DISTRICT of PENNSYLVANIA, to wit :

BEIT REMEMBERED, That on the twelfth day of February, in the nineteenth year of the Independence of the United States of America, ELIZA-BETH HALL, of the faid Diffrict, hath deposited in this Office, the Title of a Book, the right whereof fhe

claims, as Proprietor, in the words following, to wit :

" A Synopfis of methodical Nofology, in which the genera of diforders are particularly defined, and the fpecies added with the fynonimous of those from Sauvages: by WILLIAM CUL-LEN, M. D. &c. &c. from the fourth edition, corrected and much enlarged. Translated by HENRY WILKINS, M. D." in conformity to the act of the Congress of the United States, intituled, "An act for the encouragement of Learning, by fecuring the copies of Maps, Charts, and Books, to the Authors and Proprietors of fuch copies during the times therein mentioned."

SAMUEL CALDWELL, Clerk of the District of Pennsylvania.

SYNOPSIS

A

OF

METHODICAL NOSOLOGY,

IN WHICH THE

GENERA OF DISORDERS

ARE

PARTICULARLY DEFINED,

AND THE

SPECIES ADDED

WITH THE

SYNONIMOUS OF THOSE FROM SAUVAGES.

WILLIAM CULLEN, M. D. Sc. Sc.

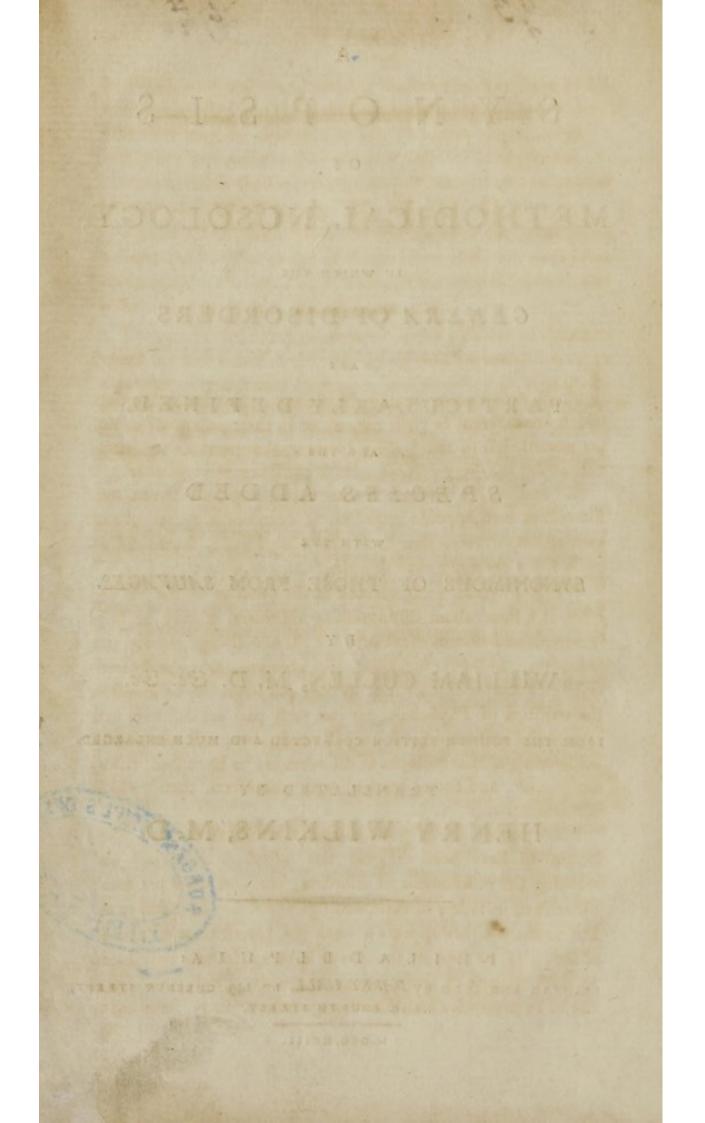

FROM THE FOURTH EDITION CORRECTED AND MUCH ENLARGED.

TRANSLATED BY

HENRY WILKINS, M. D

M.DCC.XCIII.

PREFACE.

T is well known among Phyficians, that fome diforders which are different in their nature, or in their proximate caufe, are neverthelefs fo much alike in external appearance or fymptoms, that it is very difficult to diffinguish one from another.

But as diforders different in their nature require different, and fometimes even opposite remedies, it becomes a matter of the greatest importance, that those practifing Physic, should diffinguish for a certainty each diforder from any other.

Whilft Phyficians experienced in the practice of the art are often at a ftand about diffinguifhing diforders, it may be juftly complained that medical writings do not always remove the difficulty. Indeed it has been often obferved, that the defcriptions or hiftories of diforders, as they call them, to be found in the writings of Phyficians, for the moft part are defective and imperfect; and there is no one, I think, who will not readily acknowledge, that hiftories of diforders are to be wifhed, fuller, more exact, and better marked with characters, than we have hitherto had.

Many indeed conceive the ancient Greek and Roman Phyficians to have been diligent and skilful in observing and marking the phænomena of diforders; and that there are many histories of diforders in their writings which may be useful to us. But to me it either appears a weak and superstitious veneration of antiquity, or some oftentation of learning, to have conciliated an over-estimate of the writings of ancient Physicians. It is not to be pretended but that among those writings, some are to be be found, now and then, which delineate the characters of diforders properly; but those that occur there of this kind, howfoever they may be estimated by the Moderns, have taught us but little; and perhaps they would altogether have escaped our attention, unless the fame thing had first been known to us from our own observation.

The Moderns feldom turn over the books of the Ancients to procure the first knowledge of things; but these are most often fearched only that they may support their own discoveries and observations by such authority.

I am perfuaded, that either most of the histories of diforders which are now found in the writings of the Ancients, belong to a country very different from ours, and therefore of little use to us; or that their writings have come to us fo injured and changed, that they can be of little advantage. At least it must be confessed, that the knowledge to be derived from them, is much less than the labour of clearing them from ambiguity.

Neither have the Moderns proceeded until very lately, and but flowly, to advance this branch. For in the fixteenth century the followers of Galen were engaged, with fuch great praife in reeftablishing the doctrine of the Ancients, (being almost wholly employed in explaining and illustrating their writings) that they gave little affistance in amending and enlarging the history of diforders.

Nor did the Chemical Phyficians of the fame age, the violent enemies of the Galenifts, do any more. For being altogether intent on difcovering medicines, and administering them promifcuoufly, they diverted the minds of the people entirely from the fludy of diforders.

Hence it happened, that fcarce any full or accurate hiftories were written from the reftoration of letters in the fifteenth century to the times of Sydenham. But Sydenham, by that fagacity and judgment in which he chiefly excelled, conceived that more diligence was neceffary in marking and defcribing the phænomena of diforders, and to this end applied himfelf to careful obfervation; by which means he at length publifhed a greater number, and better defcriptions, than any who preceded him.

From that period many Phyficians joined their labours in increafing creafing and rendering more accurate the hiftories of diforders, by obfervations and experiments.

Therefore from the time of Sydenham much labour was ufefully fpent to this purpofe; yet I do not think the fubject by any means perfected. Any one, however little experienced in thefe things, knows that the hiftories of diforders which we have, contain many things with little accuracy, many erroneous, and many altogether falfe; and also that from various causes these faults still prevail. For fome writers, to establish their own pleafing theories, others to conciliate a faith for remedies either difcovered or commended by them, have not difcerned the truth, being blinded by preconceptions, or have even corrupted it by feigned things and falfehoods. Many being captivated by every ftrange thing, which they eafily gave faith to, have magnified the matter beyond all bounds in order to make others believe-In fine, many, that they might procure fame to themfelves by obfervations, (fo much defired at prefent) have wrote in their clofets feigned hiftories for realities. All thefe things concerning the hitherto imperfect defcription of difeafes, might be clearly proved, if I was to inveftigate more particularly; but I pals them over for the prefent, only withing to point out one fault in the writing of histories, chiefly belonging to our fubject.

Even many Phyficians of the beft credit, diligently engaged in obferving diforders, have frequently, in writing hiftories of them, overdone the thing; for they have not only enumerated the fymptoms that are infeparable and always prefent in each diforder, but even more, and indeed all that attend at any time. Thus they have fet down the uncommon fymptoms, and thofe not neceffarily connected, and alfo many altogether adventitious and accidental; whilft at the fame time they have totally neglected to diftinguifh thofe unufual and accidental, from the more common and infeparable. Thus, whilft they were endeavouring to render the hiftory of diforders very full, which might affift to diftinguifh one from another, they have miffed it; nay, they have made it more difficult.

Those practifing medicine have often complained of this redundance; they wished what are called the Pathognomonics; that is, that those few symptoms might be set down which are

10

fo proper to each diforder, that from them alone any one might be quickly and certainly diffinguilhed from another.— But these kind of pathognomonics are not yet given in the writings of Physicians, nor are they affigned to each diforder, nor can they be, unless by a methodical Nosology properly formed. Long fince, indeed, Sydenham and the learned Baglivi wished all diforders to be referred, by a rule of botanical form, to genera and species, proper characters being affixed, that they might be more easily and certainly diffinguished; that is, that a methodical Nosology might be instituted. Other Physicians also, of great character, approved of this design; and every one that is in practice might greatly wish it was done.

However, (whether indeed from the fmall profpect of advantage, or the forefeen difficulty of the work, is not certain) nothing of this kind was done till the celebrated *Francis Boffier De Sauvages* attempted it about the year 1732.

What *Felix Platerus* in the end of the fixteenth century attempted, in arranging diforders according to their fymptoms, may in fome meafure be referred to this. But those endeavours were fo rude and imperfect, that it could fcarce be expected that any would follow them; and no one, as far as we know, carried it through before *Sauvages*.

It is not to be pretended but *Platerus* fuggefted fome things to *Sauvages*; yet few, and those not very advantageous, and which would have never been of use to any one, unless *Sauvages* with better expectation, had carried on a much more extensive work. He at first proceeded flowly and dubiously, and having attempted it again and again, did not publish his methodical Nofology (edit. ann. 1762) till after extensive reading and affiduous study for thirty years.

In the mean time two other attempts in methodical Nofology were made; one by C. Linnaus, a man much celebrated, and greatly engaged in the methodical diffribution of things; the other by the learned Rudolph. Aug. Vogel, Profeffor at Gottingen. Yet the work appears to be little promoted by either, as they followed too clofely in the track of Sauvages.

I have been long fatisfied of the utility of fuch a work, and as foon as I was appointed to teach the Practice of Phyfic in this Univerfity, Univerfity, I thought it my duty to entice our pupils to the fludy of Nofology; and that I might effect this more eafily, I took care that as many books as would tend to this, fhould be publifhed and put into their hands.

I took from Sauvages (not very full of other uleful things) those only which pertain to the diffinguishing the genera and species of diforders, and with these I published the whole books of Linnaus and Vogel together.

These authors, without doubt, deserve fome praise; for although their works do not by any means appear to be perfect, nor to be capable of affording much service to inexperienced students, yet fome advantage may be gained from them by those skilled in the art, and who have been engaged for some time in distinguishing diforders.

It will be difficult to make this work perfect immediately, nor can it be done in my opinion, unlefs by repeated trials. Therefore I have thought it not only allowable but beneficial, to promote this nofological work as much as I could; and with this motive have attempted a method in fome meafure new, and publifhed it with those mentioned above. This, although not complete in every particular, yet I hope will be found more accurate than the former in fome things.

Those who devoted themselves to this fludy before us, attempted it, in my opinion, not fo wifely; for they immediately employed themselves in forming governing genera of classes and orders, paying little attention to the species. But species are only formed by nature, and the formation of genera is the conception of the human mind, which will be fallacious and uncertain until all the species have been well marked and attended to; and unles we pay attention to the species in forming genera, our labour will be vain and unprofitable.

The formation of governing genera is not yet finished in any fystem of things. For classes, or even orders, perfectly natural, are not yet every where constituted either in the vegetable or animal fystem.

A method of foffils is even more difficult, and perhaps for difeafes will be the most difficult of all. Let us fee, therefore, how we may be able to manage this in the best manner. As the things to be diffinguished are very numerous, it appears useful and neceffary that they should be referred to some governing genera; but as the species of things are not very numerous, and the remembering of each one enumerated does not exceed the capacity of most men, it fearce seemed neceffary to be very careful in referring each to classes and orders.

Thus the illustrious De Buffon thought it unneceffary to refer quadrupeds, whole species are few, to classes and orders; and confidered what others attempted to this end to be frivolous, and to have led the studious to a troublefome denomination.

However, I cannot altogether agree with this illustrious and excellent man. For although the inflitution of classes and orders of difeases cannot be made fufficiently perfect for their investigation, nor be very necessary for ascertaining the number of them, yet I think it is to be attempted in some way, and diligently to be profecuted to greater accuracy.

Neverthelefs, if we are careful to guard against the deception which may arife from the characters of claffes and orders, (and if I am not deceived we shall often have to be careful) I contend that even the inflitution of claffes and orders will affift in many cafes the diffinguishing of species more fully and diffinctly. For although it be impoffible to obtain an inflitution of this kind, every where certain and always accurate, yet I should think those endeavours would tend greatly towards accomplishing it : for by thefe often coming into view, they would thence lead to useful difquifitions in pathology as well as the hiftory of diforders. Surely, when we wish to inquire diligently about the nature of diforders, they are to be diffinguished by the fymptoms proper to each, as well as by those proper to fome others ; which is nothing more than that diforders fhould be diffinguished by genera and fpecies, as any thing elfe in the nature of things is diftinguished, and this kind of diftinction of genera neceffarily requires a notation of the general as well as the more particular fymptoms.

Whatfoever use may be derived from the formation of claffes and orders of difeases, it certainly must be allowed that the most attentive Nosologists have not yet obtained the defired fuccess. And it happens from seeing this work to imperfect, that fome fome have difregarded all Nofology, whilft others have judged it impracticable.

Those who think it impracticable, are certainly deceived. All confess that the diffinction of diforders is fometimes difficult, but it also must be confessed that in most cases it is possible; for if any one denies this, he might as well have faid that there is nothing in the Medical Art. If indeed Phyficians are able to diftinguish diforders, they may also fay for a certainty by what fymptoms they did it ; but thefe fymptoms must be the very fame as those which define each diforder by genera and species; which, again, can only be fet forth by a nofological form rightly inftituted. Therefore, I do not at all hefitate to affirm, that the diffinction of diforders hitherto often dubious, will become more certain by a methodical Nofology. Moreover, it is to be obferved, that as often as we shall endeavour to explain this kind of diffinction of diforders, this advantage will arife, that its defects or errors may be eafily perceived, and when perceived, they will lead more accurately to infpect obfervations already made, or to making future ones more attentively. But they will also be of much use to render methodical Nofology, as well as the diffinction of diforders, more perfect at laft.

It remains that we now fet forth in these prefatory pages, the rules which I have observed in this work, and chose that I wish to be attended to by others.

It was our first and chief care that the species of diforders which attend the fick, should be difcovered and diftinguished. But as the species can fearcely be defined properly, unless the genus is shewn; and as most of the genera pointed out by Nofologists are only of one species, it so happens that even our labours appear unpaid, especially in diftinguishing genera. Nevertheles we have always paid attention to the species, and we hope that the characters of genera, given by us, will be every where useful to diftinguish them.

In reciting the genera of diforders, I have inferted fewer than are mentioned in other fyftems; which, if I have done right, will be of much advantage to fludents, who at first are eafily confused in contemplating a multitude of things. B

For although I may have fometimes erred in diminishing the number, yet I think it was fafely attempted; for when our pupils have paid proper attention to thofe, (that can be fo eafily and certainly diftinguished) I believe that they will afterwards eafily find out fuch as may by chance be omitted. But the genera of diforders with us are neceffarily fewer than with other Nofologifts; becaufe it appears that many that are accounted for, and fet down as different by others, are no ways different, and therefore placed by us under one head; and the reafons of this will afterwards appear in their proper places. In the mean time it is to be remembered, that many which appear at first fight to be omitted, are not altogether put out of the reader's fight, for they are enumerated as fynonimous with the genera of those to which we think they belong, and still retain a place in the index. And again, the genera of diforders defined by us, are fewer than those enumerated by others; becaufe we judged that none fhould be recited but the primary and idiopathic ; whilft many are taken notice of by others that are only fympathic, or fymptoms, never exifting alone; and therefore not to be received for primary diforders. Thus carphologia*, Aretching, rigor, fneezing, gaping, biccough, fnoring, anxiety, laffitude, flupor, itching, coldnefs and heat, that are enumerated by Sauvages, and other things that are recited by others for genera, are altogether omitted by us, and with propriety, unlefs we wifh to have as many genera of diforders as there are fymptoms.

In fine, the genera of diforders with us are fewer, as we have omitted many out of the claffes of BLEMISHES and DE-FOR MITIES, either becaufe the diforders are fo flight that they do not deferve attention, or becaufe being connatural and immutable, they entirely efcape the art of Phyficians. Thus we think that *lentigo*, *leuce*, *cyafma*, *feline*, and *cicatrix*, from the clafs of blemifhes; and *phoxos*, *gibber*, *rhyffemata*, *canities*, *coloboma*, *nævus*, *monfirofitas*, *rhicnofis*, *varus*, *valgus*, *leiopedes*, *faniodes*, *cripforchis*, *hermaphroditus*, *dionyfifcus*, *galiancon*, *galbulus*, and others of the clafs of deformities enumerated by *Vogel*, were rightly

* Carphologia, a fort of convultive motion of the hands, by which the fick perfon appears to be pulling the pile from the clothes, to gather motes, hunt flies, &c. rightly omitted by us. Thefe kinds of blemishes and deformities, perhaps might be enumerated in a pathology, or general history of changes which the body undergoes upon every occasion; but to load a methodical Nofology with fuch frivolous things, or to interrupt it with fo many useles appellations, does not appear at all proper. The reader may therefore judge, how defervedly the celebrated Sagar boasted that he had increased the number of genera. But there are other diforders worthy indeed to be mentioned, which the reader will not fo easily forgive for omitting.

Thefe omiffions I acknowledge and lament indeed; but there are many reafons why fome diforders might be omitted here. In the first place, it may happen that fome entirely efcaped our notice; and again, there are fome of fufficient importance for which there was no place in our Nofology; and in fine, there are others that could not have a place nor a fuitable character, becaufe the history of them is fo imperfect.

But left the genera fhould be altogether left out, I have fubjoined at the end of the work a catalogue of as many as I know to be omitted, that fome of more fagacity, in time to come, weighing them more diligently, might affign characters and places for them.

With the fame defign I have not only reduced the genera, but the fpecies alfo, to a fmaller number : this may feem a greater effay, fince no real fpecies can be rightly omitted.

Indeed I fhould not have attempted to recite the fpecies; (the difficulty of the work made me fo dubious, and hitherto fo long doubtful; and I only fhould have attempted to exhibit the fpecies of *Sauvages* a little more clear and amended in order) but having weighed the fubject more fully and accurately, I thought that the number of those fpecies, which I am about to recite, would be a great deal less than those enumerated by *Sauvages*.

He indeed was the only one (for I do not regard Sagar) that did any thing in reciting fpecies, and although an excellent man (deferving great merit in medicine, for his many obfervations collected from every fource,) it is not to be pretended but that he blundered greatly in many cafes, whilft he fet down the very very fame fpecies, found under different appellations, for different fpecies, and efpecially whilft he mingled fympathic fpecies fo frequently with idiopathic, by which means he often increafed their number beyond bounds. I have done as much as I could to remove those errors, having reduced the numerous fpecies of *Sauvages* as properly as I was able.

That I might effect this, in the first place I accounted for one and the fame many inferted by *Sauvages* for different fpecies, and put them under one title; the reafons of which will be afterwards given in their proper places; and then, as I wished to fet down only idiopathic species for true and genuine, I took away as many from the number of *Sauvages*, as I looked upon to be fymptomatical. But as there may be fome use in reciting the fymptomatics, I have recited them again by themselves.

In fine, another reafon, and the chief one, why the number mentioned by *Sauvages* should be diminished, is because I have looked upon many enumerated by him for different species, as only varieties, and have put them down as such.

But it is a thing which appears very difficult in Nofology, to fay for a certainty what is to be reckoned a fpecies of a diforder, and what only a variety of the fame fpecies. For fince that criterion which can be ufed in zoology and phytology, to diftinguifh pretty certainly the fpecies from the varieties, is not at all to be found in methodical Nofology; the diffinguifhing varieties from fpecies will be every where the more difficult. For which reafon I thought the reciting many varieties would be the moft fafe, and almoft neceffary. But confidering diffinetions of this kind would be very ufeful in practice, I have endeavoured to give them a place generally; but if I have not done it in every inflance, I feem to have acted with an equal good judgment, at leaft with fome appearance of it, having diligently confidered confequences.

When any diforder which afflicts a number of people, fhows every characteristic fymptom of a particular species, and these alone in each perfon, although they may be more lenient in one and more violent in another; we do not suppose this exemplifies a different species, and in general we think diforders differ-

ing

ing only in degree, are nothing more than varieties. There is then only room for a doubt in diffinguishing a VARIETY from a SPECIES, when in diforders that attack different men, there are fome of the ufual fymptoms of the peculiar fpecies abfent or fome added.

When there are fome of the usual fymptoms absent, as often as we can make the diffinction between those which are more and those which are less effential, we conclude from the absence of the latter that it is only a variety.

But when fome others happen to be added to the characteriftic fymptoms, if the added ones can rather be looked upon as fymptoms of fymptoms, than fymptoms of the caufe of the diforder, they only conflitute a variety. Again, when the added fymptoms are altogether unufual to the given fpecies, and at the fame time the chief circumftances of the diforder appear little or not at all altered, this alfo is only to be looked upon as a variety.

As a genus may arife from different principles, and likewife from a diverfity of origin, a difference in fpecies may be the confequence, but not always; for as often as that difference is fmall, and the fymptoms little changed by it, we would think that this likewife only exhibits a variety.

Likewife the genus may be of a different fpecies from the diverfity of its feat; but as often as neither the ftructure of the part, nor the mode of function differs, although the feat be different, this is neverthelefs to be looked upon only as a variety.

Moreover, whilft we here treat of diffinguishing diforders from one another; I could wish it to be observed, that there are two things which are of much consequence to point out the fimilarity and affinity of diforders in different people.

The one is, that fome fimilarity of the caufe argues a fimilarity of diforder produced by it. Thus when the diforders arife from one and the fame caufe, and alfo when that caufe is neceffary to produce the diforder in each perfon affected; and in fine, when the fame caufe appears to be every where of the fame quality and power, then at any rate we may judge the diforders produced from fuch a caufe are of the fame kind, or very much alike.

The

This appears to me to be the cafe in moft contagious diforders. For there are fome of thefe that originate in a number of people from the fame fpecific contagion; nor is the diforder ever obferved to arife in any of them, except from the application of that contagion; and both the ftrength and quality of it appears to be every where the fame. With regard to what I have juft faid, there may appear fome doubt; but when the effects obferved now for many ages, are always and in every place very much alike, we juftly conclude that it is the fame in quality and ftrength; and efpecially for this reafon, becaufe the effects, as far as they appear different, can be generally attributed to fome peculiarity of condition of the affected perfon, better than to any difference in the quality or ftrength of the contagion.

Therefore we must believe that diforders which arife from the fame fpecific contagion, are very much alike in nature; it is indeed fcarcely to be expected, that diforders of this kind should shew any more than a single species of the same genus; nay the difference that is fometimes to be observed in them, only indicates a variety of the same species.

I would have all this not only applied to exanthematic contagious fevers, but alfo to most epidemic fevers. But in advancing this opinion concerning the fimilitude of epidemic fevers, I am forced to differ from the great authority of Sydenham, who confidered these kinds of fevers to be of many species. Whether right or no, I doubt much; and I leave the dispute to be decided by posterity; at the same time I advise those who practice much in future, to fatisfy themselves of the truth of the one or the other opinion, or rather to determine what bounds are to fixed to each.

Another thing, which may fhew the fimilarity of diforders in different perfons, is their being cured by the fame medicines. The likenefs of diforders truly confifts in the fimilarity of their proximate caufe, whatfoever that may be; but as medicines are only applied to them for the purpofe of removing their proximate caufe, it must neceffarily be, that diforders which are cured altogether by the fame remedies are of the fame nature.

This kind of reafoning will furely have much weight in pointing out the nature of inflammations cured by bloodletting, as well as of intermittent fevers cured by bark. But this doctrine, howfoever ufeful it may fometimes be in the practice of medicine, is fallacious, and I think is not to be admitted either in the practice, or in methodical Nofology, except with fome caution. Indeed with common practitioners, the fame kind of medicines appears to be given in any fpecies of the fame genus, and in the varieties of thefe ; and hence many genera might not appear in any wife to differ from the species. But the more skilful know that diforders, in any manner different, are feldomer cured by the very fame remedies than is fuppofed. They also well know that it happens from the promifcuous use of medicines, that the fame remedies are fo often frustrated, or at least the cure is lefs perfect. Moreover the most experienced are acquainted that to treat diforders properly, there is an abfolute neceffity that the remedies should be accurately accommodated not only to the genus, but to each species, and also often to some of the varieties.

I have thought, that to render the art of medicine fhorter, and thence eafier, every fpecies of diforder fhould be diffinguifhed from its varieties. Yet I confefs that this diffinction in many cafes is fomewhat uncertain, and I have fuppofed it fafeft, to mark and recite most of the varieties. This therefore I have endeavoured to do every where, leaving it to fome more wife, who may hereafter choofe to devote themfelves to this work, to fix a more accurate difcrimination. Having now fhewn upon what principle I have endeavoured to leffen the number of genera, as well as of species; it remains that I now mention in what manner the characters of those I have admitted are formed.

In the first place, I have every where felected the external marks that are easily to be observed, having let alone, or rather rejected any conjectures about the internal state of the body. Moreover, I have always rather preferred those perceptable symptoms, such as were obvious to the Physician, than those perceived by the patient. However, the latter are not altogether to be neglected or omitted, howfoever fallacious they may be, In In the fecond place, I conceived that those fymptoms were especially to be felected for characteristic marks, which always attend the diforder, and this I think ought indeed chiefly to be aimed at. But as many diforders in their course put on quite different forms, a character is often of neceffity to be fought for in these, from a feries of circumstances, and the fymptoms that fucceed each other.

But in treating this fubject a two-fold queftion arifes, the first part of it is, whether it be proper to take part of the character from the caufe of the diforder? To this it may be answered, that although the judgment of Physicians, formed from the caufe, may often be fallacious and altogether falfe; and therefore not to be rashly admitted to diffinguish diforders, nevertheless the fame may fometimes be easily and certainly known, and I think that caufes of this kind may be properly received in Nofology for marks of characters.

The other part of the queftion here arifing is, at what time in the courfe of the fymptoms may the character be taken? To this alfo it may be anfwered, that fince many diforders, as eruptive fevers and intermittents, cannot be diftinguished in any manner, till after fome days, by the feries of fymptoms; there is a neceffity that the character should be taken from that feries. But characters in Nofology, ought not to be usurped by any means, till after a long continuance of the diforder, perhaps not till it is finished. Thus, with the illustrious *Linnaus*, the characters of what he calls *continent fevers*, which was taken from the length of the whole diforder, are altogether improper.

The third rule in forming the characters is, that as almost every diforder is folely to be diffinguished by a concurrence of many fymptoms; as many as may fuffice are to be taken from those for characteristics, and no more are to be admitted.

Former Nofologifts appear to me to have been too brief, and deficient in the characters which they have given, and perhaps I may be blamed for having been too prolix and redundant. I confeis that I have laboured to be every where full, fuppoling it to be most prudent to approach to redundancy; for it will be much easier for posterity to take away what is fuperfluous, than to add what may be deficient. In fine, in conflicting the characters of diforders, it is a queftion, whether any marks may be taken, from the defect of any function, which is exercised in health, or from the abfence of fymptoms that attend in other genera and species? Sauwages would not admit the defect of functions for diforders, because they indicated nothing positive; therefore he altogether omitted to put down many that are recited by Linnæus, under the order of CONSTRICTIONS, and by Vogel under the class of EPISCHESES.

But, begging the pardon of this great man, I might have faid, although a defect, ftrictly fpeaking, may indicate nothing politive, yet the defect of a function, exercifed in health, exhibits the ftate of the human body, which is very ufeful and even neceffary to be afcertained, and this ftate may properly be accounted a diforder. Moreover, although they are fometimes obferved in fome people, without being troublefome, or without the fymptom of a diforder, yet they would produce great uneafinefs, and many fymptoms in moft people. In thefe therefore, the defect of functions, (often the manifeft caufe of fymptoms) may be looked upon as a diforder ; and it is proper and neceffary in many diforders, to take characteriftic fymptoms from it.

Sauvages himfelf feems in this cafe to be inconfiftent, inflituting a clafs of DEBILITIES, and enumerating defed of memory, continued watching, ifchury, and even others, as genera.

With regard to marks from the absence of fymptoms, that accompany other genera of the fame fort, they are not good, and I think are to be every where avoided. But in many they could not be avoided as far as I can fee, nor have they been as yet avoided by any Nofologifts.

As characters of diforders are to be conflituted agreeably to thefe rules, it is of much confequence to form them with accurate and clear language; and no lefs, to diftinguish each diforder with a fuitable name. The learned botanists know that *Linnæus* made the arrangement of plants more perfect, by inflituting more accurate language, having. every where used the most perfect names and definitions; nor indeed do I doubt but that the delineation of a diforder, like that of a plant by *Lin-*

næusj

næus, would be of much ufe in Nofology. But it does not appear here fo neceffary as in botany, becaufe there are not fo many particulars in the former as in the latter; as well as becaufe the fyftem of fymptoms exhibited in almost every general fystem of pathology is now of much fervice in this point. It is indeed to be acknowledged, that the common fystems of fymptoms in vogue are not fo full nor exact as is requisite; and if they could be more full, and names were always ufed more fuitable, and accurately defined, they certainly would be of great fervice to perfect Nofology.

But in an attempt of this kind, care is to be taken left we admit too fubtle and doubtful diftinctions, as I think was done by the author of *Clinical Obfervations*, publifhed at *Warfaw* in the years 1767 and 1768. I have indeed never attempted any thing of this kind, becaufe it required more leifure than I have had for a long while, as well as becaufe it did not feem requifite for me, having fludied to use almost every where the most usual names with Physicians, and in the vulgar fense.

With refpect to the denomination of diforders, under the names CLASSES, ORDERS, and GENERA, I have observed those rules which are delivered by *Linnæus* in his *Botanical Criticifms* and *Botanical Philosophy*. Whenever any new ideas are to be advanced, new names are also to be affixed, and we have sometimes though sparingly admitted such.

But as it is improper to change medical nomenclature that has been confirmed by long ufe, unlefs for a very good reafon, we have taken care that it fhould not be done every where; which neverthelefs we have obferved *Linnæus* to have often done without neceffity, and *Vogel* has debafed Nofology with new, frivolous, and improper appellations.

That the knowledge of the diforders might be rendered more confpicuous and certain, we have every where affixed the names of other Nofologifts, as well as of the moft celebrated Authors, to the felect appellations. This I have attended to the more particularly, that fludents might know from what writings the knowledge of diforders might be beft obtained.

In reciting the fynonima of fpecies, I have omitted the appellations which Sagar ufed; becaufe he, in omitting the fyno-

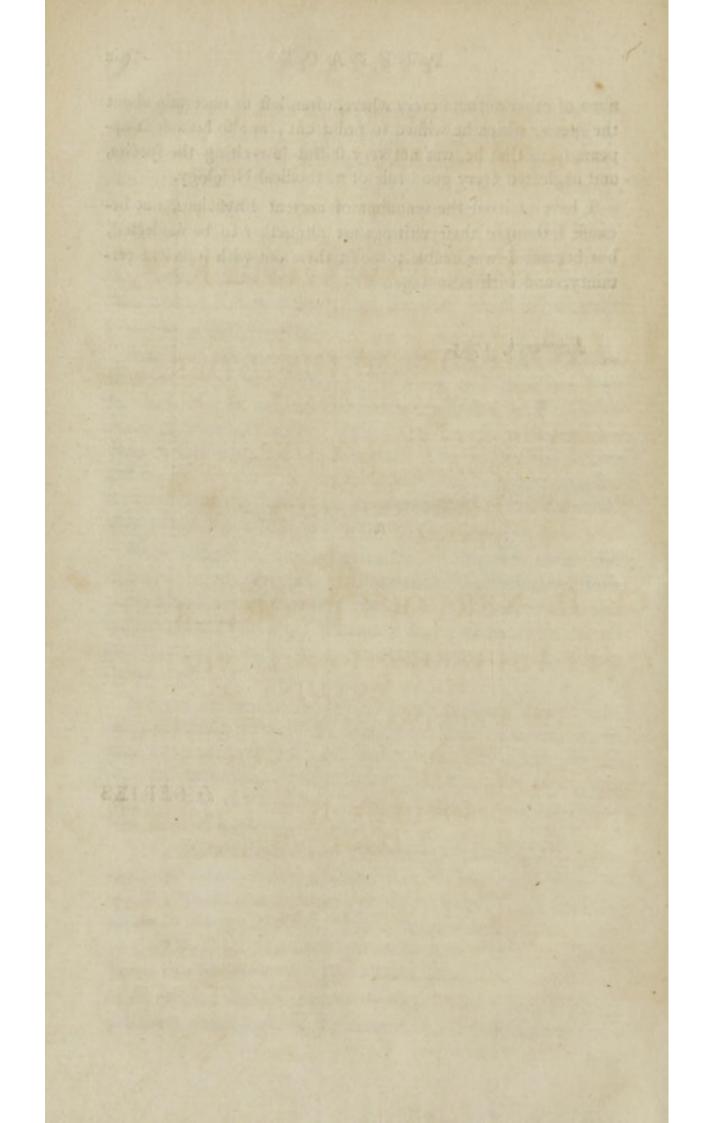

nima

nima of other authors every where, often left us uncertain about the fpecies which he wished to point out; as also because it appears to us that he was not very skilful in reciting the species, and neglected every good rule of methodical Nosology.

I have omitted the fynonima of ancient Phyficians, not becaufe I thought their writings are altogether to be neglected, but becaufe I was unable to point them out with fufficient certainty, and with advantage.

Edinburgh, 1785.

A SERIES

SERIES

A

OF

CLASSES AND ORDERS*.

CLASS I. FEBRILE DISORDERS.

ORDER I. FEVERS.

- II. INFLAMMATIONS.
- III. ERUPTIONS.
- IV. HÆMORRHAGIES.
- V. FLUXES.

CL. II. NERVOUS DISORDERS.

- OR. I. DEPRIVATIONS OF VOLUN-TARY MOTION.
 - II. DEPRIVATIONS OF THE VITAL OR NATURAL ACTIONS.
 - III. SPASMS.
 - IV. DISORDERS OF THE INTEL-LECTUAL FUNCTIONS.

* Linnzus, Vogel, and Sagar, have followed in almost every particular, the inflitution of classes given at first by Sauvages. Eut as many of their classes, viz. A Elemister, n Affections of the respiratory Organs, c Fains, and D Fluxes, are neither natural nor in any manner proper, I could not follow such a plan. Therefore I have published another, more simple, (as it appears to me) and in every thing more proper. It may seem, perhaps, that these are even less perfect, because the distinction will not be every where easy between the disorders of the whole system placed

[22]

CL. III. CACHEXIES.

placed in the three first classes, and those of a particular part, or *local*, placed in the fourth class. This indeed, we grant, may fometimes happen, though rarely. But nothing better now fuggests itself to us, and we are not very folicitous about a perfect institution of classes, for the reasons alledged in the Preface, page viii.

Clafs I. Pyrexies, or Febrile Diforders.

CHARACTER. After a fhivering a frequent pulle, increased heat, injury of many functions, diminished strength, especially of the limbs*.

SYNONIMOUS. Febrile diforders of Authors.

Order I. Fevers.

CHA. A pyrexy without a primary local diforder fucceeding a languor, laffitude, and other fymptoms of debility.

Fevers of authors, Sauvages Cl. II. Vogel Cl. I. Sagar Cl. XII. Critical febrile diforders, Linnaus Cl. II.

* It may be proper to excufe, in fome manner, what may be blamed in us, here and in many following places. Thus it may be faid, that Pyrexies are fometimes feen which were preceded by no chill, and others in which the pulfe was not more frequent, nor the heat greater, than is common in health; therefore the character given is neither true, nor every where to be admitted. I will not deny that Pyrexies of the fame kind have fometimes (though very rarely) been feen; but in admitting the character of claffes to diffinguifh the fpecies, it did not feem necefiary that every particular of the clafs fhould appear in each fpecies; and it is enough if moft of them are prefent in any fpecies.

Every proper character ought to mark a concurrence of many particulars or fymptoms. And Vogel, with the ancients, has improperly placed only an increase of heat, as Sylvius and the celebrated Boerhaave, among the moderns, only the velocity of the pulse; for the character of a Pyrexy or fever. Surely those who pronounce a fever to be prefent, although the pulse be no more frequent than natural, judge from other fymptoms than the quickness of the pulse; which shows the marking of more fymptoms to be necessary in any character.

Moreover, I with it to be obferved, that the velocity of the pulfe alone in no wife always indicates the prefence of a fever; for the pulfe becomes quicker than natural from many external caufes, without diforder or the injury of any of the functions. All poffible attention has been paid to thefe doubts, concerning the character of Pyrexy, in the character given by us. But in the other characters of claffes and orders, it is fearce poffible to be fo fortunate; and in characters in general, if they can be properly admitted to most of the species, I do not regard a few exceptions.— It fatisfies me to have been for the most part useful; to be every where perfect I do not expect.

SECT. I. INTERMITTENTS.

CHA. Fevers arifing from the miasma of marshes; continuing with many paroxysms, an apyrexy, at least an evident remission being interposed, with a perceptable exacerbation, and returning for the most part with chills: only a single paroxysm on any day*.

Intermittents of authors, S. Cl. II. Or. III. L. Cl. II. Or. II. V. Cl. I. Or. I. Sag. Cl. XII. Or. III. Remittents of authors, S. Cl. II. Or. II. Sag. Cl. XII. Or. II⁺.

Exacerbating, L. Cl. II. Or. III. Continued, V. Cl. I. Or. II ‡. Continued periodical, Sennertus. Continued remittents, Boerbaave. Formed from a fhort period, Junker. Continued proportional remittents, Torii. Continuing, Morton.

GENUS I. TERTIAN.

CHA. Similar paroxyfms at intervals of about forty eight hours: with meridian acceffions.

Tertian of authors, S. 88. L. 16. Vogel 2. Sag. Hoffman. Sthal: Cleghorn. Senac.

* Whoever will confider what is to be prefently faid about diffinguishing remittent fevers (which appear continued) from those more ftrictly called continued, will eafily see why I have been under the necessity of changing the character given before of intermittents, as well as of continued fevers.

+ The nofologists Sauvages, Linnæus and Sagar have inftituted a feparate order of *remittent fevers*, as if altogether different from true intermittents; yet not fo properly, if I am allowed to judge. For what are called remittents, proceed from the fame caufe (viz. the miafma of marfhes) as intermittents, both attack epidemically in the fame places and at the fame time of year, and both are cured by exactly the fame kind of remedies : alfo, the fame diforder is very often feen in the fame perfon, which one while exhibits the type of an intermittent, and at another that of a remittent. Therefore diforders which are very like in caufes, cure and type, fhould not be feparated into a different order nor fection.

[‡] Vogel, yet more improperly, has joined all remittents with continued fevers. What we call continued all indeed flow remiffions and exacerbations, but they are juftly to be feparated from remittents and intermittents. They differ very much from many others, as will be prefently flown.

DISORDERS.

A tertian differs

I. An apyrexy being interposed, which varies

- 1. In the duration of the paroxyfm.
- A. A tertian with paroxyfms not exceeding twelve hours.

Legitimate tertian, S. Sennert. Hoff. True tertian, Cleghorn.

- B. Tertian with paroxyfms exceeding twelve hours. Falle or fpurious tertian, S. Clegb. Hoff.
- 2. In the return of the paroxyfm.
- C. Tertian returning daily, with unequal paroxyfms alternately alike.

Double tertian, S. Sennert. Vogel G. 12. Clegborn. Duplicana, L. 18.

D. Tertian returning on alternate days, with two paroxyfms on the fame day.

Duplicate tertian, S. Jones. Riverius.

E. Tertian returning daily with two paroxyfms on one day, and only one on the next.

Triple tertian, S. Clegh. Hoff. Semitertian of the first order. Galen.

F. Tertian returning daily, with a more observable remiffion between the diffimilar and fimilar day, a lefs between the fimilar and diffimilar.

Semitertian remittent. Celfus. Semitertian. Cleghorn^{*}. Semitertian of the fecond order. Galen. Quotidian femitertian remittent. S. Quotidian baftard-femitertian remittent. S.

- 3. In the fymptoms.
- G. Tertian being accompanied with foporous affections.

D

* Perhaps any femitertian may be referred to the remittents; and although I have been unwilling to feparate the affinities, I confess the bounds cannot be fixed fufficiently accurate.

Carotic tertian. S. Werlhof. Hemiplegic tertian. S. Werlhof. Soporous quotidian. Car. Pif. Fever attacking the head. Sydenb.

H. Tertian with spafms and convulsive motions.

Afthmatic tertian. S. Bonetus. Hyfteric tertian. S. Wedell. Febricofe hyfteria. S. G. 135. Epileptic tertian. S. Calder. Lautter. Epileptic quotidian. S. Edinb. Effays, Vol. V. P. II. art. 49. Febricofe ecclampfia^{*}. S. G. 133. Febricofe epilepfy. S. G. 134. Tertian with tetanic affections. Beobacht. Febricofe tetanus. S. G. 122. Stork.

I. With efflorescences of the skin.

Petechial tertian. S. Donat. Lautter. Scorbutic tertian. Wedel. Tertian with rafh. S. Planchon. Clegh. Miliary tertian. S. Walther. Roncal.

K. Accompanied with inflammation.

Pleuritic tertian. S. Valefius. Lautter. Periodical pleurify. S. G. 103. Arthritic tertian. S. Morton. Laut.

4. Being complicated with other diforders.

Scorbutic tertian. S. Etmuller. Tima. Syphilitic tertian. S. Deidier. Tertian with worms. S. Stiffer. Lancis. Pringle. Ramazzini. Van den Bosch.

5. In the caufe of its beginningt.

Accidental tertian. S. Sydenham. Tertian from the itch repelled. Junck. Hoff.

[* Ecclampfia: An acute clonic fpafm of most of the joints or muscles, with an obscuration of the fenses. T.]

+ Indeed we allow no fufficient caufe of intermittent fevers, befides the miafma of marfhes; but as this is not always fufficient to bring about the diforder, unlefs other exciting caufes at the fame time concur to act, we admit thefe exciting powers for part of the caufe.

DISORDERS.

II. Only a remiffion being interpofed*.

Tertian remittent. S. G. 85. Sagar.
Exacerbating tertian. Linnaus.
Exacerbating femitertian. L.
Remittent and continued tertians of authors.
Intervening proportionate tertians, advancing in their progrefs to the continued form. Tort.
Tertian advancing towards a continued. S.
Deceptive quotidian. S.
Quotidiau femiquintan remittent. S.

The chief of the attended tertians of Torti are,

A. Choleric or dyfenteric tertian. Tort. Lautt. Morton.

- B. Tertian with a difcharge fomewhat fanguineous, or of black bile. Tort. This was never feen by Clegborn.
- C. Tertian with pain in the flomach. Tort. Lautt. Quotidian remittent, with affections of the flomach and fyncopet. S. Tertian remittent, with anxiety. S.

Continued fever with anxiety. Vogel.

- D. Diaphoretic tertian. Tort. Tertian remittent with colliquative fweat. S. Diaphoretic tertian remittent. S[‡]. Continued fweating fever. Vogel.
- E. Fainting tertian. Tort. Lautter. Fainting tertian remittent. S. Quotidian remittent with fyncope. S. Humoral quotidian remittent. S. Continued fainting fever. Vogel.
- F. Frigid tertian. Tort. Lautter. Quotidian remittent with spafmodic affections. S.

* Tertian remittents vary fo much in the manner of their type, as well as of their fymptoms, and the different forms of them fo often interchange in the fame perfon, that nothing could be offered, in naming them, that would always hold good. But I have recited what *Torti* called *accompanied tertians*, to wit, those which are attended with fome peculiar and important fymptom. Furthermore, that other things pertaining to this might be underftood, I have enumerated more authors who have written well of tertian remittents, and have exhibited the principal examples of them.

+ The diffinction between the quotidian remittent and the tertian remittent, is often as difficult as between quotidians and double tertians. But quotidians are much rarer than tertians, and the experienced know that the animal accommy is most prone to the tertian type, hence I have referred more quotidian remittents to the tertian remittents. But those who are eye witness may judge.

‡ I am not certain about the type of the fweating fever, which Sauvages has fet down in this place from the defcription of Boyer; and I had rather it fhould be referred to typhus. Quartan remittent depending on an affection of the liver. S.
Car. Pifo.
Spafmodic quotidian remittent. S.

[* That is, changing with other complaints, as with fore eyes, in the cafe cited by the suthor. T.]

+ All medical writers agree that a continued quartan is a very rare diforder; but. Sauvages cites an example of it, from the third volume of the works of *Joelis*. However I have found nothing pertinent in the place cited. But in the 63d page of the fifth volume are thefe words: " The ancients conflituted two fpecies (of quar-" tans) the *continued quartan*, (which I never faw, although feventy years old, " and therefore I judge it to be very rare, or not at all) and the *interpolated*, which is " very frequent."

[‡] Sauvages refers to this place the Fernelian fever of Raym. Fortis, and has it, that the fever was fo called by Fortis, becaufe Fernelius himfelf died with it. But I fee here how Sauvages has erred. For Fortis calls fome fevers Fernelian, not becaufe they were from the genus of intermittents, but becaufe they were accompanied with a diforder of fome of the vifcera, effecially the liver; and Fernelius truly died from an inflammation of the fpleen. But it was never faid by Plantius, (who in the life of Fernelius, prefixed to his works, fpeaks about that diforder,) that this, diforder ever exhibited the type of a quartan.

30

ERRATICS.

We think that erratics belong to the tertian or quartan fpecies*; and therefore we have fubjoined the varieties of them in this place.

SECT. II. CONTINUED FEVERS*.

CHA. Fevers without intermiffion, that do not arife from the miafma of marfhes, yet continuing with remiffions and exacerbations, although not very obfervable: with two paroxyfms on each day⁺.

 Continued. Macbride. S. Cl. II. Or. I. Vogel Cl. I. Or. II. Sag. 664. Boerbaave.
 Continuing. L. Cl. II. Or. I. Stabl. Junck. Sennert.

* Sauvages faid that a fever was continued, " which continued to the end of the ficknefs, without a partial exacerbation, and without accession, not returning oftener than once or twice a month;" and Linnæus, with most of the medical schools, calls fevers of this kind continent. But in a large practice of forty years, I scarce ever have feen, for a certainty, a fever of this kind, and I have obferved most always in the most continued fever, even daily, fufficient manifest exacerbations and remiffions. Vogel feems indeed to agree with me, as is pretty clear from his character of continued fevers, nor does the very experienced De Haen differ, as may be feen in his book about the division of Fevers. Divif. IV. Schol. 1. And Brendelius chiefly confirms our opinion, in the following words, " For all our fevers, " acute and inflammatory, and exanthematic and malignant, and the reft of this " kind, are continued remittents, and evident stages of increase and remission re-" new the fever." Moreover, although in fome fevers, the exacerbations and remiffion are obfcure, and therefore difficult to be obferved ; yet I think they really take place; and for this reafon especially, becaufe each paroxyfm, confifting of a remiffion and exacerbation, always finifhes its courfe within the fpace of a night and a day, in fevers of every kind, that manifeftly confift of many paroxylms; fo that it appears, that the animal acconomy in these things, is subject to some law of a daily revolution. Therefore, it feems very likely that the fame circuit which we have fo often obferved, has a place in fevers of whatever kind; and that no continent fever can be given in the real nature of things.

+ As we have laid it down, that each continued fever is made up with repeated paroxyfms, it may be often doubtful, whether the fever given belongs to the order of continued, or remittent fevers; and that a right judgment may be made, I have now given another definition than heretofore, [as well of intermittents, (to which we think all the remittents of authors belong) as of continued fevers. The definitions now given, may, in most cafes (as I think) be eafily and certainly admitted. But I leave it to be confidered, by any more fagacious, whether our definitions are rightly given, or whether any more proper can be given. We believe every continued fever confifts of two paroxyims each day; but as duplicate paroxyims are likewife feen in fome intermittents as well as remittents, continued fevers cannot be diffinguished by that mark alone. Indeed I wished by no means, that they fhould be diffinguished by that particular only; for in a dubious cafe I think any remittent may be known, either from its caule or its type, or from its rife from intermittents. Moreover, those skilled in these things can see, often plainly, and very frequently (whether or no from the caufe) that continued fevers may often certainly be known by the contagion being indubitably human.

* Nearly the fame division of continued fevers has been used from the times of Galen to the present day; and was with little accuracy, either defined from the degree of putridity, or taken from the duration of the diforder; yet both marks, effecially the latter, which the nosologists, Sauvages, Linnaeus, and Sagar chiefly ufed, is manifettly improper. (See the preface, page xiii, and pages xvi, and xvii.) Therefore I have inflituted another division, taken from the difference of symptoms, and nature of the diforders, as well as I could judge of it; at the fame time, having followed the division of continued fevers, now chiefly used by the English, into inflammatory and nervous But I have avoided these appellations, as being in fome measure theoretical. The names which I have used have long fince been received with physicians; and I care but little, if perhaps I have not used them in the fense commonly received, (in which the physicians themselves were not very consistent) fo as the definitions fubjoined may be cleared from any error.

[The chief difference between a Synocha and Synochus, according to Sauvages, is, that the latter continues about three times as long as the former, and is as much lefs in violence, as it is longer in duration. T.]

Slow nervous fever. Huxham. Edinb. Med. Estays. II. 18. IV 23.
Vogel 48. Macbride. Soc. Royale.
Contagious fever. Lind.
Nervous typhus. S.

* It does not fuit, by any means, to mark diforders differing only in degree, with different names; but as it is cuftomary with phyficians in modern times to call a certain fever by the name of *nervous* fever, as if it was different from every other, yielding in fome meafure to this opinion, I have fet down under the title of *Milder Typhus*, fevers of various authors, which in fome meafure may be referred to the *nervous* of the moderns. But as the limits in this cafe can by no means be accurately fixed, I cannot fay that I have been accurate. It is ftill lefs fuitable to the notion of the ancients or moderns, to fet down among the genera of fevers, any under the name of *putrid* fever. I think that in every typhus a proclivity of the humors to putridity is prefent; but it is only prefent in different degrees, to that a greater or lefs putridity only varies, by no means changes the fpecies. It may be enough to point out under the title of *gravior*, (more oppreffive) thofe fevers efpecially which are called putrid, as will be plain from the annexed appellations of various ' authors.

† This, unlefs I am deceived, is the first example of the appellation Nevewdns, or Nervous, given to fome particular fevers, which the English made use of immediately, but the physicians of other countries not till very lately.

[* Cephalitis. An acute fever, with a dozing delirium, and a motion in the hands, as if involuntary, by which the fick perforappears to be pulling out the nap from the clothes, &c. T.]

+ With Sauvages and Pringle I have placed above the Hungarian diforder or fever, with the tertian remittents; and there is no doubt, but that the diforder called Hungarian, may have often appeared under the form of a remittent; but at the fame time, it is certain that the fever, that arofe at first in the Hungarian camp, and fpread throughout almost all Germany, by means of the foldiers returning from thence, was of the continued kind, (see *Ruland* on the Hungarian diforder, Chap. viii. q. 39.) and we well know, was oftentimes the fame with what now frequently rifes in fome hospitals. Therefore I have thought it also should be affixed to this place.

Complicated

Scorbutic fynochus. S.

Symptomatic,

Synochus from the feabies. S.

* As there are many fevers, neither altogether inflammatory, nor altogether nervous, and therefore not eafy to be referred to Synocha or Typhus; I have here inferted a genus of Synochus, the type of which is frequently feen in thefe regions. Neverthelefs I am unable to fix accurate bounds between Typhus and Synochus; and whether they really are to be regarded as different genera, or being allowed fuch, to which of them the fynonimous of authors are to be referred, I am in doubt. But what are here fubjoined, called species by Sauvages, can very well, as it appears to me, be referred to Synochus.

38

HECTIC.

CHA. A fever returning daily; with meridian and evening acceffions, a morning remiffion, more feldom anapy rexy; frequently with night fweats, and a branny lateritious fediment from the urine*.

Hectic. S. G. 83. L. 24. V. 80. Sag. 684. Med. Tranfact. II. 1.

The fpecies of Sauvages are,

Chlorotic hectic. Syphilitic hectic. Scrophulous hectic. Hectic from calculi. Dropfical hectic. Verminous hectic. Hectic of the emaciated. Hectic from fluxes. Infantile hectic. This wants a character, and appears to be either ricketty, or fcrophulous, or verminous. Evening hectic. This can fcarce be reckoned a diforder.

We are not certain about the

Lymphatic hectic. Baglivi. S. Nervous hectic. Lorry. S.

Or. II. Inflammations.

CHA. Synocha fever; phlogofis (G. VII); or a topical pain, the function of the internal part being injured at the fame time; the blood that has been let, and coagulated, fhewing a white coriaceous fuperficies.

Membranous and parenchematous infiammations. S. Cl. III. Or. I. II. Sag. 605⁺.

* As all Nofologifts have received HECTIC into the number of fevers, I have alfo placed it here with a character; but as I have never obferved a fever of this kind, unlefs fymptomatic, (which can only be enumerated) I have not admitted it into the number of idiopathics. It will be very plain, in most of the examples here recited from what Sauvages calls species, that a hectic is truly symptomatic. See Schol. Sauvag. T 1. p. 319.

+ This division of inflammations into membranous and parenchematous, is altotogether improper; and that in the first place, because it determines the state of the internal parts, which it is not allowable in Nosology to fix; and again, because membraneus Phlogiftic febrile diforders. L. Cl. III. Compound inflammatory continued fevers. V. Acute febrile diforders. Boerbaave. Inflammatory fevers. Hoff. Juncker.

G. VII. PHLOGOSIS*.

CHA. Pyrexy, a rednefs, heat and painful tenfion of the external part.

The fpecies are,

I. Phlogofis with a lively red; a circumfcribed tumor, oftentimes elevated upon the top, often terminating in a fuppuration; frequently with a throbbing pain. (*Phlegmonic Phlogofis.*)

Phlegmon of authors. S. G. 15. L. 39. V. 351. Sag. 229. Macbride. Inflammation. L. 231. Boer. Juncker.

1. It varies in its form.

Boil. S. G. 18. V. 352. Sag. 23. Macbride. Terminthus. V. 381[†]. Papula. L. 275[‡]. Varus. V. 436. L. 270. S||. Bacchia. L. 271§. Gutta rofea. S. G. 4¶. Gutta rofacea. $V. 437^{**}$.

membranous and parenchematous parts are not diffinguished clearly enough; and hence Metritis, which is placed by *Linnaeus* and *Sagar* among parenchematous, *Sauvages* enumerates among membranous inflammations; and in fine, because fome inflammations, as of the liver, may be either membranous or parenchematous.

Neither is the inftitution of an order of mulcular inflammations, with Linnaeus and Sagar, more proper, in which neither is fufficiently accurate. For Linnaeus has badly called a phlegmon, *mufcular*, and Sagar has not done well to refer Cynanche (which is oftentimes membranous, more feldom mufcular) altogether to mufcular inflammations.

* Phlegmon was improperly made use of, in a former edition, for the name of a genus, of which erythema is a species. A new name seemed to us necessary, and nothing more proper offered itself than Phlogofis.

[+ A round, black tubercle, ariting chiefly on the fhins, pouring out from an exulceration a glutinous, ruddy humour. V.

Oslervazioni of Targ. Tozzet.

The purpuro-parotid cynanche (S. fp. 15.) feems to belong to the malignant cynanche, (fpecies 3.) or to the fcarlatina.

The fymptomatics are,

a. From internal caufes.

Epidemic cynanche. S. Anginous quotidian remittent. S. Anginous fever. Huxham. Cynanche prunellat. Exanthematic cynanche. S. Arthritic cynanche. S.

* I am not altogether certain, whether this diforder pertains to the malignant, or the tracheal cynanche; and alfo more often uncertain from the defcription that authors give of these diforders.

[+ So called from using lapis prunellæ in it. T.]

Hepatic cynanche. S. Cynanche from dyfentery. S.

b. From external caufes.

Cynanche from fwallowing a hard fubstance. S. Cynanche from mercury. S.

The cynanche of the thymous gland (S. sp. 7.) is feldom inflammatory, and scarce belongs to this place.

G. XI. PNEUMONIA*.

CHA. Pyrexy; pain in fome part of the thorax; difficult refpiration; cough.

Pneumonic fever. Hoff. Macbride.

The species are,

I. Pneumonia with a pulfe not always hard, being fometimes loft; with an obtufe pain of the thorax; a perpetual difficult respiration, oftentimes impracticable, unless fitting up; a fwoln and purple face; a cough generally moift, often with difcharge of blood. (Peripneumony.)

* Medical writers, of every age down to the prefent day, (and all Nofologists have followed thefe,) have determined that there are two genera of inflammation of the internal breast, to wit, PERIPNEUMONY and PLEURISY. But the moderns have learned from diffection, that the ancients have often been miftaken about the feat of the diforder, and therefore about the difference of these diforders ; and that which the ancients fuppofed had its feat in the pleura of the ribs, later anatomists have found to have its feat more often in the pleura invefting the lungs. Moreover we know, that if indeed these diforders had fometimes different feats, this could not be certainly known from the fymptoms ; and howfoever it might be, it would conduce but little at all to the ufe of medicine, to have diffinguished them, fince if in any manner diftinct, they are in reality nearly related, and often are joined together. Having therefore confidered thefe things, we have thought proper, with the experienced HOFFMAN, to make the phlegmatize of the internal breaft only one genus. Wherefore we have placed this genus under the name of PNEUMONIA. The fymptoms which we have admitted for a character, as they are what may be prefent in every inflammation of the internal breaft, and are the chief in each, feem to be those that rightly constitute a generic character.

I am doubtful, whether different SPECIES really can be inftituted. But being willing to yield a little to the opinions and cuftoms of phyficians, I have given fpecific characters of peripneumony and pleurify, fince they may be diffinguifhed, agreeably to the opinion of phyficians, or from myown obfervation. Yet, in the mean time, I could wifh it to be obferved, that accurate boundaries are frequently not to be fixed between those difference, however diffinct they fometimes may be.

48

Peripneumony. S. G. 112. L. 34. V. 51. Sag. 311. Boerhaave. Juncker.

1. Simple idiopathic peripneumonies,

Pure or true peripneumony of authors. S. Gastric peripneumony. S. Morgagni. Ep. XX. Art. 30. and 31*.

It varies in degree.

Catarrhal peripneumony. S. Baftard peripneumony⁺. Sydenh. Boerhaave. Morgagni. Ep. XXI. 11.-15.

2. Idiopathic peripneumonies complicated with fever¹/₂.

Putrid peripneumony. S. Ardent peripneumony. S. Malignant peripneumony. S. Typhoid peripneumony. S. Peripneumonic quotidian remittent. S.

* I am not fure whether this variety belongs more properly to peripneumony or pleurify.

+ I think that the baftard peripneumony differs from the true, only in degree; and therefore have inferted them here merely as a variety. And I think they really differ in this particular, that in the baftard peripneumony the inflammation is flighter and the afflux of humours more copious than in the true—But as the fymptons of pyrexy, pain, difficult breathing, and cough may attend in different degrees and manner, it is not a matter of furprife that the accounts of authors are fo different, and Morgagni has ftarted a doubt whether this complaint, defcribed by different authors under the title of baftard peripneumony, is always the fame, neverthelefs having confidered all that has been faid on this head, and comparing it with many obfervations from patients, I do not doubt that the diforder defcribed by Sydenham and Boerhaave, under the title of baftard peripneumony, is one and the fame, nor to differ in fubftance from that complaint obferved by Valfalva and Francis Coralio, nor from that obferved by Morgagni and Antonio Valifnerio. See Firft Lines of Practice of Phyfic. Edition 1784. § CCCLXXVI.

[‡] As different diforders may be complicated it may often be doubtful which of them is primary; and I cannot promife that I have judged right in every cafe. In fome places I have ufed my own judgment, in others I have followed Sauvages thinking it in general fufficient to bring these complications in fome way to the obfervation of the fludents.

| Following Sauvages as ufual, I have recited these three following as different, although I look upon them as the same.

3. Symptomatic peripneumonies.

Arthritic peripneumony. S. Exanthematic peripneumony. S. Peripneumony of the phthifical. S. Hydrophobic peripneumony. S. Peripneumony from the painters cholic. S.

II. With a hard pulfe; a pungent pain, generally of the fide, increafed efpecially on infpiration; difficulty of lying on the fide; very painful cough, in the beginning dry, afterwards moift, often with difcharge of blood. (Pleurify.)

Pleurify. S. 103. L. 27. V. 50. Sag. 303. Boerh. Juncker. Paraphrenefis. S. 102. L. 26*. Inflammation of the diaphragm. V. 55. Boerhaave. Diaphragmatis. Sag. 304.

Simple idiopathic pleurifies.

True pleurify. S. Boerhaave. Verna. Zeviani. Morgagni. Wendt. Pleurify of the lungs. S. Zevian. Pleuripneumony. Pleuroperipneumony. Peripneumo-pleurify. of authors. Baronius. Haller. Morgagni. Cleghorn. Miller. Huxham. Pringle. Convultive pleurify. S. Bianch. Hydrothoracic pleurify. S. Morgagni. Dorfal pleurify. S. Verna. Pleurify of the mediaftinum. S. P. Sal. Dev. Friend. Inflammation of the mediaftinum. V. G. 52, Pleurify of the pericardium. S. Verna. Parapleuritis. Zeviani.

* In the diforder which is vulgarly called *Paraphrenitis* or *Paraphrenefis*, and more properly by Sagar diaphragmatis, an inflammation takes place in the pleura extended over the diaphragm which is acknowledged by moft phyficians; it is therefore improperly recited by nofologifts as a Genus different from Pneumonia nor can it be recited for a different fpecies from pleurify as it ufually fhows no fymptoms different from those of pleurify. The Sardonic laugh, and Phrenitic Delerium, which are attributed by moft authors to this complaint, are certainly not always prefent. It is certainly very rare fince I have never feen it, and it often accompanies other fpecies of Pneumonia depending not fo much upon the part of the pleura affected as the degree of inflammation and fever.

Pleurodyne parapleuritis*. S. Diaphragmatic paraphrenitis†. S. Pleuritic paraphrenitis. S. Hepatic paraphrenitis.

Concerning the inflammation of the mediaftinum, pericardium, and diaphragm, fee Morgagni on the caufe and feat of diforders. VIII. 13. XXI. 35. 36. 46. XLV. 16. Van Swieten to Boerhaave. 913.

Putrid pleurify. S.
Pleuritic fynochus. S.
Peftilent pleurify. S.
Miliary pleurify. S.

2. With catarrh.

Catarrhal pleurify. S. Lymphatic pleurify. Bianch.

III. Symptomatic pleurifies.

Pleurify from a wound. S.
Verminofe pleurify. S. Verna. Morgagn. XXI. 43. 44.
Stomachic pleurify. Bianch.
Verminofe pleurodyne. (p. 50) S.
Lacteal pleurify[‡]. S.
Polonic pleurify. S.

IV. Falfe pleurifies.

Hepatic pleurify. S. Panarol. Splenitic pleurify. S.

* A pleuritic pain without acute pyrexy.

+ It differs from the common inflammation of the diaphragm, in having only a fenfe of ftricture inflead of lancinating pains. T.]

[‡ Pleurify of the gravid or puerperal. T.]

The confequents of pleurify are,

VOMICA.

CHA. After a pneumonia, not terminating by any refolution, continued difficulty of breathing and cough, with difficulty of lying on the well fide, and hectic fever.

Vomica. Boerhaave. Juncker*. Pleurodyne vomica. S.

EMPYEMA.

- CHA. After the termination of pneumonia by fuppuration, frequently after vomica, a remiffion of pain, whilft the difficulty of breathing, cough, uneafinefs in lying down, and hectic fever continue; oftentimes with the fenfe of a fluid fluctuating in the breaft, and figns of hydrothorax.
- We have here fubjoined the varieties from Sauvages, although they are not always to be diffinguifhed.

Empyema from peripneumony. S. Empyema from vomica. S. Empyema of the pleura. S. Empyema of the mediaftinum. S. Empyema of the diaphragm. S. Intercoftal empyema. S.

G. XIII. CARDITIS[†].*

CHA. Pyrexy; pain in the region of the heart; anxiety; difficult breathing; cough; unequal pulfe; palpitation; fyncope. Carditis. S. G. 111. V. 54.

* What phyficians call an occult vomica, we call fimply a vomica, and hence our character. But the characters of vomica with *Linnæus* and *Vogel*, only refpect the open vomica, therefore we do not here refer to these authors.

[+ Carditis. Inflammation of the heart. T.]

* Vogel was very right in faying that the fymptoms of carditis were nearly the fame as those of pleurify, only worfe; and Linnæus is of the fame opinion as neither carInflammation of the pericardium. V. 53.

I. Idiopathic.

Spontaneous carditis. S. Senac. Meckel. Eryfipelas of the lungs. Lomm.

II. Symptomatic.

Carditis from a wound. S. Senac.

G. XIV. PERITONITIS*.

CHA. Pyrexy; a pain of the abdomen, increafed when in an erect pofture, without the proper fymptoms of other phlegmafiæ of the abdomen.
If fymptoms could be given, by which the following might be diffinguished they might be fet down for species of peritonitis.

I. Peritonitis, in what is more flrictly called the peritoneum, or in the peritoneum lining the internal abdomen. (Proper peritonitis.)

Peritonitis. V. 62. Lieutaud. Raygerus. Morgagni. LVII. 20.

II. In the peritoneum covering the omentum.---(Omental peritonitis.)

Epiploitis. S. G. 106. Sag. 3087. Omentitis. V. 61. Inflammation of the omentum. Boer. Van. Swiet. Stork. Hulme.

III. In the peritoneum covering the mefentery. (Mesenteric peritonitis.)

Mefenteritis. V. 60. Mefenteric enteritis. S.

ditis nor pericardites are enumerated among the phlogiftic diforders. We certainly know that the pericardium has been inflamed without any other fymptoms than those of peripneumony.

[* Inflammation of the peritoneum. T.]

+ The species of epliploitis of Mesenteritis as well as Peritonitis are here recited, not so much because they are inflammations of the same membrane as because there are no symptoms by which they can be distinguished from Peritonitis properly so called.

G. XV. GASTRITIS*.

Сил. Typhoid pyrexy; anxiety; burning and pain in the epigaftrium, increafed by taking any thing into the ftomach; an inclination to vomit, and an inftantaneous rejection of ingefta; hiccough.

Gastritis. S. G. 104. L. 28. V. 56. Sag. G. 306. Inflammation of the stomach. Boerh. Inflammatory stomachic fever. Hoff.

- I. Idiopathics.
- 1. From internal caufes.
- A. Gastritis with acute pain, vehement pyrexy⁺. (Phlegmonic gastritis.)

Legitimate gastritis. S. Eller. Haller. Lieut. Erysipelatous gastritis. S[‡]. Inflammatory cardialgia. S. Tralles.

2. From external causes.

Gastritis from poifon. S.

B. With flighter pain and pyrexy, an eryfipelatous rednefs appearing in the fauces. (Erythematic gastritis.)

II. Symptomatics.

Exanthematous gastritis. S. Hernial gastritis. S. Sternocostal gastritis. S. of this we are uncertain.

G. XVI. ENTERITIS.

CHA. Typhoid pyrexy; a pungent, ftretching pain, twifting about the navel; vomiting; obftinate coftivenes.

[* Inflammation of the Romacio. T.]

+ I am very certain from many observations that there are two species of gastritis, as well as of enteritis: one phlegmonic, the other erysipelatous; and therefore I have inferted them here, altho' it must be allowed, that the symptoms of erysipelatous gastritis, and more especially of erysipelatous enteritis, are often obscure and uncertain. But I wish to give a caution about it for future enquiry.

‡ What Sauvages here calls eryfipelatous, appears to be altogether phlegmonic. [| Inflammation of the inteflines. T.]

Enteritis. S. G. 105. L. 29. V. 57. Sag. G. 307. Inflammation of the inteffines. Boerh. Inflammatory fever of the inteffines from the melentery. Hoff.

I. Idiopathics.

The fpecies are,

1. Enteritis with acute pain, vehement pyrexy, vomiting and coffiveness. (Phlegmonic enteritis.) Iliac enteritis. S. Cholicy enteritis. S. Boerb.

2. With flighter pain and pyrexy, without vomiting, and with diarrhœa. (Erythematic enteritis.)

Symptomatic fpecies.

Flatulent enteritis. S. Enterocelic enteritis. S.

G. XVII. HEPATITIS*.

CHA. Pyrexy; tenfion and pain of the right hypochondrium, often pungent like a pleuritic pain, more often dull; a pain in the clavicle and top of the right fhoulder; difficulty of lying on the left fide; dyfpnœa; dry cough; vomiting; hiccough t.

Hepatitis. S. G. 113. L. 35. V. 58. Sag. G. 312. Boerb. Hoff. Junck. Macbride.

It varies.

- 1. Acute. To be known by the fymptoms mentioned in the character.
- II. Chronic. This often fhows no fymptoms by which it can be diffinguished; yet it may some-

[* Inflammation of the liver. T.] + Sauvages, as well as Sagar, has placed a yellowifk colour of the face among the fymptoms of hepatitis, and the latter has added yellow bilious urine and a yellownefs of the ferum and cruft of the blood drawn. But I think Linnaus and Vogel acted more properly in omitting these symptoms of regurgitation or absorption of bile; for they do not always attend, but are very rare.

times be fufpected to be prefent, by fome caufes of hepatitis preceding—by a fenfation of fulnefs and heavinefs in the right hypochonder—by pains more or lefs pungent felt now and then in that part—by a fenfation of pain from preffing the the right hypochonder, or by lying on the left fide—and finally, by a flighter pyrexy attacking now and then, with the fymptoms mentioned.

The species from Sauvages are,

Eryfipelatous hepatitis. S*. Pleuritic hepatitis. Bianc. Hepatic pleurify. S. Cyftic hepatitis. S†. Obfcure hepatitis. S.

A fecondary diforder is improperly enumerated as a fpecies.

Suppurating hepatitis. S. Chefton. Hepatalgia || from an abcefs. S.

G. XVIII. SPLENITISS.

CHA. Pyrexy; tenfion, heat, tumor, and pain upon preffure of the left hypochonder; without figns of nephritis.

Splenitis. S. G. 114. L. 36. V. 59. Sag. G. 313. Junck. Macbride. Inflammation of the fpleen. Boerb. Van Swiet.

* I think that phyficians have had wrong ideas about erythema or eryfipelas, of the vifcera, as they term it. In my opinion, an erythema can only affect those internal furfaces which are covered by an epithetion and villous coat, which is a continuation of the external epidermis. Therefore I cannot allow an eryfipelas of the lungs, which LOMMIUS has wrote about in Book II. of his Observations. Nor do I think that any hepatitis can be called eryfipetatous, as is done here by Sauvages; and in my opinion the hepatitis here defcribed by AMATUS, was truly phlegmonic.

+ I do not doubt but that an inflammation of the gall cyft, or of the ductus choledochus, may arife from contufion or other caufes; but I do not know by what fymptoms it can be afcertained, except in one cafe, viz. In the jaundice, with an acute pain in the epigaffric region, apparently from a calculous flicking in the duct. chol. an inflammation has been known to take place frequently in the cyftic duct, and it is always to be guarded againit.

Pain of the Liver without Fever.

[Inflammation of the Spleen. T.]

Only one fpecies is recited.

Confequent of rheumatifm.

ARTHRODYNIA*.

CHA. After the rheumatism, violent frain, or dif. tortion; pains of the joints or muscles, increased efpecially by motion, more or lefs flying, leffen. ed by the heat of the bed or other external heat, weaknefs, fliffnefs and an eafy frequent difpolition of the joints to grow cold; no pyrexy, for the most part no tumor.

Chronic rheumatifm of authors.

Lumbago and ischias are fometimes acute diforders, but as they are more often chronic, they belong for the most part to this place.

London. Med. Obf. IV. 5.

G. XXIII. ODONTALGIA⁺.

CHA. A rheumatism, or arthrodynia of the jaws, from a caries, of the teeth.

[* Pain in the joints, or chronic rheumatifm.] * If the chronic rheumatifm is altogether a different genus from the acute, as indeed fome conclude, it ought to have a fimple name as every genus has, and I have put fuch on one to it, and with propriety as I think ; moreover as I have always looked on it as a confequent of acute rheumatifm (or of rheumatifm fimply fpeaking) and as the limits between the two deforders are often, hardly to be determined, I could fcarce fet down chronic rheumatifm for a different genus; but the perfect chronic rheumatism, turns out different in its nature, and demands fuch difference in treatment, that it justly deferves to be diffinguished by another name, and if any one wifhes to place it as a different genus he may for me.

[+ Tooth-ach. T.] + In a former edition of our nofology I have admitted odontalgia for a species of rheumatism, and have fet it down as such ; but as I have observed, it has a quite

Odontalgia. S. 198. L. 45. V. 145. page 157. Junk. Mach. Odontalgia or odontalgic rheumatism. Hoff.

The varieties from Sauvages are,

Carious odontalgia. S. Scorbutic odontalgia. S. Catarrhal odontalgia. S. Arthritic odontalgia. S. Odontalgia of the gravid. S. Hyfteric odontalgia. S. Stomachic odontalgia. S.

G. XXIV. PODAGRA⁺.

CHA. A hereditary diforder, arifing without any evident external caufe, but preceded for the moft part by an unufual affection of the ftomach; a pyrexy; pain chiefly afflicting a joint, and for the moft part of the great toe, invariably of the feet and hands, returning at intervals, and often alternating with affections of the ftomach and other internal parts.

Syn. Podagra. V. 175. Boerb.
Podagrial fever. V. 69.
Arthritis. S. 183. L. 60. V. 139. Sag. 142. Macb.
London Med. Obf. VI. 20.
Podagrial and true arthritic pain. Hoff.
Spaffico arthritic affections. Funck.

different caufe from any other rheumatifm, viz. an acrimony irritating the fenfible membranes, I could wifh it have a genus alfo, different from rheumatifm, and therefore I have placed it here as a different genus.

Although the tooth-ach fometimes appears to be excited by cold and other irritations, I think that a caries of the teeth inducing an inflammatory diathefis is always prefent. Perhaps there are other diforders that arife from the irritations of acrids which are very much like the rheumatifm; but we are not certain about thefe, however if the nervous ifchias really does exift according to the idea of Cotunni we might have another example of rheumatifm from an acrimony irritating the nirves; but neither the phenomena related by Cotunni, nor the method of cure, nor the diffections, prove to me that a diforder of this kind ever exifted; therefore I have neither here nor any where elfe enumerated the nervous ifchias of Cotunni among the frecies of rheumatifm.

[+ The Gout. T.]

+ I have rejected the name of arthritis as being ambiguous, and have used with the celebrated Boerhave the name of Podagra, as marking the chief type of the diforder.

- Perhaps Sauvages, in his unufual way, rightly affirmed that there was only a fingle fpecies of this diforder; but the following varieties may be marked.
- I. Podagra with an inflammation of the joints fufficiently violent, continuing for fome days, and receding, by little and little, with tumor, itching and defquamation of the part. (Regular gout.)

Podagrial arthritis. S. Rachealgic arthritis. S.* Summer arthritis. S.

II. Podagra, with atonia of the flomach or of fome other internal part, and either without the expected or accuftomed inflammation of the joints or with only gentle and flying pains of the joints and often fuddenly alternating with dyfpepfy or the fymptoms of atony. (Atonic gout.)

Melancholic arthritis. S. Winter arthritis. S. Chlorotic arthritis. S. Aftmatic arthritis. S.

- III. Podagra, with fudden receffion of the inflammation of the joints and quickly followed by an atony of the flomach or other internal part. (Retrocedent gout.)
- IV. Podagra, with inflammation of an internal part, either not preceding or preceding, and a fudden receffion of the inflammation of the joints. (*Mifplaced gout.*)

The gout is fometimes joined with other diforders.

Rheumatic arthritis. S. Scorbutic arthritis. S. Syphilitic arthritis. S.

* I place here as ufual the varieties of Sauvages, or what he calls fpecies; but as his fpecies are not always well defined, as well as becaufe the regular gout and the atonic are not always feparated by him, 1 do not engage to be every where accurate in placing his fpecies in their proper places.

62

The following appear by no means to belong to the gout.

Ricketty arthritis. S. American arthritis. S. Bahama arthritis. S.

G. XXV. ARTHROPOUSIS*.

CHA. Deep, obtufe, durable, pains of the joints or of the muscular parts, often after a contusion; little or no tumor and that diffused, no inflammation, pyrexy at first flight, at length hectic, and at the fame time a suppuration of the part.

Ploadic lumbago. S. Fordyce. Cheflon. Apostematous lumbago. S. Lumbago from ulcer of the bones. S. Ifchias from abfcefs. S. Diforder of the hip. Dehaen.

Or. III. Eruptions+.

CHA. Contagious diforders, affecting a perfon only once in the courfe of his life; beginning with fever, at a certain time inflammations appear, often numerous, fmall, difperfed over the fkin.

Syn. Exanthemata. Sag. elt. Exanthematic inflammations. S. Cl. III. Or. I. Exanthematic diforders. L. Cl. I. Or. II. Exanthematic fevers. Vog. Cl. I. Or. II.

* As I believe that neither rheumatifm nor gout ever go into fuppuration, here is certainly a diforder different from both, therefore to be put down as a different genus. I with the character given to diftinguith it from rheumatifm, arthrodynia (page 60) from an ulcer of the bones and phlogofis (G. VII.) may be every where properly admitted.

[+ Exanthemata.] ‡ It is fomewhat doubtful, with what character this order is to be properly defined, and what limits are to be circumferibed to it; for if only eruptions that arife from fpecific contagion, are to be looked upon as exanthemata and diforders of this order. those eruptions which arise from no specific contagion, but only depend on a certain flate of the fever, are by no means to be enumerated among the genuine exanthemata. Thus Peterbia is omitted by us and perhaps milliaria (G. XXXII) as well as Aptha fhould have been omitted, but again, as most exanthematas are contagious and only affect a perfon once in life, it appeared altogether proper that thefe

G. XXVI. VARIOLA*.

- CHA. Contagious fynocha with vomiting and pain upon preffing the epigaftrium.
- It begins on the third day, and on the fifth the eruption of phlegmonic papul is finished, which in the space of eight days terminate in suppuration, and at last in scabs, often leaving depressed cicatrices or pits in the scale.

Syn. Variola. S. 92. L. 3. S. 290. Variolous fever. V. 35. Hoff. Variol. Boerhave. Junck.

The species are,

I. Small-pox, with pustules distinct, circular in their limits, turgid; the fever ceasing immediately the eruption is done. (Distinct small-pox.)

Diftinct benignant fmall-pox. S. Regular diftinct fmall-pox. Syd. Diftinct fimple fmall-pox. Helvet. Diftinct complicated fmall-pox. S. Helv. Anomalous fmall-pox. Syden. Diftinct dyfenteric fmall-pox. S. Syden. Diftinct vefficular fmall-pox. S. Diftinct cryftalline fmall-pox. S. Diftinct watery fmall-pox. S. Mead. Diftinct filliquous fmall-pox. S. Friend. Diftinct milliary fmall-pox. S. Helvet.

fhould be diftinguished from eruptions that are not contagious, which may frequently attack a perfon in the courfe of his life. The fmall-pox and eryfipelas, therefore are not fo properly placed under the fame order. In fine, as eruptions may not always be of the fame form in any diforder, nor always appear on any particular day of the diforder, it may be juftly doubted whether this difeafe is to be enunumerated among exanthemata; and therefore I am dubious whether the plague fhould be referred to the order of fevers or of eruptions: perhaps all these things might be canvaffed with advantage. I can fearce dare to determine certainly about them, but what appeared most proper to me, may be seen plainly in the character which I have given it; but as a character of the order is not altogether neceffary to the characters of genera and species, I have in some manner neglected this, and have recited the diforders accounted by most noslogists for exanthemata.

[* Small-pox.]

II. Small pox with numerous pufules, confluent; irregular in their limits, flaccid, little elevated fever continuing after the eruption. (Confluent (mall pox.)

It varies in degree.

Benignant plague. S. Marfeilles plague. Cl. 3. Treatife on the P. p. 41. cl. 5. T. p. 228.

* In the fpace of forty years I have obferved the fcarlatina fix or feven times epidemic in Scotland, and in every cafe, the diforder was of that species which Sauvages calls anginous fcarlatina. We have called it cynanche fcarlatina, becaufe it was almost always accompanied with ulcers of the internal fauces. As the diforder fometimes nearly refembles the malignant cynanche in most of the patients, and I have never seen the simple epidemic scarlatina in every patient, I have often doubted whether every fcarlatina was not a cynanche, and always nearly the fame diforder as the malignant cynanche, mentioned above among inflammations. But many reasons prevent us from giving up to this opinion, for certainly a fimple fcarlatina, or one without attending cynanche has at times been obferved by the very fagacious Sydenham and others, and it is allowed that fome contagions produce the fcarlet efflorefcence of the fkin, and this diforder without any cynanchecal affection. But if at any time there may be also a contagion affecting the fauces, which for the most part produces a fcarlatina alfo, this appears to me to prove nothing more, than that it is of a nature, which is capable of affecting the fauce and fkin at the fame time; but yet they may fo differ, that one has a greater tendency to affect chiefly and primarily the fkin, the other the fauces. I think that there is fuch a difference exifting in the contagion of the fcarlatina and the malignant cynanche.

In the epidemic diforder which I have taken for fcarlatina, there were fome patients without any cynanche, and in almost all those who had a cynanche, it turned out very moderate, the ulcers of the tonfils being small, not spreading, and for the most part pouring out good pus, and the diforder was feldom fatal. But in the malignant cynanche, all the fick were feized with cynanche in the beginning of the diforder, and the ulcers always turned out malignant, so the diforder, and the diforder shows turned out malignant, so the diforder, and the ulcers always turned out malignant, so the difference of the diforder shows turned out malignant for the difference of the dif

[+ The plague. T.]

* Difputes have often arifen among phyficians about the character of the plague, nor are they likely to end, fo that we may give a chapter that will be admiffible in general; and it may be enough to have given one which can be admitted in most cafes. Remittent plague, S.

G. XXXI. ERYSIPELAS*.

CHA. Synocha of two or three days, for the most part with fleepinels often with delirium. In fome part of the fkin, more often in the face an erythematic Phlogofis. (G. 7. fp. 2.)

Syn. Eryfipelas. S. 97. L. 10. Sag. 296. Eryfipelaceous fever. Vog. 68. Eryfipelatous fever. Macbride.

The species are,

I. Epryfipelas with erythema, extending rednefs occupying a large fpace, and fome places of it going into large vefficles. (Vefficular eryfipelas.)

Rofe Eryfipelas. S. Sen. Eryfipelatous fever. Syden. Typhoid Eryfipelas. S.† Peitilential Eryfipelas[‡]. S.

[* St. Anthony's fire. T.]

* The word Eryfipelas is made use of by medical writers, for Erythematic Phlogofis as well as for Eryfipelatous fever, but Sauvage properly chooses to call that which has no fever except a fymptomatic, joined with it, Erythema, and only the Exanthematic fever, which is followed by an Erythema, Eryfipelas.

Linnæus perhaps more improperly has Eryfipelas for a chief type of Exanthemata; but it may be doubted whether Eryfipelas can be properly enumerated among Exanthematas.

+ This appears to be only a variety of Vefficular Eryfipelas differing folely in degree.

[‡] This and the following appear to be no more than fymptomatic fevers with Erythema.

Contagious Eryfipelas. S.

II. Eryfipelas with an erythema from numerous pimples, occupying, especially, parts of the trunk of the body, and going immediately into phlyctenae or small vefficles. (PhlyEtenoust eryfipelas.)

G. XXXII. MILLIARIAT.

CHA. Synochus with anxiety, frequent fighs, rancid fweat, and pricklings of the fkin.

On an uncertain day of the diforder, fmall red diftinct pimples break out thick all over the fkin, except on the face, the apices of which, after one or two days, difcover very fmall white puftnles of fhort duration.

Syn. Milliaria. L. 7.

But it is to be here remarked that the Eryfipelas often brings with it fomething of a putrid gangrenous difposition, and I do not doubt but that the Eryfipelas, which in this region is for the most part accompanied with a phlogistic diathefis, is fometimes attended with a putrid diathefis, expecially in the hotter countries; and perhaps we might have pointed out two species of Eryfipelas, to wit, the inflammatory and the putrid; but we are not sufficiently certain about the latter.

+ 1 doubt whether this fpecies can be properly referred to the fame genus with vefficular Eryfipelas.

[‡ Milliary fever. T.]

It is fharply difputed of late by phyficians, and efpecially those of Vienna, about the disposition of the milliary disorder; and in the first place it is earnestly enquired, whether it is ever idiopathic, or whether it is always fymptomatic. I cannot dare to affirm that it is never idiopathic, contrary to the opinion of phyficians from the middle of the 17th century down almost to the prefent day, and against the ideas of some respectable phyficians of the prefent time; but as I know experience in this cafe to be often fallacious, and most phyficians to have been a fervile herd of imitators, I am forced to doubt; and howfoever it may be, I know for a certainty that the milliary diforder has been for the most part symptomatic. From frequent observation of my own for many years, I have never feen it contagious, nor manifestly epidemic, although fometimes it has been more frequent than ufual. It is fometimes joined to fome other disorders inflammatory as well as putrid; yet I have not observed it to arise in any except a hot regimen and sweats preceded, and in many cafes by a temperate regimen and avoiding fweat, the disorder has been altogether prevented when it was otherways expected. I have known it divers times, raised artificially in fome parts Milliaris. S. 95. Sag. 295. Milliary fever. V. 37. Red purple fever and white milliary. Hoff. Purple or milliary fever. Junk. The FRIESEL of the Germans. G. Welch.

The chief writers on this diforder are,

Hamilton, Fantonus, Allioni, Fordyce, Fischer, Dehaen, Mat. Collin, Baraillon, Gastellier, Varnier.

These belong (if any are allowed) to the idiopathic.

G. XXXIII. URTICARIA*.

of the body. And in fine, becaufe the matter, (if any be allowed), of most specific contagions, by no means refembles the disposition of the milliary; becaufe that does not caufe an eruption on a particular day of the disorder, as well as becaufe it is not confined to affect a perfon only once in life, but may do it frequently. Therefore I very much doubt whether the specific nature of this matter is fuitable to produce any idiopathic diforder. I rejoice that I have with me the opinion of the experienced and skilful C. White, on this point. See White, on the management of lying-in women.

But, as I readily acknowledge that I may have been deceived in this thing, left I deceive others at the fame time, I have here recited Milliaria among Exanthemata, and I have offered a character, which any one, who accounts this diforder idiopathic, would have given; leaving this point to fome more fkilful, to be decided.

[* Nettle fever. T]

* There is a diforder called *n* ttle rafb by the English, which some understand to be Urticaria; but the nettle rafh, as described by Herberden, in the transactions of the royal medical society of London, (such as I have often seen myself,) is altogether different from the Urticaria of noslogists: as it is chronic, without sever, and perhaps belongs to impetigines, or depravations. CHA. Quotidian remittent fever.*

On the fecond day fpotted redneffes refembling the fting of nettles, almost disappearing in the day, returning in the evening with fever and after a few days going altogether into a very small scarft.

Syn. Nettle fever. V. 40. Uredo. L. 8. Nettle purple fever. Junk. Nettle fcarlatina. S. Another fpecies of Eryfipelas. Syd. Scarlatina fever, and nettle fever. Mefery.

G. XXXIV. PEMPHIGUS.⁺

CHA. Contagious typhus.

On the first, second, or third day of the diforder, vefficles of the fize of a filbert nut, in various parts, remaining for many days, at length pouring out a thin ichor.

Syn. Pemphigus. S. 93. Sag. 291. Morta. L. Bliftered fever. V. 41.

The species from Sauvages are,

* I have faid this is contagious, in a former edition, but I do not know it to be fo from my own experience, and I cannot now find from what authority I before mentioned it to be contagious.

+ This character is written according to the fentiments of others rather than myfelf, for I have feldom feen this diforder, and have never obferved it epidemic.

‡ [Vefficatory Fever. T.]

& As I have not yet feen a Pemphigus which I can look upon as an Exanthemata, and I can find only very little in the writings of phyficians about this diforder. It was neceffary to take almost every thing, that is faid in our Nofology, from Sauvages. I have therefore followed him, but could have willingly omitted this diforder altogether, for almost every thing faid by him about it, appears to me dubious, obscure, and ambiguous. What he has from his own observation or from C. Pifo. may be altogether credited, but what he took from Ch. Seliger, (a man of weak judgment,) appears to me to be worthy of little attention and what are brought from the relation of D. THIERRY, altogether exceeds my faith : Wonderful ! " Bezoardic acid given by a certain phyfician, in a very destructive diforder, Should make all well, whilf force one escaped that was trufted to other physicians." In fine, concerning a very doubtful diforder, defcribed dy D. Langhans, in the AZ. Helvet. I would not conclude any thing until other observations have elucidated the matter. Perhaps that diforder was nothing more than a Cynanche Maligna. and at the moft, it appears very likely that every Pemphigus is a fymptomatic diforder. A little while after this was printed, my colleague, F. Horme, fhewed me a man with a flight fever, on whom there arole, first on his arm, and at length fucceffively on every part of his body, vefficles the fize of a filbert, and after two or three days they fell away, having poured out a little ferous humor. But this fever shewed no peopliar disposition or type, and foon disappeared, being by no means contagious.

I. Idiopathi.

Plethoric Hæmorrhagy. S. Hoff.

It varies in the time of life. K

* As petecheæ may appear in any fevers either intermittent or continued or in any exanthemata or fluxes, provided there be fome ploclivity in thefe diforders to putridity ; I would look upon thefe, rather as fymptomatic efflorefcences, than idiopathic exanthemata.

+ As the clafs of Fluxes with Sauvages and Sagar, or of profluvia with Vogel, or of evacuating diforders with Linnæus, is not at all natural (as it joins diforders altogether unlike in appearance and nature,) I have thought it improper, and therefore would not admit fuch a class in our nofology, and fuppose that the diforders there recited should have been in another place. Those which are always accompanied with fome pyrexy are furely to be placed under the clafs of pyrexies, and therefore the bæmorrhagies which they call active, are placed here.

I follow Hoffman, who treats on Hæmorrhagies of this kind immediately after fevers, and gives his reason in the preface, to wit, because the phænomena being well confidered, and the reasons drawn more carefully, it will appear, that eruptions of blood proceed from nearly the same (only more imperfect) causes as what fevers arise from."

[‡ Bleeding at the nofe. T.] ‡ Linnæus has rightly advifed, in the Botanical Criticifms, as well as in the Botanical Philosophy, No. 233. "The generic name should be omitted with the common nomenclature of the classes and natural orders." Yet he makes a breach of this rule, when he uses for a generic name, the term of hæmorrhagy, which is frequently used for an appellation of classes and natural orders. Hippocrates himfelf, is not to be imitated when he errs. Therefore the name of this genus required to be changed, and I have taken one from Vogel, which is here made ufe of.

- I think that the ferous menorrhagia or leucorrhoea from a local fault fhould be referred to local diforders.
- The following hemorrhagies for the most part, if not always are lymptomatics.

STOMACACE. S. 241. L. 176. V. 85. Sag. 176.

* Perhaps the learned reader may here wonder why I have neither referred our fludents to the *treatife on the whites* of the learned Parifian Raulin, nor recited the various (pecies pointed out by that author. I leave it to judges whether I have done right or not, but this was the reafon why I did not do it. There appeared to me many things in that ingenious book more nice than true; and I cannot conceive either, how the whites can arile from an affection of any other part than the uterus or that they do at all. It is not reafonable to me judging according to my obfervations, perhaps they may be too few! Therefore I had rather refer our readers to the author himfelf than to exhibit here a doctrine not well underflood and perhaps, more imperfectly delivered to us.

+ A number of glands about the mouth of the womb, were formerly called gladulæ nabothi. It is a fymptom of fcurvy, or of an affection of the mouth, or of an external injury.

The species from Sauvages are,

1. Scorbutic flomocace.

2. Univerfal stomacace.

3. Stomacace from hemorrhous.*

4. Purulent ftomacace.

HÆMATAMESIS. S. 242. L. 184. V. 89. S. 177.†

For the moft part it is vicarious of an ufual hemorrhagy, or it is fymptomatic of a local injury of the flomach, or of the black diforder, or in fine of external violence. But as I reckon it proper to recite moft all the fpecies of Sauvages I chofe to put them down in the following order.

Plethoric. Catamenial. - Hæmatemefis. Hemorrhoidal. Hematemefis from the fpleen. from the liver. from the pancreas. Black. Hæmatemefis Scorbutic. Hematemefis from an anuerifm Carnous bloody hematemefis. Traumatic hematemefis. Hematemefis from a leach. Choleric hematemefis. Hematemefis from poifon. Hypocritical hematemefis.

Sauvages' arrangement.

Hæmatemefis. 1. Ple

- 1. Plethoric.
- 2. From anuerifm.
- 3. Traumatic.
- 4. From a leach.
- 5. Catamenial.
- 6. From the pancreas.
- 7. From the fpleen.
- 8. Scorbutic.

* Hæmorrhous, a ferpent called Curucucu. by Pifo. [+Vomiting of blood. T.]

9. Chlorotic.
 10. Hypocritic.
 11. Carnous—Bloody.
 12. Black.
 13. From the liver.

14. From poifon. HEMATURIA. S. 243. L. 198. V. 92. Sag. 178. Ed. Efs. V. 72.

(Piffing of Blood.)

It is for the most part a fymptom of stone in the kidneys, fometimes of putrid fevers.

The fpecies according to Sauvages, are,

Spontaneous Hæmaturia. Catamenial do. Calculous do. Black do. Purulent do. Violent do. do. Traumatic Hæmorrhoidal do. Ejaculatory do. Dripping Hæmaturia. Hæmaturia in exanthematics. Spurious hæmaturia Deceptive do. Hæmaturia from transfusion. from worms. Do.

CYSTERRHAGIA. V. 93. (Piles in the Bladder.)

For the most part a fymptom of a stone in the bladder, more feldom of any other diforder of that organ.

OR. V. Flux

Fluxes*.

CHA. Pyrexy, with an increafed fecretion, natuturally not fanguinous.

L

Syn. Profluvia. V. Cl. II.

[* Profluvia. T.]

* For the fame reafon that I have placed hæmorrhagies in the clafs of pyrexies, I have recited fome febrile profluvia in the fame clafs. A catarrh, indeed, from the attending pyrexy and inflammatory diathefis is nearly allied to *inflammations*, and dyfentery is not only always attended with pyrexy, but it alfo differs in many refpects from every other flux,

GENERA OF

G. XL. CATARRHUS.*

CHA. Pyrexy, often contagious; an increafed fecretion of mucous from the glands of the membrane of the nofe, at leaft, efforts to exerct it.

Syn. Catarrhus. S. 186. V. 98. Sag. 145. Coryza. L. 174. V. 100. Sag. 196. Rheuma. S. 149. Sag. 225. Cough. S. 142. L. 155. V. 205. Sag. 249. Junk. Catarrhal and rheumatic cough. Hoff.

The following genera, to be referred to this title, are for the most part fymptomatic.

Anacatharfis. S. 262. Sag. 198. Conftant expectoration. Expectoratio. L. 179. Expectoration. Raucedo. L. 146. Raucitas. V. 252. Gravedo. L. 42. Heavy pain in the forehad.

Sp. 1. Catarrh from cold.

Benignant catarrh. S. Pectoral catarrh. S. Catarrhal Coryza. S. Phlegmatoreal coryza. S. Salmuth. Junk. Morg. XIV. 21. Febricofe coryza. S. Catarrhal cough. S. N. Rofens. Catarrhal rheuma. S. Catarrhal rheuma. S. Catarrhal quotidian remittent. S. Catarrhal remittent fever. Macb. Quotidian remittent with hacking cough. S. Catarrhal cephalalgia. S.

Sp. 2. Catarrh from contagion.

Epidemic catarrh. S. Epidemic rheuma. S. Catarrhal fynocha. S.

Thefe are inftances of this,

Salient Tableau on epidemic catarrh. 1780.

Among the fpecies of catarrh and coryza in Sauvages, the following are fymptomatics.

Rubeolous catarrh. Exanthematic cough. Variolous coryza. Virulent coryza. Purulent coryza. Accidentabcough. Guttural cough. Zerolaryngeal cough. Verminous cough. Dry cough. Calculous cough. Phthefical cough. Hæmoptical cough. Cough from polypus. Cough from dentition. Humid ftomachic cough. Dry ftomachic cough. Hyfteric congh. Cough of the gravid. Hepatic cough. Rheumatic cough. Arthritic cough. Cough of metal workers.

G. XLI. DYSENTERY.

CHA. Contagious pyrexy, frequent mucous or bloody stools, the alvine fæces, for the most part retained, gripes, tenesmus.

Syn. Dyfenteria. S. 248. L. 191. V. 107. Sag. 183. Hoff. Junk.

I have known only one fpecies, the names of which with Sauvages, are,

Epidemic dyfentery. S. Sydenham. Helwich. Degner. Huxham. Cleghorn. Grimm. Baker. Akenfide. Stark. Zimmerman. Zurich. Camp dyfentry. S. Rammazini. Pringle. Monro. Equinoctial dyfenterey. S. Bont.

It varies.

1. Being accompanied with worms.

Verminofe dyfentery. S. Huxh. Pring. Monro.

2. Attended with discharge of fleshy or sebaceous lumps.

Carnous dyfentery. S. Carnous diarrhoea. S. Wedelius. Wagner. Morgany. XXXI. 17. 24. Pringle. Monro.

3. Being attended with an intermittent fever.

Intermitting dyfentery. S. Morton. Cleghorn. Lautter.

4. Without blood.

White dyfentery. S. Willis. Sydenham. Morgany Ep. XXXI. 11. Pringle. Monro. Roederer.

5. Being accompanied with milliaria.

Milliary Dyfentery of Gruberus. S. Dyfenteric exanthematic fever, epidemic at Zurich 1747.

Thefe are fymptomatics.

Spontaneous benignant dyfentery. S. Catamenial dyfentery. S. Dyfentery of the gravid. S. Atrabilliary dyfentery. S. Syphilitic dyfentery. S. Scorbutic dyfentery. S. Polonic dyfentery. S. Dyfentery from vomica of the myfentery. S.

Thefe belong to diarrhoea.

Parifian dyfentery. S. Dyfentery from cathartics. S.

Cl. II. Nervous Diforders*.

CRA. Senfe and motion injured, without an idiopathic pyrexy, and without a local diforder.

Or. I. Diminutions of voluntary motion. (Comata.)

CHA. Voluntary motions diminished, with sleep, or injury of the fenses.

Syn. Comata. S. Cl. VI. Or. 2. Sag. Cl. IX. Or. 5. Soporofi. L. Cl. VI. Or. 5. Adynamiae. Vog. Cl. VI. Refolutions of the nerves. Hoff. Soporofe affections. Hoff. Defects of vital motions. Junk.

G. XLII. A POPLEXY.

CHA. Almost every voluntary motion diminished, with fleep, + more or less profound, the action of the heart and arteries remaining.

Syn. Apoplexia. S. 182. L. 101. V. 229. Boerb. Junk. Sag. 228. Wepfer.

Carus. S. 181. L. 100. V. 231. Boerh. Sag. 287. Macbride. Cataphora. S. 180. L. 99. V. 232. Boerh. Sag. 286. Coma. V. 232. Boerh. Hæmorrhagy of the brain. Hoff.

* From the time of that ancient celebrated phyfician, among the Englifh Willis. The Britifh have diffinguifhed fome diforders by the name of Nervous. But in my opinion their diffinction was very inacurate, as long as they confined it fo much to hyfteric and hypochondriacal affections. Indeed it feems that almost every morbid action depends fo much upon the nervous fystem, that any of them might be called nervous with fome propriety. Neverthelefs, a diffinction, can be found between them, and these differders which attack that fystem almost alone or at least primarily and do not affect the circulation at the fame time nor the disposition or ftate of the fluids unless secondarily will be called by us nervous. And therefore I have inftituted a class under the name of nervous diforders (which differs as much from the class of pyrexies as from cachexies) with apparent propriety.

4 The word Sopor, in the vocabulary of Linnæus, fignifies as much a fufpenfion of motion as a fufpenfion of fenfe. But in the common way we only ufe it for fleep, or a flate very fimilar.

[‡] As the genera of carus here fubjoined, appear to be nothing more than flight apoplexies, and cannot be diffinguished with accuracy, neither by the refpiration nor the exciting cause, I thought they all ought to be referred to one genus. The following appear to me to belong to this genus.

Catalepfis. S. 176. L. 129. V. 230. Sag. 281. Boerh. Junk. Spafmodico—exflatic affections of the brain. Hoff. Exflafis. S. 177. V. 333. Sag. 283.

Thefe appear fymptomatic.

Typhomania. S. 187. L. 97. V. 23. Sag. 284. Lethargy. S. 179. L. 98. V. 22. Sag. 285.

The fpecies of idiopathic apoplexies are,

1. Apoplexy with fymptoms of universal plethora, and particularly of the head, (Sanguineous apoplexy.) -

Sanguineous apoplexy S. Morg, II. III. LX. Preyfinger. Spontaneous Carus. S. Boerh. Spinal afphyxia.* Du Hamel. Boerh. Morgan. III. 3, Cataphora Coma. S.

2. Apoplexy in the leucophlegmatic conflitution, for the most part in old men. (Serous apoplexp.)

Pituitous apoplexy. S. Serous apoplexy. Preyinger Morgan IV. LX.
Carus from hydrochephalus. S.
Hydrochephalic cataphora. S.
Sleepy cataphora. S.
Lethargy of the literary. S. Van Swiet.

3. Apoplexy coming on gradually affecting infants and youths, at first with lassifitude, slight fever, and pain of the head, after that with slower

* I formerly referred the genus, afphyxia, to fyncope, and I ftlll think that fome of the species differ from syncope only in degree. But I am persuaded that many fpecies of afphyxia belong to apoplexy, and therefore I have recited them here. The fpinal afphyxia is improperly placed among the fpecies, becaufe it cannot be diffinguished by any external symptoms. But if it ever be allowed to regard the internal caufes, it certainly thould have a place among the fpecies of apoplexy. But as the external and evident caufes are folely to be regarded, I weighed thefe attentively and enumerated many fpecies recited by Sauvages among those of apoplexy, nor do I with to oppole this, becaufe in fome fpecies of afphyxia, the pulfe as well as refpiration at length ceafe entirely, whild life remains. In the beginning of most cafes, whilst motion and fenfe are almost abolished, there still remains fome motion of the heart, as well as of the lungs, and if at length they totally ceafe, the fame may be occafionally observed in apoplectics before death. I think that in apoplexy, the brain is primarily affected, in fyncope, the heart, and therefore I refer the fpecies of afphyxia to apoplexy or to fyncope, as they may affect the brain or heart primarily, of which we may judge from their external caufes.

pulse, dilation of the pupil, and sleepinels. (Hydrochephalic* apoplexy.)

Interior hydrochephalus. S.

Internal hydrochephalus. Whytt. Lond. Med. Obf. V. IV. and VI. Gaudelius. Ed. Med. Efs. II. 18. III. 23. Memoirs of the Roy. Soc. III. p. 194.
Acute hydrochephalus Quynn.
Asthenia from hydrochephalus. S.

4. Apoplexy in a melancholic conflictution. (Atrabilious apoplexy.

Atrabilious apoplexy. S. Preyfinger. Traumatic carus. S.

5. Apoplexy from external mechanical violence offered the head. (Traumatic apoplexy.)

Traumatic apoplexy. S. Ed. Med. Efs. V. 52.

6. Apoplexy from powerful fedatives exhibited internally or externally. (Venenous apoplexy.)

Drunken apoplexy. S. Carus from narcotics. S. Lethargy from narcotics. S. Carus from black lead. S. Ed. Med. Efs. V. 55. Mephetic apoplexy. S. Asphyxia from mephetis. S. Asphyxia from muft. S. Catalepfy from fume. S. Asphyxia from fumes. S. Asphyxia from charcoal. S. Asphyia of the fcavengers. S. Asphyxia of those ftruck with lightning. S. Carus from infolation. S. Carus from cold. S. Lethargy from cold. S. Asphyxia of the frofted. S.

7. Apoplexy from paffion of the mind. (Mental apoplexy.)

* It is difficult in a nofological work, to place diforders properly, which put on two forms during their courfe, and therefore to affign a very fit place for *hydrochephalic apopl xy*. But I had rather place this diforder under apoplexy; in the first place becaufe the hydrochephalus which comes on, is by no means evident to our fenses; and again, becaufe this diforder differs a great deal in fymptoms from hydrochephalus, and finally. becaufe it is nearly allied to apoplexy in its proximate caufe, and at length refembles it in appearance.

Carus from paffion. S. Asphyxia from paffion. S. Catocheal extafy. S. Relaxed extafy. S.

8. Apoplexy with contractility of the muscles, under a motion of the limbs from external force. (Cataleptic apoplexy.*)

Catalepfis. S. 176. L. 129. V. 230. Sag. 281. Boerb. Junk.

The fpecies with Sauvages are,

Hyfteric catalepfis. Verminofe catalepfis. Catalepfis from fume. Catalepfis from fupprefied menfes. Melancholic catalepfis. Delirious catalepfis.

9. Apoplexy from an external fuffocating power. (Suffocating apoplexy.)

Asphyxia of those hung. S. Asphyxia of the drowned. S. M^cDonald. Flatulent asphyxia, S. This belongs to the genus of apoplexy, if it can be diffinguished by external fymptoms.

Apoplexy is often fymptomatic.

1. of intermittent fever.

Febricofe apoplexy. S. Febricofe carus. S. Cataphora timor. + S. Febricofe typhomania. S. Quartanarian catalepfis. S.

2. Of continued fever.

Febrile carus. S. Continued typhomania. S. ‡Agrypnocomous typhomania. S. Lethargy from fever. S.

M

* I have never feen any other than a feigned catalepfis, and I believe those feen by others were frequently of the fame kind. Therefore it was fearce allowable for me to to determine positively about a diforder that is rarely feen, variously deferibed and often feigned; but I am well perfuaded that it is not of a different genus from apoplexy; and hence I have placed it here, among the species.

+ Timor is a diforder between apoplexy and epileply, T.

Agrypnocoma, is a kind of coma vigil. T.

3. Of phlegmafia.

Inflammatory apoplexy. S. Cephalitic lethargy. S. Pulmonic lethargy. S.

4. Of Exanthemata.

Variolous carus. S. Metaftic apoplexy. S. Exanthematic carus. S. Exanthematic cataphora. S.

5. Of hysteria.

Hyfteric apoplexy. S. Hyfteric carus. S. Hyfteric afphyxia. S. Winking carus. S. Hypochondriac carus. S.

6. Of epilepfy.

Epileptic apoplexy. S. Sighing apoplexy. S.

7. Of the gout.

Arthritic apoplexy. S. Arthritic carus. S. Arthritic cataphora. S. Arthritic lethargy. S.

8. Of worms.

Verminofe apoplexy. S. Verminofe carus. S. Verminofe typhomania. S.

9. Of ischury.

Ischurious carus. S.

10. Of fcurvy.

Scorbutic cataphora.

G. XLIII. PARALYSIS.*

CHA. Some Voluntary motions, leffened only, often with fleep.

[* Palfy. T.]

Syn. Paralyfis. Boerhaave. Hemiplegia. S. 170. L. 103. V. 228. Paraplexia. S. 171. Paraplegia. S. 102. V. 227. Paralyfis. S. 169. L. 104. V. 226. Junk. Atonia. L. 120.

I. The idiopathic fpecies are.

1. Paralyfis of only fome mufcles. (Partial paralyfis.) Paralyfis. S. 169. L. 104. V. 226. Junk. Plethoric paralyfis. S. Serous paralyfis. S. Nervous paralyfis. S. Dumbnefs from palfy of the tongue. S. Paralytic lofs of fpeech. S.

2. Paralyfis of one fide of the body. (Hemiplegic paralyfis.)

Hemiplegia. S. 170. L. 103. V. 228. Sag. 276.

- It varies in the condition of the body.
- A. Hemiplegia in a plethoric habit.

Hemiplegia from apoplexy. S. Spafmodic hemiplegia. S.

B. Hemiplegia in a leucophlegmatic habit.

Serous hemiplegia. S. The aporfematous hemiplegia. S. is improperly recited, as it cannot be diffinguished by external fymptoms,

And the

Hemiplegia from epilepfy S. fcarce deferves to be recited.

3. Paralyfis of half the body, taken transversely. (Paraplegic paralyfis.)

Paraplexia. S. 171. Sag. 277. Paraplegia. L. 102. V. 227. Sanguineous paraplexia. S. Paraplexia from a *fpina bifida*. S. Rheumatic paraplexia. S.

4. Paralyfis from powerful fedatives exhibited externally or internally. (Venenous paralyfis.)

Paralyfis of the metal workers. S. Saturnine hemiplegia. S.

II. These are fymptomatic species,

Intermittent hemiplegia. S. Intermittent paraplegia. S. Febrile paralyfis. S. Exanthematic hemiplegia. S. Rheumatic paralyfis. S. Arthritic hemiplegia. S. Rachealgic paralyfis. S. Rachealgic paraplegia. S. Bilious paralyfis. S. Transverse hemiplegia. S. Scorbutic paralyfis. S. Schrophulous paralylis. S. Schrophulous hemiplegia. S. Syphilitic hemiplegia. S. Syphilitic paraplegia. S. Polonic paralyfis. S. Paralyfis from vomica. S. Traumatic paralyfis. S. Traumatic hemiplegia. S. Traumatic paraplegia. S.

I could not receive tremor into the number of genera, as it is always fymptomatic. But I here fubjoin the fpecies fet down by Sauvages, as they appeared to me to be fymptoms of asthenia or paralyfis or of convulfions.

TREMOR.

Сна A frequent alternate agitation (by going and coming) of a limb.

Tremor. S. 129. L. 130. V. 184. Sag. 236.

1. Asthenic species.

Tremor from debility. S. Senile tremor. S. Tremor from coffee. S. Tremor from paffion, fear, anger, joy, luft. S. Typhoid tremor. S.

2. Paralytic species.

Paralytic tremor. S. Vertiginous tremor. S.

Tremor from plethora. S. Tremor from fuburra. S. Tremor from hydrochephalus. S. Scorbutic tremor. S. Rheumatifmal tremor. S. Drunken tremor. S. Tremors of the metal workers. S. Traumatic tremor. S.

3. Convultive fpecies.

Forced tremor. S. Tremor of the tendons. S. Palpitating tremor. S.

Or. II. Adynamia.

CHA. Involuntary motions, whether vital or natural, leffened.

Syn. Adynamiae. V. Cl. VI. Defective. L. Cl. VI. Or. I. Leipopfychiae. S. Cl. VI. Or. IV. Sag. Cl. IX. Or. IV.

G. XLIV. SYNCOPE.*

CHA. Motion of the heart leffened or quiefcent for fome time.

Syn. Syncope. S. 174. L. 94. V. 274. Sag. 280. Junk. Leipothymia. S. 173. L. 93. V. 273. Sag. 297. Asphyxia. S. 175. L. 95. V. 275. Sag. 281. Collaps of ftrength and delequium of the mind. Hoff.

I. Idiopathics.

1. Syncope without a manifest cause; often returning, with vehement palpitation of the heart in the intervals: From a fault of the heart or neighbouring vessels. (Cardiac Syncope.)

G. XLVII. CHLOROSIS.*

Снл. Dyfpepfia, or a defire of fomething that is not efculent; a palenefs or difcolouration of the fkin; the veins not well filled; a foft trumor of the body; afthenia; palpitation; retention of the menfest.

Syn. Chlorofis. S. 309. L. 222. V. 305. Sag. 135. Boerb. Hoff. Junk.

We allow only one genuine species of chlorofis, fst.

Virgineal chlorofis. S. a. amatoreal chlorofis.

The other fpurious species, of Sauvages, or discolourations, are symptomatic.

Chlorofis from menorrhagia. S. Chlorofis of the gravid. S. Chlorofis of infants. S. Verminofe chlorofis. S. Green chlorofis. S. Chlorofis from hydrothorax. S. Spotted chlorofis. S. Carthagenic chlorofis. S. Bengal chlorofis. S. Rachealgic chlorofis. S.

OR. III. Spafms.

Сил. Irregnlar motions of the muscles or muscalar fibres⁺.

Syn. Spafms. S. Cl. IV. V. Cl. V. Sag. Cl. VII.

[* Green ficknefs. T.]

+ I formerly faid, in this character often a retention of the menfes, as if there was a fpecies of chlorofis in which they flowed properly; and I was of an opinion that fome of the fpecies of cachexy were to be referred to this head, but I now doubt whether any fpecies of cachexy can be placed, with propriety, under the title of chlorofis, or the character here given, and I could not allow any fpecies of chlorofis to be genuine, befides that which is accompanied with a retention of the menfes. Hence, the word often is now omitted, but, at the fame time I am obliged to confefs that chlorofis is not fo well recited in this place for a genus, fince it may allways be confidered as a fymptom of amenorrhœa

[‡] Irregular motions are those which arise from a preternatural cause and which are unufual in violence, frequency, or the duration of their contraction; and I do not doubt but that there are such motions in every disorder placed by us under this order; altho' there may be more disorders than have been placed by other nosologists under this same order.

Sect. I. In the animal functions.

G. XLVIII. TETANUS.*

Сил. Spaftic rigidity of many muscles.

It varies in degree.

1. Tetanus.

Half or the whole of the body affected with spafms.

Tetanus. S. 122. L. 127. V. 180. Sag. 228. Catochus. ‡ S. 123. L. 128. V. 183. Sag. 229. Opifthotonos. V. 181. Epifthotonos. V. 128.

Sauvages as usual has recited many species of this; but all that can be called idiopathic may (if I am not mistaken) be referred to one head, the chief form of which is called in Sauvages

Indian tetanus, about which may be confulted, Hillary, Chalmers, Lond. Med. Obf. V. J. a 12.

D. Munro Ed. Eff. Phys. Lit. V. 3. a. 31 and under the name of fpafms in Bontius. De. Med. Ind. method of cure. Ch. 2.

The following is no other diforder.

Indian convultion. S.

But tetanus varies in refpect to the remote caufe, fince it indubitably arifes either from an internal caufe or from cold or from a wound. The variety from a wound is frequently called by Sauvages,

Traumatic tetanus. S.

The tetanus from whatever cause it arises varies with respect to the part of the body affected: hence,

[+ Locked jaw. T.]

‡ Catochus in Sauvages is a genus not at all natural; for he has joined together species that are altogether different; therefore I have omitted such a genus, but have here refered to tetanus the species recited which depend upon a spassic regidity. Tonic tetanus, in the whole body from the head to the feet is fliff and firaight. S.

Holotonic tetanus, in which the whole perfon is affected. S. Holotonic catochus, S. Germ. Diary.

Stag catochus, which affects flag horfes as well as men with a hardnefs of the fkin equal to wood, and a circumguyration of the eyes. S. Stork.

Opifthotonic tetanus, in which the head is bent backwards. S. Emprofihotonic tetanus, in which the body is bent forward. S.

These are symptomatic species of tetanus.

Febricofe tetanus. S. Stork. Hemiplegic tetanus. S. Lateral* tetanus. S. Morg. X. 2. 3. Pleurofthotonos, of Starck. Syphilitic tetanus. S. Verminofe tetanus. S. Hyfteric tetanus. S. Admiring tetanus. S. Diurnal catochus. S.

2. Trifmus, a fpaftic rigidity of the inferior maxilla particularly.

Trifmus. S. 117. L. 124. Sag. 223. Capiltrum. V. 208.

- I. There are various species.
- 1. Trifmus feizing infants within the two first weeks from their birth. (Trifmus of infants.)

Trifmus of infants. S. The Gallic Americans call it Mal de machoire. Hiefler. Cleghorn. Hofer. Mach.

2. Trifmus of all ages, from a wound or cold. (Traumatic trifmus.)

Traumatic trifmus. S. Lon. M. Obf. V. 1. a. I. 7. Vol. II. 8. 34. V. III. 31. V. IV. 7. V. I. 13. Med. Tranfact. II. 4.

Spalmodic angina. S. Zevinger:

Calvultions from the puncture of a nerve. S.

Catarrhal trifmus. S. Hilliary. Lon. Med. Obf. V. IV. 7.

* In the example of lateral tetanus which Sauvages produces, there was a palfy of the other fide of the patient; and therefore I have placed it here directly after hemiplegic tetanus; but if the example of the lateral tetanus produced by Morgani, was without a palfy of the other fide (of which I am yet uncertain) that might have been placed among the idiopathic species.—In the mean time untill this is more certainly determined I have placed pleurosthotonos after the lateral tetanus. II. We call the following fpecies of trifmus, in Sauvages, fpurious or falle; either becaule they do not depend upon a fpafm, but on fome other fault of the muscles, or because they are rather convulse than fpasmodic, or in fine, because they are rather affections of the face than of the lower jaw.

Inflammatory trifmus. S. Scorbutic trifmus. S. Bridled trifmus. S. Arthritic trifmus. S. Verminofe trifmus. S. Vypochondriac trifmus. Frebrile trifmus. S. Chattering trifmus. S. Occipital trifmus. S. Maxillary trifmus. S. Painful trifmus. S. Cynic trifmus. S. Cynic trifmus. S. Sardonic trifmus. S. Difforted trifmus. S.

G. L. CONVULSION.

CHA. Clonic irregular contractions of the muscles without fleep.

Syn. Convultio. S. 128. L. 142. V. 191. Sag. 235.

I. Idiopathics.

Universal convulsion. S. Hieranofos.* L. 144. V. 190.

See Salerne in Mem. pref. à l'acad de fciences, tom. II.

G. LIII. EPILEPSY.†

CHA. Convultion of the muscles with fleep.

 Syn. Epilepfia. S. 134- L. 143. V. 118. Sag. 24. Boer. Hoff. Junk. Lond. Med. Obf. VI. 9.
 Ecclamfia. \$ S. 133. V. 189. Sag. 240.

The idiopathic fpecies are,

 Epilepfy fuddenly attacking, without a manifeft caufe, no troublefome fenfation preceding, unlefs perhaps of vertigo, or of fome fort of fcotoma. (Cerebral Epilepfy.)

Syn. Plethoric epilepfy. S. Plethoric Ecclamfia. S. Cachectic epilepfy.∮ S. Epilepfy from terror. Macb.

Epilepfy without a manifest cause, but preceded by a fensation of something like air rising from some part of the body towards the head. (Sympathic Epileps)

Sympathic epilepfy. S. Pedifymptomatic epilepfy. S.

· A poifon. T.

[+ Falling Fits. T.]

[‡] Sauvages and Vogel wifhed to diftinguifh ecclamfia, as being an acute diforder, from epilepfy, which they accounted chronic, and placed it as a different genus. But as it is always difficult to fix the limits between acute and chronic diforders, and as the ecclampfia of Sauvages for the moft part exactly agrees with epilepfy, in caufe as well as fymptoms, I could by no means receive it for a different genus. Linnæus or tted fuch a genus altogether, and what more Sagar advanced to diftinguifh ecclampfia from epilepfy, may ferve to diftinguifh the fpecies, not the genus.

§ The epilepfy called cachectic, appears to be of two fpecies, in the first place, the author agrees that it is the fame with the *ferous* epilepfy of Hoffman and Pifo; and then again, as it arifes from acrids repelled, it may be allowed the fame as his exanthematic epilepfy. Hence it happens, that I have placed this cachectic epilepfy in both places, but with fome doubt, leaving it to others to determine. 3. Epilepfy arifing from a manifest irritation, and ceasing on the irritation being taken away. (Occasional Epilepsy.)

It varies according to the diversity of irritation, and hence

From an injury offered the head.

Traumatic epilepfy. S. Traumatic ecclampfia.

From pain.

Sect. II. In the vital functions.

A. In the action of the heart.

G. LIV. PALPITATION.

CHA. Vehement motion of the heart, irregular.

Syn. Palpitatio. S. 130. L. 132. V. 213. Sag. 257. Hoff. Junk. Macbride.

If the various caufes of palpitation could be diffinguifhed by external fymptoms we might have prefented more fpecies, according to the diverfity of the caufe, as Sauvages has done. But as the diverfity of caufe cannot be diffinguifhed that we know of, I could only give a fingle idiopathic fpecies which I chofe to mark with the following character.

Palpitation almost constant, at least often returning without any other evident diforder. (Cardiac palpitation.)

I chose to recite the following species of Sauvages as fynonimous.

Palpitation from an anuerifm of the heart. S. Senac. Lancie.
Tremulous palpitation. S. Senac.
Apoftematous palpitation. S. Lancife. Senac.
Palpitation from offification of the heart. S. Senac. Morg.
Calculous palpitation. S.
Palpitation from polypus. S. Senac.
Polypous palpitation. S.
Palpitation from an anuerifm of the aorta. S. Lancife. Senac.
Palpitation from freightnefs of the aorta. S. Lancife. Senac.

The fymptomatic species of palpitation are,

Palpitation from the pancreas. S. Stork. Arthritic palpitation. S. Chlorotic palpitation. S. Hyfteric palpitation. S. Melancholic palpitation. S. Lancih. Febricofe palpitation. S. Stork.

B. In the action of the lungs.

G. LV. A S T H M A.

CHA. Difficulty of breathing coming on by intervals, with a lenfe of ftreightnefs in the breaft, and a noify hiffing attending the refpiration; a difficult cough or none at all at the commencement of the paroxylin, towards the end a free cough, with fpiting of mucus, often copious.

Syn. Afthma. S. 145. L. 161. V. 268. Sag. 252. Convultive and fpafmodico-flatulent afthma. Hoff. Spaftic afthma. Junk.

The idiopathic fpecies are.

1. Afthma without a manifest cause, or any other diforder accompanying. (Spontaneous asthma.)

Humid afthma. S. Flatulent Floyer. Convultive afthma. S. Willis, Med. Tranf. I. 7. Hyfteric afthma. S. Floyer. Stomachic afthma. S. Floyer. Periodical afthma. Spafmodic orthopnoea. S. Hyfteric orthopnoea. S.

2. Afthma from fcabies or fome other effusion of acrimony repelled. (Exanthematic asthma.)

Exanthematic afthma. S. Cachectic afthma. S.

3. Afthma from the fuppreffion of an evacuation of blood, ufual before, or from a fpontaneous plethora. (Plethoric afthma.)

Afthma of the plethoric. S.

The fymptomatic fpecies of afthma are.

Afthma of the hypocondriacal. S. Afthma of the gouty. S. Afthma of the venereal. S. Junk.

DYSPNOEA.* G. LVI.

CHA. Perpetual difficulty of breathing without a fenfation of ftreightness and rather with that of repletion and stuffing in the breast, frequent cough throughout the whole courfe of the diforder.

Syn. Dyspnoea. S. 144. L. 160. V. 267. Sag. 251 Junk. Orthopnoea. S. 146. L. 162. V. 269. Sag. 253. Macbride. The idiopathic fpecies are,

1. Dyfpnoea, with frequent cough, throwing up much viscid mucous. (Catarrhal Dyspnoea.)

Catarrhal afthma. S. Pneumonic afthma. Willis. Pituitous afthma. Hoff. Pneumonial afthma. S. Ed. Efs. III. 25.

- 2. Dyfpnoea, with cough, for the most part dry. (Dry Dy pnoca.)
- The various caufes of this are not eafily to be diftinguished; however, the following species of Sauvages may be referred to this place.

Dyfpnoea from tubercles. S. Dyfpnoca from fleatoma. S. Orthopnoea from lipoma. S. Polypus dyfpnoea. S.

3. Dylpnoea, increased by any very small change of weather. (Aerial Dy/pnoea.)

Dyfpnoea from collection of air within the thorax. S.

4. Dyfpnoea with cough, throwing up earthy or calcareous matter. (Terreal Dy/pnoea.)

Calculous dyfpnoea. Macbride.

5. Dyfpnoea, with little urine, and oedema of the feet, without fluctuation in the breaft, or any other fymptoms of hydrothorax. (Aqueous Dy/pnoea.)

[* Difficulty of breathing. T.]

Pituitous Dyfpnoea. S. Orthopnoea from hydropneumonia. S.

6. Dyfpnoea in men very fat. (Pinguedinous Dyfpnoea.)

Orthopnoea from fat. S.

 Dyfpnoea from an injury of the parts furrounding the thorax, or from a bad confirmation. (Thoracic Dyfpnoea.)

Traumatic dyfpnoea. S. Traumatic orthopnoea. S. Galenic dyfpnoea. S. Rachitic dyfpnoea. S. Afthma from crooked fpine. S.

8. Dyspnoea from manifest external causes. (Extrinsfic Dyspnoea.)

Afthma of thofe working dufty materials. S. Afthma of metal workers. S. Orthopnoea from vapours. S. Orthopnoea from fubftances fwallowed. S. Orthopnoea from fungus. S. Orthopnoea from antipathy. S. Orthopnoea from bronchocele. S.

The fymptomatic species of dyspnoea are symptoms,

1. Of diforders of the heart or of the great veffels.

Dyfpnoea from the heart. S. Afthma from polypus of the heart. S. Polypus orthopnoea. S. Cardiac orthopnoea. S. Anueryfmatic dyfpnoea. S. Orthopnoea from anuerifm. S. Dyfpnoea from ftreightnefs of the aorta. S.

2. Of a tumor of the abdomen.

G. LIX.

CHOLIC.

CHA. Pain of of the abdomen, twifting particularly round the navel; vomiting; bound belly.

Syn. Collica. S. 203. L. 50. V. 160. Sag. 162. Junk. Spafmodic and flatulent cholic. Hoff. Macb. Rachialgia. S. 211. Sag. 168. Illius. S. 252. V. 162. Sag. 187. Illiaca. L. 185. Pain and Illiac fpafm. Hoff. Illiac paffion. Junk.

The idiopathic fpecies are,

1. Cholic, with retraction of the umbilicus, and fpafms of the abdominal mufcles. (Spafmodic Cholic.)

Spafmodic cholic. S. Flatulent cholic. S. Windy illeus. S. Bilious cholic. S.* Ed. Eff. III. 27. Pituitous cholic. S.† Illeus from the colon being fluffed with pituita. S. Indian illeus. S.

It varies in the fymptoms superadded, hence,

a. Cholic, with vomiting of the fœces, or of the things injected by the anus.

* As any violent vomiting often repeated, will for the most part bring up the bile, I conceive that the *cholic*, which phyficians have called *bilicus*, from the vomiting of bile alone, is altogether *fpafmodic*.

+ Pituita, or phlegm, does not appear to collect in any part of the inteffines unlefs when it is obstructed by spalm; and therefore I have placed here, the *pituitous* ebolic, as well as illeus from the colon being fluffed with pituita.

Spafmodic illeus. S.* Loud. Med. Obf. IV. 17. Ed. Phyf. Eff. II. 27. 28. Illeus volvulus. S.

b. Cholic, with fupervening inflammation.

Inflammatory illeus. S. Phlogiftic cholic. S.

2. Cholic, preceded by a fenfe of weight, or of uneafinels in the abdomen, efpecially about the umbilicus; a cholic pain coming on, at first flight, not continued, and increased, particularly after eating; at length more grievous almost perpetual; with pain of the arms, and back going at length into a palfy. (Cholic of the Picts.)

Rachialga of the Picts. S.+

Cholic of the Picts. Citefius and fucceeding authors. Med. Tranf.
 I. 12, 13, 14, 15, 20. Ed. P. Eff. I. 22. Chalmers.
 Nervous cholic. Macb.

It varies with respect to the remote cause.

a. From a metallic poifon.

Metallic rachialgia. S. Cholic of the Picts. Tronchin. fp. or from a remote caufe. 2d.

b. From acid ingefta.

Rachialgia of the Picts. S. Tronchin.

c. From cold.

Rachialgia from the application of cold water. Tronchin.

* The Illeus appears to me to differ from the cholic in degree not at all in nature, therefore I have placed it here only as a variety. Many Phyficians have thought that the Illeus was altogether inflammatory; but I have often feen a pain in the belly or the cholic, with vomiting of fœces without inflammation. However, as an inflammation may fometimes be prefent; if it fupervenes to the cholic, we fhall have a phlogiftic cholic, as Sauvages mentions; which fhould not change the nomenclature of the genus; and if the inflammation was prefent from beginning with the pain and vomiting, I would look upon the diforder to be an *enteritis*. In fine, I cannot allow that *Illeus* fhould in any way be a different genus from cholic.

+ I cannot fee why Rachialgia fhould be a different genus from cholic. For the effential fymptoms of cholic are always prefent in both, and if any are fupperadded to either, thefe may conftitute a different fpecies not a different genus. Therefore as most of the modern physicians have done, I have accounted and recited what Aftruc and Sauvages called rachialgia for a species of cholic.

d. From contufion of the back.

Traumatic rachialgia. S.

3. Cholic in men of coffive habit, after a long coftivenefs. (Stercoreous Cholic.)

G. LXII. DIABETES.

CHA. Immoderate quantity, chronic profusion of urine for the most part preternatural.

Syn. Diabetes. S. 263. L. 197. V. 115. Sag. 199. Junk. Dobfon. Lond. Med. Obf. vol. V. a. 27. Howe. Diarefis. V. 114.

The idiopathic species are,

- I. Diabetes with urine of the odour, colour, and tafte of honey. (Mellited diabetes.)
 - English diabetes. S. Mead. Lond. Med. Obs. 111. 26. Dobson. Myers.

Febricose diabetes. S. Sydenh.*

II. Diabetes, with limpid urine, not fweet. 4 (Infipid Diabets.)

M. Lister. Med. Exer. II. on the Diabetes. Legitimate diabetes. S. Areteus. Diabetes from wine. S. Eph. Germ.

These are fymptomatics.

Hyfteric diabetes. S. Sydenham. Arthritic diabetes. S. Syden. Artificial diabetes. S. Malphig.

G. LXIII. HYSTERIA.⁺

CHA. Murmur of the belly; the fendation of a ball turning itfelf in the abdomen, alcending to the ftomach and to the fauces, and there ftrangling; fleep; convultions; copious profu-

* It may be enquired, whether the *frebricofe* diabetes ought to be referred to the mellited, or the infipid diabetis! and at the fame time alfo (as Sydenham has faid nothing about the tafte of the urine in any diabetes,) whether the urine is fweet or infipid, in the hyfteric or arthritic diabates? To the latter queftion, I can anfwer from my own obfervation, that I know, the urine is by no means fweet in the arthritic diabetes, and that it is almost infipid. Therefore, I have referred the febricole diabetes of Sydenham, to the mellited diabetes; because, in a like diabetes of an old man, after a long fever, I have found the urine quite fweet.

+ It is uncartain whether this species of diabetes is frequent. In all the cafes which Willis faw, which were not a few, he always found the urine fweet; and frequent late observations, have generally proved the same. So that it is doubtful, whether any other idiopathic and permanent species can be allowed. But Lister affirms it, and I myfelf have among many, obferved one cafe of infipid. Therefore I have confented to allow fuch a species, and have recited it; but I doubt very much whether it can be properly called legitimate, and alfo, whether the diabetes of Areteus, and many other authors, are of this kind. That no one of former times, or out of England, took notice of the urine's being fweet before Willis, is not very likely ; and I should impute fuch filence to the loss or neglect of observavations. I fuspect that the observers, to whom cases of diabetes occurred, before that time, were either negligent, or men of no confidence ; as many of them relate fnch incredible things about the drink passing altogether unchanged through the kidneys of diabetics. It feems ftrange, that Sydenham, fo fagacious and diligent as he was, fhould mention nothing about the ftate of the urine; but as the writings of WILLIS were well known to Sydenham, which affert, that the urine is always fweet; I do not doubt but Sydenham would have pointed it out if he had found it otherways.

[+ Hyflerics. T.]

fion of limpid urine; the mind involuntarily fickle and mutable.*

Syn. Hysterica. S. 135. L. 126. V. 219. Sag. 242. Hysteric evil. Hoff. Hysteric affection. Willis. Syd. Whytt.

How far idiopathic hyfteria may differ in fpecie, I cannot fay, nor do I think Sauvages has rightly delivered them. For, the fpecies recited by him, from nothing more than the remote caufes, appear to me, to be varieties.

Thus, he has it,

A. From retention of the menfes. Chlorotic hyfterica. S. Raulin.

B. From fanguineous menorrhagia.

Hysteria from menorrhagia. S. Raulin. Syden.

C. From ferous menorrhagia or whites. Hysteria from Leucorrhœa. S. Raulin.

D. From obstruction of the vifcera. Emphractic hysteria. S. Raulin.

E. From a fault of the ftomach. Stomachic hyfteria. S. Raulin.

F. From exceffive falacity.

Libidinofe hyfteria. S.+

Thefe are manifeftly fymptomatic.

Verminofe hyfteria. S. Delii. Febricofe hyfteria. S. Wedel.

* Every perfon who is any way fkilled in nofology and medicine, knows how difficult it is, always to diffinguifh accurately, between dyfpepfy, hypochondriafis and hyfteria. But it appears to me, that I have pointed out real genera, fufficiently different from each other. Whether I have done rightly or not, I leave to others to determine. I well know, that diforders that are relative to each other, are cafily confounded; and I acknowledge that it would be very difficult for me to point out, in every cafe, by the nofological charafters, which of them is to be looked upon as primary. Thofe who are to come after, I hope, will make this more clear.

+ In reciting the fpecies of hyfteria, Sauvages appears to have followed RAULIN; depending rather upon fubtle and fallacious theory than observation; and has not pointed out among the other species, that, which I think most perfect and frequent of all, viz. That which often arises from passion alone, in adult, fanguine, plethoric, strong women, who live high, and are pretty free from other diforders.

G. LXIV. HYDROPHOBIA.*

- CHA. Diflike and horror of any drink, as caufing a painful convultion of the pharynx; in general from the bite of a mad animal.
 - Syn. Hydrophobia. S. 231. L. 86. V. 30. Sag. 343. Boerh. Junk. Mead. Default. Sauvages differt. James. Dolby. Nugent. Choifd.
 - Journal de Med. Lond. Med. Obf. & Enq. Vol. 3. Art. 34. Vol. 5, 19, 26. Lond. Med. Tranf. Vol. 2, 5, 12, & 15. Ed. Med. Eff. Vol. 5. 51. Heyfbam. Parry. Soc. Roy. I. Mem. p. 105, 146. Andry. Soc. Roy. II. Hift. p. 229, 230, 456. Hift. III. p. 167. Vaughan.

The species are.

I. Hydrophobia, with defire of biting; from the bite of a mad animal. (Rabiofe Hydrophobia.)

Common hydrophobia. S.

II. Hydraphobia, without madnefs or defire of biting. (Simple hydrophobia.)

Spontaneous hydrophobia. S. Ed. Med. Efs. I. 27.

Or. IV. Vefania +

[* Bite of a mad dog. T.]

[+ Diforders of the intellectual functions, T.]

⁴. I with to infititute here an order of vefania, that will be juft the fame as the ninth clifs of Vogel, titled *Paranoiæ*; but different from the claffes of vefania in Suvages and Sagar in this, that it will exclude the orders of *Hallucinationes* and *Mcrofitates*; and likewife from the clafs of *Mintales* in Linneus, becaufe it will leave out the orders of *Imaginarii* and *pathetici* of thefe authors. I wifh to exclude hallucinationes as well as morolitates, from the clafs of vefania becaufe they do not in any manner a ree either in caufes or fymptoms with thofe diforders properly called vefania. Who would with to call *Syrigmus* or *Bulimia*, or any other morifitas, which does not depend upon the judgment, vefania ? It really does fometimes happen that hallucinationes as well as morolitates are joined with vefania, but at the fame time there are other fymptoms of vefania, which flow thefe to be only fymptoms of a more general affection. For thefe reafons I formerly referred the hallucinationes; and now I think that the morofitates of Sauvages and pathetici of Linneus, that were altogether omitted by us before, are alfo to be referred to local diforders.

CIIA. The functions of judgment* injured; without pyrexy or coma.

Syn. Paronia. V. Cl. IX. Dileria. S. Cl. VIII. Or. III. Sag. Cl. XI. Or. III. Ideales. L. Cl. V. Or. I.

AMENTIA.* G. LXV.

CHA. Imbecility of judgment, by which men either do not perceive the relation of things or forget them.

Syn. Amentia. S. 233. V. 337. Sag. 346. Morolis. L. 106. Stupiditas, morofis, fatuitas. V. 336. Amnefiat. S. 237. Sag. 347. Oblivia. L. 107. V. 338. Debility of memory. Junk.

The fpecies are,

I. Amentia continuing from nativity. (Congenital amentia.)

Morofe amentia. S. Microcephalic amentia. S.

II. Amentia from diminished perception and memory, when opprefied whith age. (Senile amentia.)

Senile amentia. S. Senile amentia. S.

III. Amentia from evident external caufes, coming on men of a found mind. (Acquired amentia.)

* In a former edition of our nofology, I have only mentioned functions, but not fo properly ; for falle perception or hallucinatio and erroneous appetite or marchitas in fome manner pertain to the functions of the mind ; but as I with to exclude both from this clafs, it became neceffary to change the character and fay, the functions of judgment.

[+ Fatuity. T.] ‡ I have referred amnefia with amentia to one genus, because they are for the most part conjoined as well as because they in general arise from the same cause ; and when amnefia proceeds on, it always turns to amentia,

Febrifequous amnefia. S. Amentia from a quartan. S. Cephalalgic amnefia. S. Plethoric amnefia. S. Rachealgic amentia. S. Amnefia from venery. S. Amnefia from paffion. S. Amnefia from poifons. S. Amnefia from drunkennefs. S. Amnefia from a blow. S. Traumatic amnefia. S.

The following fpecies of Sauvages ought not to be recited in a methodical nofology, for the internal caufes from which the characters are taken, cannot be diffinguished by the external symptoms.

Serous amentia. S. Amentia from tumor. S. Amentia from hydatides. S. Amentia from drynefs of the brain. S. Calculous amentia. S.

G. LXVI. MELANCHOLIA.

CHA. Partial infanity,* without dyfpepfia.+

Syn. Melancholia. S. 234. L. 71. V. 332. Sag. 347. Boerh. Junk.
Dæmomania. S. 236. Sag. 348.
Dæmonia. L. 69.
Vefania. L. 70.
Panophobia. L. 75.
Athymia. V. 329.
Melancholic delirium. Hoff.
Erotomania. L. 82.
Noftalgia. S. 226. L. 83. Sag. 338. Junk.

* We fay that an infanity is prefent whenever the mind conceives a relation of things that is altogether falfe, fo that paffions or actions are excited that are contrary to the reafon of the perfon.

+ Hypochondriafis and melancholia cannot always be diftinguished from each other. But if they can at any time it is to be done, in my opinion, by no other fymptom than by dyspepsia being always present in hypochondriafis, oftentimes abfent in melancholia.

Nervous melancholia. Lorry.

- It varies according to the variety of things, about which the man is infane. Thus,
- 1. With falle conception about the dangerous flate of his body from flight caufes; or about the fad, fearful flate of his affairs.

Common melancholia. S. Complaining melancholia. S Fearful panophobía.

2. With falle conception about the agreeable flate of his affairs.

Silly melancholia. S. Enthufiaftic melancholia. S. Dancing melancholia. S.

3. With vehement love, without fatyriafis or nymphomania.

Amatorial melancholia. S. Erotomania. L. 82.

4. With a superstitious fear of future circumstances.

Religious melancholia. S.

5. With averfion to motion, and all the duties of life.

Lazy melancholia. S.

- 6. With inquietude, and impatience of any flate. Wandering melancholia. S.
- 7. With wearinefs of life.

English melancholia.* S. Fearful melancholia. S.

8 With falfe conception about the nature of his fpecies.

Zoantropic melancholia. S.

a. In which the perfon believes himfelf to be a cat.

Q

* Perhaps a wearinels of life among the English, does not always depend upon a difeafe.

Hippantropic melancholia. S.

b. In which the perfon believes himfelf to become a horfe. S. Melancholia of the Scythians. S.

I think that there is no true dæmomania, and* in my opinion, the fpecies under this title by Sauvages are, either

1. Species of melancholia or mania, as

Fanatic dæmomania. S. Indian dæmomania. S.

Or 2. Diforders falfely attributed to the power of of dæmons, by the bye-ftanders; as,

Dæmomania from worms. S. Polonic dæmomania. S. Dæmomania from cardiogmus. S.

Or 3. Diforders altogether feigned; as

Dæmomania of the forcereffes. S.
Vampirifmic dæmomania. S.
c. The Vampiri, were a fort of legerdemains, who dealt with dead bodies. S.
Diffembled dæmomania. S.

Or 4. Diforders partly true, as No. 2; partly diffembled, as those recited in No. 3; as,

Hyfteric Dæmomania. S.

G. LXVII. M A N I A.†

Снл. Universal infanity.

Syn. Mania. S. 235. L. 68. V. 331. Sag. 349. Boerb. Junk Beattie.
Paraphrofyne. L. 66.
Amentia. L. 67.
Maniac delirium. Hoff.

* Becaufe very few believe the Devil to have fuch power over our bodies or minds at this day. [+ Madnefs, T.]

- 1. Mania, altogether from paffion of the mind. (Mental Mania.)
 - Mania from passion. S. Examples from melancholy, are to be found in *Preysinger*; from fear, in *Locher*; from love, in *Epb. Nat. Cur.* Dec. II. A. X. Obs. 126. From anger, in *Hosfman*.
- 2. Mania, from an evident fault of the body. (Corporeal Mania.)
- It varies according to the variety of the fault of the body; hence,

Metaflic mania. S.
from an ulcer dried up. A. Lufit.
from a plica cut off. Hoff. Eph. N. Cur.
from an herpes repreffed. Locher.
from retained menfes. Schenck.
from retained femen. Ibid.

The purulent analarca. S. can scarce be referred to analarca.

G. LXXVI. HYDROCHEPHALUS.*

Сил. A foft inelastic swelling of the head; the futures of the skull being open.

Syn. Hydrochephalus. S. 285. L. 216. Boerb. Hydrochephalum. V. 384.

The only species.

Exterior hydrochephalus. S.+ Lond. Med. Obf. V. 13. Med. Tranf. II. 18. Ed. Med. Efs. III. 22.

G. LXXVII. HYDRORACHITIS.[†]

CHA. A foft, fmall tumour over the vertebræ of of the loins; the vertebræ gaping.

Syn. Hydrorachitis. S. 287. Morg. XII. 9. and following. Spinola. L. 289. Spina bifida. V. 386.

G. LXXVIII. HYDROTHORAX.§

Сил. Dyfpnoea; palenefs of the face; oedema of the feet; fcarcity of urine; difficulty in laying; fudden and fpontaneous flarting from fleep, with palpitation; water fluctuating in the breaft.

Syn. Hydrothorax. S. 150. V. 311. Boerh.

The species are.

Common hydrothorax. S. Hydrothorax following fever. S. Hydrothorax from feabies. S.

The following are not fo properly recited; as neither the nature of 'the liquid contained within, nor the fource, nor the fituation of it can be diffinguished by external fymptoms.

+ I have referred internal hydrochephalus (formerly recited here,) to apoplexy, under the name of hydrochephalic apoplexy.

[I Dropfy of the Spine. T.] [§ Dropfy of the Breast, T.]

^{[*} Dropfy of the Head. T.]

Chylous hydrothorax. S. Willis.
Hydatidous hydrothorax. S. Morgay. XVI. 33.
Hydrothorax of the mediaftiuum. S.
Hydrothorax of the pleura. S. Hoff. Bergeron.
Hydrothorax of the pericardium. S. Morg. XVI. 34, 36. Senac. Ed. Med. Eff. V. 56, 58, 59.

Sauvages has improperly recited in this place, Hydrothorax from the omentum. n.

G. LXXIX. A S C I T E S.*

CHA. A tenfe swelling of the belly, scarce elastic, but fluctuating.

Syn. Afcites. S. 288. L. 217. V. 314. Sag. 115 Boer. Hoff. Junk. D. Monro. Med. Tranf. II. 17. Milman.

The fpecies are.

1. Afcites, with an equal tumour of the whole abdomen, and with a very evident fluctuation. (Abdominal Afcites.)

More common afcites. S.

It varies with respect to its cause.

A. From obstruction of the viscera.

Afeites from obstruction. S. Afeites from the liver. S. Afeites from the fpleen. S. Schrophulous afeites. S. Artificial afeites. S.

B. From debility.

Afcites from exanthemata. S. Arthritic afcites. S. Febrile afcites. S. Afcites from a quartan. Werlborf. Scorbutic afcites. S.

C. From the tenuity of the blood.

Afcites from fluxes of blood. S.

It also varies with respect to the liquid effused.

[* Dropfy of the Belly. T.]

Purulent afcites. S.* Urinous afcites. S. Chylous afcites. S. Oleous afcites. S.

2. Afcites, with a partial tumour of the abdomen, (at leaft in the beginning,) and a lefs evident fluctuation. (Encyfted afcites.)

Afcites from the ovaria. S.
Afcites of an ovarium. S.
a. Encyfted afcites S.
Hydrometra of an ovarium. S.
Bloody afcites. S. Ed. Med. Eff. V. 63.
Afcites of the ftomach. S.
Omental afcites. S.
Intercutal afcites. S.
Sanguineo-intercutal afcites. S.
Sanguineo-peretoneal afcites. S.
Purulento-peretoneal afcites. S.

G. LXXX. HYDROMETRA.*

CHA. A gradual increasing tumour of the hypogaltrium in women, refembling the figure of the uterus, yielding to preffure, or fluctuating; without ifchury and pregnancy.

Syn. Hydrometra. S. 289. Sag. 116. Boerh.

Species can fcarce be given, that are diflinguishable by external symptoms; but the following are recited from Sauvages.

Afcitic hydrometra. S. Hydrometra of the gravid. S. Hydatic hydrometra. S. Uterine afcites. S. Sanguineous hydrometra. S. Sanguineo-uterine hydrometra. S. Puriform hydrometra. S.

* The fame is to be remarked of this and many other species recited, as in p 279. [+ Dropfy of the Womb. T.]

GENERA OF

G. LXXXI. HYDROCELE.*

CHA. A tumour of the fcrotum, not painful; increafing by degrees; foft, fluctating, pellucid.

Syn. Ofcheocele. S. 41. V. 388. Ofcheophyma. Sag. 44. Dropfy of the fcrotum. V. 389. Dropfy of the teftes. Boerb.

The species are.

Watery ofcheocele. S. Monro, in the Ed. Med. Eff. V. A. 21. Sharp. Douglafs. Pott. Le Dran. Bertrand. Hydatidous ofcheocele. S.

Malabaric ofcheocele. S. Kempfer.

SECTION. IV. SOLID.

G. LXXXII. PHYSCONIA.

CHA. A tumour, chiefly occupying fome part of the abdomen; increasing by little and little; neither fonorous nor fluctuating.

Syn. Phyfconia. S. 283. V. 325. S. 110. Hypofarca. L. 218.

The species are. 1.

Hepatic phyfconia. S.

Cuffon. Bonet. Verduc. a. Schirrous. Segerus. b. Calculous. Bonet. c. Hydatidous. Winker.

Splenic phyfconia. S.

a. Emphractic. Haller. Tulp. b. Schirrhous. Bonet.

[* Dropfy of the Scrotum. T.]

[‡] The following fpecies are by no means recited according to the rule of methodical nofology; but it would be difficult to point out the fpecies of phyfconia more accurately; at leaft, it requires more time than I have to fpare. In the interim, I chufe to repeat here, the work of the learned Cuffon; a work of the greateft use in pathology.

Renal phyfconia. S.

Bonet. a. Calculous. Plater. River. b. Sarcomatic-cyftic. Haller.

Uterine phylconia, S.

Bonet.

Phyfconia from the ovarium. S.

Monro. Ed. Med. Eff. VI. Ar. 74. Obf. I.

Mefenteric phyfconia. S.

a. Hydatidous. Greg. Horft. Tulp.

b. Strumous. Bonet. Amb. Parre. Scultet.

c. Schirrous. Marc. Donat. Claudin. Trincavell. Riolan. Morg. Ep. 39. N. 2.

d. Sarcomatic. Bonet.

e. Steatomatous. Barth. Cabrol. Tulp. J. Lechelius. Hierne.

f. Fungus. Bonet.

Inteffinal phyfconia. S.

a. Concreto-glomerate. Morg. b. Sarcomatic. Fontan.

Omental phyfconia. S.

Frid. Reebman.

Polyfplachnal phyfconia. S.

a. Schirrhodeal. Fab. Hildan.

b. Schirrhodeal and Sarcomatic. Huldenreich.

c. Schirrhodeal and Adipofe. T. Bartholin.

d. Hydatidofe. Volch. Coiter. Maur. Cordaei. Hippoc.

e. Hydatidofe and Schirrhodeal. Haller.

Vifceral phyfconia. S.

Bonet. Hippocrat. Marc. Donat. Schenkus. Salmuth. Bonst. Bianch.

External lupial phyfconia. S.

Grabam.

External schirrhodeal physconia. S.

Ger. Blaf.

External hydatidous phyfconia. S. Bonet. Achotzius. Solemand. Riverius.
Phyfconia from fubcutaneous fat. S. a. Simple. Lieutaud. J. Mich. Febr. b. Syphilitic. Fizes.

Phyfconia from excrefcence. S.

G. LXXXIII. RACHITIS.*

Сил. Large head; chiefly fwelling anteriorly; fwoln knees; depreffed ribs; fwelled abdomen; the other parts pining away.

Syn. Rachitis. S. 294. L. 212. V 312. Sag. 120. Boer. Hoff. Zevianus.

It varies.

1. Simple, without any other diforder.

Knotty rickets. S. Britannic rickets. † S. Gliffon.

2. Joined with other diforders.

Strumous rickets. S. Polonic rickets. S. Elephantine rickets. S.

Neither the Calmuc Rickets. S. nor the rickets from caftration. S. can be looked upon as a diforder.

OR. III. Depravations. (Impetigines.)

CHA. Cachexy, deforming the fkin, and external parts of the body particularly.

Syn. Impetigines. S. Cl. X. Or. V. Sag. Cl. III. Or. V.

[* Rickets. T.]

+ Nodofe rickets and Britannic rickets, are improperly recited as two diforders, fince they differ no other way, than that one is incipient, the other confirmed.

G. LXXXIV. SCROPHULA.*

CHA. Tumours of the conglobate glands, efpecially in the neck; the upper lip and *columna* of the nofe fwelled; florid face; thin fkin; fwelled abdomen.

Syn. Scrophula. S. 285. V. 367. Sag. 121. Struma. L. 284.

The fpecies are.

1. Simple, external, permament fcrophula. (Common Scrophula.)

Common fcrophula. S.

2. Internal fimple fcrophula, with palenefs of the face, lofs of appetite, tumour of the abdomen, and unufual foetor of the foeces. (Mefenteric Scrophula.)

Mefenteric fchrophula. S.

3. The moft fimple fcrophula, and only about the neck, for the moft part proceeding from an abforption from ulcers of the head. (Flying Scrophula.)

Flying fcrophula. S.

4. Scrophula joined with the yaws. (American Scrophula.)

American scrophula. S.

It appears to me, that neither *periodical* fcrophula. S. nor Molucca fcrophula. S. belong to the genus of SCROPHULA.

G. LXXXV. SYPHILIS.*

CHA. A contagious diforder, after impure venery, and a diforder of the genitals; ulcers of the tonfils; of the fkin, especially at the margin of the

[* King's Evil. T.]

[+ Pox. T.]

hair; corymbole papulæ, going into crufts and crufty ulcers; pains of the bones; exoftoles.

Syn. Syphilis. S. 300. L, 6. V. 319. Sag. 126. Lues venera. Booerb. Hoff. Junk. Afruc.

The only fpecies.

Venereal fyphilis. S.

The *Polonic* fyphilis. S. by no means belongs to this genus, and we are not fufficiently acquainted with *Indian* fyphilis. S. to put it down as a different fpecies.

G. LXXXVI. SCORBUTUS.*

CHA. Afthenia; bleeding of the mouth; fpots of different colours in the fkin, for the most part livid, especially at the roots of the hair; in a cold country; after a putrescent falted diet, made up of animals; recent vegetables being at the fame time deficient.

Syn. Scorbutus. S. 391. L. 223. V. 318. Sag. Boerb. Hoff. Junk. Lind. Hulme. Rouppe. Med. Trans. II. 18. 21 Milman. Ferris.

It varies in degree.

a. Incipient fcurvy.

- b. Increasing survy.
- c. Inveterate fcurvy.

It also varies in fymptoms.

d. Livid feurvy. Nitzeh, e. Petechial feurvy. ib. f. Pallid feurvy. ib. g. Red feurvy. ib. h. Warm feurvy. ib.

[* Scurvy. T.]

G. LXXXVII. ELEPHANTIASIS.*

CHA. A contagious diforder; thick, wrinkled, rough, unctious fkin, deftitute of hairs; infenfibility of the extremities; the face deformed with lumps; the voice hoarfe and nafal.

Syn. Elephantiafis. S. 302. V. 321. Sag. 128. Elephantia of the Arabians. V. 322.

The varieties are.

Oriental elephantiafis. n.
Legitimate elephantiafis. S. Lond. Med. Obf. I. Ar. 19. Soc. Roy. Mem.
Lion-like elephantiafis. S.
Tyrian elephantiafis. S.
Alopecian elephantiafis. S.
Syphilitic elephantiafis. S.
Javanees elephantiafis. S.

Indian elephantiafis. S.+

G. LXXXVIII. LEPRA.⁺

CHA. The fkin rough; with white, furfuraceous, chopped efchars; fometimes humid beneath, itching.

Syn. Lepra. S. 303. L. 262. Sag. 122. Leprofy of the Greeks. V. 320.

The varieties are.

Leprofy of the Greeks. S. Indian leprofy. S. Scaly leprofy. S. Indian leprofy. S. Auftrian leprofy. S. Hepatic leprofy. S. Deadly-diforder. leprofy. S.

[* Arabian Leprofy. T.] + I could not dare to fay any more upon Elephantiafis, Lepra, Framboefia and Trichoma, as they are diforders which I have never feen. [‡ Grecian Leprofy. T.]

G. LXXXIX. FRAMBOESIA.*

CHA. Refemblances of mufhrooms, mulberyr or raspberry fruit, springing up in various parts of the skin.

Syn. Framboefia. S. 229. Sag. 125.

The varieties are.

Guinea framboefia. S. Ed. Eff. Vol. VI. Art. 71. American framboefia. S.

G. XC. TRICHOMA.

CHA. A contagious diforder; the hair thicker than common; twifted into knots, and inextricable chords.

Syn. Trichoma. S. 311. Sag. 137. Plica. L. 313. Plica, or Rhopalofis. V. 323.

The fpecies are.

Knotted Trichoma. S. Villofe trichoma. S.

G. XCI.

ICTERUS.*

CHA. Yellownels of the fkin and eyes; the fœces whitifh; the urine obfcurely red; ftaining what is put into it of a clay colour.

Syn. Icterus. L. 224. V. 306. Boerh. Junk. Aurigo. S. 306. Sag. 132. Icteric cachexy. Hoff.

The idiopathic species are.

1. Icterus, with acute pain in the epigastric region, increased after eating, and with a dejection of bilious concretions. (Calculous Icterus.)

Calculous aurigo. S. Ed. Med. Eff. I. 33. II. 28, 29. Med. Tranf. II. 10.

[* The Yaws. T.] [+ Jaundice. T.]

2. Icterus without pain, after spafmodic diforders, and paffion of the mind. (Spafmodic Icterus.)

Hyfteric aurigo. S. fome fpecies are recited by Sauvages, under the title of Aurigos from poifons.

3. Icterus, without pain, after diforders of the liver. (Hepatic Icterus.)

Hepatic aurigo. S. Aurigo from obstruction. S. Purulent aurigo. S.

4. Icterus, coming on at the time of pregnancy, and going off after delivery. (Icterus of the Gravid.V. Swieten. Ap. 950.)

Plethoric aurigo. S.

5. Icterus, arifing in children, not long after birth. (Icterus of Infants.)

Aurigo of the newly born. S.

The following, although properly called icterus* are fymptomatics.

Febrile aurigo. S. Febricofe aurigo. S. Accidental aurigo. S. Typhoid aurigo. S. Rachialgic aurigo. Aurigo from poifons. S.

Indian aurigo. S. or the natural colour of fome nations, cannot be called a diforder.

* A yellownefs of the fkin may arife either from bile not being fecreted as ufual, but recieved by the blood veffels and thence effufed under the fkin; or from the ferum of the blood (which is often yellow) effufed under the fkin as in *echymofis*; in fome cafes phyficians are uncertain from which the colour proceeds; but we think that the diffinction is to be made, as far as it can by this, that only the former is the caufe of a genuine Icterus, the latter of a different diforder.

GENERA OF

Cl. IV. Local Diforders.*

Сил. An affection of a part, not of the whole body.

Syn. Vitia. + S. Cl. I. L. Cl. XI. V. Cl. X. Sag. Cl. I. Plagæ. S. Cl. I. Or. VII. Sag. Cl. II. Organnic diforders of authors.

Or. I. Dysæsthesiæ.

CHA. Senfe depraved or deftroyed, from an injury of the external organs.⁺

Syn. Dyfæßthefiæ. S. Cl. V. Or. I. Sag. Cl. IX. Or. I. Hallucinationes. S. Cl. VIII. Or. I. Sag. Cl. XIII. Or. I. Privativi. L. Cl. VI. Or. III.

G. XCII. CALIGO.

CHA. Sight diminished; or altogether abolished; occasioned by an opaque obstacle between the object and the retina, adhering to the eye itfelf, or to the palpebræ.

Syn. Caligo. S. 153. V. 288. Sag. 259. Cataracta. L. 109.

The fpecies are.

143

1. Caligo, from an opaque fpot behind the pupil. (Caligo of the Lens.)

* Perhaps it may fometimes be doubtful, whether a diforder fhould be referred to univerfal or to local diforders, but with respect to most of them, it is sufficiently obvious, to which they belong; and from the inffitution of this class of *local diforders* we maintain that most diforders may be more properly and eafily arranged than in any other fystem of noslogy.

+ I have here mentioned vitia as comprehended under the clais of *local diforders* but this clafs comprehends many more diforders, fo that the word vitia cannot be looked upon as a fynonima of this clafs, and the fame may be faid of plagæ. S.

[‡] I fear that I may have recited fome fpecies in the following pages which may not altogether anfwer to the character of this order, feilt. *dyfæffbefiæ* which does not depend upon any injury of the external organs. I have indeed recited a few fpecies of this kind, and I did it becaufe I was unwilling to feparate connected fpecies fuch as would be looked for in this place

Cataract.* S. 152. L. 109. V. 239. Sag. 26.

The fpecies with Sauvages, are either true or fpurious.

The true varieties are.

True cataract. S. Glaucoma of Woollous. Anti-glaucoma cataract. S. Glaucoma cataract. S. Glaucoma. Ma. Jan. & St. Ives.

The fpurious varieties are.

Membranaceous cataract. S. Secundary cataract. S.

2. Caligo, from an opaque cornea. (Coligo of the -Cornea.)

Achlys. V. 242.

It varies according to the diforder making the opacity.

Caligo from nephelium, (a fubpellucid fpot in the cornea.) Caligo from leucoma, (a white fpot in the cornea.) Caligo from ceratocele, (a hernia of the cornea.) Caligo from ftaphyloma, (a fmall tumor of the cornea.) Caligo from ptergis, (a little membrane like a wing.) Caligo from hypofphagma, (a fuffufion of blood.)

3. Caligo, from obstructed pupil. (Caligo of the Pupil.)

It varies according to the variety of the caufe.

Caligo from ectafis, (or ftopping up of the pupil.) Amoroufis from fynchefio, (a confusion of humours.) Amaroufis from myofis, (a permanent construction of the pupil.) Caligo from fynezefis. (a coalition of the uvea.) Synizefis. V. 240.

4. Caligo, from a fault or defect of the aqueous humour. (Caligo of the Humors.)

Glaucoma.

* I cannot fee why the cataract fhould be enumerated by Sauvages for a different fpecies from *caligo*. The learned may judge whether I have not rightly changed the character of *caligo* and placed cataract as a fpecies of it.

It varies according to the flate of the humors.

Caligo from hypoaema, (effufed blood.) Lacteal caligo. S.

Caligo from rhytidofis, (a corrugation and flacidity of the cornea, from evacuation.)

Hydropthalmic amblyopia. S.

5. Caligo, from a fault adhering to the palpebræ. (Caligo of the Palpetræ.)

It varies according to the fault in the palpebræ.

Caligo from fymblepharofis, (a coalition of the upper eye-lid with the eye.)

- Caligo from ancyloblepharofi, (a coalition of the palpebræ with each other.)
- Caligo from blepharoptofis, (a dent of the upper eye-lid, fo as to fhade the cornea.)
- Caligo from pacheablepharofis, (a weakening of the palpebræ from tumors.)

Caligo from lupia, (a foft exuberance.)

Caligo from farcoma, (a fleshy tumour between the eye and eye-lid.)

Caligo from cancer. S.

G. XCIII. A M A R O U S I S.

CHA. Sight diminished, or totally abolished, without an evident fault of the eye; for the most part with a dilation and immobility of the pupil.

Syn. Amaroufis. S. 155. L. 110. V. 238. Sag. 261. Mydriafis. V. 237.

Amblyopia. L. 108. V. 236,

The species are.

1. Amaroufis, after caufes, and with fymptoms of congestion in the brain. (Amaroufis from Compression.)

It varies according to the remote caufe.

Pituitous amaroufis. S. Scrophulous amaroufis. S. Plethoric amaroufis. S.

Intermittent amaroufis. S. Exanthematic amaroufis. S. Venereal amaroufis. S. Traumatic amaroufis. S.

2. Amaroufis, after caufes, and with figns of debility. (Atonic Amaroufis.)

Congenital amaroufis. S. Amaroufis of the exhaufted. S. Rachialgic amaroufis. S. Arthritic amaroufis. S. Abfolute amblyopia. S.

3. Amaroufis, after caufes, and with fymptoms of fpafm. (Spafmodic Amaroufis.)

Amaroufis from fpafm. S. Hyfteric amaroufis, S.

4. Amarousis from poison, taken inwardly, or applied outwardly. (Venenous Amarousis.)

Amaroufis from narcotics. S. Amaroufis of the fcavengers. S.

G. XIV. DYSOPIA.*

CHA. Depraved fight; fo that objects cannot be feen clearly, unlefs in a certain light, or at a particular diffance, or in a peculiar pofture.

Syn. Amblyopia. S. 154. Sag. 258.

The fpecies are.

1. Dyfopia, in which objects are not feen unlefs in a great light. (Dyfopia of Darknefs.)

Twilight amblyopia. S.

2. Dyfopia, in which objects are not feen, unlefs in an obfcure light. (Dyfopia of Light.)

Meridian amblyopia. S.

* The word amblyopia, which Sauvages uses for a name to this species, is used differently by the ancients, as well as by *Linnæus* and *Vogel*; therefore, I though t it necessary to change the name of this genus. 3. Dyfopia, in which things at a long diftance are not feen. (Dyfopia of distant objects.)

Amblyopia of diftant objects. S.

Myopia. L. 309.

- Myopiasis. V. 515.
- 4. Dyfopia, in which things that are near are not feen. (Dyfopia of proximate objects.)

Amblyopia of proximate objects. S. Prefbytio. S.

5. Dyfopia, in which, only objects that are obliquely fituated, are feen. (Lateral Dyfopia.)

Amblyopia of the blinkards. S.

G. XCV. PSEUDOBLEPSIS.

CHA. Depraved fight; fo that a man imagines he fees things that really do not exift; or fees things which do exift, otherways than they really are.

Syn. Suffusio. S. 217. Sag. 329. Phantafma. L. 73. V. 289.

The species are.

- 1. Pfeudoblepfis, in which, what does not exift, feems to appear. (Imaginary Pfeudoblepfis.)
- It varies according to the variety of the phantom.
 - a. Fly-like fuffution. S-
 - b. Reticular fuffusion. S.
 - c. Sparkling fuffution. S.
 - Marmaryge. V. 290. (a fhining light before the eyes.)
 - d. Colouring fuffufion. S. Hemalopia. V. 245. (half-fight.)
- 2. Pfeudoblepfis, in which the object, which really does exift, is, in fome manner changed. (Changing Pfeudoblepfis.)

It varies according to the various change of the objects.

a Metamorphofe fuffution.S .

b. Noding fuffution. S.

c. Suffusion dividing the object. S.

d. Multiplying fuffution.

Diplopia. S. 218. Sag. 330. (doubling or multiplying the objects.)

Dyfopia. V. 291. (double fighted.)

The diplopia again varies according to the variety of the remote caufe.

a. Pyrexial diplopia. S.

6. Diplopia from spafm. S.

7. Diplopia from paralyfis. S.

3. Diplopia from a coalition of the palpebræ. S.

s. Diplopia from catarrh. S.

ζ. Diplopia from debility. S.

n. Diplopia from contusion. S.

0. Diplopia from terror. S.

. Diplopia from drunkennefs. S.

z. Diplopia of remote objects. S.

G. XCVI. DYSECOEA.*

CHA. Hearing diminished, or abolished.

Syn. Dyfecoea. S. 158. V. 246. Sag. 264. Cophofis. S. 160. L. 112. Sag. 266. Surditas. V. 247.

The species are.

1. Dyfecoea, from a fault in the organs, transmitting the sounds to the internal ear. (Organic Dysecoea.)

It varies according to the variety of the fault, and of the part affected.

a. Single ear, or maleus dyfecoea. S.

b. Dylecoea from obstructed meatus. S. Cophosis from obstructed meatus. S.

c. Dyfecoea from atonia of the tympanum. S. Cophofis from the tympanum. S.

d. Dyfeocea from hardness of the tympanum. S.

[* Deafnefs. T.]

- e. Dyfecoea from the tympanum being perforated. S.
- f. Dyfecoca from a fiftula of the tympanum. S.
 - g. Dyfecoea from a dropfy of the tympanum. S.
 - h. Dyfecoea from the tube being obstructed. S.
 - Cophofis from obstructed tube. S.
 - Syphilitic dylecoea. Syphilitic cophofis. Congenital cophofis. S.
- 2. Dylecoea, without an evident fault of the organs, transmitting the sound. (Atonic Dysecoea.)

It varies according to the variety of the caufe.

- a. Critical cophofis. S. Febrile dyfecoea.
- b. Cophofis from coma. S.
- c. Serous cophofis. S.
- d. Cophofis from fleatoma. S.

G. XCVII. PARACUSIS.

CHA. Depraved hearing.

Syn. Paracufis. S. 159. Sag. 265. Syrigmus. S. 219. Sag. 231.

The fpecies are.

1. Paracufis, in which the founds, proceeding from externals, are perceived, but not accurately, nor in the ufual manner. (Imperfect Paracufis.)

It varies.

A. With a loud hearing.

Loud paracufis. S.

B. With too fenfible a hearing.

Tender paracufis. S.

C. With a fingle external found, doubled by an internal caufe.

Duplicate paracufis. S.

GENERA OF

D. The founds which the perfon wifhes to hear, are not heard, except another loud found is excited at the fame time.

Willifian paracufis. S.

2. Paracufis, in which, founds not exifting without, are excited by internal causes. (Imaginary Paracufis.)

Syrigmus. S. 219. Sag. 231. Syrigmos. L. 72. Sufurrus. V. 292.

It varies according to the variety of the found perceived.

- a. Hiffing fyrigmus S.
- b. Whifpering fyrigmus. S.
- c. Humming fyrigmus. S.

It also varies according to the variety of the remote cause.

- d. Syrigmus from debility. S.
- e. Critical fyrigmus. S.
- f. Plethoric fyrigmus. S.
- g. Vertiginous fyrigmus. S.
- h. Cephalalgic fyrigmus. S.
- i. Syrigmus from the flomach. S.
- k. Catarrhal fyrigmus. S.

1. Syrigmus from too tender hearing. S.

G. XCVIII. A N O S M I A.

CHA. Smelling diminished, or abolished.

Syn. Anofmia. S. 156. L. 113. V. 248. Sag. 262.

The species are.

1. Anofmia, from a fault in the membrane invefling the internal nares. (Organic Anofmia.)

It varies according to the variety of the fault.

Catarrhal anofmia. S.

Anofmia from drynels. S. Anofmia from polypus. S. Anofmia from ozaena. S. Syphilitic anofmia. Verminofe anofmia. S.

2. Anofmia, without an evident fault of the membrane of the nose. (Atonic Anosmia.)

Paralytic anofmia. S.

G. XCIX. AGHEUSTIA.

CHA. Tafte diminished, or abolished.

Syn. Agheuftia. S. 157. Sag. 263. Agheuftia. L. 114. Apogeufis. V. 449.

The fpecies are.

1. Agheustia, from a fault in the membrane of the tongue, keeping the taste from the nerves. (Or-ganic Agheustia.)

Febrile agheuftia. S.

2. Agheustia, without an evident fault of the tongue. (Atonic Agheustia.)

Paralytic agheustia. S.

G.C. ANÆSTHESIA.

CHA. Touch diminished, or abolished.

Syn. Anæfthefia. S. 161. L. 118. Sag. 267. Anodynia. V. 274.

The following species are recited by Sauvages, and as they are not sufficiently clear to me, I would not alter them.

Anæfthefia from ſpina bifida. Plethoric anæfthefia. Anæfthefia of infants. Melancholic anæfthefia.

OR. II. Errors of Appetite.* (Dyforexia.)

CHA. Erroneous, or deficient appetite.

SECTION I. ERRONEOUS APPETITES.

Syn. Morofitates. S. Cl. VIII. Or. II. Sag. Cl. XIII. Or. II. Pathetici. L. Cl. V. Or. II. Hyperaefthefes. V. Cl. VII.

G. CI. BULIMIA.†

CHA. An appetite for esculents, in greater quantity than can be digested.

Syn. Bulimia. S. 223. L. 79. Sag. 335. Bulimus. V. 296. Addephagia. V. 297. Cynorexia. V. 298.

The idiopathic species are.

1. Bulimia. without a diforder of the flomach; craving a greater quantity of food than ufual. (Bulimia of Gluttons.)

Hungering Bulimia. S. Addephagia. V. 297. (voracioufnefs.)

2. Bulimia, frequently craving food; threatening fyncope, from a fenfe of hunger. (Syncopal Bulimia.)

Cardialgic Bulimia. S. Bulimus. V. 296.

3. Bulimia, craving a great quantity of food, and immediately rejecting it by vomit. (Emetic Bulimia.)

* I have mentioned above that morofitates are improperly referred to the clafs of vefaniæ, and now I have placed them with local diforders, and I think with propriety, as almost all dyforexiæ are manifestly affections of a part rather than of the whole fystem. Nefta/gia, (if it can be confidered as a diforder) is the only one that is not local, but I could not well feparate a diforder that is uncertain from other dyforexiæ.

[+ Canine Appetice. T.]

Canine bulimia. S. Cynorexia. V. 298.

The fymptomatic species are.

Verminofe bulimia. S. Bulimia addephagia. (voracious bulimia.) S. Bulimia of the convulfed. S. Bulimia from acids. S.

G. CII. POLYDIPSIA.

CHA. An appetite for a greater quantity of drink than ufual.

Syn. Polydipfia. S. 224. L. 80. V. 275. Sag. 336.

- Polydipfia is almost always fymptomatic, and only varies according to the variety of diforders which it accompanies; hence,
 - a. Febrile polydipfia. S.
 - b. Hydropic polydipfia. S.
 - c. Polydipfia of those labouring under fluxes. S.
 - d. Polydipfia from poifon. S.

G. CIII.

PICA.

CHA. A defire of eating things that are not efculent.

Syn. Pica. S. 222. Sag. 334. Citta. L. 78. Allotriophagia. V. 299. Mallacia. V. 300.

As I am not fufficiently acquainted with the fpecies of pica, I recite the following from Sauvages.

Infantile pica. S. Pica of the chlorotic, S. Malacian pica. (Effeminate pica.) Pica of fcorbutics. S. Voluntary pica. S.

C. CIV. SATYRIASIS.

CHA. An unbridled defire of venery in males.

Syn. Satyriafis. S. 228. L. 81. Sag. 340.

Vogel has fatyriafis for a species of mania.

The species are.

1. Satyriafis, with a vehement, unbounded defire of venery; the body being a little difordered at the fame time. (Juvenile Satyriafis.)

Satyriafis of young debauchees. S.

2. Satyriafis, with an unbridled defire of venery; the body being much difordered at the fame time. (Furious Satyriafis.)

Acute fatyriafis. S. Aret. Capadox.

Chronic fatyriafis. S. belongs to priapifm; and venereal fatyriafis. S. as alfo hydrophobic fatyriafis. S. are manifeftly fymptomatic.

G. CV. NYMPHOMANIA.

CHA. An unbridled defire of venery in women.

Syn. Nymphomania. S. 299. Sag. 341. Satyriafis. L. 81.

Vogel has uterine furor, for a species of mania.

There is only one species of nymphomania, and that varies only in degree: hence,

U

Salacious nymphomania. S. Furious nymphomania. S. Glowing uterine nymphomania. S. Itching nymphomania. S.

GENERA OF

G. CVI. NOSTALGIA.*

CHA. A vehement defire in those absent from their country, of revisiting it.

S. Noftalgia. S. 226. L. 83. Sag. 338.

Vogel has nostalgia for a species of melancholy.

The fpecies are.

154

1. Nostalgia, without any other diforder. (Simple Nostalgia.)

Simple nostalgia. S.

2. Nostalgia, accompanied with other diforders. (Complicated Nostalgia.)

Complicated noftalgia. S.

SECTION II. DEFICIENT APPETITES.

Syn. Anepithymiæ. S. Cl. VI. Or. H. Sag. Cl. IX. Or. II. Privativi. L. Cl. VI. Or. III. Adynamiæ. V. Cl. VI.

G. CVII. A N O R E X I A.†

CHA. Deficient appetite of esculents.

Syn. Anorexia. S. 162. L. 116. V. 279. Sag. 268.

Every anorexia, appears to me to be fymptomatic, and to vary only according to the variety of the diforder it attends. Indeed, I have referred above, to the genus of dyfpepfia, all the fpecies recited by Sauvages : but, perhaps, it will be uleful to recite them again here, by themfelves, and under a better arrangement.

The species are.

1. Anorexia, from a humor, oppreffing the ftomach. (Humoral Anorexia.)

[* Home Sick. T.]

[+ Loss of Appetite. T.]

Pituitous anorexia. S. Bilious anorexia. S. Anorexia from fuburra. S.

2. Anorexia from lofs of tone in the fibres of the formach. (Atonic Anorexia.)

Paralytic anorexia. S. Anorexia of the exhaufted. S. Melancholic anorexia. S. Anorexia of the cachectic. S. Arthritic anorexia. S. Febrile anorexia. S.

Thefe are of an uncertain nature.

Plethoric anorexia. S. Wonderful anorexia. S. Anorexia of infants. S. Stewartinian anorexia. S.

G. CVIII. A D I P S I A.

CHA. Suppreffion of appetite for drink; or, a deprivation of thirst.

Syn. Adipfia. S. 163. L. 117. V. 281. Sag. 269.

I cannot look upon adipfia, without any other diforder; fuch as,

Primary adipfia. S.

as a diforder; and I take every adipfia as fympathic or fymptomatic of fome diforder affecting the common fenforium; and therefore not to be referred to locals.

G. CIX. ANAPHRODISIA.

CHA. Defect of luft; or, impotence of venery.

Syn. Anaphrodifia. S. 164. Sag. 270. Atechnia. L. 119. Agenefia. V. 283.

There are various fpecies.

Paralytic anaphrodifia. S. Gonorrhic anaphrodifia. S.

The fpurious fpecies, or impediments of exercifing venery properly, are,

Anaphrodifia from warts. S. Anaphrodifia from a fault of the urethra.* S.

This is to be confidered as feigned and falle. Magic anaphrodifia. S.

Or. III. Dyscinefia.

CHA. Impeded, or depraved motion, from a fault of the organs.

Syn. Dyfcinefiæ. S. Cl. VI. Or. III. Sag. Cl. IX. Or. III.

- G. CX. APHONIA.
 - CHA. An entire suppression of voice, without coma or syncope.

Syn. Aphonia. S. 166. L. 115. V. 253. Sag. 272. The species are.

1. Aphonia, from the fauces and glottis being fwelled. (Guttural Aphonia.)

Catarrhal aphonia. S. Anginofe. Morgayni.

2. Aphonia, from compressed trachea. (Tracheal Aphonia.)

Annerifmatic aphonia. S. Pulmonic aphonia. S.

3. Aphonia, from the nerves of the larynx being cut. (Atonic Aphonia.)

Trumatic aphonia. S.

The following appear fymptomatic.

Melancholic aphonia. S.

* This belongs to the genus of dyfpermatifmus.

Paralytic aphonia. S. Aphonia of drunkards. S. Hyfteric aphonia. S. Aphonia from antipathy. S.

G. CXI. MUTITAS.

CHA. An impotence of articulating words.

Syn. Mutitas. S. 165. V. 257. Sag. 271.

The fpecies are.

1. Mutitas, from a loss or fault of the tongue. (Organic Mutitas.)

Mutitas of those without a tongue. S. Mutitas from drought. S.

2. Mutitas, from the nerves of the tongue being hurt. (Atonic Mutitas.)

Traumatic mutitas. S.

3. Mutitas, from congenital deafnefs, or from deafnefs taking place in childhood. (Mutitas of the Deaf.)

Mutitas of the deaf. S.

The following are lymptomatic.

Mutitas from palfy of the tongue. S. Mutitas from narcotics. S. Spafmodic mutitas. S. Proaeritic mutitas. S.

G. CXII. PARAPHONIA.

CHA. A depraved found of the voice.

Syn. Paraphonia. S. 168. Cacophonia. S. Sag. 274. Raucedo. L. 146. Raucitas. V. 252. Afaphia. V. 250. Clangor. V. 251. Leptophonia. V. 254. Oxyphonia. V. 255. Rhenophonia. V. 256.

The fpecies are.

1. Paraphonia, in which, about the time of puberty, the voice is changed from the acute and fweet, to a more grave and ungrateful. (Paraphonia of Youths.)

Paraphonia of youth. S.

2. Paraphonia, in which, from drynefs, or a flacid tumor of the fauces; the voice becomes hoarfe and rough. (Hoarfe Paraphonia.)

Catarrhal paraphonia. S. Raucedo. L. 146. Raucitas. V. 250.

3. Paraphonia, in which, from the nares being obstructed, the voice becomes hoarfe, with a hiffing found through the nofe. (Refounding Paraphonia.)

Nafal paraphonia. S. Paraphonia. from polypus. S. Rhenophobia. V. 256.

4. Paraphonia, in which, from the uvula being deficient or divided, for most part with a hair lip, the voice becomes hoarse, obscure, and ungrateful. (Palatine Paraphonia.)

Guttural paraphonia. S. Afaphia. V. 250.

5. Paraphonia, in which the voice is changed, to acute ringing, and fine. (Ringng Paraphonia.)

Ulcerofe paraphonia. Hiffing paraphonia. S. Clangor. V. 251. Leptophonia. V. 254. Oxyphonia. V. 255.

6. Paraphonia, in which, from the laxaty of the velum of the palate and glottis, a found is made during infpiration. (Comatofe Paraphonia.) Snoring paraphonia. S.

G. CXIII. PSELLISMUS.

CHA. A fault in articulating words.

Syn. Pfellimus. S. 167. L. 138. Sag. 273. Pfellotis. V. 259. Traulotis. V. 258. Ifchnophonia. V. 260.

🖀 Battarifmus. V. 261.

The fpecies are.

 Pfellifmus, in which, the words of ipeech, ef. pecially the first, is not easily pronounced, and not until the first fyllable is often repeated. (Hefitating Pfellimus.)

Ischnophonial pfellimus. S. Ischnophonia. V. 260. Battarismus. V. 261.

2. Pfellifmus, in which, the found of the letter R, is always afpirated, and, as it were, doubled. (Ringing Pfellifmus.)

Rotacifnial pfellifmus. S. Traulotis, or Blæfitas. V. 258.

3. Pfellismus, in which, the found of the letter L, is made more liquid. (Lalling* Pfellismus.)

Lambdacifmal pfellifmus. S.

4. Pfellifmus, in which, hard letters "are changed to fofter, and the letter S, is very much used. (Softening Pfellifmus.)

Pfellismus traulotes. + S.

* Trom the word Lalle, used in hushing children to fleep.

+ Traulofis is the faulty pronunciation of the letters S, and R.

5. Pfellifmus, in which, from a large, or a tumifyed tongue, the labial letters are better heard, and are often made use of, in the place of others. (Stuttering Pfellifmus.)

Stuttering pfellifmus. S. Pfellifmus from ranula. S.

6. Pfellifmus, in which, the labial letters can fcarce, or not at all be pronounced. (Pfellifmus Acheilos.)

Mogilalia* pfellifmus. S.

7. Pfellifmus, in which, from the palates being divided, guttural letters are not fo properly pronounced. (Logoftomal+ Pfellifmus.)

Logoftomal pfellimus. S. Jotacifmal[‡] pfellifmus. S.

G. CXIV. STRABISMUS.

CHA. The optical axis of the eyes not converging.

Syn. Strabifmus. S. 116. L. 304. V. 514. Sag. 222,

The species are.

1. Strabifmus from a bad habit of only using one eye. (Habitual Strabifmus.)

Common ftrabifmus. S.

 Strabifmus, from a greater debility or mobility of one eye than the other; fo that both eyes are not conveniently ufed. (Convenient Strabifmus.)

Strabifmus of Buffon. S. Spafmodic ftrabifmus. S. Paralytic ftrabifmus. S. Catarrhal ftrabifmus. S.

Mogalalia. An inability to pronounce labials.
+ Logoftoma. A hair lip.
‡ Jotacifmal. From the letter J, called Jota.
[§ Crofs Eyes. T.]

3. Strabifmus from a change of fituation or figure of the parts of the eye. (Neceffary Strabifmus.)

Strabifmus from lufcitas, (or crofs eyes.) S. Strabifmus of those who have a film. S. Strabifmus from a difplacement of the crystalline lens. S. Strabifmus of the near-fighted. S.

I am uncertain as to the

Equinoctial strabifmus. S.

It appears to me, that the following are improperly recited.

Symptomatic ftrabifmus. S. Lagopthalmic* ftrabifmus. S.

G. CXV. DYSPHAGIA.*

CHA. Troublesomeness, hindering deglutition, without an injury to respiration, or phlegmafia.

Syn. Dyfphagia. S. 199. Sag. 216. Acataphos. V. 149.

The species recited by Sauvages, are.

Ι.	Spafmodic]
2.	Hyfteric	
3.	Paralytic	manus and that are summing
~	Pharyngeal	Inner amond allimon prove all
and the second	Oefophageal	> Dyfphagia.

[+ Difficulty of Swallowing. T.]

GENERA OF

G. CXVI. CONTRACTURA.*

CHA. A continued rigid contraction of one or more joints.

Syn. Contractura. S. 119. L. 299. Sag. 225. Obstipitas. S. 11. Stiff head. V. 513. Digitium. V. 221.

The species are.

1. Contractura, from contracted, rigid muscles. (Primary Contractura.)

A. From muscles that are stiff from inflammation.

Painful contractura. S. Arthritic contractura. S. Catarrhal contractura. S. Catarrhal obstipas. S.

B. From muscles that are rigid, from a spafm.

Spafmodic contractura. S. Spafmodic obflipas. S. Renewing obflipas. S. Lateral offipas. S. Hypochondriac contractura. S.

C. From muscles that are contracted, on account of their antagonists being paralytic.

Paralytic contractura. S. Rachialgic contractura. S. Bohemian contractura. S. Nodding obftipas. S.

D. From muscles contracted, on account of an acrimony irritating them.

Scorbutic contractura. S.

2. Contractura, from stiff joints. (Articular Contractura.)

Contractura anchylofis.[†] S. Syphilitic contractura. S. Gibbofe obstipas. S.

[* Stiff Joint. T.] + Anchylofis, is a uniting of the extremities of the bones at a joint.

OR. IV. Profusion of the Fluids. (Apocenoses.)

CHA. Fluxes of blood, or of other humours, flowing more abundantly than ufual.

Syn. Apocenofes. V. Cl. II. Or. II. Fluxus. S. Cl. IX. Sag. Cl. V. Evacuating diforders. L. Cl. IX.

G. XVII. PROFUSIO.*

CHA. A flux of blood.

Syn. Profusio. L. 239. Hæmorrhagia. V. 81. Boerh.

The following, out of the fangui-fluxes, recited by Sauvages, appear to belong to this place.

Paffive hæmorrhagy. S. Traumatic hæmoptyfis. S. Traumatic hæmatemesis. S. Traumatic hæmaturia. S. Violent hæmaturia. S. Hæmorrhagy from a leach. S. Hæmoptyfis from a leach. S. Hæmatemelis from a leach. S.

EPHIDROSIS.+ G. CXVIII.

CHA. An unnatural evacuation of fweat.

Syn. Ephidrofis. S. 258. Sag. 194. Sudor. L. 208. Hydropedefis. V. 121.

The only idiopathic fpecies is.

Spontaneous ephidrofis. S.

The fymptomatic ephidrofes vary according to the variety of the diforder which they accompany,

[* Hæmorrhage. T.]

+ I acknowledge, that ephidrofis is not fo properly placed among the local diforders, but, as I found no fit place in our fystem of nofology for this diforder, I recited it here, with other evacuatory diforders, that were in fome manner relative to it, leaft it fhould be altogether omitted.

and alfo, according to the variety of the difcharged fweat, and in fome meafure, according to the diverfity of the part chiefly fweating :--Hence,

Febrile ephidrofis S. Febricole ephidrolis. 8. Hectic ephidrofis. S. Exanthematic ephidrofis. S. Syncoptic ephidrofis. S. Scorbutic ephidrofis. S. Ephidrofis from fuburra. S. Lacteal ephidrofis. S. Melleal ephidrofis. S. Vineal ephidrofis. S. Green ephidrofis. S. Black ephidrofis. S. Muddy ephidrofis. S. Urinous ephidrofis. S. Bloody ephidrofis. S. Cærulean ephidrofis. S. Acid ephidrofis. S. Arenofe ephidrofis. S. Latteral ephidrofis. S.

G. CXIX. EPIPHORA.*

CHA. Flux of the lacrymal humour.

Spn. Epiphora. S. 259. L. 172. V. 99. Sag. 195.

None of the species recited by Sauvages, can be accounted idiopathic, unless

Cold epiphora. S.

All the reft are fymptomatic.

Epiphora from paffion. S. Opthalmic epiphora. S. Hot epiphora. S. Epiphora from the fmall-pox. S. Arthritic epiphora. S. Bloody epiphora. S. Epiphora from an ulcer. S. Epiphora from an exulceration in the greater canthus. S. Epiphora from an extraverfion of the palpebræ. S.

[* Watery Eye. T.]

Epiphora from a cyftic tumor of the leffer canthus. S. Sebaceous epiphora. S. Lacteal epiphora. S.

G. CXX. PTYALISMUS.*

CHA. A flux of faliva.

Syn. Ptyalifm. S. 261. L. 176. V. 103. Sag. 195.

If any ptyalifm can be idiopathic, I would look upon as one,

Ptyalifm from laxaty. S.

All the following, are fymptomatic.

Naufeous ptyalifm. S. Hypochondriac ptyalifm. S. Ptyalifm of the gravid. S. Ptyalifm from pyrofis. S. Lapponic ptyalifm. S. Febrile ptyalifm. S. Variolous ptyalism. S. Arthritic ptyalifm. 3. Phthefical ptyalifm. S. Scorbutic ptyalifm. S. Catarrhal ptyalifm. S. Apthole ptyalifm. S. Ptvalifm from caries. S. Purulent ptyalifm. S. Ptyalifm from calculus. S. Syphilitic ptyalifm. S. Green ptyalifm. S. Urinose ptyalism. S. Mercurial ptyalifm. S.

G. CXXI. ENURESIS.*

CHA. An involuntary discharge of urine from the bladder, without pain.

Syn. Enurefis. S. 264. L. 195. V. 113. Sag. 200. The fpecies are.

1. Enuresis, after disorders, injuring the sphincler, of the bladder. (Atonic Enuresis.)

[* Salivation. T.] [‡ Involuntary mission. T.] Enurefis of those affected with hernia. S. Enurefis of the puerperal. S. Calculous enurefis. S. Enurefis from fiftula. S.

2. Enurefis from compreffion or irritation of the bladder.

Enurefis of the gravid. S. Catamenial enurefis. S. Enurefis from congettion of milk in the breafts. S.

The fymptomatics are,

Paralytic enurefis. S.

This cannot be looked upon as a diforder. Enurefis of infants. S.

G. CXXII. GONORRHOEA.*

CHA. Preternatural flux of a humour, from the urethra in males, with or without luft.

Syn. Gonorrhoea. S. 268: L. 200. V. 118. Sag. 204. The fpecies are.

1. Gonorrhoea, in which, without any preceding impure venery, a puriform humour flows now and then from the urethra, without dyfuria, or luft. (Pure Gonorrhoea.)

Pure gonorrhoea. S. Benignant gonorrhoea. S.

2. Gonorrhoea, in which, after impure venery, a puriform humour flows from the urethra, with dyfuria. (Impure Gonorrhoea.)

Syphilitic gonorrhoea. S. Malignant gonorrhoea, of authors.

This is a confequent of the above.

Gonorrhoea, in which, after an impure gonorrhoea, a mucous humour flows from the urethra now and then, with very little, or no dyfuria. (Mucous Gonorrhoea.)

[+ Clap. T.]

GLEET of the English.

3. Gonorrhoea, in which, a humour, for the most part pellucid, now and then flows out from the urethra, without an erection of the penis, but with lust, whilst the perfon is awake. (Gonorrhoea of the Relaxed.)

Libidinofe Gonorrhoea. S.

4. Gonorrhoea, in which, a feminal liquor is ejected, with erection and luft, in those alleep, from a libidinose dream.

Gonorrhoea oneirogonos.* S.

These are spurious species, because the flux is not from the urethra. (Gonorrhoea of the Sleeping.)

Spurious gonorrhoea. S. Astruc. Gonorrhoea of balanus. S.

OR. V. Epifchefes.

CHA. Suppreffions of excretions.

Syn. Epifchefes. V. Cl. III. Suppreflioni. L. Cl. VIII. Or. II. Supprefliones. Sag. Cl. VI.

G. CXXIII. OBSTIPATIO.+

CHA. No dejection of fœces, or more feldom than than ufual.

Syn. Obstipatio. L. 166. V. 128. Sag. 221. The fpecies are.

- 1. Obstipatio in relaxed, debilitated, and for the most part, dyspeptic men. (Obstipatio of the debilitated.)
- 2. Obstipatio in men of rigid fibres, often in hypochondriacs. (Obstipatio of the Rigid.)

* The dreaming on venereal fcenes. [+ Coffivenefs. T.] 3. Obstipatio, with fymptoms of the 1st. 2d. 3d. 4th. or 7th. species of cholic above mentioned. (Obstipatio of the Obstructed.)

G. CXXIV. ISCHURIA.*

CHA. Abfolute suppression of urine.

Syn. Ifchuria. S. 293. L. 167. V. 129. Sag. 212. Home. Lon. Med. Obf. V. Ap.

The fpecies are.

- 1. Ifchuria, preceded by a diforder of the kidneys, with pain, or a troublefome fenfation of weight in the region of the kidneys, and without a tumour of the hypogastrium, or stimulus to miction. (Renal Ifchuria.)
- It varies according to the variety of the caufe: Hence.⁺
 - a. Nephritic, from an inflammation of the kidneys. S.
 - b. Nephrolithic, from a calculus of the kidneys. S. Ed. Med. Eff. II. 31.
 - c. Nephro-plethoric, from plethora. S.
 - d. Lunatic, periodical. S.
 - e. Nephrospastic, spafmodic. S.
 - f. Nephrelmintic, verminofe. S.
 - g. Nephrothromboides, from grumous blood. S.
 - h. Nephropyic, from purulence of the kidneys. S.
 - i. Nephrophlegmatic, pituitous, or mucous. S.
 - k. Nephroplegic, paralytodeal. S.
 - 1. Suppleta, from another evacuation being fupplyed by it. S.
- 2. Ifchuria, preceded by a diforder of the kidneys, with a fenfe of pain, or fenfe of uneafinefs in fome parts of the urethra, and without a tumour of the hypogastrium, or stimulus to miction. (Ureteric Ischuria.)
- It varies according to the variety of the caufe: hence,

[* Suppression of Urine. T.]

+ I think that the excellent collection of Ifchurial cafes by Cusson; altho' they are not arranged according to methodical laws, fhould not be omitted.

169

a. Ureteric, inflammatory. S.

b. Ureterolithic, calculous. S.

c. Ureterothromboidal, from grumous blood. S.

- d. Ureterophlegmatic, from pituita. S.
- e. Ureteropyica, purulent. S.
- f. Ureteroflomatica, from a shutting up of the inferior orifice of the ureters. S.
- 3. Ifchuria, with tumour of the hypogastrium; pain at the neck of the bladder, and frequent stimulus to miction. (Veffical Ifchuria.)

It varies according to the variety of the caufe: hence,

- a. Cyflic, from inflammation of the bladder. S.
- b. Cy/tolithic, from a calculus of the bladder. S.
- c. Cyflospassic, from spasm of the sphincter of the bladder. S.
- d. Cyfloplegic, from palfy of the bladder. S.
- e. Polyuric, from diftended bladder, the urine being fo long withheld. S.
- f. Cyflopyic, purulent.
- g. Cyflothromboides, from grumous blood. S.
- h. Cyflophlegmatic, from mucous. S.
- i. Edopocyflic, from difplacement of the bladder. S.
- k. Cy/loproclic, from turgidnefs of the rectum, with balls, calculi, flatus, inflammation, abfcefs, piles.
- 1. Hysterocystic, from the uterus. S.
- m. Atretarum, from the menfes being retained in the vagina. S.
- n. Paradoxical, in which the bladder fwells, notwithstanding a dripping.
- 4. Ifchuria, with tumour of the epigastrium, frequent stimulus to miction, and pain in some part of the urethra. (Urethral Ischuria.)

It varies according to the variety of the caufe: hence.

- a. Pereneal, from a tumour of the pereneum. S.
- b. Urethrolithic, from a calculus obstructing the urethra. S.
- c. Urethrophlegmatic, from a mucous obstructing the urethra. S.
- d. Urethrothromboidal, from grumous blood clotting up the urethra. S.
- e. Urethropyical, from pus filling up the urethra. S.
- f. Urethrohymenodal, from a membrane closing up the urethra. S.
- g. Urethrelmintic, verminofe. S.
- h. Urethritic, from an inflammation of the urethra. S.

i. Carunculofe, from diforders of the urethra (fo called.) S.

- k. Hydrocelodial, from a rupture of the urethra, opening into the ferotum. S.
- 1. Cryptopycal, from retraction of the penis within the body. S.
- m. Peredefmical, from too tight girding of the penis. S.
- n. Phimofical, from phymofis. S.
- o. Afpadial, from clofing up of the urethra. S.

G. CXXV. DYSURIA.*

CHA. Painful, and in fome measure, impeded emission of urine.

Syn. Dyfuria. S. 265. L. 57. V. 164. Sag. 213. Stranguria of authors.

- The lpecies are.
- 1. Dyfuria, with heat of urine, without an evident diforder of the bladder. (Ardent Dyfuria.)

Primary dyfuria. S.

Dyfuria, from cantharides taken into the body, or applied externally. S.

Burning dyfuria. S.

Dyfuria of young maids. S.

2. Dyfuria, from spasme of other parts connected with the bladder. (Spasmodic Dysuria.)

Hyfteric dyfuria. S. Rachialgic dyfuria. S. Diabetic dyfuria. S. Nephralgic dyfuria. S.

3. Dyfuria, from neighbouring parts preffing the bladder. (Dyfuria of compreffion.)

Dyfuria of the gravid. S. Cyltocelic dyfuria. S. Dyfuria from croffing of the womb. S. Dyfuria of the imperforated. S.

4. Dyfuria from inflammation of the neighbouring parts. (Phlogiftic Dyfuria.) Dyfuria from hyfteritis. S. Hæmorrhoidal dyfuria. S. Venereal dyfuria. S. Dyfuria from caruncle. S.

[* Obstruction of Urine. T.]

- 5. Dyfuria, with fymptoms of a calculus in the bladder. (Irritated Dyfuria.) Calculus dyfuria. S.
- 6. Dyfuria, with a copious exerction of mucous. (Mucous Dyfuria.)

Glus. L. 200 Mucous pyuria. S. Vifcid pyuria. S. A rare diforder of the bladder. Hoff. Catarrh of the bladder. Lieutaud. Arthritic pyuria. S.

I am uncertain about,

Dyfuria from infects. S.

G. CXXVI. DYSPERMATISMUS.

CHA. A flow, impeded, and infufficient (for generation,) emiffion of femen, during the venereal act.

Syn, Dyfpermatifmus. S. 260. Sterilitas. L. 171. Sag. 211. Agenefia. V. 283.

The fpecies are.

- 1. Dyspermatismus, from diforders of the urethra. (Urethral Dyspermatismus.) S.
- 2. Dyspermatismus, from nodes of the corpus cavernosum. (Nodose Dyspermatismus.) S.
- 3. Dyspermatismus, from too narrow an orifice of the prepuce. (Preputial Dyspermatismus.) S.
- 4. Dyspermatismus from mucous, stuffing up the urethra. (Mucous Dyspermatismus.) S.
- 5. Dyspermatismus, from too strong an erection of the penis. (Hypertonic Dyspermatismus.) S.
- 6. Dyspermatismus, from a spasmodic epilepsy coming on during coition. (Epileptic Dyspermatismus.) S.
- 7. Dylpermatismus, from inactivity of the genitals. (Apractodeal Dyspermatismus.) S.

- 8. Dyfpermatifmus, in which there is no emiffion of feed in coition, from its flowing back from the urethra into the bladder. (Refluent Dyfpermatifmus.) S.
 - Of the ferous dyspermatismus. S. I am not fufficiently certain.

G. CXXVII. AMENORRHOEA.*

CHA. The menfes, at the time they ufually flow, either lefs than ufual, or not flowing at all, without pregnancy.

Syn. Amenorrhoea. V. 130. Dyfmenorrhoea. L. 168. S. 218.

- The species are.
- 1. Amenorrhoea in adults, in which, after the ufual time of flowing, the menfes have not then come forth, and when, at the fame time, various morbid affections attend. (Amenorrhoea of Detention.)
- 2. Amenorrhoea in adults, in which, the menfes, which now had began to flow, are fuppreffed. (Amenorrhoea of Suppreffion.)
- 3. Amennorrhoea, in which the menfes flow fparingly, and with pain. (Difficult Amenorrhoea.) Difficult menorrhagia. S.

OR. IV. Tumours.

CHA. The fize of a part increased, without inflammation.

Syn. Protuberant tumours. L. Cl. X. Or. V.

G. CXXVIII. ANUERISM.

Снл. A foft, pullating tumour, on an artery. Syn. Anuerifma. S. 32. L. 282. V. 408. Sag. 35.

[* Suppr fion of Menfes. T.]

172.
