MEDICAL RECORD

1859

W Martshorne

MEDICAL RECORD

FOR

PRIVATE MEDICAL STATISTICS.

PREPARED UNDER THE SANCTION OF THE MEDICAL SOCIETY OF THE STATE
OF PENNSYLVANIA, AND OF THE BIOLOGICAL DEPARTMENT OF
THE PHILADELPHIA ACADEMY OF NATURAL SCIENCES.

BY

HENRY HARTSHORNE, M. D.,

ONE OF THE RECORDING SECRETARIES OF THE MEDICAL SOCIETY OF
PENNSYLVANIA; RECORDER OF BIOLOGICAL DEPARTMENT
OF ACADEMY OF NATURAL SCIENCES, &c.

PHILADELPHIA:

C. J. PRICE & CO.,

BOOKSELLERS, PUBLISHERS & IMPORTERS,

No. 33 SOUTH SIXTH STREET ABOVE CHESTNUT.

1859.

AT the annual meeting of the MEDICAL SOCIETY OF THE STATE OF PENNSYLVANIA, held at Westchester, in May, 1857, the following Resolution was adopted :

Resolved, That this Society recommend to the different County Medical Societies of the State the adoption of the accompanying plan for a uniform method of recording and reporting the amount of disease, as well as of mortality, occurring within their limits each year.

Trans. Med. Soc. Penna., 1857, p. 18.

The accompanying Record is published under the immediate direction of a Committee of the Biological Department of the Academy of Natural Sciences, of Philadelphia.

By a resolution, adopted November 15th, 1858, the committee was authorized to express the approval of the Department of these forms, and to request the co-operation of Physicians in collecting statistics in accordance with them.

WILLIAM A. HAMMOND, M. D., }
HENRY HARTSHORNE, M. D., } Committee.
J. J. WOODWARD, M. D., }

PRIVATE MEDICAL STATISTICS.

THE main purpose of this Record is, the registration of the exact number of cases of every disease, occurring to the practitioner, in each month of the year. The plan adopted is believed to be so simple and convenient, as to require very little time or trouble in its use: while the aggregation of such statistics, in the hands of Committees of Medical Societies, &c., might become exceedingly useful.

The classification employed has been chosen on the ground of *convenience* and *brevity*, rather than of scientific completeness.

On the line *opposite to the name* of each Disease, a mark, 1, may be made for *each case*, at the time of the *first visit*. It will be seen that there is a page for *every month*, to record the more acute and ordinary affections; while there is a record every *three months* only, of those of a more infrequent character.

Tables are also to be found, at the close of the book, for *Obstetric cases*; and arrangements for noting the number and date of occurrence of cases of *Cholera*, *Yellow Fever*, or other special epidemics. Mortuary tables are also provided for: and blank pages are occasionally inserted for particular Notes and Remarks. Only those who wish to record *full details of special cases*, will require an additional Notebook.

<i>Diphtheria.....</i>						

NOTES AND REMARKS.

1. The first part of the paper discusses the importance of the study of the history of the United States. It is argued that a knowledge of the past is essential for a full understanding of the present and for the development of a sound policy for the future. The author points out that the study of history is not only a means of satisfying our curiosity about the past, but also a way of learning from the mistakes of our ancestors and of avoiding them in the future.

2. The second part of the paper is devoted to a discussion of the various methods which have been employed by historians in the study of the past. It is shown that there is a wide variety of methods, each of which has its own merits and its own limitations. The author points out that the most important of these methods is the use of primary sources, which are the original documents and records of the events which are being studied. He also discusses the use of secondary sources, which are the works of other historians who have written about the events in question.

3. The third part of the paper is a critical examination of the work of some of the most important historians of the United States. The author discusses the work of such men as John Adams, James Madison, and Andrew Jackson, and points out the contributions which they have made to the study of the history of the United States. He also discusses the work of more recent historians, such as Charles Beard and Louis Brandeis, and points out the ways in which they have advanced the study of the history of the United States.

4. The fourth part of the paper is a discussion of the future of the study of the history of the United States. The author points out that there are many new methods and techniques which are being developed, and that these will undoubtedly lead to a more complete and accurate knowledge of the past. He also points out that the study of the history of the United States is becoming increasingly important, as we move further into the future and as we become more aware of the need for a sound knowledge of our own history.

5. The fifth part of the paper is a conclusion. The author points out that the study of the history of the United States is a most important and interesting field of study, and that it is one which should be pursued by all who are interested in the history of our country. He also points out that the study of the history of the United States is not only a means of satisfying our curiosity about the past, but also a way of learning from the mistakes of our ancestors and of avoiding them in the future.

SUMMARY OF CASES, IN 18

MISCELLANEOUS REMARKS.

MISCELLANEOUS REMARKS

MEMORANDA OF NEW REMEDIES, PRESCRIPTIONS, &c.

MEMORANDA OF NEW REMEDIES, PRESCRIPTIONS, &c.

PRACTICAL QUERIES.

1. Of what diseases have you seen and treated the greatest number of *cases* during 18 ?

2. What diseases have, during that year, caused the greatest number of *deaths*, in your practice?

3. What diseases have caused the greatest number of deaths in *proportion to cases*?

4. Do these results differ much from those of the *year preceding*?

5. What *epidemics* have prevailed under your observation, in 18 ?

6. Have you seen, in 18 , any *fatal case* of *variolous* disease, in a *vaccinated person*?

7. Has any *special treatment* appeared to be of use, in your practice, in 18 , in *Malignant Scarlatina*?

PRACTICAL QUERIES.

8. Have you seen any proof, in 18 , of the *contagion* of *Puerperal Fever* ?

9. Have you seen any evidence, in 18 , of the extension of *Typhoid Fever* by personal *contagion* ?

10. Have you observed, in 18 , any facts which throw light upon the *origin* of *Yellow Fever* ?

11. Have you ascertained the existence of any *local peculiarities*, in the soil, water, &c., where *dysentery* has prevailed in your practice, in 18 ?

12. Has any *substitute for Quinia* been successful in your hands, in 18 , in the treatment of *Autumnal Fevers* ?

13. Is there any *local cause of disease*, in your vicinity, which might be *removed* or *destroyed* ?

14. Is the aggregate health of your locality increasing, or diminishing, according to your experience ?
