pereira is by no means a mere abridged re-issue, but contains many improvements, both in the descriptive and therapeutical departments. We can recommend it as a very excellent and reliable text-book.—*Edinburgh Med. Journal*, February, 1866.

The reader cannot fail to be impressed, at a glance, with the exceeding value of this work as a compend of nearly all useful knowledge on the materia medica. We are greatly indebted to Professor Wood for his adaptation of it to our meridian. Without his emendations and additions it would lose much of its value to the American student. With them it is an American book.—*Pacific Medical and Surgical Journal*, December, 1866.

It will fill a place which no other work can occupy in the library of the physician, student, and apothecary.—*Boston Med. and Surg. Journal*, Nov. 8, 1866.

ELLIS (BENJAMIN), M.D.

THE MEDICAL FORMULARY: being a Collection of Prescriptions derived from the writings and practice of many of the most eminent physicians of America and Europe. Together with the usual Dietetic Preparations and Antidotes for Poisons. The whole accompanied with a few brief Pharmaceutical and Medical Observations. Twelfth edition, carefully revised and much improved by ALBERT H. SMITH, M.D. In one volume 8vo. of 376 pages, extra cloth, \$3 00. (Now Ready.)

This work has remained for some time out of print, owing to the anxious care with which the Editor has sought to render the present edition worthy a continuance of the very remarkable favor which has carried the volume to the unusual honor of a TWELFTH EDITION. He has sedulously endeavored to introduce in it all new preparations and combinations deserving of confidence, besides adding two new classes, Antemetics and Disinfectants, with brief references to the inhalation of atomized fluids, the nasal douche of Thudichum, suggestions upon the method of hypodermic injection, the administration of anæsthetics, &c. &c. To accommodate these numerous additions, he has omitted much which the advance of science has rendered obsolete or of minor importance, notwithstanding which the volume has been increased by more than thirty pages. A new feature will be found in a copious Index of Diseases and their remedies, which cannot but increase the value of the work as a suggestive book of reference for the working practitioner. Every precaution has been taken to secure the typographical accuracy so necessary in a work of this nature, and it is hoped that the new edition will fully maintain the position which "ELLIS' FORMULARY" has long occupied.

CARSON (JOSEPH), M.D.,

Professor of Materia Medica and Pharmacy in the University of Pennsylvania, &c.

SYNOPSIS OF THE COURSE OF LECTURES ON MATERIA MEDICA AND PHARMACY, delivered in the University of Pennsylvania. With three Lectures on the Modus Operandi of Medicines. Fourth and revised edition, extra cloth, \$3 00. (Just Issued.)

ROYLE'S MATERIA MEDICA AND THERAPEUTICS; including the Preparations of the Pharmacopœias of London, Edinburgh, Dublin, and of the United States. With many new medicines. Edited by JOSEPH CARSON, M.D. With ninety-eight illustrations. In one large octavo volume of about 700 pages, extra cloth. \$3 00.

CHRISTISON'S DISPENSATORY; OR, COMMENTARY on the Pharmacopœias of Great Britain and the United States. With copious additions, and 213 large wood-engravings. By R. EGLESFIELD GRIFFITH, M.D. In one very handsome octavo volume of over 1000 pages, extra cloth. \$4 00.

CARPENTER'S PRIZE ESSAY ON THE USE OF ALCOHOLIC LIQUORS IN HEALTH AND DISEASE. New edition, with a Preface by D. F. CONDIE, M.D., and explanations of scientific words. In one neat 12mo. volume, pp. 178, extra cloth. 60 cents.

DE JONGH ON THE THREE KINDS OF COD-LIVER OIL, with their Chemical and Therapeutic Properties. 1 vol. 12mo., cloth, 75 cents.

MAYNE'S DISPENSATORY AND THERAPEUTICAL REMEMBRANCE. With every Practical Formula contained in the three British Pharmacopœias. Edited, with the addition of the Formulæ of the U. S. Pharmacopœia, by R. E. GRIFFITH, M.D. In one 12mo. volume, 300 pp., extra cloth. 75 cents.

GROSS (SAMUEL D.), M. D.,

Professor of Surgery in the Jefferson Medical College of Philadelphia.

ELEMENTS OF PATHOLOGICAL ANATOMY. Third edition,

thoroughly revised and greatly improved. In one large and very handsome octavo volume of nearly 800 pages, with about three hundred and fifty beautiful illustrations, of which a large number are from original drawings; extra cloth. \$4 00.

The very beautiful execution of this valuable work, and the exceedingly low price at which it is offered, should command for it a place in the library of every practitioner.

To the student of medicine we would say that we know of no work which we can more heartily commend than Gross's Pathological Anatomy.—*Southern Med. and Surg. Journal.*

The volume commends itself to the medical student; it will repay a careful perusal, and should be upon

the book-shelf of every American physician.—*Charleston Med. Journal.*

It contains much new matter, and brings down our knowledge of pathology to the latest period.—*London Lancet.*

JONES (C. HANDFIELD), F. R. S., and SIEVEKING (ED. H.), M. D.,

Assistant Physicians and Lecturers in St. Mary's Hospital.

A MANUAL OF PATHOLOGICAL ANATOMY. First American

edition, revised. With three hundred and ninetyseven handsome wood engravings. In one large and beautifully printed octavo volume of nearly 750 pages, extra cloth, \$3 50.

Our limited space alone restrains us from noticing more at length the various subjects treated of in this interesting work; presenting, as it does, an excellent summary of the existing state of knowledge in relation to pathological anatomy, we cannot too strongly urge upon the student the necessity of a thorough acquaintance with its contents.—*Medical Examiner.*

We have long had need of a hand-book of pathological anatomy which should thoroughly reflect the present state of that science. In the treatise before us this desideratum is supplied. Within the limits of a moderate octavo, we have the outlines of this great department of medical science accurately defined,

and the most recent investigations presented in sufficient detail for the student of pathology. We cannot at this time undertake a formal analysis of this treatise, as it would involve a separate and lengthy consideration of nearly every subject discussed; nor would such analysis be advantageous to the medical reader. The work is of such a character that every physician ought to obtain it, both for reference and study.—*N. Y. Journal of Medicine.*

Its importance to the physician cannot be too highly estimated, and we would recommend our readers to add it to their library as soon as they conveniently can.—*Montreal Med. Chronicle.*

GLUGE'S ATLAS OF PATHOLOGICAL HISTOLOGY.

Translated, with Notes and Additions, by JOSEPH LEIDY, M. D. In one volume, very large imperial quarto, with 320 copper-plate figures, plain and colored, extra cloth. \$1 00.

SIMON'S GENERAL PATHOLOGY, as conducive to the Establishment of Rational Principles for the Prevention and Cure of Disease. In one octavo volume of 212 pages, extra cloth. \$1 25.

WILLIAMS (CHARLES J. B.), M. D.,

Professor of Clinical Medicine in University College, London.

PRINCIPLES OF MEDICINE. An Elementary View of the Causes,

Nature, Treatment, Diagnosis, and Prognosis of Disease; with brief remarks on Hygienics, or the preservation of health. A new American, from the third and revised London edition.

In one octavo volume of about 500 pages, extra cloth. \$3 50.

No work has ever achieved or maintained a more deserved reputation.—*Virginia Med. and Surg. Journal.*

There is no work in medical literature which can fill the place of this one. It is the *Primer* of the young practitioner, the *Koran* of the scientific one.—*Stethoscope.*

A text-book to which no other in our language is comparable.—*Charleston Med. Journal.*

The absolute necessity of such a work must be evident to all who pretend to more than mere empiricism. We must conclude by again expressing our high sense of the immense benefit which Dr. Williams has conferred on medicine by the publication of this work. We are certain that in the present state of our knowledge his Principles of Medicine could not possibly be surpassed.—*London Jour. of Medicine.*

HARRISON'S ESSAY TOWARDS A CORRECT THEORY OF THE NERVOUS SYSTEM. In one octavo volume of 292 pp. \$1 50.

SOLLY ON THE HUMAN BRAIN; its Structure, Physiology, and Diseases. From the Second and much enlarged London edition. In one octavo volume of 500 pages, with 120 wood-cuts; extra cloth. \$2 50.

LA ROCHE ON YELLOW FEVER, considered in its Historical, Pathological, Etiological, and Therapeutical Relations. In two large and handsome octavo volumes, of nearly 1500 pages, extra cloth, \$7 00.

LA ROCHE ON PNEUMONIA; its Supposed Connection, Pathological, and Etiological, with Autumnal

Fevers, including an Inquiry into the Existence and Morbid Agency of Malaria. In one handsome octavo volume, extra cloth, of 500 pages. Price \$3 00.

BUCKLER ON FIBRO-BRONCHITIS AND RHEUMATIC PNEUMONIA. In one octavo vol., extra cloth, pp. 150. \$1 25.

FISKE FUND PRIZE ESSAYS.—LEE ON THE EFFECTS OF CLIMATE ON TUBERCULOUS DISEASE. AND WARREN ON THE INFLUENCE OF PREGNANCY ON THE DEVELOPMENT OF TUBERCLES. Together in one neat octavo volume extra cloth, \$1 00.

BARCLAY (A. W.), M. D.

A MANUAL OF MEDICAL DIAGNOSIS; Being an Analysis of the

Signs and Symptoms of Disease. Third American from the second and revised London edition. In one neat octavo volume of 451 pages, extra cloth. \$3 50.

A work of immense practical utility.—*London Med. Times and Gazette.*

The book should be in the hands of every practitioner.—*Dublin Med. Press.*

FLINT (AUSTIN), M. D.,

Professor of the Principles and Practice of Medicine in Bellevue Med. College, N. Y.

A TREATISE ON THE PRINCIPLES AND PRACTICE OF MEDICINE; designed for the use of Students and Practitioners of Medicine. Third edition, revised and enlarged. In one large and closely printed octavo volume of 1002 pages; handsome extra cloth, \$6 00; or strongly bound in leather, with raised bands, \$7 00. (*Just Issued.*)

From the Preface to the Third Edition.

Since the publication, in December, 1866, of the second edition of this treatise, much time has been devoted to its revision. Recognizing in the favor with which it has been received a proportionate obligation to strive constantly to increase its worthiness, the author has introduced in the present edition additions, derived from his clinical studies, and from the latest contributions in medical literature, which, it is believed, will enhance considerably the practical utility of the work. A slight modification in the typographical arrangement has accommodated these additions without materially increasing the bulk of the volume.

NEW YORK, October, 1868.

At the very low price affixed, the profession will find this to be one of the cheapest volumes within their reach.

This work, which stands pre-eminently as the advance standard of medical science up to the present time in the practice of medicine, has for its author one who is well and widely known as one of the leading practitioners of this continent. In fact, it is seldom that any work is ever issued from the press more deserving of universal recommendation.—*Dominion Med. Journal*, May, 1869.

The third edition of this most excellent book scarcely needs any commendation from us. The volume, as it stands now, is really a marvel: first of all, it is excellently printed and bound—and we encounter that luxury of America, the ready-cut pages, which the Yankees are 'cute enough to insist upon—nor are these by any means trifles; but the contents of the book are astonishing. Not only is it wonderful that any one man can have grasped in his mind the whole scope of medicine with that vigor which Dr. Flint shows, but the condensed yet clear way in which this is done is a perfect literary triumph. Dr. Flint is pre-eminently one of the strong men, whose right to do this kind of thing is well admitted; and we say no more than the truth when we affirm that he is very nearly the only living man that could do it with such results as the volume before us.—*The London Practitioner*, March, 1869.

This is in some respects the best text-book of medicine in our language, and it is highly appreciated on the other side of the Atlantic, inasmuch as the first edition was exhausted in a few months. The second edition was little more than a reprint, but the present has, as the author says, been thoroughly revised. Much valuable matter has been added, and by making the type smaller, the bulk of the volume is not much increased. The weak point in many American works is pathology, but Dr. Flint has taken peculiar pains on this point, greatly to the value of the book.—*London Med. Times and Gazette*, Feb. 6, 1869.

Published in 1866, this valuable book of Dr. Flint's has in two years exhausted two editions, and now we gladly announce a third. We say we gladly announce it, because we are proud of it as a national representative work of not only American, but of

cosmopolitan medicine. In it the practice of medicine is young and philosophical, based on reason and common sense, and as such, we hope it will be at the right hand of every practitioner of this vast continent.—*California Medical Gazette*, March, 1869.

Considering the large number of valuable works in the practice of medicine, already before the profession, the marked favor with which this has been received, necessitating a third edition in the short space of two years, indicates unmistakably that it is a work of more than ordinary excellence, and must be accepted as evidence that it has largely fulfilled the object for which the author intended it. A marked feature in the work, and one which particularly adapts it for the use of students as a text-book, and certainly renders it none the less valuable to the busy practitioner as a work of reference, is brevity and simplicity. The present edition has been thoroughly revised, and much new matter incorporated, derived, as the author informs us, both from his own clinical studies, and from the latest contributions to medical literature, thus bringing it fully up with the most recent advances of the science, and greatly enhancing its practical utility; while, by a slight modification of its typographical arrangement, the additions have been accommodated without materially increasing its bulk.—*St. Louis Med. Archives*, Feb. 1869.

If there be among our readers any who are not familiar with the treatise before us, we shall do them a service in persuading them to repair their omission forthwith. Combining to a rare degree the highest scientific attainments with the most practical common sense, and the closest habits of observation, the author has given us a volume which not only sets forth the results of the latest investigations of other laborers, but contains more original views than any other single work upon this well-worn theme within our knowledge.—*N. Y. Med. Gazette*, Feb. 27, 1869.

Practical medicine was at sea when this book appeared above the horizon as a safe and capacious harbor. It came opportunely and was greeted with pleasurable emotions throughout the land.—*Nashville Med. and Surg. Journal*, May, 1869.

DUNGLISON, FORBES, TWEEDIE, AND CONOLLY.

THE CYCLOPÆDIA OF PRACTICAL MEDICINE: comprising Treatises on the Nature and Treatment of Diseases, Materia Medica and Therapeutics, Diseases of Women and Children, Medical Jurisprudence, &c. &c. In four large super-royal octavo volumes, 613254 double-columned pages, strongly and handsomely bound in leather, \$15; extra cloth, \$11.

*** This work contains no less than four hundred and eighteen distinct treatises, contributed by sixty-eight distinguished physicians.

The most complete work on practical medicine extant, or at least in our language.—*Buffalo Medical and Surgical Journal*.

For reference, it is above all price to every practitioner.—*Western Lancet*.

One of the most valuable medical publications of

the day. As a work of reference it is invaluable.—*Western Journal of Medicine and Surgery*.

It has been to us, both as learner and teacher, a work for ready and frequent reference, one in which modern English medicine is exhibited in the most advantageous light.—*Medical Examiner*.

BARLOW'S MANUAL OF THE PRACTICE OF MEDICINE. With Additions by D. F. CONDIE, M. D. 1 vol. 8vo., pp. 600, cloth. \$2 50.

HOLLAND'S MEDICAL NOTES AND REFLECTIONS. From the third and enlarged English edition. In one handsome octavo volume of about 500 pages, extra cloth. \$3 50.

HARTSHORNE (HENRY), M. D.,
Professor of Hygiene in the University of Pennsylvania.

ESSENTIALS OF THE PRINCIPLES AND PRACTICE OF MEDICINE. A handy-book for Students and Practitioners. Second edition, revised and improved. In one handsome royal 12mo. volume of 450 pages, clearly printed on small type, cloth, \$2 38; half bound, \$2 63. (*Just Issued.*)

The very cordial reception with which this work has met shows that the author has fully succeeded in his attempt to condense within a convenient compass the essential points of scientific and practical medicine, so as to meet the wants not only of the student, but also of the practitioner who desires to acquaint himself with the results of recent advances in medical science.

As a strikingly terse, full, and comprehensive embodiment in a condensed form of the essentials in medical science and art, we hazard nothing in saying that it is incomparably in advance of any work of the kind of the past, and will stand long in the future without a rival. A mere glance will, we think, impress others with the correctness of our estimate. Nor do we believe there will be found many who, after the most cursory examination, will fail to possess it. How one could be able to crowd so much that is valuable, especially to the student and young practitioner, within the limits of so small a book, and yet embrace and present all that is important in a well-arranged, clear form, convenient, satisfactory for reference, with so full a table of contents, and extended general index, with nearly three hundred formulas and recipes, is a marvel.—*Western Journal of Medicine*, Aug. 1867.

The little book before us has this quality, and we can therefore say that all students will find it an invaluable guide in their pursuit of clinical medicine. Dr. Hartshorne speaks of it as "an unambitious effort to make useful the experience of twenty years of private and hospital medical practice, with its attendant study and reflection." That the effort will prove successful we have no doubt, and in his study, and at the bedside, the student will find Dr. Hartshorne a

safe and accomplished companion. We speak thus highly of the volume, because it approaches more nearly than any similar manual lately before us the standard at which all such books should aim—of teaching much, and suggesting more. To the student we can heartily recommend the work of our transatlantic colleague, and the busy practitioner, we are sure, will find in it the means of solving many a doubt, and will rise from the perusal of its pages, having gained clearer views to guide him in his daily struggle with disease.—*Dub. Med. Press*, Oct. 2, 1867.

This work of Dr. Hartshorne must not be confounded with the medical manuals so generally to be found in the hands of students, serving them at best but as blind guides, better adapted to lead them astray than to any useful and reliable knowledge. The work before us presents a careful synopsis of the essential elements of the theory of diseased action, its causes, phenomena, and results, and of the art of healing, as recognized by the most authoritative of our professional writers and teachers. A very careful and candid examination of the volume has convinced us that it will be generally recognized as one of the best manuals for the use of the student that has yet appeared.—*American Journal Med. Sciences*, Oct. 1867.

WATSON (THOMAS), M. D., &c.

LECTURES ON THE PRINCIPLES AND PRACTICE OF PHYSIC. Delivered at King's College, London. A new American, from the last revised and enlarged English edition, with Additions, by D. FRANCIS CONDIE, M. D., author of "A Practical Treatise on the Diseases of Children," &c. With one hundred and eighty-five illustrations on wood. In one very large and handsome volume, imperial octavo, of over 1200 closely printed pages in small type; extra cloth, \$6 50; strongly bound in leather, with raised bands, \$7 50.

Believing this to be a work which should lie on the table of every physician, and be in the hands of every student, every effort has been made to condense the vast amount of matter which it contains within a convenient compass, and at a very reasonable price, to place it within reach of all. In its present enlarged form, the work contains the matter of at least three ordinary octavos, rendering it one of the cheapest works now offered to the American profession, while its mechanical execution makes it an exceedingly attractive volume.

DICKSON'S ELEMENTS OF MEDICINE; a Compendious View of Pathology and Therapeutics, or the History and Treatment of Diseases. Second edition, revised. 1 vol. Svo. of 750 pages, extra cloth. \$4 00.

WHAT TO OBSERVE AT THE BEDSIDE AND AFTER DEATH IN MEDICAL CASES. Published under the authority of the London Society for Medical Obser-

vation. From the second London edition. 1 vol. royal 12mo., extra cloth. \$1 00.

LAYCOCK'S LECTURES ON THE PRINCIPLES AND METHODS OF MEDICAL OBSERVATION AND RESEARCH. For the use of advanced students and junior practitioners. In one very neat royal 12mo. volume, extra cloth. \$1 00.

FULLER (HENRY WILLIAM), M. D.,
Physician to St. George's Hospital, London.

ON DISEASES OF THE LUNGS AND AIR-PASSAGES. Their Pathology, Physical Diagnosis, Symptoms, and Treatment. From the second and revised English edition. In one handsome octavo volume of about 500 pages, extra cloth, \$3 50. (*Just Issued.*)

Dr. Fuller's work on diseases of the chest was so favorably received, that to many who did not know the extent of his engagements, it was a matter of wonder that it should be allowed to remain three years out of print. Determined, however, to improve it, Dr. Fuller would not consent to a mere reprint, and

accordingly we have what might be with perfect justice styled an entirely new work from his pen, the portion of the work treating of the heart and great vessels being excluded. Nevertheless, this volume is of almost equal size with the first.—*London Medical Times and Gazette*, July 20, 1867.

BRINTON (WILLIAM), M. D., F. R. S.

LECTURES ON THE DISEASES OF THE STOMACH; with an Introduction on its Anatomy and Physiology. From the second and enlarged London edition. With illustrations on wood. In one handsome octavo volume of about 300 pages, extra cloth. \$3 25. (*Just issued.*)

Nowhere can be found a more full, accurate, plain, and instructive history of these diseases, or more rational views respecting their pathology and therapeutics.—*Am. Journ. of the Med. Sciences*, April, 1865.

The most complete work in our language upon the diagnosis and treatment of these puzzling and important diseases.—*Boston Med. and Surg. Journal*, Nov. 1865.

FLINT (AUSTIN), M. D.,

Professor of the Principles and Practice of Medicine in Bellevue Hospital Med. College, N. Y.

A PRACTICAL TREATISE ON THE DIAGNOSIS, PATHOLOGY, AND TREATMENT OF DISEASES OF THE HEART. Second revised and enlarged edition. In one octavo volume of 550 pages, with a plate, extra cloth, \$4. (*Now Ready.*)

The author has sedulously improved the opportunity afforded him of revising this work. Portions of it have been rewritten, and the whole brought up to a level with the most advanced condition of science. It must therefore continue to maintain its position as the standard treatise on the subject.

Dr. Flint chose a difficult subject for his researches, and has shown remarkable powers of observation and reflection, as well as great industry, in his treatment of it. His book must be considered the fullest and clearest practical treatise on those subjects, and should be in the hands of all practitioners and students. It is a credit to American medical literature. —*Amer. Journ. of the Med. Sciences*, July, 1860.

We question the fact of any recent American author in our profession being more extensively known, or more deservedly esteemed in this country than Dr. Flint. We willingly acknowledge his success, more particularly in the volume on diseases of the heart, in making an extended personal clinical study avail-

able for purposes of illustration, in connection with cases which have been reported by other trustworthy observers.—*Brit. and For. Med.-Chirurg. Review*.

In regard to the merits of the work, we have no hesitation in pronouncing it full, accurate, and judicious. Considering the present state of science, such a work was much needed. It should be in the hands of every practitioner.—*Chicago Med. Journ.*

With more than pleasure do we hail the advent of this work, for it fills a wide gap on the list of textbooks for our schools, and is, for the practitioner, the most valuable practical work of its kind.—*N. O. Med. News*.

BY THE SAME AUTHOR. (Just Issued.)

A PRACTICAL TREATISE ON THE PHYSICAL EXPLORATION OF THE CHEST AND THE DIAGNOSIS OF DISEASES AFFECTING THE RESPIRATORY ORGANS. Second and revised edition. In one handsome octavo volume of 595 pages, extra cloth, \$4 50.

Premising this observation of the necessity of each student and practitioner making himself acquainted with auscultation and percussion, we may state our honest opinion that Dr. Flint's treatise is one of the most trustworthy guides which he can consult. The style is clear and distinct, and is also concise, being free from that tendency to over-refinement and unnecessary minuteness which characterizes many works on the same subject.—*Dublin Medical Press*, Feb. 6, 1867.

In the invaluable work before us, we have a book of facts of nearly 600 pages, admirably arranged, clear, thorough, and lucid on all points, without prolixity; exhausting every point and topic touched; a monument of patient and long-continued observation, which does credit to its author, and reflects honor on

American medicine.—*Atlanta Med. and Surg. Journal*, Feb. 1867.

The chapter on Phthisis is replete with interest; and his remarks on the diagnosis, especially in the early stages, are remarkable for their acumen and great practical value. Dr. Flint's style is clear and elegant, and the tone of freshness and originality which pervades his whole work lend an additional force to its thoroughly practical character, which cannot fail to obtain for it a place as a standard work on diseases of the respiratory system.—*London Lancet*, Jan. 19, 1867.

This is an admirable book. Excellent in detail and execution, nothing better could be desired by the practitioner. Dr. Flint enriches his subject with much solid and not a little original observation.—*Ranking's Abstract*, Jan. 1867.

PAVY (F. W.), M. D., F. R. S.

Senior Asst. Physician to and Lecturer on Physiology, at Guy's Hospital, &c.

A TREATISE ON THE FUNCTION OF DIGESTION; its Disorders and their Treatment. From the second London edition. In one handsome volume, small octavo, extra cloth, \$2 00. (*Just Ready.*)

The work before us is one which deserves a wide circulation. We know of no better guide to the study of digestion and its disorders.—*St. Louis Med. and Surg. Journal*, July 10, 1869.

A thoroughly good book, being a careful systematic

treatise, and sufficiently exhaustive for all practical purposes.—*Leavenworth Med. Herald*, July, 1869.

A very valuable work on the subject of which it treats. Small, yet it is full of valuable information.—*Cincinnati Med. Repertory*, June, 1869.

CHAMBERS (T. K.), M. D.,

Consulting Physician to St. Mary's Hospital, London, &c.

THE INDIGESTIONS; or, Diseases of the Digestive Organs Functionally Treated. Third and revised Edition. In one handsome octavo volume of 393 pages, extra cloth. \$3 00. (*Now Ready.*)

AUTHOR'S PREFACE.

Since publishing my first edition, I have inserted upwards of ten dozen cases, and have rearranged, indeed in part rewritten, the commentary upon them. A third edition is not yet required in England, so I send the MS. for publication to America. I have faith in the kindly feeling with which it will be received there.

LONDON, December, 1869.

We look upon this chapter as a most valuable guide to physicians, and warning to patients concerning transgressions against the established physiological conduct of life. The advice as to medical treatment proper, is also most serviceable. It should be read by every medical man in the country, and he should read his lessons to his patients from out its pages. We

only regret that we have no room for a more thorough analysis of its contents.—*N. Y. Medical Journal*, March, 1868.

The work should be in the hands of every practising physician.—*Boston Med. and Surg. Journal*, Nov. 21, 1867.

HABERSHON ON DISEASES OF THE ALIMENTARY CANAL, ŒSOPHAGUS, STOMACH, CÆCUM, AND INTESTINES. With illustrations on wood. One vol. 8vo., 312 pages, extra cloth. \$2 50.

THOLOGY AND TREATMENT. In one octavo volume of 600 pages, leather. \$1 75.

CLYMER ON FEVERS; THEIR DIAGNOSIS, PA-

TODD'S CLINICAL LECTURES ON CERTAIN ACUTE DISEASES. In one neat octavo volume, of 320 pages, extra cloth. \$2 50.

ROBERTS (WILLIAM), M. D.,

Lecturer on Medicine in the Manchester School of Medicine, &c.

A PRACTICAL TREATISE ON URINARY AND RENAL DISEASES, including Urinary Deposits. Illustrated by numerous cases and engravings. In one very handsome octavo volume of 516 pp., extra cloth. \$4 50. (Just Issued.)

In carrying out this design, he has not only made good use of his own practical knowledge, but has brought together from various sources a vast amount of information, some of which is not generally possessed by the profession in this country. We must now bring our notice of this book to a close, regretting only that we are obliged to resist the temptation of giving further extracts from it. Dr. Roberts has already on several occasions placed before the profession the results of researches made by him on various points connected with the urine, and had thus led us to expect from him something good—in which expectation we have been by no means disappointed. The book is, beyond question, the most comprehen-

sive work on urinary and renal diseases, considered in their strictly practical aspect, that we possess in the English language.—*British Medical Journal*, Dec. 9, 1865.

We have read this book with much satisfaction. It will take its place beside the best treatises in our language upon urinary pathology and therapeutics. Not the least of its merits is that the author, unlike some other book-makers, is contented to withhold much that he is well qualified to discuss in order to impart to his volume such a strictly practical character as cannot fail to render it popular among British readers.—*London Med. Times and Gazette*, March 17, 1866.

BASHAM (W. R.), M. D.,

Senior Physician to the Westminster Hospital, &c.

RENAL DISEASES: a Clinical Guide to their Diagnosis and Treatment. With illustrations. In one neat royal 12mo. volume of 304 pages. \$2 00. (Just Ready.)

It is with the view of promoting a practical and clinical knowledge of a class of diseases which are not without their difficulties in diagnosis that the present work has been prepared, with the hope that both student and young practitioner may by it be assisted in their clinical observations.—*Author's Preface.*

MORLAND ON RETENTION IN THE BLOOD OF THE ELEMENTS OF THE URINARY SECRETION. 1 vol. 8vo., extra cloth. 75 cents.

JONES (C. HANDFIELD), M. D.,

Physician to St. Mary's Hospital, &c.

CLINICAL OBSERVATIONS ON FUNCTIONAL NERVOUS DISORDERS. Second American Edition. In one handsome octavo volume of 348 pages, extra cloth, \$3 25. (Just Issued.)

Taken as a whole, the work before us furnishes a short but reliable account of the pathology and treatment of a class of very common but certainly highly obscure disorders. The advanced student will find it a rich mine of valuable facts, while the medical practitioner will derive from it many a suggestive hint to aid him in the diagnosis of "nervous cases," and in determining the true indications for their amelioration or cure.—*Amer. Journ. Med. Sci.*, Jan. 1867.

We must cordially recommend it to the profession of this country as supplying, in a great measure, a deficiency which exists in the medical literature of the English language.—*New York Med. Journ.*, April, 1867.

The volume is a most admirable one—full of hints and practical suggestions.—*Canada Med. Journal*, April, 1867.

SLADE (D. D.), M. D.

DIPHTHERIA; its Nature and Treatment, with an account of the History of its Prevalence in various Countries. Second and revised edition. In one neat royal 12mo. volume, extra cloth. \$1 25. (Just issued.)

SMITH ON CONSUMPTION; ITS EARLY AND REMEDIABLE STAGES. In one neat octavo volume of 254 pages, extra cloth. \$2 25.

SALTER ON ASTHMA; its Pathology, Causes, Consequences, and Treatment. In one volume octavo, extra cloth. \$2 50.

WALSHE'S PRACTICAL TREATISE ON THE DISEASES OF THE HEART AND GREAT VESSELS. Third American, from the third revised and much enlarged London edition. In one handsome octavo volume of 420 pages, extra cloth. \$3 00.

HUDSON (A.), M. D., M. R. I. A.,

Physician to the Meath Hospital.

LECTURES ON THE STUDY OF FEVER. In one vol. 8vo., extra Cloth, \$2 50. (Just Issued.)

As an admirable summary of the present state of our knowledge concerning fever, the work will be as welcome to the medical man in active practice as to the student. To the hard-worked practitioner who wishes to refresh his notions concerning fever, the book will prove most valuable. . . . We heartily commend his excellent volume to students and the profession at large.—*London Lancet*, June 22, 1867.

The truly philosophical lectures of Dr. Hudson add

much to our previous knowledge, all of which they, moreover, analyze and condense. This well-conceived task has been admirably executed in the lectures, illustrative cases and quotations being arranged in an appendix to each. We regret that space forbids our quotation from the lectures on treatment, which are, in regard to research and judgment, most masterly, and evidently the result of extended and mature experience.—*British Medical Journal*, Feb. 22, 1868.

LYONS (ROBERT D.), K. C. C.

A TREATISE ON FEVER; or, Selections from a Course of Lectures on Fever. Being part of a Course of Theory and Practice of Medicine. In one neat octavo volume, of 362 pages, extra cloth. \$2 25.

BUMSTEAD (FREEMAN J.), M. D.,*Professor of Venereal Diseases at the Col. of Phys. and Surg., New York, &c.***THE PATHOLOGY AND TREATMENT OF VENEREAL DISEASES.** Including the results of recent investigations upon the subject. A new and revised edition, with illustrations. In one large and handsome octavo volume of 640 pages, extra cloth, \$5 00. (Lately Issued.)

Well known as one of the best authorities of the present day on the subject.—*British and For. Med.-Chirurg. Review*, April, 1866.

A regular store-house of special information.—*London Lancet*, Feb. 24, 1866.

A remarkably clear and full systematic treatise on the whole subject.—*Lond. Med. Times and Gazette*.

The best, completest, fullest monograph on this subject in our language.—*British American Journal*.

Indispensable in a medical library.—*Pacific Med. and Surg. Journal*.

We have no doubt that it will supersede in America

every other treatise on Venereal.—*San Francisco Med. Press*, Oct. 1864.

A perfect compilation of all that is worth knowing on venereal diseases in general. It fills up a gap which has long been felt in English medical literature.—*Brit. and Foreign Med.-Chirurg. Review*, Jan., '65.

We have not met with any which so highly merits our approval and praise as the second edition of Dr. Bumstead's work.—*Glasgow Med. Jour.* & *W. Oct. 1864.*

We know of no treatise in any language, which is its equal in point of completeness and practical simplicity.—*Boston Medical and Surgical Journal*, Jan. 30, 1864.

CULLERIER (A.), and*Surgeon to the Hôpital du Midi.***BUMSTEAD (FREEMAN J.),***Professor of Venereal Diseases in the College of Physicians and Surgeons, N. Y.***AN ATLAS OF VENEREAL DISEASES.** Translated and Edited by FREEMAN J. BUMSTEAD. In one large imperial 4to. volume of 328 pages, double-columns, with 26 plates, containing about 150 figures, beautifully colored, many of them the size of life; strongly bound in extra cloth, \$17 00; also, in five parts, stout wrappers for mailing, at \$3 per part. (Just Ready.)

Anticipating a very large sale for this work, it is offered at the very low price of THREE DOLLARS a Part, thus placing it within the reach of all who are interested in this department of practice. Gentlemen desiring early impressions of the plates would do well to order it without delay.

A specimen of the plates and text sent free by mail, on receipt of 25 cents.

We wish for once that our province was not restricted to methods of treatment, that we might say something of the exquisite colored plates in this volume.—*London Practitioner*, May, 1869.

As a whole, it teaches all that can be taught by means of plates and print.—*London Lancet*, March 13, 1869.

Superior to anything of the kind ever before issued on this continent.—*Canada Med. Journal*, March, '69.

The practitioner who desires to understand this branch of medicine thoroughly should obtain this, the most complete and best work ever published.—*Dominion Med. Journal*, May, 1869.

This is a work of master hands on both sides. M. Cullerier is scarcely second to, we think we may truly say is a peer of the illustrious and venerable Ricord, while in this country we do not hesitate to say that Dr. Bumstead, as an authority, is without a rival. Assuring our readers that these illustrations tell the whole history of venereal disease, from its inception to its end, we do not know a single medical work, which for its kind is more necessary for them to have.—*California Med. Gazette*, March, 1869.

The most splendidly illustrated work in the language, and in our opinion far more useful than the French original.—*Am. Journ. Med. Sciences*, Jan. '69.

The fifth and concluding number of this magnificent work has reached us, and we have no hesitation in saying that its illustrations surpass those of previous numbers.—*Boston Med. and Surg. Journal*, Jan. 14, 1869.

Other writers besides M. Cullerier have given us a good account of the diseases of which he treats, but no one has furnished us with such a complete series of illustrations of the venereal diseases. There is, however, an additional interest and value possessed by the volume before us; for it is an American reprint and translation of M. Cullerier's work, with incidental remarks by one of the most eminent American syphilographers, Mr. Bumstead. The letter-press is chiefly M. Cullerier's, but every here and there a few lines or sentences are introduced by Mr. Bumstead; and, as M. Cullerier is a unicist, while Mr. Bumstead is a dualist, this method of treating the subject adds very much to its interest. By this means a liveliness is imparted to the volume which many other treatises sorely lack. It is like reading the report of a conversation or debate; for Mr. Bumstead often finds occasion to question M. Cullerier's statements or inferences, and this he does in a short and forcible way which helps to keep up the attention, and to make the book a very readable one.—*Brit. and For. Medico-Chir. Review*, July, 1869.

HILL (BERKELEY),*Surgeon to the Lock Hospital, London.***ON SYPHILIS AND LOCAL CONTAGIOUS DISORDERS.** In one handsome octavo volume: extra cloth, \$3 25. (Just Issued.)

Bringing, as it does, the entire literature of the disease down to the present day, and giving with great ability the results of modern research, it is in every respect a most desirable work, and one which should find a place in the library of every surgeon.—*California Med. Gazette*, June, 1869.

Considering the scope of the book and the careful attention to the manifold aspects and details of its subject, it is wonderfully concise. All these qualities render it an especially valuable book to the beginner, to whom we would most earnestly recommend its study; while it is no less useful to the practitioner.—*St. Louis Med. and Surg. Journal*, May, 1869.

The author, from a vast amount of material, with all of which he was perfectly familiar, has undertaken to construct a new book, and has really succeeded in producing a capital volume upon this subject.—*Nashville Med. and Surg. Journal*, May, 1869.

The most convenient and ready book of reference we have met with.—*N. Y. Med. Record*, May 1, 1869.

Most admirably arranged for both student and practitioner, no other work on the subject equals it; it is more simple, more easily studied.—*Buffalo Med. and Surg. Journal*, March, 1869.

LALLEMAND AND WILSON.**A PRACTICAL TREATISE ON THE CAUSES, SYMPTOMS, AND TREATMENT OF SPERMATORRHOEA.** By M. LALLEMAND. Fifth American edition. To which is added — ON DISEASES OF THE VESICULÆ SEMINALES. By MARRIS WILSON, M. D. In one neat octavo volume, of about 400 pp., extra cloth, \$2 75.

WILSON (ERASMUS), F. R. S.

ON DISEASES OF THE SKIN. With Illustrations on wood. Seventh American, from the sixth and enlarged English edition. In one large octavo volume of over 800 pages, \$5. (*Just Issued.*)

A SERIES OF PLATES ILLUSTRATING "WILSON ON DISEASES OF THE SKIN;" consisting of twenty beautifully executed plates, of which thirteen are exquisitely colored, presenting the Normal Anatomy and Pathology of the Skin, and embracing accurate representations of about one hundred varieties of disease, most of them the size of nature. Price, in extra cloth, \$5 50.

Also, the Text and Plates, bound in one handsome volume. Extra cloth, \$10.

From the Preface to the Sixth English Edition.

The present edition has been carefully revised, in many parts rewritten, and our attention has been specially directed to the practical application and improvements of treatment. And, in conclusion, we venture to remark that if an acute and friendly critic should discover any difference between our present opinions and those announced in former editions, we have only to observe that science and knowledge are progressive, and that we have done our best to move onward with the times.

The industry and care with which the author has revised the present edition are shown by the fact that the volume has been enlarged by more than a hundred pages. In its present improved form it will therefore doubtless retain the position which it has acquired as a standard and classical authority, while at the same time it has additional claims on the attention of the profession as the latest and most complete work on the subject in the English language.

Such a work as the one before us is a most capital and acceptable help. Mr. Wilson has long been held as high authority in this department of medicine, and his book on diseases of the skin has long been regarded as one of the best text-books extant on the subject. The present edition is carefully prepared, and brought up in its revision to the present time. In this edition we have also included the beautiful series of plates illustrative of the text, and in the last edition published separately. There are twenty of these plates, nearly all of them colored to nature, and exhibiting with great fidelity the various groups of diseases treated of in the body of the work.—*Cincinnati Lancet*, June, 1863.

No one treating skin diseases should be without a copy of this standard work.—*Canada Lancet*. August, 1863.

We can safely recommend it to the profession as the best work on the subject now in existence in the English language.—*Medical Times and Gazette*.

Mr. Wilson's volume is an excellent digest of the actual amount of knowledge of cutaneous diseases; it includes almost every fact or opinion of importance connected with the anatomy and pathology of the skin.—*British and Foreign Medical Review*.

These plates are very accurate, and are executed with an elegance and taste which are highly creditable to the artistic skill of the American artist who executed them.—*St. Louis Med. Journal*.

The drawings are very perfect, and the finish and coloring artistic and correct; the volume is an indispensable companion to the book it illustrates and completes.—*Charleston Medical Journal*.

BY THE SAME AUTHOR.

THE STUDENT'S BOOK OF CUTANEOUS MEDICINE and DISEASES OF THE SKIN. In one very handsome royal 12mo. volume. \$3 50. (*Lately Issued.*)

NELIGAN (J. MOORE), M. D., M. R. I. A.

A PRACTICAL TREATISE ON DISEASES OF THE SKIN

Fifth American, from the second and enlarged Dublin edition by T. W. Belcher, M. D. In one neat royal 12mo. volume of 462 pages, extra cloth. \$2 25. (*Just Issued.*)

Fully equal to all the requirements of students and young practitioners. It is a work that has stood its ground, that was worthy the reputation of the author, and the high position of which has been maintained by its learned editor.—*Dublin Med. Press and Circular*, Nov. 17, 1869.

Of the remainder of the work we have nothing beyond unqualified commendation to offer. It is so far the most complete one of its size that has appeared, and for the student there can be none which can compare with it in practical value. All the late discoveries in Dermatology have been duly noticed, and their value justly estimated; in a word, the work is

fully up to the times, and is thoroughly stocked with most valuable information.—*New York Med. Record*, Jan. 15, 1867.

This instructive little volume appears once more. Since the death of its distinguished author, the study of skin diseases has been considerably advanced, and the results of these investigations have been added by the present editor to the original work of Dr. Neligan. This, however, has not so far increased its bulk as to destroy its reputation as the most convenient manual of diseases of the skin that can be procured by the student.—*Chicago Med. Journal*, Dec. 1866.

BY THE SAME AUTHOR.

ATLAS OF CUTANEOUS DISEASES. In one beautiful quarto volume, with exquisitely colored plates, &c., presenting about one hundred varieties of disease. Extra cloth, \$5 50.

The diagnosis of eruptive disease, however, under all circumstances, is very difficult. Nevertheless, Dr. Neligan has certainly, "as far as possible," given a faithful and accurate representation of this class of diseases, and there can be no doubt that these plates will be of great use to the student and practitioner in drawing a diagnosis as to the class, order, and species to which the particular case may belong. While looking over the "Atlas" we have been induced to examine also the "Practical Treatise," and we are

inclined to consider it a very superior work, combining accurate verbal description with sound views of the pathology and treatment of eruptive diseases.—*Glasgow Med. Journal*.

A compend which will very much aid the practitioner in this difficult branch of diagnosis. Taken with the beautiful plates of the Atlas, which are remarkable for their accuracy and beauty of coloring, it constitutes a very valuable addition to the library of a practical man.—*Buffalo Med. Journal*.

HILLIER (THOMAS), M. D.,

Physician to the Skin Department of University College Hospital, &c.

HAND-BOOK OF SKIN DISEASES, for Students and Practitioners.

Second American Edition. In one royal 12mo. volume of 358 pp. With Illustrations. Extra cloth, \$2 25. (*Now Ready.*)

SMITH (J. LEWIS), M. D.,

Professor of Morbid Anatomy in the Bellevue Hospital Med. College, N. Y.

A COMPLETE PRACTICAL TREATISE ON THE DISEASES OF CHILDREN. In one handsome octavo volume of 620 pages, extra cloth, \$4 75; leather, \$5 75. (Just Issued.)

We have no work upon the Diseases of Infancy and Childhood which can compare with it.—*Buffalo Med. and Surg. Journal*, March, 1869.

The description of the pathology, symptoms, and treatment of the different diseases is excellent.—*Am. Med. Journal*, April, 1869.

So full, satisfactory, and complete is the information to be derived from this work, that at no time have we examined the pages of any book with more pleasure. The diseases incident to childhood are treated with a clearness, precision, and understanding that is not often met with, and which must call forth the approval of all who consult its pages.—*Cincinnati Med. Repertory*, May, 1869.

The author of this volume is well known as a valued contributor to the literature of his specialty. The faithful manner in which he has worked in the public institutions with which he has been connected, the conscientious regard for truth which has for years characterized all his researches, the great amount of experience which he has been enabled to acquire in the treatment of infantile diseases, and the care which he has accustomed himself to take in the study of the significant facts relating to the pathological anatomy

of the diseases of childhood, eminently fit him for the task which he has taken upon himself. The remarkable faculty of bringing out salient points and stating concisely other less important facts, enables him to crowd within a small compass a vast amount of practical information. The attention given to the treatment of the various maladies, as well as the presentation of all the recently accepted pathological views, make it one of the most valuable treatises, within its present compass, that can be placed in the hands of any seeker after truth. The volume as a whole will still further establish for the writer a permanent and enviable reputation as a careful observer, an impartial interpreter, a safe and trustworthy adviser, and a modest and untiring student.—*N. Y. Med. Record*, March 15, 1869.

We have perused Dr. Smith's book with not a little satisfaction; it is indeed an excellent work; well and correctly written; thoroughly up to the modern ideas; concise, yet complete in its material. We cannot help welcoming a work which will be worthy of reliance as a text-book for medical students and younger physicians in their investigation of disease in children.—*Boston Med. and Surg. Journal*, March 4, 1869.

CONDIE (D. FRANCIS), M. D.

A PRACTICAL TREATISE ON THE DISEASES OF CHILDREN.

Sixth edition, revised and augmented. In one large octavo volume of nearly 800 closely-printed pages, extra cloth, \$5 25; leather, \$6 25. (Lately Issued.)

Dr. Condie has been one of those who have performed such a service satisfactorily, and, as a result, his popular, comprehensive, and practical work has received that high compliment of approval on the part of his brethren, which several editions incontestably set forth. The present edition, which is the sixth, is fully up to the times in the discussion of all those points in the pathology and treatment of infantile diseases which have been brought forward by the German and French teachers. As a whole, however, the work is the best American one that we have, and in its special adaptation to American practitioners it certainly has no equal.—*New York Med. Record*, March 2, 1868.

No other treatise on this subject is better adapted to the American physician. Dr. Condie has long stood

before his countrymen as one peculiarly pre-eminent in this department of medicine. His work has been so long a standard for practitioners and medical students that we do no more now than refer to the fact that it has reached its sixth edition. We are glad once more to refresh the impressions of our earlier days by wandering through its pages, and at the same time to be able to recommend it to the youngest members of the profession, as well as to those who have the older editions on their shelves.—*St. Louis Med. Reporter*, Feb. 15, 1868.

We pronounced the first edition to be the best work on the diseases of children in the English language, and, notwithstanding all that has been published, we still regard it in that light.—*Medical Examiner*.

WEST (CHARLES), M. D.,

Physician to the Hospital for Sick Children, &c.

LECTURES ON THE DISEASES OF INFANCY AND CHILD-

HOOD. Fourth American from the fifth revised and enlarged English edition. In one large and handsome octavo volume of 656 closely-printed pages. Extra cloth, \$4 50; leather, \$5 50. (Lately issued.)

Of all the English writers on the diseases of children, there is no one so entirely satisfactory to us as Dr. West. For years we have held his opinion as judicial, and have regarded him as one of the highest living authorities in the difficult department of medical science in which he is most widely known.—*Boston Med. and Surg. Journal*, April 26, 1866.

Dr. West's volume is, in our opinion, incomparably the best authority upon the maladies of children that the practitioner can consult.—*Cincinnati Jour. of Medicine*, March, 1866.

We have long regarded it as the most scientific and practical book on diseases of children which has yet appeared in this country.—*Buffalo Medical Journal*.

SMITH (EUSTACE), M. D.,

Physician to the Northwest London Free Dispensary for Sick Children.

A PRACTICAL TREATISE ON THE WASTING DISEASES OF INFANCY AND CHILDHOOD. 1 vol. 8vo., pp. 195, extra cloth, \$1 50. (Just Issued.)

In this brief treatise, the author has made one of the most valuable contributions to medical literature that has been given to our profession for many years. To supply the want of information on this subject is the task which Dr. Smith has set himself, and admirably has he performed it. Keeping steadily in view

a purpose of clinical usefulness, he has succeeded in producing a treatise on the causes of chronic wasting so complete that but little could be added, and yet so concise that it would be almost impossible to give a synopsis of his views in fewer words than the book itself contains.—*N. Y. Med. Gazette*, April 2, 1870.

DEWEES (WILLIAM P.), M. D.

A TREATISE ON THE PHYSICAL AND MEDICAL TREATMENT OF CHILDREN. Eleventh edition, with the author's last improvements and corrections. In one octavo volume of 548 pages. \$2 80.

THOMAS (T. GAILLARD), M. D.,

Professor of Obstetrics, &c. in the College of Physicians and Surgeons, N. Y., &c.

A PRACTICAL TREATISE ON THE DISEASES OF WOMEN. Second edition, revised and improved. In one large and handsome octavo volume of 650 pages, with 225 illustrations, extra cloth, \$5; leather, \$6. (Now Ready.)

From the Preface to the Second Edition.

In a science so rapidly progressive as that of medicine, the profession has a right to expect that, when its approbation of a work is manifested by a call for a new edition, the author should respond by giving to his book whatever of additional value may be derivable from more extended experience, maturer thought, and the opportunity for correction. Fully sensible of this, the author of the present volume has sought by a careful revision of the whole, and by the addition of a chapter on Chlorosis, to render his work more worthy of the favor with which it has been received.—NEW YORK, March, 1869.

If the excellence of a work is to be judged by its rapid sale, this one must take precedence of all others upon the same, or kindred subjects, as evidenced in the short time from its first appearance, in which a new edition is called for, resulting, as we are informed, from the exhaustion of the previous large edition. We deem it scarcely necessary to recommend this work to physicians as it is now widely known, and most of them already possess it, or will certainly do so. To students we unhesitatingly recommend it as the best text-book on diseases of females extant.—*St. Louis Med. Reporter*, June, 1869.

Of all the army of books that have appeared of late years, on the diseases of the uterus and its appendages, we know of none that is so clear, comprehensive, and practical as this of Dr. Thomas', or one that we should more emphatically recommend to the young practitioner, as his guide.—*California Med. Gazette*, June, 1869.

If not the best work extant on the subject of which it treats, it is certainly second to none other. So short a time has elapsed since the medical press teemed with commendatory notices of the first edition, that it would be superfluous to give an extended review of what is now firmly established as the American text-book of Gynecology.—*N. Y. Med. Gazette*, July 17, 1869.

This is a new and revised edition of a work which we recently noticed at some length, and earnestly commended to the favorable attention of our readers. The fact that, in the short space of one year, this second edition makes its appearance, shows that the general judgment of the profession has largely confirmed the opinion we gave at that time.—*Cincinnati Lancet*, Aug. 1869.

It is so short a time since we gave a full review of the first edition of this book, that we deem it only necessary now to call attention to the second appearance of the work. Its success has been remarkable, and we can only congratulate the author on the brilliant reception his book has received.—*N. Y. Med. Journal*, April, 1869.

We regard this treatise as the one best adapted to serve as a text-book on gynecology.—*St. Louis Med. and Surg. Journal*, May 10, 1869.

The whole work as it now stands is an absolute indispensable to any physician aspiring to treat the diseases of females with success, and according to the most fully accepted views of their ætiology and pathology.—*Leavenworth Medical Herald*, May, 1869.

We have seldom read a medical book in which we found so much to praise, and so little—we can hardly say to object to—to mention with qualified commendation. We had proposed a somewhat extended review with copious extracts, but we hardly know where we should have space for it. We therefore content ourselves with expressing the belief that every practitioner of medicine would do well to possess himself of the work.—*Boston Med. and Surg. Journal*, April 29, 1869.

The number of works published on diseases of women is large, not a few of which are very valuable. But of those which are the most valuable we do not regard the work of Dr. Thomas as second to any. Without being prolix, it treats of the disorders to which it is devoted fully, perspicuously, and satisfactorily. It will be found a treasury of knowledge to every physician who turns to its pages. We would like to make a number of quotations from the work of a practical bearing, but our space will not permit. The work should find a place in the libraries of all physicians.—*Cincinnati Med. Repertory*, May, 1869.

No one will be surprised to learn that the valuable, readable, and thoroughly practical book of Professor Thomas has so soon advanced to a second edition. Although very little time has necessarily been allowed our author for revision and improvement of the work, he has performed it exceedingly well. Aside from the numerous corrections which he has found necessary to make, he has added an admirable chapter on chlorosis, which of itself is worth the cost of the volume.—*N. Y. Med. Record*, May 15, 1869.

CHURCHILL (FLEETWOOD), M. D., M. R. I. A.

ON THE DISEASES OF WOMEN; including those of Pregnancy and Childbed. A new American edition, revised by the Author. With Notes and Additions, by D. FRANCIS CONDIE, M. D., author of "A Practical Treatise on the Diseases of Children." With numerous illustrations. In one large and handsome octavo volume of 768 pages, extra cloth, \$4 00; leather, \$5 00.

BY THE SAME AUTHOR.

ESSAYS ON THE PUERPERAL FEVER, AND OTHER DISEASES PECULIAR TO WOMEN. Selected from the writings of British Authors previous to the close of the Eighteenth Century. In one neat octavo volume of about 450 pages, extra cloth. \$2 50.

ASHWELL (SAMUEL), M. D.,

Late Obstetric Physician and Lecturer at Guy's Hospital.

A PRACTICAL TREATISE ON THE DISEASES PECULIAR TO WOMEN. Illustrated by Cases derived from Hospital and Private Practice. Third American, from the Third and revised London edition. In one octavo volume, extra cloth, of 528 pages. \$3 50.

BROWN ON SOME DISEASES OF WOMEN ADMITTING OF SURGICAL TREATMENT. With handsome illustrations. One volume 8vo., extra cloth, pp. 276. \$1 60.

DEWEES'S TREATISE ON THE DISEASES OF FEMALES. With illustrations. Eleventh Edition,

with the Author's last improvements and corrections. In one octavo volume of 536 pages, with plates, extra cloth, \$3 00.

RIGBY ON THE CONSTITUTIONAL TREATMENT OF FEMALE DISEASES. In one neat royal 12mo. volume, extra cloth, of about 250 pages. \$1 00.

HODGE (HUGH L.), M.D.,*Emeritus Professor of Obstetrics, &c., in the University of Pennsylvania.***ON DISEASES PECULIAR TO WOMEN; including Displacements of the Uterus.** With original illustrations. Second edition, revised and enlarged. In one beautifully printed octavo volume of 531 pages, extra cloth. \$4 50. (*Just Issued.*)

In the preparation of this edition the author has spared no pains to improve it with the results of his observation and study during the interval which has elapsed since the first appearance of the work. Considerable additions have thus been made to it, which have been partially accommodated by an enlargement in the size of the page, to avoid increasing unduly the bulk of the volume.

From PROF. W. H. BYFORD, of the *Rush Medical College, Chicago.*

The book bears the impress of a master hand, and must, as its predecessor, prove acceptable to the profession. In diseases of women Dr. Hodge has established a school of treatment that has become world-wide in fame.

Professor Hodge's work is truly an original one from beginning to end, consequently no one can peruse its pages without learning something new. The book, which is by no means a large one, is divided into two grand sections, so to speak: first, that treating of the nervous sympathies of the uterus, and, secondly, that which speaks of the mechanical treatment of displacements of that organ. He is disposed, as a non-believer in the frequency of inflammations of the

uterus, to take strong ground against many of the highest authorities in this branch of medicine, and the arguments which he offers in support of his position are, to say the least, well put. Numerous woodcuts adorn this portion of the work, and add incalculably to the proper appreciation of the variously shaped instruments referred to by our author. As a contribution to the study of women's diseases, it is of great value, and is abundantly able to stand on its own merits.—*N. Y. Medical Record*, Sept. 15, 1868.

In this point of view, the treatise of Professor Hodge will be indispensable to every student in its department. The large, fair type and general perfection of workmanship will render it doubly welcome.—*Pacific Med. and Surg. Journal*, Oct. 1868.

WEST (CHARLES), M.D.**LECTURES ON THE DISEASES OF WOMEN.** Third American, from the Third London edition. In one neat octavo volume of about 550 pages, extra cloth. \$3 75; leather, \$4 75. (*Just Issued.*)

The reputation which this volume has acquired as a standard book of reference in its department, renders it only necessary to say that the present edition has received a careful revision at the hands of the author, resulting in a considerable increase of size. A few notices of previous editions are subjoined.

The manner of the author is excellent, his descriptions graphic and perspicuous, and his treatment up to the level of the time—clear, precise, definite, and marked by strong common sense.—*Chicago Med. Journal*, Dec. 1861.

We cannot too highly recommend this, the second edition of Dr. West's excellent lectures on the diseases of females. We know of no other book on this subject from which we have derived as much pleasure and instruction. Every page gives evidence of the honest, earnest, and diligent searcher after truth. He is not the mere compiler of other men's ideas, but his lectures are the result of ten years' patient investigation in one of the widest fields for women's diseases—St. Bartholomew's Hospital. As a teacher, Dr. West is simple and earnest in his language, clear and comprehensive in his perceptions, and logical in his deductions.—*Cincinnati Lancet*, Jan. 1862.

We return the author our grateful thanks for the vast amount of instruction he has afforded us. His valuable treatise needs no eulogy on our part. His graphic diction and truthful pictures of disease all speak for themselves.—*Medico-Chirurg. Review*.

Most justly esteemed a standard work. . . . It bears evidence of having been carefully revised, and is well worthy of the fame it has already obtained.—*Dub. Med. Quar. Jour.*

As a writer, Dr. West stands, in our opinion, second only to Watson, the "Macaulay of Medicine;" he possesses that happy faculty of clothing instruction in easy garments; combining pleasure with profit, he leads his pupils, in spite of the ancient proverb, along a royal road to learning. His work is one which will not satisfy the extreme on either side, but it is one that will please the great majority who are seeking truth, and one that will convince the student that he has committed himself to a candid, safe, and valuable guide.—*N. A. Med.-Chirurg. Review*.

We must now conclude this hastily written sketch with the confident assurance to our readers that the work will well repay perusal. The conscientious, painstaking, practical physician is apparent on every page.—*N. Y. Journal of Medicine*.

We have to say of it, briefly and decidedly, that it is the best work on the subject in any language, and that it stamps Dr. West as the *facile princeps* of British obstetric authors.—*Edinburgh Med. Journal*.

We gladly recommend his lectures as in the highest degree instructive to all who are interested in obstetric practice.—*London. Lancet*.

We know of no treatise of the kind so complete, and yet so compact.—*Chicago Med. Journal*.

BY THE SAME AUTHOR.**AN ENQUIRY INTO THE PATHOLOGICAL IMPORTANCE OF ULCERATION OF THE OS UTERI.** In one neat octavo volume, extra cloth. \$1 25.**MEIGS (CHARLES D.), M.D.,***Late Professor of Obstetrics, &c. in Jefferson Medical College, Philadelphia.***WOMAN: HER DISEASES AND THEIR REMEDIES.** A Series of Lectures to his Class. Fourth and Improved edition. In one large and beautifully printed octavo volume of over 700 pages, extra cloth, \$5 00; leather, \$6 00.**BY THE SAME AUTHOR.****ON THE NATURE, SIGNS, AND TREATMENT OF CHILDBED FEVER.** In a Series of Letters addressed to the Students of his Class. In one handsome octavo volume of 365 pages, extra cloth. \$2 00.**SIMPSON (SIR JAMES Y.), M.D.****CLINICAL LECTURES ON THE DISEASES OF WOMEN.** With numerous illustrations. In one octavo volume of over 500 pages. Second edition, *preparing*.

HODGE (HUGH L.), M. D.,*Emeritus Professor of Midwifery, &c. in the University of Pennsylvania, &c.*

THE PRINCIPLES AND PRACTICE OF OBSTETRICS. Illustrated with large lithographic plates containing one hundred and fifty-nine figures from original photographs, and with numerous wood-cuts. In one large and beautifully printed quarto volume of 550 double-columned pages, strongly bound in extra cloth, \$14. (*Lately published.*)

The work of Dr. Hodge is something more than a simple presentation of his particular views in the department of Obstetrics; it is something more than an ordinary treatise on midwifery; it is, in fact, a cyclopædia of midwifery. He has aimed to embody in a single volume the whole science and art of Obstetrics. An elaborate text is combined with accurate and varied pictorial illustrations, so that no fact or principle is left unstated or unexplained.—*Am. Med. Times*, Sept. 3, 1864.

We should like to analyze the remainder of this excellent work, but already has this review extended beyond our limited space. We cannot conclude this notice without referring to the excellent finish of the work. In typography it is not to be excelled; the paper is superior to what is usually afforded by our American cousins, quite equal to the best of English books. The engravings and lithographs are most beautifully executed. The work recommends itself for its originality, and is in every way a most valuable addition to those on the subject of obstetrics.—*Canada Med. Journal*, Oct. 1864.

It is very large, profusely and elegantly illustrated, and is fitted to take its place near the works of great obstetricians. Of the American works on the subject it is decidedly the best.—*Edinb. Med. Jour.*, Dec. '64.

*** Specimens of the plates and letter-press will be forwarded to any address, free by mail, on receipt of six cents in postage stamps.

TANNER (THOMAS H.), M. D.

ON THE SIGNS AND DISEASES OF PREGNANCY. First American from the Second and Enlarged English Edition. With four colored plates and illustrations on wood. In one handsome octavo volume of about 500 pages, extra cloth, \$4 25. (*Just Issued.*)

The very thorough revision the work has undergone has added greatly to its practical value, and increased materially its efficiency as a guide to the student and to the young practitioner.—*Am. Journ. Med. Sci.*, April, 1868.

With the immense variety of subjects treated of and the ground which they are made to cover, the impossibility of giving an extended review of this truly remarkable work must be apparent. We have not a single fault to find with it, and most heartily commend it to the careful study of every physician who would not only always be sure of his diagnosis of pregnancy, but always ready to treat all the numerous ailments that are, unfortunately for the civilized women of to-day, so commonly associated with the function.—*N. Y. Med. Record*, March 16, 1868.

We have much pleasure in calling the attention of our readers to the volume produced by Dr. Tanner, the second edition of a work that was, in its original

We have examined Professor Hodge's work with great satisfaction; every topic is elaborated most fully. The views of the author are comprehensive, and concisely stated. The rules of practice are judicious, and will enable the practitioner to meet every emergency of obstetric complication with confidence.—*Chicago Med. Journal*, Aug. 1864.

More time than we have had at our disposal since we received the great work of Dr. Hodge is necessary to do it justice. It is undoubtedly by far the most original, complete, and carefully composed treatise on the principles and practice of Obstetrics which has ever been issued from the American press.—*Pacific Med. and Surg. Journal*, July, 1864.

We have read Dr. Hodge's book with great pleasure, and have much satisfaction in expressing our commendation of it as a whole. It is certainly highly instructive, and in the main, we believe, correct. The great attention which the author has devoted to the mechanism of parturition, taken along with the conclusions at which he has arrived, point, we think, conclusively to the fact that, in Britain at least, the doctrines of Naegele have been too blindly received.—*Glasgow Med. Journal*, Oct. 1864.

state even, acceptable to the profession. We recommend obstetrical students, young and old, to have this volume in their collections. It contains not only a fair statement of the signs, symptoms, and diseases of pregnancy, but comprises in addition much interesting relative matter that is not to be found in any other work that we can name.—*Edinburgh Med. Journal*, Jan. 1868.

In its treatment of the signs and diseases of pregnancy it is the most complete book we know of, abounding on every page with matter valuable to the general practitioner.—*Cincinnati Med. Repertory*, March, 1868.

This is a most excellent work, and should be on the table or in the library of every practitioner.—*Humboldt Med. Archives*, Feb. 1868.

A valuable compendium, enriched by his own labors, of all that is known on the signs and diseases of pregnancy.—*St. Louis Med. Reporter*, Feb. 13, 1868.

MONTGOMERY (W. F.), M. D.,*Professor of Midwifery in the King's and Queen's College of Physicians in Ireland.*

AN EXPOSITION OF THE SIGNS AND SYMPTOMS OF PREGNANCY. With some other Papers on Subjects connected with Midwifery. From the second and enlarged English edition. With two exquisite colored plates, and numerous wood-cuts. In one very handsome octavo volume of nearly 600 pages, extra cloth. \$3 75.

MILLER (HENRY), M. D.,*Professor of Obstetrics and Diseases of Women and Children in the University of Louisville.*

PRINCIPLES AND PRACTICE OF OBSTETRICS, &c.; including the Treatment of Chronic Inflammation of the Cervix and Body of the Uterus considered as a frequent cause of Abortion. With about one hundred illustrations on wood. In one very handsome octavo volume of over 600 pages, extra cloth. \$3 75.

RIGBY'S SYSTEM OF MIDWIFERY. With Notes and Additional Illustrations. Second American edition. One volume octavo, extra cloth, 422 pages. \$2 50.

DEWEES'S COMPREHENSIVE SYSTEM OF MIDWIFERY. Twelfth edition, with the author's last improvements and corrections. In one octavo volume, extra cloth, of 600 pages. \$3 50.

MEIGS (CHARLES D.), M. D.,

Lately Professor of Obstetrics, &c., in the Jefferson Medical College, Philadelphia.

OBSTETRICS: THE SCIENCE AND THE ART. Fifth edition, revised. With one hundred and thirty illustrations. In one beautifully printed octavo volume of 760 large pages. Extra cloth, \$5 50; leather, \$6 50. (*Just Issued.*)

The original edition is already so extensively and favorably known to the profession that no recommendation is necessary; it is sufficient to say, the present edition is very much extended, improved, and perfected. Whilst the great practical talents and unlimited experience of the author render it a most valuable acquisition to the practitioner, it is so condensed as to constitute a most eligible and excellent text-book for the student.—*Southern Med. and Surg. Journal*, July, 1867.

It is to the student that our author has more particularly addressed himself; but to the practitioner we believe it would be equally serviceable as a book of reference. No work that we have met with so thoroughly details everything that falls to the lot of the accoucheur to perform. Every detail, no matter

how minute or how trivial, has found a place.—*Canada Medical Journal*, July, 1867.

This very excellent work on the science and art of obstetrics should be in the hands of every student and practitioner. The rapidity with which the very large editions have been exhausted is the best test of its true merit. Besides, it is the production of an American who has probably had more experience in this branch than any other living practitioner of the country.—*St. Louis Med. and Surg. Journal*, Sept. 1867.

He has also carefully endeavored to be minute and clear in his details, with as little reiteration as possible, and beautifully combines the relations of science to art, as far as the different classifications will admit.—*Detroit Review of Med. and Pharm.*, Aug. 1867.

RAMSBOTHAM (FRANCIS H.), M. D.

THE PRINCIPLES AND PRACTICE OF OBSTETRIC MEDICINE AND SURGERY, in reference to the Process of Parturition. A new and enlarged edition, thoroughly revised by the author. With additions by W. V. KEATING, M. D., Professor of Obstetrics, &c., in the Jefferson Medical College, Philadelphia. In one large and handsome imperial octavo volume of 650 pages, strongly bound in leather, with raised bands; with sixty-four beautiful plates, and numerous wood-cuts in the text, containing in all nearly 200 large and beautiful figures. \$7 00.

We will only add that the student will learn from it all he need to know, and the practitioner will find it, as a book of reference, surpassed by none other.—*Stethoscope*.

The character and merits of Dr. Ramsbotham's work are so well known and thoroughly established, that comment is unnecessary and praise superfluous. The illustrations, which are numerous and accurate, are executed in the highest style of art. We cannot too highly recommend the work to our readers.—*St. Louis Med. and Surg. Journal*.

To the physician's library it is indispensable, while to the student, as a text-book, from which to extract the material for laying the foundation of an education on obstetrical science, it has no superior.—*Ohio Med. and Surg. Journal*.

When we call to mind the toil we underwent in acquiring a knowledge of this subject, we cannot but envy the student of the present day the aid which this work will afford him.—*Am. Jour. of the Med. Sciences*.

CHURCHILL (FLEETWOOD), M. D., M. R. I. A.

ON THE THEORY AND PRACTICE OF MIDWIFERY. A new American from the fourth revised and enlarged London edition. With notes and additions by D. FRANCIS CONDIE, M. D., author of a "Practical Treatise on the Diseases of Children," &c. With one hundred and ninety-four illustrations. In one very handsome octavo volume of nearly 700 large pages. Extra cloth, \$4 00; leather, \$5 00.

In adapting this standard favorite to the wants of the profession in the United States, the editor has endeavored to insert everything that his experience has shown him would be desirable for the American student, including a large number of illustrations. With the sanction of the author, he has added, in the form of an appendix, some chapters from a little "Manual for Midwives and Nurses," recently issued by Dr. Churchill, believing that the details there presented can hardly fail to prove of advantage to the junior practitioner. The result of all these additions is that the work now contains fully one-half more matter than the last American edition, with nearly one-half more illustrations; so that, notwithstanding the use of a smaller type, the volume contains almost two hundred pages more than before.

These additions render the work still more complete and acceptable than ever; and with the excellent style in which the publishers have presented this edition of Churchill, we can commend it to the profession with great cordiality and pleasure.—*Cincinnati Lancet*.

Few works on this branch of medical science are equal to it, certainly none excel it, whether in regard to theory or practice, and in one respect it is superior to all others, viz., in its statistical information, and therefore, on these grounds a most valuable work for the physician, student, or lecturer, all of whom will find in it the information which they are seeking.—*Brit. Am. Journal*.

The present treatise is very much enlarged and amplified beyond the previous editions but nothing

has been added which could be well dispensed with. An examination of the table of contents shows how thoroughly the author has gone over the ground, and the care he has taken in the text to present the subjects in all their bearings, will render this new edition even more necessary to the obstetric student than were either of the former editions at the date of their appearance. No treatise on obstetrics with which we are acquainted can compare favorably with this, in respect to the amount of material which has been gathered from every source.—*Boston Med. and Surg. Journal*.

There is no better text-book for students, or work of reference and study for the practising physician than this. It should adorn and enrich every medical library.—*Chicago Med. Journal*.

SWAYNE (JOSEPH GRIFFITHS), M. D.,

Physician-Accoucheur to the British General Hospital, &c.

OBSTETRIC APHORISMS FOR THE USE OF STUDENTS COMMENCING MIDWIFERY PRACTICE. From the Fourth and Revised London Edition, with Additions by E. R. HUTCHINS, M. D. With Illustrations. In one neat 12mo. volume. Extra cloth, \$1 25. (*Just Ready.*)

GROSS (SAMUEL D.), M.D.,

Professor of Surgery in the Jefferson Medical College of Philadelphia.

A SYSTEM OF SURGERY: Pathological, Diagnostic, Therapeutic, and Operative. Illustrated by upwards of Thirteen Hundred Engravings. Fourth edition, carefully revised, and improved. In two large and beautifully printed royal octavo volumes of 2200 pages, strongly bound in leather, with raised bands. \$15 00.

The continued favor, shown by the exhaustion of successive large editions of this great work, proves that it has successfully supplied a want felt by American practitioners and students. Though but little over six years have elapsed since its first publication, it has already reached its fourth edition, while the care of the author in its revision and correction has kept it in a constantly improved shape. By the use of a close, though very legible type, an unusually large amount of matter is condensed in its pages, the two volumes containing as much as four or five ordinary octavos. This, combined with the most careful mechanical execution, and its very durable binding, renders it one of the cheapest works accessible to the profession. Every subject properly belonging to the domain of surgery is treated in detail, so that the student who possesses this work may be said to have in it a surgical library.

It must long remain the most comprehensive work on this important part of medicine.—*Boston Medical and Surgical Journal*, March 23, 1865.

We have compared it with most of our standard works, such as those of Erichsen, Miller, Fergusson, Syme, and others, and we must, in justice to our author, award it the pre-eminence. As a work, complete in almost every detail, no matter how minute or trifling, and embracing every subject known in the principles and practice of surgery, we believe it stands without a rival. Dr. Gross, in his preface, remarks "my aim has been to embrace the whole domain of surgery, and to allot to every subject its legitimate claim to notice;" and, we assure our readers, he has kept his word. It is a work which we can most confidently recommend to our brethren, for its utility is becoming the more evident the longer it is upon the shelves of our library.—*Canada Med. Journal*, September, 1865.

The first two editions of Professor Gross' System of Surgery are so well known to the profession, and so highly prized, that it would be idle for us to speak in praise of this work.—*Chicago Medical Journal*, September, 1865.

We gladly indorse the favorable recommendation of the work, both as regards matter and style, which we made when noticing its first appearance.—*British and Foreign Medico-Chirurgical Review*, Oct. 1865.

The most complete work that has yet issued from the press on the science and practice of surgery.—*London Lancet*.

This system of surgery is, we predict, destined to take a commanding position in our surgical literature, and be the crowning glory of the author's well earned fame. As an authority on general surgical subjects, this work is long to occupy a pre-eminent place, not only at home, but abroad. We have no hesitation in pronouncing it without a rival in our language, and equal to the best systems of surgery in any language.—*N. Y. Med. Journal*.

Not only by far the best text-book on the subject, as a whole, within the reach of American students, but one which will be much more than ever likely to be resorted to and regarded as a high authority abroad.—*Am. Journal Med. Sciences*, Jan. 1865.

The work contains everything, minor and major, operative and diagnostic, including mensuration and examination, venereal diseases, and uterine manipulations and operations. It is a complete Thesaurus of modern surgery, where the student and practi-

BY THE SAME AUTHOR.

A PRACTICAL TREATISE ON THE DISEASES, INJURIES, AND MALFORMATIONS OF THE URINARY BLADDER, THE PROSTATE GLAND, AND THE URETHRA. Second edition, revised and much enlarged, with one hundred and eighty-four illustrations. In one large and very handsome octavo volume of over nine hundred pages, extra cloth. \$4 00.

BY THE SAME AUTHOR.

A PRACTICAL TREATISE ON FOREIGN BODIES IN THE AIR-PASSAGES. In one handsome octavo volume, extra cloth, with illustrations. pp. 468. \$2 75.

MALGAIGNE'S OPERATIVE SURGERY. With numerous illustrations on wood. In one handsome octavo volume, extra cloth, of nearly 600 pp. \$2 50.

tioner shall not seek in vain for what they desire.—*San Francisco Med. Press*, Jan. 1865.

Open it where we may, we find sound practical information conveyed in plain language. This book is no mere provincial or even national system of surgery, but a work which, while very largely indebted to the past, has a strong claim on the gratitude of the future of surgical science.—*Edinburgh Med. Journal*, Jan. 1865.

A glance at the work is sufficient to show that the author and publisher have spared no labor in making it the most complete "System of Surgery" ever published in any country.—*St. Louis Med. and Surg. Journal*, April, 1865.

The third opportunity is now offered during our editorial life to review, or rather to indorse and recommend this great American work on Surgery. Upon this last edition a great amount of labor has been expended, though to all others except the author the work was regarded in its previous editions as so full and complete as to be hardly capable of improvement. Every chapter has been revised; the text augmented by nearly two hundred pages, and a considerable number of wood-cuts have been introduced. Many portions have been entirely re-written, and the additions made to the text are principally of a practical character. This comprehensive treatise upon surgery has undergone revisions and enlargements, keeping pace with the progress of the art and science of surgery, so that whoever is in possession of this work may consult its pages upon any topic embraced within the scope of its department, and rest satisfied that its teaching is fully up to the present standard of surgical knowledge. It is also so comprehensive that it may truthfully be said to embrace all that is actually known, that is really of any value in the diagnosis and treatment of surgical diseases and accidents. Wherever illustration will add clearness to the subject, or make better or more lasting impression, it is not wanting; in this respect the work is eminently superior.—*Buffalo Med. Journal*, Dec. 1864.

A system of surgery which we think unrivalled in our language, and which will indelibly associate his name with surgical science. And what, in our opinion, enhances the value of the work is that, while the practising surgeon will find all that he requires in it, it is at the same time one of the most valuable treatises which can be put into the hands of the student seeking to know the principles and practice of this branch of the profession which he designs subsequently to follow.—*The Brit. Am. Journ., Montreal*.

KEY'S OPERATIVE SURGERY. In one very handsome octavo volume, extra cloth, of over 650 pages, with about 100 wood-cuts. \$3 25.

ERICHSEN (JOHN),*Senior Surgeon to University College Hospital.*

THE SCIENCE AND ART OF SURGERY; being a Treatise on Surgical Injuries, Diseases, and Operations. From the Fifth enlarged and carefully revised London Edition. With Additions by JOHN ASHHURST, Jr., M. D., Surgeon to the Episcopal Hospital, &c. Illustrated by over six hundred Engravings on wood. In one very large and beautifully printed imperial octavo volume, containing over twelve hundred closely printed pages: cloth, \$7 50; leather, raised bands, \$8 50. (*Just Issued.*)

This volume having enjoyed repeated revisions at the hands of the author has been greatly enlarged, and the present edition will thus be found to contain at least one-half more matter than the last American impression. On the latest London edition, just issued, especial care has been bestowed. Besides the most minute attention on the part of the author to bring every portion of it thoroughly on a level with the existing condition of science, he called to his aid gentlemen of distinction in special departments. Thus a chapter on the Surgery of the Eye and its Appendages has been contributed by Mr. Streatfeild; the section devoted to Syphilis has been rearranged under the supervision of Mr. Berkeley Hill; the subjects of General Surgical Diseases, including Pyæmia, Scrofula, and Tumors, have been revised by Mr. Alexander Bruce; and other professional men of eminence have assisted in other branches. The work may thus be regarded as embodying a complete and comprehensive view of the most advanced condition of British surgery; while such omissions of practical details in American surgery as were found have been supplied by the editor, Dr. Ashhurst.

Thus complete in every respect, thoroughly illustrated, and containing in one beautifully printed volume the matter of two or three ordinary octavos, it is presented at a price which renders it one of the cheapest works now accessible to the profession. A continuance of the very remarkable favor which it has thus far enjoyed is therefore confidently expected.

The high position which Mr. Erichsen's Science and Art of Surgery has for some time attained, not only in this country, but on the Continent and in America, almost limits the task of the reviewer, on the appearance of a new edition, to the mere announcement. Elaborate analysis and criticism would be out of place; and nothing remains to be done except to state in general terms that the author has bestowed on it that labor which such a work required in order to be made a representative of the existing state of surgical science and practice. Of the merits of the book as a guide to the "Science and Art of Surgery" it is not necessary for us to say much. Mr. Erichsen is one of

those enlightened surgeons of the present day, who regard an acquaintance with the manual part of surgery as only a portion of that knowledge which a surgeon should possess.—*British Medical Journal*, Jan. 2, 1869.

Thus the work bears in every feature a stamp of novelty and freshness which will commend it to those who are making its acquaintance for the first time, whilst those who have found it a safe guide and friend in former years will be able to refer to the new edition for the latest information upon any point of surgical controversy.—*London Lancet*, Jan. 23, 1869.

BY THE SAME AUTHOR. (*Just Issued.*)

ON RAILWAY, AND OTHER INJURIES OF THE NERVOUS SYSTEM. In small octavo volume. Extra cloth, \$1 00.

MILLER (JAMES),*Late Professor of Surgery in the University of Edinburgh, &c.*

PRINCIPLES OF SURGERY. Fourth American, from the third and revised Edinburgh edition. In one large and very beautiful volume of 700 pages, with two hundred and forty illustrations on wood, extra cloth. \$3 75.

BY THE SAME AUTHOR.

THE PRACTICE OF SURGERY. Fourth American, from the last Edinburgh edition. Revised by the American editor. Illustrated by three hundred and sixty-four engravings on wood. In one large octavo volume of nearly 700 pages, extra cloth. \$3 75.

It is seldom that two volumes have ever made so profound an impression in so short a time as the "Principles" and the "Practice" of Surgery by Mr. Miller, or so richly merited the reputation they have

acquired. The author is an eminently sensible, practical, and well-informed man, who knows exactly what he is talking about and exactly how to talk it.—*Kentucky Medical Recorder.*

PIRRIE (WILLIAM), F. R. S. E.,*Professor of Surgery in the University of Aberdeen.*

THE PRINCIPLES AND PRACTICE OF SURGERY. Edited by JOHN NEILL, M. D., Professor of Surgery in the Penna. Medical College, Surgeon to the Pennsylvania Hospital, &c. In one very handsome octavo volume of 780 pages, with 316 illustrations, extra cloth. \$3 75.

SARGENT (F. W.), M. D.

ON BANDAGING AND OTHER OPERATIONS OF MINOR SURGERY. New edition, with an additional chapter on Military Surgery. One handsome royal 12mo. volume, of nearly 400 pages, with 184 wood-cuts. Extra cloth, \$1 75.

Exceedingly convenient and valuable to all members of the profession.—*Chicago Medical Examiner*, May, 1862.

The very best manual of Minor Surgery we have seen.—*Buffalo Medical Journal.*

We cordially commend this volume as one which the medical student should most closely study; and to the surgeon in practice it must prove itself instructive on many points which he may have forgotten.—*Brit. Am. Journal*, May, 1862.

DRUITT (ROBERT), M. R. C. S., &c.

THE PRINCIPLES AND PRACTICE OF MODERN SURGERY.

A new and revised American, from the eighth enlarged and improved London edition. Illustrated with four hundred and thirty-two wood-engravings. In one very handsome octavo volume, of nearly 700 large and closely printed pages. Extra cloth, \$4 00; leather, \$5 00.

All that the surgical student or practitioner could desire.—*Dublin Quarterly Journal*.

It is a most admirable book. We do not know where we have examined one with more pleasure.—*Boston Med. and Surg. Journal*.

In Mr. Druitt's book, though containing only some seven hundred pages, both the principles and the practice of surgery are treated, and so clearly and perspicuously, as to elucidate every important topic. The fact that twelve editions have already been called for, in these days of active competition, would of itself show it to possess marked superiority. We have examined the book most thoroughly, and can say that this success is well merited. His book, moreover, possesses the inestimable advantages of having the subjects perfectly well arranged and classified, and of being written in a style at once clear and succinct.—*Am. Journal of Med. Sciences*.

Whether we view Druitt's Surgery as a guide to operative procedures, or as representing the latest

theoretical surgical opinions, no work that we are at present acquainted with can at all compare with it. It is a compendium of surgical theory (if we may use the word) and practice in itself, and well deserves the estimate placed upon it.—*Brit. Am. Journal*.

Thus enlarged and improved, it will continue to rank among our best text-books on elementary surgery.—*Columbus Rev. of Med. and Surg.*

We must close this brief notice of an admirable work by recommending it to the earnest attention of every medical student.—*Charleston Medical Journal and Review*.

A text-book which the general voice of the profession in both England and America has commended as one of the most admirable "manuals," or, "*vade mecum*," as its English title runs, which can be placed in the hands of the student. The merits of Druitt's Surgery are too well known to every one to need any further eulogium from us.—*Nashville Med. Journal*.

HAMILTON (FRANK H.), M. D.,

Professor of Fractures and Dislocations, &c. in Bellevue Hosp. Med. College, New York.

A PRACTICAL TREATISE ON FRACTURES AND DISLOCATIONS. Third edition, thoroughly revised. In one large and handsome octavo volume of 777 pages, with 294 illustrations, extra cloth, \$5 75. (*Just Issued.*)

In fulness of detail, simplicity of arrangement, and accuracy of description, this work stands unrivalled. So far as we know, no other work on the subject in the English language can be compared with it. While congratulating our trans-Atlantic brethren on the European reputation which Dr. Hamilton, along with many other American surgeons, has attained, we also may be proud that, in the *mother tongue*, a classical work has been produced which need not fear comparison with the standard treatises of any other nation.—*Edinburgh Med. Journal*, Dec. 1866.

The credit of giving to the profession the only complete practical treatise on fractures and dislocations in our language during the present century, belongs to the author of the work before us, a distinguished

American professor of surgery; and his book adds one more to the list of excellent practical works which have emanated from his country, notices of which have appeared from time to time in our columns during the last few months.—*London Lancet*, Dec. 15, 1866.

These additions make the work much more valuable, and it must be accepted as the most complete monograph on the subject, certainly in our own, if not even in any other language.—*American Journal Med. Sciences*, Jan. 1867.

This is the most complete treatise on the subject in the English language.—*Ranking's Abstract*, Jan. 1867.

A mirror of all that is valuable in modern surgery.—*Richmond Med. Journal*, Nov. 1866.

CURLING (T. B.), F. R. S.,

Surgeon to the London Hospital, President of the Hunterian Society, &c.

A PRACTICAL TREATISE ON DISEASES OF THE TESTIS, SPERMATIC CORD, AND SCROTUM. Second American, from the second and enlarged English edition. In one handsome octavo volume, extra cloth, with numerous illustrations. pp. 420. \$2 00.

BRODIE'S CLINICAL LECTURES ON SURGERY. 1 vol. 8vo., 350 pp.; cloth, \$1 25.

COOPER'S LECTURES ON THE PRINCIPLES AND PRACTICE OF SURGERY. In one very large octavo volume, extra cloth, of 750 pages. \$2 00.

GIBSON'S INSTITUTES AND PRACTICE OF SURGERY. Eighth edition, improved and altered. With thirty-four plates. In two handsome octavo volumes, about 1000 pp., leather, raised bands. \$6 50.

MACKENZIE ON DISEASES AND INJURIES OF THE EYE. 1 vol. 8vo., 1027 pp., extra cloth. \$6.

ASHTON (T. J.).

ON THE DISEASES, INJURIES, AND MALFORMATIONS OF THE RECTUM AND ANUS; with remarks on Habitual Constipation. Second American, from the fourth and enlarged London edition. With handsome illustrations. In one very beautifully printed octavo volume of about 300 pages. \$3 25. (*Just Issued.*)

We can recommend this volume of Mr. Ashton's in the strongest terms, as containing all the latest details of the pathology and treatment of diseases connected with the rectum.—*Canada Med. Journ.*, March, 1866.

One of the most valuable special treatises that the physician and surgeon can have in his library.—*Chicago Medical Examiner*, Jan. 1866.

The short period which has elapsed since the appearance of the former American reprint, and the numerous editions published in England, are the best arguments we can offer of the merits, and of the uselessness of any commendation on our part of a book already so favorably known to our readers.—*Boston Med. and Surg. Journal*, Jan. 25, 1866.

MORLAND (W. W.), M. D.

DISEASES OF THE URINARY ORGANS; a Compendium of their Diagnosis, Pathology, and Treatment. With illustrations. In one large and handsome octavo volume of about 600 pages, extra cloth. \$3 50.

WELLS (J. SOELBERG),*Professor of Ophthalmology in King's College Hospital, &c.*

A TREATISE ON DISEASES OF THE EYE. First American Edition, with additions; illustrated with 216 engravings on wood, and six colored plates. Together with selections from the Test-types of Jaeger and Snellen. In one large and very handsome octavo volume of about 750 pages: extra cloth, \$5 00; leather, \$6 00. (*Just Ready.*)

A work has long been wanting which should represent adequately and completely the present aspect of British Ophthalmology, and this want it has been the aim of Mr. Wells to supply. The favorable reception of his volume by the medical press is a guarantee that he has succeeded in his undertaking, and in reproducing the work in this country every effort has been made to render it in every way suited to the wants of the American practitioner. Such additions as seemed desirable have been introduced by the editor, Dr. I. Minis Hays, and the number of illustrations has been more than doubled. The importance of test-types as an aid to diagnosis is so universally acknowledged at the present day that it seemed essential to the completeness of the work that they should be added, and as the author recommends the use of those both of Jaeger and of Snellen for different purposes, selections have been made from each, so that the practitioner may have at command all the assistance necessary. The work is thus presented as in every way fitted to merit the confidence of the American profession.

His chapters are eminently readable. His style is clear and flowing. He can be short without over-condensing, and accurate without hair splitting. These merits appear in a remarkable degree when he comes to treat of the more abstruse departments of his subject, and contrast favorably with the labored obscurity which mars the writings of some greater authorities in the same line. We congratulate Mr. Wells upon the success with which he has fulfilled his ideal, as

represented in the preface, in producing "an English treatise on the diseases of the eye, which should embrace the modern doctrines and practice of the British and Foreign Schools of Ophthalmology." The new school of Ophthalmology may also be congratulated in having found an exponent who is neither a bigoted partisan of everything new, nor a scoffer at everything old.—*Glasgow Med. Journal*, May, 1869.

TOYNBEE (JOSEPH), F. R. S.,*Aural Surgeon to and Lecturer on Surgery at St. Mary's Hospital.*

THE DISEASES OF THE EAR: their Nature, Diagnosis, and Treatment. With one hundred engravings on wood. Second American edition. In one very handsomely printed octavo volume of 440 pages; extra cloth, \$4.

The appearance of a volume of Mr. Toynbee's, therefore, in which the subject of aural disease is treated in the most scientific manner, and our knowledge in respect to it placed fully on a par with that which we possess respecting most other organs of the body, is a matter for sincere congratulation. We may reasonably hope that henceforth the subject of this treatise will cease to be among the *opprobria* of medical science.—*London Medical Review*.

The work, as was stated at the outset of our notice, is a model of its kind, and every page and paragraph of it are worthy of the most thorough study. Considered all in all—as an original work, well written, philosophically elaborated, and happily illustrated with cases and drawings—it is by far the ablest monograph that has ever appeared on the anatomy and diseases of the ear, and one of the most valuable contributions to the art and science of surgery in the nineteenth century.—*N. Am. Med.-Chirurg. Review*.

LAURENCE (JOHN Z.), F. R. C. S.,*Editor of the Ophthalmic Review, &c.*

A HANDY-BOOK OF OPHTHALMIC SURGERY, for the use of Practitioners. Second Edition, revised and enlarged. With numerous illustrations. In one very handsome octavo volume, extra cloth, \$3 00. (*Now Ready.*)

No book on ophthalmic surgery was more needed. Designed, as it is, for the wants of the busy practitioner, it is the *ne plus ultra* of perfection. It epitomizes all the diseases incidental to the eye in a clear and masterly manner, not only enabling the practitioner readily to diagnose each variety of disease, but affording him the more important assistance of proper treatment. Altogether this is a work which ought certainly to be in the hands of every general practitioner.—*Dublin Med. Press and Circular*, Sept. 12, '66.

We cordially recommend this book to the notice of our readers, as containing an excellent outline of modern ophthalmic surgery.—*British Med. Journal*, October 13, 1866.

Not only, as its modest title suggests, a "Handy-Book" of Ophthalmic Surgery, but an excellent and well-digested *résumé* of all that is of practical value in the specialty.—*New York Medical Journal*, November, 1866.

This object the authors have accomplished in a highly satisfactory manner, and we know no work we can more highly recommend to the "busy practitioner" who wishes to make himself acquainted with the recent improvements in ophthalmic science. Such a work as this was much wanted at this time, and this want Messrs. Laurence and Moon have now well supplied.—*Am. Journal Med. Sciences*, Jan. 1867.

LAWSON (GEORGE), F. R. C. S., Engl.,*Assistant Surgeon to the Royal London Ophthalmic Hospital, Moorfields, &c.*

INJURIES OF THE EYE, ORBIT, AND EYELIDS: their Immediate and Remote Effects. With about one hundred illustrations. In one very handsome octavo volume, extra cloth, \$3 50. (*Now Ready.*)

This work will be found eminently fitted for the general practitioner. In cases of functional or structural diseases of the eye, the physician who has not made ophthalmic surgery a special study can, in most instances, refer a patient to some competent practitioner. Cases of injury, however, supervene suddenly and usually require prompt assistance, and a work devoted especially to them cannot but prove essentially useful to those who may at any moment be called upon to treat such accidents. The present volume, as the work of a gentleman of large experience, may be considered as eminently worthy of confidence for reference in all such emergencies.

It is an admirable practical book in the highest and best sense of the phrase.—*London Medical Times and Gazette*, May 18, 1867.

WALES (PHILIP S.), M. D., Surgeon U. S. N.

MECHANICAL THERAPEUTICS: a Practical Treatise on Surgical

Apparatus, Appliances, and Elementary Operations: embracing Minor Surgery, Bandaging, Orthopraxy, and the Treatment of Fractures and Dislocations. With six hundred and forty-two illustrations on wood. In one large and handsome octavo volume of about 700 pages: extra cloth, \$5 75; leather, \$6 75. (*Just Issued.*)

A Naval Medical Board directed to examine and report upon the merits of this volume, officially states that "it should in our opinion become a standard work in the hands of every naval surgeon;" and its adoption for use in both the Army and Navy of the United States is sufficient guarantee of its adaptation to the needs of every-day practice.

The title of this book will give a reasonably good idea of its scope, but its merits can only be appreciated by a careful perusal of its text. No one who undertakes such a task will have any reason to complain that the author has not performed his duty, and has not taken every pains to present every subject in a clear, common-sense, and practical light. It is a unique specimen of literature in its way, in that, treating upon such a variety of subjects, it is as a whole so completely up to the wants of the student and the general practitioner. We have never seen any work of its kind that can compete with it in real utility and extensive adaptability. Dr. Wales perfectly understands what may naturally be required of him in the premises, and in the work before us has bridged over a very wide gap which has always heretofore existed between the first rudiments of surgery and practical surgery proper. He has emphatically given us a comprehensive work for the beginner; and when we say of his labors, that in their particular sphere they leave nothing to be desired, we assert a great deal to recommend the book to the attention of those specially concerned. In conclusion, we would state, at the risk of reiteration, that this is the most comprehensive book on the subject that we have seen; is the best that can be placed in the hands of the stu-

dent in need of a first book on surgery, and the most useful that can be named for such general practitioners who, without any special pretensions to surgery, are occasionally liable to treat surgical cases.—*N. Y. Med. Record*, March 2, 1868.

It is certainly the most complete and thorough work of its kind in the English language. Students and young practitioners of surgery will find it invaluable. It will prove especially useful to inexperienced country practitioners, who are continually required to take charge of surgical cases, under circumstances precluding them from the aid of experienced surgeons.—*Pacific Med. and Surg. Journal*, Feb. 1868.

The title of the above work is sufficiently indicative of its contents. We have not seen for a long time (in the English language) a treatise equal to this in extent, nor one which is better adapted to the wants of the general student and practitioner. It is not to the surgeon alone that this book belongs; the physician has frequent opportunities to fill an emergency by such knowledge as is here given. Every practitioner should make purchase of such a book—it will last him his lifetime.—*St. Louis Med. Reporter*, Feb. 1868.

BIGELOW (HENRY J.), M. D.,

Professor of Surgery in the Massachusetts Med. College.

ON THE MECHANISM OF DISLOCATION AND FRACTURE

OF THE HIP. With the Reduction of the Dislocation by the Flexion Method. With numerous original illustrations. In one very handsome octavo volume. Cloth. \$2 50. (*Now Ready.*)

We cannot too highly praise this book as the work of an accomplished and scientific surgeon. We do not hesitate to say that he has done much to clear up the obscurities connected with the mechanism of dislocation of the hip-joint, and he has laid down most valuable practical rules for the easy and most successful management of these injuries. The mono-

graph is largely illustrated with exquisitely executed woodcuts, after photographs, which help to elucidate the admirable subject-matter of the text. We cordially commend the "Hip," by Dr. Bigelow, to the attention of surgeons.—*Dublin Quarterly Journal of Medical Science*, Feb. 1870.

THOMPSON (SIR HENRY),

Surgeon and Professor of Clinical Surgery to University College Hospital.

LECTURES ON DISEASES OF THE URINARY ORGANS. With

illustrations on wood. In one neat octavo volume, extra cloth. \$2 25. (*Now Ready.*)

These lectures stand the severe test. They are instructive without being tedious, and simple without being diffuse; and they include many of those practical hints so useful for the student, and even more valuable to the young practitioner.—*Edinburgh Med. Journal*, April, 1869.

Very few words of ours are necessary to recommend these lectures to the profession. There is no subject

on which Sir Henry Thompson speaks with more authority than that in which he has specially gathered his laurels; in addition to this, the conversational style of instruction, which is retained in these printed lectures, gives them an attractiveness which a systematic treatise can never possess.—*London Medical Times and Gazette*, April 24, 1869.

BY THE SAME AUTHOR. (Nearly Ready.)

ON THE PATHOLOGY AND TREATMENT OF STRICTURE OF

THE URETHRA AND URINARY FISTULÆ. With plates and wood-cuts. From the third and revised English edition. In one very handsome octavo volume, extra cloth, \$3 50. (*Now Ready.*)

This classical work has so long been recognized as a standard authority on its perplexing subjects that it should be rendered accessible to the American profession. Having enjoyed the advantage of a revision at the hands of the author within a few months, it will be found to present his latest views and to be on a level with the most recent advances of surgical science.

With a work accepted as the authority upon the subjects of which it treats, an extended notice would be a work of supererogation. The simple announcement of another edition of a work so well and favor-

ably known by the profession as this before us, must create a demand for it from those who would keep themselves well up in this department of surgery.—*St. Louis Med. Archives*, Feb. 1870.

TAYLOR (ALFRED S.), M.D.,*Lecturer on Med. Jurisp. and Chemistry in Guy's Hospital.***MEDICAL JURISPRUDENCE.** Sixth American, from the eighth and revised London edition. With Notes and References to American Decisions, by CLEMENT B. PENROSE, of the Philadelphia Bar. In one large octavo volume of 776 pages, extra cloth, \$4 50; leather, \$5 50. (*Just Issued.*)

Considerable additions have been made by the editor to this edition, comprising some important sections from the author's larger work, "The Principles and Practice of Medical Jurisprudence," as well as references to American law and practice. The notes of the former editor, Dr. Hartshorne, have likewise been retained, and the whole is presented as fully worthy to maintain the distinguished position which the work has acquired as a leading text-book and authority on the subject.

A new edition of a work acknowledged as a standard authority everywhere within the range of the English language. Considering the new matter introduced, on trichiniasis and other subjects, and the plates representing the crystals of poisons, etc., it may fairly be regarded as the most compact, comprehensive, and practical work on medical jurisprudence which has issued from the press, and the one best fitted for students.—*Pacific Med. and Surg. Journal*, Feb. 1867.

The sixth edition of this popular work comes to us in charge of a new editor, Mr. Penrose, of the Philadelphia bar, who has done much to render it useful, not only to the medical practitioners of this country, but to those of his own profession. Wisely retaining the references of the former American editor, Dr. Hartshorne, he has added many valuable notes of his own. The reputation of Dr. Taylor's work is so well established, that it needs no recommendation. He is now the highest living authority on all matters con-

nected with forensic medicine, and every successive edition of his valuable work gives fresh assurance to his many admirers that he will continue to maintain his well-earned position. No one should, in fact, be without a text-book on the subject, as he does not know but that his next case may create for him an emergency for its use. To those who are not the fortunate possessors of a reliable, readable, interesting, and thoroughly practical work upon the subject, we would earnestly recommend this, as forming the best groundwork for all their future studies of the more elaborate treatises.—*New York Medical Record*, Feb. 15, 1867.

The present edition of this valuable manual is a great improvement on those which have preceded it. It makes thus by far the best guide-book in this department of medicine for students and the general practitioner in our language.—*Boston Med. and Surg. Journal*, Dec. 27, 1866.

WINSLOW (FORBES), M.D., D.C.L., &c.**ON OBSCURE DISEASES OF THE BRAIN AND DISORDERS OF THE MIND;** their incipient Symptoms, Pathology, Diagnosis, Treatment, and Prognosis. Second American, from the third and revised English edition. In one handsome octavo volume of nearly 600 pages, extra cloth. \$4 25. (*Just Issued.*)

Of the merits of Dr. Winslow's treatise the profession has sufficiently judged. It has taken its place in the front rank of the works upon the special department of practical medicine to which it pertains.—*Cincinnati Journal of Medicine*, March, 1866.

It is an interesting volume that will amply repay for a careful perusal by all intelligent readers.—*Chicago Med. Examiner*, Feb. 1866.

A work which, like the present, will largely aid the practitioner in recognizing and arresting the first insidious advances of cerebral and mental disease, is one of immense practical value, and demands earnest attention and diligent study on the part of all who have embraced the medical profession, and have

thereby undertaken responsibilities in which the welfare and happiness of individuals and families are largely involved. We shall therefore close this brief and necessarily very imperfect notice of Dr. Winslow's great and classical work by expressing our conviction that it is long since so important and beautifully written a volume has issued from the British medical press.—*Dublin Medical Press*.

It is the most interesting as well as valuable book that we have seen for a long time. It is truly fascinating.—*Am. Jour. Med. Sciences*.

Dr. Winslow's work will undoubtedly occupy an unique position in the medico-psychological literature of this country.—*London Med. Review*.

LEA (HENRY C.).**SUPERSTITION AND FORCE: ESSAYS ON THE WAGER OF LAW, THE WAGER OF BATTLE, THE ORDEAL, AND TORTURE.** Second Edition, Enlarged. In one handsome volume royal 12mo. of nearly 500 pages; extra cloth, \$2 75. (*Just Ready.*)

The copious collection of facts by which Mr. Lea has illustrated his subject shows in the fullest manner the constant conflict and varying success, the advances and defeats, by which the progress of humane legislation has been and is still marked. This work fills up with the fullest exemplification and detail the wise remarks which we have quoted above. As a book of ready reference on the subject it is of the highest value.—*Westminster Review*, Oct. 1867.

When—half in spite of himself, as it appears—he sketches a scene or character in the history of legalized error and cruelty, he betrays so artistic a feeling, and

a humor so fine and good, that he makes us regret it was not within his intent, as it was certainly within his power, to render the whole of his thorough work more popular in manner.—*Atlantic Monthly*, Feb. '67.

This is a book of extraordinary research. Mr. Lea has entered into his subject *con amore*; and a more striking record of the cruel superstitions of our unhappy Middle Ages could not possibly have been compiled. . . . As a work of curious inquiry on certain outlying points of obsolete law, "Superstition and Force" is one of the most remarkable books we have met with.—*London Athenæum*, Nov. 3, 1866.

BY THE SAME AUTHOR. (Just Issued.)**STUDIES IN CHURCH HISTORY—THE RISE OF THE TEMPORAL POWER—BENEFIT OF CLERGY—EXCOMMUNICATION.** In one large royal 12mo. volume of 516 pp. extra cloth. \$2 75.

Altogether, the book is a useful addition to the popular literature of a most important and too little known department of mediæval history.—*London Saturday Review*, Feb. 26, 1870.

They are careful studies by a thorough scholar in the most interesting of all historical fields, made without passion or prejudice, and recorded with honesty. The whole volume is of the deepest interest; the style is masculine and animated, and great skill

is shown in weaving in anecdote and picturesque stories, without impairing the flow of the relation or the proper dignity of the composition.—*Hartford Courant*, Jan. 22, 1870.

We recommend the book as a highly instructive discussion of matters which are always of interest to scholars, and which are just now clothed with a special importance.—*N. Y. Nation*, Feb. 3, 1870.
