The American medical formulary: based upon the United States and British pharmacopoeias: including also numerous standard formulae derived from American and European authorities: together with the medical properties and uses of medicines, poisons, their antidotes, tests, etc.: designed for the medical and pharmaceutical student / by John J. Reese.

THE AMERICAN

MEDICAL FORMULARY.

AMERICAN

MEDICAL FORMULARY:

BASED UPON

THE UNITED STATES AND BRITISH PHARMACOPŒIAS.

INCLUDING ALSO

NUMEROUS STANDARD FORMULÆ,

DERIVED FROM AMERICAN AND EUROPEAN AUTHORITIES.

TOGETHER WITH

THE MEDICAL PROPERTIES AND USES OF MEDICINES; POISONS, THEIR ANTIDOTES, TESTS; ETC.

DESIGNED FOR

THE MEDICAL AND PHARMACEUTICAL STUDENT.

BY JOHN J. REESE, M.D.,

LECTURER ON MATERIA MEDICA AND THERAPEUTICS IN THE PHILADELPHIA MEDICAL INSTITUTE, FELLOW OF THE COLLEGE OF PHYSICIANS, ETC.

PHILADELPHIA:
LINDSAY AND BLAKISTON.
1850.

R329a 1850

Entered, according to Act of Congress, in the year 1850,

By LINDSAY & BLAKISTON,

In the Clerk's Office of the District Court for the Eastern District of Pennsylvania.

PHILADELPHIA:

C. SHERMAN, PRINTER.

PREFACE.

The author of the present volume is aware that several excellent works of a somewhat similar character have already issued from the medical press; and he deems it but just to them, as well as to himself, to disclaim anything like an invidious comparison in appropriating to his book the title which it bears. The term American may, he thinks, without impropriety, be assigned to it, since throughout the work, in the description of the various medicinal substances and pharmaceutical preparations, the precedence has uniformly been given to those recognised by our own national pharmacopæia.

With a very few unimportant exceptions, every article that has a place in the pharmacopæia of the United States and in those of Great Britain has been here described, and its medical properties and uses, as received by standard authorities, noticed to the extent allowed by the limits of the work. The design was not to write a treatise on Materia Medica and Therapeutics, but simply to prepare a correct Formulary of all the officinal articles, and also of the most valuable of the numerous published prescriptions both of hospitals and private practice,—the authority, in nearly every case, being at the same time given.

The reader is requested to observe that when any particular preparation is described as recognised by the medical authorities of the United States as well as by those of Europe, the process adopted by the former is the one always given, except in a very few cases, which are properly noted. It seemed unnecessary to occupy space in detailing all the other processes, inasmuch as they were either only slight modifications of the one mentioned, or else were inferior to it. Besides, they are all to be found in the more extensive treatises on Materia Medica and Pharmacy, accessible to the student.

In the general arrangement of the work, the alphabetical order has been followed, for two reasons: it made it more easy of reference, and it avoided the necessity of a classification of the medicines, which must always be more or less arbitrary, and which might very properly be dispensed with in a manual like the present. It might also be observed, that the alphabetical order has rendered a general index unnecessary.

In the Appendix, several articles have been introduced, which could not with the same propriety have been brought into the body of the work,—such as a list of some of the more common and useful dietetic preparations; a brief description of poisons, with reference to their treatment, antidotes, and tests; a table of the most celebrated natural mineral waters of the United States and Europe; a table of the doses of the most important medicines, &c.,—all which, it is hoped, may prove acceptable to the reader, and perhaps enhance, in his estimation, the value of the work.

In the execution of his task, the author has bestowed considerable labour in accurately comparing every article in the Formulary with the original, either directly or indirectly. For this purpose he has consulted numerous works bearing upon the subject, among which are the following:—The Pharmacopæia of the United States of America, The United States Dispensatory, Ellis's Medical Formulary, Beasley's Pocket Formulary, Dr. Neligan's Medicines, Dunglison's New Remedies, Pereira's Materia Medica, Mayne's Dispensatory, Dr. A. T. Thomson's Conspectus, Orfila's "Traité des Poisons," Bell on Baths and Mineral Waters, together with the various Dispensatories and Pharmacopæias of Great Britain, the Codex, Pharmacopée Française, Alibert's Nouveaux Elémens de Matière Médicale, Soubeiran's Nouveau Traité de Pharmacie, théorique et pratique, Bouchardat's Annuaire de Thérapeutique, and several works on Chemistry. He is especially indebted to Mr. Beasley's Pocket Formulary for many of the hospital and private formulæ, which are often of great value.

In conclusion, it is hoped that the work may prove not altogether useless to the profession—more especially to the student of medicine and pharmacy.

Philadelphia, March, 1850.

Med. Prop. Medical Properties.

The individual names attached to the Formulæ are those of the authors to whom they are commonly attributed, or from whose works they have been taken.

For an explanation of the Signs and Abbreviations used in the Formulary, see Appendix.

[Note. In the description of those preparations to which the letters U. S. are prefixed, it will be understood that the process of the United States Pharmacopæia is the one intended, and consequently that the Liquid Measure employed is the old "Wine Measure," and not the "Imperial Standard Measure" of the London and Edinburgh Colleges.]

AMERICAN

MEDICAL FORMULARY.

ABSINTHIUM. U. S., L., E. [Artemisia Absinthium, D.] Worm-wood. The tops and leaves of Artemisia Absinthium.

Med. Prop. Tonic, and reputed anthelmintic and discutient.

Use. In debility of the digestive organs, &c.

Acacia. U. S., L. [Gummi Acaciæ, E.; Acacia Arabica, et A. vera, D.] Gum Arabic. The concrete juice of Acacia vera, and other species of Acacia.

Med. Prop. Demulcent; also nutritious.

Uses. In inflammation of the gastric, intestinal, pulmonary, and vesical mucous membranes; as an article of diet in fevers; also, in pharmacy, for making pills, troches, and mixtures.

Acetosella. L. Wood-sorrel. The herbaceous portion of Oxalis Acetosella.

Med. Prop. Refrigerant and antiscorbutic.

Use. As a drink in fevers, and as an antiscorbutic.

ACETA. U. S. [Acetica, L., E., D.] Medicated Vinegars. Infusions or solutions of medicinal substances in vinegar or acetic acid. Ordinary vinegar requires to be purified by distillation before being used as a solvent. A small quantity of alcohol or concentrated acetic acid, is generally added to contribute to their preservation.

ACETONE. See NAPHTHA.

ACETUM. U. S., L. [Acetum Gallicum (French Vinegar), Acetum Britannicum (British Vinegar), E.; Acetum Vini, D.] Vinegar. Procured from various liquors by the acetous fermentation;—in the United States, from cider; in Britain, from an infusion of malt; in France, from wine. It is an impure dilute acetic acid.

Med. Prop. Refrigerant and diuretic.

Use. As a drink, diluted, in fevers; also externally, as a lotion.

ACETUM AROMATICUM. P. Aromatic Spirit of Vinegar. Strong acetic acid Oj, camphor 3jj, oil of lavender gr. ix, oil of cloves 3ss, oil of cinnamon gr. xx. Mix together.

ACETUM CANTHARIDES. (Epispasticum.) L., E. Cantharides in powder 3ij, acetic acid f3xx; macerate 8 days and strain. E. directs cantharides in powder 3iij, acetic acid f3v, pyroligneous acid f3xv, euphorbium 3ss; macerate 7 days.

Use. To promote prompt vesication.

ACETUM COLCHICI. U. S., L., E., D. Vinegar of Colchicum. Dried colchicum root, bruised, Zij, distilled vinegar (or dilute acetic acid) Oij, alcohol fZj. Macerate the root with the vinegar in a close glass vessel for 7 days, then express the liquor, let the dregs subside, pour off the clear liquor, and add the alcohol. L., E., and D., direct fresh colchicum Zj, distilled vinegar fZxvj; macerate for 3 days, and add fZj of proof spirit to the clear liquid.

Med. Prop. Diuretic. See Colchicum.

Use. In dropsy; in gout, rheumatism, and neuralgia.

ACETUM DESTILLATUM. U. S., L., E., D. Distilled Vinegar. From Cong. j of vinegar in a glass retort, distil Ovij, by the heat of a sand-bath. D. rejects the first 10th. E. and D. direct French vinegar.

Med. Prop. The same as those of common vinegar.

Use. Chiefly in pharmacy, in making vinegars and oxymels.

ACETUM OPII. U. S., E., D. Vinegar of Opium. Black Drop. Digest opium, in coarse powder, Zviij, nutmeg p. Zjss, saffron

3ss, with Ojss of distilled vinegar on a sand-bath, with a gentle heat, for 48 hours, and strain. Digest the residue with an equal quantity of distilled vinegar in the same manner for 24 hours. Then put the whole into a displacement apparatus, and return the filtered liquor, as it passes, until it comes away quite clear. Pour distilled vinegar gradually upon the materials remaining in the instrument until the whole quantity of filtered liquor equals 3 pints. Lastly, add 3xij sugar, and by means of a water-bath, evaporate to 3 pints and 4 fluid ounces.—E. and D. direct opium, sliced, 3iv, distilled vinegar f3xvj; triturate the opium with a little of the vinegar, add the rest; macerate 7 days; strain, press, and filter.

Med. Prop. Narcotic.

Use. As laudanum; but usually agrees better with the patient. Dose, 13 drops, about equal to gr. j opium.

ACETUM SCILLÆ. U. S., L., E., D. Vinegar of Squills. Macerate bruised squill Ziv, with Oij distilled vinegar in a close glass vessel, for 7 days; express, and to the clear liquor add fZj alcohol. L. directs, dried squill Zxv, distilled vinegar Ovj; digest with a gentle heat 24 hours, strain, and add Oss proof spirit.—E. and D., nearly the same.

Med. Prop. Diuretic and expectorant.

Use. In dropsy, and pulmonary affections.

Acidum Aceticum. U. S., L., E., D. Acetic Acid. Put Ibss of sulphuric acid into a glass retort, and gradually add Ibj of acetate of soda, in powder; then, by means of a sand-bath, distil with a moderate heat into a glass receiver, till the residuum becomes dry. Mix the resulting liquid with 3j of red oxide of lead, and again distil, with a moderate heat, to dryness. The sp. gr. of this acid is 1.06.—L. directs Ibij acetate of soda, and 3ix sulphuric acid, previously mixed with 3ix water, to be distilled together in a glass retort, by the heat of a sand-bath. Sp. gr. 1.048.—E. directs 3vj of acetate of lead, dried at 320°, to be distilled with f3ixss of sulphuric acid, in a glass matrass, at 320°; the product to be agitated with a little red oxide of lead,

and again distilled. Sp. gr. 1.063 to 1.065.—D. directs it to be distilled from 52 parts of sulphuric acid, and 100 of acetate of potassa. Sp. gr. 1.074.—U. S. contains 50 per cent. of water; L., 63 per cent.

Med. Prop. Stimulant, rubefacient, and vesicant.

Use. In syncope and headache, applied to the nostrils. Externally, to warts and corns.

Acidum Aceticum Dilutum. U.S. Mix Oss of acetic acid, with Ov of distilled water. It is intended as a substitute for distilled vinegar. It contains 4.54 per cent. of pure acid. 15 parts of strong acid, and 85 of distilled water, mixed together, form an acid equivalent to the distilled vinegar of L.

ACIDUM ACETICUM AROMATICUM. [Apothecaries' Hall, L.] Dissolve the oils of cloves, lavender, rosemary, and calamus in highly concentrated acetic acid.

Use. As a very pungent perfume, in syncope, &c.

ACIDUM ACETICUM CAMPHORATUM. E., D. Camphor, pulverized with spirit, 3ss, strong acetic acid f3vjss. D., f3vj.

Use. The same as the preceding.

ACIDUM ARSENIOSUM. U. S., L. [Arsenicum Album, E.; Arsenici Oxydum Album, D.] Arsenious Acid. White Oxide of Arsenic.

Med. Prop. Internally, alterative and antiperiodic; externally, escharotic.

Use. In intermittent diseases; chronic skin diseases, particularly of a scaly character; chronic rheumatism, especially of a syphilitic character; nodes, and hemicrania. Externally, to cancers, lupus, and malignant ulcers. Caution is necessary to avoid absorption.

Acidum Benzoicum. U. S., L., E., D. Benzoic Acid. Flowers of Benzoin. Benzoin, in coarse powder, intimately mixed with an equal weight of fine sand, is to be sublimed in a suitable vessel until vapours cease to rise. Press the sublimed acid between bibulous paper, to remove the oil, and again sublime.

Med. Prop. Stimulant, and perhaps expectorant. Asserted by

Dr. Ure to convert the uric acid, when in excess, into hippuric acid.

Use. In the phosphatic form of gravel; also in gout, and rheumatism, combined with carbonate of potassa.

ACIDUM CITRICUM. U. S., L., E., D. Citric Acid. Saturate lemon-juice with prepared chalk, wash the precipitated citrate of lime repeatedly, and decompose with a slight excess of dilute sulphuric acid; strain, and carefully concentrate by boiling, and then crystallize.

Med. Prop. Refrigerant and antiscorbutic.

Use. As a substitute for lemon-juice.

ACIDUM HYDROCYANICUM. U.S., E. [Acidum Hydrocyanicum Dilutum, L.; Acidum Prussicum, D.] Hydrocyanic Acid. Prussic Acid. Sulphuric acid 3jss, water f3iv; mix, and when cool, put them into a tubulated retort, and add ferrocyanuret of potassium Zij, dissolved in f\(\)x water. Pour f\(\)zviij of distilled water into the cooled receiver, and having attached this to the retort, distil f\(\) vj with a gentle heat. Lastly, add to this product f3v of distilled water, or q. s. that 12.7 grs. of nitrate of silver, dissolved in water, may be accurately saturated by 100 grs. of the acid, indicating 2 per cent. of real acid.—E. directs ferrocyanide of potassium Ziij, sulphuric acid fZij, water fZxvj; dissolve the salt in f3xj of water, add the acid mixed with f3v of water, and distil f\(\) xiv; add distilled water to the product, to make up the measure exactly of f\(\)\forall xvj.\(-D\). directs bicyanide of mercury 3j, muriatic acid f3vij, water f3viij; distil from a glass retort into a cooled receiver, f\(\) viij. It may also conveniently be prepared, extemporaneously, by adding together 50½ grains of cyanuret of silver, muriatic acid 41 grains, and distilled water f3j; the mixture is to be shaken in a stopped vial; decant the clear liquid when the sediment has subsided. The acid should be kept in a cool, dark place.

Med. Prop. Sedative and antispasmodic; powerfully poisonous. Use. In spasmodic coughs, asthma, hooping-cough, hypertrophy

of the heart, neuralgia of stomach and bowels; locally, in skin diseases, to allay the itching.

ACIDUM HYDROSULPHURICUM AQUA SOLUTUM. P. Pass a current of sulphuretted hydrogen (procured by acting on sulphuret of iron by dilute sulphuric acid), through cold distilled water, till it ceases to be absorbed.

Med. Prop. and Use. This is an artificial sulphurous water, and may be used in chronic rheumatism, chronic cutaneous diseases, &c.

Acidum Lacticum. Lactic Acid. To Ovj of milk, add Zviij bicarbonate of soda; expose it to the air for some days, till it becomes sour, and saturate it with more soda. Repeat this as often as it becomes acid. Boil, filter, and evaporate to the consistence of syrup, and digest with alcohol. Filter the solution, and add sulphuric acid as long as it occasions a precipitate. Again filter, and concentrate the clear solution by evaporation, till its density is 1.215.

Use. Not employed in medicine in the uncombined state.

ACIDUM MURIATICUM. U. S., E., D. [Acidum Hydrochloricum, L.] Muriatic Acid. Aqueous solution of chlorohydric acid gas, of the sp. gr. 1·16; (1·17, E.)

Med. Prop. Tonic and antiseptic.

Use. In low forms of fever; also as a gargle in malignant sore throat.

ACIDUM MURIATICUM DILUTUM. U. S., E., D. [Acidum Hydrochloricum Dilutum, L.] Dilute Muriatic Acid. Muriatic acid f\(\frac{7}{3} \) iv, distilled water f\(\frac{7}{3} \) xij; mix them in a glass vessel.

Med. Prop. and Use. Same as the preceding.

ACIDUM NITRICUM. U.S., L., E., D. Nitric Acid, of sp. gr. 1.5; (1.49, D.)

Med. Prop. Tonic and antiseptic.

Use. In low forms of fever (to be largely diluted); in chronic syphilis and hepatitis; externally, to ulcers; also for fumigation.

ACIDUM NITRICUM DILUTUM. U.S., L., E., D. Nitric acid, f\(\f{\mathfrak{Z}} \)j, distilled water f\(\mathfrak{Z} \)ix; mix in a glass vessel.

Med. Prop. and Use. Same as the preceding.

ACIDUM NITROSUM. Nitrous Acid. The red fuming nitric acid (nitric acid containing nitrous acid gas) is so termed.

Med. Prop. and Use. Same as those of nitric acid.

ACIDUM NITRO-MURIATICUM. U. S., D. Nitro-Muriatic Acid. Nitric acid f3j, muriatic acid f3j; mix, and keep in a dark and cool place, in a well-stopped bottle.

Med. Prop. Tonic, with a tendency to the liver.

Use. In chronic hepatitis and syphilis, both internally and as a bath.

ACIDUM PYROLIGNEUM. E. Pyroligneous Acid. An impure acetic acid, procured by the destructive distillation of wood. Sp. gr. 1.034.

Med. Prop. Antiseptic.

Use. As an application to ill-conditioned ulcers; also as a preservative for meats.

Acidum Succinicum. D. Succinic Acid. Mix amber with its weight of sand, and distil. Press the crystals between bibulous paper, and re-sublime.

Use. Not employed in medicine.

ACIDUM SULPHURICUM. U. S., L., E., D. Sulphuric Acid, of sp. gr. 1.845, U. S. and L.; 1.840, E.; 1.850, D.

Use. Not employed in medicine. See the following.

ACIDUM SULPHURICUM AROMATICUM. U. S., E., D. Elixir of Vitriol. Sulphuric acid f\(\mathcal{z}\) iijss, ginger, bruised, \(\mathcal{z}\) j, cinnamon, bruised, \(\mathcal{z}\) jss, alcohol Oij. Digest the alcohol and acid together for three days; then add the ginger and cinnamon, and macerate for a week; lastly, filter through paper.—E. and D. very similar.

Med. Prop. Astringent, tonic, and refrigerant.

Use. In low fevers, in convalescence, in colliquative sweats, hemorrhages, diarrheas, &c.

ACIDUM SULPHURICUM DILUTUM. U. S., L., E., D. Sulphuric acid f\(\mathcal{z} \) j, distilled water f\(\mathcal{z} \) xiij. Add them gradually together in a glass vessel, and mix.

Med. Prop. and Use. Same as the preceding.

ACIDUM TANNICUM. U.S. Tannic Acid. Tannin. Cause commercial sulphuric ether to percolate through powdered galls, in a glass adopter, closed at the lower end with carded cotton. The liquor obtained separates into two parts; pour off the upper layer, and evaporate the lower portion, with a moderate heat, to dryness. Dose, 2 to 5 grains.

Med. Prop. Purely astringent.

Use. In chronic dysentery and diarrhœa, and in passive hemorrhages; externally, to check hemorrhages.

Acidum Tartaricum. U. S., L., E., D. Tartaric Acid. Saturate the excess of acid in bitartrate of potassa (cream of tartar), with carbonate of lime; decompose the resulting tartrate of lime by sulphuric acid; then decompose the remaining neutral tartrate of potassa by chloride of calcium in excess; finally, decompose the resulting tartrate of lime by sulphuric acid, as at first; then strain and crystallize by evaporation.

Med. Prop. Refrigerant, antiseptic, and antiscorbutic.

Use. As a drink, in fevers and inflammatory affections. Also for making the Soda and Seidlitz Powders.

Aconitina. L. Aconitia, Aconitine. The active alkaline principle of Aconite. Very apt to be spurious as found in the markets. Morson's Aconitia is of certain strength. (An energetic poison; used only externally, in neuralgia.)

Aconitum. U. S., E. [Aconiti Folia et Radix, L.; Aconitum paniculatum. Folia, D.] Aconite. Leaves and root of Aconitum napellus, and of A. paniculatum.

Med. Prop. Sedative narcotic.

Use. In neuralgia, especially as an external application.

ADEPS. U. S., L. [Axungia, E.; Adeps Suillus Preparatus, D.] Lard. The prepared fat of the Sus Scrofa, or common hog, free from salt.

Med. Prop. Emollient.

Use. In the formation of cerates, ointments, &c.

ÆTHER NITROUS. D. [Æther Nitricus.] Nitrous Ether. Hyponitrous Ether. Nitric Ether. D. directs it to be made

by the reaction between nitrate of potassa, sulphuric acid, and alcohol. An improved process by Dr. Hare is here subjoined: Dissolve 14 parts of hyponitrate of potassa (obtained by heating the nitrate) in 7 parts of water, and mix with 8 parts of alcohol, in a retort, the head of which is tapering, and bent downwards, so as to pass through the tube and enter a tall vial. Both tube and vial are kept cold by ice; 7 parts of sulphuric acid, diluted with its weight of water, are gradually added, and distillation effected by means of a water-bath of 100°. Sp. gr., 0.947. (Diluted with alcohol, it forms Sweet Spirits of Nitre.)

Med. Prop. and Use. The same as those of Sulphuric Ether.

ÆTHER SULPHURICUS. U. S., L., E., D. Sulphuric Ether. Ether. Pour gradually f\(\frac{7}{3}\)xiv sulphuric acid into Oij alcohol, in an open vessel. Put the mixture into a glass retort, heat quickly to boiling, in sand; let the liquor distil into a refrigerated receiver until half a pint has passed over; then add alcohol Oij, previously mixed with sulphuric acid f\(\frac{7}{3}\)ij, conveyed through a tube reaching nearly to the bottom of the retort. Continue the distillation until about 3 pints have passed over. Add this to 3vj potassa, previously dissolved in f\(\frac{7}{3}\)ij distilled water, and shake frequently; at the end of 24 hours pour off the supernatant liquid, and redistil it with a gentle heat, until two pints shall have passed over, or until it has acquired the sp. gr. of 0.750. (U. S.)

Med. Prop. A diffusible stimulant, narcotic, and antispasmodic; externally, refrigerant or rubefacient, according as it is allowed to evaporate or not.

Use. In prostrate conditions of system, gout of the stomach, hysteria, asthma, and other spasmodic diseases; externally, in headache.

Alcohol. U. S. [Spiritus Rectificatus, L., E., D.] Alcohol. Rectified Spirits. Spirits of Wine. Procured by distillation from different varieties of ardent spirits. U. S. directs it to be of sp. gr. 0.835; (contains 15 per cent. of water.)

Med. Prop. Stimulant both internally and externally; also narcotic.

Use. Not used internally; in pharmacy, to prepare certain tinctures, &c.

Alcohol Dilutum. U. S. [Spiritus Tenuior, L., E., D.] Diluted Alcohol. Proof Spirit. Mix together equal measures of alcohol and distilled water. Sp. gr. 0.935. (U. S.) It contains 42 per cent. of absolute alcohol.—L. directs the sp. gr. to be 0.920, equivalent to 49 per cent. of pure alcohol. E. directs sp. gr. 0.912, equivalent to 52 per cent. D. orders sp. gr. 0.919, or rather more than 49 per cent.

Med. Prop. Similar to the preceding.

Use. In pharmacy, to prepare most vegetable tinctures (except those of resins).

ALLIUM. U. S., L., E. Garlic. The bulb of Allium sativum. Med. Prop. Stimulant, antispasmodic, emmenagogue, diuretic, diaphoretic, and expectorant; externally, rubefacient.

Use. In enfeebled digestion, flatulence, chronic pectoral affections, and hooping-cough; externally, to the feet of children, as a revulsive.

ALLIUM CEPA. D. Onion.

Med. Prop. and Use. Much the same as the preceding.

Aloe. U. S., L. [Aloe Barbadensis. A. Indica. A. Socotorina, E.; A. Hepatica. A. Socotorina, D.] Aloes. Inspissated juice of the leaves of Aloe spicata, and other species of Aloe.

Med. Prop. Cathartic, emmenagogue, and anthelmintic.

Use. In constipation, usually combined with other cathartics; in amenorrhœa; and for ascarides, in enema.

ALTHÆA. U. S. [A. radix et folia, L., E.; A. officinalis. D.] Marsh-mallow. Root of the Althæa officinalis.

Med. Prop. Emollient, and demulcent.

Use. In pulmonary and intestinal affections; externally, as a gargle.

ALUMEN. U. S., L., E., D. Alum. Sulphate of alumina and potassa.

Med. Prop. Astringent, and in large doses, purgative and emetic.

Uses. In passive hemorrhages, chronic diarrhœa, &c., and hooping-cough; externally, as an injection.

ALUMEN EXSICCATUM. U. S., L., E., D. Dried Alum. Melt alum in an earthen or iron vessel over the fire, till it become dry, and reduce to powder.

Med. Prop. A mild escharotic.

Use. On fungous granulations.

Ammoniæ Bicarbonas, D. Pass carbonic acid gas through any quantity of water of carbonate of ammonia, until saturated; then let it rest to form crystals, which are to be dried without heat.—Dose, gr. v. to xx.

Med. Prop. and Use. Same as those of the carbonate.

Ammoniæ Carbonas. U. S., E., D. [Ammoniæ Sesquicarbonas, L.] Carbonate of Ammonia. (Volatile Salts. Volatile Alkali.) Mix fbj. of powdered muriate of ammonia with fbjss of prepared chalk, and sublime with a gradually increasing heat.

Med. Prop. Stimulant, antacid, diaphoretic, and antispasmodic.

Use. In low forms of disease, atonic dyspepsia, gout, and chronic rheumatism.

Ammonia. U. S., E., D. [Ammoniae Hydrochloras, L.] Muriate of Ammonia. Sal Ammoniae. Chloride of Ammoniam. The commercial sal ammoniae should be purified by crystallization, for internal use.—Dose, gr. v. to xxx.

Med. Prop. Purgative in large doses, alterative, and resolvent. Use. In hemicrania, chronic enlargements, &c.; externally, as a lotion to indurations.

Ammoniæ Hydrosulphuretum. D. Pass Sulphuretted hydrogen gas (made by acting on sulphuret of iron with dilute sulphuric acid), through water of ammonia. A sedative poison.

—Dose, 4 to 8 drops.

Ammoniæ Phosphas. Saturate dilute phosphoric acid with carbonate of ammonia, and evaporate so that crystals may form.

—Dose, grs. x to xx.

Med. Prop. Excitant, diaphoretic, and discutient.

Use. Reputed useful in rheumatism, gout, and uric acid calculus.

AMMONIACUM. U. S., L., E. [Ammoniacum Gummi, D.] Ammoniac. The concrete juice of Dorema Ammoniacum.

Med. Prop. Stimulant, expectorant, emmenagogue, and deobstruent.

Use. In chronic pulmonary disorders, chronic amenorrhœa; and externally, as a discutient plaster in tumours of the joints, &c.

AMYGDALA AMARA. U. S., L., E. [Amygdalæ Amaræ, D.]

Bitter Almonds. The kernels of the fruit of Amygdalus communis.—Var. Amara.

Med. Prop. Sedative.

Use. In pectoral affections, attended with cough.

AMYGDALA DULCIS. U. S., L., E. [Amygdalæ Dulces, D.] Sweet Almonds. The kernels of the fruit of Amygdalus communis.—Var. Dulcis.

Med. Prop. Demulcent, nutritious.

Use. Chiefly in emulsion, as a vehicle for other medicines; externally, as a lotion.

Amygdalin. The peculiar azotized principle found in the bitter almond, peach kernel, &c., which, by reacting with emulsin and water, generates hydrocyanic acid and oil of bitter almonds. It may be thus used medicinally as a substitute for prussic acid.—Prepared, by boiling well-pressed cake of bitter almonds, twice, in strong alcohol; strain through linen, and press the residue. Remove any oil that may appear; heat the liquid again, and filter. In a few days part of the amygdalin crystallizes. Concentrate the residual liquor to a sixth part, and add ether, which will precipitate the amygdalin. Press it between blotting paper, wash it with ether, re-dissolve in boiling alcohol, and set aside to crystallize. [A mixture composed of gr. xvij of amygdalin, with f\(\frac{7}{2}\)jss of the emulsion of sweet almonds, contains one grain of absolute hydrocyanic acid. (Liebig and W\(\frac{7}{2}\)limits dose of this would be f\(\frac{7}{2}\)j, to commence with.]

Amygdalus Persica. [Folia, D.] Peach Leaves. Leaves of Amygdalus Persica.

Med. Prop. Laxative and sedative.

AMYLUM. U. S., L., E. Starch. The fecula of the seeds of Triticum vulgare.

Med. Prop. Demulcent and nutritious.

Use. Chiefly in decoction, as a vehicle for injections.

ANETHUM. L., E. Dill Seeds. Fruit of Anethum graveolens. Med. Prop. and Use. Aromatic.

ANGELICA. U. S. (Sec.) The root and herb of Angelica atropurpurea.

Med. Prop. and Use. Similar to those of the following.

Angelica. E. [Angelica Archangelica. Semina, D.] Root and seeds of Angelica Archangelica.

Med. Prop. Aromatic, tonic. Seldom employed.

Angustura. U. S., D. [Cusparia, L., E.] Angustura Bark. Bark of Galipea officinalis.

Med. Prop. Stimulant, tonic, febrifuge.

Use. In intermittents and remittents, bilious diarrhœas, and dysentery. Not much employed.

Anisum. U. S., L., E., D. Anise. Fruit of the Pimpinella

Med. Prop. Aromatic.

Use. Chiefly for imparting flavour; also as a carminative.

ANTHEMIS. U. S., L., E. [Chamæmelum. Anthemis Nobilis, D.] Chamomile. Flowers of the Anthemis nobilis.

Med. Prop. Tonic; the warm infusion, emetic.

Use. In dyspepsia, and in convalescence; also to promote the operation of emetics.

ANTHRACOKALI. (Dr. Poyla.) Carb. potassæ 3vj, lime 3iijss, water Oiv. Proceed as in making liquor potassæ, and concentrate the clear solution by boiling in an iron vessel, till an oily-looking liquid remains. Then stir in 3v of finely-powdered mineral coal; remove from the fire, and continue stirring till the whole is reduced to a uniform powder, which is to be immediately put into small dry bottles.—Dose, gr. ij, twice or thrice a day, for skin diseases, scrofula, chronic rheumatism, &c.

Antimonii et Potassæ Tartras. U. S. [Antimonii Potassiotartras, L.; Antimonium Tartarizatum, E.; Antimonii et Potassæ Tartras, sive Tartarum Emeticum, D.] Tartar Emetic. Tartarized Antimony. Mix together, in a glass vessel, 3xxv of muriatic acid, and 3ij of nitric acid; to this add gradually 3iv of finely powdered sulphuret of antimony; digest with a moderate heat, till effervescence ceases, and then boil for an hour; filter when cold, and pour into water. Wash the precipitated oxychloride, and then dry it. Boil together 3ij of this powder, 3ijss of powdered cream of tartar, and f3xviij of distilled water; filter while hot, and crystallize by cooling.—L. employs the crocus of antimony (oxysulphuret).

Med. Prop. In full dose, emetic; in smaller doses, refrigerant, diaphoretic, and expectorant.

Use. In fevers not of a low form, and in pectoral affections; large doses have been recommended in pneumonia and acute rheumatism; as an alterative, in chronic cutaneous diseases; and as an emetic.

Antimonii Oxidum Nitro-muriaticum, D.] Oxychloride of Antimony.

Powder of Algaroth. Proceed as in the first part of process for tartar emetic.

Use. In pharmacy, in the preparation of tartar emetic.

Antimonii Sulphuretum. U. S., E., D. [Antimonii Sesquisulphuretum, L.] Native Sulphuret of Antimony, purified by fusion.

Use. Not employed in medicine.

Antimonii Sulphuretum, L.; Antimonii Sulphuretum Aureum, E.; Sulphur Antimoniatum Fuscum, D.] Mix zvj of powdered sulphuret of antimony with Oiv of solution of potassa, and Oxij of distilled water, and boil over a gentle fire for three hours, constantly stirring, and occasionally adding distilled water. Strain the liquor immediately through a linen cloth, and add to it, while hot, diluted sulphuric acid, so long as it produces a precipitate;

then wash away the sulphate of potassa with hot water, and dry the residue with a gentle heat. (If the solution be allowed to cool slowly before adding the acid, Kermes mineral is deposited; and if the acid be now added, it throws down the Golden Sulphur of Antimony.) The P. and other foreign pharmacopæias direct carbonate of soda instead of potassa, which is said to yield a finer kermes.

Med. Prop. Alterative; emetic and cathartic in larger doses. Use. Chiefly as an alterative, in chronic skin diseases.

APOCYNUM CANNABINUM. U.S. (Sec.) Indian Hemp.

Med. Prop. Emeto-cathartic and diuretic; sometimes narcotic. Use. In obstinate dropsies.

APOCYNUM ANDROSÆMIFOLIUM. U. S. (Sec.) Dogsbane. Med. Prop. Emetic; not much used.

AQUA. U.S., E. Water. Natural water in its purest attainable state. [Spring water, E.]

AQUA DESTILLATA. U. S., L., E., D. Take of water ten gallons; first distil two pints, and throw them away; next distil eight gallons. Keep in glass bottles.

Use. In pharmacy, where purity is required.

AQUÆ DISTILLATÆ. L., E., D. Simple Distilled Waters. The plants, &c., (fresh, if possible,) are put into the still with twice as much water as is intended to be drawn off.—L. directs f\(\frac{7}{3} \) vij of proof spirit, and \(E., f\(\frac{7}{3} \) iij of rectified spirit, to be added in the still for each gallon of product; but its utility is very questionable. The \(L. \) and \(E. \) Colleges also allow the process of \(U. \) S. See \(Aquæ Medicatæ.

AQUÆ MEDICATÆ. U. S. Preparations consisting of water impregnated with some medicinal substance. Most of the aromatic waters are prepared, according to U. S., by saturating the volatile oils with carbonate of magnesia; then adding the water, and filter.

Med. Prop. Aromatic.

Use. Chiefly as vehicles; also as carminatives.

AQUA ACIDI CARBONICI. U. S. Carbonic Acid Water. Water

charged by pressure, with 5 times its volume of carbonic acid gas.

Med. Prop. Anti-emetic, diaphoretic, and diuretic.

Use. In irritable stomach; also, as a vehicle for certain medicines.

AQUA ÆTHEREA. [Eau Ethérée, P.] Mix 1 part of ether with 8 of water; agitate frequently in a bottle with a ground stopper; let it rest 24 hours; separate the supernatant ether, and keep the water for use.

Med. Prop. Slightly stimulant, and carminative.

AQUA ANETHI. L., E. Dill Water. Bruised dill seeds hiss, proof spirit f\(\mathfrak{z}\) vij, (rect. spt. f\(\mathfrak{z}\) iij, E.,) water Cong. ij; distil Cong. j.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA ANISI. P. As Aqua Anethi.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA AROMATICA. Prus. Phar. Sage Zviij, rosemary Ziv, peppermint Ziv, lavender flowers Ziv, fennel seeds Zij, cinnamon Zij, rectified spirit Ibiv, water Ibxx; macerate for 24 hours, and draw off Ibxij.

Med. Prop. and Use. Those of the aromatics generally.

AQUA BINELLI. An Italian styptic nostrum, supposed to contain creasote.

AQUA CALCIS. E., D. See Liquor Calcis.

AQUA CAMPHORÆ. U. S. [Mistura Camphoræ, L., E., D.] Camphor Water. Rub 3ij of camphor with mxl of alcohol, then with 3j of carbonate of magnesia, and lastly, with Oij of distilled water, gradually added. Filter through paper.—It contains about gr. iij to the f3.

Med. Prop. Those of camphor in small doses.

Use. In low forms of fever, to quiet restlessness, and to allay uterine pains.

AQUA CARUI. L., D. Caraway Water. From Caraway seeds, or the oil, as Aqua Anethi.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA CARYOPHYLLI. P. Cloves Ibij, water q. s.; macerate for 12 hours, and distil Ibviij.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA CASCARILLÆ. P. Cascarilla bark fbij, water q. s.; distil Cong. j.

Med. Prop. and Use. Those of Cascarilla.

AQUA CASSIÆ. E. Cassia bark lbjss, rectified spirit f\(\)iij, water Cong. ij, distil Cong. j, [Guy's H. substitutes \(\) xv of Cassia buds.]

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA CHALYBEATA AERATA. (SOUBEIRAN.) Water, freed from air, Oj, sulphate of iron gr. ss; charge with 5 vols. of carbonic acid gas. Or, sulphate of iron gr. j, carbonate of soda gr. iv, water freed from air and charged with 5 volumes of gas, Oj. [Bewley's Aqua Chalybeata is a solution of citrate of iron in aërated water, flavoured with orange peel.]

Med. Prop. and Use. A mild chalybeate; intended as a substitute for natural chalybeate spring water.

AQUA CHLORINI. D. [Chlorinei Aqua, E.] Chlorine Water. Pass chlorine gas through cold water till it ceases to be absorbed.—E. forms the solution in the liquid way.

Med. Prop. Stimulant and antiseptic.

Use. In malignant scarlatina; also externally, to the throat.

AQUA CINNAMOMI. U. S., L., E., D. Cinnamon Water. Triturate f3ss of oil of cinnamon with 3ss of carbonate of magnesia, then with Oij of distilled water, gradually added; filter through paper. The British Colleges direct as Aquæ Distillatæ. Med. Prop. and Use. As those of Cinnamon.

AQUA COLONIENSIS. Eau de Cologne. P. Oil of bergamot Ziij, oil of lemon Ziij, oil of rosemary Zjss, oil of neroli Zjss, oil of lavender Zjss, oil of cinnamon Zvj, rectified spirit Oxxiv, compound spirit of balm Oiij, spirit of rosemary Oij; mix, and after 8 days distil Oxxiv.

Use. A very agreeable perfume.

AQUA CREASOTI. Creasote 3j, distilled water 3x; shake together, and filter.

Med. Prop. and Use. Those of Creasote.

AQUA CUPRI SULPHATIS CAMPHORATA. BATES'S Camphorated Lotion. Sulphate of copper gr. xv, bole gr. xv, powdered camphor gr. iv, boiling water f3iv; when cold, filter. [As a collyrium, this requires dilution.]

AQUA FLORUM AURANTII. L. [Aurantii Aqua, E.] Orange Flower Water. Orange flowers lbx, proof spirit Zvij, water Cong. ij; distil Cong. j.

Use. As a perfume.

AQUA FŒNICULI. U. S., L., E., D. From oil of fennel, as Aqua Cinnamomi.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA GOULARDI. See Liquor Plumbi Subacetatis.

AQUA HYDROCYANICA VEGETABILIS. (SCHRADER.) Essential oil of bitter almonds 3j, rectified spirit 3jss, distilled water 3xvj; mix well, and filter through wet filtering paper. [Intended as a substitute for Aqua Lauro-cerasi.]

AQUA LAURO-CERASI. E., D. Cherry-Laurel Water. Fresh leaves of cherry laurel chopped small lbj, water Oijss; distil Oj; agitate the distilled liquor well, filter it through wet paper, and add compound spirit of lavender 3j. [It contains an uncertain amount of prussic acid. Dose, mxxx to f3j.]

Med. Prop. and Use. Similar to those of Hydrocyanic Acid.

AQUA LAVANDULÆ. P. Flowering tops of lavender Ibij, water q. s.; distil by steam Ibiv. [The simple and perfumed Spirit of Lavender are also named Lavender Water. See Spiritus Lavandulæ.]

AQUA MARINA FACTITIA. Artificial Sea Water. To Cong. iv of water, add the following salts in crystals: chloride of sodium 3xvj, sulphate of soda 3vij, chloride of calcium 3jss, chloride of magnesium 3vj, iodide of potassium 9j, bromide of potassium

gr. x.—A simple substitute, used as a bath, is Ibj of common salt to Ibxxx of water.

AQUA MENTHÆ PIPERITÆ. U. S., L., E., D. Peppermint Water. From oil of peppermint, as directed for Aqua Cinnamomi.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA MENTHÆ PULEGII. L., D. Pennyroyal Water. As directed for Aquæ Distillatæ.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA MENTHÆ VIRIDIS. U. S., L., E., D. Spearmint Water. From oil of spearmint, as Aqua Cinnamomi.

Med. Prop. and Use. Those of Aquæ Medicatæ.

AQUA OPII. (GUIBOURT.) Opium, in small pieces, lbj, water lbvj. Macerate for 48 hours, and distil lbj. Some authorities direct lbiij to be distilled.—Dose, 3ij, or more.

Med. Prop. Narcotic.

Use. As a mild opiate.

AQUA PHAGEDÆNICA. See Lotio Hydrargyri Flava.

AQUA PICIS LIQUIDÆ. D. Tar Water. Mix a quart of tar with a gallon of cold water; stir together for a quarter of an hour, and filter. Keep in a close vessel.—Dose, one to two pints, daily.

Med. Prop. Stimulant and diuretic.

Use. Chiefly in chronic pectoral affections.

AQUA PIMENTÆ. L., E., D. Bruised pimento lbj (or 3ij of the oil), proof spirit f3vij, water Cong. ij. Distil Cong. j.

AQUA REGIA. See Acidum Nitro-Muriaticum.

AQUA ROSÆ. U. S., L., E., D. Rose Water. Fresh hundred-leaved rose petals lbx, water Cong. ij (proof spirit f\(\frac{7}{3}\)vij, L.); distil Cong. j.

Use. A pleasant vehicle for collyria, &c.

AQUA SALVIÆ. P. Sage Water. As Aqua Lavandulæ.

AQUA SAMBUCI. L., E. Elder Water. From fresh elder-flowers, as Aqua Rosæ.

AQUA SAPPHIRINA. Liquor Cupri Ammoniati.

AQUA SASSAFRAS. P. Sliced sassafras Ibiij, water q. s. Distil Cong. j.

AQUA SEDLITZENSIS. P. Crys. sulphate of magnesia 3ij, water Oj; dissolve, and charge the solution with 3 volumes of carbonic acid gas.

Use. As a gentle laxative.

AQUA SELTERANA. P. Selters or Seltzer Water. Chloride of sodium \ni j, crys. carbonate of soda gr. xv, crys. phosphate of soda gr. iss, water \Im x. Dissolve also chloride of calcium gr. v, and chloride of magnesium gr. iv, in \Im x of water. Mix the solutions, and aerate with five volumes of carbonic acid gas.

Med. Prop. Those of the natural Seltzer water.

AQUA TANACETI. P. Flowering tops of tansy by, water q. s.; distil Cong. ij.

AQUA VANILLÆ. (NIEMANN.) Vanilla fbj, water fbxij. Macerate 24 hours, and distil fbvj.

Use. For imparting flavour.

AQUA VULNERANA. From the same herbs as Spiritus Vulnerarius, but with water only.

ARALIA NUDICAULIS. U. S. (Sec.) False Sarsaparilla.

Med. Prop. Gently stimulant, diaphoretic, and alterative.

Use. As the genuine sarsaparilla, in chronic rheumatism, &c.

ARALIA SPINOSA. U. S. (Sec.) Angelica-tree Bark.

Med. Prop. A stimulant, diaphoretic, emetic, and cathartic.

Use. In rheumatism, and colic.

ARGENTI Ammonio-Chloridum. (Serre.) Saturate boiling aqua ammoniæ with freshly precipitated and carefully washed chloride of silver; filter whilst boiling hot, and let the crystals, which form on cooling, be dried between blotting paper, and immediately put into well-stopped bottles.—Dose, from 1/14th of a grain, in syphilitic affections.

ARGENTI CHLORIDUM. Precipitate a solution of nitrate of silver by an excess of chloride of sodium; wash the precipitate with distilled water; dry it quickly, and keep from the light.—Dose, ½ gr. to gr. iij.

Med. Prop. and Use. Those of the nitrate.

ARGENTI CYANURETUM. U. S. [Argenti Cyanidum, L.] Dissolve 3xv of nitrate of silver in Oj of distilled water; add Oj of dilute hydrocyanic acid; wash and dry the precipitate.

Used in the extemporaneous preparation of Dilute Hydrocyanic Acid.

ARGENTI IODIDUM. (DR. PATTERSON.) Dissolve separately in distilled water, equal weights of iodide of potassium and nitrate of silver; mix the solutions, wash the precipitate with distilled water, and dry with a gentle heat.—Dose, ½ to 2 grs.

Use. Similar to that of nitrate of silver; particularly in hooping-cough.

ARGENTI NITRAS. U. S., L., E. [Argenti Nitras Fusum, D.]

Lunar Caustic. Dissolve 3j of silver in a mixture of f3v of nitric acid and f3ij of distilled water, on a sand-bath. Evaporate the solution to dryness, fuse, and pour into suitable moulds. [The crystals may be procured by concentrating the solution, so that they may form on cooling.]—Dose, gr. 4th to gr. iij.

Med. Prop. Tonic, antispasmodic; externally, stimulant and escharotic.

Use. In chorea and epilepsy; chronic disorders of the stomach and bowels; also as an astringent lotion and injection.

ARGENTI OXIDUM. (Mr. LANE.) To a solution of 3iv of nitrate of silver, add a solution of 3ij hydrate of potassa; wash the precipitate well, and dry it in the shade with a moderate heat.

—Dose, gr. ss to gr. j, two and three times a day.

Use. In gastralgia, &c.

Armoracia. U. S., L., E. Horseradish. The fresh root of Cochlearia Armoracia.

Med. Prop. Stimulant, and externally rubefacient.

Use. In enfeebled dropsy.

Arnica montana. Leopard's Bane. The root and herb of

Med. Prop. Stimulant, narcotic, diaphoretic, diuretic, and emmenagogue.

Use. In amaurosis, paralysis, &c.

ARUM. U. S. (Sec.) Dragon-root. Indian turnip. The cormus of Arum triphyllum.

Med. Prop. When fresh, very acrid and stimulating; increases the secretions.

Use. In asthma, pertussis, chronic rheumatism, &c.

Asarum. U. S. (Sec.) Canada Snake-root. Wild Ginger.
The root of Asarum Canadense.

Med. Prop. An aromatic stimulant tonic; used as a substitute for Serpentaria.

ASCLEPIAS TUBEROSA. U. S. (Sec.) Pleurisy-root. The root of Asclepias tuberosa.

Med. Prop. Diaphoretic, and expectorant.

Use. In pectoral affections, rheumatism, and dysentery.

Assafætida. U. S., L., E., D. The concrete juice of the root of Ferula Assafætida.

Med. Prop. Antispasmodic, expectorant, and emmenagogue.

Use. In hysteria, convulsions, hooping-cough, chronic coughs, &c.

AURANTII CORTEX. U.S. Orange Peel. The outer rind of the fruit of Citrus vulgaris, or C. Aurantium.

Med. Prop. Aromatic.

Use. In flavouring unpleasant infusions and decoctions.

Auri Pulvis. P. Triturate gold-leaf with 10 or 12 times its weight of sulphate of potassa, and wash out the latter with boiling water.—Dose, gr. ½th to gr. j; or, applied in frictions to the tongue.

Use. In chronic syphilitic affections.

Auri[Ter]-Chloridum. P. Dissolve gold in 3 parts of nitromuriatic acid; evaporate till vapours of chlorine begin to appear, and set aside to crystallize.—Dose, ¹/₂₀th to ¹/₁₆th of a grain.

Med. Prop. Very similar to those of corrosive sublimate. Use. In syphilis.

Auro-Chloridum Sodii. P. Soda-Muriate of Gold. Dissolve 85 parts chloride of gold, and 16 chloride of sodium in a little water; concentrate by evaporation, that crystals may form as it cools.—Dose, as the last. Both require to be cautiously administered.

Use. As the last.

AURI IODIDUM. P. To a solution of chloride of gold, add a solution of iodide of potassium, as long as it occasions a precipitate. Wash with alcohol, and dry by a gentle heat.—Dose, 1sth to 10th of a grain.

Use. As the preceding.

Auri Oxidum. P. Teroxide of Gold, or Auric Acid. To a solution of 1 part chloride of gold in 40 of distilled water, add 4 parts of fresh calcined magnesia. Boil together, and wash the sediment with distilled water, then with pure nitric acid, diluted with 20 parts of water. Dry it in the shade.—Dose, 10th to 12 grain.

Med. Prop. and Use. As the preceding.

AVENÆ FARINA. U. S. [Avena, L., E.; Avena Sativa, D.]

Oatmeal. Meal prepared from the seeds of Avena sativa.

Med. Prop. Nutritive, emollient.

Use. As a diet for the sick.

AZEDARACH. U. S. (Sec.) The bark of the root of Melia Azedarach.

Med. Prop. Anthelmintic, cathartic, and emetic.

Use. Chiefly to expel worms.

Balneæ Medicatæ. Baths of cold or heated water, vapour, and heated air are used medicinally. The following are the temperatures at which they are usually applied:—Water, cold, 50° to 75° F.; temperate, 75° to 85°; tepid, 85° to 92°; warm, 92° to 98°; hot, 98° to 112°. Vapour, if breathed, tepid, 90° to 100°; warm, 100 to 110°; hot, 110 to 130°: if not breathed, tepid, 96° to 106°; warm, 106° to 120°; hot, 120° to 160°. Hot air, as a sudorific, 85° to 100°; as a stimulant, 100° to

130°. Water (usually warm), vapour, and heated air are often medicated by being charged with the active principles of different herbs and other drugs. There are various contrivances for applying them either generally or locally. Dr. Serres suggests the following simple plan of applying hot vapour:—A lump of quick lime, wrapped in a wet cloth, and covered with a dry one, is placed on each side of the patient in bed, and allowed to remain until perspiration is established.

BALNEUM ACIDUM. DR. Scott's Nitro-Muriatic Bath. Proper proportions for sponging, or a foot-bath, f\(\frac{7}{3} \) ij to a gallon of water, at 90°; for a general bath, f\(\frac{7}{3} \) j to the gallon. Wooden vessels only should be used.

Med. Prop. Stimulant to the liver.

Use. In hepatitis and syphilis.

BALNEUM FURFURIS. Bran Bath. Boil this of bran in Cong. j of water, and add it to the bath, which should be at 90°.

Med. Prop. Emollient.

Use. Chiefly in cutaneous eruptions.

Balneum Sulphur osum. Sulphur Bath. The fumes of burning sulphur (3ss at a time), are used in the cure of itch, &c. The patient should avoid breathing the fumes.

BALNEUM SULPHURATUM. Fr. H. Liver of sulphur (Sulphuret of Potassium) 3jss to 3jv, warm water Cong. xxv to 1; a small quantity of sulphuric or muriatic acid may be added.

Med. Prop. Those of the natural sulphur waters.

Use. In chronic rheumatism, and chronic skin diseases.

BARII CHLORIDUM. U. S., L. [Barytæ Murias, E., D.] Dissolve Ibj of carbonate of baryta in f3xij of muriatic acid, diluted with Oiij of water; apply gentle heat; filter and evaporate to form crystals.

Med. Prop. Deobstruent and alterative.

Use. Chiefly in scrofula, chronic ophthalmia, and diseases of the skin.

BARII IODIDUM. (MAGENDIE.) Heat a fresh solution of iodide of iron with excess of carbonate of baryta; filter, and evaporate to

dryness. Re-dissolve and crystallize. (The Bromide is made in a similar manner.)

Med. Prop. Alterative.

Use. In scrofula, morbid growths, hypertrophy, chronic skin diseases, &c.

BARYTÆ CARBONAS. U. S., L., E. Occurs native. May be made artificially by precipitating the nitrate or muriate, by a carbonated alkali.

Use. Not employed in medicine. In pharmacy, for making the chloride.

BARYTÆ NITRAS. Dissolve the carbonate in nitric acid, and evaporate to dryness; re-dissolve, and crystallize.

Belladonna. U. S., L., E., D. Deadly Nightshade. The leaves of Atropa Belladonna.

Med. Prop. Narcotic, antispasmodic, diaphoretic, and diuretic.

Use. In neuralgia, hooping-cough, epilepsy, mania, amaurosis, &c.

Benzoinum. U. S., L., E. [Styrax Benzoin, D.] Gum Benzoin. The concrete juice of Styrax Benzoin.

Med. Prop. Stimulant, and expectorant.

Use. Chiefly for obtaining its acid.

BISMUTHI SUBNITRAS. U. S., D. [Bismuthi Trisnitras, L.; Bismuthum Album, E.] Subnitrate, or White Oxide of Bismuth. Magistery of Bismuth. Dissolve \$\mathcal{z}\$j of pure bismuth in \$f\mathcal{z}\$jss of nitric acid, diluted with \$f\mathcal{z}\$j of water. Pour the clear solution into Oiij of distilled water; collect the precipitate; wash it with distilled water, and dry by a gentle heat.—Dose, 5 to 15 grs., in pyrosis and gastrodynia.

Brominum. U. S. (Sec.) Procured from the bittern of seawater, or certain brine springs, by first passing chlorine through it, and then agitating it with ether. Next, add the etherial solution of bromine to a concentrated solution of caustic potassa; finally, decompose the bromide of potassium by sulphuric acid and the peroxide of manganese.

Med. Prop. and Use. Very similar to those of Iodine,

CALAMUS. U. S. (Sec.) Sweet Flag. The rhizoma of Acorus calamus.

Med. Prop. Stimulant, and aromatic.

Use. As a carminative, in colic, &c.

CALCH CHLORIDUM. U. S., L. [Calcis Murias, E., D.] Prepared by saturating muriatic acid with chalk or marble, evaporating, and drying at a red heat.

Med. Prop. and Use. See Liquor Calcii Chloridi.

Calcis Carbonas Præcipitatum. D. To 5 parts of solution of muriate of lime, add a solution of 3 parts of carbonate of soda in 4 parts of distilled water. Wash, collect, and dry the precipitate.

Med. Prop. and Use. As those of Creta Præparata.—When properly made, it is a very pure carbonate of lime, in a finely divided state.

CALCIS HYDRAS. L. Slaked Lime. Fresh lime sprinkled with water till it falls into powder.

Use. To form chlorinated lime, or bleaching powder.

CALCIS MURIAS. See Calcii Chloridum.

CALCIS PHOSPHAS PRÆCIPITATUM. D. Digest 1 part of calcined and powdered bones, with 2 of dilute muriatic acid and 2 of water, for 12 hours, and filter the liquor; then add q. s. of aqua ammoniæ; wash and dry the precipitate.

Dose, 3ss, in rickets, &c. An excellent basis for tooth-powders.

CALCIS SULPHURETUM. P. Sulphur 3x, slaked lime 3xxx, water Oijss; boil together till a portion dropped on a cold surface becomes solid; pour it on a marble slab, and, when solidified, break it up, and keep in well-closed vessels.

CALX. U. S., L., E., D. Lime. Quick Lime. Lime recently prepared by calcining the carbonate.

Med. Prop. Externally, escharotic.

Use. See Liquor Calcis.

CALX CHLORINATA. U. S., L., E. Chloride of Lime. Bleaching Powder. (Hypochlorite of Lime.) Pass chlorine gas into a vessel, or chamber in which slaked lime is thinly spread, till the latter is thoroughly saturated.

Med. Prop. and Use. Those of a disinfectant. Employed also for bleaching.

CALOMELAS. See Hydrargyri Chloridum Mite.

Calomelas Præcipitatum. D. Precipitate a clear solution of nitrate of mercury with a solution of chloride of sodium. Wash the precipitate with distilled water, as long as the washings are affected by liquor potassæ, and dry it.

Med. Prop. and Use. Similar to those of Hydrargyri Chloridum Mite.

CALUMBA. L. See Colomba.

CAMPHORA. U. S., L., E., D. Camphor. The concrete substance derived, by heat, from Laurus Camphora, and purified by sublimation. [Sumatra, or Borneo Camphor is derived from the Dryobalanops Camphora, in which it exists in concrete masses.]

Med. Prop. Narcotic, sedative, diaphoretic; externally, anodyne. Use. In low forms of fever, in rheumatism, after-pains, &c.

CANELLA. U. S., L., E. [Canella Alba, D.] The bark of Canella alba.

Med. Prop. Stimulant, tonic, and aromatic.

Use. Chiefly as an ingredient in hiera picra.

CANNA. E. Canna Starch. (Tous les mois.) Fecula of a species of Canna.

Med. Prop. and Use. Similar to those of arrow-root (Maranta).

CANTHARIS. U. S., L., E. [C. Vesicatoria, D.] Spanish Flies.

Med. Prop. Stimulant, diuretic, and emmenagogue; externally, escharotic.

Use. In passive dropsies, and chronic amenorrhœa of an enfeebled character; also in the form of cerate, for blisters.

CANTHARIS VITTATA. U.S. Potato Flies.

Med. Prop. and Use. The same as the preceding.—There are several other species possessing similar properties.

CANTHARIDINA. P. Cantharidin. Exhaust powder of can-

tharides with strong alcohol by percolation; distil off the spirit from the filtered tincture, and leave the residue to deposit crystals, which may be purified by dissolving them in boiling alcohol, digesting with animal charcoal, filtering the hot solution, and crystallizing by cooling. This is the active principle of cantharides.

Capsicum. U. S., L. [Capsicum Annuum, D.] Cayenne Pepper. The fruit of Capsicum annuum.

CARBO ANIMALIS. U. S., L., E. Animal Charcoal. Bone-black. Ivory-black. Obtained by burning bones (or flesh, L.), in close vessels.

Use. As a decolorizing agent in making pharmaceutical preparations.

CARBO ANIMALIS PURIFICATUS. U. S., L., E. Hydrochloric acid and water, each, f\(\frac{7}{3}\times ij\), mix, and pour it gradually on lbj of bone-black; digest for two days with a gentle heat, stirring frequently. Set aside, pour off the liquor, wash the charcoal frequently, until entirely free from acid, and then dry it.

Use. The same as the preceding.

CARBO LIGNI. U. S., L., E., D. Charcoal. Prepared by burning wood in close vessels.

Med. Prop. Antiseptic, and absorbent.

Use. In dyspepsia, attended with fœtid eructations, in constipations, nausea of pregnancy, and as a poultice to gangrenous and fœtid ulcers.

CARBONIS BISULPHURETUM. Sulphuret, or Bisulphuret of Carbon. Heat iron pyrites with one-fifth its weight of dry charcoal, in a stone retort, furnished with a glass tube dipping in water. Separate the sulphuret which collects at the bottom of the water, and carefully re-distil it from chloride of calcium. Or pass the vapour of sulphur over charcoal, heated to redness, in a porcelain tube.—Dose, as a sudorific in rheumatism, 2 or 3 drops, gradually increased.

Use. Externally, in liniment, for rheumatic pains. It is also

dropped (40 or 50 drops) on the part, to promote the reduction of strangulated hernia. (KRIMER.)

CARBONIS TER-CHLORIDUM. What is sold as Terchloride of Carbon appears to be an alcoholic solution of chloroform.

CARDAMOMUM. U. S., L., E. [Amomum Cardamomum, D.]

Cardamom Seeds. The fruit of Alpinea Cardamomum.

Med. Prop. Aromatic.

Use. As a stomachic, and carminative; chiefly as an adjuvant.

CAROTA. U. S. (Sec.) Wild Carrot Seed. [Dauci Radix, L., E. Garden Carrot Root.] Products of the Daucus Carota.

Med. Prop. Diuretic, and slightly excitant.

Use. In dropsy; the fresh root grated, as a poultice in foul ulcers.

CARRAGEEN. See Chondrus.

CARUM. U. S. [Carui, L., E.; Carum Carui, D.] Caraway
Seeds. The fruit of Carum Carui.

Med. Prop. and Use. Those of the aromatic seeds generally.

CARYOPHYLLUS. U. S., L., E., D. Cloves. The unexpanded flowers of Caryophyllus aromaticus.

Med. Prop. and Use. Stimulant, aromatic, and carminative;—in nausea, &c.

CASCARILLA. U. S., L., E., D. Cascarilla. The bark of Croton Eleutheria. (C. Cascarilla, D.)

Med. Prop. Stimulant tonic.

Use. Chiefly as an adjuvant to other bitter tonics, as cinchona, &c.

Cassia Fistula. U. S. [Pulpa, L., E., D.] The fruit of the Cassia Fistula.

Med. Prop. Laxative.

Use. Chiefly in combination with other laxatives.

Cassia Marilandica. U. S. American Senna. The leaves of Cassia Marilandica.

Med. Prop. and Use. The same as those of Senna.

CASTOREUM. U. S., L., E., D. A peculiar concrete substance obtained from the præputial follicles of Castor fiber or beaver.

Med. Prop. Stimulant, and antispasmodic.

Use. In hysteria, amenorrhœa, and typhoid diseases.

Cataplasma Simplex. D. Simple Poultice. Oatmeal, 2 parts, flaxseed meal, 1 part, mixed with boiling water, q. s.—The simple flaxseed poultice, made by mixing the ground flaxseed with boiling water, and the common bread-and-milk poultice, made by heating together fresh milk and the crumb of bread, are equally good emollient cataplasms. Fresh lard or olive oil incorporated with the poultice, preserves its softness. To be used warm.

Med. Prop. and Use. Emollient; to relieve local inflammations; and to hasten suppuration.

CATAPLASMA ACETI. Vinegar Poultice. Oatmeal, or bread crumb, with vinegar.

Use. Applied cold, for sprains, &c.

CATAPLASMA ALUMINIS. Alum Poultice. Alum 3j, whites of two eggs. Agitate together till a coagulum is formed. The Alum Curd is commonly made by rubbing up the whites of eggs briskly with a lump of alum.

Med. Prop. Astringent.

Use. Applied, between fine linen, to inflamed eyes, and also to chilblains.

CATAPLASMA ANODYNUM. P. Poppy-heads \$\mathcal{z}\)j, dried henbane \$\mathcal{z}\)ij, water \$\mathcal{z}\)xxiv. Boil, strain, and add to the liquor q. s. of emollient meals (see Farinæ Emollientes) to form a poultice. Or, simple poultice \$\mathcal{z}\)xvj, wine of opium \$\mathcal{z}\]j.

Med. Prop. Anodyne, and emollient.

Use. To relieve local pains.

CATAPLASMA CARBONIS LIGNI. D. Charcoal Poultice. Charcoal powder incorporated with q. s. of simple poultice.

Use. An excellent application to foul and gangrenous ulcers.

CATAPLASMI CONII. L., D. Hemlock Poultice. Extract of hemlock Zij, water Oj, ground flaxseed q. s.—D. directs a decoction

of 3j dried hemlock leaves in Ojss water, boiled down to Oj, to be thickened with the powdered leaves.

Med. Prop. Anodyne.

Use. In painful ulcers; recommended in cancerous sores.

CATAPLASMA DAUCI. D. Carrot Poultice. Carrots boiled till soft, and bruised. (Simply emollient.) The fresh root grated forms a slightly stimulating poultice.

Use. In flabby and foul ulcers.

CATAPLASMA DIGITALIS. L. (Mr. Allard.) A strong decoction of foxglove leaves, with bread crumb or flaxseed meal.

CATAPLASMA DISCUTIENS. E. H. Barley-meal 3vj, fresh hemlock 3ij, vinegar q. s. Boil, and add sal-ammoniac 3ss.—F. H., the same, with addition of acetate of lead 3ij.

Med. Prop. Discutient.

Use. To chronic swellings, and indolent tumours.

CATAPLASMA EFFERVESCENS. Fresh wort thickened with oatmeal, and a spoonful of yeast added.

Med. Prop. and Use. The same as the following.

CATAPLASMA FERMENTI. L. [Cataplasma Cerevisiæ, D.] Yeast Cataplasm. Flour lbj, yeast Oss. Mix, and apply a gentle heat till it begins to rise.

Med. Prop. Slightly stimulant, and antiseptic.

Use. To foul and flabby ulcers.

CATAPLASMA HUMULI. Hop Poultice. Hops softened with hot water.

Med. Prop. and Use. Anodyne and emollient; to relieve local pains, as in rheumatism, &c.

CATAPLASMA LINI. L. Flaxseed Poultice. See Cataplasma Simplex.

CATAPLASMA PANIS. See Cataplasma Simplex.

CATAPLASMA PLUMBI (vel GOULARDI). Goulard water Oj, bread crumb q. s. Mix together.

Med. Prop. Sedative, and astringent.

Use. In sprains, local inflammations, bruises, &c.

CATAPLASMA SINAPIS. L., D. Mustard Poultice, Sinapism. Ground flaxseed and flour of black mustard, of each, lbss, hot vinegar q. s. [Warm water is superior to vinegar.]

Med. Prop. Rubefacient and vesicant.

Use. To arouse the system when in a depressed state; to produce revulsion to the surface, and to allay spasm.

CATAPLASMA STIMULANS. (Dr. Hugh Smith.) Rye flour lbj, old yeast Ziv, common salt Zij.

Use. As a local stimulant to ill-conditioned ulcers.

CATAPLASMA TONICUM. GERM. H. Powdered Peruvian bark 3j, charcoal 3j, camphor 3jss, oil of turpentine q. s.

Prop. Stimulant, and antiseptic.

CATAPLASMA ULMI. Slippery Elm Poultice. The powdered bark of Ulmus fulva mixed with boiling water.

Med. Prop. and Use. Emollient; -in inflammations of the skin.

CATARIA. U. S. (Sec.) Catnep. The leaves of Nepeta Cataria.

Med. Prop. and Use. Tonic and excitant;—in amenorrhœa, chlorosis, hysteria, and infantile colic.

CATECHU. U. S., L., E., D. The extract of the wood of Acacia Catechu.

Med. Prop. A pure astringent.

Use. In chronic diarrhœa, and dysentery; locally, for spongy gums, elongation of the uvula, and epistaxis.

CAUSTICUM ANTIMONIALE. See Antimonii Chloridum.

CAUSTICUM AUREUM. (RECAMIER.) Chloride of gold gr. v, nitro-muriatic acid 3j; dissolve.

CAUSTICUM ZINCI. (DR. CAUQUOIN'S CAUSTICS, Nos. 1, 2, and 3.) Mix one part chloride of zinc with two, three, and four parts of wheat flour, and water q. s. to form a paste. Form it into cakes or wafers of a line to four lines in thickness, according to circumstances.

Used in lupus, nævi, cancers, &c.; to remain on the part for 24 hours, then to be gently removed, and the part covered with a poultice.

CENTAURIUM. L., E., D. European Centaury. The flowering tops of Erythræa Centaurium.

Med. Prop. Tonic.

Use. In dyspepsia, and the apyrexia of fevers.

CERA ALBA. CERA FLAVA. U.S., L., E., D. White and Yellow Wax.

Use. Chiefly in pharmacy, for making cerates and plasters.

CEREVISIÆ FERMENTUM. L., D. Yeast.

Med. Prop. Stimulant, and antiseptic.

Use. Chiefly to form the yeast poultice.

CETACEUM. U. S., L., E., D. Spermaceti. A peculiar concrete substance obtained from the Physeter macrocephalus, or spermaceti whale.

Med. Prop. Demulcent.

Use. In pharmacy, to form cerates and ointments.

CETRARIA. U. S., L., E. [Lichen Islandicus, D.] Iceland Moss.

Med. Prop. Demulcent, tonic, and nutritious.

Use. In chronic catarrhs, chronic dysentery, and in convalescence.

CERATUM CALAMINÆ. L. See Ceratum Zinci Carbonatis.

CERATUM CALOMELANOS. Calomel 3j, spermaceti cerate 3iv.

Use. In cutaneous diseases.

CERATUM CAMPHORATUM. Pommade du frère Cosme. Olive oil 3xvj, yellow wax 3viij; melt together, and add camphor 3j; stir till it begins to thicken.

Med. Prop. Anodyne, and emollient.

CERATUM CANTHARIDIS. U. S. [Emplastrum Cantharidis, L., E., D.] Emplastrum Epispasticum. Blistering Plaster. Melt together yellow wax, resin, and lard, each, 3viij; add fbj finely powdered cantharides; stir constantly till cool.

Med. Prop. Vesicant.

Use. For spreading blisters.

CERATUM CANTHARIDIS. L. See Unguentum Cantharidis.

CERATUM CETACEI. U.S., L. [Ceratum Simplex, E.; Unguentum

Cetacei, D.] Spermaceti 3j, white wax 3iij; melt together; then add olive oil f3vj, previously heated, and stir the mixture till cool.

Med. Prop. Emollient, and cooling.

Use. To abraded surfaces, and to blisters.

CERATUM CINNABARIS. ALIBERT'S Anti-herpetic Cerate. Vermilion 3j, camphor 9j, cerate 3j.

Use. In obstinate herpetic eruptions.

CERATUM COSMETICUM. Pommade en crème. Oil of almonds 3iv, white wax 3iij, spermaceti 3iij, rose water 3iij, tincture of balsam of Mecca 3ij; mix.

Med. Prop. Emollient, and cooling.

Use. An agreeable application to chapped lips and hands.

CERATUM CROTONIS. (M. CAVENTOU.) Melt 2½ parts of lard with half a part of wax, and when nearly cold, mix with it one part of croton oil.

Med. Prop. Rubefacient, and vesicant.

Use. As a counter-irritant.

CERATUM GALENI. P. Cold Cream. White wax 3iv, oil of almonds 3xvj; melt, and gradually add in 3xij of rose water, stirring till cold.

Med. Prop. and Use. Same as Ceratum Cosmeticum.

CERATUM GOULARDI. See Ceratum Plumbi Subacetatis.

CERATUM HYDRARGYRI COMPOSITUM. L. Strong mercurial ointment 3iv, soap cerate 3iv, camphor 3j; mix.

Med. Prop. Discutient.

Use. To indolent tumours.

CERATUM PLUMBI SUBACETATIS. U. S. [Ceratum Plumbi Compositum, L.] Goulard's Cerate. White wax 3iv, olive oil f3viij. Melt together; remove from the fire, and when it begins to thicken, gradually add solution of subacetate of lead f3ijss; stir till cool, and lastly add camphor 3ss, dissolved in olive oil f3j.

Med. Prop. Cooling, sedative, and astringent.

Use. In cutaneous eruptions, and to blisters indisposed to heal.

CERATUM RESINÆ. U. S., L. [Unguentum Resinosum, E.; Unguentum Resinæ Albæ, D.] Resin Cerate. Basilicon Ointment. Resin 3v, yellow wax 3ij, lard 3viij. Melt together; strain while warm, through linen, and stir till cool.

Med. Prop. Gently stimulating.

Use. To indolent ulcers, especially those resulting from burns.

CERATUM RESINÆ COMPOSITUM. U.S. Deshler's Salve. Melt together resin, suet, and yellow wax, each fbj, turpentine fbss, flaxseed oil Oss; strain through linen, and stir till cold.

Med. Prop. and Use. Similar to the preceding.

CERATUM ROSATUM. P. Lip Salve. Oil of almonds Zij, white wax Zj, alkanet root Zj. Melt, and digest till coloured sufficiently; then strain, and add 6 drops of otto of roses.

CERATUM RUBRUM. Yellow wax and lard, each fbss, resin 3ss, red sulphuret of mercury gr. xvj. Mix.

Use. As a common dressing.

CERATUM SABINÆ. U. S., L., E. [Unguentum Sabinæ, D.]

Savine Cerate. Savine, in powder, Zij, to be mixed with fbj of resin cerate. [The Br. Phars. direct fresh savine leaves to be boiled with lard and wax.]

Used for maintaining the discharge from blisters.

CERATUM SAPONIS. U. S., L. Solution of subacetate of lead Oij, soap 3vj, white wax 3x, olive oil Oj. Boil gently the solution of the subacetate with the soap, to the consistence of honey; heat in a water-bath till the moisture is dissipated; lastly, add the wax, previously melted with the oil, and mix.

Med. Prop. Resolvent, and sedative.

Use. To scrofulous tumours, and as a dressing over fractured limbs.

CERATUM SIMPLEX. U. S. [Ceratum, L.] Simple Cerate. Lard Zviij, white wax Ziv. Melt together, and stir constantly till cool.—L. directs olive oil fZiv to be added to melted wax Ziv.

Med. Prop. Emollient, and cooling.

Use. To inflamed or abraded surfaces; also as a dressing for blisters.

CERATUM ZINCI CARBONATIS. U. S. [Ceratum Calaminæ, L., E.; Unguentum Calaminæ, D.] Turner's Cerate. Prepared carbonate of zinc and yellow wax, each lbss, lard lbij. Melt the wax and lard together, and as the mixture thickens on cooling, add the carbonate of zinc, and stir constantly till cold.

Med. Prop. Astringent, and desiccative.

Use. In cutaneous diseases, and to abraded surfaces.

CEREI vel CEREOLI. Bougies are made by dipping strips of soft linen cloth, rather wider at one end than at the other, into certain emplastic or elastic compositions, folding them up closely, and rolling them firmly on a smooth slab. For elastic bougies, pieces of catgut, bundles of thread, &c., are sometimes used. The following are some of the compositions held in most repute:—

- 1. Bell's. Lead plaster 3iv, yellow wax 3jss, olive oil 3iij.
- 2. Hunter's. Olive oil fbiij, yellow wax fbj, red lead fbjss; boil together over a slow fire till combined.
- 3. Swediaur's white. White wax fbj, spermaceti Ziij, acetate of lead from Zij to Zj; boil together slowly.
- 4. St. B. H., red. Wax fbj, Chian turpentine 3iv; melt together, and add vermilion 3j. To be well stirred.
- 5. Piderit's wax. Yellow wax 6 parts, olive oil 1 part.
- 6. Goulard's. Yellow wax, melted and mixed by stirring with from \(\frac{1}{24}\)th to \(\frac{1}{3}\)d of Goulard's extract of lead.—Prus. Ph., 3ij of Goulard's extract to 3vj of yellow wax.
- 7. Falk's mercurial. Mercurial plaster 3j, turpentine 3ss, powdered shell-lac gr. xv, calomel 3j, red oxide of mercury 9j.
- 8. Sharp's. Lead plaster \$\mathcal{z}ij\$, Burgundy pitch \$\mathcal{\text{9}}ij\$, prepared antimony (sulphuret) \$\mathcal{z}ss\$; mix, and add quicksilver \$\mathcal{z}j\$, triturated with oil of sulphur q. s.
- 9. Dr. Reece. Lead plaster, tar, and powdered belladonna, spread on linen.

- 10. Elastic. Boiled linseed oil 3xij, amber 3iv, oil of turpentine 3iv, caoutchouc 3v; this varnish is repeatedly applied to the web.
- CEREVISIA ABIETINA. (Dr. Wood.) Spruce Beer. Essence of spruce Oss, pimento and ginger, bruised, each 3v, hops 3v, water Cong. iij; boil for 5 or 10 minutes, strain, add Cong. xj of warm water, yeast Oj, molasses Ovj. Let it ferment for 24 hours.
- CEREVISIA DIURETICA. E. H. Mustard seed (whole) Zviij, juniper leaves Zviij, wild carrot seed Ziij, wormwood Zij, new small ale Cong. x.

Med. Prop. Diuretic.

Use. As a drink in dropsies.

CEREVISIA PICIS. (DUHAMEL.) Tar Beer. Bran Oij, tar Oj, honey Oss, water Ovj; mix them in an earthen vessel, and simmer over a slow fire for 3 hours; when cool, add yeast Oss, and let it work for 30 hours, and strain.—Dose, a wineglassful before meals.

Use. In bronchial affections, and incipient phthisis.

CEREVISIA ZINGIBERIS. (DONOVAN.) Ginger Beer. Infuse 3 ijss of bruised ginger in Cong. iv of boiling water. When cool, strain, and add this of white sugar, Oss of solid yeast, and 3 ij of cream of tartar. Ferment in a warm situation, and when the fermentation subsides, rack off the clear liquor, and return it into the cooler, previously cleansed. In a day or two, bottle it. Use. An agreeable stomachic drink.

CHARTA ANTIRHEUMATICA. (M. BERG.) Euphorbium 30 parts, cantharides 15 parts, alcohol 150 parts; digest 8 days, filter and add black resin 50 parts, turpentine 50 parts. Thin paper is to be brushed over 2 or 3 times with this varnish. (To be applied, gently heated, over the part.)

The following is said to resemble Poor Man's Plaster:—Black resin 3 parts, tar 2 parts, yellow wax 1 part. To be

melted and spread upon paper.

Med. Prop. Stimulant.

Use. As a mild irritant and revulsive.

CHARTA EPISPASTICA CUM CANTHARIDE. For keeping blisters open. White wax 3j, spermaceti 3iij, olive oil 3iv, turpentine 3j, cantharides from 3j to 9iv, water 3x; boil slowly in a tinned vessel for 2 hours, constantly stirring, and filter through flannel. To be spread upon paper.

CHARTA PRO FONTICULIS. (SOUBEIRAN.) Issue Paper. White wax 10 parts, spermaceti 5, elemi 5, turpentine 6; melt over a slow fire, and strain. To be spread on paper by a proper machine.

Chenopodium. U.S. Wormseed. The fruit of Chenopodium anthelminticum.

Med. Prop. Anthelmintic.

Use. To destroy lumbrici in children.

CHIMAPHILA. U. S., L. [Pyrola, E.; Pyrola Umbellata, D.] Pipsissewa. The leaves of Chimaphila umbellata.

Med. Prop. Tonic, alterative, astringent, and reputed diuretic.
Use. In scrofula, and disorders of the bladder.

CHLORINIUM. Chlorine Gas may be procured by gently heating hydrochloric acid with half its weight of black oxide of manganese, in a flask or retort.

Chloroform. Distil together chloride of lime 1 part, water 3 parts, and alcohol 3 parts, placed in a capacious retort, into a refrigerated receiver. The heavy oily fluid (chloroform) is separated from the water, and may be rectified by re-distilling with oil of vitriol.

Med. Prop. Antispasmodic, sedative, and narcotic.

Use. In severe neuralgia, and by inhalation as an anæsthetic.

Chocolata. Chocolate. The nuts are picked, slightly roasted to loosen the envelopes, broken, winnowed and cleansed, again heated and ground in a mill. The powder is then beaten to a paste in a warm iron mortar, and mixed with sugar.

Med. Prop. Nutritious, and demulcent.

CHOCOLAT DE SANTÉ. P. 90 pounds each, of the richer and infe-

rior kinds of cacao (Cacao Caraque and Maraignan), treated as above, with 160 pounds of sugar, and 1 ounce of cinnamon.

CHOCOLATA MARTIS. (TROUSSEAU.) Spanish Chocolate Zxvj, subcarbonate of iron Zss. Triturate on a warm slab, and divide into cakes of Zj, each. Some direct levigated filings of iron.

Med. Prop. Chalybeate, and nutritious.

Use. In amenorrhœa, chlorosis, anæmia, dyspepsia, &c.

CHOCOLATA CUM SALEP. To Zxvj of prepared chocolate add Zss of powdered salep. Arrow-root and tapioca are mixed with chocolate in the same proportion. A mixture very similar to the foregoing constitutes the Rachohout des Arabes, much used by invalids.

CHONDRUS. U. S. (Sec.) Irish Moss. Carrageen. Chondrus crispus.

Med. Prop. Demulcent, and nutritious.

Use. Chiefly as an article of diet.

CIMICIFUGA. U. S. (Sec.) Black Snake-root. Cohosh. The root of Cimicifuga racemosa.

Med. Prop. Tonic, diuretic, diaphoretic, expectorant, and emmenagogue.

Use. Chiefly in chorea, and rheumatism.

CINCHONA. U. S., L., E., D. Peruvian Bark. The bark of different species of Cinchona, derived from the western coast of South America.

Med. Prop. Tonic, and antiperiodic.

Use. In low forms of disease, and in all intermittent and remittent disorders.

CINCHONIA. Cinchonine is procured from the Gray Bark (C. pallida), in the same manner as Quinia.

Med. Prop. and Use. Similar to those of Quinia.

CINCHONIÆ DISULPHAS. As Quiniæ Disulphas.

CINNAMOMUM. U. S., L., E., D. [Cassiæ Cortex, E.; Cassia, D.] The bark of Cinnamomum Zeylanicum, and of C. aromaticum. (Nees.)

Med. Prop. Aromatic, and astringent.

Use. As an adjuvant, in diarrhœa and dysentery.

Cocculus. E. [Cocculus Suberosus, D.] Cocculus Indicus. Fruit of Anamirta Cocculus.

Prop. Stimulant, narcotic, and poisonous;—not used in medicine.

Coccus. U. S. [Cocci, L., E.; Coccus Cacti, D.] Cochineal. Use. To impart a fine red colour.

CODEIA. This alkaloid is left in the solution, when ammonia is added to ordinary muriate of morphia, and it is obtained by evaporating the residual liquor, crystallizing, treating the salt with liquor potassæ, dissolving the precipitate in ether, and evaporating.

Med. Prop. Narcotic, with an apparent tendency to the sympathetic nerve.

Colchicum Autumnale. Bulbus, D.; Colchici Semina, L., E.; Colchicum Autumnale. Semina, D.] The cormus and seeds of Colchicum autumnale, or Meadow saffron.

Med. Prop. Sedative, narcotic, diuretic, diaphoretic, emetic, and cathartic.

Use. Chiefly in gout, and rheumatism; also in dropsies, and diseases of the circulatory system.

COLCHICINIA. The active principle of Colchicum. Digest colchicum seeds in boiling alcohol, precipitate by magnesia, treat the precipitate with boiling alcohol, and evaporate the filtered solution.

Collutoria. Mouth-washes. They are of a thicker consistence—than gargles, and are prepared extemporaneously.

Collyria. Eye-waters. Aquæ Ophthalmicæ. These are noticed under other heads.

COLLYRIUM ACIDUM. (KRIMER.) For removing particles of iron from the eye. Muriatic acid mxx, mucilage 3j, rose-water 3ij.

COLOCYNTHIS. U. S., L., E. [Cucumis Colocynthis, D.] The fruit of Cucumis Colocynthis, deprived of its rind.

Med. Prop. and Use. A hydragogue, drastic cathartic.

COLOMBA. U.S., D. [Calumba, L., E.] Root of Cocculus palmatus.

Med. Prop. Tonic.

Use. In dyspepsia, chronic diarrhœa, and dysentery, &c.

Confectio Amygdalæ. L. [Conserva Amygdalæ, E.] Sweet almonds, blanched, Zviij, powdered gum Arabic Zj, white sugar Ziv. Beat together to a uniform mass.

Med. Prop. Demulcent.

Confectio Aromatica. U. S., L., D. [Electuarium Aromaticum, E.] Aromatic powder zvss, powdered saffron zss; to be rubbed together. Then add syrup of orange peel zvj, clarified honey zij, and beat them together till thoroughly mixed.

Use. An agreeable aromatic vehicle for other medicines.

Confectio Aurantii Corticis. U. S. [Confectio Aurantii, L.; Conserva Aurantii, E.] Fresh orange peel, grated, lbj, white sugar lbiij; beat together till thoroughly mixed.

Use. As a pleasant vehicle for other medicines.

CONFECTIO CASSIÆ. L. Cassia pulp lbss, manna 3ij, tamarind pulp 3j, syrup of roses 3viij. Dissolve the bruised manna in the syrup, add the pulps, and evaporate to a due consistence.

Use. Same as the preceding.

Confectio Cinchonæ. St. B. H. Powdered yellow bark 3vj, powdered ginger 3ss, treacle 3iijss.—Dose, 3j to 3ij.

Med. Prop. and Use. Same as those of Cinchona.

CONFECTIO CONII. (Dr. OSBORNE.) Fresh hemlock leaves, beaten up with an equal weight of treacle. Dr. O. proposes to prepare other narcotic plants in the same manner.

Med. Prop. and Use. Similar to those of Conium.

Confectio Damocratis. Mithridate. It consisted of 45 ingredients, and contained one grain of opium in 3ss.

Confectio Ferri Subcarbonatis. St. B. H. Subcarbonate of iron 3ss, treacle q. s.—Dose, 3ss.

Med. Prop. and Use. Those of the chalybeates generally.

Confectio Ferri Tartarizati. St. B. H. Cream of tartar 3jss, tartarized iron 3ij, powdered ginger 9j, treacle 3ijss. Dose, 3ij, three times a day.

Med. Prop. and Use. Chalybeate, and aromatic; -in chlorosis, &c.

Confectio Jalapæ Composita. St. B. H. Powdered jalap Zij, cream of tartar Zjss, ginger Əj, treacle Zijss.—Dose, Zij. Med. Prop. A brisk hydragogue cathartic.

Confectio Opii. U. S., L., D. [Electuarium Opii, E.] Opium, in powder, 3ivss, aromatic powder 3vj, clarified honey 3xiv. Rub the opium with the aromatic powder; then beat them with the honey till thoroughly mixed.—One grain of opium is contained in about 36 grains of the confection.

Med. Prop. and Use. Those of Opium.

Confectio Piperis Nigri. L., D. [Electuarium Piperis, E.] Ward's Paste. Black pepper lbj, elecampane lbj, fennel seed lbiij, white sugar lbij. Reduce them to a very fine powder, and keep it in a close vessel. When required for use, mix 3vij of the powder with 3ij of honey.

Med. Prop. Stimulant.

Use. In hæmorrhoids.—Dose, 3j-ij.

Confectio Rosæ. U. S. [Confectio Rosæ Gallicæ, L.; Conserva Rosæ, E., D.] Powdered red roses \(\mathcal{z} \) iv, refined sugar, in powder, \(\mathcal{z} \) xxx, clarified honey \(\mathcal{z} \) vj, rose water f\(\mathcal{z} \) vij. Rub the roses with the rose water at a boiling heat, then add gradually the sugar and honey, and beat together till thoroughly mixed. The Br. Phars. direct the fresh roses.

Med. Prop. Slightly astringent.

Use. As a vehicle for other medicines.

Confectio Rosæ Caninæ. L. Pulp of fruit of dog-rose fbj, white sugar Zxx; heat the pulp gently in an earthen vessel, gradually add the sugar, and rub together until they are incorporated.

Med. Prop. Acidulous, and refrigerant.

Use. As a vehicle.

Confectio Scammonii. L. [Electuarium Scammonium, E.] Scammony zjss, cloves zvj, ginger zvj; powder finely, and add syrup of roses q. s.; rub together with oil of caraway fzss. The powders are directed to be kept mixed, and the syrup and oil added when required for use.

Med. Prop. Cathartic.

Confection Sennæ. U. S., L. [Electuarium Sennæ, E., D.]

Lenitive Electuary. Senna Zviij, coriander seed Ziv, bruised liquorice root Ziij, figs fbj, pulp of prunes, pulp of tamarinds, pulp of purging cassia, each, fbss, white sugar fbijss, water Oiv. Rub the senna and coriander together, and separate 10 ounces of the powder with a sieve. Boil the residue with the figs and liquorice root, in the water, to one-half; press out the liquor, and strain; evaporate the strained liquor, by means of a water-bath, to Ojss, then add the sugar, and form a syrup. Lastly, rub the pulps with the syrup, and, having thrown in the sifted powder, beat all together till thoroughly mixed.

Med. Prop. A gentle laxative.—Dose 3ij.

CONFECTIO STANNI. St. B. H. Powdered tin 3j, confection of dog-rose 3j; mix.—Dose 3ss, every morning.

Med. Prop. Anthelmintic.

CONFECTIO SULPHURIS COMPOSITA. St. B. H. Precipitated sulphur 3ss, cream of tartar 3j, clarified honey 3j; mix.

Med. Prop. and Use. Cathartic; -in constipation, rheumatism, &c.

CONEIA. (GEIGER.) The active (alkaloid) principle of Conium maculatum, procured by distilling soft alcoholic extract of conium seeds with its weight of water, and a little caustic potash.

Med. Prop. Narcotic, poisonous.

CONII FOLIA et SEMEN. U. S., L. Leaves and seeds (Leaves, E., D.) of Conium maculatum.

Med. Prop. Narcotic and resolvent.

Use. As a palliative in cancer; also, as a general anodyne; externally, to cancerous sores.

CONTRAYERVA. U. S. (Sec.) The root of Dorstenia Contrayerva.

Med. Prop. Stimulant, tonic, and diaphoretic.

Use. In low fevers, typhoid dysentery, and diarrhœa.

Convolvulus Panduratus. U. S. (Sec.) Wild Potato.

The root of Convolvulus panduratus.

Med. Prop. Feebly cathartic, and diuretic.

COPAIBA. U. S., L., E., D. The juice of Copaifera officinalis, and other species of Copaifera.

Med. Prop. Stimulant, diuretic, and, in large doses, purgative; it acts also upon the mucous membranes generally.

Use. In gonorrhœa, gleet, dysentery, &c.

COPTIS. U. S. (Sec.) Gold Thread. The root of Coptis trifolia.

Med. Prop. Tonic.

Use. In dyspepsia, and in convalescence.

Corallia Præparata. Corals are prepared as Chalk. See Creta Præparata.

CORIANDRUM. U. S., L., E. [C. Sativum, D.] The fruit of Coriandrum sativum.

Med. Prop. Aromatic.

Use. Chiefly as an adjuvant.

CORNU. L., E. [Cornua Cervina, D.] Hartshorn. Horn of Cervus Elaphus.

Use. To prepare a demulcent and nutritious jelly.

CORNU USTUM. L., D. Burn pieces of stag's horn in an open vessel till they are perfectly white, then powder and prepare them as Chalk. See Creta Præparata.

CORNUS CIRCINATA. U.S. (Sec.) Round-leaved Dogwood.

The bark of Cornus circinata.

Med. Prop. and Use. Similar to the following.

CORNUS FLORIDA. U. S. Dogwood. The bark of Cornus Florida.

Med. Prop. Tonic, and astringent.

Use. In the apyrexia of fevers.

CORNUS SERICEA. U. S. (Sec.) Swamp Dogwood. The bark of Cornus sericea.

Med. Prop. and Use. Similar to the preceding.

COTULA. U. S. (Sec.) May-weed. The herb of Anthemis Cotula.

Med. Prop. and Use. Similar to Anthemis.

CREASOTUM. U. S., E. [Creasoton, L., P.] Distil wood tar in an iron retort till white vapours appear; collect the heavy oily matter which forms the lower layer of the product, and wash it with water slightly acidulated with sulphuric acid; then distil it in a glass retort (rejecting the first portions, which are chiefly eupione), and heat the product with a solution of potassa, at sp. gr. 1.12, shaking the mixture strongly. When it has settled, pour off the layer of eupione from the surface, and expose the combined potash and creasote to the air till it becomes black; then saturate with dilute sulphuric acid, pour away the watery liquid, and distil the product in glass. Repeat the treatment by exposure, potash, sulphuric acid, and distillation, three times, or oftener, till the combination of creasote and potash ceases to become coloured by the action of the air; then saturate it with concentrated phosphoric acid, and distil the creasote, rejecting the first portions. (P.)

Med. Prop. Irritant, narcotic, styptic, antiseptic, and escharotic.

Use. In certain irritable conditions of the stomach, in hæmatemesis; externally, in chronic skin diseases; also, to arrest hemorrhages.

CREMOR TARAXACI. (DR. COLLIER.) Wash fresh dandelion roots, cut them in slices, and sprinkle them with spirit of juniper; then express the juice by means of an iron press. The creamy juice will keep for a considerable time.—Dose, a table-spoonful 2 or 3 times a day.

Med. Prop. and Use. The same as those of Taraxacum.

CRETA. U. S., L., E. [Calcis Carbonas, D.] Chalk. See the following.

CRETA PRÆPARATA. U. S., L., E., D. Rub chalk very fine with a little water; stir this into a large quantity of water, and when the coarse particles have subsided, pour off the supernatant turbid liquor into another vessel, and let it settle. Pour off the water, and dry the powder.

Med. Prop. Antacid, astringent, and absorbent.

Use. In diarrhea, accompanied with acidity; externally, to burns and ulcers, to absorb the ichorous discharge.

CROCUS. U. S., L., E. [Crocus Sativus, D.] Saffron. The stigmas of Crocus sativus.

Med. Prop. Reputed stimulant, diaphoretic, and emmenagogue. Use. Chiefly to impart colour and flavour to officinal tinctures.

CUBEBA. U. S., D. [Piper Cubeba, L.; Cubebæ, E.] The berries of Piper Cubeba.

Med. Prop. Stimulant, aromatic, and diuretic.

Use. Chiefly in gonorrhœa, gleet, and catarrh of the bladder.

Cupri Acetas et Diacetas. The diacetate or subacetate of copper (Cupri Subacetas, U. S.; Ærugo, L., E.), commonly called Verdigris, is made by the action of fermenting marc of grapes, or of vinegar, on sheets of copper. The acetate is made by dissolving verdigris in acetic acid, and crystallizing.

Very seldom used.

CUPRUM AMMONIATUM. U. S., E., D. [Cupri Ammonio-sulphas, L.] Sulphate of copper 3ss, carbonate of ammonia 3vj; rub together in a mortar till effervescence ceases; then wrap the mass in bibulous paper, and dry it by a gentle heat.

Med. Prop. Tonic, and antispasmodic.

Use. In epilepsy, chorea, and hysteria.

CUPRI SULPHAS. U. S., L., E., D. Blue Vitriol. Dissolve copper in dilute sulphuric acid; evaporate, and crystallize.

Med. Prop. Astringent, and tonic; in large doses, emetic; externally, stimulant, styptic, and escharotic.

Use. In intermittent fever, and chronic diarrhœa; externally, in ophthalmia, ulcers, and mucous discharges.

Curcuma. U. S. (Sec.), L., E. [C. Longa, D.] Turmeric. The rhizoma of Curcuma longa.

Use. To impart colour.

CYDONIA. L. Quince Seeds. From Cydonia vulgaris.

Med. Prop. Demulcent.

CYMINUM. L. [Cuminum, E.] Cumin Seed. Fruit of the Cuminum Cyminum.

Med. Prop. and Use. Those of the Aromatics.

Decocta. Decoctions. The roots, barks, woods, &c., require to be sliced or bruised. The purest and softest water should be used. In compound decoctions, the various ingredients should be added at different periods of the process, according to the length of time required to extract their virtues. Glass or earthenware vessels are preferable, as a general rule. When sufficiently boiled, the liquid should be strained.

DECOCTUM ADSTRINGENS. (SWEDIAUR.) Oak bark, tormentil root, pomegranate rind, of each, 3ij, water lbj, milk lbj; boil for a quarter of an hour, adding 3ij of cinnamon, and strain.

Med. Prop. and Use. Those of the Astringents generally.

Decoctum Aloes Compositum. L. Extract of liquorice 3vij, carbonate of potassa 3j, aloes, myrrh, saffron, each, 3jss, water Ojss. Boil to Oj, strain, and add compound tincture of cardamom f3vij.—E. and D. direct aloes, myrrh, saffron, each, 3j, extract of liquorice 3ss, carbonate of potassa 9ij, water f3xvj. Boil to f3xij, filter, and add compound tincture of cardamom f3iv.

Med. Prop. A tonic, cordial cathartic, and antacid.

Use. In constipation with dyspepsia, and amenorrhœa.

DECOCTUM ALTHÆÆ. D. [Mistura Althææ, E.] Marshmallow herb and root, dried, Ziv, raisins, stoned, Zij, water Ovij. Boil

down to Ov, and strain the liquor; allow the dregs to subside, and then decant.

Med. Prop. and Use. Those of the mucilages and demulcents.

DECOCTUM AVENÆ. Guy's H. Gruel. Oatmeal 3j, cold water f3iv; mix, and add Oiij of boiling water; boil for an hour, and strain through a hair sieve.

Use. A nutritive, bland diet for the sick and convalescent.

DECOCTUM CETRARIÆ. U. S., L. [Decoctum Lichenis Islandici, D.] Iceland moss 3ss, water Ojss; boil down to Oj, and strain with compression. The bitterness is sometimes removed by first infusing the moss in boiling water for a quarter of an hour.

Med. Prop. and Use. Those of Cetraria.

DECOCTUM CHENOPODII. (Dr. WOOD.) Fresh leaves of the Chenopodium anthelminticum 3j, milk Oj; boil.—Dose, a wineglassful, with some aromatic.

Med. Prop. and Use. Those of Chenopodium.

Decoctum Chimaphilæ. U. S., L. [Decoctum Pyrolæ, D.] Pipsissewa, bruised, 3j, water Ojss; boil down to a pint, and strain.

Med. Prop. and Use. Those of Chimaphila.

Decoctum Chondri. Macerate 3ss of carrageen (Irish moss) for 10 minutes in cold water; remove the moss, free it from the water, and boil it in Oiij of milk or water for 15 minutes, and strain. Flavour, and sweeten to the taste. Ad libitum.

Med. Prop. and Use. Nutritive and demulcent;—as an article of diet.

DECOCTUM CINCHONÆ. U.S., L., E., D. Peruvian bark, bruised, 3j, water Oj. Boil for ten minutes in a covered vessel, and strain while hot.—D. directs the pale bark. The preparation is much improved by adding to the pint of water 3j of aromatic, or dilute sulphuric acid, which more completely exhausts the bark.

Med. Prop. and Use. Those of Cinchona.

DECOCTUM CINCHONÆ CUM SERPENTARIA. (SIR J. PRINGLE.)
Peruvian bark Ziij, water Oj; boil to Oss, and infuse in the hot
decoction Ziij of serpentaria root.

Med. Prop. and Use. Similar to the preceding, though more efficient.

DECOCTUM COLOCYNTHIDIS. Bat. Ph. Colocynth pulp 3j, water 3viij; boil for 10 minutes, strain, and when cool, add syrup of orange peel 3j, ether 3j.—Dose, 3ss 3 times a day.

Med. Prop. A drastic hydragogue cathartic.

Use. In dropsies, &c.

DECOCTUM CORNUS FLORIDÆ. U.S. Dogwood bark, bruised, 3j, water Oj; boil for 10 minutes in a covered vessel, and strain while hot.

Med. Prop. and Use. Those of Cornus Florida.

DECOCTUM CYDONIÆ. L. Quince seeds 3ij, water Oj; boil for 10 minutes, and then strain.

Med. Prop. and Use. An excellent mucilage, for the eyes, skin, &c.

DECOCTUM DULCAMARÆ. U. S., L., E., D. Bittersweet stalks, bruised, 3j, water Ojss; boil down to Oj, and strain.

Med. Prop. and Use. Those of Dulcamara.

DECOCTUM ERGOTÆ. (PEREIRA.) Ergot 3j, water f3vj; boil for 10 minutes, and strain.—For three doses.

Med. Prop. and Use. Those of Ergota.

Decoctum Geoffroyæ. D. Cabbage-tree bark, bruised, 3j, water Oij; boil down to Oj, and to the strained liquor add 3ij of syrup of orange peel. Dose for an adult, 3ss to 3j.

Med. Prop. and Use. A good anthelmintic.

DECOCTUM GERANII. Dried root of cranesbill (Geranium maculatum) 3j, water f3xxiv; boil to f3xvj.

Med. Prop. Astringent. The root boiled in milk is an excellent remedy for infantile cholera and diarrhœa. (Chapman.)

DECOCTUM GLYCYRRHIZÆ. D. Liquorice root 3jss, water f3xvj; boil for ten minutes and strain.

Med. Prop. and Use. A demulcent drink; used also to flavour.

DECOCTUM GRANATI. L. Pomegranate rind 3ij, water Ojss; boil down to Oj.

Use. As an astringent gargle, &c.

Decoctum Granati Vermifugum. [Apozême Vermifuge, P.]
Dried bark of pomegranate root \(\mathfrak{z}\)ij, water \(\mathfrak{z}\)xxiv, boil slowly to \(\mathfrak{z}\)xvj, and strain. (The form used in India is \(\mathfrak{z}\)viij of the fresh bark boiled in Oiij of water to Oij. Dose, a wineglassful repeated every half hour, or as the patient can bear it.)

Med. Prop. Anthelmintic.

Use. To expel tænia.

DECOCTUM GUAIACI. [Compositum, D.; Decoctum Lignorum, E.] Guaiac turnings Ziij, raisins Zij, water Oviij; boil to Ov, adding towards the end, liquorice root Zj, sassafras Zj; strain.

Med. Prop. Demulcent; reputed alterative.

Use. In chronic rheumatism, syphilis, &c.

DECOCTUM HÆMATOXYLI. U. S., E. Rasped logwood 3j, water Oij; boil to Oj, and strain. [E. directs 3j of cinnamon to be added towards the end of the process.]

Med. Prop. A mild astringent.

Use. In diarrhœa, &c.

DECOCTUM HORDEI. U. S., L., D. Barley Water. Pearl barley 3ij, wash it with cold water; boil it a few minutes with Oss of water; throw this away, and boil the barley with Oiij of water, poured boiling hot upon it, to Oij, and strain.

Med. Prop. Demulcent.

Use. As a drink in fevers and inflammations, chiefly of the mucous membrane, alimentary canal, and urinary organs.

DECOCTUM HORDEI COMPOSITUM. L., D. Decoction of barley Oij, figs 3ijss, raisins 3ijss, liquorice root 3v, water Oj; boil to Oij.

Med. Prop. Demulcent, and gently laxative.

DECOCTUM JUNIPERI COMPOSITUM. St. B. H. Juniper berries 3ij, cream of tartar 3iij, water Oiv; boil to Oij, strain, and add comp. spirit of juniper f3ij.

Med. Prop. Diuretic and refrigerant.

Use. As a drink in dropsies.

DECOCTUM LUSITANICUM. Lisbon Diet Drink. The Decoc. Sarzæ Comp. is now substituted for it.

DECOCTUM MALTI. (SWEDIAUR.) Ground malt zvj, water thv; boil to thiv, and strain.—Zij of lemon syrup may be added.

Med. Prop. Tonic and demulcent.

DECOCTUM MALVÆ COMPOSITUM. L. Dried mallows 3j, chamomile flowers 3ss, water Oj; boil for 15 minutes, and strain.

Use. For fomentations and enemata.

DECOCTUM MEZEREI. E., D. Mezereon in chips, 3ij, liquorice root 3ss, water Oij; boil to Oj, and strain.

Med. Prop. and Use. Those of Mezereum.

DECOCTUM PAPAVERIS. L., E., D. Poppy-heads (without the seeds) 3iv, water Oiv [E. Oiij; D. Oij]; boil 15 minutes, and strain.

Med. Prop. Emollient, and gently anodyne.

Use. To foment painful parts.

DECOCTUM QUERCUS ALBÆ. U. S. [Decoc. Quercûs. L., E., D.] White oak bark bruised 3j, water Ojss; boil down to Oj, and strain.

Med. Prop. A good astringent.

Use. Chiefly externally to indolent and flabby ulcers,—as a bath in chronic cholera infantum and diarrhœa, and as a gargle.

DECOCTUM RUBI. (Dr. WOOD.) Smaller roots (or bark of the larger roots) of Rubus villosus 3j, water f3xxiv; boil to f3xvj. Med. Prop. Astringent.

Use. In chronic diarrhœa.

DECOCTUM RUMICIS AQUATICI. (Dr. A. T. THOMSON.) Water-dock root dried \$\mathcal{z}\mathcal{j}\$ (or fresh, \$\mathcal{z}\mathcal{j}\)), water Oj; boil for 15 minutes, and strain.

Use. In chronic skin diseases.

DECOCTUM SALICIS. (WILKINSON.) Broad-leaved willow bark 3jss; bruise, and macerate in Ibij of water for 6 hours; boil for 15 minutes, and strain.

Med. Prop. Tonic and astringent.

Use. As an antiperiodic.

DECOCTUM SAMBUCI. (SYDENHAM.) Inner bark of elder 3j, water Oj, milk Oj; boil down to Oj.

Med. Prop. Hydragogue cathartic, and emetic.

Use. In dropsies, and as an alterative.

Decoctum Saponariæ. (Swediaur.) Soapwort 3ji, water fbiv; boil to fbj, and strain.—Taken as Decoctum Sarsaparillæ.

Med. Prop. Reputed alterative.

Decoctum Sarsaparillæ. D. [Decoc. Sarzæ, L., E.] Sarsaparilla 3v, boiling water Oiv; macerate for 4 (E., 2) hours near the fire; take out, and bruise the root; return it to the liquor; again macerate for 2 hours; boil down to Oij, and strain. Med. Prop. and Use. Those of Sarsaparilla.

Decoctum Sarsaparillæ [Sarzæ, L., E.] Compositum. U. S., D.] Sarsaparilla, bruised, \(\mathfrak{z} \) vj, sassafras, rasped guaiacum wood, bruised liquorice root, each \(\mathfrak{z} \) j, mezereon \(\mathfrak{z} \) iij, water Oiv; boil for a quarter of an hour, and strain.—The Br. Phars. direct the Decoc. Sarzæ, boiling, Oiv, sassafras, guaiacum wood, liquorice root, each \(\mathfrak{z} \) x, mezereon \(\mathfrak{z} \) iij; boil for a quarter of an hour, and strain. This process is inferior to that of \(U. S. \), in consequence of the long boiling of the sarsaparilla.

Med. Prop. Alterative.

Use. In secondary syphilis, chronic rheumatism, and skin diseases.

DECOCTUM SARZÆ CUM ICHTHYOCOLLA. Tisane de Feltz. Sarsaparilla Ziij, isinglass Zss, sulphuret of antimony (tied up in a rag) Ziij, water Ov; boil to Oijss, and strain.

Med. Prop. Alterative.

Use. Chiefly in chronic skin diseases.

DECOCTUM SARZÆ CUM SENNA. Tisane de Vinache. (CADET.) Sarsaparilla 3jss, China root 3jss, guaiacum wood 3jss, sulphuret of antimony (tied up in a rag) 3jj, water Ov; boil to Oij, and add sassafras 3iv, senna 3iv; infuse for 1 hour, and strain.

Med. Prop. Alterative, and slightly purgative.

Use. As the former.

DECOCTUM SCILLÆ COMPOSITUM. Dried squill Ziij, juniper berries Ziv, senega Ziij, water Oiv. Boil to Oij; strain, and add spirit of nitric ether Ziv.

Use. As a diuretic, in dropsies.

Decoctum Scoparii Compositum. L. Broom-tops, juniper berries, dandelion root, each, 3ss, water Ojss; boil to Oj, and strain.—E. omits the dandelion, and adds bitartrate of potassa 3iij.—Dose, a wineglassful 3 times a day.

Med. Prop. Diuretic, in dropsies.

Decoctum Senegæ. U.S., L., D. Seneka, bruised, 3j, water Oiss; boil to Oj, and strain.

Med. Prop. and Use. Those of Senega.

DECOCTUM SPIGELIÆ. Pink-root and senna, each, 3ss, water Oj; boil for a few minutes, and strain.

Med. Prop. and Use. An excellent anthelmintic for children.

DECOCTUM SPONGIÆ. (HUFELAND.) Burnt sponge 3j, water lbj; boil, digest for 12 hours, strain, and add cinnamon water f3j. Dose, f3j.

Med. Prop. Alterative.

Use. In goitre.

Decoctum Staphisagriæ. Stavesacre seeds 3j, water Oij; boil for a few minutes, and strain. For external use, in neuralgia, rheumatism, and paralysis.

DECOCTUM TARAXACI. U. S., E., D. Dandelion root, bruised, 3ij, water Oij; boil to Oj, and strain.

Med. Prop. and Use. Those of Taraxacum.

DECOCTUM TORMENTILLÆ. L. Tormentil root Zij, water Ojss; boil to Oj, and strain.

Med. Prop. Astringent.

Decoctum Ulmi. L., D. Fresh elm bark, bruised, Zijss, distilled water Oij; boil to Oj, and strain. Used in scaly skin diseases. [The Ulmus of the U. S. Phar. is the inner bark of Ulmus fulva, or Slippery Elm. It forms with water a mucilage; very useful as a demulcent, both internally and externally.]

DECOCTUM UVÆ URSI. U.S., L. Bearberry leaves, 3j, water Ojss; boil to Oj, and strain.

Med. Prop. and Use. Those of Uva Ursi.

DECOCTUM VERATRI. L., D. White hellebore root, in powder 3x, water Oij; boil to Oj, and strain, and add rectified spirit f\(\)iij. [f\(\)\ iijss, D.]—For external use in skin diseases.

Med. Prop. Those of Veratrum Album.

DECOCTUM VERBASCI. (Dr. Home.) Leaves of great mullein 3ij, water Oij; boil for 20 minutes, and strain.—Dose, f3iv.

Use. In diarrhœas. Also as a fomentation.

Decoctum Zittmani. Zittman's Decoction is a preparation of sarsaparilla much used in Germany for the same purposes as the Decoctum Sarsaparillæ Compositum. It contains a very small portion of mercury.

DELPHINIUM. U. S. (Sec.) Larkspur. The root of Delphinium consolida.

DELPHINIA. Delphine. Treat alcoholic extract of stavesacre seeds with water acidulated with sulphuric acid, as long as anything is dissolved; add ammonia to the filtered solution; collect and dry the precipitate, and redissolve it in rectified spirit; filter through charcoal, and evaporate it carefully to dryness.—Dose, gr. ss. Used also outwardly, as veratria.

DIGITALIS. U. S., E. [Digitalis Purpurea, L., D.] The leaves (and seeds, L.) of Digitalis purpurea.

Med. Prop. Narcotic, and sedative, especially to the circulatory system; diuretic.

Use. In hypertrophy and dilatation of the heart, and aneurism; in inflammations, active hemorrhages, and in dropsies.

DIGITALINA. Digitaline. (Henry.) Exhaust powdered digitalis by percolation or digestion with spirit of sp. gr. ·860. Filter, distil off the spirit, dissolve the residue in water acidulated with acetic acid, precipitate with infusion of galls, collect the precipitate, mix it with powdered litharge and a little spirit; dry the paste, digest it at a very gentle heat with rectified spirit, distil off the spirit, and agitate the residue with ether. What remains is digitaline. It is said to be 100 times as strong as powdered digitalis.—Not employed, as yet, in medicine.

DIOSMA. U. S., L., E., D. Buchu. The leaves of Diosma crenata.

Med. Prop. Stimulant, diuretic, and diaphoretic.

Use. In gravel, and disorders of the bladder.

DIOSPYROS. U. S. (Sec.) Persimmon. The bark of Diospyros Virginiana.

Med. Prop. Astringent.

Use. In chronic dysentery, &c. (The unripe fruit is still more efficacious as an astringent.)

Dracontium. U. S. (Sec.) Skunk Cabbage. The root of Symplocarpus fœtidus. (Barton.)

Med. Prop. Stimulant, antispasmodic, and narcotic.

Use. In asthma, chronic catarrh, &c.

Dulcamara, U. S., L., E. [Solanum Dulcamara, D.] Bittersweet. The stalks of Solanum Dulcamara, or Woody Nightshade.

Med. Prop. Narcotic, sedative, diaphoretic, and alterative.

Use. Chiefly in chronic skin diseases; also as an antaphrodisiac.

ELATERIUM. U. S., L., E., D. A substance deposited by the juice of the fruit of Momordica Elaterium. See Extractum Elaterii.

Med. Prop. A powerful drastic cathartic; also diuretic.

Use. Chiefly in dropsy.

ELATERINUM. Elaterin. Elatin. (Dr. Morries.) Evaporate tincture of elaterium to the consistence of a thin oil, and throw it into boiling distilled water. Collect the crystalline precipitate when cold, and dry it with a gentle heat.—Dose, 16th of a grain.

ELECTUARIA. Electuaries are masses of soft consistence, made by incorporating the medicinal substance with syrup, honey, or molasses. They are generally extemporaneous prescriptions.

ELECTUARIUM ANTICACHECTICUM. Bath Electuary. Select the heaviest and bluest clinkers from a blacksmith's forge; powder them finely, and mix with enough treacle to form a stiff paste; to 3viij of this, add carbonate of magnesia and powdered ginger,

each, 3ss.—Dose, a teaspoonful twice a day, for 3 days; then omit for 3 days, and repeat if necessary. (This is sometimes named Elect. Ferri Compositum.)

Med. Prop. Tonic.

ELECTUARIUM AROMATICUM. E. Aromatic powder one part, syrup of orange peel two parts; mix.

Med. Prop. Stimulant and carminative.

ELECTUARIUM ANTIEPILEPTICUM. (Dr. MEAD.) Peruvian bark 3j, valerian 3ss, powdered tin 3ss. Mix the powders with syrup q. s. to form an electuary.

ELECTUARIUM CARBONIS. Prepared charcoal 3ij, carbonate of soda 3ij, confection of senna 3ij.

Med. Prop. Laxative, antacid, and antiseptic.

Use. In dyspepsia.

ELECTUARIUM CATECHU. E. [Comp., D.] Confectio Japonica. Catechu Ziv, kino Ziv, cinnamon Zj, nutmeg Zj (Zij, D.), opium Zjss; diffuse the opium in a little sherry wine, powder the rest finely, and mix the whole in syrup of red roses (syrup of ginger, D.), boiled to the consistence of honey, Ojss. (Ibijss, D.)

Med. Prop. Astringent, carminative, and anodyne.

ELECTUARIUM CINCHONÆ COMPOSITUM. (DR. COPLAND.) Yellow (Calisaya) bark \$\mathcal{z}\mathcal{j}\$, confection of roses \$\mathcal{z}\mathcal{s}\mathcal{s}\$, diluted sulphuric acid \$\mathcal{z}\mathcal{j}\$, syrup of ginger \$\mathcal{z}\mathcal{j}\mathcal{s}\mathcal{s}\$.—Dose, \$\mathcal{z}\mathcal{j}\$ or \$4\$ times a day.—Quarin's Electuary consists of powdered red bark \$\mathcal{z}\mathcal{j}\$, gentian \$\mathcal{z}\mathcal{j}\$, ammoniated iron \$\mathcal{z}\mathcal{j}\$, oxymel of squill and syrup of five roots (Species Diureticæ) q. s.—\$P\$. Gray bark \$\mathcal{z}\mathcal{v}\mid \mathcal{j}\$, muriate of ammonia \$\mathcal{z}\mathcal{j}\$, honey \$\mathcal{z}\mathcal{j}\$, syrup of wormwood \$\mathcal{z}\mathcal{j}\$.

Med. Prop. and Use. Those of Cinchona.

ELECTUARIUM COPAIBÆ. (CASPAR.) Blanched almonds 3vj, marshmallow powder 3j, catechu 3ss, copaiva 3iij.

Med. Prop. and Use. Those of Copaiba.

ELECTUARIUM CUBEBÆ ET COPAIBÆ. (BOUCHARDAT.) Copaiba 3j, powdered cubebs 3jss, oil of peppermint gtt. viij, sweet spirits

of nitre gtt. xv, powdered sugar q. s. to form a paste.—To be taken in four days, wrapped in wafer paper.

Use. In gonorrhœa, and gleet.

ELECTUARIUM FERRI SUBCARBONATIS. (COPLAND.) Subcarbonate of iron \$\mathcal{z}\$ss, syrup of ginger \$\mathcal{z}\$ss, conserve of orange-peel \$\mathcal{z}\$ij; mix.—Dose, the size of a nutmeg, 2 or 3 times a day.

Med. Prop. and Use. Those of the chalybeates generally.

ELECTUARIUM HÆMORRHOIDALE. Manna Zij, sulphate of potash, nitre, sulphur, each, Zij, syrup q. s. Or, confection of senna Zij, sulphur Ziv.—Dr. Copland. Nitre Zij, confection of senna Zjss, syrup of ginger Zjss, elder syrup Zj; mix.—Dr. Graves. Confection of senna Zj, sulphur Zj, jalap Zj, balsam of copaiva Zss, ginger Zss, cream of tartar Zss, syrup q. s.; mix.

Use. As a laxative in hemorrhoids.

ELECTUARIUM LENITIVUM. See Confectio Sennæ:

ELECTUARIUM MUCUNÆ. (CHAMBERLAIN'S.) Dip the pods of Mucuna pruriens in treacle, and scrape off the hairs, repeating fresh pods till it becomes sufficiently thick.

Med. Prop. Anthelmintic.

Use. To expel lumbrici.

ELECTUARIUM NIGRUM. TROUSSEAU'S Black Tonic. Perchloride of iron 3iv, tannin 3j, confection of roses 3j, syrup of orange-peel 3j; mix.

Med. Prop. Intended for a tonic, but of doubtful efficacy.

ELECTUARIUM SINAPIS. (GUY'S H.) Mustard seed, lightly bruised, \$\mathcal{z}\mathcal{j}\$, sulphur 3ij, syrup of orange-peel f\$\mathcal{z}\mathcal{j}\$.—Dose 3j, 3 or 4 times a day.

Med. Prop. and Use. Laxative, and stimulant to the digestive organs;—in dyspepsia.

ELECTUARIUM SULPHURIS COMPOSITUM. (GUY'S H.) Sulphur 3j, cream of tartar 3ss, treacle 3iij; mix.

Med. Prop. Cathartic, and alterative.

ELECTUARIUM VERMIFUGUM. (BEESMER.) Worm-seed 3ss, tansy seed 3ss, valerian 3ij, jalap 3jss, sulphate of potash with sulphur 3jss, oxymel of squills q. s.

Med. Prop. Anthelmintic.

ELEMI. L., E., D. The concrete resinous juice of Amyris Elemifera.

Med. Prop. Stimulant, like the turpentines.

Use. Externally, in plasters.

ELIXIR. This name is applied to certain compound tinctures, and other solutions of the active principles of drugs.

ELIXIR ANTIVENEREUM. (QUINCY.) Jesuits' Drops. Copaiva 3j, guaiacum 3j, oil of sassafras 3j, subcarbonate of potash 3ss, rectified spirit f3v; digest 3 days.

Med. Prop. Alterative, stimulant, diuretic.

Use. As an antisyphilitic.

ELIXIR LONGÆ VITÆ. Tinctura Rhei et Aloes.

ELIXIR PAREGORICUM. Tinctura Opii Camphorata.

ELIXIR PROPRIETATIS. Tinctura Aloes et Myrrhæ.

ELIXIR SACRUM. Tinctura Rhei et Aloes.

ELIXIR SALUTIS. Tinctura Sennæ et Jalapæ.

ELIXIR STOMACHICUM. Tinctura Gentiani Composita.

ELIXIR VITRIOLI ACIDUM. Acidum Sulphuricum Aromaticum.

Embrocationes. Embrocations do not materially differ from Lotions. See Lotio.

EMBROCATIO CONTRA ALOPECIAM. (Dr. E. WILSON.) Eau de Cologne f\(\frac{7}{3} \) ij, tincture of cantharides f\(\frac{7}{3} \) ij, oil of rosemary mx, oil of lavender mx.

Use. To promote the growth of the hair.

EMETINA PURA. P. Emetine. Dissolve 1 part of alcoholic extract of ipecacuanha in 10 parts of water, filter, add 1 part of calcined magnesia, evaporate to dryness with a gentle heat; wash the product in a filter with 4 or 5 parts of very cold water; dry it again, and treat it with boiling alcohol. Evaporate the filtered tincture, redissolve the residue in a little water acidulated with sulphuric acid, decolorize with animal charcoal, filter, precipitate with ammonia, and dry with a gentle heat.

This is the active principle of ipecacuanha, but it is very seldom used in medicine.

EMPLASTRA. Plasters should be of such a consistency as to retain their form at the temperature of the body, merely becoming adhesive, without melting. The resins, gum-resins, &c., should be previously strained. In melting them, no greater heat than is necessary should be employed.

EMPLASTRUM ADHÆSIVUM. See Emplastrum Resinæ.

EMPLASTRUM ÆRUGINIS. Corn Plaster. P. Yellow wax 3iv, Burgundy pitch 3ij, Venice turpentine 3j. Melt together, add prepared verdigris 3j, and stir till nearly cold.

Use. To soften and remove corns from the feet.

EMPLASTRUM AMMONIÆ. Dr. KIRKLAND'S Volatile Plaster. Scraped soap 3ij, lead plaster 3ss; melt together, and when nearly cold, add finely powdered sal ammoniac 3ss. It should be renewed every 24 hours.

Med. Prop. Discutient, and stimulant.

Use. To chronic enlargements, &c.

EMPLASTRUM AMMONIACI. U. S., L., E., D. Ammoniac 3v, vinegar Oss; dissolve and strain, and evaporate the solution by means of a water-bath, stirring constantly until it becomes thick.

Med. Prop. Stimulant and discutient.

Use. To chronic swellings of the joints.

EMPLASTRUM AMMONIACI CUM HYDRARGYRO. L., E., D. Triturate quicksilver Ziij with sulphuretted oil fZj, till the metallic globules disappear, and mix them with fbj of strained ammoniac, melted with a gentle heat.

Med. Prop. Stimulant and alterative; it may salivate.

Use. In chronic swellings, nodes, &c.

EMPLASTRUM ANODYNUM. See Emplastrum Opii.

EMPLASTRUM ANTICANCROSUM. (RICHTER.) Extract of hemlock 3j, extract of henbane 3iv, powdered belladonna 3j, acetate of ammonia q. s.; mix.

Use. Of supposed efficacy in cancer.

EMPLASTRUM AROMATICUM. D. Strained frankincense (juice of Abies excelsa) 3iij, yellow wax 3ss; melt together, and when nearly cool, add powdered cinnamon 3vj, oil of pimento 3ij, oil of lemon 3ij.

Med. Prop. Stimulant, and antiemetic.

Use. Over the epigastrium, to relieve sickness.

EMPLASTRUM ASSAFŒTIDÆ. U. S., E. Lead-plaster and assafætida, each, lbj, galbanum and yellow wax, each, lbss, diluted alcohol Oiij. Dissolve the assafætida and galbanum in the alcohol, by the aid of a water-bath; strain the liquor while hot, and evaporate to a proper consistence; then add the lead-plaster and wax, previously melted together; stir the mixture well, and evaporate to a proper consistence.

Med. Prop. Stimulant, carminative, and antispasmodic.

Use. To the chest in hooping-cough, and to the abdomen in hysteria.

EMPLASTRUM BELLADONNÆ. U. S., L., E., D. Resin plaster 3iij, extract of belladonna 3iss; add the extract to the plaster, previously melted with a gentle heat, and mix them.—[D. directs Emplastrum Saponis 3ij, Extract. Belladonnæ 3j.]

Med. Prop. A local anodyne.

Use. In local neuralgia, and dysmenorrhœa.

EMPLASTRUM CALEFACIENS. See Emplastrum Picis cum Cantharide.

EMPLASTRUM CANTHARIDIS. See Ceratum Cantharidis.

EMPLASTRUM CANTHARIDIS DILUTUM. (PEREIRA.) Cerate of cantharides 1 part, soap cerate 3 parts.

Use. For blistering in cases of children.

EMPLASTRUM CANTHARIDIS COMPOSITUM. E. Venice turpentine 18 parts, Burgundy pitch 12 parts, powder of cantharides 12 parts, wax 4 parts, verdigris 2 parts, powdered mustard and black pepper, each, 1 part. Melt the pitch and wax, add the turpentine, sprinkle into the mixture the powder, and stir till cool.

Med. Prop. A very prompt and speedy vesicant.

EMPLASTRUM CERÆ. E. [Emplastrum Simplex, L.] Yellow wax Ibiij, suet Ibiij, resin Ibj; melt together, and strain.

Med. Prop. Slightly stimulant.

Use. As a mild dressing to ulcers.

EMPLASTRUM CERUSSÆ. P. Emplastrum Plumbi Carbonatis. Carbonate of lead \$\mathcar{z}\xvj\$, olive oil \$\mathcar{z}\xxxij\$; mix them thoroughly in a large basin, add water Ojss, and boil together till they combine. Make it into rolls; then remelt it, and add white wax \$\mathcar{z}\iij\$. Use. A good application to inflamed and excoriated surfaces.

EMPLASTRUM CICUTÆ. See Emplastrum Conii.

EMPLASTRUM CONII. Swed. Ph. Wax Ibss, olive oil 3iv, ammoniacum 3ss; melt, and add powder of conium Ibss. [Bat. Ph. Lead plaster Ibj, yellow wax Ibj, olive oil 3vj, powdered hemlock Ibj.]

Med. Prop. Anodyne, and discutient.

Use. To painful tumours.

EMPLASTRUM CROTONIS. (M. BOUCHARDAT.) Melt 4 parts of lead plaster, and when nearly cold, mix with it 1 part of croton oil.

Med. Prop. A local irritant, or vesicant.

Use. As a revulsive.

EMPLASTRUM DIACHYLON. See Emplastrum Plumbi.

EMPLASTRUM FERRI. U. S., E. [Emplastrum Thuris, D.] Emplastrum Roborans. Subcarbonate of iron Ziij, lead plaster fbij, Burgundy pitch fbss. Melt together the lead plaster and pitch, add the subcarbonate of iron, and stir constantly till the mixture thickens on cooling.

Med. Prop. A good local stimulant.

EMPLASTRUM GALBANI. D. Litharge (lead) plaster fbij, galbanum fbss, wax 3iv. Melt the galbanum, add the wax and lead plaster, then melt the whole together, and strain.

Med. Prop. and Use. The same as the following.

EMPLASTRUM GALBANI COMPOSITUM. U.S. [Diachylon with the Gums, L.] Galbanum Zvij, lead plaster lbiij, turpentine

 $\Im x$, Burgundy pitch (thus, L.) Ibiij. Melt together the galbanum and turpentine, and strain; then add the pitch, and then the lead plaster, melted over a gentle fire, and mix the whole together.

Med. Prop. Stimulant, and discutient.

Use. In chronic scrofulous enlargements.

EMPLASTRUM GLUTINANS. [Emplâtre d'André de la Croix, P.]
White pitch Zviij, elemi Zij, Venice turpentine Zj, oil of bays
Zj. Melt, and strain.

Med. Prop. Stimulant, and adhesive.

EMPLASTRUM GUMMOSUM. E. Litharge plaster 3iv, ammoniacum, galbanum, beeswax, of each, 3ss. Melt, and mix.

Med. Prop. and Use. The same as Emplastrum Galbani Compositum.

EMPLASTRUM HYDRARGYRI. U. S., L., E. Mercurial Plaster. Mercury 3vj, olive oil, resin, of each, 3ij, lead plaster 1bj. Melt the oil and resin together, and when cool rub the mercury with them till the globules disappear; then gradually add the lead plaster, previously melted, and mix the whole together.—[L. directs sulphuretted oil, which facilitates the extinguishment of the mercury, but which impairs the virtues of the plaster, by forming a sulphuret of mercury.]

Med. Prop. Stimulant, resolvent, and discutient.

Use. To buboes, nodes, and chronic venereal swellings; also in chronic hepatitis.

EMPLASTRUM HYOSCYAMI. Swed. Ph. As Emplastrum Conii.

emplastrum Ichthyocollæ. Court Plaster is made by brushing over stretched sarcenet with a solution of 1 part of isinglass in 8 of water, mixed with 8 parts of proof spirit, and finishing with a coat of tincture of benzoin, or balsam of Peru. The transparent plaster is made by brushing over oiled silk with a similar solution. An improved method is to brush over one surface of the peritoneal membrane of the cœcum of the ox (prepared as gold-beater's skin), with a solution of isinglass, and the other with drying oil.

Med. Prop. and Use. Those of a mild simple adhesive plaster.

EMPLASTRUM IODINII. Lead plaster 3vj, resin plaster 3ij; melt together, and add iodine 9j, rubbed with olive oil 3ss.

Med. Prop. Resolvent.

Use. In chronic scrofulous, and other tumours.

EMPLASTRUM IODINII COMPOSITUM. (St. Geo. H.) Iodine 3ij, iodide of potassium 3iij, lead plaster lbj, opium plaster 3ij. Melt the plasters, and add the iodine and iodide, in fine powder, and mix.

Med. Prop. and Use. Similar to the former.

EMPLASTRUM IODINII CUM BELLADONNA. Iodine 3ss to 3ij, Venice turpentine 3ij, olive oil 3j, belladonna plaster fbj; mix, and spread with a cool iron. (In these plasters an iodide of lead is formed.)

Med. Prop. Resolvent, and locally anodyne.

Use. In chronic painful tumours.

EMPLASTRUM LITHARGYRI. The E. and D. name for Emplastrum Plumbi.

EMPLASTRUM OPH. U. S., L., E., D. Powdered opium 3ij, Burgundy pitch 3iij, lead plaster 1bj; melt together the lead plaster and pitch, and add the opium, previously mixed with boiling water f3iv, and boil over a gentle fire to a proper consistence.—[The Br. Phars. direct a much smaller quantity of opium.]

Med. Prop. Anodyne, and stimulant.

Use. To relieve local rheumatic and other pains.

EMPLASTRUM OPII ET CAMPHORÆ. (DR. PARIS.) Opium and camphor, each 3ss, lead plaster q. s.; mix.

Med. Prop. and Use. Same as the former.

EMPLASTRUM PICIS. L., E. Pitch Plaster. Burgundy pitch Ibij, resin of spruce fir (or dry white turpentine) Ibj, resin Ziv, wax Ziv, oil of mace Zj, olive oil fZij, water Zij. Melt together the pitch, resin, and wax; add the rest, and boil to a proper consistence.—(Guy's H.) Burgundy pitch (or black pitch) Zvj, wax Zss, common turpentine Zj. Melt, and mix.

Med. Prop. Stimulant, and rubefacient.

Use. As a revulsive, in chronic internal inflammations of a mild character.

EMPLASTRUM PICIS CUM CANTHARIDE. U. S. [Emplastrum Calefaciens, D.] Warming Plaster. Burgundy pitch lbiijss, cerate of cantharides lbss. Melt together by means of a waterbath, and stir constantly till it thickens on cooling.

Med. Prop. Rather more stimulating than the former; it sometimes vesicates.

EMPLASTRUM PLUMBI. U. S., L. [Emplastrum Lithargyri, E., D.] Lead Plaster. Litharge Plaster. Diachylon. Powdered litharge fbv, olive oil Cong. j, water Oij. Boil together over a gentle fire, stirring constantly till the oil and litharge unite into a plaster. A little more boiling water may be added if necessary. When sufficiently cooled, the plaster must be worked in the hands, to separate the water, and then formed into rolls.

Med. Prop. Defensive, and slightly sedative.

Use. To protect the surface, and for making other plasters.

EMPLASTRUM QUINIÆ. (VOISIN.) Sulphate of quinia 3ij, mercurial plaster 3iv; mix.

Used in enlargement of the spleen, after intermittent fever.

EMPLASTRUM RESINÆ. U.S., L. [Emplastrum Resinosum, E.; Emplastrum Lithargyri cum Resina, D.] Emplastrum Adhæsivum. Resin in powder lbss, lead plaster lbiij. To the melted plaster add the resin, and mix.—This is the common adhesive plaster of the shops, so much used to retain the edges of wounds in contact, and to give support to ulcers, &c. It is slightly stimulating, in some cases, to the skin.

EMPLASTRUM RESOLVENS. [Emplastrum ex mixtis quatuor, P.] Equal parts of hemlock, galbanum, mercurial and soap plasters; melt, and mix by stirring.

Med. Prop. and Use. Those of the resolvent plasters.

EMPLASTRUM ROBORANS. See Emplastrum Ferri.

EMPLASTRUM SAPONIS. U.S., L., E., D. Soap Plaster. Soap in slices fbss, lead plaster fbiij; mix the soap with the melted

plaster, and boil for a short time.—[E. directs lead plaster 3iv, galbanum plaster 3ij, Castile soap 3j.]

Med. Prop. Protective, and slightly discutient.

Use. To bed-sores and tumours.

EMPLASTRUM SAPONIS COMPOSITUM. D. Emplastrum Adhærens. Soap plaster Zij, resin plaster Zij; melt, and mix together.

Med. Prop. and Use. Those of Emplastrum Resinæ.

EMPLASTRUM STOMACHICUM. See Emplastrum Aromaticum.

EMPLASTRUM VIGONIS. P. Lead plaster 3xl, wax 3ij, resin 3ij, ammoniac, bdellium, olibanum, myrrh, each, 3v, saffron 3iij, quicksilver 3xij, common turpentine 3ij, liquid styrax 3vj, oil of lavender 3ij. Powder the gum-resins and saffron, and rub the mercury with the styrax and turpentine in an iron mortar, until completely extinguished; melt the plaster with the resin, and add to the mixture the powders and volatile oil. When sufficiently cooled, but while yet liquid, add the mercurial mixture, and incorporate the whole thoroughly.

Use. Applied, spread upon a linen cloth, to the face, in the early stage of small-pox, to check the eruption and prevent subsequent suppuration and consequent pitting.

EMULSIONES. The *Emulsions* of the U. S. and Br. pharmacopœias are now termed *Mixtures*. (See Misturæ.) In a few cases, however, both terms are employed where different preparations are signified.

EMULSIO ACACIÆ. E. Blanched almonds 3x, sugar 3v; beat them together with mucilage of gum arabic f3iij; gradually add Oij of water, constantly stirring; strain through a linen or muslin cloth.

Med. Prop. Demulcent.

Use. In irritative conditions of the mucous membranes of the lungs, bowels, and urino-genital organs.

EMULSIO ARABICA. D. Powdered gum Acacia 3ij, blanched almonds 3ss, sugar 3ss, water f3xvj; mix.

Med. Prop. and Use. Same as the former.

EMULSIO AMYGDALÆ. See Mistura Amygdalæ.

EMULSIO AMYGDALÆ CUM AMYGDALINA. (WOEHLER.) Form 3j of emulsion with 3ij of sweet almonds, and dissolve in it gr. xvij of amygdaline.—Dose, 10 to 40 drops.

Use. As a substitute for Aqua Amygdalæ Amaræ.

EMULSIO BALSAMI PERUVIANI. Balsam of Peru Ziv, oil of almonds Zvj, powdered gum Arabic Zj; triturate, and add rose-water Ziv.—Dose, Zss.

Med. Prop. and Use. An excellent form for administering the Balsum of Peru;—expectorant.

EMULSIO CAMPHORÆ. Camphor Əj, sugar ℥ss; rub together, and add blanched almonds ℥ss; beat the whole into a smooth pulp, and gradually add water Oj, constantly stirring; then strain.—This is a very good form for administering camphor.

EMULSIO COPAIBÆ. Copaiva Zij, syrup and mucilage, each, Zj, water Zxij. Triturate the copaiva with the mucilage and syrup, and gradually add the water.

Med. Prop. and Use. Those of Copaiba.

EMULSIO CUBEBÆ. (W. PROCTOR.) Oleo-resinous extract of cubebs 3ij, powdered gum Arabic 3ss, sugar 3j, water f3iijss; form into an emulsion.—Dose, a tablespoonful.

Med. Prop. and Use. Those of Cubebs. This is a very certain formula for use.

EMULSIO SIMPLEX. P. Blanched almonds 3j, sugar 3j, cold water 3xxxij; rub together in a mortar.

Med. Prop. and Use. An agreeable demulcent.

Enemata. Injections or clysters are almost always extemporaneous prescriptions. A few only are here noticed.

Enema Aloes. L. Aloes \ni ij, carbonate of potassa gr. xv, decoction of barley Oss; mix, and rub them together.

Use. To remove ascarides from the rectum; and in amenorrhoea.

ENEMA ANODYNUM. See Enema Opii.

ENEMA ASTRINGENS. See Enema Rhataniæ.

ENEMA CATHARTICUM. E. Senna 3ss, boiling water f3xvj; infuse, strain, add sulphate of magnesia 3ss, sugar 3j, olive oil 3j.—D. Manna 3j, Comp. Decoct. of Chamomile f3x, olive oil 3j, sulphate of magnesia 3ss.

Med. Prop. and Use. An excellent and certain cathartic enema.

ENEMA CEVADILLÆ. (SOUBEIRAN.) Cevadilla 3ij, water 3x; boil to 3vij, strain, and add milk 3viij.

Use. To destroy ascarides.

ENEMA COLOCYNTHIDIS. L. Comp. extract of colocynth Jij, soft soap Zj, water Oj; mix and rub them together.

Use. Whenever a very powerful purgative impression is required, as in obstinate colic.

ENEMA COMMUNE. (GUY'S H.) Warm gruel f\(\frac{7}{3} \text{xij, common salt } \frac{7}{3} \text{j; mix. Linseed oil f} \frac{7}{3} \text{ij may be added.}

Med. Prop. and Use. A good laxative enema.

ENEMA FELLIS. (Dr. CLAY.) Fresh ox-gall f\(\)\ ij, warm water f\(\)\ iv.

Use. To soften indurated fæces.

ENEMA FŒTIDUM. E. To Enema Catharticum, add tincture of assafœtida 3ij.

Med. Prop. and Use. In flatulence, hysteria, convulsions, &c.

Enema Nutriens. Strong beef-tea, thickened with arrow-root.

Use. In cases of inability to swallow food, or to retain it on the stomach.

ENEMA OPII. L., E. Decoction of starch f\(\)\forall iv, tincture of opii mxxx.

Med. Prop. and Use. To procure the constitutional effects of opium.

ENEMA TABACI. Tobacco leaves 3j, boiling water Oj; macerate for one hour, and strain;—one half to be thrown up at once.

Med. Prop. Powerfully sedative and relaxing.

Use. In strangulated hernia, and violent colic; great caution is requisite, on account of the prostration produced.

ENEMA TEREBINTHINÆ. L., E., D. Oil of turpentine f3j, yolk

of egg q. s.; rub them up together, and add decoction of barley (or water) f3xix.

Use. In ascarides; to remove flatus; and in some affections of the urinary organs.

ERGOTA. U. S., L., E. Spurred Rye. The diseased seeds of Secale cereale, or common rye.

Med. Prop. Narcotic, parturifacient.

Use. Chiefly to facilitate labour; also in menorrhagia.

ERGOTINA. This name has been applied to different principles or mixed products procured from ergot. The true active principle of ergot has not yet, probably, been isolated.

ERIGERON CANADENSE. U. S. (Sec.) Canada Fleabane.

Med. Prop. Diuretic, tonic, and astringent.

Use. In dropsy and diarrhœa.

ERIGERON HETEROPHYLLUM. U. S. (Sec.) Various-leaved Fleabane.

ERIGERON PHILADELPHICUM. U. S. (Sec.) Philadelphia Fleabane. The two latter are frequently known by the name of Scabious.

Med. Prop. Diuretic.

Use. As a drink (in decoction) in dropsy, and irritable bladder.

ERYNGIUM. U. S. (Sec.) Button Snake-root. The root of Eryngium aquaticum.

Med. Prop. Diaphoretic, expectorant, and emetic; has been used as a substitute for Seneka.

ERYTHRONIUM. U. S. (Sec.) The root and herb of Erythronium Americanum.

Med. Prop. Emetic, when fresh.

EUPATORIUM. U. S. Thoroughwort. Boneset. The tops and leaves of Eupatorium perfoliatum.

Med. Prop. Tonic, diaphoretic, and, in large doses, emetic and cathartic.

Use. In catarrhs and rheumatism.

Euphorbia Corollata. U. S. (Sec.) Large flowering Spurge. The root of Euphorbia corollata.

Med. Prop. and Use. Similar to the following.

Euphorbia Ipecacuanha. U. S. (Sec.) Ipecacuanha Spurge. The root of Euphorbia Ipecacuanha.

Med. Prop. Emetic, cathartic, diaphoretic, and expectorant;—not much used.

Euphorbium. L., E. [Euphorbia Canariensis, D.] The concrete resinous juice of an undetermined species of Euphorbia.

Med. Prop. A violent irritant, both internally and externally. Use. Chiefly as an errhine (diluted).

ESSENTIÆ. The term *Essences* has been vaguely applied to certain strong alcoholic tinctures, to some essential oils, to solutions of the latter in alcohol, and even to concentrated fluid extracts, infusions, and decoctions.

ETHER. See Æther.

EXTRACTA. Extracts are made by evaporating the expressed juices of plants, or their decocting infusions or tinctures, by a gentle heat. They are usually of a solid consistence; though occasionally in a semi-fluid state (fluid extracts). In some instances, alcohol, wine, vinegar, and ether are employed as the solvents. A few extracts are procured from animal substances. The plan most recommended is to conduct the evaporation in vacuo. The extracts from the expressed juices are perhaps best prepared by evaporating at common temperatures in shallow vessels. Extracts from expressed juices (Succi Spissati, D.) are made by bruising the fresh plants after they have begun to flower, sprinkled with water, in a marble mortar, and expressing the juice, which should be filtered.

Watery extracts (Extracta Aquosa, D.) are made by boiling (or sometimes, preferably, by maceration, or by percolation) the drug with 8 or 10 times its weight of water, till reduced to one half. It is then strained and evaporated as above.

Spirituous Extracts (Extracta Alcoholica) are made by evaporating tinctures prepared with rectified or diluted alcohol. They are generally more active than other extracts. EXTRACTUM ACONITI. U. S., L., E. [Succus Spissatus Aconiti, D.] Evaporate the juice obtained by bruising the fresh leaves of monkshood in a mortar with a little water, and expressing to a proper consistence.—E. directs the expressed juice to be mixed with the tincture of the residuum; the mixture filtered, the spirit distilled off, and the residuum evaporated in a water-bath.

—Dose, gr. j, to gr. ij.

Med. Prop. A good and certain preparation of aconite, if well made.

Extractum Aconiti Alcoholicum. U. S., P. Coarsely powdered aconite leaves lbj, proof spirit Oiij. (lbiijss, P.) Moisten the powder with half its weight of the spirit, and in 24 hours lixiviate it in a displacement apparatus, with the rest of the spirit. When all the spirit has penetrated the powder, keep this covered with distilled water till a precipitate begins to form; then distil off the spirit, and evaporate to a proper consistence. If made from freshly dried leaves, this is a good preparation.

—Dose, gr. ss to gr. j. [A much stronger extract is made by evaporating the tincture of the root.]

Med. Prop. and Use. Those of Aconite. An excellent preparation.

EXTRACTUM ANTHEMIDIS. E. [Extractum Chamæmeli, D.]
From a decoction of chamomile flowers, by evaporation. (The volatile oil must of course escape, and the peculiar virtue of the flowers be consequently lost.)

EXTRACTUM BELLADONNÆ. U. S., L., E. [Succus Spissatus Belladonnæ, D.] From the fresh leaves of Atropa Belladonna, as Extr. Aconiti. Its strength is variable.—Dose ½ to ½ gr. Med. Prop. and Use. Those of Belladonna.

Extractum Belladonnæ Alcoholicum. U. S., P. As Extr. Aconiti Alcoholicum.—Dose, ½ gr. to gr. j. [Mohr and Pelletan recommend the juice of the fresh leaves to be expressed, coagulated by heat, strained, and rapidly evaporated by waterbath to the consistence of syrup; an equal measure of absolute alcohol is added, and the clear portion of the liquid is evaporated.]

EXTRACTUM CANNABIS INDICÆ. Bengal Disp. Boil the dried tops of Indian hemp (Gunjah) in rectified spirit (about lbj to Cong. j); distil off the spirit, and evaporate the extract by a gentle heat.—Dose, in India, gr. ss to gr. j.

Med. Prop. and Use. Those of Cannabis Indica.

Extr. Ipecac. A stronger extract (Extr. Oleosum) is obtained by evaporating a tincture made by percolation, or digestion, with sulphuric ether. Acetic acid is sometimes employed as the menstruum.

Med. Prop. A powerful epispastic.

EXTRACTUM CASSIÆ. L. The pulp of the Cassiæ fistula, washed out of the pods by boiling water, strained through a hair sieve, and evaporated.—P. directs cold water, and the solution to be strained through flannel.

Med. Prop. and Use. A gentle laxative.

EXTRACTUM CATECHU. P. Bruised catechu Ibj, boiling water Ibvj. Infuse for 24 hours, stirring the mixture occasionally; decant, and evaporate by water-bath.

Med. Prop. and Use. Similar to those of Extractum Krameriæ.

EXTRACTUM CATHARTICUM. See Extractum Colocynthidis Compositum.

EXTRACTUM CINCHONÆ. U. S., L., E., D. Coarsely powdered cinchona fbj, alcohol Oiv, water q. s.; macerate the bark in the alcohol for 4 days, then filter by displacement, pouring the water gradually on until Oiv of liquid have passed through, distil off the spirit, and evaporate to a proper consistence.—L. and D. direct it to be made by evaporating a strong decoction of either the red or pale bark.—Dose 10 to 20 grs.

Med. Prop. and Use. Those of Peruvian bark, or Quinia.

EXTRACTUM CINCHONÆ FLUIDUM. (DR. NELIGAN.) Exhaust yellow bark by percolation with proof spirit, and afterwards with water; concentrate the mixed liquors by cautious evaporation.

Med. Prop. and Use. As the preceding.

EXTRACTUM COLCHICI ACETICUM. L., E. Fresh colchicum cormus bruised fbj, sprinkle with f\(\) iij of acetic acid; express and evaporate the juice. Scudamore recommends it to be made by digesting dried colchicum in distilled vinegar, and evaporating.

—Dose, gr. i to gr. ij.

Med. Prop. and Use. Those of Colchicum.

EXTRACTUM COLCHICI CORMI. L. Bruise the fresh bulbs, sprinkle with a little water, express the juice, and evaporate.

Med. Prop. and Use. The same as the preceding.

EXTRACTUM COLOCYNTHIDIS. L., E., D. Colocynth pulp fbj, distilled water Oij; boil slowly for 6 hours, supplying the waste of water; strain while hot, and evaporate to a proper consistence. P. directs it to be made from the cold infusion.

Med. Prop. and Use. Those of Colocynth. Not a very good preparation.

EXTRACTUM COLOCYNTHIDIS COMPOSITUM. U. S., L., D. Cathartic Extract. Pulp of colocynth, sliced, 3vj; macerate in diluted alcohol with a gentle heat for 4 days; express, and filter the liquid; then add powdered aloes 3xij, powdered scammony 3iv, powdered cardamom 3j, Castile soap 3iij; evaporate to the proper consistence.

Med. Prop. and Use. A safe and energetic cathartic. Used often in combination with others.

EXTRACTUM CONII. U. S., L., E. [Succus Spissatus Conii, D.] From the fresh hemlock leaves, as directed by U. S. for Extractum Stramonii; and by L. and D. for Extractum Aconiti.

Med. Prop. and Use. Those of Conium. A good form of exhibition.

EXTRACTUM CONII ALCOHOLICUM. U.S., P. By percolation with proof spirit, and evaporating.—Dose, 2 to 3 grs.

EXTRACTUM CUBEBÆ. (MR. TOLLER.) Exhaust cubebs by rectified spirit; distil off most of the spirit, and evaporate the residue over a water-bath, at a low temperature, to a pilular con-

sistence, adding a little powdered soap.—Dose, gr. xv, twice a day.

Extractum Cubebæ Oleo-Resinosum. (M. Dublanc.) From Ibvj of powdered cubebs put into a still with Oxij of water, distil Ovj. Separate the oil, and return the distilled water into the still with Ibvj more cubebs, and again distil and separate the oil. Express the marc strongly, and exhaust it by rectified spirit. Distil the filtered tincture; evaporate the extract to the consistence of honey, and incorporate with it the volatile oil. One part of this extract is equal to eight of the powder.—Mr. Procter exhausts the powdered cubebs with ether, in a displacement apparatus, adds the residue to diluted alcohol, and then distils the tincture by means of a water-bath; this being evaporated to a proper consistence, is added to the ethereal product; and the whole evaporated to the consistence of honey. It is eight times as strong as the powder.

Med. Prop. and Use. Those of cubebs. An excellent form of administration.

EXTRACTUM DIGITALIS. L. From the unfiltered juice.—E. As Extractum Conii.—D. From the dried leaves, by percolation with proof spirit, and also with water.

Med. Prop. and Use. Like Digitalis.—Dose, gr. ss to gr. ij.

EXTRACTUM DULCAMARÆ. U.S. From coarsely powdered dulcamara, as Extractum Gentianæ.

Med. Prop. and Use. Those of Dulcamara. Very little used.

EXTRACTUM ELATERII. L., D. [Elaterium, U. S., E.] Slice the fruit of ripe wild cucumbers, express the juice very gently and pass through a fine hair sieve. Set it aside, and when the thicker part has subsided, reject the supernatant liquid, and dry the thicker part with a gentle heat, upon a linen or muslin cloth.—Dose, of the best, \$th of a grain; of the commercial, \$\frac{1}{4}\$ gr. to gr. j.

Med. Prop. A drastic hydragogue cathartic.

Use. In obstinate constipation, and in ascites.

EXTRACTUM ERGOTÆ AQUOSUM. (The Ergotine of M. BONJEAN.)

Exhaust powdered ergot by displacement, with cold water; heat the solution in a water-bath, and filter; evaporate to the consistence of syrup, and add rectified spirit to throw down the gummy matter; when settled, decant the clear liquid, and evaporate by water-bath.—One ounce of ergot yields about 70 grs. M. Bonjean says it possesses the hæmostatic without the toxic effects of ergot.

EXTRACTUM ERGOTÆ ÆTHEREUM. (MR. WRIGHT.) Exhaust powdered ergot, by percolation, with ether, and let the solution evaporate spontaneously.

EXTRACTUM FULIGINIS. Boil wood-soot in 8 parts of water for half an hour; strain and evaporate to an extract.—Dose, gr. iv to gr. xvj, daily.

Med. Prop. Tonic and antispasmodic. Not much used internally; externally, a good stimulant, applied in form of a poultice to porrigo.

EXTRACTUM GALLARUM. As Extractum Krameriæ.

EXTRACTUM GENTIANÆ. U. S., L., E., D., P. Mix fbj of coarsely powdered gentian with Oj of cold water; let it stand 24 hours, then, in a displacement apparatus, pour water gradually upon it until it passes but slightly impregnated with the properties of the root. Heat the filtered liquid to 212° F., and evaporate to the proper consistence.

Med. Prop. and Use. Those of Gentian.—One of the best tonic extracts.

EXTRACTUM GLYCYRRHIZÆ. U. S., L., E., D. Liquorice. From the root, by percolation with cold water. [The commercial liquorice is made in Spain and Sicily by evaporating the decoction; it usually requires to be purified or refined, by dissolving in water, without boiling, and evaporating.]

Med. Prop. Demulcent.

Use. In coughs and colds,—an excellent adjuvant.

EXTRACTUM HÆMATOXYLI. U. S., L., E., D. Boil Ibj of rasped logwood in Cong. j of water to Cong. ss; strain while hot, and evaporate to a proper consistence

- Med. Prop. and Use. Those of Hæmatoxylon.—In consequence of its great hardness, it is apt to pass through the stomach undissolved.
- EXTRACTUM HELLEBORI. U. S., P. As Extractum Aconiti Alcoholicum.
- Med. Prop. and Use. Those of Helleborus.
- EXTRACTUM HYOSCYAMI. U. S., L., E. [Succus Spissatus Hyoscyami, D.] As Extractum Stramonii Foliorum, U. S.; as Extractum Aconiti, L., D.; as Extractum Conii, E.—Dose of the inspissated juice, gr. ij to gr. viij; of the alcoholic extract, gr. ss to gr. ij.
- Med. Prop. and Use. Those of Hyoscyamus. It is an excellent narcotic extract, much used as an anodyne; also to quiet cough, where opium would not be admissible, on account of arresting the bronchial secretion.
- EXTRACTUM HYOSCYAMI ALCOHOLICUM. U.S., P. From the dried leaves, as directed for Extractum Aconiti Alcoholicum.
- Med. Prop. and Use. As the former.
- EXTRACTUM SEMINUM HYOSCYAMI. P. Digest lbj of the ground seeds with lbiij of proof spirit, with a gentle heat; strain, and digest with lbiij more spirit, and again strain. Evaporate the filtered liquors to an extract; dissolve in cold water, filter, and again evaporate.—Dose, gr. ss to gr. ij.
- Med. Prop. and Use. As Extractum Hyoscyami.
- EXTRACTUM JALAPÆ. U.S., L., D. From jalap root in powder, as Extractum Cinchonæ (U.S.)—L. and D. direct decoction, which extracts the starch.—Dose, gr. x to Эj.
- Med. Prop. and Use. As jalap root; it possesses all the purgative properties.
- EXTRACTUM SIVE RESINA JALAPÆ. E. Moisten powdered jalap with rectified spirit, and, after 12 hours, exhaust the rectified spirit in a percolator. Distil off the greater quantity of the spirit, and concentrate the residuum over a vapour-bath to a due consistence.—Dose, gr. iv to gr. xij.
- Med. Prop. and Use. As the preceding, but more powerfully purgative and drastic.

EXTRACTUM JUGLANDIS FOLIORUM. (M. NEGRIER.) From the dried leaves of the European walnut (Juglans regia), by decoction, or, preferably, by percolation.—Dose, gr. iij, two or three times a day, in scrofula.

Med. Prop. Antiscorbutic.

EXTRACTUM JUGLANDIS. U.S. From the inner bark of the root of Juglans cinerea, or Butternut, as directed for Extractum Gentianæ.

Med. Prop. and Use. A mild cathartic, resembling rhubarb.

EXTRACTUM KRAMERIÆ. U.S., E. From moderately fine powder of Krameria (bark of root), as directed for Extractum Gentianæ. Med. Prop. and Use. Those of Krameria.

EXTRACTUM LACTUCÆ. L. By inspissating the unfiltered juice of lettuce leaves. [It is inferior to Lactucarium, which it resembles in properties.]

EXTRACTUM LACTUCÆ VIROSÆ. P. The inspissated juice of wild lettuce.

Med. Prop. and Use. Similar to those of Lactucarium.

EXTRACTUM LOBELIÆ INFLATÆ. Dried lobelia Ziv, proof spirit Oiv, strong acetic acid Zj. Macerate for 48 hours, filter, and evaporate by water-bath.

Med. Prop. Those of Lobelia.

EXTRACTUM MARTIS. P. By evaporating Tinctura Martis Tartarizata.

Med. Prop. Chalybeate.

EXTRACTUM MEZERII. The alcoholic extract is made by digesting mezereon bark in a water-bath with rectified spirit, and evaporating the tincture. The ethereal extract is best made from the alcoholic, by digesting the latter (evaporated to the consistence of a syrup) in ether, in a stopped bottle; then decant, and carefully evaporate.

Med. Prop. and Use. Those of Mezereum.

EXTRACTUM NARCISSI. From dried leaves of daffodil, by percolation with proof spirit or water.—Dose, gr. ss to gr. jss, in hooping-cough.

EXTRACTUM NUCIS VOMICÆ. U.S., E., D. Exhaust nux vomica (which has been softened by steam, sliced, dried, and ground) by percolation with alcohol. Filter, and distil off the greater part of the spirit, and evaporate.—Dose, gr. ss to gr. ij, 2 or 3 times a day.

Med. Prop. and Use. Those of Nux Vomica. It is not always of uniform strength.

EXTRACTUM OPII. E. [Extractum Opii Purificatum, L.; Extractum Opii Aquosum, D.] Opium, sliced, 3xx, distilled water Cong. j. Soften the opium by maceration with a little of the water for 12 hours; then, the rest of the water being gradually added, triturate them together till perfectly mixed, and set aside till the dregs have subsided. Then filter, and evaporate to a proper consistence.—E. directs repeated maceration and strong expression, and the extract to be again taken up by maceration with successive portions of cold water, and the filtered liquor evaporated.

Med. Prop. and Use. Those of opium, but inferior to it.

EXTRACTUM OPH SINE NARCOTINA. (M. DUBLANC.) The extract, softened with cold water, is agitated and macerated with successive portions of ether, as long as anything is taken up. The ether being poured off, the extract is evaporated to a pilular consistence.

Med. Prop. and Use. Those of opium, with a less tendency to disagree with the stomach.

EXTRACTUM OPII VINO PARATUM. P. Macerate 1bj of choice opium in 1biv of white wine for 24 hours, stirring occasionally; strain, and press; diffuse the residuum through 1bij more wine, and after some hours, express the liquid. Evaporate the strained liquors to an extract. [Other extracts are obtained from opium by digesting it with vinegar, lemon-juice, quince-juice, alcohol, &c.]

EXTRACTUM PAPAVERIS. L., E. Poppy-heads, without the seeds, 3xv, boiling water Cong. j. Macerate for 24 hours, boil

to Oiv, filter whilst hot, and evaporate by water-bath to a proper consistence.—Dose, 5 to 10 grs.

Med. Prop. Those of opium in an inferior degree; and not of uniform strength.

EXTRACTUM PAREIRÆ. L., E. From the bruised root of Pareira Brava, as Extractum Gentianæ; or by percolation (P.), as Extractum Krameriæ.

Med. Prop. and Use. Those of Pareira Brava.

EXTRACTUM PETROSELINI. P. From Parsley root, as Extractum Krameriæ.—M. Peraire prescribes the inspissated juice of the leaves as a substitute for quinia.—Dose, gr. viij to gr. xv, in 24 hours.

EXTRACTUM PODOPHYLLI. U. S. From the root of May-apple, as Extractum Jalapæ.—Dose, gr. x to gr. xv.

Med. Prop. Purgative.

EXTRACTUM PYROLÆ. See Extractum Chimaphilæ.

EXTRACTUM QUASSIÆ. U.S., E. From the raspings of Quassia, as Extractum Gentianæ.

Med. Prop. and Use. Those of Quassia;—it is the most powerful of the bitter extracts.

EXTRACTUM RHEI. L., D. Powdered rhubarb 3xv, proof spirit Oij, distilled water Ovij; macerate for 4 days at a gentle heat, then strain, and set the solution aside to settle. Decant, and evaporate the clear liquid to a proper consistence. E. directs it to be prepared by maceration in successive portions of cold water, and the expressed and filtered liquids evaporated in a vapour-bath, or, preferably, in vacuo, to a proper consistence.

Med. Prop. and Use. Those of rhubarb; over which it possesses no advantage.

EXTRACTUM RHEI COMPOSITUM. (Prus. Ph.) Extractum Panchymagogum. Extract of rhubarb 3iij, purified aloes 3j, soap of jalap 3j. Dissolve them in a little spirit, and evaporate to a proper consistence. [The active principle of rhubarb is dissipated at a high temperature.]

Med. Prop. A good, active cathartic extract.

EXTRACTUM RHEI FLUIDUM. See Tinct. Rhei Saccharata.

EXTRACTUM SABADILLÆ. (TURNBULL.) By evaporating the concentrated tincture of cevadilla seeds.—Dose, \$\frac{1}{2}\$th of a grain, —as a substitute for Veratria, which it resembles in medical properties.

EXTRACTUM SALICIS. P. From powdered willow-bark, as Extractum Krameriæ.

Med. Prop. Those of willow-bark.

EXTRACTUM SAMBUCI. E., D. Elder Rob. From fresh ripe elder-berries, as the inspissated juice of aconite.

Med. Prop. and Use. As Sambucus.

Extractum Sarsaparillæ. U. S., D., P. (Extractum Sarzæ, L.) From coarsely-powdered sarsaparilla, as Extractum Aconiti Alcoholicum, U. S.; as Extractum Gentianæ, L.

Med. Prop. and Use. Those of sarsaparilla, the virtues of which it possesses in a high degree.

Extractum Sarsaparilla Fluidum. (Mr. Hodgson.)
Bruised Sarsaparilla root Zxvj, bruised liquorice root, guaiacum wood, rasped bark of sassafras root, each, Zij, mezereon Zvj, diluted alcohol Oviij. Digest for 14 days at a common temperature, then strain, express and filter. Evaporate the tincture in a water-bath to fZxij; then add Zviij of white sugar, and remove from the fire as soon as the sugar is dissolved. (This extract is much superior to those of the Brit. Phars.)—Dose, fZj, equivalent to Zj of the root.

EXTRACTUM SATURNI. See Liquor Plumbi Subacetatis.

EXTRACTUM SIVE RESINA SCAMMONII. E. Boil scammony, in fine powder, in successive portions of proof spirit, till nothing more is dissolved; filter, distil the liquid till little but water passes over; then pour away the watery solution from the resin, wash the latter with boiling water, and dry it at a temperature not exceeding 240°.

Med. Prop. and Use. Those of Scammony;—given best rubbed up with skimmed milk.

EXTRACTUM SENNÆ. P. By percolation with temperate water, as Extractum Krameriæ. [Proof spirit is said to yield a more active extract.]

Med. Prop. and Use. Those of Senna.

EXTRACTUM SENNÆ FLUIDUM. (MR. DUNCAN.) Senna Ibxv, boiling water 4 times its weight. Exhaust the senna by displacement, concentrate to Ibx, dissolve in it Ibvj of treacle, previously concentrated over a water-bath till it becomes nearly dry in cooling. Add f\(\frac{7}{3}\)xxiv of rectified spirit, and water q. s. to make up Oxij (imp.).—Dose, \(\frac{7}{3}ij. \) Each f\(\frac{7}{3}j \) corresponds with \(\frac{7}{3}j \) of senna.—MR. Duhamel (\(U.S. \)) prepares it as follows: Macerate \(\frac{7}{3}\)viij of coarsely-powdered senna with Oj of dilute alcohol for 12 hours; then, by displacement, procure Oiij of liquid, evaporate with a gentle heat to f\(\frac{7}{3}v, \) and while still hot, dissolve in it \(\frac{7}{3}v \) of sugar. Strain the liquor, and, when cold, add for each f\(\frac{7}{3}j \) gtts. ij of oil of fennel, dissolved in a little of Hoffman's anodyne.—Dose, for an adult, f\(\frac{7}{3}ss. \)

EXTRACTUM SOLANI TUBEROSI. (DR. LATHAM.) From the stalks and leaves of the common potato as Extractum Conii.

—Dose, gr. iij.

Med. Prop. Narcotic.

EXTRACTUM STRAMONII FOLIORUM. U. S. Bruise fresh stramonium leaves in a stone mortar, sprinkling on them a little water, then express the juice, and, having heated it to the boiling point, strain and evaporate.—Dose, gr. j, twice a day, gradually increased.—P. directs an alcoholic extract by percolation with proof spirit, as Extractum Aconiti.

Med. Prop. and Use. Those of Stramonium.

EXTRACTUM STRAMONII. [Seminis, U. S.] L., D. Powder of stramonium seeds the probability; rub with Oss of dilute alcohol. Introduce the mixture into a percolator, and pour upon it gradually, diluted alcohol, till the liquor passes colourless. Distil off the

alcohol, and evaporate the residue to a proper consistence.

—Dose, ½ to ½ gr.—(L. exhausts the seeds by boiling water.)

Med. Prop. and Use. As the preceding.

EXTRACTUM TARAXACI. U. S., L., E., D. From the fresh bruised root of the Dandelion, as Extractum Hæmatoxyli. Mr. Houlton prepares it by spontaneous evaporation of the expressed juice.

Med. Prop. and Use. Those of Taraxacum.

EXTRACTUM UVÆ URSI. L. From the dried leaves, by decoction, as Extractum Gentianæ.—Dose, 5 to 30 grs.

EXTRACTUM VALERIANÆ. D. As Extractum Gentianæ.—P., by percolation with proof spirit.

EXTRACTUM VALERIANÆ FLUIDUM. See Tinct. Valerianæ Ætherea.

FARINÆ EMOLLIENTES. See Species Emollientes.

FERRI ACETAS. D. Carbonate of iron 1 part, acetic acid 6 parts; digest for three days, and filter.—Dose, gtt. x to xxv, taken in water.

Med. Prop. Tonic and astringent.

Use. In dyspepsia, chlorosis, hysteria, &c.

FERRI Ammonio-Chloridum. L. Sesquioxide of iron Ziij, hydrochloric acid f\(\frac{7}{3}\xi\); digest in a proper vessel in a sand-bath for 12 hours. Add sal-ammoniac lbijss, previously dissolved in Oiij of distilled water; filter, evaporate to dryness, and reduce to powder.

Med. Prop. Tonic, and emmenagogue.

Use. In amenorrhœa, chlorosis, hysteria, &c.

FERRI Ammonio-Citras. (Beral.) Citric acid 3xxiv, distilled water Oiij, water of ammonia f3xjss; heat to below boiling, and gradually add moist hydrated oxide of iron till a portion remains undissolved (about 3lv will be required). Evaporate the filtered solution to the consistence of treacle, and then spread thinly on dishes, or glass plates, and dry gradually by a current of air, till it can be chipped off in scales.—Dose, gr. iv. to gr. viij.

Med. Prop. and Use. Very similar to the tartrate and lactate of iron.

FERRI AMMONIO-TARTRAS. (W. PROCTER, JR.) Dissolve 31 of tartaric acid in f\(\frac{7}{3}\text{xvj} \) of water, saturate with carbonate of ammonia, and add 31 more of acid. Heat the solution in a water-bath, and add moist hydrated oxide of iron. Digest till the oxide is dissolved, filter, and evaporate on shallow porcelain dishes, till it becomes brittle, and can be chipped off.—Dose, gr. iv to gr. vj.

Med. Prop. and Uses. Those of the other chalybeates. It is a very good preparation.

FERRI ARSENIAS. Mix together solutions of arseniate of soda and protosulphate of iron; collect, wash, and dry the precipitate.—Dose, \(\frac{1}{16}\)th of a grain, in herpetic and cancerous affections. (BIETT.)—Also used externally, with four times its weight of phosphate of iron, by CARMICHAEL; and likewise in the form of ointment.

Med. Prop. Very irritant, poisonous; externally, escharotic.

FERRI BROMIDUM. (MOHR.) Mix 1 part of iron filings with 3 parts of water in a stopped vial; add 1 part of bromine; close the bottle, and set it aside, shaking it occasionally. When the solution has assumed a greenish colour, filter, and evaporate to dryness.—Dose, gr. ij to vj.

Med. Prop. Tonic, and resolvent.

Ferri Carbonas. D. See Ferri Subcarbonas.

FERRI CARBONAS SACCHARATUM. E. Sulphate of iron 3iv, carbonate of soda 3v; dissolve each in Oij of water, and mix the solutions; collect the precipitate on a cloth filter, wash it with cold water, squeeze out as much water as possible, and without delay, triturate the pulp with 3ij of finely-powdered white sugar. Dry the mixture at a temperature not much above 120°. [It is inferior to Vallet's Ferruginous Mass. See Pil. Ferri Carbonat.]

FERRI CARBURETUM. (Prus. Ph.) Common graphite is purified by first boiling it, finely powdered, in pure water; then it

is digested in a solution of nitro-muriatic acid for 24 hours; it is then washed in pure water, and dried. [Used, internally and externally, in herpetic and other cutaneous diseases. Weinhold.]

FERRI CHLORIDUM. P. The protochloride is made by dissolving clean iron turnings in muriatic acid, boiling the solution on excess of iron, decanting as soon as settled, and evaporating quickly to dryness. The perchloride is made by evaporating to dryness a solution of red oxide of iron in muriatic acid.

Use. Not employed internally; chiefly in pharmacy.

FERRI CITRAS. (BERAL.) Citric acid ziv, water ziv; heat together in a platinum capsule, and gradually add moist hydrated sesquioxide of iron as long as any is dissolved; proceed as directed for Ferri Ammonio-Citras. The more gradually it is dried the larger the scales.—Dose, gr. v to x.—The citrate of the protoxide may be made by treating iron filings with citric acid dissolved in distilled water. It has a dark-green colour, and is more soluble than the former.

Med. Prop. and Use. An excellent chalybeate; used as the tartrate.

FERRI ET QUINÆ CITRAS. (BERAL.) Dissolve 4 parts of citrate of iron, and 1 of citrate of quinia in distilled water, and evaporate the solution to dryness, as directed for Ferri Ammonio-Citras.

Med. Prop. and Use. An agreeable, and excellent chalybeate.

ERRI ET POTASSÆ TARTRAS. U. S. [Ferri Potassio-Tartras, L.; Ferrum Tartarizatum, E.; Ferri Tartarum, D.] Digest Jiij of subcarbonate of iron with f3x of muriatic acid, for 2 hours; pour the solution into Cong. j of distilled water; set aside for an hour, and pour off the supernatant liquid; to this, add Ovss of the solution of potassa (which precipitates the hydrated sesquioxide of iron), wash the precipitate frequently with water, and mix it, while moist, with 3vjss of cream of tartar and Cong. ss of distilled water. Keep the mixture at 140°

for 30 hours, frequently stirring; then filter the solution, and evaporate to dryness by means of a water-bath.

Med. Prop. and Use. One of the mildest of the chalybeates; well borne by the stomach, not unpleasant to the taste, and soluble.

Ferri Ferrocyanuretum. U. S. [Ferri Percyanidum, L.; Ferri Cyanuretum, D.] Pure Prussian Blue. Make a solution of persulphate of iron, as directed for Ferri Oxidum Hydratum, and dissolve in it 3ivss of ferrocyanuret of potassium, pour it upon a filter, wash the precipitate with boiling water, until tasteless; dry, and rub into powder.—Dose, gr. iij to vj, in intermittents, epilepsy, &c.

Ferri Iodidum. U. S., L., E. Mix 3ij of iodine with Oj of distilled water, in a porcelain or glass vessel, and gradually add 3j of iron filings, stirring constantly. Heat the mixture gently until it acquires a light-greenish colour; filter, and wash what remains with Oss of boiling distilled water. Evaporate the filtered liquors at a temperature not exceeding 212°, in an iron vessel, to dryness. It must be kept in a closely stopped bottle. (It is best given in saccharine solution. See Liquor Ferri Iodidi.)

Med. Prop. Tonic, alterative, diuretic, and emmenagogue.

Use. Chiefly in scrofulous affections, atonic amenorrhea, and mesenteric obstructions.

FERRI LACTAS. Dissolve 3j of lactate of lime in 3iv of boiling water; precipitate the lime by oxalic acid, avoiding excess, and filter. Heat the liquid with excess of iron filings for 6 or 8 hours, filter, set aside, wash the crystalline powder which is deposited, with a little alcohol, and dry it.—Dose, gr. j to ij, several times a day.

Use. Chiefly in chlorosis.

FERRI LIMATURA. E. See Ferri Ramenta.

FERRI NITRAS. Put 3jss of iron (in chips or wire) in an earthen vessel, pour upon it f3iij of nitric acid, diluted with f3xv of water, set it aside until the acid has united with the iron,

decant the liquid, strain and filter, then add 3j of muriatic acid, diluted with as much water as will increase the whole solution to f3xxx. It should have a fine dark-red colour.

Med. Prop. Very astringent, but not caustic. Dose, 10 to 25 drops; in chronic diarrhœa, leucorrhœa, &c.

Ferri Oxidum Hydratum. U.S. [Ferrugo, E.] Hydrated Sesquioxide of Iron. Dissolve Ziv of sulphate of iron in Oij of water, and add fZiijss of sulphuric acid; boil the solution, and add nitric acid q. s., in small quantities, boiling for a few moments after each addition, until the acid ceases to produce a dark colour. Filter, cool, and add solution of ammonia in excess, stirring briskly. Wash until thoroughly free from sulphuric acid, and preserve in close bottles with water sufficient to cover it.

Use. Chiefly as an antidote to arsenic, in which case it should always be employed in the moist state. It should not be long kept.

Ferri Oxidum Nigrum. E., D. Martial Ethiops. Mix together the solution of persulphate of iron (as directed for Ferri Oxidum Hydratum) and the protosulphate of iron; and precipitate the oxide by means of strong solution of ammonia.—D. directs the scales from the anvil to be prepared as chalk. (See Creta Præparata.)—Dose, gr. v to xx, two or three times a day.

Use. The same as Ferri Subcarbonas.

Ferri Sesquioxidum. L. See Ferri Subcarbonas.

FERRI NITRAS vel SESQUINITRAS. (MR. KERR.) To 3jss of iron wire add f3iij of nitric acid, diluted with f3xv of water; set them aside till the action has ceased; decant, add muriatic acid 3j, and water to make up f3xxx.—Dose, 6 to 10 drops.

Med. Prop. A powerful styptic and astringent.

Use. In solution, in chronic diarrhœa.

FERRI PHOSPHAS. U.S. Dissolve separately $\mathfrak{Z}v$ of sulphate of iron (pure), and $\mathfrak{Z}vj$ of phosphate of soda, in Oiv of water; mix, and when the phosphate has subsided, pour off the super-

natant liquid; wash the precipitate in hot water, and dry with a gentle heat.—Dose, gr. v to x.

Use. A very good chalybeate in amenorrhœa and dyspepsia.

Ferri Potassio-Tartras. L. See Ferri et Potassæ Tartras.

FERRI RAMENTA. U.S. [Ferri Limatura, D.] Iron Filings. File a piece of pure iron with a clean file.—Dose, 5 to 20 grains.

Med. Prop. and Use. Similar to the other ferruginous preparations, but inferior. In undergoing oxidizement in the stomach it liberates hydrogen gas.

FERRI RUBIGO. D. Expose fragments of iron wire, moistened, to the action of the air, till it is converted into rust. Rub the powder in an iron mortar; separate the finer particles by the affusion of water, and dry it. [It consists chiefly of the sesquioxide combined with a little protocarbonate.]

Not much employed.

Ferri Subcarbonas. U. S. [Ferri Sesquioxidum, L.; Ferri Oxidum Rubrum, E.; Ferri Carbonas, D.] Precipitated Carbonate of Iron. Dissolve Zviij of sulphate of iron and Zix of carbonate of soda, severally in Oiv of water; mix the solutions, stir, and let the powder subside; then pour off the supernatant liquor, wash the precipitate with hot water, wrap it in bibulous paper, and dry with a gentle heat.

Med. Prop. Tonic, alterative, and emmenagogue.

Use. An excellent chalybeate in all cases requiring the employment of iron.

Ferri Sulphas. U. S., L., E., D. Green Vitriol. Add sulphuric acid Zxviij, and water Cong. j to Zxij of iron wire cut into pieces; heat the mixture till effervescence ceases. Pour off the solution, and having added Zss of sulphuric acid, filter through paper; evaporate, and set it aside to crystallize. Drain the crystals in a funnel, dry them on bibulous paper, and keep in well-stopped bottles.

Med. Prop. Tonic, astringent, emmenagogue, and styptic.

Use. In debility, amenorrhœa, passive hemorrhage, diabetes, &c.; externally, in leucorrhœa, gleet, eruptions, &c.

FERRI SULPHAS EXSICCATUM. E. Dry sulphate of iron with a moderate heat, in a porcelain or earthen vessel not glazed with lead, till it becomes a grayish-white mass, and reduce to powder. (Three grains are about equal to five of the sulphate.)

FERRI TANNAS. (BENEDETTI.) To a boiling solution of 90 parts of pure tannic acid, add gradually 440 parts of subcarbonate of iron (prepared from the pure sulphate). Agitate the solution till effervescence ceases; evaporate the mixture at 176° F., in a porcelain vessel, until it becomes thick; then spread it on glass or porcelain to dry in a stove at 95°.

Used in chlorosis.—Dose, 2 or 3 grs., gradually increased.

Ferri Valerianas. (Ruspini.) To clean iron filings, in a Wedgwood mortar, add gradually an equal weight of valerianic acid, and stir constantly. In an hour, add distilled water; gently warm the whole in a flask, and filter. The surface in contact with the air becomes covered over with a crystalline layer of the valerianate; collect this, and expose as before, repeating the process as long as it continues to yield crystals.—Dose, 1 to 2 grains.

Use. As a tonic, in nervous disorders, as hysteria, chorea, chlorosis, neuralgia, &c.

FERRUGO. E. See Ferri Oxidum Hydratum.

FERRUM AMMONIATUM. U.S. See Ferri-Ammonio Chloridum.

FERRUM REDUCTUM. Iron reduced by hydrogen. Cause a stream of hydrogen gas to pass through a tube containing oxide of iron, till it is reduced.

Med. Prop. This is chemically pure metallic iron, and almost always becomes oxidized in the stomach before it can act medicinally.

Ficus. U. S. [Fici, L., E.; Ficus Carica, D.] Figs. The dried fruit of Ficus Carica.

Med. Prop. Nutritious, laxative, and demulcent.

FILIX MAS. U.S. [Aspidium Filix Mas, L., E., D.] Male Fern. The rhizoma of Aspidium Filix mas.

Med. Prop. Anthelmintic, tonic, and astringent.

Use. To expel tænia.

Fœniculum. U.S., L., E., D. Fennel-seed. The fruit of Fœniculum vulgare.

Med. Prop. and Use. Those of the other aromatics.

FOLIA BELLADONNÆ OPIATA. (CRUVEILHIER.) Steep 3ij of belladonna leaves in a solution of \ni j of opium to 3ij of water; dry them in the shade.

Used for smoking in phthisis and asthma; but caution is requisite.

Fomenta vel Fotus. Fomentations are external applications of medicated liquids, nearly always prepared extemporaneously.

FOMENTUM ACETI. P. White vinegar 3viij, cold water 3xxxij; mix.

Med. Prop. Refrigerant, and slightly resolvent.

Fomentum Ammoniæ Muriatis. (Ch.) Decoction of mallows Ojss, muriate of ammonia \$\mathcal{z}\mathcal{j}\$; dissolve, and add tincture of camphor \$\mathcal{z}\mathcal{i}\mathcal{j}\$; [or, muriate of ammonia \$\mathcal{z}\mathcal{j}\$, water \$f\mathcal{z}\mathcal{i}\mathcal{j}\$, proof spirit \$f\mathcal{z}\mathcal{i}\mathcal{j}\$, Goulard's extract \$f\mathcal{z}\mathcal{i}\mathcal{j}\$; mix.

Med. Prop. Anodyne, and resolvent.

Use. To painful swellings, &c.

FOMENTUM ARNICÆ. (GRAEFF.) Arnica flowers 3ji, rue 3j; infuse in boiling water q. s. to strain off f3xij.

Use. For bruises of the eye, &c.

Fotus Antineuralgicum. (Mialhe.) Acetate of morphia gr. ij, acetic acid gtt. ij, eau de Cologne 3ij.

Use. As an anodyne in facial neuralgia.

Fotus Astringens. Decoction of oak-bark, or of pomegranate, Ojss, alum Ziij.

Fotus Calmans. (F. H.) Mallows 3j, henbane 3j, poppy-heads 3j, water lbiv; boil to lbiij.

Use. As a mild, soothing application in painful tumours, and skin diseases.

Fotus Emolliens. P. Emollient herbs (Species Emollientes) 3j, boiling water Ojss; infuse for an hour, and strain.

Use. Where an emollient fomentation is required.

Fotus Narcoticus. P. Narcotic herbs (Species Narcoticæ) 3j, boiling water Ojss; infuse for an hour, and strain.

Use. As Fotus Calmans.

Fotus Resolvens. Infusion of elder flowers Zviij, Goulard's extract 3ss; mix.

Use. As a resolvent in painful swellings, &c.

Fotus Tannini. (Ricord.) Tannin 3ij, aromatic wine 3viij.

Med. Prop. Astringent, and detergent.

Use. To chancres and buboes.

Frasera. U. S. (Sec.) American Columbo. The root of Frasera Walteri.

Med. Prop. and Use. Very similar to those of Columbo.

FULIGO. Common Wood-soot.

Used. Chiefly as an external application to chronic cutaneous diseases.

FULIGORALI. (DESCHAMPS.) Caustic potash 20 parts, powdered wood-soot 100 parts, distilled water q. s.; dissolve the potash in a little water, and add the soot; boil for an hour, then add more water, and filter. Evaporate the clear solution to dryness, constantly stirring, and keep the powder in dry bottles.

Uses. Same as the preceding.

FULIGORALI SULPHURATUM. Caustic potash 14 parts, sulphur 4 parts; heat them together with a little water till dissolved; add fuligokali 60 parts, and evaporate to dryness.

Use. Same as the preceding.

Fumigatio Aromatica. Olibanum, mastic, amber, of each, 3iij, styrax 3ij, benzoin and labdanum, each 3j. Throw the mixed powders on red-hot cinders.

Use. To produce an agreeable fumigation.

FUMIGATIO BALSAMICA. Benzoin is burnt alone, or with styrax,

as a remedy for hooping-cough, 3ss of each being thrown on hot coals, in the patient's room.

Fumigatio Chlorinii. P. Put into an earthen, or glass vessel, 3 parts of common salt, 1 of peroxide of manganese, and 2 of water; add 2 parts of sulphuric acid; stir it with a glass rod.—

For unoccupied rooms only.

Fumigatio Iodini et Sulphuris. (Sellers.) Sulphur 3iij, cinnabar 3ij, iodine gr. x; in six powders. One to be thrown on a heated iron, in the bottom of a large jar, capable of receiving the limb.—In lepra, psoriasis, and tubercular eruptions.—To be used 20 minutes, 3 times a day.

Fumigatio Mercurialis. The patient is placed in a wooden box, having an aperture sufficiently large to allow his head to protrude; 3ij or 3iij of cinnabar are sprinkled upon a hot iron at his feet, and the vapour allowed to condense upon the body. The fumes may be directed to any particular part, by means of an inverted funnel, in an apparatus made for the purpose. (The black sulphuret of mercury may be employed for the same purpose.)

Use. In syphilis, and certain skin diseases.

Fumigatio Acidi Nitrici. P. Put into a porcelain cup equal measures of sulphuric acid and water; add to it, from time to time, powdered nitre.

Use. As a disinfectant.

FUMIGATIO NITROSA. Soak porous paper in a solution of nitrate of potassa; roll it up, place it in a candlestick, and set it on fire.

Use. In asthma.

Fumigatio Picis Liquidæ. Place a tin vessel containing a small quantity of tar, in another vessel of water, keeping the latter at the boiling temperature by means of a spirit-lamp. The patient is to be confined to the apartment.

Use. In chronic bronchitis, &c.

GALBANUM. U. S., L., E., D. The concrete juice of an unknown plant.

Med. Prop. Stimulant, expectorant, and antispasmodic.

Use. In chronic bronchial affections, amenorrhœa, and chronic rheumatism; externally, as a plaster to indolent swellings.

Galla. U. S. (Gallæ, L., E., D.) Morbid excrescences growing upon Quercus infectoria.

Med. Prop. A powerful astringent.

Use. In chronic diarrheas, &c.; but chiefly externally, as a gargle and injection.

Gambogia. U. S., D. (Cambogia, L., E.) The concrete juice of the Hebradendron Cambogioides.

Med. Prop. A drastic hydragogue cathartic.

Use. In dropsy, and constipation.

GARGARISMA SIMPLEX. (Br. H.) Vinegar f3ijss, decoction of barley Oj, honey, or honey of roses, f3jss; mix.

Use. In irritations, and inflammations of the throat.

GARGARISMA ACIDI MURIATICI. (St. B. H.) Red roses 3ij, boiling water Oj, muriatic acid 3jss; macerate for an hour, and strain.—F. H. Infusion of Cinchona bark 3iv, syrup of honey 3j, muriatic acid 18 drops.

Med. Prop. Astringent, and detergent.

Use. In chronic ulcerated throat, and in the sore throat of scarlet fever.

GARGARISMA ALUMINIS. (SAUNDERS.) Alum Jj, infusion of roses Zvij, honey of roses Zj; or, alum Zj, decoction of bark fZx, honey q. s.; or, alum Zj to Zij, decoction of sage Oj, honey q. s.

Use. In quinsy, and other inflammations of the throat.

GARGARISMA ANTISEPTICUM. (F. H.) Muriate of ammonia 9ss, camphor 9j, decoction of bark 3vj.

Use. In ulcers of the throat of a gangrenous character.

GARGARISMA ASTRINGENS. (A. T. THOMSON.) Infusion of roses f3vij, diluted sulphuric acid f3j, tincture of catechu f3vj, tinc-

ture of opium f3jss.—(Jannert.) Tannin 3ss, honey of roses 3ij, water 3viij, rose-water 3ij.—(Neligan.) Decoction of pomegranate f3vij, honey of borax 3j.

Use. In aphthous ulcerations of the mouth and throat.

GARGARISMA BORACIS. Borax 3ij, water f\(\frac{7}{3} vj, \) honey \(\frac{7}{3} j; \) or, borax 3ij, oxymel f\(\frac{7}{3} ss, \) water f\(\frac{7}{3} xj. \)

Use. Same as the preceding.

GARGARISMA CAPSICI. Two tablespoonsful of powdered capsicum, with a teaspoonful of common salt, to be infused for an hour in a pint of boiling vinegar and water (equal parts of each); to be strained through fine linen, when cool.

Used in the West Indies in malignant scarlatina, both as a gargle and also internally, in the dose of a tablespoonful every half hour. In milder cases, a much weaker preparation may be used.

GARGARISMA CALCIS CHLORINATÆ. Chloride of lime 3ij, water Oj; triturate, filter, and add clarified honey 3j.

Med. Prop. Antiseptic.

Use. In putrid sore throats.

GARGARISMA IODINII. (Dr. Ross.) Tincture of iodine 3j to 3j, tincture of opium 3j, water f3vj.

Use. In ulceration of the tonsils.

GARGARISMA MYRRHÆ. Tincture of myrrh 3ss, honey of roses 3jss, lime-water 3vj.

Use. As an astringent and detergent gargle.

GARGARISMA PLUMBI. (RATIER.) Liquid subacetate of lead 3ss, barley water lbj, syrup 3j.

Use. In severe salivation.

GARGARISMA ROSÆ. Red-rose leaves 3ij to 3iij, boiling water Oj; infuse for half an hour. (Or the compound infusion may be used.)

Use. A very good gargle in inflammation of the throat.

GARGARISMA SODÆ CHLORINATÆ. (Guy's H.) Solution of chlo-

ride of soda f3xij, water f3xij.—(Dr. Copland.) Solution of chloride of soda f3xij, honey 3ss, water f3vj.

Use. The same as Gargarisma Calcis Chlorinata.

GARGARISMA STIMULANS. (DR. COPLAND.) Infusion of roses f\(\frac{7}{3} \text{vjss}, \text{ dilute muriatic acid mxl, tincture of capsicum f\(\frac{7}{3} \text{jss}, \text{ honey 3iij.} \)

Use. In atonic ulceration of the throat; also in the sore throat of scarlatina.

GARGARISMA ZINCI. (Dr. COPLAND.) Sulphate of zinc 3j, rosewater f\(\frac{7}{3} vij, \) simple oxymel f\(\frac{7}{3} j. \)

Use. In inflammation and ulceration of the throat.

GAULTHERIA. U. S. Partridge-berry. The leaves of Gaultheria procumbens.

Med. Prop. and Use. Those of an aromatic and astringent; reputed emmenagogue; chiefly employed to impart flavour.

GELATINA CHONDRI. See Decoctum Chondri.

GELATINA ICHTHYOCOLLÆ. See Decoctum Ichthyocollæ.

GELATINA LICHENIS ISLANDICI. See Decoctum Lichenis.

GELATINA MARANTÆ. See Decoctum Marantæ.

GENTIANA. U.S., L., E., D. The root of Gentiana lutea.

Med. Prop. An excellent bitter tonic.

Use. In functional dyspepsia, and in debility from acute diseases.

GENTIANA CATESBÆI. U.S. (Sec.) Blue Gentian. The root of Gentiana Catesbæi.

Med. Prop. and Use. Very similar to the preceding.

Gentianin, the active principle of gentian, is procured by macerating powdered gentian in cold ether, concentrating the filtered tincture, and treating the crystalline residue with alcohol. Evaporate the solution, and set it aside to crystallize. Other steps are necessary to obtain it *perfectly* pure.

Geoffroyæ Inermis Cortex. D. Cabbage-tree Bark. Bark of Andira inermis.

Med. Prop. Cathartic, and anthelmintic.

Use. To expel lumbrici.

GERANIUM. U.S. Cranesbill. The root of Geranium maculatum.

Med. Prop. An excellent indigenous astringent.

Use. In chronic diarrhœa and dysentery; also as an astringent gargle and injection.

GEUM. U. S. (Sec.) Water Avens. The root of Geum rivale. Med. Prop. and Use. Those of a tonic and astringent.

GILLENIA. U.S. The root of Gillenia trifoliata.

Med. Prop. and Use. A mild and efficient emetic; it resembles ipecacuanha in its mode of action.

GLYCERINUM. Glycerine is obtained in making the Emplastrum Plumbi, from the water employed, by passing a current of sulphuretted hydrogen through it, until all the lead is thrown down; filter and evaporate in vacuo, or over sulphuric acid, till the sp. gr. is 1.27.

Used externally in skin diseases, and inflammations of the external meatus of the ear, diluted with water; also, internally, in affections of the throat and chest.

GLYCYRRHIZA. U. S., L. [Glycyrrhizæ Radix, E.; Glycyrrhiza Glabra, D.] Liquorice Root. The root of Glycyrrhiza glabra.

Med. Prop. A good demulcent.

Use. Chiefly as an adjuvant, in catarrhal and urinary diseases.

Gossypium. E. Raw Cotton. The filamentous matter surrounding the seeds of Gossypium herbaceum.

Med. Uses. Externally, to parts affected with burns, erysipelas, and rheumatism.

GRANATI (Fructus et Radicis) CORTEX. U. S., L., E., D. The rind of the fruit, and bark of the root of Punica Granatum, or Pomegranate.

Med. Prop. and Use. The rind of the fruit is a mild astringent, and is chiefly used as a gargle. The bark of the root is anthelmintic, and is used in tænia.

GUAIACI LIGNUM et RESINA. U.S., L., D. [Guaiacum Offici-

nale; Lignum et Resina, D.] The wood and concrete juice (Guaiac) of Guaiacum officinale.

Med. Prop. Stimulant, diaphoretic, and alterative.

Use. In syphilis, chronic rheumatism, scrofula, and skin diseases.

GUTTÆ ACOUSTICÆ. Acoustic Drops. Oil of almonds 3iv, oil of turpentine 3ss, tincture of opium 3ss.

GUTTÆ ANTIPERTUSSICÆ. (Dr. GRAVES.) Tincture of cantharides, compound tincture of camphor, each, f\(\mathcal{z} \) ss, compound tincture of cinchona bark f\(\mathcal{z} \) v.—Dose, a teaspoonful three times a day, in hooping-cough.

GUTTÆ EMMENAGOGÆ. (BRANDE.) Compound tincture of aloes f3j, tincture of valerian f3j, tincture of chloride of iron f3ss.—
Dose, a teaspoonful, in chamomile tea.

Guttæ Nigræ. Lancaster Black Drop. (Dr. Armstrong.) Opium Ibss, verjuice Oiij, bruised nutmegs 3jss, saffron 3ss. Boil to a proper thickness, then add 2 spoonsful of yeast, and let it stand in a warm place for 6 or 8 weeks, then in the open air till it is of the consistence of syrup. Then decant, filter, and bottle, adding a little sugar to each bottle. (See Acetum Opii, U. S.)

Guttæ Odontalgicæ. Toothache Drops. (Dr. Copland.)
Opium gr. x, camphor gr. x, rectified spirit q. s., oil of cloves
3j, oil of cajeput 3j.—(Dr. Righini.) Rectified spirit 3iv,
creasote 3vj, tincture of cochineal 3ij, oil of peppermint gtt. xij.
—(Dr. Blake.) Finely powdered alum 3j, spirit of nitric
ether 3vij.—(M. Cottereau.) Saturate cold ether with
camphor, and add a few drops of Aqua Ammoniæ.

Hæmatoxylon. U. S., L., E. [Hæmatoxylon Campechianum. Lignum, D.] Logwood. The wood of Hæmatoxylon Campechianum.

Med. Prop. A mild astringent.

Use. In the bowel complaints of children.

HAUSTUS. Draughts are single doses of liquid medicines, and

are almost exclusively extemporaneous. A few selected formulæ are here given.

HAUSTUS ANODYNUS. (DR. COPLAND.) Camphor mixture 3ix, nitrate of potash gr. vj, Hoffman's anodyne f3j, tincture of opium mx to xij, syrup of poppies f3ij.—To be taken at bedtime.

HAUSTUS ANTIARTHRITICUS. SIR H. HALFOURD'S Gout Preventive. Infusion of gentian f3jss, bicarbonate of potash gr. xv, tincture of rhubarb f3j.

HAUSTUS ANTILITHICUS. (DR. PARIS.) Bicarbonate of soda gr. x, infusion of quassia f\(\mathcal{z} \)j, tincture of columbo f\(\mathcal{z} \)j; mix.—

(DR. Venables.) Borax gr. viij, bicarbonate of soda gr. x, aerated water f\(\mathcal{z} \) viij.

Use. In red gravel.

Haustus Aperiens. (Dr. Paris.) Infusion of senna f3j, tincture of senna f3j, tincture of jalap f3j, tartrate of potassa 3j, syrup of senna f3j.—(Dr. Ryan.) Sulphate of magnesia f3iv, infusion of senna f3jss, tincture of senna f3jss, syrup of ginger f3j, aromatic spirit of ammonia mxx.—See also Haustus Sennæ Comp.

HAUSTUS APERIENS EFFERVESCENS. (Dr. Young.) Bicarbonate of soda 3ijss, water f3viij, cream of tartar 3iij. Cork securely in a strong bottle.—(Dr. Barker.) Bisulphate of potassa 73 grains, crystallized carbonate of soda 72 grains, water q. s.; dissolve separately, and mix together.

Use. A pleasant, mild cathartic.

HAUSTUS ASTRINGENS. (Dr. Paris.) Chalk mixture 3jss, tincture of opium mxv, tincture of catechu f3j; mix.

Use. In chronic diarrhœa, and dysentery.

HAUSTUS CAMPHORÆ. (Guy's H.) Camphor gr. vj, spirit q. s., white sugar 3j, mucilage f3iij, water f3jss.

Use. As camphor.

HAUSTUS COLCHICI. (SIR C. SCUDAMORE.) Magnesia gr. xv,

to xx, sulphate of magnesia 3j to ij, vinegar of colchicum f3j to ij, cinnamon, or other water f3ix, syrup 3j.

Use. In gout.

HAUSTUS EFFERVESCENS. Bicarbonate of soda 3ss, water q. s., dissolve, and add f3ij of any syrup; then add gr. xxv of citric or tartaric acid. See Haustus Potassæ Citratis.

HAUSTUS FERRI EFFERVESCENS. (DR. MACMICHAEL.) Bicarbonate of soda 3j, water f\(\frac{7}{2}iv \); dissolve, and add tincture of chloride of iron f\(\frac{7}{2}j \).

Use. A good effervescing chalybeate.

HAUSTUS FERRI CUM MAGNESIA. (SIR J. MURRAY.) Fluid carbonate of magnesia f\(\frac{7}{3} \) jss, tincture of chloride of iron mx. to xxx.

Use. In chlorosis with acidity.

HAUSTUS HYDROCYANICUS. (DONOVAN.) Cyanide of potassium gr. j, distilled water f\(\mathcal{z} \) iijss, syrup of lemons f\(\mathcal{z} \) si. Mix, and divide into 8 equal draughts. One for a dose.

HAUSTUS MAGNESIÆ EFFERVESCENS. Solution of bicarbonate of magnesia f\(\mathcal{z} \) jss, syrup of orange peel f\(\mathcal{z} \) j, lemon-juice f\(\mathcal{z} \) iij. Med. Prop. and Use. As the Citrate of Magnesia.

HAUSTUS MAGNESIÆ CITRATIS. (BRANDE.) Carbonate of magnesia 3j, water f3ix, syrup of Tolu f3j, spirit of nutmeg f3ss, lemon-juice f3iij.

Haustus Magnesiæ Citratis. (Mr. Carter.) Rub up together in a mortar, citric acid 3iij, oil of lemons gtt. ij, white sugar 3iv; then add carbonate of magnesia, in powder, 3ij, and water sufficient, or nearly so, to fill an eight-ounce bottle. Transfer the solution to the bottle, before the effervescence has ceased, and cork it tightly, securing it by a string. [Some use magnesia instead of the carbonate, employing, at the same time, a small quantity of bicarbonate of soda to obtain effervescence.]—Dose, as a purgative, the whole bottle-full; as a laxative, one half that quantity.

Med. Prop. An agreeable effervescing, refrigerant, laxative or purgative.

Use. In febrile affections, nausea, constipation, &c.

HAUSTUS MAGNESIÆ SULPHATIS. Sulphate of magnesia 3vj to 3j, aromatic sulphuric acid gtt. iv or v; rub together in a mortar, then add water f3j, syrup of lemons f3j, aerated water f3v.

Use. An agreeable form for taking Epsom salts.

HAUSTUS NIGER. Black Draught. See Haustus Aperiens, and Haustus Sennæ Comp.

HAUSTUS OLEI RICINI. The most pleasant method of taking castor oil is to drop it into a wine-glass containing some froth of porter, and then pour a little more of the latter upon the top of it; the taste is entirely disguised.

HAUSTUS POTASSÆ CITRATIS. Effervescing Draught. Carbonate of potassa gr. xv (or bicarbonate, gr. xxij), water fʒj; dissolve, and add at the time of taking, fresh lemon-juice sweetened fʒss.

Med. Prop. A very pleasant refrigerant diaphoretic.

Use. In fevers, and irritable stomach.

HAUSTUS QUASSIÆ ET FERRI. (DR. PARIS.) Infusion of quassia f3x, tincture of chloride of iron mx, tincture of columbo f3j.

Med. Prop. Tonic, and chalybeate.

Use. In dyspepsia and amenorrhœa.

HAUSTUS SCOPARII COMPOSITUS. Decoction of broom-tops f3xj, spirit of juniper, f3j, bitartrate of potassa 3j.

Med. Prop. and Use. A good diuretic in dropsy.

HAUSTUS SENNÆ. Senna, manna, and sulphate of magnesia (or cream of tartar) each \$\mathcal{z}\$ss, fennel, or cardamom seed \$\mathcal{z}\$ij, boiling water \$f\mathcal{z}\$x. Infuse for half an hour, and strain.

Use. An excellent formula for senna tea.

HAUSTUS SENNÆ COMPOSITUS. (Guy's H.) Black Draught. Senna 3x, mint 3x, boiling water Oij. Macerate for an hour, strain, and add sulphate of magnesia 3viij.—Dose, f3ij to iv.

Use. A prompt cathartic, much used in Great Britain.

HEDEOMA. U.S. Pennyroyal. The herb Hedeoma pulegioides. (The European pennyroyal is the Mentha Pulegium.)

Med. Prop. and Use. Those of a gently stimulating aromatic.

Helleborus. U. S., L., E. [Helleborus Niger; radix, D.]

Black Hellebore. The root of Helleborus niger.

Med. Prop. A drastic hydragogue cathartic, and emmenagogue. Use. In dropsy, mania, melancholia, and amenorrhœa.

HEPATICA. U.S. (Sec.) Liverwort. The leaves of Hepatica Americana.

Med. Prop. A mild demulcent tonic, and astringent.

Use. Formerly esteemed in coughs and chronic hepatic affections; not used at present.

HIRUDO. L. [Hirudo Medicinalis, D.] The Leech.

Use. To take blood topically. A single European leech will draw from half an ounce to an ounce of blood. An American leech, only about one-sixth as much.

Hordeum. U. S., L., E., D. Barley. The decorticated seeds of Hordeum distichon. When rounded and polished in a mill, it constitutes pearl barley (Hordeum Perlatum).

Med. Prop. Nutritious, and demulcent.

Use. Much employed in the form of decoction (barley-water) in fevers, and inflammation of the urino-genital organs.

Humulus. U. S. [Lupulus, L., E.; Humulus Lupulus, D.]

Hops. The strobiles of Humulus Lupulus.

Med. Prop. Tonic, and narcotic.

Use. In dyspepsia of drunkards; to relieve morbid vigilance; also in the form of a poultice, in rheumatism, and face-ache.

HYDRARGYRUM. U.S., L., E., D. Mercury.

Use. Liquid mercury was formerly used in obstinate constipation and introsusception of the bowels.

Hydrargyri Ammonio-chloridum, L.; Hydrargyri Precipitatum Album, E.; Hydrargyri Submurias Ammoniatum, D.] White Precipitate. Bi-chloride of mercury 3vj, distilled water Cong. j; dissolve by

heat, and add to the solution, when cold, water of ammonia f\(\frac{7}{2}\) viij, frequently stirring. Wash the precipitate till it becomes tasteless, and dry it. (It is an ami-chloride of mercury, consisting of calomel and amidogen. Kane.)

Use. Externally, as an ointment in skin diseases.

HYDRARGYRUM CUM CRETA. U. S., L., E., D. Rub together mercury 3iij, and prepared chalk 3v, till all the globules disappear.

Med. Prop. The mildest of the mercurials; alterative, and antacid.

Use. Chiefly in the bowel affections of children.

Hydrargyrum cum Magnesia. D. Purified mercury and manna, each, 2 parts, carbonate of magnesia 1 part. Rub the mercury and manna together with enough water to give them the consistence of syrup, till the globules disappear; then add, still triturating, one eighth of the carbonate of magnesia; and after the whole is well mixed, add 16 parts of hot water, and agitate the mixture. When it has settled, decant the fluid, and repeat the washing a second and third time, that all the manna may be removed. Then add the rest of the magnesia, and dry the powder on bibulous paper. (It contains nearly twice as much mercury as the Hydrargyrum cum Cretâ.)

Med. Prop. and Use. The same as Hydr. cum Cretâ.

HYDRARGYRI ACETAS. P., D. Dissolve protonitrate of mercury in 3 or 4 times its weight of water, slightly acidulated with nitric acid, and add to it gradually a solution of acetate of soda (acetate of potassa, D.), in slight excess; wash the precipitate with cold water, and dry it in the shade.—Dose, † gr. to gr. j.

Med. Prop. Similar to the other mercurials.

HYDRARGYRI ET AMMONIÆ MURIAS. P. Sal Alembroth. Equal parts of bichloride of mercury and muriate of ammonia levigated together.

Med. Prop. Very similar to those of Corrosive Sublimate. It is more soluble.

HYDRARGYRI BICYANIDUM. L. [Hydrargyri Cyanidum, U. S., D.]

Boil Zviij of Prussian blue with Zx of binoxide of mercury in Oiv of distilled water, for half an hour, and filter; evaporate and crystallize; wash what remains frequently with boiling distilled water, and evaporate the mixed liquors for more crystals.—Dose, 16th to 18th of a grain.

Med. Prop. Very poisonous,—rarely used as a medicine; chiefly to prepare hydrocyanic acid.

Hydrargyri Bichloridum. L. See Hydrarg. Chloridum Corrosivum.

Hydrargyri Chloridum Corrosivum. U. S. [Hydrargyri Bichloridum, L.; Sublimatus Corrosivus, E.; Hydrargyri Murias Corrosivum, D.] Corrosive Sublimate. Boil fbij of mercury with fbiij of sulphuric acid, until the sulphate is left dry; rub this, when cold, with fbjss of chloride of sodium, in an earthenware mortar; then sublime with a gradually increasing heat.

Med. Prop. One of the strongest of the mercurials, and the least apt to salivate.

Used. In secondary syphilis, and chronic skin diseases; externally, as a gargle, and in skin diseases.

Hydrargyri Chloridum, L.; Calomelas, E.; Calomelas Sublimatum, D.] Calomel. Boil fbij of mercury with fbiij of sulphuric acid, until the sulphate is left dry; rub this when cold with fbij of mercury in an earthenware mortar, until they are thoroughly mixed; then rub this with fbjss of chloride of sodium till the globules disappear; after which sublime. Reduce the sublimed matter to very fine powder, washing it frequently with boiling distilled water, till no precipitate is given by water of ammonia. [When sublimed into a vessel containing steam, it forms Jewell's hydrosublimate.]

Med. Prop. A certain mercurial purgative, and anthelmintic.

Use. As a purgative, whenever the liver requires stimulation; as an alterative, in dyspepsia, constipation, and chronic skin diseases; as a sialagogue, in inflammations, and some fevers.

HYDRARGYRI ET POTASSII IODIDUM. (M. BOULLAY.) Iodohy-

drargyrate of Iodide of Potassium. Iodide of potassium 10 parts, biniodide of mercury 25 parts, distilled water 10 parts; boil together in a glass matrass till the biniodide of mercury is dissolved; let the solution cool, pour off the clear liquid, and crystallize by evaporation and refrigeration.

Use. In secondary syphilis, and chronic skin diseases.

HYDRARGYRI IODIDUM. U. S., L. Rub 3j of mercury and 3v of iodine together, with enough alcohol to form a soft paste, till the globules disappear. Dry the iodide in the dark, by a gentle heat, and preserve in a well-stoppered bottle. [A better way is to decompose calomel by iodide of potassium.]

Med. Prop. Alterative, and resolvent.

Use. In scrofula and syphilis; externally, as an ointment in skin diseases.

Hydrargyri Iodidum Rubrum. U.S. [Hydrargyri Biniodidum, L., E.] Dissolve 3j of corrosive sublimate in Ojss of distilled water, and mix it with 3x of iodide of potassium dissolved in Oss of distilled water. Collect the precipitate on a filter, wash it with distilled water, and dry by a moderate heat. Dose, 15th to 5th of a grain.

Med. Prop. A powerful irritant poison, too active for internal use; employed in the form of an ointment, in obstinate skin diseases.

Hydrargyri Oxidum Nigrum. U. S., D. [Hydrargyri Oxydum, L.] Dissolve 3iv of potassa in Oj of water, and add 3iv of calomel, stirring constantly till the black oxide is formed; pour off the supernatant liquor, wash the precipitate with distilled water, and dry with a gentle heat.

Med. Prop. Alterative, purgative, and sialagogue.

Use. As calomel; also for fumigation.

Hydrargyri Oxidum Rubrum. U. S., E. [Hydrargyri Nitrico-Oxydum, L.; Hydrargyri Oxydum Nitricum, D.] Red Precipitate. Dissolve Zxxxvj of mercury in fZxiv of nitric acid previously mixed with Oij of water, and evaporate to dry-

ness. Rub the dry mass into powder, and heat it in a very shallow vessel till vapours cease to rise.

Use. Not employed internally; externally, as an ointment to indolent and fungous ulcers, and psorophthalmia.

Hydrargyri Oxidum Rubrum. D. Precipitate per se. Place purified mercury in an open glass vessel with a narrow open mouth and broad bottom, and expose it to a heat of about 600°, till it is converted into red scales.

Med. Prop. and Use. Similar to the former.

Hydrargyri Binoxidum. L. Dissolve Ziv of bichloride of mercury in Ovj of distilled water, and add f\(\mathcal{Z}\)xxviij of solution of potassa. The precipitate is to be carefully washed and dried. Med. Prop. and Use. Similar to Hydrargyri Oxidum Rubrum.

Hydrargyri Precipitatum Album. E. See Hydrargyrum Ammoniatum.

Hydrargyri Precipitatum Nigrum. Hahnemann's Soluble Mercury. Dissolve protonitrate of mercury, by triturating it with distilled water, slightly acidulated with nitric acid; add to the filtered solution, by small quantities, solution of ammonia diluted with 15 or 20 times its weight of water, so long as the precipitate formed is nearly black, stirring it with a glass rod. Wash the powder, and dry in the shade.—Dose, ½ to 1 grain.

Hydrargyri Sulphas Flavus. U.S. [Hydrargyri Oxydum Sulphuricum, D.] Turpeth Mineral. Mix Ziv of mercury with Zvj of sulphuric acid in a glass vessel, and boil by means of a sand-bath till a dry white mass remains; rub this into powder, and throw it into boiling water; pour off the supernatant liquor, and wash the yellow precipitate repeatedly with hot water; then dry it.—Dose, as an emetic, 3 to 6 grains.

Used chiefly as an errhine.

Hydrargyri Sulphuretum Nigrum. U. S., D. [Hydrargyri Sulphuretum cum Sulphure, L.] Ethiops Mineral. Rub equal weights of mercury and sulphur together till the globules disappear.

Med. Prop. Alterative.

Use. In scrofulous, and glandular swellings of children.

Hydrargyri Sulphuretum Rubrum. U.S., D. [Hydrargyri Bisulphuretum, L.] Cinnabar. Mix 3xl of mercury with 3viij of melted sulphur, over the fire; and as soon as the mass begins to swell, remove from the fire, and cover it with considerable force, to prevent combustion; then reduce to powder, and sublime.

Used chiefly for fumigations, in syphilis and skin diseases.

HYDROMEL. P. Fine honey 3ij, boiling water 3xxxij; dissolve, and filter.

Use. As a drink.

HYOSCYAMI FOLIA ET SEMEN. U.S., L., E., D. Henbane. Leaves and seed of Hyoscyamus niger.

Med. Prop. Narcotic, gently excitant, and anodyne.

Use. As a substitute for opium, in coughs, asthma, &c.;—externally, as an anodyne fomentation.

ICHTHYOCOLLA. U.S. Isinglass. The swimming bladder of Acipenser Huso, and other species of Acipenser.

Med. Prop. A very pure variety of gelatin;—used as a nutritious article of diet, made up into a jelly.

Infusa. Infusions are generally prepared by pouring boiling water on vegetable substances, previously cut or bruised, and macerating in a close vessel till cool. In a few cases cold water is used, as when the active principle of the vegetable is volatilizable at the temperature of boiling water, or when it is injured at a high heat, or where it is desirable to avoid the solution of some of the associated principles. The water employed should always be pure. For infusions containing acids, vessels of glass should be employed. For very strong infusions, the process by displacement or percolation should be resorted to.—The usual dose of infusions is from f3j to f3ij.

Infusum Absinthii. (Brande.) Fresh wormwood 3ij (or dried 3j), boiling water Oj; macerate for 4 hours, and strain.

Med. Prop. Tonic.

INFUSUM ALKALINUM. Hickory ashes Oj, wood soot O1, boiling

water Cong. ss. Let them stand 24 hours, and decant.—Dose, a wineglassful 3 or 4 times a day, in lithiasis and dyspepsia. [This was a favourite remedy of Dr. Physick.]

INFUSUM ALOES COMPOSITUM. (Dr. FOTHERGILL.) Aloes 3j, rhubarb 3iv, columbo 3iv, lime-water f3viij, spirit of horseradish f3ss. Infuse 12 hours, in a close vessel, and strain.

Med. Prop. Tonic, purgative, and stimulant.

Infusum Angusturæ. U. S., D. [Infusum Cuspariæ, L., E.]
Bruised angustura bark 3ss, boiling water Oj; macerate for 2
hours, in a covered vessel, and strain.

Med. Prop. Tonic.

Infusum Anthemidis. U. S., L., E. [Infusum Chamæmeli, D.] Chamomile flowers 3ss, boiling water Oj; macerate for 10 minutes, in a covered vessel, and strain.

Med. Prop. Tonic, when used cold; emetic, when taken warm, and in large quantities.

INFUSUM ARMORACIÆ. U.S. [Infusum Armoraciæ Compositum, L., D.] Fresh horseradish root, sliced, and mustard-seed, bruised, each 3j, boiling water Oj; macerate for 2 hours, in a covered vessel, and strain.

Med. Prop. Stimulant, diuretic.

Use. In passive dropsy, scurvy, and paralysis.

Infusum Aurantii . E. [Infusum Aurantii Compositum, L., D.] Dried bitter orange-peel 3ss, fresh lemon-peel 3ij, cloves 3j, boiling water Oj; macerate for 15 minutes, and strain.

Med. Prop. A grateful stomachic.

Use. In nausea, and debility of the stomach.

INFUSUM BELLADONNÆ. (DR. PARIS.) Dried belladonna leaves gr. iv, boiling water f\(\mathcal{z} \) ij; infuse for one dose.

Med. Prop. and Use. The same as Belladonna.

INFUSUM BUCHU. E., D. See Infusum Diosmæ.

INFUSUM CALUMBÆ. L., D. See Infusum Columbæ.

INFUSUM CAPSICI. (PEREIRA.) Powdered capsicum 3iv, boiling

water Oj; macerate for 2 hours, and strain.—Dose, f3ss. (See Gargarisma Capsici.)

INFUSUM CARYOPHYLLI. U. S., L., E. [Infusum Caryophyllorum, D.] Bruised cloves 3ij, boiling water Oj; macerate in a covered vessel, for 2 hours, and strain.

Med. Prop. and Use. Those of a carminative, and stomachic.

INFUSUM CASCARILLÆ. U. S., L., E., D. Bruised cascarilla bark 3j, boiling water Oj; macerate for 2 hours, in a covered vessel, and strain.

Med. Prop. and Use. Those of the aromatic tonics.

Infusum Cassiæ. Eau de Casse. (Soubeiran.) Cassia pods, bruised, 3iv, boiling water Ojss; infuse for 6 hours, and strain. Med. Prop. Aromatic, carminative; like cinnamon, but weaker. Use. In nausea, flatulence, &c.

Infusum Catechu Compositum. U. S., L., D. [Infusum Catechu, E.] Powdered catechu 3ss, bruised cinnamon 3j, boiling water Oj; macerate for 1 hour, in a covered vessel, and strain.

Med. Prop. Astringent, stomachic.

Use. An elegant mode of administering catechu, in diarrhœa, &c.

INFUSUM CHIRETTÆ. E. Chiretta 3iv, boiling water Oj; infuse for 2 hours, and strain.

Med. Prop. A pleasant simple bitter tonic.

Use. In dyspepsia, and general debility.

Infusum Cinchonæ. U. S., L., E., D. Peruvian bark bruised \mathfrak{Z} j, boiling water Oj; macerate for 2 hours, in a covered vessel, and strain. It may also be advantageously prepared by percolation. [D. directs it to be prepared by macerating \mathfrak{Z} j of bark in \mathfrak{Z} ij of cold water, for 24 hours.]

Med. Prop. Those of Peruvian bark, but less powerful.—The D. process is the best.

Use. In general debility, convalescence, &c.

Infusum Cinchonæ Compositum. U.S. Powdered Peruvian bark 3j, aromatic sulphuric acid f3j, cold water Oj; macerate for 12 hours and strain.

Med. Prop. and Use. An excellent form for administering Peruvian bark.

Infusum Colombæ. U. S., D. [Infusum Calumbæ, L., E.] Bruised columbo 3ss, boiling water Oj; macerate for 2 hours, in a covered vessel, and strain. [E. directs it to be made by percolation with cold water, which is a better preparation.]

Med. Prop. An excellent simple bitter tonic.

Use. In dyspepsia, convalescence from acute diseases, cholera, and diarrhœa.

INFUSUM DAUCI. (WOODVILLE.) Carrot seed 3j, boiling water Oj.

Med. Prop. and Use. Diuretic; in dropsy.

INFUSUM DIGITALIS. U. S., L., E., D. Dried foxglove leaves 3j, boiling water Oss [L., Oj]; macerate for 4 hours, in a covered vessel, and strain; then add tincture of cinnamon f3j.—Dose, f3ij to f3iv.

Med. Prop. and Use. The same as Digitalis; a good form for administration.

Infusum Diosmæ. U. S., L. [Infusum Buchu, E., D.] Buchu leaves 3j, boiling water Oj; macerate for 4 hours, in a covered vessel, and strain.

Med. Prop. Stimulant, diuretic, and diaphoretic.

Use. In chronic affections of the bladder.

INFUSUM ERGOTÆ. (PEREIRA.) Bruised ergot 3j, boiling water f3iv; macerate till cold.—For three doses.

Med. Prop. and Use. Those of Ergot.

INFUSUM EUPATORII. U. S. Dried thoroughwort (boneset) 3j, boiling water Oj; macerate for 2 hours in a covered vessel, and strain.

Med. Prop. Diaphoretic and emetic in large warm draughts; tonic, when cold.

Use. In catarrh and influenza; as a tonic, in dyspepsia, &c.

INFUSUM FŒNICULI. Fennel seed 3ij, boiling water Oj; infuse for half an hour.

Med. Prop. and Use. As the aromatic seeds generally.

Infusum Gentianæ Compositum. U. S., L., D. [Infusum Gentianæ, E.] Bruised Gentian root 3ss, dried bitter orangepeel and coriander seed, bruised, each 3j, diluted alcohol f3iv, cold water f3xij. First pour on the alcohol, and three hours afterwards, the water; then macerate for 12 hours, and strain.

Med. Prop. An excellent tonic, and stomachic.

Use. In debility of the digestive organs, convalescence, and diarrhœa.

INFUSUM HUMULI. U. S. [Infusum Lupuli, L.] Hops 3ss, boiling water Oj; macerate for 2 hours, in a covered vessel, and strain.

Med. Prop. Tonic; slightly narcotic.

Use. In dyspepsia, and morbid vigilance; -very feeble.

INFUSUM JUGLANDIS. (M. NEGRIER.) Fresh walnut leaves 3j, boiling water f3xij; infuse till cold, and strain.—Dose, f3iv 2 or 3 times a day.

Use. In scrofula.

Infusum Juniperi. (Pereira.) Bruised juniper berries 3j, boiling water Oj; macerate for 1 hour.

Med. Prop. A mild diuretic.

Use. As a drink in dropsy; usually as an adjuvant.

Infusum Juniperi Compositum. (Guy's H.) Juniper berries 3ijss, boiling water Oj; macerate for 2 hours, and strain; then add compound spirit of juniper f3x, and bitartrate of potassa 3j [or more].—Dose, f3ij three times a day.

Use. An excellent drink in dropsies.

INFUSUM KRAMERIÆ. U. S., L. Bruised rhatany 3j, boiling water Oj; macerate for 4 hours, in a covered vessel, and strain. [Better prepared by percolation, with cold water.]

Med. Prop. and Use. Those of Krameria; an excellent astringent.

Infusum Lini. U.S., E. [Compositum, L., D.] Flaxseed 3ss,

bruised liquorice root 3ij, boiling water Oj; macerate for 4 hours, in a covered vessel, and strain.

Med. Prop. Demulcent.

Use. In catarrhs, strangury, gonorrhœa, and diseases of the bladder and kidney.

Infusum Maticonis. (Dr. H. Lane.) Leaves of matico 3j, boiling water Oj; macerate for 2 hours, and strain.

Med. Prop. Astringent.

INFUSUM MELISSÆ. Fresh balm 3v, boiling water Oj; infuse for a quarter of an hour.

Med. Prop. Diaphoretic and emetic, when taken warm.

INFUSUM MENTHÆ SIMPLEX. D. Dried mint 3ij, boiling water q. s. to yield f3vj of strained infusion; digest for half an hour, and strain.

Med. Prop. A mild aromatic, carminative, and stomachic.

Use. In nausea, slight colic, flatulence, and to cover the taste of other medicines.

INFUSUM MENTHÆ COMPOSITUM. D. Add to the last, when strained and cold, white sugar 3ij, oil of spearmint 3 drops dissolved in comp. tinc. of cardamom f3ss.

Med. Prop. and Use. The same as the preceding, but stronger.

INFUSUM PAREIRÆ. L., E. Pareira brava root 3vj, boiling water Oj; macerate for 2 hours, and strain.

Med. Prop. Tonic, diuretic, and aperient.

Use. In chronic urinary disorders.

INFUSUM PRUNI VIRGINIANÆ. Wild cherry bark, bruised, 3ss, cold water Oj; macerate for 24 hours, and strain. [Also by percolation.]

Med. Prop. A sedative tonic; an excellent form of administra-

Use. In dyspepsia with excitement; in the colliquative sweats of phthisis.

INFUSUM QUASSIÆ. U.S., L., E., D. Rasped quassia 3ij, cold water Oj; macerate for 12 hours, and strain.

Med. Prop. An excellent simple bitter infusion.

Use. In dyspepsia, and general debility.

Infusum Rhei. U. S., L., E., D. Bruised rhubarb root 3j, boiling water Oss; digest for 2 hours, in a covered vessel, and strain. [Any of the aromatics may advantageously be added.]

Med. Prop. Purgative, and stomachic.

Use. In constipation, and in diarrhœa.

Infusum Rosæ Compositum. U. S., L. [Infusum Rosæ, E.; Infusum Rosæ Acidum, D.] Dried red roses \$\mathcal{z}\$ss, boiling water Oijss, diluted sulphuric acid f\$\mathcal{z}\$iij; macerate for half an hour, in a glass vessel, strain, and add refined sugar \$\mathcal{z}\$jss.

Med. Prop. Astringent, and refrigerant.

Use. In hemorrhages, and colliquative sweats; also as a pleasant vehicle for saline medicines.

INFUSUM SALVIÆ. Dried sage leaves 3j, boiling water Oj; macerate for half an hour, and strain.

Med. Prop. A mild astringent.

Use. Chiefly as a gargle, in sore throat.

INFUSUM SANGUINARIÆ. Dried blood-root 3ss, boiling water Oj; infuse for half an hour, and strain.

Med. Prop. Emetic, and diaphoretic.

Infusum Sarsaparillæ. U. S. [Compositum, D.] Bruised sarsaparilla root 3j, boiling water Oj (lime-water Oj, D.), digest for 2 hours (12, D.), in a covered vessel, and strain.

Med. Prop. Those of sarsaparilla; -an inferior preparation.

INFUSUM SASSAFRAS. Sassafras (bark of root) 3ss, boiling water Oj; macerate for 6 hours.

Med. Prop. Aromatic and alterative.

Use. In chronic rheumatism, chronic skin diseases, and secondary syphilis;—of doubtful efficacy.

INFUSUM SCOPARII. L. Broom tops 3j, boiling water Oj; macerate for 4 hours, and strain.

Med. Prop. Diuretic and cathartic.

Use. As a drink in dropsy.

INFUSUM SENEGÆ. E. Senega 3x, boiling water Oj; infuse for 4 hours, and strain.

Med. Prop. and Use. Those of Senega.

Infusum Sennæ. U. S., E. [Infusum Sennæ Compositum, L., D.] Senna \(\mathfrak{z} \), bruised coriander \(\mathfrak{z} \)j, boiling water Oj; macerate for an hour, in a covered vessel, and strain. (Or, senna \(\mathfrak{z} \)ss, sulphate of magnesia and manna, each, \(\mathfrak{z} \)j, fennel seed \(\mathfrak{z} \)j, boiling water Oss; infuse in a covered vessel till cool.)—Dose, one-third every 4 or 5 hours.

Med. Prop. and Use. An admirable form for administering senna as a cathartic; the saline and aromatic obviating its griping effects.

Infusum Sennæ Cum Tamarindis, D. [Infusum Sennæ Compositum, E.] Senna 3j or 3ij, tamarinds 3j, bruised coriander 3j, muscovado sugar 3ss, boiling water f3viij; infuse for 4 hours, with occasional stirring, in a vessel not glazed with lead, and strain.

Med. Prop. and Use. Much the same as the preceding.

INFUSUM SERPENTARIÆ. U. S., L., E. Virginia Snake-root 3ss, boiling water Oj. Macerate for 2 hours, in a covered vessel, and strain.

Med. Prop. and Use. As Serpentaria;—the ordinary form for administration.

Infusum Sesami. (Wood.) Two fresh bene leaves infused in f\(\) viij of cold water form a mucilaginous demulcent drink. (Dried leaves require hot water.)

Use. In diarrhœas and dysentery of children, and cholera infantum.

INFUSUM SIMARUBÆ. L., E., D. Bruised simaruba bark 3iij, boiling water Oj; macerate for 2 hours, in a covered vessel and strain.

Med. Prop. and Use. Similar to Infusum Quassiæ.

INFUSUM SPIGELIÆ. U.S. Pink-root 3ss, boiling water Oj; macerate for 2 hours in a covered vessel, and strain.

Med. Prop. Anthelmintic.

Use. A common method of administering pink-root as a vermifuge.

INFUSUM SPIGELIÆ CUM SENNA. As the last, with 3iv of senna.

—Dose, for a child 3 years old, f3ss to f3j.

Use. A better form than the last.

Infusum Tabaci. U.S., D. [Enema Tabaci, L., E.] Tobacco leaves 3j, boiling water Oj; macerate for an hour, in a covered vessel, and strain.

Use. As an injection, in strangulated hernia, &c.

INFUSUM TANACETI. (PEREIRA.) Fresh tansy 3j to 3j, boiling water Oj; infuse and strain.

Med. Prop. Anthelmintic, and emmenagogue.

Use. A popular remedy in amenorrhœa.

INFUSUM ULMI. U.S. Slippery elm bark, sliced and bruised, 3j, boiling water Oj; macerate for 2 hours, in a covered vessel and strain.

Med. Prop. Demulcent.

Use. As Infusum Lini.

INFUSUM VALERIANÆ. U.S., L., D. Valerian 3ss, boiling water Oj; macerate for an hour, in a covered vessel, and strain.

Med. Prop. and Use. As Valeriana;—a common method of administration.

Infusum Zingiberis. (Wood.) Bruised ginger 3ss, boiling water Oj; macerate for 2 hours, and strain.

Med. Prop. Stimulant, carminative, and stomachic.

Use. In mild colic, flatulence, nausea, and debility of stomach.

INULA. U. S. (Sec.), L. [Inula Helenium, D.] Elecampane. The root of Inula Helenium.

Med. Prop. Tonic, diuretic, and expectorant.

Use. In dyspepsia, chronic diseases of the lungs, amenorrhœa, &c.

IODINUM. U. S. [Iodinium, L., D.; Iodineum, D.] Iodine is

prepared by lixiviating kelp, and removing the crystallizable salts by successive evaporations; dry the mother liquor, and heat the residuum with one-tenth its weight of powdered peroxide of manganese, in an iron pot, constantly stirring. Dissolve it in water to obtain a solution of sp. gr. 1.334; pass through it a current of chlorine, avoiding excess; wash the deposit with a little water, and distil it in a glass retort. (P.)

Med. Prop. Stimulant, absorbent, alterative, and emmenagogue. Use. In scrofula, bronchocele, glandular swellings, tertiary syphilis, chronic rheumatism.—Used only in solution.

IPECACUANHA. U. S., L., E. [Cephaelis Ipecacuanha, D.] The root of Cephaëlis Ipecacuanha.

Med. Prop. Emetic, in full dose; alterative, diaphoretic, and expectorant, in small doses.

Use. A prompt and efficient, though mild emetic;—in dysentery, pulmonary diseases, &c.

IRIS FLORENTINA. U.S. (Sec.) Orris-root. The rhizoma of Iris Florentina.

Med. Prop. Cathartic, diuretic, and in large doses, emetic.

Use. At present, chiefly for its agreeable odour.

IRIS VERSICOLOR. U. S. (Sec.) Blue Flag. The rhizoma of Iris versicolor.

Med. Prop. Cathartic, as the preceding.

JALAPA. U.S., L., E., D. The root of Ipomœa Jalapa.

Med. Prop. An active hydragogue cathartic.

Use. In dropsy, combined with cream of tartar;—often with calomel.

Juglans. U.S. The inner bark of the root of Juglans cinerea, or Butternut.

Med. Prop. Cathartic, resembling rhubarb. [The leaves of Juglans regia are recommended by Négrier, in scrofula.]

Juniperus. U. S., L., E., D. Juniper Berries. The fruit of Juniperus communis.

Med. Prop. Gently stimulant, and diuretic.

Use. As an adjuvant, in dropsy.

JUNIPERUS VIRGINIANA. U. S. (Sec.) Red Cedar. The tops of Juniperus Virginiana.

Med. Prop. Very similar to Savine (Juniperus Sabina).

KALI. See Potassa.

KERMES MINERALE. See Antimonii Sulphuretum Precipitatum.

Kino. U. S., L., E., D. An extract (or inspissated juice), obtained from an uncertain plant.

Med. Prop. One of the best astringents for internal use.

Use. In diarrhœa, chronic dysentery, passive hemorrhages, &c.; also externally.

KRAMERIA. U. S., L., E. [Rhatania, D.] Rhatany. The root of Krameria triandra.

Med. Prop. and Use. Very similar to those of Kino. Applied also to spongy gums, and as an injection, in fissure of the anus.

LAC AMYGDALÆ. See Mistura Amygdalæ.

LAC ASSAFŒTIDÆ. See Mistura Assafœtidæ.

LAC SULPHURIS. See Sulphur Precipitatum.

Lacmus. L., E. [Litmus, D.] Litmus. A peculiar colouring matter, from Roccella tinctoria.

Use. To impart a red colour, and as a test for acids.

LACTUCARIUM. U. S., L., E. The inspissated juice of Lactuca sativa [and L. virosa, E.]

Med. Prop. Narcotic, anodyne.

Use. As a mild substitute for opium, especially in pulmonary affections. It does not check the secretions.

Lapis Divinus. P. Sulphate of copper Ziij, nitre Ziij, alum Ziij; fuse them together, stir in Zj of powdered camphor, and pour it out on an oiled slab.

Used in lotions, eye-waters, &c.—Pulegnat recommends the following in recent contusions: alum 3ij, sal ammoniac, verdigris,

and sulphate of zinc, each, 3j; mix, and melt with a gentle heat. A piece the size of a nut to be dissolved in a quart of water. The Lapis Vulnerarius of some formularies is nearly the same.

LAUDANUM SYDENHAMI. See Vinum Opii.

LAURI BACCÆ ET FOLIA. L., D. Berries and leaves of the Bay Tree (Laurus Nobilis).

Med. Prop. Excitant and narcotic; -not used as a medicine.

Lauro-Cerasus. E. [Prunus Lauro-Cerasus, D.] Leaves of Prunus Lauro-Cerasus, or Cherry Laurel.

Med. Prop. and Use. Similar to Hydrocyanic Acid.

LAVANDULA. U. S., L., E. [Lavandula Spica, D.] The flowers of Lavandula vera, or Lavender.

Med. Prop. A delightful aromatic, tonic, and carminative.

Use. Chiefly in the form of oil (Oleum Lavandulæ); also as a perfume.

LIMATURA FERRI. See Ferri Limatura.

LIMATURA STANNI. See Pulvis Stanni.

LIMON. U. S. [Limones, L., E., D.] Lemons. The fruit of Citrus Limonum.

Used for their juice, and rind.

LIMONIS CORTEX. U. S. [Limonum Cortex, L., E., D.] Lemon-Peel. The outer rind of the fruit of Citrus Limonum.

Med. Prop. A mild stimulant, and tonic.

Use. Chiefly as an adjuvant to stomachic infusions.

LIMONADUM. Lemonade. Cut 2 lemons in slices, pour on them Ojss of boiling water; infuse for an hour, in a covered vessel, then add \$\mathcal{z}\$ij of white sugar, and strain. Or, citric acid \$\mathcal{z}\$j, rubbed up with 2 drops of oil of lemons, sugar \$\mathcal{z}\$ij, water Ojss.

Med. Prop. and Use. An agreeable refrigerant drink, in fevers.

LIMONADUM AERATUM. Put f3j of syrup of lemons in each bottle, and fill up with aerated water.

Med. Prop. and Use. As the former.

LIMONADUM MAGNESIÆ LAXATIVUM. (MIALHE.) Calcined magnesia 3ij, citric acid 3vjss, water f3x. Heat to boiling, and filter, whilst hot, into a pint bottle containing 3ij of syrup

of lemon-peel, and fill up with (aerated) water. This contains 3xij of citrate of magnesia, equal in effect to 3j of the sulphate. [See Haustus Magnesiæ Citratis.]

LIMONADUM SULPHURICUM. (M. GENDRIN.) Sulphuric acid gtt. xl, water Oj; mix.

Med. Prop. Refrigerant, tonic, and astringent.

Use. Chiefly as a prophylactic, in colica pictonum.

LINCTUS ACIDUS. (DR. COPLAND.) Honey of roses 3x, muriatic acid mxx, syrup of red poppies 3ij.

Use. A soothing antiseptic application to ulcerated throats.

LINCTUS BORACIS. (U. C. H.) Borax Ziij, honey Zj; melt, and stir together; then add syrup Zj.—Dr. Copland. Spermaceti Zijss, compound powder of tragacanth Ziij, syrup of tolu Zj, borax Zijss, confection of roses Zv, syrup of marsh-mallows q. s. Use. In cases of inflamed throat, or aphthous mouth.

LINCTUS IPECACUANHÆ. (DR. COPLAND.) Oil of almonds f3j, syrup of lemons f3j, ipecacuanha gr. vj, confection of hips 3j, compound powder of tragacanth 3iij.

Use. In coughs.

LINCTUS MYRRHÆ ET IPECACUANHÆ. (DR. COPLAND.) Myrrh 3j, ipecacuanha gr. vj, mucilage, syrup of marsh-mallows, and oxymel of squill, each, 3vj.

Use. In coughs, and irritation of the throat.

LINCTUS OLEOSUS. (U. C. H.) Oil of almonds f3j, syrup of poppies f3j, powdered tragacanth 3iij.

Use. As the preceding.

LINCTUS OPIATUS. (Guy's H.) Tincture of opium f3ij, dilute sulphuric acid f3ijss, treacle f3viij, water f3iij.—Dose, a teaspoonful occasionally.

LINCTUS PECTORALIS. (Dr. RYAN.) Oxymel of squill, mucilage of acacia, and simple syrup, equal quantities.

Use. In pectoral affections.

LINCTUS POTASSÆ NITRATIS. (Guy's H.) Nitre 3jss, honey of roses f3j, oxymel f3ss.—Dose, a teaspoonful occasionally.

LINCTUS ROSÆ. Confection of roses 3ij, dilute sulphuric acid f3j, compound tincture of camphor f3xij.

Use. As an astringent and refrigerant, in colliquative sweats and hemorrhage.

LINCTUS SCILLÆ. Oil of almonds 3ij, oxymel of squills 3j.

Use. As a demulcent and expectorant, in coughs.

LINCTUS TEREBINTHINÆ. (RECAMIER.) Oil of turpentine 3ij, honey of roses 3iv.

Use. A pleasant mode of administering oil of turpentine.

LINIMENTA. Liniments. These are oleaginous preparations intended for external use; usually applied by gentle friction with the hand.

LINIMENTUM ALBUM. Rectified oil of turpentine \$\mathcal{z}ij\$, solution of ammonia \$\mathcal{z}ij\$, soap liniment \$\mathcal{z}iij\$, spirit of rosemary \$\mathcal{z}j\$; mix in the above order, and gradually add distilled vinegar \$\mathcal{z}viij\$, constantly agitating it.

Use. For chapped hands.

LINIMENTUM ALBUMINIS. (DR. CHRISTISON.) Equal parts of white of eggs, and rectified spirit, agitated together.

Use. In excoriation from pressure.

LINIMENTUM AMMONIÆ. U. S., L., E., D. Volatile Liniment. Solution of ammonia f\(\mathfrak{z} \)j, \[[f\(\mathfrak{z} \)j, \[D., \] olive oil f\(\mathfrak{z} \)j; \(\mix. \)

Use. A mild rubefacient to the throat and chest, especially of children, in catarrh or bronchitis.

LINIMENTUM AMMONIÆ COMPOSITUM. D. (DR. GRANVILLE'S counter irritants.) Strong solution of ammonia of sp. gr. 880 f\(\frac{7}{3} v\), tincture of camphor f\(\frac{7}{3} ij\), spirit of rosemary f\(\frac{7}{3} j\); mix.

Used to produce a speedy rubefacient effect.

LINIMENTUM ANODYNUM. D. See Linimentum Opii.

LINIMENTUM BELLADONNÆ. (BIETT.) Extract of belladonna 3ij, lime-water Zviij, oil of almonds Ziv.—Rangue. Extract. Belladonnæ 3ij, cherry-laurel water Zij, sulphuric ether Zij; mix.

Use. In eczema, &c.

LINIMENTUM BELLADONNÆ COMPOSITUM. (Guy's H.) Extract of belladonna 3j, soap liniment f3viij; mix.

Use. As a local anodyne, in neuralgia, sprains, &c.

LINIMENTUM CALCIS. U. S., E., D. Mix together equal quantities of lime-water and linseed oil.

Used for burns.

LINIMENTUM CALCIS OPIATUM. (Germ. H.) Lime-water 3iij, oil of almonds 3iij, extract of opium gr. j.

Use. For sore nipples.

LINIMENTUM CAMPHORÆ. U. S., L., E. [Oleum Camphoratum, D.] Camphor 3j, olive oil f3iv; dissolve.

Use. In rheumatism and gout; it is the mildest of the camphorated liniments.

LINIMENTUM CAMPHORÆ COMPOSITUM. L., D. Solution of ammonia f\(\mathcal{Z}\) vijss, spirit of lavender Oj; mix, and distil Oj; then dissolve in it camphor \(\mathcal{Z}\) ijss.

Med. Prop. Stimulant, and anodyne.

Use. In sprains and bruises, chronic rheumatism, and indolent swellings.

LINIMENTUM CANTHARIDIS. U.S. Powdered cantharides 3j, oil of turpentine f3viij; digest for 3 hours in a water-bath, and strain.

Med. Prop. Powerfully epispastic.

Use. In very prostrate states of the system.

LINIMENTUM CAPSICI. (Dr. COPLAND.) Compound camphor liniment f3j, volatile liniment f3j, tincture of capsicum f3iij; mix.

Use. As the last.

LINIMENTUM CHLORINATUM. (KOPP.) Solution of chloride of lime 3vj, olive oil 3jss.

Used in inveterate itch, &c.

LINIMENTUM CROTONIS. (PEREIRA.) One part of croton oil to 5 of olive oil.

Med. Prop. and Use. A convenient mode of applying croton oil to the skin.

LINIMENTUM DIGITALIS. (DR. ROYLE.) Infusion of digitalis f\(\)ij, water of ammonia f\(\)jij, oil of poppy-seed f\(\)iv. To be rubbed on the abdomen 3 or 4 times a day, to procure the constitutional effect of digitalis.

LINIMENTUM HYDRARGYRI COMPOSITUM. L. Camphor 3j, rectified spirit f3j; rub together, and add strong mercurial ointment and lard, each, 3iv, solution of ammonia f3iv; mix.

Med. Prop. Stimulant, resolvent, and absorbent.

Use. To glandular swellings, and chronic tumours.

LINIMENTUM IODINII. (DR. MANSON.) Liniment of opium f3j, tincture of iodine f3j; mix.

Use. As an anodyne resolvent, in painful scrofulous swellings.

LINIMENTUM OPII. L., E. [Linimentum Saponis cum Opio, vel Liniment. Anodynum, D.] Soap liniment f\(\frac{7}{3} vi, \) tincture of opium f\(\frac{7}{3} ij; \) mix.

LINIMENTUM SAPONIS CAMPHORATUM. U.S. [Linimentum Saponis Compositum, L., D.] Opodeldoc. Common white soap 3iij, digest with alcohol Oj, by means of a sand-bath, till dissolved; then add camphor 3j, oil of rosemary and oil of origanum, each, f3j; dissolve.

Med. Prop. A very good anodyne liniment for sprains, bruises, and rheumatic pains.

LINIMENTUM SIMPLEX. E. Olive oil f\(\)\;\ iv, white wax \(\)\;\ j; melt together.

Use. As a protective to the skin, in cold weather.

LINIMENTUM SULPHURIS CUM SAPONE. (LUGOL.) Soap Ziij, water Zvj; dissolve by a gentle heat, and add sulphur Ziij.

Med. Prop. and Use. As Unguentum Sulphuris.

LINIMENTUM SULPHURIS IODIDI. (E. WILSON.) Iodide of sulphur 3ss, olive oil 3j; triturate together.

Med. Prop. and Use. As Unguentum Sulphuris Iodidi.

LINIMENTUM TEREBINTHINE. U.S., L., D. [Linimentum Terebinthinatum, E.] Oil of turpentine Oss, resin cerate, melted, lbj; mix. (Dr. Kentish's application to burns.)

LINIMENTUM VERATRIÆ. (BRANDE.) Veratria gr. viij, alcohol f3iv, soap liniment f3iv; mix.

Use. As an application in neuralgia.

LINUM. U. S. [Lini Semina, L.; Lini Farina, E.; Linum Usitatissimum, D.] Flaxseed. The seeds (meal of the seeds, E.) of Linum usitatissimum.

Med. Prop. Demulcent, emollient.

Use. For internal use;—see Infusum Lini. The ground seeds are much employed for making an emollient poultice, by simply mixing with boiling water.

LIQUOR ACIDI CITRICI. Artificial lemon-juice. Citric acid 3ixss, oil of lemons 4 or 5 drops; rub together, and dissolve in f3xvj of water.

Med. Prop. and Use. As Succus Limonum.

Liquor Ammoniæ. U. S., L. [Ammoniæ Aqua, E.; Ammoniæ Causticæ Aqua, D.] Solution of Ammonia. Sal-ammoniac, in powder, lbj, lime lbj; slake the lime in f3ix of water, and mix with it the sal-ammoniac. Introduce it into a glass retort fitted to a receiver containing Oj of distilled water. Distil, by means of a sand-bath, till ammonia ceases to come over. Add to every f3 of the distilled liquor f3iijss of distilled water, or so much as may be requisite to raise the sp. gr. to 0.96. [It may also be made by mixing 1 part of the stronger solution of ammonia with 2 parts of distilled water.]

Med. Prop. Stimulant and antacid, internally;—externally, rubefacient.

Use. Internally, in heartburn and sick headache;—externally, as Linimentum Ammoniæ.

LIQUOR AMMONIÆ FORTIOR. Pass gaseous ammonia (from slaked lime and sal-ammoniac) into water kept very cold, till the sp. gr. of the solution is ·882.

Use. Only externally to form very strong rubefacient and vesicating lotions and liniments.

LIQUOR AMMONIÆ ACETATIS. U. S., L. [Ammoniæ Acetatis Aqua, E., D.] Spirit of Mindererus. Add carbonate (ses-

quicarbonate) of ammonia to dilute acetic acid, until it is saturated.

Med. Prop. Diaphoretic, diuretic; externally, discutient.

Use. In fevers and inflammatory disorders; externally, in sprains, bruises, and porrigo of scalp.

LIQUOR ANODYNUS HOFFMANI. See Spiritus Ætheris Sulphurici Compositus.

LIQUOR ARSENICALIS. See Liquor Potassæ Arsenitis.

LIQUOR ARSENIATIS SODÆ. Pearson's Arsenical Solution. Arseniate of soda gr. iv, distilled water f\(\mathcal{z}\)iv.—Dose, mxij to mxxx, in the day.

Med. Prop. and Use. Similar to Liquor Potassæ Arsenitis.

LIQUOR ARSENICI ET HYDRARGYRI HYDRIODATIS. Donovan's Solution. Triturate 6.08 grains of metallic arsenic, 15.38 grains of mercury, and 50 grains of iodine, with f3j, of alcohol, till dry; mix the powder with f3viij of distilled water; put them into a flask with 3ss of hydriodic acid (prepared by the acidification of gr. ij of iodine), and boil for a few minutes. When cold, add water to make up the mixture exactly f3viij.— Dose, 5 to 20 drops 3 times a day.

Use. In chronic cutaneous diseases, chronic rheumatism, and syphilitic nodes.

LIQUOR CALCIS. U.S., L. [Aqua Calcis, E., D.] Lime-water. Pour Cong. j of distilled water on 3iv of freshly slaked lime; stir them together, and immediately cover the vessel, and set it aside for 3 hours. Keep the solution, together with the undissolved lime, in closely-stopped bottles, and pour off when wanted for use.

Med. Prop. Antacid, astringent, and tonic.

Use. In dyspepsia and diarrhoea with acidity; combined with milk, in nausea and vomiting; and where there is excess of lithic acid.

LIQUOR CUPRI SULPHATIS COMPOSITUS. Aqua Styptica. Sulphate of copper Ziij, alum Zij, sulphuric acid Zij, water fZxxiv. Use. As an external application in hemorrhages.

LIQUOR DISINFECTANS. The solutions of chloride (hypochlorite) of lime and chloride (hypochlorite) of soda are so named. The name has also been applied to other disinfecting solutions.

Liquor Ferri Iodidi. U. S. [Ferri Iodidi Syrupus, E.] Mix \Im ij of iodine with $f\Im$ x of distilled water, in a porcelain or glass vessel, and add \Im j of iron filings, stirring constantly. Heat the mixture gently till it acquires a greenish tint; then add $f\Im$ v of prepared honey, continue the heat for a short time, and filter. Lastly, pour distilled water on the filter until enough has passed to make up the whole $f\Im$ xx.—Dose, gtt. xx to xxx.

Use. See Ferri Iodidum; -an excellent form for administration.

LIQUOR FOWLERI. See Liquor Potassæ Arsenitis.

LIQUOR HYDRARGYRI BICHLORIDI. Van Swieten's Liquor. Bichloride of mercury gr. x, sal ammoniac gr. x, distilled water Oj; dissolve. It contains 1 gr. of sublimate in f3ij.—Dose, f3ss to f3ij.

Med. Prop. Alterative.

Use. In secondary syphilis, and chronic skin diseases.

Liquor Iodini Compositus. U. S. [Iodinei Liquor Compositus, E.; Liquor Potassii Iodidi Compositus, L.] Iodine 3vj, iodide of potassium 3jss; dissolve them in Oj of distilled water. [This corresponds in strength with Lugol's Concentrated Solution of Iodine.]—Dose, 6 drops 3 times a day. (The preparations of the L. and E. Phars. are much weaker.)

Med. Prop. and Use. A very good form of administering iodine, in scrofula, &c.

Liquid Magnesia is prepared by passing carbonic acid gas into a reservoir containing carbonate of magnesia suspended in water. (They contain about 9 grains in the fluid ounce.)

Med. Prop. Laxative, and antacid.

LIQUOR MAGNESIÆ CITRATIS. See Haustus Magnesiæ Citratis.

LIQUOR MORPHIÆ SULPHATIS. U.S. A solution containing gr. j of sulphate of morphia to f3j of water.

Med, Prop. and Use, A convenient form of administering morphia.

LIQUOR OPH SEDATIVUS. (BATTLEY'S.) Macerate opium in distilled water for a long time, at a moderate temperature, and add a little spirit to the filtered solution. [Dr. Christison states that mxx of the solution is equal to mxxx of laudanum.]

Med. Prop. and Use. As laudanum, over which it has no advantage.

LIQUOR PICIS. See Aqua Picis Liquidæ.

LIQUOR PLUMBI SUBACETATIS. U. S. [Liquor Plumbi Diacetatis, L.; Plumbi Diacetatis Solutio, E.] Goulard's Extract of Lead. Acetate of lead \(\) xvj, semivitrified oxide of lead (litharge), powdered finely, \(\) ixss, distilled water Oiv; boil together in a glass or porcelain vessel for half an hour, occasionally adding distilled water to preserve the measure; filter through paper, and preserve in closely-stopped bottles.

Med. Prop. Externally, cooling, astringent, and sedative.

Use. Diluted, to sprains, bruises, excoriations, burns, and irritable ulcers.

LIQUOR PLUMBI SUBACETATIS DILUTUS. U.S. [Liquor Plumbi Diacetatis Dilutus, L.; Plumbi Subacetatis Liquor Compositus, D.] Lead-water. Mix f3ij of the preceding with Oj of distilled water.

Med. Prop. and Use. The same as the preceding.

LIQUOR POTASSÆ. U. S., L. [Aqua Potassæ, E.; Aqua Potassæ Causticæ, D.] Take of carbonate of potassa lbj, lime lbss, boiling distilled water Cong. j. Dissolve the carbonate of potassa in Cong. ss of the water; pour a little of the water on the lime, and when slaked, add the remainder. Mix the hot liquors, and boil for 10 minutes, stirring constantly; set the mixture aside, in a covered vessel, until it becomes clear. Lastly, pour off the supernatant liquor, and preserve it in well-stopped bottles.

Med. Prop. Antacid, diuretic, and antilithic.

Use. In some forms of dyspepsia, in the lithic acid diathesis, in lepra, and psoriasis.

LIQUOR POTASSÆ ARSENITIS. U. S., L. [Liquor Arsenicalis, E., D.] Fowler's Solution of Arsenic. Boil together 64 grs.

of arsenious acid and pure carbonate of potassa, each, in f\(\frac{7}{3}\)xij of distilled water, till the acid is entirely dissolved. When cold, add compound spirit of lavender f\(\frac{7}{3}\)ss, and distilled water q. s. to make up the measure of 1 pint. [Each f\(\frac{7}{3}\) contains gr. ss of arsenious acid.]—Dose, 10 drops, 3 times a day, after eating.

Med. Prop. Tonic, in minute doses; antiperiodic, and alterative. Use. In obstinate intermittent fever, periodical headache; in chronic skin diseases, especially those of a scaly character.

LIQUOR POTASSÆ CARBONATIS. U. S., L. [Potassæ Carbonatis Aqua, D.] Dissolve Ibj of carbonate of potassa in f\(\mathcal{Z}\) xij of water; filter.

Med. Prop. and Use. Those of Carbonate of Potassa.

LIQUOR POTASSÆ CHLORINATÆ. Eau de Javelle. Dissolve 1 part of subcarbonate of potassa in 8 or 10 parts of water, and pass chlorine gas through it, until fully saturated.

Med. Prop. and Use. Much the same as Liquor Sodæ Chlorinatæ.

LIQUOR POTASSÆ CITRATIS. U.S. Neutral Mixture. Saline Mixture. Fresh lemon juice Oss; add carbonate of potassa q. s. to saturate; filter. Or, citric acid \$\mathcal{z}\ss, oil of lemons mij; rub together, and then dissolve in water Oss; then add carbonate of potassa q. s. to completely saturate, and filter.—Dose, f\$\mathcal{z}\ss.

Med. Prop. Refrigerant, and diaphoretic.

Use. An excellent diaphoretic, in febrile and inflammatory diseases.

LIQUOR POTASSÆ EFFERVESCENS. L. [Potassæ Aqua Effervescens, E.] Aerated Potash Water. Dissolve 3j of bicarbonate of potash in Oj of distilled water, and pass into it, by pressure, carbonic acid, more than sufficient for saturation.

Med. Prop. and Use. An agreeable form of administering bicarbonate of potash.

LIQUOR SODÆ CHLORINATÆ. U.S., L. Labarraque's Disinfecting Liquid. Dissolve thij of carbonate of soda in Oiij of water, with the aid of heat. Add chlorinated lime, well triturated, thij, to water Oix; when the dregs have subsided, decant the clear liquor, and mix it with the solution of carbonate of

soda. Lastly, decant the clear liquor from the precipitated carbonate of lime, strain it through a linen cloth, and preserve in bottles from the light. [L. directs chlorine gas (prepared at the time by the addition of sulphuric acid to chloride of sodium and peroxide of manganese), through a solution of carbonate of soda.]

Med. Prop. Astringent, antiseptic.

Use. In low forms of disease; chiefly externally, as a gargle, when properly diluted, in sloughing of the throat; also as a disinfectant.

Liquor Sodæ Effervescens. L. [Sodæ Aqua Effervescens, E.] Sesquicarbonate of soda 3j, distilled water Oj; dissolve, and force by pressure an excess of carbonic acid into the solution. [Or, extemporaneously, by putting 3ss of sesquicarbonate of soda into a bottle of carbonic acid water.]

Med. Prop. and Use. An agreeable mode of administering carbonate of soda.

LIRIODENDRON. U. S. (Sec.) Tulip-tree Bark. The bark of Liriodendron tulipifera.

Med. Prop. Stimulant, tonic, and diaphoretic.

Use. Has been employed as a substitute for Peruvian bark.

LOBELIA. U.S., L., E. The herb Lobelia inflata.

Med. Prop. Emetic, narcotic, sedative.

Use. Chiefly in spasmodic asthma.

LOBELINA. The active alkaline narcotic principle of Lobelia. It strongly resembles nicotina, the active principle of tobacco.

Not used medicinally.

LOTIO ACETI. One part of vinegar with 3 of water, is a common preparation for sponging the skin, in the hot stage of fevers.

Lotio Alkalina. P. Subcarbonate of potash Zij, water (or rose-water) Oij.

Use. As a wash in cutaneous diseases;—it may be used stronger.

LOTIO ALKALINA AMYGDALINA. (Dr. A. T. THOMSON.) Solution of potash f3iv, emulsion of bitter almonds f3vss.

- Use. To remove the scurf in porrigo furfurans; afterwards applied twice a day, diluted with warm water.
- LOTIO AD ALOPECIAM. (Dr. LANDERER.) Bay leaves 3ij, cloves 3ij, spirit of lavender 3iv, spirit of origanum 3iv. Digest for 6 days, strain, and add sulphuric ether 3ss.
- Use. Applied by friction, to prevent the hair falling off. [Mr. E. Wilson prescribes eau de Cologne f\(\mathcal{z} \) ij, tincture of cantharides f\(\mathcal{z} \) ss, oil of nutmeg f\(\mathcal{z} \) ss, oil of lavender mx.]
- Lotio Ammoniæ Hydrochloratis Spirituosa. Sal ammoniac 3j, distilled vinegar f3j, rectified spirit f3j, water f3xvj. Use. For contusions, chronic tumours, &c.
- LOTIO AMMONIATA FORTIOR. GRANVILLE'S Stronger Counterirritant. Strongest solution of ammonia f3x, spirit of rosemary f3ss, spirit of camphor f3ij; mix.
- LOTIO AMMONIATA MITIOR. GRANVILLE'S Weaker Counterirritant. Strongest solution of ammonia f3j, spirit of rosemary f3vj, spirit of camphor f3ij; mix.
- [The above preparations produce prompt vesication, if linen or flannel, several folds thick, be impregnated with them, and then pressed upon the surface for a very few minutes.]
- LOTIO ANTIPHLOGISTICA. (COPLAND.) Liquid diacetate of lead (Goulard's Extract), 3vj, solution of acetate of ammonia 3iv, distilled water Oij.
- Med. Prop. and Use. Sedative, cooling, and resolvent; in bruises, painful tumours, and swellings.
- LOTIO ARNICÆ. Either the infusion of arnica flowers may be used; or the tincture, in the proportion of 10 to 30 drops to f3j of water.
- Use. In bruises, contusions, &c.
- LOTIO BORACIS. Borax 3ss, rose-water Oj; or borax 3j, water 3ij, rectified spirit 3ss. (SIR A. COOPER.)
- Use. As a wash in chronic scaly diseases of the skin, also in aphthous ulcerations of the mouth of children.

LOTIO BORACIS ACIDA. (DR. ABERCROMBIE.) Borax 3j, distilled vinegar f3jj.

Use. In ringworm of the scalp.

LOTIO BORACIS CUM MORPHIA. (DR. C. D. MEIGS.) Borax 3ss, sulphate of morphia gr. vj, rose-water f3viij.

Use. In pruritus vulvæ.

LOTIO CHLORINATA. Liquid chlorinated soda 3j, water 3x to 3xv.

Med. Prop. and Use. As Liquor Sodæ Chlorinatæ.

LOTIO EVAPORANS. (COPLAND.) Ether f\(\mathcal{z}\)jss, solution of acetate of ammonia f\(\mathcal{z}\)jss, rectified spirit f\(\mathcal{z}\)jss, rose-water f\(\mathcal{z}\)ijss.

Med. Prop. Refrigerant.

Use. In external inflammations, &c.

LOTIO FERRI SULPHATIS. (VELPEAU.) Sulphate of iron 3j, water Oj.

Use. In erysipelas.

LOTIO GLYCERINI. (Mr. STARTIN.) Glycerine 3ss, water Oss.

Med. Prop. Emollient; by some supposed to exert a specific influence.

Use. In certain skin diseases, as eczema and lichen; also to the meatus externus in deafness depending on a want of secretion of cerumen.

LOTIO HYDRARGYRI CINEREA. Black Wash. Calomel 3ijss, lime-water Oj; shake together.

Use. As a dressing to chancres, and other venereal ulcers.

LOTIO HYDRARGYRI FLAVA. Yellow Wash. Corrosive sublimate gr. xxv, lime-water Oj; rub together.

Use. As the preceding.

LOTIO MYRRHÆ. (DR. KIRKLAND.) Tincture of myrrh Zij, lime-water Zij.

Use. To fungous growths.

LOTIO NIGRA. See Lotio Hydrarg. Cinerea.

LOTIO PLUMBI DIACETATIS. See Liquor Plumb. Subacetat. Dilutus.

LOTIO SODÆ CHLORINATÆ. Solution of chlorinated soda 3jss, water f\(\) xij.

Med. Prop. and Use. As Liquor Sodæ Chlorinatæ.

LUPULINA. Lupulin is the orange-yellow powder procured by rubbing and sifting the dried hops.

Med. Prop. and Use. It possesses all the tonic and narcotic properties of hops, for which it is advantageously substituted; also antaphrodisiac.

Lycopus. U. S. (Sec.) Bugle-weed. The herb of Lycopus Virginicus.

Med. Prop. A mild narcotic, and diaphoretic.

Use. To quiet coughs.

MAGNESIA. U. S., L., E., D. Magnesia Usta. Calcined Magnesia. Calcine carbonate of magnesia at a red heat for 2 hours, or till the carbonic acid is expelled. [By trituration it becomes heavier.]

Med. Prop. Antacid, and laxative.

Use. In dyspepsia with acidity, diarrhœa of children, gout, and lithiasis.

MAGNESIÆ CARBONAS. U. S., L., E., D. Magnesia Alba. Prepared by decomposing sulphate of magnesia by carbonate of soda. Med. Prop. and Use. Similar to the preceding.

Magnesia. Add 1 volume of a cold saturated solution of carbonate of soda to a boiling mixture of 1 volume of a saturated solution of sulphate of magnesia, and 3 volumes of water. Boil until effervescence has ceased, constantly stirring with a spatula. Then dilute with boiling water, set aside, pour off the supernatant liquor, and wash the precipitate with hot water on a linen cloth, and dry it by heat in an iron pot.

Med. Prop. Similar to the preceding.

MAGNESIÆ CITRAS. See Haustus Magnesiæ Citratis.

MAGNESIÆ PHOSPHAS. (NIEUMANN.) Add to diluted phosphoric acid pure magnesia, or its carbonate, to saturation; evaporate to dryness.—Dose, 8 to 30 grs., in *rickets*.

MAGNESIÆ SULPHAS. U.S., L., E., D. Epsom Salts. The commercial sulphate, obtained from bittern or from magnesian limestone, is usually sufficiently pure. In the U.S. it is extensively manufactured from a native magnesite, a silicious hydrate of magnesia.

Med. Prop. Cathartic, and refrigerant.

Use. In fevers and inflammatory disorders generally.

MAGNOLIA. U. S. (Sec.) The bark of Magnolia glauca, M. acuminata, and M. tripetala.

Med. Prop. Gently stimulant, tonic, and diaphoretic.

Use. In chronic rheumatism, typhoid remittents, and gastric debility.

Malva. L., E. Common Mallow. (Malva sylvestris.)

Med. Prop. Emollient.

Use. Much the same as Linum.

MANNA. U. S., L., E., D. The concrete juice of Ornus Europæa.

Med. Prop. A mild laxative; apt to gripe.

Use. As a purgative for children; but chiefly as an adjunct to other cathartics.

Mannite is procured by boiling manna in alcohol, allowing the solution to cool, and redissolving the crystalline precipitate. It is the purgative principle of manna.—Dose, half that of manna.

MARANTA. U. S., L., E. Arrow-root. The fecula of the rhizoma of Maranta arundinacea.

Med. Prop Nutritious, and demulcent.

Use. Mixed with boiling water, or milk, it forms an excellent diet for infants and convalescents.

MARMOR. U.S., L. E. [Marmor Album, D.] White granular carbonate of lime, or pure marble.

Use. To procure carbonic acid gas.

MARRUBIUM. U. S. (Sec.), L. Horehound. The herb of Marrubium vulgare.

Med. Prop. Tonic; diaphoretic in hot infusion.

Use. In debility of the digestive organs, and in catarrhs.

MASTICHE. L., E., D. The concrete resinous exudation of Pistachia Lentiseus.

Med. Prop. Stimulant; not used internally.

MATRICARIA. U. S. (Sec.) German Chamomile. The flower of Matricaria Chamomilla.

Med. Prop. and Use. Similar to those of Anthemis.

Mel. U.S., L., E., D. Honey is a liquid prepared from flowers by the bee (Apis mellifica).

Med. Prop. Demulcent, and laxative.

Use. As a vehicle for other medicines.

MEL DESPUMATUM. U. S., D. Clarified Honey. Melt any quantity of honey by means of a water-bath, removing the scum.

MEL PRÆPARATUM. U.S. Clarified honey Oss, diluted alcohol Oj, prepared chalk 3ss. Mix the honey and alcohol together, add the chalk, and let it stand for 2 hours, occasionally stirring it; then heat to ebullition, filter, and evaporate, by means of a water-bath, till its density is 1:32, when cold.

Use. Only in pharmacy, in the preparation of the protosalts of iron.

MELLITA. Preparations with Honey.

MELLITUM SIMPLEX. P. White honey fbvj, water fbij; dissolve by heat, skim, and, when the boiling solution attains a density of 1.261, strain through flannel.

MEL BORACIS. L., E., D. Powdered borax 3j, clarified honey 3j; mix.

Med. Prop. and Use. A very common and excellent mode of applying borax to the aphthous mouths of children; also to the throat.

MEL SCILLÆ COMPOSITUM. Coxe's Hive Syrup.—Syrupus Scillæ Compositus is now substituted for it.

MEL ROSÆ. U.S., L., E., D. Red roses 3ij, boiling water Ojss; macerate for 2 hours, and strain; then add clarified honey Oij, and evaporate by means of a water-bath to a proper consistence.

Med. Prop. Slightly astringent.

Use. A pleasant ingredient to gargles.

Melissa. U. S. (Sec.), E., D. Balm. The leaves of Melissa officinalis.

Med. Prop. A very mild diaphoretic, if taken in warm infusion.

MENTHA PIPERITA. U. S., L., E., D. Peppermint. The herb of Mentha piperita.

Med. Prop. A grateful aromatic stimulant.

Use. In nausea, mild colic, flatulence; and externally, to the epigastrium, in cholera infantum.

MENTHA PULEGIUM. L., D. European Pennyroyal.

Med. Prop. and Use. As the preceding.

MENTHA VIRIDIS. U.S., L., E., D. Spearmint. The herb of Mentha viridis.

Med. Prop. and Use. As Mentha piperita.

MENYANTHES. L., E. Buckbean. Leaves of Menyanthes trifoliata.

Med. Prop. Tonic, and in large doses emeto-cathartic.

Use. In intermittents, chronic rheumatism, and general debility. Not much employed in U.S.

MEZEREUM. U.S., L. [Mezereon, E., D.] Mezereon. The bark of Daphne Mezereum, and of Daphne Gnidium.

Med. Prop. Stimulant, diaphoretic, diuretic, and cathartic; externally, epispastic.

Use. Chiefly in chronic rheumatism and syphilis; also as a sialagogue.

MISTURÆ. The term mixtures, in strict pharmaceutical language, is applied to preparations in which insoluble substances, whether solid or liquid, are suspended in watery fluids by the intervention of gums, sugar, yelk of eggs, or other viscid matter. The term emulsion is applied where the suspended substance is of an oleaginous nature. Some of the pharmacopæias also include juleps, mucilages, potions, &c.

MISTURA ACACIÆ. L. See Mucilago Acaciæ.

MISTURA ACACIÆ. E. See Emulsio Acaciæ.

MISTURA ACIDI NITROSI. Hope's Acid Mixture. Nitrous acid f3j, tincture of opium gtt. xl, camphor water f3viij; mix.— Dose, one-fourth every 3 or 4 hours.

Use. In dysentery, diarrhœa, and cholera.

MISTURA ALUMINIS. (Dr. G. BIRD.) Alum gr. xxv, extract of conium gr. xij, syrup of red poppies f3ij, dill-water f3iij.—
Dose, a dessert-spoonful every 6 hours.

Use. In hooping-cough,—with asserted great efficacy.

MISTURA AMMONIACI. U. S., L., D. Ammoniac 3ij, water Oss; rub them together, gradually added, until thoroughly mixed.

Use. A convenient method of administering ammoniac, as a stimulant expectorant.

MISTURA AMYGDALÆ. U. S., L. [Mistura Amygdalarum, E., D.] Sweet almonds, blanched, \$\frac{3}{3}\ss, powdered gum Arabic \$\frac{3}{3}\ss, sugar \$\frac{3}{1}\si; beat them together in a marble mortar till thoroughly mixed, then rub the mixture with distilled water \$\frac{7}{3}\vij, gradually added, and strain. [The same formula will answer for an emulsion of bitter almonds.]

Med. Prop. Demulcent, and emollient.

Use. As the demulcent drinks generally.

MISTURA ANTIHYSTERICA. (Dr. Paris.) Assafætida 3j, peppermint water f\(\frac{7}{2} \) jss, ammoniated tincture of valerian f\(\frac{7}{2} \) ji, tincture of castor f\(\frac{7}{2} \) iij, ether f\(\frac{7}{2} \).—Dose, a tablespoonful every 2 hours.

Use. In hysteria.

MISTURA ASSAFŒTIDÆ. U.S., L., D. Lac Assafætidæ. Assafætida 3ij, water Oss; rub the gum with the water, gradually added, until thoroughly mixed.

Med. Prop. Antispasmodic, expectorant, laxative, stimulant, and carminative.

Use. A good form for obtaining the prompt effects of assafætida; to children, in convulsions.

MISTURA ASTRINGENS. (PRADEL.) Tannin gr. xij, syrup of rhatany 3j, mucilage 3j, camphor mixture 3iv; mix.

Med. Prop. Astringent, and slightly anodyne.

Use. In diarrhœa, chronic dysentery, and passive hemorrhages.

MISTURA CAMPHORÆ. L. Camphor Julep. Camphor 3ss, rectified spirit mx; rub together, gradually adding Oj of water, and strain.

Med. Prop. Those of Camphor.

Use. In low fevers, nervous derangements, &c.

MISTURA CAMPHORÆ CUM MAGNESIA. E., D. Camphor gr. x, carbonate of magnesia gr. xxv, water fʒvj; mix. See Aqua Camphoræ.

Med. Prop. Anodyne, laxative, and antacid.

Use. Much the same as the preceding.

MISTURA CARMINATIVA INFANTILIS. Dalby's Carminative. Carbonate of magnesia \ni ij, oil of peppermint mj, oil of nutmeg mij, oil of aniseed miij, tincture of castor mxxx, tincture of assafætida mxv, tincture of opium mv, spirit of pennyroyal mxv, compound tincture of cardamom mxxx, peppermint water f \bar{z} ij. (Dr. Paris.)

Med. Prop. A stimulant, carminative, anodyne, and antacid. Use. Chiefly in infantile colics.

MISTURA CARMINATIVA ANTACIDA. (DR. PARIS.) Magnesia 3ss, peppermint water f3ijss, compound spirit of lavender f3ss, spirit of caraway f3iv, syrup of ginger f3ij; mix. See Misturæ Catharticæ.

Med. Prop. Laxative, antacid, and carminative.

MISTURA CASCARILLÆ COMPOSITA. L. Infusion of cascarilla f\(\) tvij, vinegar of squills f\(\) j, compound tincture of camphor f\(\) ij; mix.

Med. Prop. Tonic, expectorant, and anodyne.

Use. In chronic bronchial affections.

MISTURA CATHARTICA. See Mistura Sennæ.

MISTURA CATHARTICÆ. Cathartic Mixtures. The following are among the most approved:

Mixture of Assafætida, Carbonate of Magnesia, &c. Dewees'

Carminative. Carbonate of magnesia 3ss, tineture of assafætida gtt. lx, tineture of opium gtt. xx, white sugar 3j, distilled water f3j; mix.—Dose, 25 drops for an infant.

Use. In flatulent colic, &c., of infants.

Dr. Meigs's Mixture. Carbonate of magnesia 3ss, sulphate of magnesia 3iij, aromatic spirit of ammonia f3j, tincture of rhubarb f3ss, tincture of hyoscyamus f3ss, mint-water f3iv; mix.—Dose, a large tablespoonful, 2 or 3 times a day.

Med. Prop. An anodyne, cordial cathartic.

Use. In colic, flatulence, &c.

Mixture of Castor Oil and Turpentine. Castor oil f3jss, oil of turpentine f3ss; to be rubbed up with the yelk of an egg, and 3ij of sugar; then add mint-water f3iv; mix.—Dose, a table-spoonful every 2 hours.

Med. Prop. A prompt cathartic and anthelmintic; also carminative.

Use. In flatulence, and tympanitis; also to expel worms.

Mixture of Croton Oil. Croton oil gtt. j-iij, mucilage of gum Arabic, distilled water, of each, f3j; mix.—Dose, a teaspoonful every 2 hours, till it operates on the bowels. [Another formula is, croton oil gtt. viij, potassa gr. vj, water f3ij; mix.—Dose, 3 to 6 drops.] Four drops may also be rubbed around the umbilicus.

Mixture of Magnesia and Rhubarb. Magnesia 3ss, powdered rhubarb gr. ij, white sugar 3j, essence of peppermint gtt. vj, water f3jss; mix.—Dose, a teaspoonful every 2 hours.

Use. For young children, in diarrhœa with acidity. [Laudanum may be added.]

Mixture of Manna, Rhubarb, and Carbonate of Magnesia. (Dr. Wood.) Manna 3j, fennel seed, bruised, 3j, boiling water f3iv; infuse, and strain; then add carbonate of magnesia 3ij; mix.—Dose, one-third every 3 or 4 hours, till it operates.

Med. Prop. Laxative, antacid, and carminative.

Use. In flatulence, and pain in the bowels.

MISTURA COLCHICI. (SCUDAMORE.) Magnesia 3jss, peppermint-

water f\(\frac{7}{2} \) iij, vinegar of colchicum f\(\frac{7}{2} \) iv, syrup of orange-peel f\(\frac{7}{2} \) iv.

—Dose, a tablespoonful every 3 hours.

Use. In acute gout; also in rheumatism.

MISTURA CRETÆ. U. S., L., E., D. Chalk Mixture. Prepared chalk \$\mathcal{z}\$ ss, refined sugar, powdered gum Arabic, each, \$\mathcal{z}\$ ij, cinnamon-water, water, each, \$\mathcal{z}\$ iv; rub them thoroughly together.—

Dose, for an adult, \$\mathcal{z}\$ ss. [Laudanum, or the tincture of rhatany, may often be added with advantage.]

Med. Prop. Astringent, antacid, absorbent, and carminative.

Use. Much employed in diarrhoas, and chronic dysenteries.

MISTURÆ DIURETICÆ. Diuretic Mixtures. The following are among those most employed:

Mixture of Copaiva. Copaiva, sweet spirits of nitre, of each, f3ss, gum Arabic, sugar, of each, 3j, tincture of opium f3j, compound spirits of lavender f3ij, distilled water f3iv; mix.—Dose, a tablespoonful 3 times a day, in gonorrhœa.

Mixture of Copaiva, Cubebs, &c. Copaiva, powdered cubebs, of each, \$\mathcal{Z}\$ss, gum Arabic, sugar, of each, \$\mathcal{Z}\$ij, camphorated tineture of opium \$f\$\mathcal{Z}\$ss, water \$f\$\mathcal{Z}\$viij; mix.—Dose, a tablespoonful every 3 hours, in chronic gonorrhea, and gleet.

MISTURA EFFERVESCENS. See Haustus Effervescens.

MISTURA ELATERII. (FERRIAR.) Elaterium gr. j, spirit of nitric ether f\(\frac{7}{3} \) ij, tincture of squills f\(\frac{7}{3} \) ss, oxymel of colchicum f\(\frac{7}{3} \) syrup of buckthorn f\(\frac{7}{3} \) j; mix.—Dose, f\(\frac{7}{3} \) j, 3 or 4 times a day, in dropsy.

MISTURA FERRI COMPOSITA. U.S., L., E., D. Myrrh 3j, carbonate of potassa gr. xxv, rose-water f3vijss, powdered sulphate of iron 9j, spirit of lavender f3ss, refined sugar 3j; rub the myrrh with the rose-water gradually added; then mix with these the spirit of lavender, sugar, and carbonate of potassa; and lastly, the sulphate of iron. Pour the mixture immediately into a glass bottle, which is to be well stopped.

Med. Prop. This preparation was made in imitation of Griffith's

Antihectic Mixture; -it is tonic and chalybeate.

Use. In dyspepsia attended with amenorrhœa or chlorosis; also in chronic coughs.

MISTURA FUSCA. Brown Mixture. Extract of liquorice, gum Arabic, each, 3ij, boiling water f3iv; dissolve, and add antimonial wine f3ij, laudanum mxx.—Dose, a tablespoonful occasionally. Use. In coughs, &c.

MISTURA GUAIACI. L., E. Guaiac Ziij, sugar Zss; rub together; then rub with mixture of gum Arabic fZss, gradually adding cinnamon-water fZxix.

Med. Prop. and Use. As Guaiacum.

MISTURA MAGNESIÆ. Magnesia 3j, syrup f3j; rub up together, and add carbonic acid water f3iv. The whole to be taken at once.

Med. Prop. An antacid cathartic.

Use. As magnesia; a pleasant method of administering it.

MISTURA MAGNESIÆ CARBONATIS ET MANNÆ. Manna 3j, bruised fennel seed 3j, boiling water f3iv; infuse and strain; then add carbonate of magnesia 3ij.—Dose, one-third.

Med. Prop. Laxative, and carminative.

Use. In constipation with flatulence.

MISTURA OLEI RICINI. Oleaginous Mixture. Castor oil f3jss, powdered sugar and gum Arabic, each, 3ij, mint-water f3iv. Rub the sugar and gum together, with a little of the mint-water, then add the oil, rubbing intimately; and lastly, the rest of the mint-water, with mxxx of laudanum.—Dose, a tablespoonful, in dysentery and diarrhæa.

MISTURA SALINA. See Liquor Potassæ Citratis.

MISTURA SCAMMONII. E. Resin of scammony gr. vij, unskimmed milk f\(\) iij; triturate the resin with a little of the milk, and gradually add the rest.

Monarda. U. S. Horsemint. The herb of Monarda punctata. Med. Prop. Stimulant, and carminative.

Use. In infusion, for flatulent colic, and sick stomach.

Monesia. An astringent extract imported from South America, obtained from Buranhem bark.

MORA. L. [Morus Nigra, D.] Mulberries.

Med. Prop. Refrigerant, and laxative.

Use. In fevers.

Morphia, or Morphine, U. S., L. Macerate Ibj of sliced opium with distilled water Oiv, for 24 hours, and having worked it with the hand, digest it for 24 hours longer, and strain. In like manner macerate the residue twice successively with distilled water, and strain. Mix the infusions, evaporate to Ovj, and filter. Add alcohol Ov, and then water of ammonia f3iij, previously mixed with Oss of alcohol. After 24 hours, pour on water of ammonia f3iij, mixed with Oss of alcohol, as before; set the liquor aside for 24 hours, that crystals may form. These are purified by boiling in Oij of alcohol until dissolved, filtering the solution, while hot, through animal charcoal, and setting aside to crystallize. [L. decomposes the hydrochlorate of morphia by means of ammonia.]

Med. Prop. The most valuable active principle of opium, all of whose theraupetical applications it is well calculated to meet;—especially useful in irritable stomach, combined with minute doses

of calomel; also endermically.

MORPHIÆ ACETAS. U. S., L., E. Morphia (freed from narcotina by sulphuric ether) 3j, distilled water Oss; mix, and carefully drop in acetic acid to saturation; evaporate to the consistence of syrup, dry with a gentle heat, and reduce to powder.—Dose 1/8 to 1/4 of a grain.

Med. Prop. and Use. One of the best forms for administering

morphia.

MORPHIÆ HYDRIODAS. (Dr. A. T. THOMSON.) Mix strong solutions of 2 parts of muriate of morphia and 1 part, or rather more, of iodide of potassium. Wash the precipitate with a little cold water; press it between folds of blotting paper, re-dissolve in hot water, and crystallize.

Med. Prop. and Use. Those of morphia and iodine combined.

MORPHIÆ HYDROCHLORAS. See Morphiæ Murias.

MORPHIÆ MURIAS. U. S., E. [Morphiæ Hydrochloras, L.] Morphia, in powder, 3j; distilled water Oss; mix, and carefully add muriatic acid till saturated, constantly stirring. Evaporate

by means of a water-bath, crystallize, and dry the crystals on bibulous paper.—Dose & of a grain.

Med. Prop. and Use. Similar to those of the acetate.—Not so much used in the U. S. as the sulphate.

MORPHIÆ MURIATIS SOLUTIO. E. Muriate of morphia 3jss, rectified spirit f3v, distilled water f3xv. [It is about the strength of laudanum.]

Med. Prop. and Use. As Liquor Morphiæ Sulphatis.

Morphiæ Nitras and Morphiæ Phosphas may be prepared as Morphiæ Murias, by substituting the respective acids.

MORPHIÆ SULPHAS. U. S. As Morphiæ Murias, by substituting sulphuric acid.—Dose, ½ to ¼ of a grain.

Use. The salt of morphia most employed in the U.S.

MORPHIÆ TARTRAS. (Dr. A. T. THOMSON.) As Morphia Murias, by substituting tartaric acid.

Med. Prop. and Use. As the preceding preparations of Morphia.

Moschus. U.S., L., E., D. Musk is a peculiar concrete substance, obtained from the follicles of Moschus moschiferus.

Med. Prop. Stimulant and antispasmodic; but often inefficient on account of adulterations.

Use. In singultus, hysteria, gout in the stomach, pertussis, and typhous conditions.

Moschus Artificialis. See Oleum Succini Oxydatum.

Moxa. The Chinese moxa are made from the downy leaves of a species of Artemisia. Various substitutes are used, composed of some light, porous, inflammable substance which burns slowly, as the pith of the sunflower, cotton cloth soaked in a solution of nitrate, chromate, or chlorate of potassa, rolled up into cylinders, and cut into pieces of proper length. [Dr. Osborne employs quicklime moistened with water.]

Use. As a powerful counter-irritant, when a deep and permanent action is required, as in chronic neuralgia and paralysis, to be applied over the origin of the nerves; also in incipient caries of the spine.

Mucuna. U. S. (Sec.) [Dolichos Pruriens, D.] Cowhage. The bristles of the pods of Mucuna pruriens.

Med. Prop. Anthelmintic; acting by their mechanical irritation. Use. To dislodge lumbrici.

MUCILAGE. The term *mucilage* is used by the U.S. Phar. to mean an aqueous solution of gum, or of substances closely analogous to it. The British Phars. use it in a more extended sense.

Mucilago Acaciæ. U.S. [Mucilago, E.; Mucilago Gummi Arabici, D.; Mistura Acaciæ, L.] Powdered gum Arabic Ziv, boiling water Oss; add them gradually together, rubbing till a mucilage is formed.

Med. Prop. Demulcent.

Use. Chiefly in pharmacy, from its viscid nature, to form pills and mixtures; also an excellent demulcent ingredient in cough mixtures.

MUCILAGO ALTHEÆ. P. Althea root 3j, boiling water 3vj; digest for 6 hours, and strain.

Med. Prop. Demulcent, and emollient.

Use. An excellent adjuvant to gargles for inflamed throat.

MUCILAGO AMYLI. E., D. [Decoctum Amyli, L.] Starch 3iv, water Oj; rub them gradually together, and boil for a short time.

Med. Prop. Demulcent.

Use. Chiefly as an enema, in irritations or inflammations of the rectum or colon.

MUCILAGO GLYCYRRHIZÆ. From liquorice-root, as Mucilago Altheæ.

Med. Prop. and Use. Similar to those of Mucilago Altheæ.

Mucilago Lini. P. Linseed 3j, boiling water 3vj; digest for 6 hours, and strain.

Med. Prop. and Use. Similar to Mucilago Altheæ.

MUCILAGO SASSAFRAS. Pith of sassafras 3j, water f3xvj; boil and strain.

Med. Prop. Demulcent, and emollient.

Use. A very pleasant application to inflamed eyes and skin; also as a drink in catarrhs, nephritis, and dysentery.

Mucilago Tragacanthæ. U.S., E. [Mucilago Gummi Tragacanthæ, D.] Gum tragacanth 3j, boiling water Oj; macerate for 24 hours, then triturate it, and forcibly strain it through linen.

Med. Prop. Demulcent.

Use. Chiefly for making troches and pills.

Myristica. U. S., L., E. [Nux Moschata, D.] Nutmeg. The kernels of the fruit of Myristica moschata.

Med. Prop. Aromatic, and narcotic.

Use. Chiefly for imparting flavour.

Myristicæ Adeps. E. Concrete Oil of Nutmeg. Obtained by expression.

Use. As a gentle external stimulant; rarely employed.

Macis. D. Mace is the membrane which surrounds the fruit of Myristica Moschata.

Med. Prop. and Use. As Nutmeg.

Myroxylon. U. S. [Balsamum Peruvianum, L., E.; Myroxylum Peruvianum, D.] Balsam of Peru. The juice of Myroxylon Peruiferum.

Med. Prop. Stimulating, tonic, and expectorant.

Use. Chiefly in chronic bronchitis and phthisis; also externally, to indolent ulcers.

MYRRHA. U. S., L., E., D. Myrrh is the concrete juice of Balsamodendron Myrrha.

Med. Prop. Stimulant, tonic, expectorant, and emmenagogue.

Use. In chronic bronchitis, amenorrhœa and chlorosis of an enfeebled character, combined with iron and aloes; also an ingredient in tooth-powders, and mouth-washes.

NAPHTHA. This name has been applied to many kinds of inflammable liquids, several of which have been used medicinally. The Naphtha of Dr. Hastings, lately introduced as a remedy

for consumption, is acetone, or pyroacetic spirit. It is made by distilling acetate of lime, and re-distilling the product over lime, till its boiling point becomes constant. Or it may be procured by passing the vapour of acetic acid through a tube heated to dull redness, and rectifying the product as before.—Dose, 12 to 15 drops, 3 times a day, in water, to be gradually increased.

Nux Vomica. U. S., L., E., D. The seeds of Strychnos Nux Vomica.

Med. Prop. Tonic, in small doses; in larger doses, excitant to the motor nervous centres; overdoses are poisonous.

Use. In dyspepsia depending on atony of the muscular coat of the stomach, in paralysis, prolapsus ani, and impotence.

OLEA DESTILLATA. U. S., L. [Olea Volatilia, E.; Olea Essentialia, D.] Distilled, Volatile, or Essential Oils, are prepared by putting the substance from which the oil is to be extracted (the herbs, flowers, seeds, &c.), into a retort, with as much water as will cover them, and distilling into a large receiver, kept cool. Separate the oil from the water which comes over with it. In this manner prepare the following:

OLEUM ANETHI. E. From Dill seeds.

OLEUM ANISI. U.S., L., E., D. From Anise seeds.

OLEUM ANTHEMIDIS. L., E. From Chamomile flowers.

OLEUM CARUI. U. S. [Oleum Carui, L., E., D.] From Caraway seeds.

OLEUM CHENOPODII. U.S. From Wormseed.

OLEUM FŒNICULI. U.S., E. [Oleum Fœniculi Dulcis, D.] From Fennel seeds.

OLEUM GAULTHERIÆ. U.S. Oil of Partridge-berry. From leaves (and other parts) of Gaultheria procumbens.

OLEUM HEDEOMÆ. U.S. Oil of Pennyroyal. From the herb Hedeoma pulegioides.

OLEUM JUNIPERI. U.S., L., E., D. From Juniper berries.

OLEUM LAVANDULÆ. U.S., L., E., D. From Lavender flowers.

OLEUM MENTHÆ PIPERITÆ. U. S., L., E., D. From Peppermint.

OLEUM MENTHÆ PULEGII. L. [Oleum Pulegii, D.] Oil of European Pennyroyal. From European Pennyroyal.

OLEUM MENTHÆ VIRIDIS. U.S., L., E., D. From Spearmint.

OLEUM MONARDÆ. U.S. From Horsemint.

OLEUM ORIGANI. U. S., L., E., D. From Origanum [Marjoram].

OLEUM PIMENTÆ. U.S., L., E., D. From Pimento [Allspice].

OLEUM ROSMARINI. U. S., L., E., D. From Rosemary tops.

OLEUM RUTÆ. E., D. From Rue.

OLEUM SABINÆ. U.S., E., D. From Savine leaves.

OLEUM SAMBUCI. L. From Elder flowers.

OLEUM SASSAFRAS. U.S. From Sassafras bark.

[All the above volatile oils possess in a very high degree the stimulant, aromatic, and other medical properties of the substances from which they are derived. They are employed chiefly as adjuvants; also in pharmacy. Some of them are used as external irritants.]

OLEA FIXA VEL EXPRESSA. Fixed or Expressed Oils are procured from certain fruits, seeds, &c., by expression, and sometimes by decoction.

OLEA EMPYREUMATICA. Oily fluids, procured in the destructive distillation of various vegetable and animal substances.

OLEA MEDICATA. [Olea Cocta, vel Infusa.] Oils medicated by infusion or decoction. They are mostly prepared by digesting or gently boiling the fresh leaves or flowers of various plants in olive oil, till they become crisp, taking care that the temperature does not rise above 212°. A few animal substances are treated in the same way.

OLEUM AMYGDALÆ. U.S., L. [Oleum Amygdalinum, D.] The fixed oil of the sweet and bitter almond, procured by expression.

Med. Prop. Demulcent, and emollient.

Use. Rubbed up with water, in catarrhal and other pulmonary irritations.

OLEUM AMYGDALÆ AMARÆ DESTILLATUM. P. Procured by distilling the cake of bitter almonds (from which the fixed oil has been expressed) with water.—Dose, ½ to ½ a drop.

Med. Prop. A powerful sedative narcotic; it resembles prussic acid.

Use. As a substitute for hydrocyanic or prussic acid.

OLEUM ARMORACIÆ. By distilling fresh horseradish root with water. It appears to be identical with the Oil of black mustard.

Med. Prop. A powerful stimulant.

Use. As a rubefacient.

OLEUM AURANTII FLORUM. P. Neroli. By distilling orange flowers fbx, with water fbxx. [An oil is also procured from the leaves.]

Med. Prop. A delightful fragrant, aromatic oil.

Use. For imparting odour to perfumes.

OLEUM BERGAMII. U. S., L. [Oleum Bergamotæ, E.] From bergamot peel [Citrus Limetta], as Oleum Limonis.

OLEUM BEZOARDICUM. Wedel's Oil. Camphor 3ij, oil of almonds f3ij, oil of bergamot 3ss, alkanet root q. s. to colour it. Med. Prop. and Use. Very similar to those of Linimentum Saponis Camphoratum.

OLEUM BUBULUM. U.S. Neat's-foot Oil. By boiling the feet of the ox a long time in water, and skimming off the oil.

Use. In pharmacy, for making citrine ointment.

OLEUM CAJAPUTI. U. S. (Sec.), L., E., D. By distilling the leaves of Melaleuca Cajaputi with water.

Med. Prop. A powerful stimulant.

Use. In epilepsy, palsy, chronic rheumatism, and in spasms of stomach and bowels; also as an external irritant.

OLEUM CAMPHORÆ. The liquid camphor, obtained by piercing the young camphor tree, is so termed in India.

Med. Prop. Similar to those of Camphor; seldom employed in U. S.

OLEUM CAMPHORATUM. See Linimentum Camphoræ.

OLEUM CANNABIS. Expressed from Hemp seed.

OLEUM CARYOPHYLLI. U. S., L., E., D. By distilling cloves with water.

Med. Prop. A powerful irritant, and aromatic.

Use. Chiefly as a corrigent; also to relieve toothache.

OLEUM CASSIÆ. As Oleum Cinnamomi.

OLEUM CINNAMOMI. U. S., L., E., D. From Cinnamon (and Cassia) bark, by macerating in salt water, and distilling.

Med. Prop. Stimulant, cordial, and aromatic; not astringent. Use. Chiefly to impart flavour.

OLEUM CITRI. Oil of Cedrat. From the peel and flowers of Citron; as Ol. Limonis.

OLEUM COPAIBÆ. E. Copaiva 3j, water Ojss; distil and remove the oil, preserving the water; when most of the water has passed over, heat it and return it to the still, and resume the distillation; repeat this till no more oil comes over.

Med. Prop. and Use. The same as Copaiba. As it contains no oxygen, it is a good vehicle for preserving potassium.

OLEUM CORNU CERVI. Dippel's Animal Oil. Procured in the distillation of hartshorn or bones. It is rectified by re-distillation.

Med. Prop. Stimulant and antispasmodic;—not used at present on account of its repulsive odour and taste.

OLEUM CROTONIS. See Oleum Tiglii.

OLEUM CUBEBÆ. U. S., E. By distilling the ground berries in water.

Med. Prop. and Use. Similar to cubebs, for which it may be advantageously substituted.

OLEUM CUCURBITÆ. Expressed from the seeds of the *Pumpkin*. Use. A soothing application in piles.

OLEUM ERGOTÆ. (Dr. WRIGHT.) From coarsely powdered ergot

of rye, by percolation with ether, and allowing the ether to evaporate spontaneously; or by digesting the ergot in solution of potash at 120° or 150°, diluting the liquid with half its weight of water, neutralizing by sulphuric acid, and distilling by an oil-bath.—Dose, 20 to 50 drops, in hemorrhage.

OLEUM LIMONIS. U. S. [Oleum Limonorum, L., E.] By expressing the yellow portion of the peel of lemons, previously grated off. An inferior kind is procured by distillation.

Med. Prop. Stimulant, and aromatic.

Use. To impart flavour.

OLEUM LINI. U. S., E., D. Linseed Oil. By expression from flaxseed, either cold, or previously roasted.

Med. Prop. Demulcent, emollient, and laxative.

Use. As an adjuvant to purgative enemata; also externally, to burns, combined with lime-water.

OLEUM MORRHUÆ. OLEUM JECORIS ASELLI. Cod-Liver Oil. The oil procured from the fresh liver of the codfish, Gadus Morrhua, by expression. Three kinds are usually to be met with, the pale yellow, the reddish-yellow, and the brown.—Dose, a teaspoonful to a tablespoonful, 3 times a day, in phthisis, scrofula, &c. [By some it is thought to be beneficial in consequence of the minute quantity of iodine which it contains. It more probably acts by increasing the nutritive functions.]

OLEUM MYRISTICÆ. U. S., L., E. The essential oil procured by distilling powdered nutmegs with water. The concrete oil—oil of mace—is obtained by expression.

Med. Prop. Similar to Nutmeg.

OLEUM OLIVÆ. U. S., L., E., D. Expressed from crushed olives. An inferior oil is made by boiling the pressed paste with water.

Med. Prop. Nutritious, demulcent, and mildly laxative.

Use. As a laxative for children; as an ingredient in purgative enemata; to burns; also in pharmacy.

OLEUM PALMÆ. Expressed from the fruit of Elais Guiniensis.

Med. Prop. Emollient.

Use. Chiefly in the manufacture of palm soap.

OLEUM PAPAVERIS. Huile Blanche. From poppy-seeds, as Oleum Amygdalæ.

Med. Prop. and Use. Similar to Oleum Olivæ.

OLEUM PETRÆ. Rock Oil, or Oil of Petroleum. The name is also given to the following mixture [GRAY]: Oil of turpentine 3viij, Barbadoes tar 3iv, oil of rosemary 3iv.

Med. Prop. and Use. Those of a stimulant embrocation.

OLEUM RICINI. U. S., L., E., D. Castor Oil. By expressing the seeds of Ricinus communis, previously heated; then clarified by boiling the oil with a considerable quantity of water, separating the oil, and again heating with a little water, until the latter is driven off. In the East and West Indies, the oil is procured by boiling the seeds in water, by which a more acrid oil is obtained.

Med. Prop. Cathartic.

Use. In cases requiring a gentle, soothing action, as in dysentery, also in colic, combined with laudanum, also in cases of children and puerperal women.

OLEUM ROSÆ. Otto, or Attar of Roses. From rose leaves, by distilling with water, and collecting the oil, when cool, from the surface of the water.

Use. A delightful fragrant perfume.

OLEUM SESAMI. U. S. (Sec.) Benne Oil. From the seeds of Sesamum orientale.

Med. Prop. Emollient; in large doses, laxative. Use. As Olive Oil.

OLEUM SINAPIS VOLATILE. By distillation from black mustardseed.

Med. Prop, An active rubefacient.

Use, Externally, as a counter-irritant.

OLEUM SUCCINI. U. S., D. Oil of Amber. By distilling am-

ber, previously mixed with an equal weight of sand, in a glass retort, by means of a sand-bath, and separating the oil from the other products.

Med. Prop. Stimulant, antispasmodic, diuretic; externally, rubefacient.

Use. In hysteria, hooping-cough, amenorrhœa, singultus, &c.; externally, in chronic rheumatism and palsy; and to the spine, in hooping-cough, and infantile convulsions.

OLEUM SUCCINI RECTIFICATUM. U. S., D. [Oleum Succini, L.] Distil together oil of amber Oj, water Ovj, until Oiv of the water have passed over with the oil; then separate the oil from the water.—Dose, 5 to 15 drops. [This is the form for internal administration.]

OLEUM SUCCINI OXYDATUM. Artificial Musk. Put into a cup f3j of oil of amber, and add to it, drop by drop, f3iij of strong nitric acid; let it stand for 36 hours; then separate, and wash the resinous matter.—Dose, gr. v to x.

Med. Prop. Antispasmodic.

Use. Very similar to Musk.

OLEUM SULPHURATUM. Balsam of Sulphur. Olive oil f\(\frac{7}{3}\text{xvj}, \) heated in a large vessel; washed sulphur \(\frac{7}{3}\text{ij}, \) to be gradually added, stirring occasionally till they combine.

Use. Formerly esteemed in chronic catarrh, and other pectoral affections, but not now employed.

OLEUM TEREBINTHINÆ. U. S., D. Spirits of Turpentine. By distilling common turpentine with water. It can be further purified by re-distillation with water, or by agitating it with alcohol, [Oleum Terebinthinæ Purificatum, L., E.]

Med. Prop. Stimulant, diuretic, and anthelmintic; externally, rubefacient.

Use. In chronic rheumatism, lumbago, and sciatica; in uterine hemorrhage, typhoid fever, chronic gastritis, chronic dysentery, and chronic bronchitis.

OLEUM TIGLII. U. S., L. [Oleum Crotonis, E., D.] Croton

Oil. Procured by expression from the seeds of the Croton Tiglium.

Med. Prop. One of the most powerful of the drastic cathartics.

Use. In obstinate constipation; in dropsy, mania, apoplexy, coma, dropped on the tongue; externally, as a counter-irritant, to the chest and throat.

OLEUM VALERIANÆ. (Prus. Ph.) By distilling valerian root 1 part, with water 8 parts. It contains valerianic acid, which is increased in quantity by exposure.—Dose, 4 or 5 drops.

Med. Prop. and Use. Those of Valerian; it is its active principle.

OLEUM VINI. OLEUM ÆTHEREUM. Oil of Wine. Procured in the preparation of sulphuric ether.

Med. Prop. Anodyne, and calmative.

Use. In the preparation of Hoffman's Anodyne.

OLIBANUM. L., D. Frankincense. A gum-resin, the product of Boswellia serrata.

Med. Prop. Stimulant, as the other gums.

Use. Only externally, for plasters; also for fumigations.

OPIUM. U. S., L., E., D. The concrete juice of the unripe capsules of Papaver somniferum.

Med. Prop. Stimulant, anodyne, antispasmodic, soporific, diaphoretic, and astringent.

Use. In low forms of disease; to relieve pain in all disorders where the brain is not implicated; in spasmodic diseases, especially in tetanus and mania à potu; in morbid restlessness, not dependent on inflammation of the brain; in rheumatism, gout, dysentery, enteritis, and peritonitis; in all unhealthy discharges.

OPOPONAX. L. A gum-resin, the product of Opoponax Chironium.

Med. Prop. Antispasmodie, and emmenagogue.

Use. Scarcely ever employed at present.

ORIGANUM. U. S., L., E. [Origanum Vulgare, D.] Marjoram. The herb of Origanum vulgare.

Med. Prop. Gently tonic, and excitant.

Use. In the form of warm infusion, as a diaphoretic and emmenagogue.

ORIGANUM MARJORANA. D. Sweet Marjoram.

Med. Prop. Very similar to the preceding.

Use. Chiefly in cookery.

Os. U.S. [Ossa, D.] Bone.

Use. Not employed in medicine; only in pharmacy.

OVUM. L., E. Egg.

Med. Prop. Nutritive.

Use. As a diet; in pharmacy, the yelk is employed in making mixtures.

OXYMEL. L., D. Honey fbx, acetic acid Ojss; mix the acid with the honey, previously heated.

Use. As an adjuvant to gargles.

OXYMEL COLCHICI. D. Vinegar of colchicum f3xvj, clarified honey fbij; boil to the consistence of syrup.—Dose, f3j.

Med. Prop. and Use. Very similar to those of Colchicum.

OXYMEL SCILLÆ. U. S., L., D. Clarified honey fbiij, vinegar of squill Oij; mix, and evaporate by means of a water-bath to the proper consistence.—Dose, f3j to f3ij.

Med. Prop. and Use. As Squill;—an excellent form for administering it as an expectorant.

PANAX. U. S. (Sec.) Ginseng. The root of Panax quinque-folium.

Med. Prop. Demulcent.

Use. Not employed as a medicine.

Papaver. U. S., L., E. Poppy-heads. The ripe capsules of Papaver somniferum.

Med. Prop. Those of Opium, in a very feeble degree.

Use. As a very mild narcotic, in the form of syrup; externally, as an emollient anodyne application.

PAREIRA. U. S. (Sec.), L., E. Pareira Brava. The root of Cissampelos Pareira.

Med. Prop. Tonic, diuretic, and aperient.

Use. Chiefly in chronic urinary disorders.

Pasta Alther. P. Pâte de Guimauve. Decorticated marshmallow root 3iv, water Oiv; macerate for 12 hours, strain, and add fbijss of picked gum Arabic and white sugar, each; dissolve, strain, and evaporate to the consistence of honey, constantly stirring, and add gradually the whites of 12 eggs, well beaten with 3iv of orange-water. Evaporate with constant stirring, till the paste is so firm as to adhere to the hands. [The P. Codex of 1836 substitutes water for decoction of althea, and terms the compound Pâte de Gomme.]

Med. Prop. An agreeable demulcent.

Use. In coughs, irritations of the throat, &c.

PASTA JUJUBÆ. P. Jujube Paste. Formerly prepared from the jujube fruit, by boiling with water, then adding gum Arabic and sugar, and clarifying with the whites of eggs; then evaporating to a thick consistence, flavouring with orange flower water, and pouring into moulds and drying. At present, the jujubes are usually omitted.

Med. Prop. Demulcent.

Use. As the last.

PASTA VIENNENTIS. PATE DE VIENNE. Potassa cum Calce.

PASTILLI ODORATI. Aromatic Pastils. P. Benzoin Zij, balsam of Tolu Ziv, labdanum Zj, yellow sandal-wood Ziv, charcoal Zvj, nitre Zij, mucilage of tragacanth q. s.; mix, and divide into conical pastils.

Use. To be burned, for fumigation.

Petroleum. L., E., D. Barbadoes Tar. Rock Oil. A native, inflammable product of various parts of the world. See Oleum Petræ.

Petroselinum. U. S. (Sec.) Parsley Root. Root of Apium Petroselinum.

Med. Prop. Diuretic, and aperient.

Use. As an adjuvant, in dropsies.

Phloridzine is prepared from the fresh root-bark of the apple, pear, cherry, or plum, by boiling with alcohol, straining, distilling off most of the spirit, and allowing the residue

to cool. Its properties and uses are similar to those of Salicine.

—Dose, gr. x to gr. xv.

Phosphorus. L.

Med. Prop. A powerful stimulant in small doses; poisonous in larger quantities.

Use. In Germany, in cases of extreme prostration.

Phytolacca. U. S. (Sec.) Poke (Berries and Seeds). The berries and root of Phytolacca decandra.

Med. Prop. Emetic, purgative, narcotic, and alterative.

Use. In rheumatism, as an alterative; as an ointment in piles and tinea capitis.

PICROTOXINA. The poisonous active principle of Cocculus Indicus.

Use. Not used in medicine.

PILULÆ. Pills are small globular masses of a size convenient for swallowing. They afford a convenient method of administering disagreeable medicines, which do not require to be given in large doses. Deliquescent substances are not proper to be given in the pilular form; and those which are efflorescent should first be deprived of their water of crystallization. Care should be taken not to combine substances mutually incompatible. A mixture of syrup and powdered gum Arabic forms an excellent material for the formation of pills; the conserve of roses, honey, and molasses, are also employed. Pills are sometimes silvered, and sometimes covered with gelatine, to disguise their odour and taste.

PILULÆ ALOES. U. S., E. Powdered aloes and soap, each 3j; beat them with water so as to form a mass; to be divided into 240 pills.—Dose, 2 to 5 pills.

Med. Prop. Laxative or purgative, according to the dose.

Use. In habitual constipation.

PILULÆ ALOES COMPOSITÆ. L., D. Aloes 3j, extract of gentian 3ss, oil of caraway mxl, syrup q. s.—Dose, gr. v—xv.

Med. Prop. Laxative, and tonic.

Use. In the constipation of the dyspeptic and sedentary.

PILULÆ ALOES ET ASSAFŒTIDÆ. U.S., E. Powdered aloes, assafætida, and soap, each 3ss, water q. s. to form a mass. Divide into 180 pills.—Dose, 2 to 5 pills.

Med. Prop. Laxative, stimulant, and carminative.

Use. In the constipation of old persons; in flatulence and debility.

PILULÆ ALOES ET FERRI. E. Sulphate of iron three parts,
Barbadoes aloes two parts, aromatic powder six parts, confection
of roses eight parts; make a mass to be divided into five-grain
pills.

Med. Prop. Laxative, and tonic.

Use. In constipation with dyspepsia, and amenorrhœa.

PILULÆ ALOES ET IPECACUANHÆ. (Dr. BAILLIE.) Aloes Əj, ginger 3ss, ipecacuanha gr. viij, syrup q. s. Divide into 16 pills.—Dose, one before dinner, daily.

Med. Prop. Laxative, tonic, and carminative.

Use. In constipation with dyspepsia.

PILULÆ ALOES CUM MASTICH. Dinner Pills. Aloes 3vj, mastic and red rose petals, each 3ij, syrup of wormwood (or common syrup) q. s. To be divided into three-grain pills.

—Dose, 1 or 2 before a meal.

Med. Prop. A gentle tonic laxative.

Use. Much employed in dyspepsia with constipation.

PILULÆ ALOES ET MYRRHÆ. U. S., E. [Pil. Aloes cum Myrrhâ, L., D.] Rufus's Pills. Powdered aloes 3ij, powdered myrrh 3j, saffron 3ss, syrup q. s.; beat together into a mass, and divide into 480 pills.—Dose, 3 to 6 pills.

Med. Prop. A warm, stimulant cathartic.

Use. In dyspepsia with constipation, or amenorrhoea.

PILULÆ ALOES ET ZINGIBERIS. D. Hepatic aloes 3j, ginger 3j, soap 3iv, oil of peppermint 3ss; mix.

Med. Prop. A warm aromatic cathartic.

Use. In constipation with flatulence.

PILULÆ ANDERSONIS. P. Scot's Pills. Aloes 3vj, gamboge

3vj, oil of aniseed 3j, syrup q. s.; mix, and divide into four-grain pills.

Med. Prop. and Use. Very similar to the preceding.

PILULÆ DIETÆ ANTECIBUM. P. Dinner Pills. Aloes 3vj, extract of cinchona 3iij, cinnamon 3j, syrup of wormwood q. s.; mix.—Dose, 6 grains, or more. [These are substituted for the Pil. Aloes et Mastich.]

Med. Prop. A tonic, aromatic laxative.

Use. In dyspepsia.

PILULÆ ANTICEPHALALGICÆ. (BROUSSAIS.) Extract of belladonna gr. xv, extract of hyoscyamus gr. xv, extract of lettuce 3ss, extract of opium gr. vj, butter of cacao 3iv; divide into 120 pills.—Dose, one, night and morning. (Dr. Wilson Philip's pills for nervous headache:—Rhubarb 3ss, nutmeg 3ss, extract of chamomile 9j, oil of peppermint q. s.; divide into 30 pills.—Dose, 3 pills twice a day.)

PILULÆ ANTIEPILEPTICÆ. (RECAMIER.) Oxide of zinc gr. ix, camphor gr. vj, extract of belladonna gr. vj; divide into 12 pills.

PILULÆ ANTACIDÆ. Antacid Pills. Pills of Soda and Rhubarb, &c. Powdered rhubarb, dried carbonate of soda, extract of gentian, of each Эj, calomel gr. iij. To be made into 20 pills.—Dose, two occasionally.

Use. In dyspepsia, with acidity of stomach.

PILULÆ AROMATICÆ. Aromatic Pills. (Dr. Parrish.) Carbonate of ammonia, capsicum, cloves, and mace, of each, \ni j, oil of caraway gtt. v, extract of gentian gr. xij, syrup q. s. To be made into 20 pills.—Dose, one every 2 hours, in gout of the stomach.

PILULÆ ANTISPASMODICÆ. Antispasmodic Pills. The following are used:

Pills of Assafætida. Assafætida 3j, soap gr. x, water q. s.; to be divided into 20 pills.—Dose, 2 to 4 pills.

Pills of Castor, Oil of Amber, &c. Castor 3j, oil of amber 3ss,

extract of gentian q. s.; to be made into 24 pills.—Dose, 3 pills night and morning, in hysteria.

Pills of Musk and Camphor. (RICHARD.) Musk gr. x, camphor gr. xx, ammoniac \ni ij, opium gr. iv; to be divided into pills of 4 grains each.—Dose, 4 or 5 in the 24 hours, in nervous diseases.

PILULÆ ARSENICI. P. Pilulæ Asiaticæ. Tanjore Pills. White arsenic gr. j, black pepper gr. xij; triturate for a long time, and add gum acaciæ gr. ij, water q. s.; divide into 15 pills. [Each pill contains \(\frac{1}{15} \text{th gr. of arsenic.} \)]

Med. Prop. Alterative, as arsenious acid.

Use. In the East, in the treatment of syphilis and elephantiasis.

PILULÆ ASSAFŒTIDÆ. U. S. Assafætida 3jss, soap 3ss, water q. s. to form a mass; divide into 240 pills. [Each pill contains 3 grs. of the gum.]

Med. Prop. and Use. As Assafœtida.

PILULÆ ASTRINGENTES. Astringent Pills. The following may be employed:

Pills of Sugar of Lead and Opium. Acetate of lead gr. xxiv, opium gr. vj; mix, and divide into 12 pills.—Dose, one every hour or two, in hæmoptysis and dysentery. [Dr. Graves recommends acetate of lead \ni j, opium gr. j; to be divided into 12 pills.—Dose, one every hour, in cholera.]

Pills of Alum, Opium, and Catechu. Alum gr. vj, extract of opium gr. j, catechu gr. j—vj; to be divided into 6 pills.—Dose, one every 2 hours, in passive hemorrhages.

Pills of Tannin, &c. Tannin \(\partial\)j, sulphate of morphia gr. j, blue mass gr. vj; to be divided into 12 pills.—Dose, one every 2 hours, in diarrhaea and dysentery.

PILULÆ CALOMELANOS COMPOSITÆ. E., D. [Pilulæ Hydrargyri Chloridi Compositæ, L.] Plummer's Pills. Calomel 3ij, oxysulphuret of mercury 3ij; rub together, then with guaiac 3iv, and treacle 3ij, or q. s. to form a mass. To be divided into five-grain pills.

Med. Prop. Alterative.

Use. In chronic skin diseases, chronic rheumatism, &c.

PILULÆ CALOMELANOS ET OPII. E. Calomel 3 parts, opium 1 part, confection of roses q. s. Beat them into a mass, to be divided into pills, each containing 2 grains of calomel.

Use. Where the combined effects of mercury and opium are required; but the proportion of ingredients may often require to

be varied.

PILULÆ CAMPHORÆ CUM THRIDACE. (RICORD.) Camphor, and extract of lettuce, each, Jijss; divide into 20 pills.—Dose, 4 to 6 daily.

Med. Prop. Anaphrodisiac.

PILULÆ CATHARTICÆ. Cathartic Pills. The following, among

many others, are employed:

Griffitts' Cathartic Pills. Pulverized jalap, pulverized rhubarb, and soap, of each, 3ss, calomel gr. xxv, tartar emetic gr. jss; mix, and divide into 25 pills.—Dose, two at once, and repeated in 2 hours, if they do not operate.

Pills of Blue mass, Jalap, and Aloes. Blue mass, pulverized jalap, and pulverized aloes, of each, gr. xv, syrup q. s.; mix,

and divide into 12 pills.—Dose, 3 pills at night.

Pills of Blue mass and Rhubarb. Blue mass gr. ix, pulverized rhubarb and bicarbonate of soda, of each, gr. xij, aromatic syrup of rhubarb q. s.; mix, and divide into 12 pills.—Dose, one, 2 or 3 times a day. As an alterative, in derangement of the liver. (Dr. Hartshorne.)

Compound Cathartic Pills. See Pilulæ Catharticæ Compositæ.

Pills of Rhubarb and Iron. Pulverized rhubarb 3jss, sulphate of iron (dried) 3ss, white soap 3j; mix, and divide into 40 pills. (Dr. Griffits.)

Pills of Aloes and Gentian. Pulverized aloes 3j, extract of gentian 3ss, oil of caraway gtt. x, syrup q. s.; mix, and divide into

pills of 4 grains each.—Dose, 2 or 3 at once.

Aperient Pills. Aloes and rhubarb, of each, 3j, ipecacuanha gr. vj, white soap 3j; divide into 64 pills.—Dose, 1 at night, or more frequently. [Blue mass may be added, if there is deficiency of bile.]

- PILULÆ CATHARTICÆ COMPOSITÆ. U.S. Compound extract of colocynth, in powder, 3ss, extract of jalap, powdered, and calomel, each, 3iij, gamboge, in powder, 9ij; divide into 180 pills.—Dose, 1 to 3 pills.
- Med. Prop. and Use. An admirable cathartic, where there is derangement of the hepatic secretion, as in the commencement of bilious fevers.
- PILULÆ CŒRULEÆ. By Blue Pills we understand Pilulæ Hydrargyri; but in some of the European pharmacopæias (as those of Portugal and Germany), the Pilulæ Cupri Ammoniatæ are so named.
- PILULÆ COLOCYNTHIDIS. E. [— Compositæ, D.] Aloes 3j, scammony 3j, colocynth 3iv, sulphate of potash 3j [soap 3ij, D.], oil of cloves 3j, rectified spirit [treacle, D.] q. s. Divide into five-grain pills.
- Med. Prop. and Use. An active cathartic.
- PILULÆ COLOCYNTHIDIS ET HYOSCYAMI. E. Compound colocynth pill 2 parts, extract of henbane 1 part, rectified spirit q. s. Mix, and divide into five-grain pills.
- Med. Prop. and Use. An active cathartic;—the hyoscyamus is asserted to obviate the griping effect.
- PILULÆ COLOCYNTHIDIS ET COLCHICI. (BOUCHARDAT.) Compound extract of colocynth \ni j, extract of colchicum \Im j, extract of opium gr. j. Divide into 18 pills.—Dose, one or more, according to their purgative effect. Substituted for Lartigue's Gout Pills. [A similar compound, termed Sir H. Halford's Gout Pills, contains acetic extract of colchicum gr. ijss, Dover's powder and compound extract of colocynth, each, gr. jss—in each pill.]
- PILULÆ CONII COMPOSITÆ. L. Extract of hemlock 3v, ipecacuanha 3j, mucilage q. s.—Dose, gr. iij—v.
- Med. Prop. Anodyne, and expectorant.
- PILULÆ COPAIBA. U. S., and MIALHE. Copaiva Zij, freshly calcined magnesia Zj; mix and set aside, stirring occasionally, till it concretes into a pilular mass, which is to be divided into

200 pills.—Dose, 2 to 6 pills twice daily. [Hydrate of lime produces the same effect on copaiva as magnesia.]

Med. Prop. and Use. As Copaiba;—a good form for administration.

PILULÆ CUPRI AMMONIATI. E. Ammoniated copper, finely powdered, 1 part, bread crumb 6 parts, solution of carbonate of ammonia q. s. Beat it into a mass, to be divided into pills containing gr. ss. of ammoniated copper in each.

Med. Prop. and Use. As Cuprum Ammoniatum.

PILULÆ DIAPHORETICÆ. Diaphoretic Pills:—Pills of Antimony, Calomel, and Opium. Antimonial powder gr. x, powdered opium and calomel, of each, gr. ij, confection of roses q. s.; divide into 4 pills.—Dose, two at bedtime, in acute rheumatism.

Plummer's Pills. See Pil. Calomelanos Comp.

PILULÆ DIURETICÆ. Diuretic Pills. The following are frequently used:

Pills of Digitalis, Calomel, and Opium. Powder of digitalis gr. xij, calomel gr. vj, powdered opium gr. iv, confection of roses, q. s.; divide into 12 pills.—Dose, one 3 times a day, in hydrothorax and ascites.

Pills of Extract of Dandelion, &c. Extract of dandelion 3ss, blue mass gr. v—x, powder of uva ursi q. s.; make into 10 pills.— Dose, one 3 times a day; in dropsy complicated with disease of the liver.

Pills of Carbonate of Soda. Dried carbonate of soda 3j, white soap 3j; divide into 30 pills.—Dose, three pills 3 times a day; in calculous affections.

PILULÆ DIGITALIS ET SCILLÆ. E. Digitalis and squill, each, one part, aromatic electuary two parts, confection of roses q. s. Mix, and divide into four-grain pills.—Dose, 1 or 2 pills.

Med. Prop. Diuretic.

Use. In dropsy.

PILULÆ DIGITALINÆ. Granules de Digitaline, (HOMOLLE.)
Digitaline gr. xv, refined sugar 3xijss; mix accurately, and

divide into 1000 granules. From 4 to 6 may be given in 24 hours.

Use. To procure the effects of Digitalis.

PILULÆ EMMENAGOGÆ. Emmenagogue Pills.—The following are employed:

Pills of Myrrh, Sulphate of Iron, &c. Myrrh and sulphate of iron (dried), of each, \ni ij, carbonate of potassa and soap, each, 3ss; mix, and divide into 40 pills.—Dose, two 3 times a day.

Hooper's Pills. Sulphate of iron (dried) \ni j, powder of senna, jalap, and cream of tartar, of each, gr. x, powdered ginger, gr. xij, syrup q. s.; mix and divide into 25 pills.—Dose, three pills twice a day.

Pills of Aloes, Sulphate of Iron, &c. Dried sulphate of iron, Эj, powdered aloes Эij, powdered cloves gr. v, Venice turpentine q. s.; mix, and divide into 20 pills.—Dose, one 3 times a day. [Assafætida, or myrrh may advantageously be added.]

PILULÆ FELLIS BOVINI. (DR. CLAY.) Inspissated ox-gall may be formed into four-grain pills alone, or as follows:—Inspissated gall 3ij, oil of caraway mx, carbonate of magnesia q. s. Divide into 36 pills.—Dose, 2 pills three times a day; in costiveness, deficiency of bile, &c.

PILULÆ FERRI CUM ABSINTHIO. Pilulæ Martiales. (SYDEN-HAM.) Levigated iron 3j, extract of wormwood q. s. [SWEDIAUR substitutes the black oxide for the powdered filings.]

Med. Prop. Tonic, and chalybeate.

Use. In dyspepsia, chlorosis, and amenorrhœa.

PILULÆ FERRI CARBONATIS. U. S., E. Vallet's Ferruginous Pills. Dissolve separately, ziv of sulphate of iron, and zv of carbonate of soda in fzxvj of boiling water, and to each solution add fzj of syrup; mix the two solutions in a closely-stopped bottle, and allow the carbonate of iron to subside. Wash this repeatedly with warm water and syrup, in the proportion of fzj of the latter to Oj of the former, till tasteless; press it in flannel; mix it immediately with fzijss of clarified honey, and reduce the mass to the pilular consistence by means of a water-

bath.—Dose, 3 to 5 grains, three times a day. [E. directs saccharated carbonate of iron 4 parts, conserve of roses 1 part, beat into a mass, and divide into five-grain pills. Dr. Bland's pills are made by triturating, in an iron mortar, 3iv of sulphate of iron, 3iv of subcarbonate of soda, and 3ss of gum tragacanth; to be divided into 96 pills.]

Med. Prop. One of the best chalybeates.

Use. In chlorosis, amenorrhœa, and general debility requiring a tonic treatment.

PILULÆ FERRI COMPOSITÆ. U. S., L., D. Powdered myrrh 3ij, carbonate of soda 3j; rub together; add sulphate of iron 3j; rub again, then beat them in a warm mortar with syrup, or treacle q. s., to form a mass, and divide into 80 pills.—Dose, 2 to 6 pills three times a day.

Med. Prop. and Use. Similar to the last.

PILULÆ FERRI CUM ALOE. (BRANDE.) Sulphate of iron $\ni j$, carbonate of potassa $\ni j$, myrrh 3j, aloes 3ss. Mix and divide into 30 pills. [The Philadelphia College of Pharmacy gives the following as a substitute for *Hooper's Pills*: Barbadoes aloes 3j, dried sulphate of iron 3ij, extract of hellebore 3ij, myrrh 3ij, soap 3ij, canella and ginger, each, 3j, water q. s. Divide into pills of $2\frac{1}{2}$ grains, each.]

Med. Prop. Tonic, chalybeate, and aperient.

Use. In dyspepsia with anemia and constipation.

PILULÆ FERRI SULPHATIS. E. Dried sulphate of iron 2 parts, extract of taraxacum 5 parts, conserve of roses 2 parts, liquorice powder 3 parts. Beat together, and divide into five-grain pills.

Med. Prop. As the other chalybeates; but inferior.

PILULÆ FERRI ET QUINÆ IODIDI. (BOUCHARDAT.) Fresh protoiodide of iron 3jss, disulphate of quinia gr. xviij, honey 9j,
liquorice powder q. s.; mix and make into 60 pills.—Dose, 2 to
6 daily, in *chlorosis*.

PILULÆ FŒTIDÆ. See Pil. Assafætidæ, and Pil. Galbani Compositæ.

PILULÆ GALBANI COMPOSITÆ. U. S., L., D. [Pil. Assafætidæ, E.] Galbanum and myrrh, each, 3jss, assafætida 3ss, syrup q. s. Beat together into a mass, and divide into 480 pills.

—Dose, 10 to 20 grains.

Med. Prop. Antispasmodic, and emmenagogue.

Use. In hysteria, and chlorosis.

PILULÆ GAMBOGIÆ COMPOSITÆ. D. [Pil. Cambogiæ Compositæ, L.; Pil. Cambogiæ, E.] Gamboge 3j, aloes 3jss, ginger 3ss, soap 3ij; mix.

Med. Prop. An active purgative.

PILULÆ HYDRARGYRI. U. S., L., E., D. Blue Pills. Mercury \mathfrak{Z} j, confection of roses \mathfrak{Z} jss; rub together till all the globules disappear; then add powdered liquorice-root \mathfrak{Z} ss, and beat the whole into a mass, to be divided into 480 pills. Each pill contains 3 grains of the mass.

Med. Prop. One of the mildest of the mercurials; alterative, sialagogue, and cathartic.

Use. To procure the alterative and salivant operation of mercury.

PILULÆ HYDRARGYRI CHLORIDI MITIS. U. S. Calomel Ziv, powdered gum Arabic Zj, syrup q. s. Mix, and divide into 240 pills.

Med. Prop. and Use. A convenient form for administering calomel.

PILULÆ HYDRARGYRI CHLORIDI COMPOSITÆ. L. See Pilulæ Calomelanos Compositæ.

PILULÆ HYDRARGYRI BICHLORIDI. Pilulæ Majores Hoffmani. There are several formulæ for these pills, varying in the proportion of corrosive sublimate,—each pill containing from the \(\frac{1}{3} \) oth to the \(\frac{1}{8} \)th of a grain.

Use. Chiefly in syphilitic affections.

PILULÆ HYDRARGYRI BICHLORIDI CUM CONIO. Kopp's Antiherpetic Pills. Bichloride of mercury gr. iij; dissolve in alcohol
q. s., and add extract of hemlock 3j; mix, and divide into 60
pills.—Dose, 6 pills in the course of the day, gradually increased
to 9 pills.

Use. In chronic skin diseases, and syphilis.

PILULÆ HYDRARGYRI IODIDI. L. Iodide (protiodide) of mercury 3j, confection of dog-rose 3iij, powdered ginger 3j. Beat thoroughly together.—Dose, 5 to 10 grains.

Med. Prop. As the Iodide of Mercury.

Use. Chiefly in syphilis.

PILULÆ HYDRARGYRI PROTIODIDI COMPOSITÆ. (BIETT.) Protiodide of mercury 3ss, extract of guaiacum 3j, extract of lettuce 9ij, extract of sarza q. s. Make into 72 pills.—Dose, 1, and afterwards 2, a day.—(RICORD.) Iodide of mercury gr. j, extract of lettuce gr. j, extract of hemlock gr. ij, in each pill.—(Dr. Barbour.) Iodide of mercury 9j, aloes 3ss, dried sulphate of iron 3ss, myrrh 3ss, oil of savin gtt. xx.; divide into 24 pills. Dose, one 3 times a day, in amenorrhæa.

PILULÆ HYDRARGYRI DEUTO-IODIDI. Biniodide of mercury gr. j, extract of juniper gr. xij, powdered liquorice q. s. Divide into 10 pills.

Med. Prop. and Use. As the Biniodide of Mercury.

PILULÆ HYDRARGYRI ET POTASSII IODIDI. (PUCHE.) Iodide of potassium gr. viij, biniodide of mercury gr. viij, syrup of gum q. s.; rub together, and add sugar of milk gr. lxiv. Divide into 32 pills.—(MIALHE.) Iodide of potassium gr. vj, protiodide of mercury gr. vj, extract of opium gr. xij; mix the salts accurately, then the extract, and divide into 24 pills.

Use. In chronic skin diseases.

PILULÆ IPECACUANHÆ COMPOSITÆ. L. Dover's powder 3iij, fresh dried squill 3j, ammoniacum 3j, mucilage q. s.; mix.—Dose, 5 to 10 grains.

Med. Prop. Anodyne, stimulant, expectorant.

Use. In chronic bronchial affections.

PILULÆ IPECACUANHÆ ET OPH. E. Dover's powder 3 parts, confection of roses 1 part; mix, and divide into four-grain pills.

Med. Prop. Narcotic, and sudorific.

Use. As Dover's Powder.

PILULÆ OPII. U. S. [Pil. Opii sive Thebaicæ, E.] Powdered opium 3j, soap gr. xij. Beat them with water so as to form a

mass, and divide into 60 pills. E. directs opium 1 part, sulphate of potassa 3 parts, conserve of roses 1 part; to be divided into five-grain pills.

Med. Prop. and Use. As Opium.

PILULÆ PECTORALES. DR. LATHAM'S Cough Pills. Dover's powder 3j, fresh squill 9j, ammoniacum 9j, calomel gr. iv; divide into 20 pills.—Dose, 1 three times a day.

Use. In pectoral complaints, after the inflammation has been subdued.

PILULÆ PLUMBI OPIATÆ. E. Acetate of lead 6 parts, opium 1 part, conserve of roses 1 part; mix, and divide into four-grain pills.

Med. Prop. Astringent, sedative, and narcotic.

Use. In dysentery, hemorrhages, and morbid discharges.

PILULÆ PLUMBI IODIDI. (COTTEREAU.) Iodide of lead 3ss, confection of roses q. s.; mix, and divide into 120 pills.—Dose, 1, gradually increased to 5, twice a day, in scrofula, scirrhous tumours, &c.

PILULÆ PLUMMERI. See Pilulæ Calomelanos Compositæ.

PILULÆ QUINIÆ SULPHATIS. U.S. Sulphate of quinine 3j, powdered gum Arabic 3j, syrup q. s.; mix together the sulphate and the gum, then beat with the syrup so as to form a mass, to be divided into 480 pills.—Twelve pills are equal to 3j of good bark.

Med. Prop. and Use. As Sulphate of Quinia.

PILULÆ RHEI. U. S., E. Powdered rhubarb 3vj, soap 3ij; beat them up with water so as to form a mass, to be divided into 120 pills.—Each pill contains 3 grs. of rhubarb.

Med. Prop. and Use. As rhubarb; soap is a very good addition.

PILULÆ RHEI COMPOSITÆ. U. S., L., E. Powdered rhubarb 3j, aloes 3vj, myrrh 3iv, oil of peppermint f3ss, syrup of orange peel q. s.; beat together so as to form a mass, to be divided into 240 pills.—Dose, 2 to 4 pills, in constipation.

PILULÆ RHEI ET CARUI. DR. KITCHENER'S Peristaltic Persuaders.

Turkey rhubarb 3ij, syrup 3j, oil of caraway mx; divide into 40 pills.—Dose, 1 to 3 pills.

Use. A favourite aperient and carminative in constipation and indigestion.

PILULÆ RHEI ET FERRI. E. Dried sulphate of iron 4 parts, extract of rhubarb 10 parts, conserve of roses 5 parts; mix, and divide into five-grain pills.

Med. Prop. A warm, tonic laxative.

Use. In costiveness with debility of the stomach.

PILULÆ RUFI. See Pilulæ Aloës cum Myrrhâ.

PILULÆ SAGAPENI COMPOSITÆ. L. Sagapenum 3j, aloes 3ss, syrup of ginger q. s.—Dose, 10 to 30 grains.

Med. Prop. Stimulant, antispasmodic, and laxative.

Use. In flatulent colic with costiveness.

PILULÆ SAPONIS COMPOSITÆ. U. S., L. [Pilulæ Saponis cum Opio, D.] Powdered opium \$\mathcal{z}\$ss, soap \$\mathcal{z}\$ij; beat them together, so as to form a pilular mass. (One grain of opium is contained in the mass.)

Med. Prop. and Use. As Opium.

PILULÆ SCILLÆ. E. Powdered squill 5 parts, ammoniac, ginger, and soap, each, 4 parts, conserve of roses 2 parts. Make a uniform mass, and divide into five-grain pills.

Med. Prop. A stimulant expectorant.

Use. In chronic pectoral affections.

PILULÆ SCILLÆ COMPOSITÆ. U. S., L., D. Powdered squill 3j, powdered ginger and ammoniac, each, 3ij, soap 3iij, syrup q. s.; mix the powders together, then beat them with the soap, and add the syrup to form a mass; to be divided into 120 pills.

—Dose, 5 to 10 grains three or four times a day.

Med. Prop. and Use. As the last.

PILULÆ STYRACIS COMPOSITÆ. L. [Pilulæ Styracis, E.; Pilulæ e Styrace, D.] Strained storax 3iij, opium 3j, saffron 3j; mix. (Five grains contain one of opium.)

PILULÆ TONICÆ. Tonic Pills. The following are used:

Pills of Sulphate of Copper, &c. Sulphate of copper gr. j, powder of opium gr. ij, sulphate of quinia gr. viij, extract of gentian q. s.; divide into 4 pills.—Dose, 1 three times a day. In chronic quartan ague, and in chronic diarrhœa.

Pills of Nitrate of Silver, &c. Nitrate of silver gr. v—x, powdered opium 3ss, camphor and nutmeg, of each, Эj, mucilage q. s.; mix, and make into 20 pills.—Dose, one, morning and evening. In epilepsy and chorea.

Pills of Nitrate of Silver. Nitrate of silver gr. iij—vj, crumb of bread (free from salt) q. s.; make into 12 pills.—Dose, 1, 2, or 3 twice a day.

Pills of Ammoniated Copper. Ammoniated copper \ni j, confection of roses q. s.; divide into 40 pills.—Dose, one or two at bedtime.

Arsenic Pills. Arsenious acid gr. ij, opium gr. iij, soap gr. viij, powdered liquorice root q. s.; mix, and divide into 20 pills.— Dose, 1 two or three times a day, gradually increased. In intermittent fever and chronic skin diseases.

PILULÆ ZINCI VALERIANATIS. (BOUDET.) Valerianate of zinc gr. ix, tragacanth 3ss; mix and divide into 12 pills.—Dose, 1 night and morning; in nervous diseases.

PIMENTA. U. S., L., E., D. Allspice. The unripe berries of Myrtus Pimenta.

Med. Prop. and Use. As the aromatics; chiefly used to impart flavour.

Piper. U. S. [Piper Nigrum, L., E., D.] Black Pepper. The dried berries of Piper nigrum.

Med. Prop. Stimulant, and carminative.

Use. Chiefly as a condiment; also as an adjuvant, to excite the stomach.

PIPER LONGUM. L., E., D. The dried unripe spikes of Piper longum.

Med. Prop. and Use. Similar to the preceding.

PIX ABIETIS. U. S. [Pix Abietina, L.; Pix Burgundica, E., D.] Burgundy Pitch is the prepared concrete juice of the Norway Spruce (Abies excelsa).

Med. Prop. A mild rubefacient.

Use. As a mild revulsive, in the form of a plaster.

PIX CANADENSIS. U. S. Hemlock Pitch. Hemlock Gum. The prepared concrete juice of Abies Canadensis, the native hemlock spruce of U. S.

Med. Prop. and Use. The same as the preceding, for which it may be substituted.

PIX LIQUIDA. U. S., L., E., D. Tar is the impure turpentine, procured by burning, from the wood of Pinus palustris, and other species of pines.

Med. Prop. As Terebinthina.

Use. In chronic bronchial affections, in the form of tar-water; also by inhalation; and, externally, as an ointment, in tinea capitis.

PIX NIGRA. L. [Pix Arida, E.] The solid black mass left after the evaporation of the liquid parts of tar.

Med. Prop. Gently stimulant and tonic; -scarcely ever employed.

PLUMBI ACETAS. U. S., L., E., D. Sugar of Lead. This salt is always procured in the U. S. from the manufacturing chemist. The L. and E. Phars. direct it to be made by dissolving litharge by the aid of heat, in dilute acetic (pyroligneous, E.) acid. The D. Phar. directs the carbonate to be dissolved in the acid.

Med. Prop. Astringent, and sedative.

Use. In hemorrhages, especially hæmoptysis; in dysentery, and in the black vomit of yellow fever; externally, as a sedative lotion to inflamed surfaces; also as an injection in inflamed mucous membranes.

Plumbi Carbonas. U. S., L., E., D. White Lead, or Cerussa, is manufactured either by passing carbonic acid gas through a solution of the subacetate, or by exposing lead to the vapours of vinegar, at a certain temperature.

Med. Prop. Sedative, and astringent.

Use. Not internally; externally, sprinkled over abraded surfaces, and to form a plaster.

Plumbi Chloridum. L. Dissolve Zxix of acetate of lead in Oiij of boiling water; and Zvj of chloride of sodium in Oj of water; mix the solutions, and when cold, wash the precipitates with distilled water, and dry it.—Not used in medicine.

Plumbi Iodidum. L., E. Acetate of lead Zix, iodide of potassium Zvij. Dissolve the former in Ovj of distilled water, and filter; add it to the latter, dissolved in Oij of water; wash the precipitate, and dry it. [E. directs the nitrate, instead of the acetate.]—Dose, gr. ss to gr. iv.

Med. Prop. Resolvent.

Use. In scrofulous tumours, and indolent swellings.

Plumbi Nitras. E. Digest, with a gentle heat, litharge 3ivss in dilute nitric acid Oj; filter, and crystallize.—Not used in medicine.

Plumbi Oxidum Hydratum. L. Solution of diacetate of lead Ovj, distilled water Cong. iij, solution of potash Ovj. Mix, and wash the precipitated oxide till nothing alkaline remains.—Not used in medicine.

Plumbi Oxidum Rubrum. U. S., E. Red Lead, or Minium, is procured by heating the protoxide in a reverberatory furnace, till, by absorbing oxygen, it assumes a red colour.—Not employed in medicine; in pharmacy, for preparing acetic acid, and solution of chlorine.

Plumbi Oxidum Semivitreum. U. S., L., D. [Lithargyrum, E.] Litharge is procured by exposing melted lead to a current of air till oxidized, and the oxide is partially fused into crystalline grains.—Not used internally; in pharmacy, for making lead plaster.

Plumbi Tannas. By decomposing a solution of acetate of lead by a solution of tannic acid.

Used, externally, as a resolvent, in chronic enlargements.

Podophyllum peltatum. U.S. May-apple. The rhizoma of Podophyllum peltatum.

Med. Prop. An active and certain hydragogue cathartic. Use. As Jalap, which it strongly resembles.

Polygala Rubella. U. S. (Sec.) Bitter Polygala. The root and herb of Polygala rubella.

Med. Prop. Tonic, laxative, and diaphoretic.

Use. In dyspepsia.

POLYGONUM BISTORTA. D. Bistort Root. The root of Polygonum Bistorta.

Med. Prop. and Use. As the vegetable astringents generally.

Pomatum. A name given to unctuous scented preparations, used for the hair.

Porrum. L. Leek-root. The root of Allium Porrum.

Med. Prop. and Use. Similar to the Onion, though milder.

Potassa. U. S. [Potassæ Hydras, L.; Potassa Caustica, D.] Caustic Potash. Solution of potassa, any quantity; evaporate rapidly in a clean iron vessel over the fire, till ebullition ceases, and the potassa melts. Pour this into cylindrical moulds, and when cold, transfer to well-stopped bottles.

Med. Prop. A powerful escharotic.

Use. To form issues, and open deep abscesses.

Potassa cum Calce. L., E. Vienna Caustic. [Potassa Caustica cum Calce, D.] Rub together equal parts of hydrate of potassa and quicklime, and keep them in a well-stopped bottle. [E. and D. direct solution of potash to be evaporated in a clean iron vessel to one-fourth, and enough quicklime added to form a stiff paste.]

Med. Prop. and Use. As the preceding, but milder and more manageable.

Potassæ Acetas. U.S., L., E., D. Sal Diureticus. Saturate any quantity of acetic acid with carbonate of potassa, gradually added; then filter, and evaporate cautiously by means of a sandbath till a dry salt remains. It must be kept in closely-stopped bottles.—Dose, \ni j to \Im ij.

Med. Prop. Diuretic; cathartic, in large doses.

Use. In dropsies, lithiasis, and as a deobstruent.

Potassæ Ammonio-Tartras. (Niemann.) Dissolve cream of tartar in hot water, and add carbonate of ammonia to saturation. Evaporate to dryness by a gentle heat.

Potassæ Bitartas. U.S., L., E., D. Cream of Tartar. Procured from the crude tartar, or argol, deposited by wines, by solution and crystallization. The crystals are again dissolved in boiling water, containing charcoal and clay. When these have subsided, the clear solution is drawn off, and left to crystallize.

Med. Prop. Cathartic, diuretic, and refrigerant.

Use. In dropsies, frequently combined with jalap; as a drink in fevers; also in pharmacy.

Potassæ Boro-Tartas. P. Soluble Cream of Tartar. Bitartrate of potassa, in powder, Ziv, boracic acid, in crystals, Zj, water Ibij; put them in a silver basin; boil till most of the water is evaporated, stirring incessantly. When the matter becomes very thick, take it up in portions, flatten them, and place them in a stove till sufficiently dry; reduce to powder, and preserve in well-stopped bottles.

Med. Prop. A mild, cooling purgative.

Potassæ Carbonas. U. S., L., E. [Potassæ Carbonas e Lixivio Cinere, D.] Dissolve fbiij of impure carbonate of potassa (pearlash) in Oijss of water; filter, and pour it into a clean iron vessel, and evaporate by a gentle heat till the solution thickens; then stir it constantly with an iron spatula, till it granulates.

Med. Prop. Antacid, diuretic, and antilithic.

Use. In gravel, dropsy, and dyspepsia with acidity; also to prepare the neutral mixture.

Potassæ Carbonas Impurus. U. S. [Carbonas Impura, L.; Lixivus Cinis, D.] The potash and pearlash of commerce is procured by lixiviating wood ashes, and evaporating the solution to dryness.—Not employed in medicine.

Potassæ Carbonas Purus. U. S. [Potassæ Carbonas Purum, E.; Potassæ Carbonas e Tartari Crystallis, D.] Salt of Tartar. Rub up separately into powder fbij of cream of tartar and fbj of nitrate of potash; then mix together, and throw them into a

brass vessel heated nearly to redness, that they may undergo combustion. From the residue, prepare the pure carbonate, in the manner directed for the carbonate.

Med. Prop. and Use. As Potassæ Carbonas.

Potassæ Bicarbonas. U. S., L., E., D. Dissolve this of carbonate of potassa in Ox of distilled water, and pass carbonic acid through the solution till fully saturated. Then filter, and evaporate at a heat below 160°, that crystals may form; pour off the supernatant liquid, and dry the crystals upon bibulous paper.

Med. Prop. and Use. As the carbonate; but milder, and more acceptable to the stomach.

Potassæ Chloras. (Graham.) Mix 2 parts of carbonate of potash with 1 of quicklime, and expose to a current of chlorine gas. When saturated, heat the mixture gently, digest it in water, and separate the chlorate from the filtered liquid by crystallization.—Dose, 5 to 15 grains.

Med. Prop. Refrigerant, and diuretic.

Potassæ Citras. Saturate a solution of citric acid with carbonate or bicarbonate of potassa, and evaporate to dryness.—Rarely used except in solution. See Liquor Potassæ Citratis.

POTASSÆ HYDRAS. L. See Potassa.

POTASSÆ HYDRIODAS. See Potassii Iodidum.

POTASSÆ HYDROCYANAS. See Potassii Cyanidum.

POTASSÆ MURIAS. See Potassii Chloridum.

Potassæ Nitras. U.S., L., E., D. The nitre or saltpetre of commerce is chiefly a natural production found in various parts of the earth, but derived mostly from India. In commerce it is known by the name of crude saltpetre. It is purified by dissolving in boiling water, and crystallizing; it then constitutes refined saltpetre.

Med. Prop. Refrigerant, diuretic, and diaphoretic.

Use. In fevers of a sthenic character, active hemorrhages; and in large doses (3ij to 3vj in 24 hours), in acute rheumatism.

Potassæ Nitras Purificatum. D. Dissolve 1 part of nitrate of potassa in 2 parts of boiling water; filter, and set aside to crystallize.

Med. Prop. and Use. As the preceding.

Potassæ Nitras Fusa. P. Sal Prunelle. Fuse nitre in a Hessian crucible, adding 1-128th part of sulphur, and pour out the product on a smooth marble slab, or into moulds. [It is a mixture of nitrate and sulphate of potassa.]

Potassæ Sulphas. U.S., L., E., D. Vitriolated Tartar. Procured by igniting in a crucible the salt which remains in the retort after the production of nitric acid, so as to expel the excess of sulphuric acid; then dissolve in water and crystallize; or the excess of acid may be neutralized by carbonate of potassa.

—Dose, Эj to 3ss. [It has appeared sometimes to produce poisonous effects.]

Med. Prop. A mild purgative, and refrigerant. Use. In febrile affections.

POTASSÆ SULPHAS CUM SULPHURE. E. Sal Polychrest. Mix equal parts of nitre and sulphur; throw the mixture, in small successive portions, into a red-hot crucible; and when cool, reduce the salt to powder, and preserve in well-stopped bottles.— Dose, 3ss to 3j.

Med. Prop. Like the preceding.

Potassæ Bisulphas. L., E., D. Dissolve fbij of the salt which remains after the distillation of nitric acid, in Ovj of boiling water; add to it fbj (fzvij fzj, E.) of sulphuric acid, and boil down the solution, and set it aside to crystallize.—D. Mix 1 part of sulphuric acid with 6 of water, saturate it with carbonate of potassa, add another part of sulphuric acid, and evaporate, that crystals may form on cooling.—Dose, gr. xx to zij, properly diluted.

Med. Prop. Aperient, and tonic.

Use. In constipation with loss of appetite.

POTASSÆ TARTRAS. U.S., L., E., D. Soluble Tartar. Dissolve 3xvj of carbonate of potassa in Oj of water, and gradually

add fbiij, or q. s. of powdered cream of tartar, till perfectly saturated, and boil. Filter the liquor, evaporate till a pellicle begins to form, and set aside to crystallize. Pour off the liquid, dry the crystals on bibulous paper, and preserve in well-stopped bottles.

Med. Prop. A mild, cooling cathartic.

Use. In febrile diseases.

Potassii Bromidum. L. To Ojss of distilled water add 3j of iron filings, and then 3j of bromine. Set aside for half an hour, stirring occasionally; then apply a gentle heat, and when the liquid becomes greenish add 3xvij of carbonate of potassa, dissolved in Ojss of water. Filter, wash what remains with Oij of boiling water, and filter again; then evaporate the mixed solutions that crystals may form.—Dose, 2 to 5 grains.

Med. Prop. Alterative, and resolvent.

Use. In enlarged spleen; in bronchocele, and scrofula; externally to scrofulous and other tumours.

Potassii Chloridum. (Potassæ Murias.) To a solution of carbonate of potash, add muriatic acid to saturation; concentrate the solution by evaporation, and leave it to cool slowly so that crystals may form.—Not used in Medicine.

Potassii Cyanuretum. U. S. Expose zviij of ferrocyanuret of potassium to a moderate heat, until it becomes nearly white, and perfectly dry; then introduce it into an earthen retort, having its beak loosely stopped, and exposed to a red heat for 2 hours, or as long as any gas escapes. Withdraw the retort from the fire, close the orifice with lute, and then let the whole remain till quite cold; then break the retort, reduce the black mass to powder, and put it into a fzxij bottle, with fzvj of distilled water. Agitate occasionally for half an hour, filter, evaporate rapidly to dryness, and preserve in closely-stopped bottles.

Med. Prop. As Hydrocyanic Acid; poisonous.—Dose, \$\frac{1}{8}\$ to \$\frac{1}{4}\$ of a grain.—It is not so liable to decomposition as Hydrocyanic Acid.

Potassii Ferrocyanuretum. U. S. [Potassii Ferrocyanidum, L., E.] Prussiate of Potash. Prepared on a large scale by

calcining animal matters with the pearlash of commerce, occasionally adding iron filings; dissolve the calcined mass, after cooling, in water, and then crystallize by evaporation.

Med. Prop. Said to be sedative to the circulatory and nervous system.—Dose, 10 to 15 grains, three or four times a day. (Dr. Smart.)

Potassii Iodidum. U. S., L., E. [Potassæ Hydriodas, D.] Mix 3vj of iodine with Oiij of distilled water, and add 3iij of iron filings, stirring frequently with a spatula for half an hour. Heat gently, and when the liquid assumes a greenish colour, add gradually 3iv, or q. s. of carbonate of potassa, previously dissolved in f3viij of distilled water, till it ceases to produce a precipitate. Continue the heat for half an hour, and then filter. Wash the residuum with f3viij, of boiling distilled water, and again filter. Mix the filtered liquors, and evaporate so that crystals may form. Pour off the liquid, and dry the crystals on bibulous paper.—Dose, 2 to 15 grains, three times a day.

Med. Prop. As Iodine, but rather milder; it increases the secretions, especially the urine.

Use. As an alterative, in tertiary syphilis, scrofula, rheumatism, &c.

Potassii Sulphuretum. U. S., L., E. [Potassæ Sulphuretum, D.] Liver of Sulphur. Rub together 3ij of dried carbonate of potassa, and 3j of sulphur; melt the mixture in a covered crucible over the fire; then pour it out, and when cold, break into pieces, and put into a well-stopped bottle. [It consists of a mixture of tersulphuret of potassium and sulphate of potassa.]

Med. Prop. Sedative; poisonous in large doses.—Dose, 2 to 10 grains.

Use. In chronic rheumatism, and gout; in cutaneous affections; also as a wash, or ointment, in scabies.

Potus. Drinks.—Ptisanæ. Ptisanes. These are nearly synonymous, and include various medicated decoctions, infusions, and solutions, to be taken ad libitum.

Prinos. U. S. (Sec.) Black Alder. The bark of Prinos verticillatus.

Med. Prop. Tonic, and astringent.

Use. In intermittents, diarrhœa, gangrene, chronic skin diseases, and ill-conditioned ulcers; also externally.

PRUNUM. U. S. [Pruna, L., E.; Prunus Domestica, D.] Prunes.

The dried fruit of Prunus domestica.

Med. Prop. Laxative, and nutritious.

Use. As an article of diet, in costiveness, especially in convalescence.

PRUNUS VIRGINIANA. U.S. Wild-cherry Bark. The bark of Cerasus serotina (De Candolle), Cerasus Virginiana (Michaux).

Med. Prop. Tonic, calmative, and sedative.

Use. In cold infusion, in debility of the digestive organs attended with nervous irritation; in phthisis, hectic fever, and intermittents.

PULPÆ. Pulps are the soft parts of plants, separated from the harder parts by pressing them through a hair sieve. If unripe or dry, they should first be boiled in a little water till they become soft.

Cassiæ Fistulæ Pulpa. U.S. [Cassia, L.; Cassiæ Pulpa, E.; Cassia Fistula, D.] Pour boiling water upon bruised purging cassia pods, so that the pulp may be softened; then strain, first through a coarse sieve, and afterwards through a hair one, and evaporate, by means of a water-bath, to the proper consistence.

Med. Prop. and Use. Laxative. See Cassia Fistula.

PULPÆ CAROTI. P. Carrot roots are reduced to a pulp by means of a rasp. The tubers of potato, bulb of garlic, &c., are prepared in the same way.

Med. Prop. and Use. To form a mild stimulating poultice.

PULPÆ CONII. P. Fresh hemlock is beaten in a marble mortar to a fine paste, and pressed through a hair sieve. All fresh leaves and flowers may be reduced to pulp in the same way.

Med. Prop. and Use. To form an anodyne emollient poultice.

PRUNI PULPA. U.S. Soften prunes in the vapour of boiling

water, separate the stones, and beat the remainder in a marble mortar, and press through a hair sieve.

Med. Prop. and Use. As Prunum.

Pulpa Rosæ Caninæ. The ripe hips of the dog-rose are to be deprived of their seeds and hairs, and reduced to pulp in the usual way.—P. directs them to be put into an earthen pan, moistened uniformly with white wine, and left in a cool place, stirring them occasionally till they become soft. They are then beaten and pressed through a sieve.

Med. Prop. Slightly astringent.

TAMARINDI PULPA. U.S. [Tamarindus, L., E.; Tamarindus Indica, D.] Digest tamarinds with a small quantity of water, till they become of uniform consistence; then separate the seeds and filaments by pressing through a hair sieve.

Med. Prop. Refrigerant, and nutritious.

Use. Chiefly as a diet for the sick and convalescent, in constipation.

Pulveres. Substances are administered in the form of powders which are not given in very large doses, have no corrosive property, and do not deliquesce rapidly on exposure to the air. When the powder is composed of more than one ingredient, the constituents should, as a general rule, be pulverized separately, and then united.

Pulvis Absorbens. (Sp. Ph.) Carbonate of magnesia 3iv, dried subcarbonate of soda $\ni j$, ginger $\ni j$; mix.

Pulvis Aloes Compositus. L., D. Aloes (hepatic, D.) \Im jss, guaiac \Im j, compound powder of cinnamon \Im iv; mix.

Med. Prop. A warm, stimulant cathartic;—but little used.

Pulvis Aloes et Canellæ. U.S. [Pulvis Aloës cum Canellâ, D.] Hiera Picra. Aloes (hepatic, D.) İbj, canella bark ℥iij; rub separately into fine powder, and mix.

Med. Prop. Warm, cathartic, and emmenagogue.

Use. In amenorrhœa.

PULVIS ALTERATIVUS. (DR. PLUMMER.) Equal parts of calomel

and golden sulphur of antimony, levigated together. [It changes by keeping.]

Use. In chronic skin diseases, and some forms of scrofula.

Pulvis Aluminis Compositus. E. Alum Ziv, kino Zj; mix.—Dose, 5 to 20 grains.

Med. Prop. Astringent.

Use. In diarrhœa, menorrhagia, and hemorrhage from the stomach or bowels. [The alum and kino undergo decomposition.]

Pulvis Aluminis cum Capsico. (Dr. Turnbull.) Alum 3 parts, concentrated tincture of capsicum 1 part; mix, dry, and again triturate.

Use. Applied to the tonsils, in ulcers of a low form, or in gangrene, as in scarlatina maligna.

Pulvis Aluminis Opiatus. (Bouchardat.) Alum 3j, sugar 3j, opium gr. iv; mix for 12 powders.—Dose, 2 or 3 daily, in obstinate diarrhœas and passive hemorrhages.

Pulvis Amyli et Sodæ. Devergie's Alkaline Powder. Mix 1 part of carbonate of soda, in fine powder, with 10 of white starch.

Use. For external application, in certain skin diseases.

PULVERES ANTACIDÆ. Antacid Powders. The following are employed:

Compound Cretaceous Powder with Opium. Prepared chalk 3jss, cinnamon 3j, long pepper gr. viij, opium gr. vj; mix, and divide into 12 powders.—Dose, one 3 or 4 times a day, in diarrhæa.

Powder of Crabs' Eyes and Rhubarb. Crabs' eyes (or Testa præparata) 3j, rhubarb jij; mix, and divide into 4 powders.—
Dose, one, once or twice a day, in diarrhæa with acidity.

Powder of Soda, Magnesia, &c. Magnesia 3ss, bicarbonate of soda and ginger, of each, 9j; mix.—Dose, a small teaspoonful occasionally.

Powder of Magnesia and Columbo. Magnesia 3jss, powdered columbo 3j; mix, and divide into 6 powders.—Dose, one 3 times a day in sugar and water, in cardialgia.

Pulveres Anthelminticæ. Anthelmintic Powders. The following are approved:

Powder of Calomel and Gamboge. Calomel gr. v, gamboge gr. vj—x; mix.—The whole to be taken for an adult, in syrup, early in the morning.

Powder of Calomel and Pink-root. Calomel gr. iv, powdered spigelia gr. x; mix.—To be taken two mornings successively, and followed by a purgative. For a child over 4 years old.

Powder of Pink-root, Senna, and Savine. Powdered spigelia and senna, of each, $\ni ij$, powdered savine gr. xij; mix, and divide into 6 powders.—Dose, one every morning until three are taken, followed by a dose of castor oil.

Powder of Male Fern. This may be given in the dose of 3j—iij, in a teacupful of any distilled water, early in the morning; to be followed in the course of two hours by a brisk purgative. In tænia. (Nouffer.)

Powder of Cochineal and Common Salt. (Dr. Rush.) Chloride of sodium 3iij, powdered cochineal gr. xv; divide into 6 doses.—
One every morning, following the last dose with a cathartic.

Pulvis Antimonialis. E., D. [Pulvis Antimonii Compositus, L.] Sesquisulphuret of antimony lbj, hartshorn shavings lbij (an equal quantity, E.); mix, and throw them into a crucible red-hot in the fire, and stir constantly till vapour no longer rises. Rub what remains to powder, and put it into a proper crucible; then apply heat, and raise it to redness, and keep it so for 2 hours. Rub the residue to a very fine powder. [Made in imitation of James's Powder.]

Med. Prop. As tartar emetic, but very uncertain. Use. In fevers, and inflammations.

Pulvis Aromaticus. U. S., E., D. [Pulvis Cinnamomi Compositus, L.] Cinnamom and ginger, each, \$\mathcal{z}ij\$, cardamoms, deprived of the capsules, and nutmeg, each, \$\mathcal{z}j\$; rub together to a very fine powder.

Med. Prop. Stimulant, and carminative.

Use. In dyspepsia, with flatulence; chiefly as an adjuvant.

Pulvis Arsenicalis. See Pulvis Escharoticus Arsenicalis.

PULVERES ASTRINGENTES. Astringent Powders.

Compound Powder of Alum. Alum Jj, kino gr. v; divide into 5 powders.—Dose, one every 2 hours.

Powder of Sugar of Lead and Calomel. Acetate of lead gr. ss—j, calomel gr. j—ij; mix, and divide into 4 powders.—Dose, one every 3 hours, in cholera infantum.

Powder of Alum and Opium. Alum 3ss, powdered opium gr. iij; divide into 6 powders.—Dose, one every 3 or 4 hours, in diarrhæa.

Pulvis Asari Compositus. D. Dried asarabacca leaves 3j, dried lavender flowers 3j: rub together to a fine powder.—A good errhine.

Pulvis Belladonnæ Compositus. (Hecker.) Belladonna gr. j—iij, musk gr. v, camphor gr. v, white sugar 3ss; mix, for 8 powders.—(Kopp.) Belladonna root gr. ij, ipecac. gr. ij, sulphur gr. xxxij, sugar of milk gr. xxxij; mix, for 8 powders.—Dose, 3 daily, in hooping-cough.

Pulvis Calaminæ cum Myrrha. (St. B. H.) Equal parts of calamine and myrrh.

Use. For sprinkling over ulcers.

Pulvis Calomelanos Arsenicalis. (Dupuytren.) One part of arsenious acid intimately mixed with 199 parts of calomel. [Other proportions are used.]

Med. Prop. Stimulant, and mild escharotic.

Use. Applied to cancerous sores, lupus, &c.

Pulvis Calumbæ Compositus. Columbo 3j, rhubarb 3ss, dried carbonate of soda 3j, ginger 3j.

Med. Prop. Tonic, laxative, and antacid.

Use. An excellent remedy in dyspepsia with acidity.

Pulvis Calumbæ et Ferri. (Dr. Copland.) Potassio-tartrate of iron gr. x to xv, columbo gr. xij to xx; mix.

Med. Prop. Tonic.

Use. In dyspepsia with amenorrhœa, and chlorosis.

Pulvis Camphoræ. P. Camphor is readily pulverized by triturating it with the addition of a few drops of alcohol.

Pulvis pro Cataplasmate. D. Linseed meal 1 part, oatmeal 2 parts; mix.

Use. For making an emollient poultice.

PULVERES CATHARTICÆ. Cathartic Powders. The following are among the most approved:

Powder of Calomel and Jalap. Calomel gr. v—x, powdered jalap gr. x—xv. To be given in molasses or syrup.

Powder of Calomel and Rhubarb. Calomel gr. v—x, powdered rhubarb gr. x—xv. To be given as the former.

Powder of Jalap and Cream of Tartar. Cream of tartar 3ij, powdered jalap 3j. To be divided into 6 powders.—Dose, 1 every two hours, in molasses.

Compound Powder of Jalap. As the former, with the addition of gr. vj of gamboge. To be used in the same manner.

Powder of Sulphur and Cream of Tartar. Sulphur 3ss, cream of tartar 3j; to be mixed in molasses. Dose, a teaspoonful three or four times daily.

Powder of Milk of Sulphur and Magnesia. Milk of sulphur and calcined magnesia, each, 3ss. To be used as the last; in costiveness with acidity.

Pulvis Cetacei. Spermaceti is pulverized as camphor.

Pulvis Cinchonæ Compositus. (Dr. Chapman.) Powdered cinchona bark 3ss, pulverized serpentaria 3j, bicarbonate of soda 3ss; mix, and divide into 4 powders.—Dose, 1 every three or four hours, in *intermittent fevers*. [The efficacy of Peruvian bark is increased by the above additions.]

Pulvis Cinnamomi Compositus. L. Cinnamom Zij, cardamom Zjss, ginger Zj, long pepper Zss; mix. See Pulvis Aromaticus.

Pulvis Cretæ Compositus. L., E., D. Prepared chalk fbss, cinnamon \(\mathfrak{z}\)iv, tormentil and gum Arabic, each, \(\mathfrak{z}\)iij, long pepper \(\mathfrak{z}\)ss. Rub separately into very fine powder, and then mix them.

Med. Prop. Astringent, and aromatic.

Use. In diarrhœa with acidity.

Pulvis Cretæ Compositus cum Opio. L., E., D. Compound chalk powder Zvjss (Zvj, E.), opium Jiv; mix very accurately. Use. In diarrhœa with acidity; as the preceding.

Pulvis Dentifricus. P. Red bole Ziij, coral Ziij, sepia bone Ziij, dragon's blood Zjss, cochineal Ziij, cream of tartar Zivss, cinnamon Zvj, cloves Zj; all to be very finely powdered and mixed.—A few more formulæ for dentifrices are here added: Aromatic calamus Ziv, charcoal Zj, soap Zj, oil of cloves mxij.

—Venetian talc Ziv, bicarbonate of soda Zj, carmine gr. v, oil of mint gr. x.—Charcoal 4 parts, cinchona 2 parts, myrrh 1 part.—Cinchona Zij, orris powder Zj, muriate of ammonia Zss, catechu Zvj, myrrh Zvj, oil of cloves mvij.—Camphorated chalk is made by mixing 1 part of finely pulverized camphor with from 3 to 7 parts of prepared chalk.

Use. As tooth-powders.

Pulvis Depilatorius. (Plenk.) Quicklime 3xij, starch 3x, yellow sulphuret of arsenic 3j; to be mixed with water, when used, and the paste left on to dry.—(RAYER.) Lime 3j, carbonate of potash 3j, charcoal 3j.

Use. For the removal of the hair.

Pulveres Diaphoretic A. Diaphoretic Powders. The following may be used:

Powder of Nitrate of Potassa, Calomel, and Tartar Emetic. (Nitrous Powders.) Nitrate of potassa 3j, calomel gr. vj, tartar emetic gr. ss—gr. j; to be divided into six powders.—Dose, 1 every 2 hours, in febrile affections not of a low form, and without irritation of the stomach.

Powder of Opium, Ipecacuanha, Calomel, and Nitre. Opium gr. iij, ipecac. gr. vj, calomel gr. jss, nitrate of potassa 3ss; to be divided into 6 powders.—Dose, 1 three times a day.

Powder of Guaiac, &c. Guaiac and nitrate of potassa, of each, 3j, ipecac. gr. iij, opium gr. ij; to be made into 6 powders.—
Dose, 1 three times a day.

Use. In acute rheumatism, after proper depletion.

Dover's Powders. See Pulv. Ipecac. et Opii.

Powders of Calomel, Opium, and Ipecacuanha. (Dr. Chapman.) Calomel gr. xvj, opium gr. iv, ipecac. gr. viij; to be divided into 8 powders.—Dose, 1 every hour or two hours, till slight ptyalism is produced.

Use. In dysentery, &c.

Pulveres Diureticæ. Diuretic Powders. The following may be used:

Powder of Calomel, Squill, and Digitalis. Calomel, squill, and digitalis, each, gr. xij; divide into 12 powders.—Dose, 1 three times a day, till slight ptyalism is produced; in dropsy.

Powder of Uva Ursi and Soda. Powdered uva ursi 3jss, bicarbonate of soda 3j; to be divided into 12 powders.—Dose, 1 three times a day; to be taken in sugar and water.

Use. In nephritic complaints.

Powder of Squill and Nitrate of Potassa. Powdered squill gr. vj, nitrate of potassa 3j; to be divided into 6 powders.—Dose, 1 three times a day; to be taken in sugar and water.

Pulvis Doveri. See Pulp. Ipecac. et Opii.

Pulveres Effervescentes. E. Soda Powders. Divide 3j of tartaric acid, and 534 grs. of bicarbonate of soda (or 640 grs. of bicarbonate of potash), each, separately, into 16 powders. To be kept in papers of different colours; and when used, to be dissolved in separate glasses, half full of water, and mixed. [The more usual proportions are 25 grs. of tartaric acid and 30 of the soda.]

Med. Prop. Refrigerant.

Pulveres Effervescentes Aperientes. Seidlitz Powders. Rochelle salts 3ij, bicarbonate of soda 3ij, in one paper; tartaric acid 3ss, in the other paper. To be taken as the preceding.

Med. Prop. and Use. Refrigerant, and gently laxative;—in sick headache, slight constipation, &c.

Pulveres Effervescentes cum Ferro. Dried sulphate of iron 3ss, white sugar 3iij, tartaric acid 3jss; mix, and divide into 12 powders. Bicarbonate of soda 3ij, white sugar 3iij; mix, and divide into 12 powders. To be taken as the preceding.

Pulveres Effervescentes cum Zingibere. Ginger-beer Powders. Ginger 3j, bicarbonate of soda 3vj, white sugar 3xx, essence of lemon gtt. vj; mix, and divide into 12 powders. The other papers contain 3ss of tartaric acid in each. To be taken as the preceding.

Med. Prop. Gently stimulant, and antiemetic.

Pulvis Emeticus. (Dr. Wood.) Tartar emetic gr. j, powdered ipecacuanha jj. To be taken in a wineglassful of water.

Med. Prop. A prompt and efficient emetic.

Pulveres Emmenagogue Emmenagogue Powders. The following are frequently employed:

Powder of Hiera Picra. See Pulvis Aloës et Canellæ.

Powder of Savin, &c. Dried savin, in powder, 3j, powdered ginger 3j, sulphate of potassa 3j; divide into 6 powders.—
Dose, one twice a day.

Powder of Savin and Cantharides. Powdered savin 3j, powdered cantharides gr. ij; mix, and divide into 4 powders.—Dose, one every night.

Powdered Ergot may be given in the dose of 10 grains, morning and night.

Pulvis Escharoticus Arsenicalis. P. Red sulphuret of mercury 3iv, dragon's blood 3iv, levigated arsenious acid 3ij; mix accurately. [Other authorities direct less arsenic.] To be moistened when using it.

Pulvis Escharoticus Aluminosus. Sharp's Pulvis Angelicus. Burnt alum and red precipitate, equal parts.

Med. Prop. A mild escharotic.

Pulveres Expectorantiæ. Expectorant Powders. The following are most approved:

Powder of Myrrh, &c. Powdered myrrh gr. xij, ipecacuanha gr. vj, nitrate of potassa 3ss; mix, and divide into 4 powders.—
Dose, one every 4 hours.

Powder of Opium, Ipecacuanha, &c. Opium gr. iij, ipecacuanha gr. iij—vj, nitrate of potassa 3j, calomel gr. iij; mix, and divide into 6 powders.—Dose, one every 2 or 3 hours, in syrup.

Pulvis Febrifugus. Nitrous Powders. Nitrate of potash 3j, tartar emetic gr. j, calomel gr. vj; divide into 6 powders.— Dose, one every 2 or 3 hours. [The proportion of the mercurial may be diminished.]

Pulvis Ferri Compositus. (Dr. Neligan.) Saccharated carbonate of iron 3ss, myrrh gr. xxiv, aromatic powder 3ss; mix, for 12 doses.

Use. In protracted infantile diarrhœa.

Pulvis Ferri et Ipecacuanhæ. (Dr. Ashwell.) Carbonate of iron gr. viij, ipecacuanha gr. j, mercury with chalk gr. ij. Use. Once or twice daily, in anemia.

Pulvis Ferro-Carbonicus. (Dauvergne.) Sulphate of iron 10 parts, charcoal 35 parts; mix.

Used, externally, in sychosis menti.

Pulvis Ipecacuanhæ et Opii. U.S. [Pulvis Ipecacuanhæ Compositus, L., E., D.] Dover's Powder. Opium and ipecacuanha, in powder, each, 3j, sulphate of potash 3j; rub them together to a very fine powder. [The Pulvis Doveri, P., comes nearer to the original form: sulphate of potash 3iv, nitrate of potash 3iv, ipecacuanha, extract of opium, liquorice root, each, 3j.]

Med. Prop. An admirable anodyne diaphoretic.

Use. In the phlegmasiæ generally, after proper depletion; in dysentery, diarrhœa, and hemorrhages.

Pulvis Jacobi. See Pulvis Antimonialis.

Pulvis Jalapæ Compositus. U.S., L., E., D. Powdered jalap 3j, cream of tartar 3ij.—Dose, 3ss to 3j.

Med. Prop. An active hydragogue cathartic.

Use. In inflammatory dropsies, and scrofulous diseases of the joints.

Pulvis Kino Compositus. L., D. Kino 3xv, cinnamon 3ss, hard opium 3j; rub them separately to a very fine powder, and then mix them. [Twenty grains contain one grain of opium.]

Med. Prop. Astringent, and slightly narcotic.

Use. In chronic dysentery and diarrhœa, and in passive hemorrhages.

Pulvis pro Cataplasmate. D. Flaxseed which remains after the expression of the oil, 1 part, oatmeal 2 parts. [The unpressed flaxseed meal is preferable.]

Pulvis Rhei Compositus. E. Gregory's Powder. Magnesia fbj, powdered ginger Zij, powdered rhubarb Ziv; mix thoroughly, and preserve in well-stopped bottles.—Dose, gr. v—x, for a child two or three years old.

Med. Prop. Laxative, cordial, and antacid.

Use. In infantile colic, and diarrhœa.

Pulvis Salinus Compositus. E., D. Pure chloride of sodium 3iv, sulphate of magnesia 3iv, sulphate of potash 3iij. Dry the salts separately, and triturate them together.—Dose, 3ij to 3ss.

Med. Prop. Aperient.

Use. In costive habits.

Pulvis Salinus Anticholericus. (Dr. Stevens.) Chlorate of potash gr. vij, muriate of soda gr. xx, carbonate of soda 3ss; mix, for one dose.—(Dr. O'Shaughnessy.) Phosphate of soda gr. x, chloride of sodium gr. x, carbonate of soda gr. v, sulphate of soda gr. x; mix for one dose.

Use. In cholera, with a view of supplying the saline elements to the blood.

Pulvis Scammonii Compositus. L., E., D. Scammony, dried extract of jalap, each 3ij, ginger 3ss; rub separately to a very fine powder, and mix.—Dose, gr. x—xx. [E. directs equal parts of scammony and cream of tartar to be mixed together.—Dose, gr. xx—xxx.]

Med. Prop. An active cathartic.

Pulvis Spongiæ. D. Beat the sponge, cut it into small pieces, and burn it in a covered iron vessel until it becomes black and friable; then reduce it to powder.

Med. Prop. Similar to Iodine, upon which its virtues depend.

Use. In goitre, and scrofulous glandular swellings.

Pulvis Stanni. U. S., E., D., P. Melt pure tin in an iron ladle, pour it into a warm iron mortar, and triturate it lightly with a warm pestle; separate the powder by a sieve, and treat the remainder as before.

Med. Prop. Anthelmintic.

Use. To expel tape-worm.

Pulvis Sternutatorius. (See Pulvis Asari Comp.)—Boeli's Cephalic Snuff. Valerian Zij, tobacco Zij, oil of lavender gtt. iij, oil of marjoram gtt. iij; mix!—(Pearson.) Asarabacca Zjss, marum Zjss, hellebore Zj; make into a very fine powder.—(Mialhe.) Sugar candy Zj, veratrine gr. j—ij; mix accurately.

Med. Prop. Irritant to the Schneiderian mucous membrane.

Use. As an errhine.

Pulvis Sulphuris Compositus. (Ratier.) Sulphur, eream of tartar, each \$\mathcal{z}\mathcal{j}\$, white sugar q. s.—Van Mon's Antidysenteric Powder. Sulphur \$\mathcal{z}\mathcal{j}\$, fennel seed \$\mathcal{z}\mathcal{j}\$, white sugar \$\mathcal{z}\mathcal{j}\$, gum Arabic \$\mathcal{z}\mathcal{j}\$; mix.—Swediaur's Pectoral Powder. Sulphur \$\mathcal{z}\mathcal{s}\$, liquorice \$\mathcal{z}\mathcal{j}\$, orris \$\mathcal{z}\mathcal{j}\$, benzoic acid \$\mathcal{j}\mathcal{j}\$, white sugar \$\mathcal{z}\mathcal{j}\$, oils of anise and fennel, each, \$\mathcal{z}\mathcal{t}\$.

PULVERES TONICÆ. Tonic Powders. The following are much used:

Powder of Columbo, Iron, &c. Powdered columbo, subcarbonate of iron, rhubarb, and ginger, of each 3j; mix, and divide into 12 powders.—Dose, 1 three times a day; in dyspepsia.

Powder of Columbo and Tartrate of Iron. Powdered columbo 3ss, tartrate of iron and potassa 3ij; mix and divide into 4 powders.—Dose, 1 every three or four hours, mixed in syrup.

Powder of Peruvian Bark, Snake-root, &c. Powdered cinchona 3ss, serpentaria 3j, bicarbonate of soda 3j; divide into 4 powders.—Dose, 1 every two or three hours, in obstinate intermittents.

Pulvis Tragacanthæ Compositus. L., E. Tragacanth zjss, gum Arabic zjss, starch zjss, white sugar ziij. Powder separately and mix.

Med. Prop. Demulcent.

Use. Chiefly for mixing heavy insoluble powders.

PYRETHRUM. U. S. (Sec.), L., E., D. Pellitory. The root of Anthemis Pyrethrum.

Med. Prop. A powerful irritant.

Use. Exclusively as a sialagogue in neuralgia of the face, and toothache, &c.

Quassia. U. S., L., E. [Quassia Excelsa, D.] Quassia. The wood of Quassia excelsa.

Med. Prop. and Use. Those of the pure bitter tonics.

QUASSINA. Quassine is the active principle of Quassia.

Quercus Alba. U.S. White-oak Bark. The bark of Quercus alba.

Med. Prop. A good astringent, and somewhat tonic.

Use. Chiefly externally, for a gargle in inflamed throat, and as a bath for children in marasmus and chronic diarrhœa; also as a wash for flabby ulcers.

Quercus Tinctoria. U. S. Black-oak Bark. The bark of Quercus tinctoria. [The Br. Phars. recognise the barks of Quercus robur and Q. pedunculata.]

Med. Prop. and Use. Very similar to the preceding; but the black-oak bark may produce irritation of the bowels, in consequence of containing quercitrin.

Quina vel Quinia. Quinine is procured by adding to a solution of the sulphate (disulphate) a solution of ammonia, in sufficient quantity to throw down the alkaloid; wash this with warm water, and dry it. To procure it in crystals, dissolve it in the smallest possible quantity of alcohol, and allow it to evaporate spontaneously in a warm place.

Med. Prop. and Use. See Quiniæ Sulphas.

Quina Impura. Coloured Quinine. Quinine Brute. Exhaust Peruvian bark by boiling it in water acidulated with muriatic acid; neutralize the decoction with milk of lime; dry the precipitate, and boil it repeatedly with rectified spirit; mix, and filter the solution, and distil off the spirit. The residue is im-

pure quinine, which M. TROUSSEAU considers superior to the sulphate.

QUINÆ ACETAS. P. Mix 100 parts of quinine with 150 parts of distilled water; heat the mixture, and add as much acetic acid as will dissolve the quinine, and render the solution slightly acid. Filter boiling, and set it aside to crystallize.

Med. Prop. and Use. As Quiniæ Sulphas.

QUINÆ ARSENIAS. (BOURIERES.) Dissolve 3jss of arsenic acid in 3vj of water; add 3v of pure quinine, and boil till the quinine is dissolved. Let the clear solution cool till crystals form, which purify by recrystallization.—Dose, ½th of a grain.

Med. Prop. As Arsenic.

Use. In obstinate intermittents, but inferior to arsenic.

QUINIÆ CITRAS. P. As Quinæ acetas; substituting citric acid. Med. Prop. and Use. As Quinæ Sulphas.

QUINÆ ET FERRI CITRAS. See Ferri et Quinæ Citras.

QUINÆ ET FERRI IODIDUM. (BOUCHARDAT.) Pour a strong solution of acid sulphate of quinine into a fresh solution of iodide of iron. Collect the precipitate, dry it quickly by pressing it between blotting paper, and protect it from the air.

Med. Prop. Similar to Ferri Iodidum.

QUINÆ IODIDUM. (RIGHINI.) Add, by drops, a solution of 24 parts of iodide of potassium in 8 of water, to a strong solution of 20 parts of bisulphate of quinine. Wash the precipitate quickly, and dry it in the shade.

Med. Prop. Tonic, alterative, and resolvent.

Use. In scrofulous enlargements of the glands.—Dose, gr. ss, to gr. jj.

Quinæ Murias vel Hydrochloras. P. Disulphate of quinine 10 parts, chloride of barium 3 parts; dissolve separately in boiling distilled water; mix the solutions, filter, evaporate till crystals begin to form on the surface, and set it aside to crystallize. [It may also be made by saturating dilute muriatic acid with quinine.]

Med. Prop. and Use. As Quiniæ Sulphas.

QUINÆ NITRAS. P. In the same way as the muriate, substituting the nitrate of barytes, for the chloride of barium.

Med. Prop. and Use. As Quiniæ Sulphas.

QUINIÆ SULPHAS. U.S., E., D., P. [Quinæ Disulphas, L.] Coarsely powdered yellow Calisaya bark fbiv, muriatic acid f3iij, lime, in powder, 3v, water Cong. v, sulphuric acid, alcohol, animal charcoal, each, q. s. Boil the bark in one-third of the water, mixed with one-third of the muriatic acid, and strain through linen. Boil the residue twice successively with the same quantity of acid and water as before, and strain; mix the decoctions, and, while hot, gradually add the lime previously mixed with 2 pints of water, stirring constantly until the quinia is completely precipitated. Wash the precipitate with distilled water, and having pressed and dried it, digest in boiling alcohol, repeating the digestion several times, till the spirit is no longer bitter. Mix the liquors, and distil off the alcohol until a brown viscid mass remains. Remove this from the vessel, and pour on it Cong. ss of distilled water, heat it to the boiling point, and add sulphuric acid q. s. to dissolve the impure alkali. Then boil the solution with 3 jss of animal charcoal, for two minutes, filter while hot, and set aside to crystallize. Should the liquid before filtration be entirely neutral, acidulate very slightly with sulphuric acid; if decidedly acid, add more animal charcoal. Separate the crystals from the liquor, dissolve them in boiling water slightly acidulated with sulphuric acid, add a little animal charcoal, filter, and set aside to crystallize. Wrap the crystals in bibulous paper, and dry them with a gentle heat. [L. directs the bark to be boiled with water and sulphuric acid, and the alkali to be precipitated with oxide of lead; E. directs sulphuric acid, and the alkali to be thrown down by carbonate of soda; D. directs sulphuric acid, and the quinia to be precipitated by lime.]

Med. Prop. It possesses the valuable tonic and febrifuge properties of the Peruvian bark, which it has almost superseded, since it can be given in much smaller doses, and is better borne by

the stomach. Twelve grains are about equivalent to one ounce of good bark.

Use. In all intermittent diseases, remittent fevers, especially of the malignant type, (the latter require very large doses,) also as a tonic, in typhoid diseases, suppurations, &c.

QUINÆ SULPHAS NEUTRALIS. Soluble Sulphate of Quinine. Dissolve 3j of disulphate (sulphate) of quinia in distilled water acidulated with f3ss of sulphuric acid, by the aid of heat, filter while hot, and crystallize by refrigeration.

Med. Prop. and Use. As the preceding. It is a supersulphate.

QUINÆ TANNAS. To a solution of any soluble salt of quinine add a solution of tannic acid; wash the precipitate with a little cold water, and dry it.

Med. Prop. and Use. Asserted by Dr. Ronander, to be a very efficient febrifuge; but it may be regarded as a superfluous preparation.

Quinæ Tartras. P. As the acetate, substituting tartaric acid. Med. Prop. and Use. As the Sulphate.

Quinæ Valerianas. (Prince L. L. Bonaparte.) To a cold solution of valerianic acid in distilled water, add a concentrated solution of quinine in strong alcohol to saturation, and evaporate spontaneously, or by a very moderate heat, till crystals are formed.—Dose. gr. ss, every 2 hours, in epilepsy, hemicrania, &c.

RANUNCULUS. U. S., (Sec.) Crowfoot. The cormus and herb of Ranunculus bulbosus.

Med. Prop. Acrid, and irritant.

Use. Externally, as a rubefacient.

RESINA. U. S., L., E., D. The residuum after the distillation of the volatile oil from the turpentines.

Med. Prop. Slightly stimulant.

Use. Externally, in the composition of plasters and cerates.

Resina Cannabis. Cannabine. The active principle of Indian hemp (Cannabis Indica).

Med. Prop. and Use. The genuine cannabin, as found in India,

appears to possess very decided narcotic properties of a sedative character. It has been used successfully in the treatment of traumatic tetanus, and other convulsive diseases.

RESINA JALAPÆ. P. Macerate powdered jalap root with repeated portions of rectified spirit till exhausted; filter, and distil the mixed tinctures; mix the residue with 20 or 30 times its weight of warm water, wash the resinous matter, and dissolve it in a little rectified spirit; then spread it on plates, and dry in a stove, till it becomes brittle.

Med. Prop. As Jalap, but more active in its operation.

RHAMNUS. L. [Rhamni Baccæ, E.; Rhamnus Catharticus, D.]

Buckthorn Berries. The fruit of Rhamnus catharticus.

Med. Prop. An irritant cathartic.—Very seldom employed.

RHEIN. The supposed active purgative principle of rhubarb.

RHEUM. U. S., L., E., D. Rhubarb. The root of Rheum palmatum, and other species of Rheum.

Med. Prop. Purgative, stomachic, and astringent.

Use. As a purge, in typhous complaints, diarrhœa, and dysentery; also in costiveness.

RHEUM USTUM. (Mr. Hoblyn.) Heat powdered rhubarb in an iron vessel, with constant stirring, till it becomes nearly black; then smother it in a covered jar.—Dose, gr. v—x, as an astringent in diarrhæa.

RHŒAS. L., E. [Papaver Rhœas, D.] Red Poppy. The petals of Papaver Rhœas.

Med. Prop. Very slightly narcotic.

Use. Chiefly to impart a fine red colour.

RHUS GLABRUM. U.S. (Sec.) Sumach. The fruit of Rhus glabrum.

Med. Prop. Astringent, and refrigerant.

Use. As a cooling drink in fevers; an infusion of the inner bark is useful as a gargle, in the mercurial sore mouth.

Rob. A name sometimes given to the inspissated juices of fruits.

Rosa Canina. L., D. [Rosæ Fructus, E.] Dog-rose. Hips. Fruit of Rosa canina.

Med. Prop. Nearly inert.

Use. Chiefly as an agreeable vehicle for other medicines.

Rosa Centifolia. U. S., L., E., D. Hundred-leaved Rose. The petals of Rosa centifolia.

Med. Prop. Slightly laxative.

Use. Chiefly in the preparation of rose-water. See Aqua Rosæ.

Rosa Gallica. U.S., L., E., D. Red Roses. The unexpanded petals of Rosa Gallica.

Med. Prop. Slightly astringent, and tonic.

Use. In infusion, as a pleasant vehicle for tonic and astringent medicines.

Rosmarinus. U. S., L., E. [Rosmarinus Officinalis, D.] Rosemary. The tops of Rosmarinus officinalis.

Med. Prop. Gently stimulant, and reputed emmenagogue.

Use. Scarcely employed, except as an adjunct.

Rubia. U. S. (Sec.) [Rubia Tinctorum, D.] Madder. The root of Rubia tinctorum.

Med. Prop. Emmenagogue, and diuretic.

Use. In amenorrhœa, dropsy, and jaundice; but chiefly as a dye.

Rubigo Ferri. See Ferri Rubigo.

Rubus Trivialis. U. S. (Sec.) Dewberry-root. The root of Rubus trivialis.

Med. Prop. Astringent, and tonic.

Use. An excellent indigenous astringent, in chronic diarrhoeas.

Rubus Villosus. U. S. (Sec.) Blackberry-root. The root of Rubus villosus.

Med. Prop. and Use. As the preceding.

Rumex. L. [Rumex Acetosa, D.] Sorrel. The leaves of Rumex acetosa [and R. acetosella].

Med. Prop. Refrigerant, and diuretic.

Use. In scorbutic complaints, and as a drink in fevers.

RUMEX AQUATICUS. D. Water Dock Root. The root of Rumex aquaticus.

Med. Prop. A mild tonic, and astringent.

Use. In some cutaneous eruptions.

RUMEX BRITANNICA. U. S. (Sec.) Water Dock. The root of Rumex Britannica.

Med. Prop. and Use. As the preceding.

RUMEX OBTUSIFOLIUS. U. S. (Sec.) Blunt-leaved Dock. The root of Rumex obtusifolius.

Med. Prop. and Use. As Rumex Aquaticus.

RUTA. U. S. (Sec.), L., E. [Ruta Graveolens, D.] Rue. The leaves of Ruta graveolens.

Med. Prop. Stimulant, antispasmodic, and increases the secretions.

Use. In hysteria, flatulent colic, and amenorrhœa.

Sabadilla. U. S., L., E. Cevadilla. The seeds of Veratrum Sabadilla.

Med. Prop. An acid emeto-cathartic.

Use. In tænia.

SABATIA. U. S. American Centaury. The herb of Sabatia angularis.

Med. Prop. Tonic.

Use. In infusion, as a prophylactic in intermittent and remittent fevers; also in convalescence.

SABINA. U. S., L., E. [Juniperus Sabina, D.] Savine. The tops of Juniperus Sabina.

Med. Prop. Stimulant, diaphoretic, emmenagogue, anthelmintic; externally, rubefacient.

Use. In amenorrhœa of an enfeebled character; chronic rheumatism; externally, as a cerate, to blistered surfaces to maintain the discharge.

SACCHARUM. U.S., L. [Saccharum Purum, E.; Saccharum

Officinarum, D.] Sugar. The sugar of Saccharum officinarum, refined.

Med. Prop. Demulcent.

Use. In making mixtures, and other pharmaceutical preparations.

SACCHARA. Medicated Sugars are usually made by moistening refined sugar with a strong alcoholic, ethereal, or aqueous solution of a medicinal substance, drying it very gradually, and afterwards reducing it to powder. Or, they are mere mixtures of sugar with other substances. A mixture of an essential oil with sugar is termed Oleo-saccharum.

SACCHARUM COMMUNE. E. Brown Sugar. Impure sugar, from Saccharum officinarum.

Med. Prop. A mild laxative.

Use. As an article of diet, in constipation.

SACCHARUM LACTIS. Sugar of Milk. Clarify whey by white of egg, and carefully evaporate the strained liquid by a gentle heat, that it may crystallize on cooling. Purify by animal charcoal and repeated crystallizations.—Not used in medicine.

SACCHARI FÆX. L., E. [Syrupus Empyreumaticus, D.] Molasses. The liquid residue after the crystallization of sugar from Saccharum officinarum.

Med. Prop. and Use. As Saccharum Commune.

SACCULI. Sachels. Little bags containing dry substances, commonly in coarse powder, used as local applications. Sometimes they are moistened with spirits, &c.

SACCULUS AROMATICUS. Spice Plaster. Cloves, cinnamon, allspice, of each, in powder, 3j, ginger, in powder, 3j; to be quilted between folds of flannel, and wet with hot spirits.

Use. Applied to the epigastrium, to relieve vomiting.

SAGAPENUM. L., D. A gum-resin, the product of an unknown plant.

Med. Prop. Stimulant, and antispasmodic.

Use. In amenorrhœa, hysteria, and chlorosis; externally, as a plaster, to indolent tumours.

SAGO. U. S., L., E. Sago is the prepared fecula of the pith of Sagus Rumphii, or Sago Palm.

Med. Prop. Nutritive, and demulcent.

Use. As an article of diet.

SAL ABSINTHII. Salt of Wormwood is now believed to be identical with carbonate of potassa.

SAL ÆRATUS. The name given in the U. S. to a salt made by placing the carbonate of potassa in a brewer's vat. Its composition is between the carbonate and bicarbonate of potassa.

SAL ACETOSELLÆ. Salt of Sorrel, or Binoxalate of Potassa.

SAL TARTARI. Salt of Tartar. See Potassæ Carbonas.

Salicina. P. Salicine, the active principle of willow-bark, is procured by adding to a strong decoction of that bark, milk of lime; filter, evaporate the liquor to a syrupy consistence, add alcohol to separate the gummy matter, filter, distil off the spirit, evaporate the residuum, and set aside to crystallize.

Med. Prop. Tonic, and febrifuge.

Use. As a substitute for Quinia, but very inferior.

SALIX. U. S. (Sec.), E., D. Willow. The bark of Salix alba, (and of S. caprea and S. fragilis, E., D.)

Med. Prop. and Use. As Salicina.

SALVIA. U. S. (Sec.) Sage. The leaves of Salvia officinalis.

Med. Prop. Astringent, tonic, and aromatic.

Use. Chiefly in infusion, as a gargle for sore throat.

Sambucus. U. S. (Sec.), L., E. [Sambucus Nigra, D.] Elder Flowers. The flowers of Sambucus Canadensis. (Sambucus nigra, L., E., D.)

Med. Prop. Diaphoretic, and discutient.

Use. As a discutient poultice. The berries, or their expressed juice, are employed in fevers.

SANGUINARIA. U.S. Bloodroot. The rhizoma of Sanguinaria Canadensis.

Med. Prop. Acrid, emetic, stimulant, and narcotic.

Use. Chiefly in chronic catarrh and pertussis.

- SANGUINARINA. (DR. DANA.) The active alkaline principle of Blood-root.
- Santalum. U. S. [Pterocarpus, L., E.; Santalum Rubrum, D.] Red Saunders. The wood of Pterocarpus santalinus. Use. To impart a red colour to tinctures.
- SAPO. U. S., L. [Sapo Durus, E., D.] Spanish or Castile Soap. Soap made with soda and olive oil.

Med. Prop. Laxative, antacid, and antilithic.

- Use. In combination with aloes and other purgatives, to obviate their acrimony; also as an antidote for mineral acids.
- SAPO VULGARIS. U. S. Soap made with soda and an animal oil.

 —Not used in medicine, except by enema.
- SAPO MOLLIS. L., E., D. Soft Soap. Made with olive oil and potash.
- Sapo Amygdalinus. P. Amygdaline Soap. Solution of caustic soda (at 1.334 sp. gr.) 3x, oil of almonds 3xxj; add the ley to the oil in very small portions, stirring frequently; leave the mixture for some days at a temperature of 64° to 68° F., stirring occasionally; then put it into moulds, till sufficiently solid. It should be exposed to the air for several weeks before it is used. Use. For the toilet.
- Sapo Animalis. Beef-marrow, boiled with 2 parts of water and half of soda ley; when saponified, add one-fifth of common salt, stir, remove the soap from the surface, and place it in moulds.

 Med. Prop. Very similar to Sapo Vulgaris.
- SAPO OLEI JECORIS ASELLI. (DESCHAMPS.) Cod-liver oil 3ij, caustic soda 3ij, water 3v; dissolve the soda in the water, and mix it with the oil.—An *ioduretted soap* is made by mixing with 3j of the above, 3j of iodide of potassium, dissolved in 3j of water.
- Med. Prop. and Use. As cod-liver oil.—The last-mentioned preparation also combines the remedial properties of Iodine.
- SAPO OLEI ELAIS GUINIENSIS. Palm Soap is prepared from

palm-oil and soda, to which tallow is added to increase its firmness.

Use. Chiefly for the toilet.

SAPO TEREBINTHINE. P. Starkey's Soap. Equal parts of subcarbonate of potash, oil of turpentine and Venice turpentine, triturated together till they combine.

Med. Prop. Stimulant.

SAPO WINDSOR. Windsor Soap is a scented soda soap made of one part of olive oil and nine parts of tallow.

Use. A very agreeable soap for the toilet.

SARSAPARILLA. U.S., D. [Sarza, L., E.] Sarsaparilla. The root of Smilax officinalis, and of other species of Smilax.

Med. Prop. Alterative, diuretic, and reputed anti-syphilitic.

Use. Its preparations are very much employed, in conjunction with iodine, in tertiary syphilis, chronic rheumatism, and cachectic conditions of the system.

SARSAPARILLIN, or SMILACIN. The crystalline active principle of Sarsaparilla may be procured by boiling the root in rectified spirits, distilling off two-thirds, filtering, and evaporating.

Sassafras Medulla. U.S. Sassafras Pith is obtained from the stems of Laurus Sassafras.

Med. Prop. Demulcent.

Use. The infusion forms a very pleasant application to the inflamed eyes and skin; internally, in inflammations of the mucous membranes.

Sassafras Radicis Cortex. U.S. [Sassafras, L., E.; Laurus Sassafras, D.] The bark of the root of Laurus Sassafras.

Med. Prop. Stimulant and diaphoretic; and reputed alterative. Use. In chronic rheumatism, &c.; but chiefly to impart flavour.

SCAMMONIUM. U. S., L., E., D. Scammony. The concrete juice of the root of Convolvulus Scammonia.

Med. Prop. A powerful drastic cathartic.

Use. In constipation, worms, and dropsy, -usually in combination.

Scilla. U. S., L., E. [Scilla Maritima, D.] Squill. The bulb of Scilla maritima.

Med. Prop. Expectorant, diuretic, and in large doses, emetocathartic.

Use. In chronic bronchial affections, and dropsy.

SCILLITIN. The active principle of Squill.

Scoparius. U. S. (Sec.), L. [Scoparium, E.; Sparticum Scoparius, D.] Broom. The fresh tops of Cytisus Scoparius.

Med. Prop. Diuretic; and, in large doses, emeto-cathartic. Use. In dropsies.

Scrophularia Nodosa. D. Figwort leaves. Leaves of Scrophularia nodosa.

Med. Prop. Anodyne, and diuretic.

Use. As a fomentation to painful tumours and ulcers; also to hemorrhoids.

SENEGA. U. S., L., E. [Polygala Senega, D.] Seneka. The root of Polygala Senega.

Med. Prop. Stimulant, expectorant, emmenagogue, diuretic, and, in large doses, emeto-cathartic.

Use. In chronic bronchial affections; in amenorrhœa, and rheumatism.

Senna. U. S., L., D. [Senna Alexandrina; Senna Indica, E.] Senna. The leaves of Cassia acutifolia., C. obovata, and C. elongata. (Also of C. lanceolata and C. Æthiopica. Guibourt.)

Med. Prop. A brisk cathartic.

Use. When the object is to deplete, as in fevers. Often employed in combination with salts and manna.

SERPENTARIA. U. S., L., E. [Aristolochia Serpentaria, D.] Virginia Snakeroot. The root of Aristolochia Serpentaria.

Med. Prop. A stimulant tonic, diaphoretic, and diuretic.

Use. In typhoid complaints; in tardy eruptions, and, combined with cinchona, in obstinate intermittents.

SESAMUM. U. S. (Sec.) Benne. The leaves of Sesamum orientale.

Med. Prop. Mucilaginous, and demulcent.

Use. One or two leaves steeped for a short time in a tumbler of cold water, forms a pleasant mucilaginous drink in the bowel affections of children.

Sevum, U. S., L., E. [Adeps Ovillus Præparatus, D.] Suet. The prepared suet of Ovis Aries (the sheep).

Med. Prop. Emollient.

Use. As a dressing to blisters; also in pharmacy, to give consistence to ointments and cerates.

SIMARUBA. U. S., L., E. [Quassia Simaruba, D.] Simaruba Bark. The bark of the root of Simaruba officinalis; (S. amara, E.; Quassia Simaruba, D.)

Med. Prop. and Use. The same as Quassia.

SINAPIS. U. S., L. [Sinapi, E.; Sinapis Alba; S. Nigra, D.]

Mustard. The seeds of Sinapis alba, and S. nigra.

Med. Prop. Laxative, when swallowed whole; when bruised, stimulant, diuretic, and emetic.

Use. As a laxative in dyspepsia with torpor of the bowels; as an emetic in cases of poisoning from the narcotics; also externally, as a rubefacient.

Soda Pura. P. Caustic Soda. Crystallized subcarbonate of soda 3xx, quick lime 3viij, water Ovj; boil for half an hour, strain, evaporate rapidly in a silver dish to dryness, and melt as directed for Potassa Fusa.

Med. Prop. and Use. As Potassa Fusa.

Sode Acetas. U. S., L., D. Usually manufactured by decomposing acetate of lime (made by saturating crude pyroligneous acid by chalk) by sulphate of soda. [D. directs carbonate of soda to be saturated by distilled vinegar, or diluted wood vinegar; evaporate to 1.276, and set aside to crystallize.]

Med. Prop. Diuretic, in moderate doses; in larger doses, cathartic.

Use. As Acetate of Potassa.

Sode Arsenias. P. Nitrate of soda 100 parts, arsenious acid 116 parts; mix exactly, heat to redness in a Hessian crucible, treat the residue with water, add carbonate of soda to the solution till it is alkaline; evaporate and crystallize. If the mother liquor is not alkaline, add subcarbonate of soda, and again evaporate. Dose, \(\frac{1}{6} \text{th} \) to \(\frac{1}{8} \text{th} \) of a grain.

Med. Prop. and Use. As Liquor Potassæ Arsenitis.

Soda. Boras. U. S., D. [Borax, L., E.] Borax. Biborate of Soda. Procured from native borax, or tincal, by calcination, solution, and crystallization. It is also made from native boracic acid, by saturating it with carbonate of soda.

Med. Prop. Refrigerant, and diuretic; reputed emmenagogue. Use. Chiefly externally, as a detergent, in aphthous sore mouth.

Sode Carbonas. U. S., L., E., D. The commercial carbonate of soda is thus designated by the U. S., and E. Phars.—L. directs fbij of the commercial salt to be boiled in Oiv of distilled water; strain the solution while hot, and set aside to crystallize.—D. prepares it in a similar manner from barilla.

Med. Prop. Antacid, antilithic, and resolvent.

Use. In dyspepsia, with acidity, in uric acid diathesis, in hooping-cough, and bronchocele.

Sodæ Carbonas Impura. L. [Sodæ Carbonas Venale; Barilla, D.] Commercial Sal Soda. Formerly obtained from barilla and kelp, the products of the incineration of certain marine plants; but at present, on a larger scale, by decomposing sulphate of soda by carbonate of lime, dissolving the impure carbonate of soda, thus formed, in water, straining the solution, and evaporating to obtain crystals.

Sodæ Carbonas Exsiccatus. U. S. [Sodæ Carbonas Exsiccata, L.; Sodæ Carbonas Siccatum, E., D.] Expose carbonate of soda, in a clean iron vessel, to heat till it is thoroughly dried, stirring constantly with an iron spatula; then rub it into powder.—Dose, 5 to 15 grains, three times a day.

Med. Prop. and Use. Similar to Sodæ Carbonas, but preferable, from its smaller bulk.

Sodæ Carbonatis Aqua. D. Dissolve carbonate of soda in distilled water, so as to form a solution of sp. gr. 1.024 (3j in Oj).—Dose, f3j—ij, in water q. s.

Med. Prop. and Use. As the preceding.

Sodæ Bicarbonas. U. S., E., D. [Sodæ Sesquicarbonas, L.] Put crystallized carbonate of soda, broken into fragments, into a wooden box having a transverse partition near the bottom, pierced with numerous small holes, and a cover, which can be tightly fitted on. A stream of carbonic acid is then allowed to pass through water into the box, until the carbonate is fully saturated.

Med. Prop. and Use. As the carbonate, but more agreeable to the taste.

Sodæ Et Potassæ Tartras. U. S., D. [Sodæ Potassio-Tartras, L., Potassæ et Sodæ Tartras, E.] Rochelle Salt. Dissolve Ibj of carbonate of soda in Ov of boiling water, and gradually add 3xvj of cream of tartar, in powder. Filter, and evaporate till a pellicle forms; then set aside to crystallize. Pour off the liquor, and dry the crystals on bibulous paper.

Med. Prop. Refrigerant, and cathartic; diuretic, in small and repeated doses.

Use. An excellent purgative in febrile affections.

Sode Murias Purum. E. Evaporate a filtered solution of common salt, skim off the crystals as they form, wash them quickly with cold water, and dry them.

Med. Prop. As common salt. See Sodii Chloridum.

Sode Phosphas. U. S., L., E., D. Bones burnt to whiteness, and powdered, fbx, sulphuric acid fbvj; mix in an earthen vessel, add gradually Cong. j of water, and stir them well together; digest for 3 days, occasionally adding a little water to replace that lost by evaporation, frequently stirring; then pour in Cong. j of boiling water, and strain through linen, gradually adding more boiling water, until the liquid passes nearly tasteless. Allow the dregs to subside, and pour off the clear liquor, which boil down to a gallon; heat the clear liquor in an iron

vessel, and add by degrees carbonate of soda (dissolved in boiling water), until effervescence ceases, and the phosphoric acid is completely neutralized; then filter, and set aside to crystallize. More crystals may be obtained by evaporating the remaining liquor, adding more carbonate of soda. Preserve the crystals in well-stopped bottles.

Med. Prop. A mild purgative, particularly adapted to cases of children.

SODÆ SULPHAS. U. S., L., E., D. Glauber's Salts. Dissolve the residuary salt after the preparation of muriatic acid, in boiling water, and saturate the excess of acid with carbonate of soda; evaporate, and crystallize.

Med. Prop. A refrigerant cathartic; diuretic, in small doses. Use. In fevers, &c.

Sodæ Bisulphas. Mix 10 parts of dried sulphate of soda, with 7 of strong sulphuric acid; heat the mixture gently in a crucible.

Med. Prop. As the last.

Sodæ Tartarizata Effervescens. Acidulated Alkali. Bicarbonate of soda ziv, tartaric acid ziv, refined sugar zxij, essence of lemon fzss. The powders to be separately dried at a moderate temperature, and the whole uniformly mixed.

Med. Prop. and Use. As the common soda-powders.

Sodii Bromidum. As Potassii Bromidum.

Sodii Chloridum. U. S., L. [Sodæ Murias, E., D.] Common salt is procured either in the solid state, from rock salt, or by evaporating native solutions, as saline springs, and sea-water.

Med. Prop. In small doses, tonic; in larger quantities, purgative, and anthelmintic; externally, slightly stimulant.

Use. Universally as a condiment; also an ingredient in the common laxative enema; also externally, as a fomentation for sprains and bruises.

Solidago. U. S. (Sec.) Golden-rod. The leaves of Solidago odorata.

Med. Prop. Aromatic, stimulant, and diaphoretic.

Use. In colic, and nausea.

Solution. Solution. This term is synonymous with Liquor.

Solutio Acidi Citrici. Citric acid 3ixss, water f\(\frac{7}{3} \text{xvj}. \] [This is about the average strength of lemon juice.]

Use. As Citric Acid.

Solutio Aconitinæ. (Dr. Turnbull.) Aconitine gr. viij, rectified spirit f\(\frac{7}{3} \)j.

Use. Externally, to the unbroken skin, in neuralgia, &c.

Solutio Atropiæ. (Mr. Wilde.) Atropia gr. j, rectified spirit mij, dilute nitric acid mj, distilled water f3j. [Stronger solutions contain 2 and 3 grs. of atropia.]

Use. One drop, applied to the conjunctiva of the lower lid, dilates the pupil.

Solutio Conii. (Dr. Paris.) Extract of hemlock 3j, tincture of hemlock f3j; water, at 120° F., Oss.

To be used 3 or 4 times a day, by inhalation, in irritation of the nasal passages.

Solutio Creasoti. The watery solution consists of 1 part of creasote to 80 parts of water. [A weaker solution, from 3 to 6 drops to Oj of water, is used for preserving pathological specimens.] The alcoholic solution consists of 1 part of creasote to 16 (10, Laennec) parts of alcohol.

Use. As Creasote.

Solutio Delphiniæ. (Dr. Turnbull.) Delphinia Əj, rectified spirit f\(\)ij.

For outward use.

Solutio Iodinii cum Conio. Dr. Scudamore's Solution for Inhaling. Iodine gr. vj, iodide of potassium gr. vj, rectified spirit 3ij, water 3v 3vj. From 3ss to 3v of this solution, with 3ss of tincture of hemlock (or the preserved juice), is to be added to water, at 120° F., in a glass inhaler, and used twice a day.

Solutio Veratriæ. (Dr. Turnbull.) Veratria 9j, rectified spirit 3 ij.

Use. Externally, in neuralgia. [See LIQUOR, for other solutions.]

SPIGELIA. U. S., L., E. [Spigelia Marilandica, D.] Pink-root. The root of Spigelia Marilandica.

Med. Prop. Anthelmintic, and narcotic.

Use. Extensively used, especially in the U.S., as a vermifuge.

Species. Mixtures of dried plants, or parts of plants, in a divided state, which, for convenience, are kept mixed for use.

Spiræa. U. S. (Sec.) Hardhack. The root of Spiræa tomentosa.

Med. Prop. Tonic, and astringent.

Use. In diarrhœa, and cholera infantum.

Spiritus. U. S., L., E., D. Spirits are alcoholic solutions of volatile principles, obtained by distillation. They are prepared chiefly from aromatic vegetable substances, the essential oils of which rise with the vapour of alcohol. Some of the oils, however, will not rise at the temperature of boiling alcohol, in which case proof spirit must be employed, which should always be free from impurities. Care should also be used to avoid the colour and empyreumatic flavour arising from the decomposition of the vegetable matter by heat; for which purpose, sufficient water must be added to cover the vegetable matter, after the alcohol shall have been distilled.

Spiritus Ætheris Nitrici. U. S., L., E. [Spiritus Æthereus Nitrosus, D.] Sweet Spirits of Nitre. Mix together in a large glass retort lbij of coarsely powdered nitrate of potassa, and Oixss of alcohol, and gradually pour in lbjss of sulphuric acid. Digest with a gentle heat, for 2 hours; then raise the heat, and distil a gallon. To the distilled liquor add Oj of diluted alcohol, and 3j of carbonate of potassa, and again distil a gallon. [L. and E. mix the nitric acid ready formed, with the alcohol, and distil.] The Sweet Spirits of Nitre of commerce is a mixture, in variable proportions, of hyponitrous ether and alcohol. It has been recommended by Dr. Hare, in order to insure uniformity, to prepare it by mixing together known quantities of pure hyponitrous ether and rectified spirit.

Med. Prop. Diaphoretic, diuretic, and antispasmodic.

Use. In febrile complaints, especially of children, attended with nervous disturbance.

Spiritus Ætheris Sulphurici. E. Mix together Oj of sulphuric ether and Oij of rectified spirit. See the following.

Spiritus Ætheris Sulphurici Compositus. U. S., L. Hoffman's Anodyne Liquor. Mix together sulphuric ether Oss, alcohol Oj, ethereal oil f3iij.—Dose, f3ss to f3ij.

Med. Prop. Antispasmodic, and anodyne.

Use. In low forms of fever, with nervous disturbance; in mild hysteria, &c.

Spiritus Ammoniæ. U. S., L., E., D. (Formerly Alcohol Ammoniatum.) Mix fbj of muriate of ammonia, in fine powder, with fbj of lime, (slaked with fzix of water,) and proceed in the manner directed for Solution of Ammonia, introducing fzxx of alcohol into the quart bottle instead of the water. Preserve in well-stopped bottles.—Dose, 10 to 30 drops in sweetened water. See the following.

Spiritus Ammoniæ Aromaticus. U. S., L., E., D. Aromatic Hartshorn. Mix together 3v of muriate of ammonia, 3viij of carbonate of potassa; cinnamon and cloves, bruised, each, 3ij, lemon peel 3iv, alcohol and water, each, Ov; distil off Ovijss.—Dose, gtt. xx to lx.

Med. Prop. Antacid, stimulant, and aromatic.

Use. In sick headache, hysteria, flatulent colic, and fainting.

Spiritus Ammoniæ Fætidus. L., E., D. Mix together 3x of muriate of ammonia, 3xvj of carbonate of potassa, Oiij of rectified spirit and water, each, and 3v of assafætida; distil, with a slow fire, Oiij.—Dose, gtt. xxx to f3j.

Med. Prop. As the preceding.

Use. In hysteria.

Spiritus Anisi. L. Aniseed 3x, proof spirit Cong. j, water Oij; distil Cong. j.

Med. Prop. and Use. As the Aromatics.

Spiritus Anisi Compositus. D. Macerate Ibss of bruised

anise seeds, and bruised angelica seeds, each, in Cong. j of proof spirit for 24 hours, with water q. s., to prevent empyreuma; distil Cong. j. (This is a simplification of the Irish usquebaugh.)

Spiritus Armoraciæ Compositus. L., D. Mix together 3xx of horseradish root, sliced, and dried orange peel, each, 3v of bruised nutmeg, Cong. j of proof spirit, and water Oij; distil, with a slow fire, Cong. j.

Med. Prop. and Use. A stimulant diuretic;—in the dropsy of drunkards.

Spirit of wine, at 863, lbvj; macerate for 2 days, and distil, by water-bath, to dryness.

Med. Prop. and Use. A pleasant aromatic.

Spiritus Bergami. P. From fresh bergamot peel, as Spiritus Aurantii.

SPIRITUS CAMPHORÆ. See Tinctura Camphoræ.

Spiritus Carui. L., E., D. Bruised caraway seeds Zxxij, proof spirit Cong. j, water Oij; mix, and, by a slow fire, distil Cong. j.

Med. Prop. and Use. As the former.

Spiritus Cassiæ. E. Cassia, in coarse powder, lbj; proceed as for Sp. Carui.

Med. Prop. and Use. As the former.

Spiritus Cinnamomi. L., E., D. Oil of cinnamom 3ij, proof spirit Cong. j, water Oj; mix, and, by a slow fire, distil Cong. j. (lbj of cinnamom bark may be substituted for the oil.)

Med. Prop. An agreeable aromatic cordial.

Use. In debility of the stomach.

Spiritus Juniperi Compositus. U. S., L., E., D. Bruised juniper berries Ibj, bruised caraway seeds and fennel seeds, each, 3jss, diluted alcohol Cong. j, water Oij; macerate the seeds in the alcohol for 24 hours, then add the water, and, with a slow fire, distil Cong. j.—A useful addition to diuretic infusions.

SPIRITUS LAVANDULÆ. U.S., L., E., D. Fresh lavender flowers

thij, alcohol Cong. j, water Oij; mix, and, with a slow fire, distil Cong. j. Used chiefly as a perfume; but the preparation usually sold under the name of lavender water, as a perfume, is not a distilled spirit, but an alcoholic solution of the oil, with the addition of other odorous substances. Mr. Brande gives the following as one of the most approved receipts for preparing it. Rectified spirits Cong. v, essential oil of lavender 3xx, essential oil of bergamot 3v, essence of ambergris (made by digesting 3j of ambergris and gr. viij of musk in Oss of alcohol) 3ss; mix them together.

Med. Prop. and Use. As the following.

Spiritus Lavandulæ Compositus. U. S., E., D. [Tinctura Lavandulæ Composita, L.] Lavender Compound. Spirit of lavender Oiij, spirit of rosemary Oj, bruised cinnamon 3j, bruised cloves 3ij, bruised nutmeg 3ss, red saunders, rasped, 3iij; macerate for 14 days, and filter through paper.—Dose, f3ss to f3j.

Med. Prop. A delightful carminative, and aromatic.

Use. In debility of the stomach, mild colic, and nausea; also as an adjuvant.

SPIRITUS LIMONIS. P. As Sp. Aurantii.

Spiritus Melissæ Compositus. P. Eau de Carmes. Fresh balm, in flower, Zxxiv, lemon peel Ziv, cinnamon Zij, cloves Zij, nutmeg Zij, coriander seed Zj, dry angelica root Zj, rectified spirit Ibviij; macerate for 8 days, and distil, by means of a water-bath, to dryness.

Med. Prop. and Use. As the preceding.

Spiritus Menthæ Piperitæ. L., D. [Spiritus Menthæ, E.]
Oil of peppermint Ziij, proof spirit Cong. j, water Oj; mix them,
and with a slow fire, distil Cong. j. [E. directs it to be prepared
from lbjss of fresh peppermint, as Sp. Carui.]

Med. Prop. and Use. As the essence of peppermint.

Spiritus Menthæ Pulegii. L., D. From the oil of European Pennyroyal, as Sp. Menth. Pip.

SPIRITUS MENTHÆ VIRIDIS. L., D. From the oil of spearmint, as Sp. Menth. Pip.

SPIRITUS MINDERERI. See Liquor Ammoniæ Acetatis.

Spiritus Myristicæ. U. S., L., E. [Spiritus Nucis Moschatæ, D.] Bruised nutmeg 3jj, diluted alcohol Cong. j, water Oj; mix them, and with a slow fire distil Cong. j.

Use. Chiefly to impart flavour.

Spiritus Pimentæ. U. S., L., E., D. Bruised pimento 3ij, diluted alcohol Cong. j, water Oj; macerate the pimento in the dilute alcohol for 24 hours, and with a slow fire distil Cong. j.

Use. As the aromatics generally.

SPIRITUS RECTIFICATUS. L., E., D. See Alcohol.

Spiritus Rosmarini. U. S., L., E. [Spiritus Rorismarini, D.]
Oil of rosemary 3ij, alcohol Cong. j, water Oj; mix them, and
with a slow fire distil Cong. j. [A superior product, is obtained
from the fresh herb.]

Use. As an ingredient in liniments.

Spiritus Rosmarinæ Compositus. (Wirt. Ph.) Hungary Water. Flowering rosemary lbiv, sage 3vj, ginger 3ij, proof spirit lbxij, water lbij; distil lbxj. [The original receipt for the Queen of Hungary's Water is said to be: Rectified spirit 3 parts, rosemary tops 2 parts; distil.]

Use. As a perfume.

Spiritus Tenuior. Proof Spirit. L. directs the density to be 0.920 at 62° F.; E., 0.912; D., 0.919, at 60° F.; P., (alcohol faible,) 0.923. It is about the strength of equal parts of alcohol (rectified spirit) and water.

SPIRITUS TEREBINTHINÆ. See Oleum Terebinthinæ.

SPIRITUS VINI GALLICI. Brandy. Spirit distilled from French wines.

Med. Prop. Stimulant.

Use. In very low forms of disease.

SPIRITUS VOLATILIS AROMATICUS. See Sp. Ammoniæ Aromaticus.

SPIRITUS VULNERARIUS. P. Arquebuscade. Fresh leaves of

basil, calamint, hyssop, marjoram, balm, mint, origanum, rosemary, sage, mother of thyme, common thyme, wormwood, angelica, fennel, rue, flowering tops of St. John's wort, and lavender, each, \$\mathcar{z}\$j, proof spirit Oiij. Macerate for 6 days, and distil Oij.

Med. Prop. A stimulant, aromatic compound.

Spongia. U. S., E. [Spongia Officinalis, D.] Sponge.

Med. Prop. and Use. See Spongia Usta.

Spongia Cerata. Sponge Tents. Fine sponge, washed and dried, is dipped into melted bees'-wax, pressed between heated tin plates, and left till cold. It is then cut into pieces of proper size, to be employed as tents.

Use. For dilating wounds and sinuses.

Spongia Preparata. Sponge is prepared by macerating it for several days in cold water, beating it in order to break up the concretions which it contains, and dissolving the remainder of the calcareous matter by muriatic acid diluted with 30 parts of water. It is thus rendered perfectly soft, and fit for surgical use. It may be bleached by steeping it in water impregnated with sulphurous acid, or by exposure, in the moist state, to the action of chlorine.

Sponge into pieces, beating it so as to separate any extraneous matters, then burning it in a close iron vessel until it becomes black and friable, and reducing it to a very fine powder.—Dose, 3j—iij.

Med. Prop. Alterative, &c., as Iodine.

Use. In goitre, and scrofulous glandular swellings.

STANNI PULVIS. See Pulvis Stanni.

Staphisagria. L. E. [Delphinium Staphisagria, D.] Stavesacre. Seeds of Delphinium Staphisagria.

Med. Prop. Emetic, and cathartic.

Use. Scarcely employed, owing to its violence.

STATICE. U. S. (Sec.) Marsh Rosemary. The root of Statice Caroliniana.

Med. Prop. Astringent.

Use. In gargles, for sore throat.

STILLINGIA. U. S. (Sec.) Queen's-root. The root of Stillingia sylvatica.

Med. Prop. Acrid, and purgative.

Use. In chronic skin diseases.

STRAMONII FOLIA; S. RADIX; S. SEMEN. U. S. [S. Folia; S. Semina, L.; S. Herba; S. Semina, E., D.] Leaves, root, and seed of Datura Stramonium, or Thorn-apple.

Med. Prop. Strongly narcotic.

Use. See Extractum Stramonii.

STRYCHNIA. U.S., L., E. Strychnine. Digest biv of rasped nux vomica in Cong. ij of water, acidulated with f3j of muriatic acid, for 24 hours; then boil for 2 hours, and express through a strong linen bag. Boil the residuum twice successively in the same quantity of acidulated water, each time straining, as be-Mix the decoctions, and evaporate to the consistence of a thin syrup; then add 3vj of powdered lime, previously mixed with Oj of water, and boil for 10 minutes, frequently stirring. Pour the mixture into a double linen bag, and having washed the precipitate well with water, press, dry, and powder it. Treat the powder repeatedly with alcohol, until deprived of its bitterness, mix the liquors, and distil off the alcohol by means of a water-bath. Mix the residue with water, and having applied heat, drop in sufficient dilute sulphuric acid to neutralize and dissolve the strychnia; then boil for a few minutes with purified animal charcoal, filter, evaporate, and crystallize. Dissolve the crystals in water, and precipitate the strychnia by means of a solution of ammonia. Lastly, dry the precipitate on bibulous paper; [or crystallize from a solution of the precipitate in boiling spirit, by evaporation, L.]—Dose, $\frac{1}{16}$ th to $\frac{1}{10}$ th of a grain, to begin with. [Strychnine is more readily obtained, and in greater purity, from St. Ignatius's Bean. 7

Med. Prop. and Use. As Nux Vomica.

STRYCHNIÆ ACETAS. Mix 1 part of powdered strychnia with 5 of boiling water, and add acetic acid till the strychnia is dissolved; filter, concentrate, and crystallize. A slight excess of acid favours the crystallization. [In the same way prepare the Muriate, Nitrate, Phosphate, and Sulphate.]

Med. Prop. and Use. As Strychnia.

STYRAX. U. S., L., E. [Styrax Officinale, D.] Storax. The concrete juice (balsamic) of Styrax officinale.

Med. Prop. Stimulant, and expectorant.

Use. In chronic pectoral complaints; in leucorrhœa, and gonor-rhœa.

Styracis, E.] Dissolve storax in alcohol, and strain the solution; then distil off the alcohol with a gentle heat, until the storax acquires the proper consistence.

Med. Prop. and Use. As the preceding.

Succinum. U. S., L., D. Amber is a fossil resin of vegetable origin, derived probably from extinct coniferæ. See Oleum Succini.

Succi Ætherizati. Bouchardat's Sucs éthérés. To the expressed juices of plants so much ether is added, that, after agitating them together, a thin layer of ether rises to the surface. After 24 hours, remove the supernatant ether by means of a pipette, filter the juice, and retain the ether. Preserve the etherized juice in well-stopped bottles, and when any of the juice is required, reverse the bottle, that the ether may remain behind. [These juices are said to retain their active properties for an indefinite period.]

Succi Alcoholati. Juices preserved with Spirits. These are prepared from fresh plants, either by adding rectified spirit to the expressed juice, or by digesting the bruised leaves with the spirit, before pressing. The latter method, which is adopted by the French Codex, is noticed under Tincturæ. According to the other method, the leaves of the mature plants, in flower, are bruised in a marble mortar, and placed in a powerful press.

The expressed juice is allowed to stand for 24 hours, and is then poured off from the dregs, and rectified spirit added. After standing 24 hours, the liquid is filtered. Mr. Bentley directs one measure of rectified spirit to be added to four of juice; Mr. Squire, one of spirit to two of juice. [The principal preserved juices, prepared according to the above process, are those of Aconite, Belladonna, Digitalis, Hemlock, Henbane, &c.]

Succi Expressi. Expressed Juices are prepared by bruising the plants in a marble mortar, and expressing them in an iron or wooden press. Some plants, as the labiate and those of a viscous nature, require the addition of a small quantity of water. The expressed juice should be filtered, if possible; but some require to be heated, to coagulate their albuminous matter. The acid juices of fruits are allowed to clear themselves by a slight fermentation, in a cool place, before filtration. Fruits are usually crushed by the hand over a hair sieve, and the mare pressed. [Apperts' method of preserving vegetable juices is to bottle them, secure the corks with wire, and place the bottles up to their necks in cold water, with straw between them to prevent breakage, allow the water to boil for a few minutes, remove the bottles, and when cool, cover the corks with wax or pitch.]

Succi Spissati. Inspissated Juices. See Extracta.

Succus Limonis. Lemon-Juice is best preserved by first separating the seeds immediately after expression, then allowing it to stand for a short time till a coagulable matter separates; then filter, and introduce into glass bottles, with a stratum of almond or other sweet oil upon its surface. Before closing the bottles, allow them to stand for 15 minutes in a vessel of boiling water. The juice may also be preserved by concentrating it, either by means of evaporation with a gentle heat, or by exposing to a freezing temperature, which congeals the watery portion, leaving the acid much stronger.

Med. Prop. and Use. As Citric Acid.

Succus Malorum. (Guy's H.) Verjuice. Bruise crab-apples

in a mortar, and express the juice. [P. directs it to be expressed from grapes.]

Med. Prop. Similar to the preceding.

Sulphur. U. S., L., E. [Sulphur Sublimatum, D.] Sublimed Sulphur. Flowers of Sulphur.

Med. Prop. Laxative, diaphoretic, and resolvent.

Use. In habitual constipation, chronic rheumatism, catarrh, and cutaneous eruptions, especially psora.

SULPHUR LOTUM. U. S., D. [Sulphur Sublimatum, E.] Washed Sulphur. Sublimed sulphur, thoroughly washed with water. Med. Prop. As the preceding.

Sulphur Præcipitatum. U. S. Lac Sulphuris. Milk of Sulphur. Mix together Ibj of sublimed sulphur with Ibjss of lime, recently slaked with a small portion of water; add Cong. ij of water, boil for 2 or 3 hours, occasionally adding water to preserve the measure, and filter. Dilute the filtered liquor with an equal bulk of water; then drop into it muriatic acid q. s. to precipitate the sulphur. Wash the precipitate with water till the washings are tasteless.—Dose, Zij—iij. [Much of the Lac Sulphuris of commerce contains a large quantity of sulphate of lime.]

Med. Prop. and Use. As Sulphur.

Sulphuris Iodidum. U. S. Rub together sulphur 3j, iodine 3iv, until thoroughly mixed. Put the mixture into a matrass, close the orifice loosely, and apply a gentle heat, so as to darken the mass without melting it. When uniformly dark throughout, increase the heat so as to melt the iodide, moving the matrass in different directions, so as to insure thorough mixing; allow it to cool, break it, and put the contents into well-stopped bottles.

Used as an ointment, in cutaneous diseases.

Suppositorium Laxativum. A cone of hard soap, two or three inches long, or of solidified molasses, is sometimes employed as a laxative suppository.

SYRUPI. Syrups are concentrated solutions of sugar in water,

either pure or medicated. Medicated syrups are prepared by incorporating sugar with vegetable infusions, decoctions, expressed juices, fermented liquors, or simple aqueous solutions. When the active matter is not readily soluble in water, or is volatilized or decomposed by a temperature of 212°, it is sometimes extracted by diluted alcohol, the spirit of which is subsequently driven off. Occasionally they are prepared by adding a tincture to simple syrup, and evaporating the alcohol. The sugar employed should always be the best refined, as it saves subsequent clarification. The quantity of sugar required is about 2 parts to 1 of the liquid; if in too small proportion, fermentation is apt to ensue; if too abundant, crystallization. The proper degree of concentration is 30° (Baumé's saccharometer), when boiling, and 35° when cold; or sp. gr. 1·261 boiling, and 1·319 cold.

Syrupus. U. S., L. [Syrupus Simplex, E., D.] Simple Syrup is made by dissolving fbijss of refined sugar in Oj of water, with the aid of heat, removing the scum, and straining while hot. [White of egg is sometimes employed to clarify it.]

Med. Prop. Demulcent.

Use. Chiefly as a vehicle for cough and other mixtures.

Syrupus Simplex Albus. P. Very white sugar fbij, water fbj; dissolve without heat, add 3ji of animal charcoal, and in 12 hours filter through paper.

Syrupus Aceti. E. French vinegar f\(\)\;\ z\, i, white sugar \(\)\;\ boil them together.

Med. Prop. and Use. As a refrigerant drink, with water, in fevers.

Syrupus Aceti Rubi Idæi. P. Raspberry vinegar Zxvj, sugar Zxxx; dissolve by a gentle heat in a glass vessel, and strain.

Med. Prop. and Use. As the preceding.

SYRUPUS ACIDI CITRICI. P. Dissolve Zijss of citric acid in 3v of water, and add to it 3xvj (f3xiij) of boiling syrup.

Use. As Lemon juice.

Syrupus Acidi Tartarici. P. As Syrupus Acidi Citrici.

Syrupus Adianthi. P. Syrop de Capillaire. Infuse Ziv of the herb maidenhair in Oijss of boiling water, add the freshed sugar, make a syrup, and clarify with white of egg. Pour the boiling syrup into a water-bath with Zij of maidenhair, infuse for 2 hours, and strain.

Use. In pectoral complaints.

Syrupus Allii. U.S., D. Macerate 3vj of fresh garlic, sliced, in Oj of distilled vinegar, in a glass vessel, for 4 days; then express the liquor, and let the dregs subside; add to the clear liquor fbij of refined sugar, and proceed as directed for Simple Syrup.—Dose, a teaspoonful, in infantile catarrhs, &c. See Allium.

Syrupus Allii Compositus. Dr. Willis's Syrup. Garlie, cut small, 3ss, bruised aniseed 3ss, elecampane root 3iij, liquorice root 3ij, brandy f3xxiv. Digest for 2 or 3 days; express, and form a syrup with the clear liquor and fbjss of refined sugar.

Med. Prop. and Use. As the preceding.

Syrupus Althææ. L., E., D. Fresh marshmallow root Zviij, water Oiv; boil to Oij, set aside for 24 hours, decant, and make a syrup with Ibijss of sugar. [P. directs it to be made with cold water, thus avoiding the extraction of the starch.]

Med. Prop. and Use. A simple demulcent.

Syrup. Blanch Ibj of sweet, and Ziv of bitter almonds, and rub them in a mortar to a very fine paste, with fZiij of water, and Ibj of white sugar. Mix the paste thoroughly with Oij fZxiij of water, strain with strong expression, and dissolve Ibv of white sugar in the strained emulsion, by the aid of a gentle heat. Strain the syrup through fine linen, allow it to cool, and keep it in well-stopped bottles, in a cool place. [P. adds Zvj of orange-flower water to the syrup, after the solution of the sugar.]

Med. Prop. Demulcent, nutritive, and slightly sedative.

Use. A very agreeable addition to pectoral mixtures.

Syrupus Armoraciæ. (Dr. Cullen.) Scraped horseradish 3j, hot water f\(\frac{7}{2}\) viij; digest, strain, and dissolve in the liquor twice its weight of sugar.—Dose, f\(\frac{7}{2}\) j, frequently, in hoarseness from relaxation.

Syrupus Aquæ Aurantii. P. Orange-flower water lbj, very white sugar lbij; dissolve, and filter. [Similar syrups are made from the distilled waters of cinnamon, rose, peppermint, and lettuce.]

Syrupus Aurantii Corticis. U. S. [Syrupus Aurantii, L., E., D.] Macerate 3ij of bruised orange-peel in Oj of boiling water, in a covered vessel for 12 hours, and strain; then add thijss of refined sugar, and proceed as directed for Simple Syrup. Use. Simply for its agreeable flavour.

SYRUPUS BALSAMI TOLUTANI. See Syrupus Tolutani.

Syrupus Belladonnæ. P. Extract of belladonna gr. xxxij, dissolve in 3iv of boiling water, and add it to 3xvj of boiling syrup.

Med. Prop. and Use. As Belladonna.

SYRUPUS CALCIS. (TROUSSEAU.) Slake 3ijss of quicklime with f3iij of water, and add it to 3xxxij of simple syrup; boil 10 minutes, and filter.

Used, diluted with 4 parts of simple syrup, in diarrhaa.

Syrupus Cerasorum. P. Depurated juice of cherries 3xvj, sugar 3xxx; make a syrup.

Use. Only to impart an agreeable flavour.

SYRUPUS CHONDRI. (MOUCHON.) Boil Zviij of carrageen in Oiij of water, for half an hour; strain with pressure and boil the clear liquor with lbx of syrup, till the whole is reduced to lbx.

Use. As a pleasant demulcent in colds, and irritations of the alimentary canal and bladder.

Syrupus Croci. L., E. Macerate 3x of saffron in Oj of boiling water for 12 hours, in a tightly covered vessel; strain and add lbiij of refined sugar.

Med. Prop. Demulcent and slightly stimulant.

Use. Chiefly for its fine colour.

Syrupus Cydoniæ. P. Clarified quince-juice 3xvj, sugar 3xxx; dissolve by a gentle heat. [In the same way syrups from other fruits are prepared.]

Use. As a demulcent.

Syrupus Digitalis. P. Infuse Əviij of foxglove leaves in 3xvj of boiling water for 6 hours; strain the liquor, and make a syrup with twice its weight of sugar. [Guibourt substitutes alcoholic extract of digitalis 1 part, dissolved in 8 parts of water; the filtered solution to be added to 300 parts of boiling syrup. It is twice the strength of the above.]

Med. Prop. and Use. As Digitalis.

Syrupus Ferri Iodidi. E. See Liquor Ferri Iodidi.

Syrupus Ferri Iodidi Compositus. (Ricord.) This may be made by adding the Syrupus Ferri Iodidi to the compound syrup of sarsaparilla. [Each f3 contains gr. iv of the iodide.]

Med. Prop. Tonic, and alterative.

Use. In cachectic conditions of the system.

Syrupus Gentianæ. P. Infuse Zxij of gentian in Zxviij of boiling water; strain, and make a syrup with Zxxxij of sugar. [A more elegant syrup is made by percolation with cold water.]

Med. Prop and Use. As Gentiana.

Syrupus Gummi Arabici. P. Syrop de Gomme. Gum Arabic (picked, and twice washed for an instant in cold water) bj, cold water bj; stir them occasionally, till the gum is dissolved, strain without expression, and mix it with bviij of syrup, of sp. gr. 1.252, boiling.

Med. Prop. and Use. An agreeable, nutritious demulcent.

Syrupus Hyoscyami. P. From the extract, as Syrupus Belladonnæ.

Med. Prop. and Use. As Hyoscyamus;—a good adjuvant to cough mixtures.

Syrupus Ipecacuanhæ. U.S., E. Macerate 3j of coarsely powdered ipecacuanha in Oj of diluted alcohol, for 14 days, and filter. Evaporate the filtered liquor to f3j, and again filter;

then mix it with Oij of simple syrup, and evaporate by means of a water-bath, to the proper consistence. Or the alcoholic infusion may first be obtained by displacement, employing 3j of powdered ipecac., and diluted alcohol q. s. to procure Oj of filtered liquor; evaporate this to f3j, and proceed as above. [P. dissolves the alcoholic extract in water, and then mixes it with syrup.]—One fluid ounce is about equal to 15 grains of the root.

Use. Chiefly as an expectorant, in cases of children.

Syrupus Krameriæ. U.S. Extract of rhatany 3ij, water Oj; dissolve and filter; then add refined sugar Ibijss, and proceed as for Simple Syrup.

Med. Prop. As Krameria.

Use. A convenient mode of administration to infants, in diarrhæa.

Syrupus Limonis. U.S., D. [Syrupus Limonum, L., E.] Strained lemon juice Oj, refined sugar fbij; add them together, and proceed in the manner directed for Simple Syrup.

Med. Prop. and Use. To form a cooling, grateful drink in fevers; also a pleasant adjuvant to certain medicines.

SYRUPUS LOBELIÆ. (Mr. Procter.) Vinegar of lobelia f\(\mathcal{z} \) vj, sugar \(\mathcal{z} \) xij. Dissolve by a gentle heat.

Med. Prop. As Lobelia.

Use. A good form for administering, in asthma.

Syrupus Malorum. From apple-juice, as Syrupus Cydoniæ.

Syrupus Marrubii. P. Dried horehound 3j, horehound water lbij; digest in a water-bath for 2 hours, strain, and add sugar lbiv.

Med. Prop. Demulcent, and reputed expectorant.

Use. A popular remedy in colds.

Syrupus Menthæ. From mint (the herb), as Syrupus Marrubii.—[Syrupus Aquæ Menthæ, as Syrupus Aquæ Aurantii.]

Syrupus Morphiæ Acetatis. P. Dissolve gr. iv of acetate

of morphia in a very little water, with a few drops of acetic acid, and mix the solution with Zxvj of cold syrup.

Med. Prop. and Use. An excellent anodyne demulcent, in pectoral affections.

SYRUPUS MORPHIÆ SULPHATIS. P. From sulphate of morphia as the last. [A fluid ounce of each contains 4th of a grain of the salt of morphia. They are intended as substitutes for Syrupus Papaveris.]

Syrupus Mori. L. Strained mulberry juice Oj, refined sugar fbijss; dissolve by a gentle heat, and set it aside for 24 hours: afterwards remove the scum, and pour off the clear liquid from the dregs. [In like manner syrups may be prepared from strawberries, raspberries, pine-apples, &c.]

Use. To impart a pleasant flavour to drinks.

Syrupus Opii. D. Extract of opium gr. xviij, boiling water f\(\frac{7}{3}\)viij; macerate, strain, and add sugar q. s. to make a syrup. \(-P\). Dissolve gr. xvj of extract of opium in \(\frac{7}{3}\)ss of water, add to it f\(\frac{7}{3}\)xvj of boiling syrup; boil for an instant, and strain.

Med. Prop. and Use. As the following.

Syrupus Papaveris. L., E. [Syrupus Papaveris Somniferi, D.] Poppy capsules (without the seeds) Ibij, water Cong. v; boil to Cong. ij; express, and again boil to Oiv; set aside for 12 hours, decant, boil to Oij, add sugar Ibv, and make a syrup. [The presence of the seeds is thought to dispose the syrup to ferment.]—Mr. Southall recommends it to be prepared with a cold infusion, made by percolation, the above proportions being employed.—P. directs 3iv of the alcoholic extract of poppies to be dissolved in 3iv of water, and the solution added to Ibiv of boiling syrup, continuing the boiling to a proper consistence.—Dose, f3ss to f3j, for an infant.

Med. Prop. and Use. A very mild anodyne and demulcent syrup, intended for infantile cases.

SYRUPUS PERSIMMONIS. Unripe persimmons, slightly crushed,

Zviij, boiling water Oj; infuse till cold, and strain. Boil with Zviij of sugar, to the consistence of syrup.

Med. Prop. Astringent.

Use. In chronic diarrhœa, and dysentery.

SYRUPUS PRUNI VIRGINIANÆ. (MR. PROCTER.) Macerate 3iv of wild cherry bark, powdered, with f3xij of water, and put it into a percolator, adding water till f3xij of liquid are obtained, retaining the first portions, if not clear; dissolve in this liquor lbij of white sugar.—Dose, a tablespoonful.

Med. Prop. Tonic, and sedative.

Use. An elegant substitute for the cold infusion.

SYRUPUS QUINIÆ SULPHATIS. P. Dissolve gr. xxxij of sulphate of quinine in 3ij of water, with a few drops of alcoholized sulphuric acid, and mix the solution with 3xvj of white syrup, without heat. (Lemon syrup may also be used.)

Use. A good form of administering quinia to children.

Syrupus Rhamni. L., E., D. Fresh juice of buckthorn berries (cleared by subsidence) Oiv, sliced ginger 3vj, bruised pimento 3vj, sugar fbiv; macerate the ginger and pimento with Oj of the juice for 4 hours, with a gentle heat, and strain; boil the rest to Ojss, and dissolve the sugar in the mixed liquors.

Med. Prop. A brisk cathartic.

SYRUPUS RHATANIÆ. See Syrupus Krameriæ.

Syrupus Rhei. U.S. Bruised rhubarb 3j; macerate in boiling water Oj for 24 hours, and strain; then add refined sugar fbij, and proceed in the manner directed for Simple Syrup.—Dose, f3j to f3ij, in infantile cases.

Med. Prop. As Rhubarb.

Syrupus Rhei Aromaticus. U. S. Spiced Syrup of Rhubarb. Bruised rhubarb \(\frac{2}{3}\)ijss, bruised cloves, bruised cinnamon, each, \(\frac{2}{3}\)ss, bruised nutmeg \(\frac{2}{3}\)ij, diluted alcohol Oij; macerate for 14 days, strain, evaporate by water-bath to Oj, filter while hot, and mix with Ovj of syrup previously heated. [It may also be prepared by percolation.]—Dose, f\(\frac{2}{3}\)j, in infantile diarrhaea.

Med. Prop. A warm stomachic laxative.

Syrupus Rheados. L., E. [Syrupus Papaveris Rheados, D.] To Oj of water, heated in a water-bath, add gradually bj of red poppy-petals; then remove from the fire, macerate for 12 hours, strain, and make a syrup with bijss of sugar.

Use. It has no medicinal virtues, and is very liable to ferment.

Syrupus Rosæ. L., D. [Syrupus Rosæ Centifoliæ, E.] Dried petals of the hundred-leaved rose \(\mathcal{z} \) vij, boiling water Oiij; macerate for 12 hours, and strain. Evaporate the strained liquid to Oij, strain, and dissolve in it Ibvj of white sugar.—E. directs the fresh petals of the damask rose to be infused in boiling water for 12 hours, and the sugar then added.

Med. Prop. Gently laxative.

Use. In infantile cases.

Syrupus Rosæ Gallicæ. E. Red rose petals Zij, boiling water Oj, pure sugar Zxx, infuse for 12 hours, strain, and dissolve the sugar by heat.

Med. Prop. Gently astringent.

Use. Chiefly to impart a fine red colour to mixtures.

Syrupus Rutæ. Infuse 3j of rue in Oj of boiling water, strain, and add twice its weight of sugar; or triturate 8 drops of the oil of rue with Oj of simple syrup. (Pereira.)

Syrupus Sambuci. Boil the juice of elder berries for an instant with twice its weight of sugar.

Med. Prop. and Use. As Sambucus.

Syrupus Sarsaparillæ. D. [Syrupus Sarzæ, L., E.] Sarsaparilla sliced, 3xv, boiling water Cong. j; macerate for 24 hours, boil down to Oiv, strain, add 3xv of sugar, and boil to a syrup.

Med. Prop. As Sarsaparilla; but not a good preparation.

Syrupus Sarsaparillæ Compositus. U. S. Powdered sarsaparilla fbij, rasped guaiacum Ziij, red roses, senna, and bruised liquorice root, each, Zij, diluted alcohol Ox; macerate for 14 days, express and filter; evaporate the tincture by water-bath, to Oiv, filter, add sugar (refined) fbviij, and dissolve it as recommended for Simple Syrup. To this, when cold, add oil of anise

my, oil of sassafras my, oil of partridge-berry mij, previously triturated with a little of the syrup.—Dose, f3ss. [For a more concentrated syrup, see Extractum Sarzæ Compositum.]

Med. Prop. and Use. An excellent preparation of sarsaparilla; much employed as an alterative in chronic disorders, especially secondary syphilis.

Syrupus Scillæ. U. S., E. Vinegar of squill Oj, refined sugar lbij; add them together, and proceed as directed for Simple Syrup.—Dose, f3ss to f3j, for an adult.

Med. Prop. A stimulant expectorant.

Use. In pectoral affections, after the subsidence of the inflammation.

Syrupus Scillæ Compositus. U. S. Hive Syrup. Squill and seneka, bruised, each, Ziv, tartrate of antimony and potassa gr. xlviij, water Oiv, sugar (refined) Ibiijss. Pour the water upon the squill and seneka, boil to one half, strain, add the sugar, evaporate to Oiij, and, while still hot, dissolve in it the tartar emetic. [It may also advantageously be prepared by displacement.]—Dose, 10 drops to a fluidrachm.

Med. Prop. Emetic, diaphoretic, expectorant, and cathartic. Use. In croup, and chronic pectoral affections.

Syrupus Sennæ. L. Senna Zijss, fennel seed Zx, boiling water Oj; digest for an hour, strain, and add manna Ziij, sugar Zxv, and boil to a syrup.—E. directs senna Ziv, boiling water fZxxiv; infuse for 12 hours, strain with strong expression, so as to obtain fZxxij of liquid. Concentrate Ibiv of treacle as far as possible in a vapour-bath, add to it the infusion, stirring carefully, and removing the vessel from the bath as soon as the mixture is complete.—U. S. directs senna Zij, fennel seed, bruised, Zj, boiling water Oj, sugar Zxv. The senna and fennel seed to be digested in the water with a gentle heat, for an hour, then strained, the sugar added, and then evaporated to the proper consistence.

Med. Prop. and Use. Intended chiefly as a cathartic for children.

SYRUPUS SENNÆ CONCENTRATUS. See Extractum Sennæ Fluidum.
Another method of preparing it is that of Mr. Duhamel: Mace-

rate $\overline{3}$ viij of coarsely powdered senna with $f\overline{3}$ xvj of diluted alcohol for 12 hours; put it into a displacement apparatus, and pour in water, till $f\overline{3}$ xlviij have passed. Evaporate to $f\overline{3}$ v, and dissolve in it $\overline{3}$ v of sugar; strain, and, when cold, add for each fluid ounce 2 drops of oil of fennel dissolved in a little comp. spirit of sulphuric ether.—Dose, $f\overline{3}$ ss.

Med. Prop. and Use. A good substitute for Senna, the griping qualities of which are obviated.

SYRUPUS SENEGÆ. U.S. Boil Ziv of bruised seneka with Oj of water to one half, strain, and add fbj of refined sugar, and proceed in the manner directed for Simple Syrup. [It may also be advantageously prepared by displacement.]

Med. Prop. and Use. A stimulant expectorant;—in chronic pulmonary complaints.

SYRUPUS SIMPLEX. See Syrupus.

Syrupus Stramonii. From the extract, as Syrupus Belladonnæ.

Syrupus Tolutani. U. S. [Syrupus Tolutanus, L., E. Syrupus Balsami Tolutani, D.] Tincture of Tolu f\(\mathcal{z}\)j, syrup Ojss; mix together, and, by means of a water-bath, evaporate to the proper consistence.

Med. Prop. Almost inert.

Use. To impart flavour to cough mixtures.

Syrupus Tragacanthæ. (Guibourt.) Make a mucilage of 3j of tragacanth with 3j of water; add 3vj more water, heat for half an hour in a water-bath, mix with it 3xxxij of syrup, boil to a due consistence, and strain through flannel.

Med. Prop. and Use. As Syrupus Acaciæ.

Syrupus Violæ. E., D. Fresh violets lbj, infuse for 24 hours in boiling water Oijss, in a covered glass or earthen vessel, strain without pressure, and add pure sugar lbvijss.

Med. Prop. and Use. A gentle laxative for infants.

SYRUPUS ZINGIBERIS. U. S., L., E., D. Mix together f\(\) iv of tincture of ginger and Cong. j of Simple Syrup, and, by means of a

water-bath, evaporate to the proper consistence. [The other Phars. direct it to be made from the infusion.]

Med. Prop. and Use. A warm stomachic addition to other preparations.

TABACUM. U. S., L., E. [Nicotiana Tabacum, D.] Tobacco.
The leaves of Nicotiana Tabacum.

Med. Prop. A powerful sedative narcotic, emetic, diuretic, and errhine.

Use. Chiefly in infusion, as an enema, in strangulated hernia, and ileus; also to the throat, in spasmodic croup; also as an ointment, in porrigo of the scalp.

TAMARINDUS. U. S., L., E. [Tamarindus Indicus, D.] Tamarinds. The preserved fruit of Tamarindus Indica.

Med. Prop. Laxative, and refrigerant.

Use. As a drink, in fevers.

TANACETUM. U. S. (Sec.) [Tanacetum Vulgare, D.] Tansy. The herb of Tanacetum vulgare.

Med. Prop. Tonic, and reputed emmenagogue, and anthelmintic. Use. In amenorrhœa.

Tapioca. U. S., E. The fecula of the root of Jatropha Manihot. Med. Prop. Nutritious, and demulcent.

Use. As an article of diet.

TARAXACUM. U. S., L., E. [Leontodon Taraxacum, D.] Dandelion. The root of Leontodon Taraxacum.

Med. Prop. Tonic, diuretic, and laxative; also alterative to the liver.

Use. Chiefly in disorders connected with a deranged secretion of the liver.

TEREBINTHINA. U. S. Turpentine. The juice of Pinus palustris, and other species of Pinus.

Med. Prop. Stimulant, diuretic, anthelmintic, and cathartic.

Use. As the essential oil. See Oleum Terebinthinæ.

TEREBINTHINA CANADENSIS. U.S., L. [Balsamum Canadense,

E., D.] Canada Turpentine. Canada Balsam. Balsam of Fir. The juice of Abies balsamea.

Med. Prop. and Use. As the preceding.

TEREBINTHINA CHIA. L., E., D. Chian Turpentine. The liquid resinous exudation of Pistachia Terebinthus.

Med. Prop. and Use. As Terebinthina.

TEREBINTHINA VENETA. E., D. Venice Turpentine. Liquid resinous exudation of Abies Larix.

Med. Prop. and Use. As Terebinthina.

Terebinthina Vulgaris. L., D. Common European Turpentine. The resinous liquid exudation of Pinus sylvestris.

Med. Prop. and Use. As Terebinthina.

Testa Præparata. U.S. [Testæ Præparatæ, L.] Prepared Oyster-shell. Free oyster-shell from extraneous matters, wash it with boiling water, and reduce it to powder; then prepare it in the manner directed for chalk. See Creta Preparata.

Med. Prop. Antacid, and absorbent; the minute quantity of animal matter blended with the carbonate of lime is supposed to render it more acceptable to a delicate stomach.

Use. In diarrhœa with acidity.

Thein, or Caffein, the active principle of tea and coffee, can be prepared from a decoction of tea or raw coffee, by adding to it a solution of subacetate of lead so long as it occasions a precipitate; filter the liquid, and pass sulphuretted hydrogen through it, so as to free it from the lead; again filter, and concentrate, that crystals may form.

THERIACA ANDROMACHI. Venice Treacle. This preparation consists of 61 ingredients, and contains 1 grain of opium in 75. The Theriaca of P. contains 72 ingredients, and contains 1 grain of opium in 72. [These preparations are now obsolete.]

TINCTURÆ. Tinctures, in a pharmaceutical sense, are solutions of medicinal substances in alcohol, or diluted alcohol, prepared by maceration, digestion, or percolation. Solutions in spirit of ammonia and ethereal spirit are also embraced under the same

denomination, but are severally distinguished as ammoniated tinctures and ethereal tinctures. Rectified spirit (alcohol of sp. gr. 0.835) is preferred as the solvent, when the substance to be extracted is nearly, or quite insoluble in water; diluted alcohol (proof spirit) is preferred where the substance is soluble in both alcohol and water. Tinctures are prepared by macerating or digesting the medicinal substances in the state of coarse powder, for a sufficient length of time, in the proper menstruum, or by percolation. [For the method of preparing tinctures of fresh plants, see Succi Alcoholati.] Tinctures should be preserved in closely-stopped bottles.

TINCTURA ACONITI. U. S. Aconite (dried leaves) Ziv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.—Dose, 20 or 30 drops. [Prepared also by percolation, with aconite Ziv, diluted alcohol q. s. to cause Oij of filtered liquor.]

Med. Prop. As Aconitum.

Use. A good preparation for internal use, if made from good leaves.

TINCTURA ACONITI CUM FOLIIS RECENTIBUS. P. Fresh aconite is bruised and macerated for 15 days with an equal weight of rectified spirits; then strain with expression, and filter the liquor.—Dose, 2 to 12 drops.

Med. Prop. and Use. As the preceding, but stronger.

TINCTURA ACONITI ÆTHEREA. P. Powdered aconite 3iv, sulphuric ether 3xvj; prepare by percolation, by means of an adopter.

Med. Prop. and Use. As the alcoholic tinctures.

TINCTURA ACONITI RADICIS CONCENTRATA. (DR. TURNBULL.)
Powdered aconite root fbj, rectified spirit fbij; digest for 7 days,
express the tincture, and filter.—For outward use only, in neuralgia.

TINCTURA ALOES. U.S., L. Powdered aloes 3j, liquorice 3iij, alcohol Oss, distilled water Ojss; macerate for 14 days, and filter through paper.

Med. Prop. and Use. As Aloes; -but little used.

TINCTURA ALOES ET MYRRHÆ. U. S., E. [Tinctura Aloës Composita, L., D.] Elixir Proprietatis. Powdered aloes Ziij, saffron Zj, tincture of myrrh Oij; macerate for 14 days, and filter through paper.

Med. Prop. Tonic, purgative, and emmenagogue.

Use. In chlorosis, and amenorrhœa with constipation.

TINCTURA AMMONIÆ COMPOSITA. L. Spiritus Ammoniæ Succinatus. Mastic 3ij, rectified spirit f3ix; digest until dissolved, decant, and add oil of lavender mxiv, oil of amber mxiv, stronger solution of ammonia Oj; mix. [Without the oil of amber, this forms the Eau de Luce of the shops.]

Med. Prop. Very much as Spiritus Ammoniæ;—stimulant and antispasmodic.

Use. Chiefly as a stimulant, applied to the nostrils.

TINCTURA ANGUSTURÆ. D. Powdered Angustura bark 3ij, rectified spirit f3xxxij; macerate for 7 days, and filter.

Med. Prop. and Use. As Angustura bark.

TINCTURA ANTISCORBUTICA. P. Tinctura Armoraciæ Composita. Horseradish root Zviij, black mustard seed Ziv, muriate of ammonia Zij, proof spirit Zxvj, compound spirit of scurvy grass Zxvj; macerate for a week.

Med. Prop. A stimulant tincture, employed in scurvy.

TINCTURA ANTIARTHRITICA. DR. GRAVES'S Gout Tincture. Orange-peel 3j, rhubarb 3j, powder of aloes and canella 3j, brandy Oij; digest for a week.—Dose, a spoonful, night and morning, with water.

TINCTURA ARNICÆ. (Prus. Ph.) Arnica flowers 3jss, spirit of wine (at 0.900) fbj; digest, and filter.

Med. Prop. and Use. As Arnica.

TINCTURA ARNICÆ ÆTHEREA. P. From Arnica flowers, as Tinctura Aconiti Ætherea.

Med. Prop. and Use. As Arnica.

TINCTURA AROMATICA. See Tinctura Cinnamomi Composita.

TINCTURA ASSAFŒTIDÆ. U. S., L., E., D. Assafœtida 3iv, alcohol Oij; macerate for 14 days, and filter through paper.

Med. Prop. As Assafœtida.

Use. To make the emulsion, by the addition of water.

TINCTURA ASTRINGENS. (Dr. COPLAND.) Catechu 3ss, myrrh 3ss, cinchona 3ij, balsam of Peru 3jss, spirit of horseradish 3jss, rectified spirit 3jss; digest.

Use. For sponginess of the gums.

TINCTURA AURANTII. L., E., D. Dried orange-peel Ziijss, proof spirit Oij; macerate 14 days, and strain.

Use. As an agreeable addition to infusions, decoctions, and mixtures.

TINCTURA BELLADONNÆ. U.S. Belladonna leaves 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation.]—Dose, 15 to 30 drops. [Other stronger tinctures are made by macerating the extract in proof spirit.]

Med. Prop. and Use. A good preparation, if made from the recently dried leaves; but very apt to be inefficient.

TINCTURA BELLADONNÆ ÆTHEREA. P. As Tinc. Aconiti Ætherea.

TINCTURA BENZOINI. P. Benzoin 3iv, rectified spirit Oj; digest for 6 days.

Med. Prop. and Use. As Benzoinum;—chiefly employed to flavour.

Tinctura Benzoini Composita. U. S., L., E. [Tinc. Benzoës Comp., D.] Benzoin \(\mathfrak{z}iij \), purified storax \(\mathfrak{z}ij \), balsam of Tolu \(\mathfrak{z}j \), powdered aloes \(\mathfrak{z}ss \), alcohol Oij; macerate for 14 days, and filter through paper. [This is identical with the \(Balsamum \) Traumaticum, \(Wade's \) Balsam, or \(Friar's \) Balsam.—Turlington's \(Balsam \) consists of the above ingredients, with the addition of Peruvian bark, myrrh, and angelica root.]

Used as a vulnerary.

TINCTURA BUCHU. D. [Tinc. Buku, E.] Leaves of the Diosma

crenata (Buchu) 3ij, proof spirit Oj; macerate for 7 days, and filter.

Med. Prop. As Diosma.

TINCTURA CAMPHORÆ. U. S., L., E., D. Camphor Ziv, alcohol Oij; dissolve.—Dose, 5 drops to fZj, in sugar and water.

—P. directs 1 part of camphor to 7 of spirit; and a weaker solution, consisting of 1 part of camphor to 40 of proof spirit.

Med. Prop. Stimulant, and antispasmodic; externally, anodyne. Use. In mild colic, and cholera; externally, to bruises, sprains, &c.

TINCTURA CANNABIS INDICÆ. (Bengal Ph.) Resinous Extract of Indian Hemp gr. xxiv, proof spirit f3j.—Dose, 5 to 10 drops in neuralgia, cholera, &c. In tetanus, much larger doses are given.

Med. Prop. A powerful sedative narcotic.

TINCTURA CANTHARIDIS. U. S., L., E., D. Spanish flies, bruised, 3j, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.—Dose, 20 drops to f3j, three times a day.

Med. Prop. and Use. The best form for the internal administration of cantharides, in chronic leucorrhœa, gleet, amenorrhœa, &c.; also externally, as a rubefacient.

TINCTURA CANTHARIDIS ÆTHEREA. P. Powdered Cantharides 3iv, acetic ether 3xxxij; macerate for 8 days in a stoppered bottle; express and filter.

Med. Prop. and Use. As the preceding.

TINCTURA CAPSICI. U. S., L., E., D. Cayenne pepper 3j, diluted alcohol Oij; macerate for 14 days, and filter through paper. [Also by displacement.]

Med. Prop. Stimulant.

Use. In low states of the system; malignant scarlet fever, and in the gastric insensibility of drunkards; also to the throat, in scarlatina maligna.

TINCTURA CAPSICI ACETATA. (VAN MONS.) Capsicum 3ij, vinegar 3xij, proof spirit 3xij; digest.

Med. Prop. and Use. As the last.

TINCTURA CARDAMOMI. U.S., L., E. Bruised cardamom Ziv,

diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [It may also be prepared by percolation.]

Med. Prop. and Use. As the following.

TINCTURA CARDAMOMI COMPOSITA. L., E., D. Cardamom seeds, free from capsules, 3ijss, caraway seeds 3ijss, cochineal 3j, cinnamon 3v, raisins, stoned, 3v, proof spirit Oij; macerate for 14 days, and filter.

Med. Prop. A very agreeable carminative tincture.

Use. In mild colic, nausea, debility of the stomach, &c.

TINCTURA CARYOPHYLLI. P. Digest bruised cloves with four times their weight of spirit at 0.863, for 15 days.

Med. Prop. A strong aromatic tincture.

TINCTURA CASCARILLÆ. L., E., D. Powdered Cascarilla 3v, proof spirit Oij; macerate for 14 days, and filter;—[17 days, E. and D., or by percolation.]

Med. Prop. and Use. As Cascarilla.

TINCTURA CASSIÆ. E. Cassia, in moderately fine powder, Ziijss, proof spirit Oij; digest for 7 days, strain, express strongly, and filter. [Or preferably, by percolation.]

Med. Prop. and Use. As Tinctura Cinnamomi.

TINCTURA CASTOREI. U. S., L., E., D. Castor, bruised, 3ij, alcohol Oij; macerate for 7 days, express, and filter through paper.

Med. Prop. Antispasmodic.

Use. In hysteria, and spasmodic affections.

Tinctura Castorei Ammoniata. E. Bruised castor Zijss, assafætida, in small fragments, Zx, spirit of ammonia Oij; digest for 7 days in a close vessel, strain, express strongly, and filter through paper. [This is the Elixir Fætidum of foreign pharmacopæias; and, with the addition of Zv of opium, it forms the Elixir Uterinum, or Elixir Castorei Thebaicum.]

Med. Prop. Stimulant, and antispasmodic.

Use. In hysteria, cramps of the stomach, &c.

TINCTURA CASTOREI ÆTHEREA. P. Castor 3iv, sulphuric ether 3xvj; macerate for 4 days in a well-stopped bottle, and filter.

Med. Prop. and Use. As the preceding.

TINCTURA CATECHU. U. S., L., E., D. Tinctura Japonica. Catechu Ziij, bruised cinnamon Zij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, E.]

Med. Prop. and Use. A grateful astringent, useful in chronic diarrhœa; often combined with chalk.

TINCTURA CINCHONÆ. U. S., L., E., D. Peruvian bark [yellow, L., E., D.] in powder, 3vj, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, allowing the bark to stand moistened with the spirit for 48 hours, and then displacing Oij of the tincture.]

Med. Prop. As Cinchona.

Use. Chiefly as an adjunct.

Tincture. Peruvian bark, in powder, [pale, L.; yellow, E.] 3ij, bruised orange-peel 3jss, bruised serpentaria 3iij, cut saffron 3j, red saunders 3j, diluted alcohol f3xx; macerate for 14 days, express and filter through paper. [Or by percolation, as the preceding.]—Dose, f3j—iv.

Med. Prop. An excellent cordial stomachic.

Use. In low forms of fever, and malignant intermittents; and in certain forms of dyspepsia.

TINCTURA CINNAMOMI. U. S., L., E., D. Bruised cinnamon 3iij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation.]

Med. Prop. and Use. As an aromatic astringent in diarrhœas.

TINCTURA CINNAMOMI COMPOSITA. U. S., L., E., D. Bruised cinnamon 3j, bruised cardamom seeds 3ss, bruised ginger 3ij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, as Tinc. Cinchonæ.]

Med. Prop. and Use. A stimulant cordial;—in spasm of the stomach, flatulence, and debility of the stomach.

Tinctura Colchici. L., E. [Tinctura Colchici Seminis, U. S.; Tinctura Seminum Colchici, D.] Bruised colchicum seeds 3v, proof spirit Oij; macerate for 14 days. (L.)—U. S. directs colchicum seeds, bruised, 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation as Tinctura Cinchonæ.]—Dose, f3ss to f3ij.—P. directs the dried cormus, one part to four of proof spirit.

Med. Prop. and Use. As Vinum Colchici, which is usually preferred.

TINCTURA FLORUM COLCHICI. Dr. WILSON'S Eau Medicinale.

Mix two parts of fresh juice of colchicum flowers with one of brandy; after a few days filter or decant.

Med. Prop. and Use. As Colchicum.

TINCTURA COLCHICI COMPOSITA. L. Bruised colchicum seeds 3v, aromatic spirit of ammonia Oij; macerate for 14 days, and filter.—Dose, $m \times x \times to f3j$.

Med. Prop. and Use. As Vinum Colchici, but more stimulating.

TINCTURA COLOMBÆ. U. S., D. [Tinctura Columbæ, L., E.] Columbo, bruised, 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation, as Tinctura Cinchonæ.]

Med. Prop. As Columbo.

Use. Generally as an adjuvant.

Tinctura Conii. U. S., L., E., D. Dried hemlock leaves \mathfrak{Z} iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, as the last.]—E. directs fresh hemlock \mathfrak{Z} xij, tincture of cardamom $\mathfrak{f}\mathfrak{Z}$ x, rectified spirit $\mathfrak{f}\mathfrak{Z}$ xxx; bruise, and press the hemlock, and transmit first the tincture, and then the spirit through the pressed residuum into the juice, gently adding water q. s. to displace the spirit remaining in the percolator.—P. directs a tincture from the fresh leaves, as Tinctura Aconiti.

Med. Prop. and Use. As Conium.

TINCTURA CONII ÆTHEREA. P. As Tinctura Aconiti Ætherea.

TINCTURA CROCI. E. Saffron, chopped fine, Zij, proof spirit Oij; prepare it either by percolation or digestion, as Tinctura Cinchonæ.

Use. To impart colour to mixtures.

TINCTURA CUBEBÆ. U. S., L. [Tinctura Piperis Cubebæ, D.] Bruised cubebs 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by displacement.]

Med. Prop. and Use. As Cubeba.

Tinctura Digitalis. U. S., L., E., D. Foxglove (leaves) 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by displacement, as Tinctura Cinchonæ.]—Dose, ten to twenty drops, three times a day, carefully increased, if necessary.

Med. Prop. and Use. A good form for administering Foxglove.

TINCTURA DIGITALIS ÆTHEREA. P. As Tinctura Aconiti Ætherea.

Med. Prop. and Use. As the preceding.

TINCTURA FERRI ACETATIS. D. Acetate of potash 2 parts, sulphate of iron 1 part; rub them together, dry with a moderate heat, triturate with 26 parts of rectified spirit, digest for 7 days in a stoppered bottle, shaking frequently, and decant.—Dose, mxx to f3j.

Med. Prop. and Use. As Ferri Acetas.

TINCTURA FERRI AMMONIO-CHLORIDI. L. Tinctura Ferri Ammoniati. Ammonio-chloride of iron (ammoniated iron) 3iv, proof spirit Oj; dissolve.

Med. Prop. A feeble and uncertain chalybeate.

TINCTURA FERRI CHLORIDI. U. S. [Tinctura Ferri Sesquichloridi, L.; Ferri Muriatis Tinctura, E.; Muriatis Ferri Liquor, D.] Muriated Tincture of Iron. Subcarbonate of iron (sesquioxide) lbss, muriatic acid Oj; mix them together, shaking the mixture occasionally, for 3 days; let the dregs

subside, pour off the liquor, and then add alcohol Oiij.—Dose, mx to xxx.

Med. Prop. An active and certain chalybeate; it also acts on the kidneys.

Use. As a tonic in scrofula; also in gleet, leucorrhœa, and dysuria dependent on spasm of the urethra; externally, to cancrum oris.

TINCTURA FERRI CHLORIDI ÆTHEREA. P. Teinture de Bestuchef. Dry perchloride of iron 3j, spirit of sulphuric ether 3vij; mix in a stoppered bottle, and keep it from the light.

Med. Prop. and Use. As the preceding.

TINCTURA FERRI PROTIODIDI. (CALLOUD.) Sulphate of iron 3j, iodide of potassium 3x; powder them separately, triturate together, and add rectified spirit Oj; filter, and keep in close bottles, quite filled. [Each f3 contains about 4 grs. of dry iodide of iron.]

Med. Prop. and Use. As Liquor Ferri Iodidi.

TINCTURA GALBANI. D. Galbanum, in small pieces, 3ij, proof spirit Oij; digest for 7 days, and filter.

Med. Prop. and Use. Similar to Tinctura Assafætidæ, but weaker.

TINCTURA GALLÆ. U. S., L. [Tinctura Gallanum, E., D.] Galls, bruised, 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation as Tinctura Cinchonæ.]

Med. Prop. A powerful astringent, but used more as a test than as a medicine.

TINCTURA GENTIANÆ COMPOSITA. U. S., L., E., D. Tinctura Amara. Bruised gentian 3ij, dried orange-peel 3j, bruised cardamom seeds 3ss, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation, as Tinctura Cinchonæ.]

Med. Prop. An elegant tonic, and stomachic.

Use. In dyspepsia, and as an adjunct to other bitters.

TINCTURA GUAIACI. U.S., L., E., D. Powdered guaiac lbss, alcohol Oij; macerate for 14 days, and filter through paper.

Med. Prop. As Guaiacum.

Use. Chiefly in dysmenorrhœa.

TINCTURA GUAIACI ALKALINA. (DR. DEWEES.) Guaiac (in powder) Ziv, carbonate of potassa Zjss, powdered pimento Zj, diluted alcohol fbj; digest for a few days.—Dose, a teaspoonful, 3 times a day, in dysmenorrhæa.

TINCTURA GUAIACI AMMONIATA. U. S., E., D. [Tinctura Guaiaci Composita, L.] Powdered guaiac ziv, aromatic spirit of ammonia Ojss; macerate for 14 days, and filter through paper.—Dose, fzj to fzij.

Use. In chronic rheumatism, and dysmenorrhœa.

TINCTURA HELLEBORI. U. S., L. [Tinctura Hellebori Nigri, D.] Black hellebore, bruised, 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.

Med. Prop. As Helleborus.

Use. Chiefly in amenorrhœa; but an uncertain remedy.

TINCTURA HELLEBORI ALBI. See Tinctura Veratri.

TINCTURA HUMULI. U. S., D. [Tinctura Lupuli, L.] Hops 3v, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.

Med. Prop. Tonic, stimulant, and narcotic.

Use. In the dyspepsia of drunkards, and in cases threatening mania à potu.

TINCTURA HYOSCYAMI. U. S., L., E., D. Henbane leaves 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation, as Tinctura Cinchonæ.]—Dose, f3ss to f3j.

Med. Prop. As Hyoscyamus.

Use. As a substitute for laudanum, in quieting coughs.

TINCTURA HYPERICI. Flowering tops of St. John's wort 3v, rectified spirit Oj; digest for 3 days.

Use. Chiefly as an application to wounds and bruises.

Tinctura Iodini. U. S., L., E., D. Iodine \(\frac{2}{3}\)j, alcohol Oj; dissolve the iodine in the alcohol, and preserve in closely-stopped bottles. [Coindet directs 1 part of iodine to 12 of rectified spirit.]—Dose, 10 to 20 drops. Most used externally, in erysipelas, chilblains, and tumours.

Med. Prop. See Iodinum.

TINCTURA IODINI COMPOSITA. U.S., L. Iodine 3ss, iodide of potassium 3j; dissolve them in Oj of alcohol.—Dose, 15 to 20 drops, in water.

Med. Prop. and Use. As Iodine;—a good preparation for internal use.

TINCTURA IRIDIS. Fresh powdered orris-root 1 part, rectified spirit 8 parts. (Sold as Esprit de Violettes.)

TINCTURA JALAPÆ. U. S., L., E., D. Jalap, in powder, Zviij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by displacement, as Tinctura Cinchonæ.]

Med. Prop. and Use. As Jalapa;—sometimes employed as an adjunct to purgative mixtures.

TINCTURA JAPONICA. See Tinctura Catechu.

TINCTURA KINO. L., E., D. Kino, in powder, Ziijss, rectified spirit Oij; macerate for 14 days, and filter. [It is apt to become gelatinous on keeping, and to lose its astringency.]

Med. Prop. and Use. As Kino.

TINCTURA KRAMERIÆ. U.S. Rhatany, in powder, 3vj, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, as Tinctura Cinchonæ.]

Med. Prop. and Use. As Krameria;—a good astringent preparation for combination with the chalk mixture.

TINCTURA LACTUCARII. E. Lactucarium, in fine powder, Ziv, proof spirit Oij; digest, or percolate.

Med. Prop. and Use. As Lactucarium.

TINCTURA LAVANDULÆ COMPOSITA. L. Spirit of lavender Ojss, spirit of rosemary Oss, cinnamon 3 ijss, nutmeg 3 ijss, red saun-

ders wood 3v; macerate for 14 days, and strain. [For U. S., E., and D., see Spiritus Lavandulæ Compositus.]

Med. Prop. and Use. Stimulant, and carminative;—in nausea, fainting, and debility of stomach.

TINCTURA LOBELIÆ. U. S., E. Dried lobelia (the herb) Ziv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.—Dose, fZj to fZij, in the paroxysms of asthma. Med. Prop. As Lobelia.

TINCTURA LOBELIÆ ÆTHEREA. E. Dried lobelia, in powder, 3v, spirit of sulphuric ether Oij; digest or percolate. [Whitlaw's Ethereal Tincture is: Dried lobelia fbj, rectified spirit Oiv, spirit of nitric ether Oiv, spirit of sulphuric ether 3iv; macerate for 14 days in a dark place, and filter.—Dose, my v to xx.]

Med. Prop. As the last, but inferior.

TINCTURA LUPULINÆ. U.S. [Tinctura Lupuli, E.] Lupulin 3iv, alcohol Oij; macerate for 14 days, and filter through paper.—Dose, f3j to f3ij. [It is preferable to Tinc. Humuli.]

Use. As Tinctura Lupuli.

TINCTURA MOSCHI. D. Musk, in powder, 3ij, rectified spirit Oj; digest for 7 days, and filter.—P. directs 3iv to Oj.

Med. Prop. This is too feeble to be of any use as an antispasmodic.

TINCTURA MYRISTICÆ COMPOSITA. Essence Cephalique, P. Nutmeg Zij, cloves Zij, cinnamon Zjss, pomegranate flowers Zjss, rectified spirit Oij; macerate for 15 days, and strain.

Med. Prop. A strong aromatic cordial.

TINCTURA MYRRHÆ. U.S., L., E., D. Myrrh, bruised, 3iv, alcohol Oiij; macerate for 14 days, and filter through paper.

Med. Prop. As Myrrha.

Use. Chiefly as an external application to indolent and flabby ulcers, and to spongy gums, and aphthous sore mouth.

TINCTURA MYRRHÆ ÆTHEREA. P. As Tinc. Castorei Ætherea. TINCTURA NUCIS VOMICÆ. D. Nux vomica, rasped, 3ij, recti-

fied spirit 3viij; macerate for 7 days, and filter.—Dose, 5 to 20 drops.

Med. Prop. As Nux Vomica, but inferior to the alcoholic extract.

TINCTURA OLEI MENTHÆ PIPERITÆ. U.S. Essence of Peppermint. Oil of peppermint f\(\mathfrak{z}\) j, dissolve it in Oj of alcohol.—
Dose, 10 to 20 drops.

Med. Prop. As Mentha Piperita.

Use. A very convenient form for internal use, given dropped on loaf sugar.

TINCTURA OLEI MENTHÆ VIRIDIS. U.S. Essence of Spearmint. As the last, substituting oil of spearmint.

TINCTURA ODONTALGICA. Tincture of opium 3j, sulphuric ether 3iij, oil of cloves 3 drops.

Use. For toothache; applied to the carious tooth.

Tinctura Opii. U. S., L., E., D. Laudanum. Thebaic Tincture. Powdered opium Zijss, diluted alcohol Oij; macerate for 14 days, express and filter through paper.—L. directs powdered opium Zij, proof spirit Oij (imp. meas.).—E. directs sliced opium Zij, to be digested in fZxiijss of water, at near 212°, for 2 hours, break it down with the hand, strain, and express; then macerate the residuum in fZxxvij of rectified spirit for 24 hours; strain, express, and mix together the two infusions, and filter.—D. is the same as U. S.—Dose, 25 drops, equivalent to gr. j of opium.

Med. Prop. As Opium.

Use. The most commonly employed preparation of opium, both internally and externally.

TINCTURA OPH ACETATA. U.S. Opium 3ji, to be rubbed up with vinegar f3xij; then add alcohol Oss; macerate for 14 days, express, and filter through paper.—Dose, equivalent to gr. j of opium, mx, or 20 drops.

Med. Prop. and Use. As Tinctura Opii.

TINCTURA OPII AMMONIATA. E. Scotch Paregoric. Benzoic acid and saffron, of each, 3vj, opium sliced 3ss, oil of anise 3j,

spirit of ammonia Oij; digest for 7 days, and then filter. [80 minims are about equivalent to gr. j of opium.]

Med. Prop. and Use. As the following, but somewhat uncertain.

Tinctura Opii Camphorata. U. S., E., D. [Tinc. Camphoræ Composita, L.] Paregoric Elixir. Powdered opium and benzoic acid, of each, 3j, oil of anise f3j, clarified honey 3j, camphor 3j, diluted alcohol Oij; macerate for 14 days, and filter through paper. [Half a fluid ounce contains very nearly one grain of opium.]—Dose, f3j, or more.

Med. Prop. Anodyne, and antispasmodic.

Use. In diarrhœa, nausea, slight colic, coughs, and in infantile cases.

[The following formulæ are given by the Phila. Col. of Pharmacy for Bateman's Pectoral Drops, and Godfrey's Cordial:

Bateman's Drops. Diluted alcohol Cong. iv, red saunders, rasped, 3ij; digest for 24 hours, filter, and add powdered opium 3ij, powdered catechu 3ij, camphor 3ij, oil of anise f3iv; digest for 10 days.—It contains about gr. ij of opium to the f3.

Godfrey's Cordial. Tincture of opium Ojss, sugar-house molasses Oxvj, alcohol Oij, water Oxxvj, carbonate of potassa 3 ijss, oil of sassafras f3iv; dissolve the carbonate of potassa in the water, add the molasses, and heat over the fire till they simmer; remove the scum, and then add the laudanum and oil of sassafras, well mixed together.—It contains rather more than gr. j of opium to the f3.]

TINCTURA QUASSIÆ. U.S., E., D. Rasped quassia Zij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.

Med. Prop. and Use. As Quassia;—as an adjunct to tonic infusions and mixtures.

TINCTURA QUASSIÆ COMPOSITA. E. Bruised cardamom seed and bruised cochineal, of each, 3ss, powdered cinnamon and chipped quassia, of each, 3vj, raisins 3vij, proof spirit Oij; digest for 7 days.

Med. Prop. Tonic, and aromatic.

Use. As the former.

TINCTURA RHEI. U. S., E. Bruised rhubarb 3iij, bruised cardamom seeds 3ss, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, as Tinc. Cinchonæ.]

Med. Prop. and Use. As Rheum.

TINCTURA RHEI ANISATA. (DR. COPLAND.) Rhubarb and liquorice-root, of each, bruised, Zij, aniseed and sugar, of each, Zj, proof spirit Oij; macerate for 14 days.

Med. Prop. and Use. As Tinc. Rhei Composita.

TINCTURA RHEI COMPOSITA. L., D. Sliced rhubarb Zijss, bruised liquorice-root Zvj, sliced ginger Ziij, saffron Ziij, proof spirit Oij; macerate for 14 days, and strain.

Med. Prop. Laxative, and carminative.

TINCTURA RHEI ET ALOES. U. S., E. Elixir Sacrum. Bruised rhubarb 3x, powdered aloes 3vj, bruised cardamom seeds 3ss, diluted alcohol Oij; macerate for 14 days, express, and filter through paper.

Med. Prop. Stomachic, laxative, and emmenagogue.

Use. In amenorrhœa with constipation.

TINCTURA RHEI SACCHARATA [or EXTRACTUM RHEI FLUIDUM]. Coarsely powdered rhubarb \(\mathcal{z}\) viij is to be introduced into a percolator; pour in diluted alcohol Oij, returning it till the rhubarb is exhausted. Evaporate to f\(\mathcal{z}\) vss, and then dissolve in it white sugar \(\mathcal{z}\) v. The resulting liquid should measure f\(\mathcal{z}\) viij.

Med. Prop. and Use. A strong and certain preparation of rhubarb.

—Dose, f3j.

TINCTURA RHEI ET GENTIANÆ. U. S., E. Bruised rhubarb 3ij, bruised gentian 3ss, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation, as Tinc. Cinchonæ.]—Dose, f3j—iv.

Med. Prop. Stomachic, laxative, and tonic.

Use. Where a purgative is required in low states of the system.

TINCTURA RHEI ET SENNÆ. U.S. Warner's Gout Cordial. Bruised rhubarb 3j, senna 3ij, bruised coriander and fennel-seeds, each, 3j, red saunders 3ij, saffron and liquorice, each 3ss, raisins

(stoned) lbss, diluted alcohol Oiij; macerate for 14 days, express, and filter through paper.—Dose, f3ss, and upwards.

Use. As a stomachic purgative.

TINCTURA RHOIS TOXICODENDRI vel RADICANTIS. P. From the fresh leaves of the Poison Oak, as Tinc. Aconiti cum Fol. Recent.—Dose, 5 to 10 drops.

Med. Prop. and Use. See Toxicodendron.

TINCTURA SABADILLÆ. (TURNBULL.) Digest the seeds of cevadilla (freed from their capsules, and bruised) for 10 days, in as much rectified spirit as will cover them.

Use. For external use only, in rheumatism, &c.

TINCTURA SACRA. See Vinum Aloës.

TINCTURA SANGUINARIÆ. U.S. Bruised blood-root 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation.]

Med. Prop. Emetic in full doses, alterative in small quantities.

TINCTURA SAPONIS. P. White soap Ziij, subcarbonate of potash Zj, proof spirit Zxij; dissolve.

Med. Prop. and Use. An emollient and slightly stimulant embrocation.

TINCTURA SAPONIS. P. White soap \(\mathfrak{z}\) iij, subcarbonate of potash \(\mathfrak{z}\)j, proof spirit \(\mathfrak{z}\)xij; dissolve.

Med. Prop. and Use. An emollient, slightly stimulant embrocation.

TINCTURA SAPONIS CAMPHORATA. U. S. [Linimentum Saponis, L., E., D.] Camphorated Tincture of Soap. Castile soap, in shavings, Ziv, camphor Zij, oil of rosemary fZss, alcohol Oij; digest the soap with the alcohol by means of a water-bath, till it is dissolved, filter, and add the camphor and oil.

Med. Prop. and Use. An anodyne and mild rubefacient embrocation;—in sprains, bruises, and local rheumatism.

TINCTURA SAPONIS TEREBINTHINATA. P. Baume de vie externe. White soap Ziij, oil of turpentine Ziij, spirit of wild thyme Ibij, water of ammonia Zij.

Med. Prop. A stimulant embrocation.

TINCTURA SCAMMONII. P. Scammony Ziv, rectified spirit Oj; digest.

Med. Prop. and Use. As Scammonium.

TINCTURA SCILLÆ. U. S., L., E., D. Squill 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation, as Tinctura Cinchonæ.]—Dose, 20 to 40 drops.

Med. Prop. and Use. It possesses all the diuretic and expectorant virtues of Squill.

TINCTURA SENNÆ COMPOSITA. L., D. Elixir Salutis. Senna 3iijss, caraway seeds 3iijss, cardamom seeds, bruised, 3j, raisins 3v, proof spirit Oij; macerate for 14 days, and strain.

Med. Prop. A warm, cordial purgative.

Use. In constipation with flatulence.

Tinctura Sennæ Et Jalapæ. U.S. [Tinctura Sennæ Composita, E.] Senna Ziij, powdered jalap Zj, bruised caraway and coriander seeds, each, Zss, bruised cardamoms Zij, refined sugar Ziv, diluted alcohol Oiij; macerate for 14 days, express, and filter through paper. [Also by percolation.]—This preparation, as well as the preceding one, is an imitation of the old Elixir Salutis, which, however, is said to have contained guaiacum.

Med. Prop. and Use. As the preceding.

TINCTURA SERPENTARIÆ. U. S., L., E., D. Bruised Virginia snake-root 3iij, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation.]

Med. Prop. and Use. As Serpentaria;—a useful addition to the infusion of cinchona.

TINCTURA STAPHISAGRIÆ CONCENTRATA. (DR. TURNBULL.)
Digest stavesacre seeds in twice their weight of rectified spirit.
For external use only, in neuralgic and rheumatic affections.

TINCTURA STRAMONII. U. S. Bruised stramonium seeds 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation.]—Dose, 20 to 40 drops. Med. Prop. and Use. As Stramonium.

TINCTURA SUCCINI. P. Amber, in fine powder 3j, rectified spirit f3xvj; digest for 6 days, and filter. [The ethereal tincture, as Tinctura Castorei Ætherea.]

TINCTURA TOLUTANI. U.S. [Tinc. Tolutana, E.; Tinc. Balsami Tolutani, L., D.] Balsam of Tolu Ziij, alcohol Oij; macerate until the balsam is dissolved, and filter through paper.

Med. Prop. As Tolutanum.

Use. As an adjuvant to cough mixtures.

TINCTURA VALERIANÆ. U.S., L., E., D. Bruised Valerian root 3iv, diluted alcohol Oij; macerate for 14 days, express, and filter through paper. [Also by percolation.]

Med. Prop. As Valeriana.

Use. As an antispasmodic; but it cannot be used in full doses, without stimulating too much.

TINCTURA VALERIANÆ ÆTHEREA, [or EXTRACTUM VALERI-ANÆ FLUIDUM.] Coarsely powdered valerian root (English) 3viij is to be uniformly packed in a percolator; add, gradually, alcohol f3xij, and sulphuric ether f3iv, previously mixed together. Pour in diluted alcohol q. s. to displace the ethereal menstruum, which is to be set aside in a shallow vessel to evaporate spontaneously. More diluted alcohol is now poured in, till f3x of the liquid have passed. When the first (ethereal) liquid has been reduced to f3vj, the two are to be mixed, and allowed to stand for a few hours, when they are to be filtered.—Dose, f3j.

Med. Prop. and Use. An excellent preparation of Valerian, well adapted for cases requiring a mild antispasmodic, from the smallness of the dose.

TINCTURA VALERIANÆ ÆTHEREA. P. Valerian 3iv, ether f3xvj; by percolation.

Med. Prop. and Use. As the preceding.

TINCTURA VALERIANÆ AMMONIATA. U. S., E., D. [Tinc. Valerianæ Composita, L.] Bruised valerian root 3iv, aromatic spirit of ammonia Oij; macerate for 14 days, express, and filter

through paper. [Also by percolation.]—Dose, f3j to f3ij, in hysteria, and other nervous affections.

TINCTURA VERATRIÆ. (DR. TURNBULL.) Veratria Đj to 3j, rectified spirit f\(\mathcal{z} \) ij.

For external use only, in neuralgia.

TINCTURA ZINGIBERIS. U. S., L., E., D. Bruised ginger Zviij, alcohol Oij; macerate for 14 days, express, and filter through paper. [Or by percolation.] The Br. Phars. direct a much weaker tincture,—Zijss of ginger to Oij (imp. meas.) of rectified spirit. [This is the Essence of Ginger of the shops.]

Med. Prop. An excellent stimulant carminative.

Use. In debility of stomach, flatulence, &c.

TOLUTANUM. U.S. [Balsamum Tolutanum, L., E.; Toluifera Balsamum, D.] Balsam of Tolu. The juice of Myroxylon Toluiferum.

Med. Prop. A stimulant tonic, and expectorant.

Use. In chronic pectoral affections.

TORMENTILLA. U. S. (Sec.), L., E. [Tormentilla Officinalis, D.]

Tormentil. The root of Potentilla Tormentilla.

Med. Prop. and Use. As the Astringents.

TOXICODENDRON. U. S. (Sec.), L. [Rhus Toxicodendron, D.]

Poison Oak. The leaves of Rhus Toxicodendron. [The Rhus

radicans and R. Vernix have similar properties.]

Med. Prop. Acrid, excitant, and narcotic.

Use. In paralysis, and chronic skin diseases; but uncertain.

TRAGACANTHA. U. S., L., E. [Tragacantha Gummi, D.] Tragacanth. The concrete juice of Astragalus verus.

Med. Prop. Demulcent.

Use. Chiefly in pharmacy, for making troches.

TRIOSTEUM. U. S. (Sec.) Fever-root. The root of Triosteum perfoliatum.

Med. Prop. Cathartic, emetic, and diuretic.

TRITICUM HYBERNUM, D. [Farina, L., E.] Wheat Flour. Flour of the seeds of Triticum vulgare, or T. hybernum.

Med. Prop. Externally, as a cooling application to the skin in erysipelas and urticaria. In the form of toasted bread, it forms an agreeable, nutritious drink in febrile complaints. Boiled in milk, bread forms an excellent emollient poultice.

Troches, or Lozenges, are small, dry, solid masses composed of medicinal substances, incorporated with sugar and mucilage. They are designed to be held in the mouth, and slowly dissolved, and consequently should not be composed of substances very disagreeable to the taste, or which require to be given in large doses. Tragacanth is preferred to gum Arabic, on account of its greater tenacity. The term Pastilles is sometimes applied generally to these preparations.

TROCHISCI ACACIÆ. E. Gum Arabic Ziv, starch Zj, refined sugar lbj; mix, and pulverize them, and make them into a proper mass, with rose-water, for forming lozenges. [The transparent gum paste or lozenges may be thus made: Dissolve lbvj of picked gum Arabic, without heat, in lbviij of water, and add the solution to lbvij of simple syrup. Evaporate by a gentle heat to a very thick syrup, adding towards the end fziv of orange-flower water. Finish, as directed, for Pasta Jujubæ.] Use. As a demulcent, in coughs, and irritations of the throat.

TROCHISCI ACIDI CITRICI. P. Citric acid Ziij, sugar Zxvj, essence of lemon 10 drops, mucilage of tragacanth q. s.; mix, and divide into 10-grain lozenges.

Use. An agreeable mode of taking citric acid.

TROCHISCI ACIDI LACTICI. Lactic acid 3ij, sugar 3j, oil of vanilla 4 drops, mucilage of tragacanth q. s.

Use. A good form for administering lactic acid.

TROCHISCI ACIDI TARTARICI. E. Tartaric acid 3ij, sugar 3viij, oil of lemons mx; mix them thoroughly, and with mucilage beat them up into a proper mass for making lozenges.

Use. A convenient method of using tartaric acid.

TROCHISCI ALTHEÆ. P. Tablettes de Guimauve. Powdered decorticated marshmallow root 3jj, sugar 3xiv, mucilage of

tragacanth (made with orange-flower water) q. s. Divide into 13-grain lozenges.

Med. Prop. Demulcent.

Use. For coughs, &c.

TROCHISCI CHOCOLATÆ ET FERRI. (BOUCHARDAT.) Fine chocolate 3xiv, iron reduced by hydrogen 3j; soften the chocolate by heat, mix it with the iron, and divide into lozenges of 15 grains each. [Levigated iron filings are sometimes substituted for reduced iron.]

Med. Prop. and Use. As Chocolata Martis.

TROCHISCI CRETÆ. U. S., E. Prepared chalk 3iv, powdered gum Arabic 3j, powdered nutmeg 3j, powdered sugar 3vj; rub together till they are intimately mixed, then with water form into a mass, to be divided into troches of 10 grains each.

Med. Prop. A gentle astringent, and antacid.

Use. In diarrhœa.

TROCHISCI CROTONIS. (SOUBEIRAN.) Croton oil my, starch Aj, sugar 3j, chocolate 3ij; divide into 30 lozenges.

Med. Prop. and Use. As Croton Oil.

TROCHISCI FERRI CITRATIS. (BERAL.) Ammonio-citrate of iron gr. xv, sugar 3iv, sugar of vanilla and cloves gr. xv; mix, and divide into 12-grain lozenges.

Use. A convenient form for the internal use of the chalybeate.

TROCHISCI FERRI IODIDI. Syrup of iodide of iron f\(\frac{7}{3}iij, gum \)
Arabic \(\frac{7}{3}j, \) sugar \(\frac{7}{3}ixss; \) mix, and divide into 240 lozenges, each containing gr. ss. of iodide of iron.

Use. As the former chalybeate.

TROCHISCI GLYCYRRHIZÆ. E. Liquorice and gum Arabic, each, 3vj, sugar lbj; dissolve them in hot water, and evaporate to a paste.

Use. For allaying cough.

TROCHISCI GLYCYRRHIZÆ ET OPII. U. S., E. Wistar's Cough Lozenges. Powdered opium 3ss, powdered liquorice, powdered sugar, and powdered gum Arabic, of each, 3x, oil of anise f3ij;

mix the powders intimately, add the oil, and with water form them into a mass, to be divided into troches weighing each 6 grains. [They are sometimes made with morphia, instead of opium.]—Each contains about 10th of a grain of opium.

Med. Prop. Demulcent, and anodyne.

Use. To allay cough.

TROCHISCI IPECACUANHÆ. U.S. Powdered ipecacuanha 3ss, powdered sugar 3xiv, arrow-root 3iv, mucilage of tragacanth q. s.; mix intimately, and form into troches of 10 grains.—Each one contains about 4 grain of ipecacuanha.

Med. Prop. Expectorant, and demulcent.

Use. In catarrhal complaints.

TROCHISCI KERMETIS. P. Kermes mineral 3ij, sugar 3xvij, gum acacia 3j, orange-flower water 3j; mix, and divide into lozenges of 12 grains each.

Med. Prop. Alterative.

Use. In chronic pectoral complaints, and chronic skin diseases.

TROCHISCI MAGNESIÆ. U. S., E. Magnesia Ziv, sugar Ibj, powdered nutmeg Zj; rub them thoroughly together, and with mucilage of tragacanth q. s., form them into a mass, to be divided into troches of 10 grains each. [E. directs the carbonate of magnesia.]

Med. Prop. Antacid, and laxative.

TROCHISCI MENTHÆ PIPERITÆ. U.S. Oil of peppermint f3j, powdered sugar fbj; rub thoroughly together, and then with mucilage of tragacanth q. s., make into a paste, to be divided into 10-grain lozenges.

Use. In nausea and flatulence; but chiefly for their pleasant

flavour.

TROCHISCI MORPHIÆ. E. Muriate of morphia Jj, tincture of tolu f\(\mathcal{Z}\) ss, sugar \(\mathcal{Z}\) xxv; dissolve the muriate in a little hot water, mix it and the tincture with the sugar, beat into a mass with

mucilage, and divide into lozenges of 15 grains each. [Each lozenge contains about 1/40th of a grain of morphia.]

Use. To procure the effects of small doses of morphia, in coughs, &c.

TROCHISCI MORPHIÆ ET IPECACUANHÆ. E. As the last, adding 3j of powdered ipecacuanha.

Med. Prop. Expectorant, and anodyne.

TROCHISCI OPII. E. Opium 3ij, tincture of tolu f3ss, pure sugar 3vj, extract of liquorice 3v, gum Arabic 3v. Reduce the opium to a fluid extract (as in making Extractum Opii), mix it intimately with the liquorice, reduced to the consistence of treacle; add the tincture, sprinkle in the powdered sugar and gum, and beat the whole into a proper mass, which is to be divided into 10-grain lozenges. [One grain of opium is contained in 6 or 7 lozenges.]

Med. Prop. Anodyne, and demulcent.

Use. To allay coughs.

TROCHISCI QUINÆ SULPHATIS. (SOUBEIRAN.) Sulphate of quinia gr. xxxij, sugar \(\mathcal{Z}\) xvj, mucilage of tragacanth q. s.; divide into 15-grain lozenges.

Use. As Pilulæ Quiniæ.

TROCHISCI RHEI AROMATICI. P. Turkey rhubarb 3jj, powdered cinnamon 3j, sugar 3xj, mucilage of tragacanth q. s.; divide into 480 lozenges.

Use. As Pilulæ Rhei.

TROCHISCI SODÆ BICARBONATIS. E. Bicarbonate of soda 3j, pure sugar 3iij, gum Arabic 3ss. Pulverize them, and, with mucilage of tragacanth, beat them into a proper mass for making lozenges. [The Pastilles de Vichy, P., contain bicarbonate of soda 3j, sugar 3xix, mucilage of tragacanth q. s.; divide into troches of 9j weight.]

Med. Prop. and Use. Antacid; -in cardialgia and lithiasis.

TROCHISCI TOLUTANI. P. Balsam of tolu 3j; dissolve in 3j of rectified spirit, add 3jj of water; heat in a water-bath, and filter.

Make a mucilage of the filtered liquor with Div of tragacanth; add sugar 3xvj, and form a paste for lozenges.

Med. Prop. and Use. Demulcent, and slightly expectorant.

TROCHISCI ZINGIBERIS. (SOUBEIRAN.) Powdered ginger 3j, sugar 3vij; form into a paste with mucilage of tragacanth, and divide into 15-grain lozenges.

Med. Prop. and Use. A grateful cordial stimulant;—in debility of stomach, and flatulence.

Tussilago. L., D. Coltsfoot. The flowers and leaves of Tussilago Farfara.

Med. Prop. Demulcent, and slightly expectorant.

ULMUS. L. [Ulmus Campestris, D.] Elm Bark. The interior bark of Ulmus Campestris.

Med. Prop. Demulcent, feebly tonic, and astringent; also diuretic. Use. In skin diseases.

ULMUS. U.S. Slippery Elm Bark. The inner bark of Ulmus fulva.

Med. Prop. An excellent demulcent.

Use. In infusion or decoction, as a drink in dysentery, diarrhoea, and disorders of the urinary passages; externally, as a poultice or lotion, in inflammatory skin diseases; also to form tents for dilating fistulas and strictures.

Unguenta. Ointments are fatty substances, softer than cerates, usually applied by inunction. They are apt to become rancid when long kept; hence they should be prepared, as a general rule, only when wanted for use. [The French pommades and onguents are placed under this head.]

Unguentum Acidi Muriatici. (Dr. Corrigan.) Muriatic acid 3j, spermaceti ointment 3j; mix. For scald head,—to be applied night and morning, after the scabs are removed by a poultice.

UNGUENTUM ACIDI NITRICI. D. Olive oil fbj, prepared lard 3iv, nitric acid f3vss. Melt the oil and lard together in a glass

vessel, and when they begin to congeal, add the acid, stirring constantly with a glass rod. [This ointment is less efficient than the Unguentum Hydrargyri Nitratis.]

UNGUENTUM ACIDI PHOSPHORICI. (SOUBEIRAN.) Phosphoric acid (sp. gr. 1.454) 3j, lard 3j.

Use. In frictions, over osseous tumours.

Unguentum Acidi Sulphurici. D. Sulphuric acid 3j, prepared lard 3j; mix together.

Use. In scabies.

Unguentum Aconiti. (Dr. Turnbull.) Alcoholic extract of aconite 3j, lard 3ij.

Used as a substitute for Unguentum Aconitinæ, in neuralgia.

Unguentum Aconiti Ammoniatum. (Dr. Turnbull.) Ammoniated extract of aconite 3j, lard 3iij.

Use. In old rheumatic cases, and paralysis.

Unguentum Aconitinæ. (Dr. Turnbull.) Aconitina gr. ij; triturate with 6 drops of alcohol, and add 3j of lard. [It should not be employed where there is any abrasion of the skin.]

Use. In violent neuralgia.

Unguentum Æruginis. E. Verdigris, in fine powder, \$\mathcal{z}\$j, resinous ointment \$\mathcal{z}\$xv.—D. Ointment of white resin 1bj, prepared verdigris \$\mathcal{z}\$ss.

Med. Prop. Detergent, and stimulant.

Use. In chronic skin diseases, and indolent ulcers.

UNGUENTUM ALKALINUM. (CAZENAVE.) Subcarbonate of potash 3ij, lard 3ij.—(CULLERIER.) Subcarbonate of soda 3ij, wine of opium 3j, lard 3j.—Devergie uses from 9 to 15 grs. of carbonate of soda with 3j of lard in lichen; 15 to 30 grs. in lepra, psoriasis, and ichthyosis; and 30 to 60 grs. in porrigo favosa.

Unguentum Alkalinum Camphoratum. (Cazenave.) Subcarbonate of potash \ni j, lard \exists vij, camphor gr. iij; mix together. Use. In sycosis. Unguentum Ammonicale. P. Pommade de Gondret. Lard 3vj, suet 3iv, almond oil 3ij, strong liquor ammoniæ 3xij. The suet, lard, and oil to be melted together, and the water of ammonia added, and the whole well shaken together in a close bottle.

Med. Prop. Rubefacient; and vesicant, if covered with a compress.

Unguentum Antimonii. U. S. [Unguentum Antimoniale, E.; Unguentum Antimonii Potassio-Tartratis, L.; Unguentum Tartari Emetici, D.] Tartar emetic, in fine powder, 3ij (3j, D.), simple ointment 3j; mix them.

Med. Prop. Rubefacient, and vesicant; it usually pustulates.
Use. As a counter-irritant, chiefly in chronic pectoral affections.

Unguentum Antiherpeticum. (Chevallier.) Chloride of lime Ziij, subsulphate of mercury Zij, oil of almonds Zvj, lard Zij.—(Alibert.) Red sulphuret of mercury Zjss, camphor Zss, cerate Zij.

UNGUENTUM AQUÆ ROSÆ. U.S. Cold Cream. Oil of almonds f\(\mathcal{z} \) ij, spermaceti \(\mathcal{z} \) ss, white wax \(\mathcal{z} \) j; melt together by means of a water-bath, and then add rose-water f\(\mathcal{z} \) ij, and stir constantly until cold.

Med. Prop. and Use. A delightful cooling unguent, much employed as an application to chapped and abraded surfaces.

Unguentum Argenti Nitratis. (Jobert.) From 4, 8, to 12 parts of nitrate of silver, to 30 of lard;—for white swellings.
—Mr. Macdonald prescribes 1 part of the nitrate with 7½ of lard, to smear bougies, in gonorrhœa.—Mr. Guthrie's Ophthalmic Ointment consists of gr. x of nitrate of silver, mxv of liquid diacetate of lead (Goulard's extract), and 3j of lard.—Velpeau's, of gr. j of the nitrate to 3j of lard.—Mackenzie's, of gr. v to 3j.

UNGUENTUM ARSENICI. (Guy's H.) Levigated arsenious acid jij, lard zj; mix.—(Mr. Luke.) Arsenious acid gr. ij, spermaceti ointment zj; mix.

Use. In onychia maligna.

Unguentum Arsenici cum Sulphure. (Guy's H.) Levigated arsenious acid Əij, sulphur Zj, lard Zj; mix.—(Sir A. Cooper.) White arsenic Zj, sulphur Zj, spermaceti cerate Zj.—(Mr. Marshall.) Arsenic and sulphur, each, Əj, cerate Zj; mix.

Use. As the preceding.

UNGUENTUM ARSENICI IODIDI. (BIETT.) Iodide of arsenic gr. ijss, lard 3j; mix.

Use. In obstinate skin diseases.—It requires caution.

Unguentum Arsenicale. (Mr. Carmichael.) Arseniate of iron 3ss, phosphate of iron 3ij, spermaceti cerate 3vj; mix. Use. In cancerous sores.

Unguentum Atropiæ. (Dr. Brooks.) Atropia gr. v, lard 3iij. Med. Prop. As Unguentum Belladonnæ, but much more powerful. Use. In neuralgia; also to dilate the pupil.

Unguentum Barii Iodidi. (Biett.) Iodide of barium gr. iij to iv, lard 3j; mix.

Med. Prop. Resolvent.

Use. To indolent tumours.

Unguentum Basilioum. See Ceratum Resinæ.

Unguentum Belladonnæ. (Soubeiran.) Fresh belladonna leaves 1 part, lard 2 parts; bruise the leaves, mix them with the lard, and boil them gently together till the leaves become crisp; digest, and strain with pressure.—(Pereira.) Extract of belladonna 3j—ij, lard 3j; mix.—(Chaussier.) Extract of belladonna 3ij, simple cerate 3j; mix.

Med. Prop. Locally anodyne.

Use. In local neuralgia; to painful joints; to dilate the pupil, and also the os uteri; and to the denuded spine, in violent tetanus and delirium tremens.

Unguentum Benzoini. (M. Deschamps.) Benzoin, coarsely powdered, 1 part, fresh lard 25 parts; heat for 2 or 3 hours in a water-bath, and strain. [An excellent basis for ointments, as benzoin resists rancidity, and the decomposition of metallic salts and oxides. Poplar buds have the same effect.]

UNGUENTUM CÆRULEUM. Mercurial Ointment is so named.

UNGUENTUM CALAMINÆ. D. Ointment of yellow wax lbv, prepared calamine lbj; mix.

Med. Prop. and Use. A mild stimulant application to ulcers.

UNGUENTUM CALCIS OPIATUM. (GUIBOURT.) Cucumber ointment 3ij, slaked lime 3ij, tincture of opium 3ij; mix.

Med. Prop. Anodyne, and stimulant.

Use. For hemorrhoids.

Unguentum Calcis Muriatis. (Sundelin.) Chloride of calcium (muriate of lime) 3j, powdered digitalis 3ij, concentrated vinegar 3ij, lard 3j.

Use. For chronic glandular swellings.

UNGUENTUM CALOMELANOS. (PEREIRA.) Calomel 3j, lard 3j. (UNDERWOOD.) Calomel 3j—ij, elder-flower ointment 3j. Use. In eczema, and other skin diseases.

Unguentum Calomelanos Compositum. Banyer's Ointment for milk scall. Calomel 3ij, burnt alum 3iv, carbonate of lead 3iv, Venice turpentine 3vj, spermaceti ointment 3jss.—(Dr. A. T. Thomson.) Calomel 3j, tar ointment 3iv, spermaceti ointment 3j.

Use. In lepra.

Unguent Cantharidis. U. S., L., D. [Unguent. Infusi Cantharidis, E.] Powdered Spanish flies 3ij, distilled water Oss; boil down to one-half, and strain; then mix the strained liquor with resin cerate (basilicon) 3viij, and evaporate to the proper consistence. [E. adds Venice turpentine 3ij.]

Use. For maintaining the discharge from blisters.

Unguentum Cantharidis. E. [Ceratum Cantharidis, L.] Cantharides, in fine powder, \$\mathfrak{z}\j\text{, resinous ointment \$\mathfrak{z}\vi\j\text{; add}\$ the flies to the melted ointment, and stir briskly, as it concretes on cooling.

Use. As the last.

UNGUENTUM TINCTURÆ CANTHARIDIS. (DUPUYTREN.) Tincture of cantharides 3j, lard 3ix.

Unguentum Ceræ Albæ. D. White wax fbj, lard fbiv; mix. Med. Prop. and Use. Emollient and protective.

UNGUENTUM CERÆ FLAVÆ. D. Purified yellow wax fbj, lard fbiv.

Med. Prop. and Use. As the last.

UNGUENTUM CETACEI. L. Spermaceti Ointment. Spermaceti 3vj, white wax 3ij, olive oil f3iij; melt together over a slow fire, and stir constantly till cold.

Med. Prop. and Use. A mild emollient; used as a dressing for blisters, &c.

UNGUENTUM CINCHONÆ. (BIETT.) Powdered red bark 3ij, almond oil 3ij, beef-marrow 3vj.

Use. In porrigo decalvans.

Unguentum Cocculi. E. Beat the kernels of Cocculus Indicus in a mortar, first alone, and then with five times their weight of lard, gradually added.

Use. For the destruction of vermin.

Unguentum Conii. D. Fresh hemlock leaves this, lard this; boil the leaves in the lard until they become crisp, and strain through linen.

Med. Prop. A mild anodyne application.

Use. To painful joints, scrofulous enlargements, and cancerous sores.

Unguentum Cosmeticum. (Quincy.) Oil of almonds 3ij, spermaceti 3iij, trisnitrate of bismuth 3j, oil of rhodium 6 drops; mix together.

Use. As a cosmetic for the face, but liable to discoloration.

Unguentum Creasoti. U. S., L., E. Creasote f3ss; add it to 3j of lard, previously melted, and stir them constantly, till cold.

Use. In cutaneous diseases, especially porrigo of the scalp.

Unguentum Cucumis. (Guibourt.) Cucumber Ointment. Melt together 4 parts of lard and 1 of veal suet; strain, and

mix it well with 3 parts of juice of cucumber. In 24 hours pour off the juice, and add fresh juice; repeat this process 10 times. Melt, and to each pound add 3iij of powdered starch; let it settle, pour off the ointment from the sediment, strain through a cloth, and stir till cold.

Med. Prop. and Use. As Unguentum Aquæ Rosæ.

Unguentum Cupri Subacetatis. U. S., D. [Unguent. Æruginis, E.] Subacetate of copper, in fine powder, 3j, simple ointment, previously melted, 3xv, add together and stir constantly till cold.

Med. Prop. A mild escharotic.

Use. In fungous granulations, and to the eyelids in conjunctivitis.

UNGUENTUM CUPRI AMMONIATI. (SWEDIAUR.) Solution of ammonio-sulphate of copper 3j, simple cerate 3j; mix.

Med. Prop. A stimulant application to indolent ulcers.

Unguentum Cupri Carbonatis. (M. Devergie.) Carbonate of copper 3ij, lard 3j.

Use. In impetigo and eczema of the scalp.

UNGUENTUM DELPHINIÆ. (DR. TURNBULL.) Delphine gr. x—xxx, olive oil 3j; rub together, and add 3j of lard.

Med. Prop. A powerful local sedative.

Use. As Unguentum Aconitinæ.

Unguentum Depilatorium. (Cazenave.) Subcarbonate of soda 6 parts, slaked lime 4 parts, lard 30 parts.

Use. To remove superfluous hair.

UNGUENTUM ECTROTICUM. (Fr. H.) Mercurial ointment 12 parts, wax 5 parts, black pitch 3 parts.

Use. To prevent the pitting of small-pox pustules.

UNGUENTUM ELEMI. L., D. Elemi lbj, suet lbij; melt together, and while yet hot, add common turpentine 3x, olive oil f3ij; mix together, and strain through linen.

Med. Prop. and Use. As a gentle stimulant to weak ulcers, and

to maintain the discharge from issues.

UNGUENTUM FERRI SULPHATIS. (VELPEAU.) Sulphate of iron 3j-ij, lard 3j.

Use. In erysipelas.

UNGUENTUM FULIGINIS. (M. BLAUD.) Wood soot 3ss, lard 3ij; mix.

Use. In cutaneous diseases.

UNGUENTUM FULIGINIS COMPOSITUM. Acetic extract of woodsoot 3iv, dried common salt 3x, lard 3xiv.

Use. For tinea capitis.

UNGUENTUM FULIGOKALI. (DESCHAMPS.) Fuligokali 3j—ij, lard 3iv; mix.

Use. As the preceding.

UNGUENTUM GALLÆ. U.S. [Unguentum Gallarum, D.] Powdered galls 3j, lard 3vij; mix together.

Use. For piles, and prolapsus ani.

Unguentum Gallæ Compositum. L. [Unguentum Gallæ et Opii, E.] Galls, in fine powder, 3ij, lard 3ij, powdered opium 3ss; mix.

Med. Prop. Astringent, and anodyne.

Use. In irritable piles.

UNGUENTUM GALLÆ CUM CUPRI SULPHATE. Powdered galls 3j, sulphate of copper 9j, lard 3j. An Indian remedy for ringworm of the scalp.

Unguentum Hydrardyri. U. S., E., D. [Unguent. Hydr. Fortius., L.] Blue Ointment. Mercury Ibij, lard Zxxiij, suet Zj; rub the mercury and suet, with a little of the lard, together until the globules disappear, then add the rest of the lard, and mix. [As the extinguishment of the mercury is a slow and tedious process, many expedients for facilitating it have been adopted, such as the addition of turpentine, sulphur, rancid lard, and old mercurial ointment; all of which, except the last, are objectionable.]

Med. Prop. and Use. When applied by friction, it produces all the constitutional effects of mercury; also as a resolvent in local

glandular, and other swellings; also to the face, in small-pox, to prevent the pitting.

Unguentum Hydrargyri Mitius. L. Strong mercurial ointment fbj, lard fbij; mix them.

Med. Prop. and Use. As the preceding, but weaker.

UNGUENTUM HYDRARGYRI CUM AMMONIÆ MURIATE. (DUPUY-TREN.) Strong mercurial ointment Zij, muriate of ammonia, in fine powder, Zj.

Med. Prop. and Use. As a resolvent, in chronic glandular enlargements.

Unguentum Hydrargyri cum Pice. (Barthez.) Mercurial ointment 24 parts, wax 10 parts, black pitch 6 parts; mix together.

Use. To prevent the scars from small-pox.

Unguent Hydrargyri Ammoniati. U. S. [Unguent. Hydr. Ammonio-Chloridi, L.; Unguent. Precipitati Albi, E.; Unguent. Hydr. Submuriatis Ammoniati, D.] White Precipitate Ointment. Ammoniated mercury 3j, simple ointment 3jss; mix. Use. In cutaneous affections, as psora, porrigo, and herpes.

UNGUENTUM HYDRARGYRI CHLORIDI. See Unguentum Calomelanos.

Unguentum Hydrargyri Bichloridi. (Guy's H.) Corrosive sublimate gr. iij, spermaceti ointment 3j.

Use. In chronic cutaneous diseases.

[The Pommade de Cerillo, P. is made with 3j of corrosive sublimate to 3j of lard, well ground together.—Dr. Corrigan uses an ointment containing gr. v of the sublimate to 3j of lard, in porrigo.]

UNGUENTUM HYDRARGYRI CYANIDI. (CAZENAVE.) Cyanide of mercury gr. viij, lard 3j.

Use. In chronic skin diseases.

UNGUENTUM HYDRARGYRI IODIDI. L. Iodide of mercury 3j, white wax 3ij, lard 3vj; melt the wax and lard together, and

add the iodide in fine powder. [It may be diluted with lard if necessary.]

Use. Chiefly as a dressing to chronic scrofulous ulcers, and skin diseases.

Unguentum Hydrargyri Biniodidi. L. As the last, substituting the red iodide of mercury.

Use. As the last, but stronger.

Unguentum Hydrargyri Nitratis. U. S., L., D. [Unguent. Citrinum, E.] Citrine Ointment. Dissolve 3j of mercury in f3xj of nitric acid; melt together lard 3iij, and fresh neat's-foot oil f3ix, and when they begin to stiffen on cooling, add the mercurial solution, and mix.

Med. Prop. A stimulant and alterative application.

Use. In porrigo, tinea capitis, psoriasis, &c.; also in psorophthalmia.

Unguentum Hydrargyri Oxidi Rubri. U. S. [Unguentum Hydr. Nitrico-Oxydi, L.; Unguent. Oxidi Hydrargyri, E.; Unguent. Hydr. Oxydi Nitrici, D.] Red Precipitate Ointment. Add red oxide of mercury, in very fine powder, 3j to 3viij of simple ointment, previously softened over a gentle fire, and mix them.

Use. In psorophthalmia and indolent ulcers.—It may require dilution.

UNGUENTUM HYDRARGYRI SUBSULPHATIS. (ALIBERT.) Turpeth mineral 3ij, lard 3iv.—(BIETT.) Turpeth mineral 3j, sulphur 3ij, lard 3iij, oil of lemon 15 drops.

Use. In skin diseases.

UNGUENTUM HYDRARGYRI SULPHURETI RUBRI. (ALIBERT.)
Red sulphuret of mercury 3j, lard 3xvj.

Use. As the preceding.

Unguentum Iodini. U. S. [Unguent. Iodinii, D.] Iodine gr. xx, to be rubbed up with alcohol mxx, then with lard 3j, till thoroughly mixed.

Med. Prop. Stimulant, and resolvent.

Use. In chronic scrofulous, and other tumours.

Unguentum Iodini Compositum. U. S. [Unguent. Iodinii Compositum, L.; Unguent. Iodinei, E.] Iodine 3ss, iodide of potassium 3j; rub them up together with alcohol f3j, and then with lard f3j, until they are thoroughly mixed.

Med. Prop. and Use. As the preceding.

Unguentum Ipecacuanhæ. (Dr. Turnbull.) Powdered ipecac. 3ij, olive oil 3ij, lard 3ss; mix together. [Rubbed on the skin for a few minutes, once or twice a day, it produces an eruption.]

Use. Applied to the chest, as a counter-irritant in chronic pectoral complaints.

Unguentum Mezerei. U. S. Mezereon bark, dried, Ziv, moisten with a little alcohol, and beat in an iron mortar, until reduced to a fibrous mass; then digest it with lard Zxiv, in a salt water-bath for 12 hours, strain with strong expression, and allow the liquid to cool slowly. Separate the medicated lard from the dregs, and melt it with white wax Zij, and stir them constantly till cold.—M. Guibourt proposes to mix Zij of alcoholic extract of mezereon with Zix of lard, and Zj of wax.

Use. To keep up a discharge from blistered surfaces.

Unguentum Ophthalmicum. Eye Ointment. The following are selected from the many bearing this name:—

Ackerman's. Red precipitate 9j, camphor gr. vj, fresh butter 3ij.

DESSAULT'S. Red oxide of mercury 3j, tutty 3j, acetate of lead 3j, burnt alum 3j, corrosive sublimate gr. x, rose ointment 3j; grind for a long time on porphyry.

DUPUYTREN'S. Red oxide of mercury gr. x, sulphate of zinc 9j, lard 3jj.

FRICKE's. Nitrate of silver gr. x, balsam of Peru 3ss, zinc ointment 3ij.

HUFELAND'S. Black oxide of mercury gr. ij, oil of walnut 3ij.

Lohsses'. Iodine gr. jss, iodide of potassium 9j, lard 3ss. In opacity of the cornea.

23*

Rust's. Liquid diacetate of lead 3ss, wine of opium 3ss, washed fresh butter 3ij.

Scarpa's. Tutty 3j, aloes gr. ij, calomel gr. ij, butter 3iijss.

Unguentum Phytolaccæ. (Dr. Wood.) Powdered leaves, or root, of Phytolacca decandra (common poke) 3j, lard 3j.

Use. In psora, tinea capitis, &c.

Unguentum Picis Liquidæ. U. S., L., E., D. Tar Ointment. Tar and suet, of each, lbj; add the tar to the suet, previously melted with a moderate heat, and stir constantly till cold.

Med. Prop. Stimulant.

Use. In porrigo of the scalp;—it should be kept constantly applied.

UNGUENTUM PICIS NIGRÆ. L. Black Basilicon. Black pitch 3ix, wax 3ix, resin 3ix, olive oil f3xvj; melt together, and strain.

Med. Prop. and Use. As the preceding.

UNGUENTUM PICIS COMPOSITUM. (Guy's H.) Equal parts of tar ointment and sulphur ointment.

Use. As the preceding.

Unguentum Piperis Nigri. D. Powdered black pepper 3iv, prepared lard fbj.

Use. As the last; -not much employed.

Unguentum Plumbi Acetatis. E., D. [Ceratum Plumbi Acetatis, L.] Finely powdered sugar of lead 3j, simple ointment 3xx; mix.

Med. Prop. Sedative, and cooling.

Use. To burns, and excoriated and inflamed surfaces.

Unguentum Plumbi Carbonatis. U. S., E., D. Finely powdered carbonate of lead 3ij, simple ointment lbj; mix together. Use. Same as the preceding.

Unguentum Plumbi Compositum. L. Kirkland's Neutral Ointment. Melt Ibiij of lead-plaster with Oj of olive oil; mix 3viij of prepared chalk with f3vj of distilled vinegar; add

the warm solution to the plaster and oil, also warm, and stir till cold.

Use. For indolent ulcers.

UNGUENTUM PLUMBI CHLORIDI. (Mr. Tuson.) Chloride of lead 3j, simple cerate 3j.

Use. In cancerous ulcerations, and painful neuralgic tumours.

UNGUENTUM PLUMBI IODIDI. L. Iodide of lead 3j, lard 3viij; rub, and mix them.

Med. Prop. and Use. As a discutient, in chronic and glandular swellings.

Unguentum Populeum. (M. Deschamps.) Buds of poplar 2 parts, water 1 part, fresh lard 12 parts. Boil in a tin vessel till the moisture is evaporated, strain through linen, and stir now and then, whilst cooling. [See Unguent. Benzoini.]

UNGUENTUM POTASSII CYANIDI. (CAZENAVE.) Cyanide of potassium gr. xij, oil of almonds 3ij, cold cream 3ij.

Use. To the sound skin, for neuralgia.

UNGUENTUM POTASSÆ HYDRIODATIS. D. Iodide of potassium $\ni j$, lard $\exists j$. [It may very properly be made with $\exists j$ to the $\exists j$.]

Med. Prop. and Use. As Unguent. Iodini, but weaker.

UNGUENTUM POTASSII SULPHURETI. (ALIBERT.) Sulphuret of potassium 3iij, carbonate of soda 3iij, lard 3iij.

Use. For ringworm.

UNGUENTUM QUINÆ FORTIUS. Sulphate of quinine 3j, lard 3ij. Used by friction, in intermittents.

UNGUENTUM RESINÆ ALBÆ. D. Lard tbiv, white rosin tbij, yellow wax tbj; melt together, and strain.

Med. Prop. and Use. Very similar to Ceratum Resinæ.

Unguentum Resinosum. E. Resin 3v, lard 3viij, wax 3ij; melt together.

Med. Prop. and Use. As the preceding.

Unguentum Rosatum. P. Pommade Rosat. Washed lard Ibij, petals of the hundred-leaved rose Ibiv, bruise half the flowers, mix with the lard; in 2 days melt, strain, and express.

Add the rest of the flowers, and in 24 hours melt, strain, and express; colour with alkanet-root. (See Unguent. Aquæ Rosæ.)

Unguentum Sabinæ. D. Fresh savine lbss, lard lbij; boil till the leaves are crisp; strain, and add yellow wax lbss.

Use. For maintaining issues.

Unguentum Sambuci. L. Elder flowers and lard, of each, fbij, boil together, and express through linen.

Unguentum Sambuci Vinde. D. Fresh elder leaves bruised fbiij, lard fbiv, suet fbij. Boil the leaves in the lard till they become crisp, then strain with expression; lastly, add the suet, and melt them together.

Med. Prop. and Use. A cooling demulcent application.

Unguentum Scrophulariæ. D. Fresh leaves of Scophularia nodosa (knotty figwort) fbij, lard fbij, suet fbj; boil together till the leaves become crisp, and strain with expression. [A specific in pemphigus gangrenosus.—Dr. W. Stokes.]

Unguentum Simplex. U. S., E. [Unguent. Ceræ Flavæ, D.] White wax fbj, lard fbiv; melt them together with a moderate heat, and stir constantly till cold.

Med. Prop. Emollient.

Use. As a mild dressing to blistered surfaces and ulcers; also to form the basis of other ointments.

UNGUENTUM STAPHISAGRIÆ. (SWEDIAUR.) Powdered stavesacre 3j, lard 3iij; digest for 3 hours, and strain.

Use. As Unguent. Veratriæ.

Unguentum Stramonii. U. S. Fresh stramonium leaves, cut into pieces, fbj, lard fbiij, yellow wax fbss. Boil the leaves in the lard until they become friable, then strain through linen; lastly, add the wax previously melted, and stir them until they are cold.

Use. In hemorrhoids, irritable ulcers, and irritable cutaneous diseases.

UNGUENTUM SULPHURIS. U. S., L., E., D. Sulphur Ibj, lard Ibij; mix them.

Use. A specific in scabies.

Unguentum Sulphuris Compositum. U. S., L. Sulphur 3j, ammoniated mercury, benzoic acid, each, 3j, oil of bergamot, sulphuric acid, each f3j, nitrate of potassa 3ij, lard lbss. Melt the lard, and add the other ingredients, and stir constantly till cold.—L. directs sulphur lbss, powdered white hellebore 3ij, nitrate of potassa 3j, soft soap lbss, lard lbjss, oil of bergamot mxxx; mix them.

Use. As the preceding, but more irritating.

Unguentum Sulphuris Alkalinum. (Bateman.) Subcarbonate of potash Ziv, rose-water Zj, vermilion Zj, oil of bergamot Zss, sulphur Zxj, lard Zxj; mix them.

Use. In skin diseases.

UNGUENTUM SULPHURIS CUM CARBONE. (RICHARD.) Charcoal and sulphur, each, 3j, lard 3v.

UNGUENTUM SULPHURIS CUM ZINCI. JASSER'S Ointment for tinea capitis. Sulphur Zij, sulphate of zinc Zj, bay ointment Zj, lard Zv.

UNGUENTUM SULPHURIS IODIDI. (CAZENAVE.) One part of iodide of sulphur to 30 of lard.—(Pereira.) Gr. x—xxx of the iodide, to 3j of lard.

Use. In obstinate skin diseases.

Unguentum Tabaci. U.S. Fresh tobacco, cut in pieces, 3j, lard lbj; boil together over a gentle fire, till the leaves become friable; then strain through linen.

Use. In irritable ulcers, and tinea capitis.—It should be used with caution.

UNGUENTUM OLEI TABACI. Empyreumatic oil of tobacco 20 drops, simple ointment 3j.

Use. As the preceding.

UNGUENTUM TANNINI. (RICHARD.) Tannin 3ij, water 3ij, lard 3jss; mix.)—Cazenave.) Tannin 3j, lard 3xxx.—Astringent.
UNGUENTUM TARTARI EMETICI. See Unguent. Antimonii.

Unguentum Tutiæ. D. Unguentum Zinci Oxidi Impuri.
Prepared tutty 3ij, white wax ointment 3x; mix.

Use. As Unguent. Zinci Oxidi.

Unguentum Veratri Albi. U. S. [Unguent. Veratri, L., D.] White hellebore-root, powdered, Zij, oil of lemons mxx, lard Zviij; mix them.

Use. In scabies, as sulphur ointment.

UNGUENTUM VERATRIÆ. (DR. TURNBULL.) Veratria gr. x—xx, lard 3j. [The veratria should first be rubbed up with a little oil.]

Med. Prop. A powerful local stimulant, and also anodyne.

Use. In neuralgia, amaurosis, and paralysis.

UNGUENTUM ZINCI OXIDI. U. S., D. [Unguent. Zinci, L., E.]
Oxide of zinc 3j, lard 3vj; mix them.

Med. Prop. and Use. A mild astringent application in chronic ophthalmia, and skin diseases.

Unguentum Zinci Iodidi. (Dr. Ure.) Iodide of zinc 3j, lard 3j.

Med. Prop. and Use. A resolvent application to chronic swellings.

UNGUENTUM ZINCI SULPHATIS. (SCARPA.) Sulphate of zinc 3j, lard 3j.—(Klein.) Sulphate of zinc 3j, fresh butter 3j. Use. To eruptions of the skin.

Uva Passa. U.S. [Uva, L.; Uvæ Passæ, E.; Vitis Vinifera. Fructus siccatus, D.] Raisins. The dried fruit of Vitis vinifera, or common grape.

Med. Prop. Laxative.

Use. To impart flavour to demulcent drinks.

UVA URSI. U.S., L., E., D. The leaves of Arbutus Uva Ursi. Med. Prop. Astringent, and tonic, with a tendency to the urinary organs.

Use. In lithiasis, chronic nephritis, catarrh of the bladder, &c.

UREA FACTITIA. Artificial Urea. Mix 28 parts of well-dried ferrocyanuret of potassium with 14 of black oxide of manganese, (both in fine powder), and heat them to dull redness, on an iron

plate. Lixiviate them with cold water; add 20½ parts of dry sulphate of ammonia; concentrate, by evaporation, with a heat not exceeding 212° F.; decant the concentrated liquid; treat it with rectified spirit, and crystallize.

Med. Prop. Diuretic.—Dose, gr. x to 9j.

UREÆ NITRAS. Nitric acid throws down this salt from a concentrated solution of urea.—Dose, gr. jss, 3 times a day, in anasarca.

VALERIANA. U. S., L., E. [Valeriana Officinalis, D.] Valerian. The root of Valeriana officinalis.

Med. Prop. Gently excitant, and antispasmodic.

Use. In hysteria, morbid restlessness, hypochondriasis, and in hemicrania, especially in combination with cinchona.

VEGETABILIUM PREPARATIO. Vegetables should be collected in dry weather. They should not be kept longer than a year. To dry them, spread them out lightly shortly after they are gathered, and dry them with a gentle heat, between 100° and 212° F. Preserve them in convenient vessels from the air and light.

Most roots should be dug up before the leaves and stalks shoot forth: annual roots, just before the time of flowering; biennial, after the vegetation of the first year has ceased; perennial, in the spring, before vegetation has commenced. To preserve roots fresh, put them in dry sand. Fleshy roots may be sliced, and, after drying in the air, exposed to a heat of 100°. The sliced bulbs should be dried at the same temperature.

Barks should be collected at the season when they are most readily separated from the wood. This, with few exceptions, is late in the spring, or early in the summer. (Brande.)

Leaves are to be collected after the flowers are fairly blown, and before the seeds ripen.

Seeds should be gathered when fully ripe.

Flowers should be collected when recently blown.

Pulps.—See Pulpæ.

VERATRIA. L. Boil Ibij of bruised sabadilla in three successive gallons of rectified spirit, in a retort with a receiver fitted to it. Press the sabadilla, distil off the spirit from the mixed and filtered liquors, and evaporate the residue to the consistence of an extract. Boil this 3 times, or oftener, in water acidulated with a little dilute sulphuric acid, and evaporate the clear liquor to the consistence of syrup. To this, when cold, add magnesia to saturation; stir it, press, and wash it 2 or 3 times; then dry it, and digest it several times in spirit, filtering the solutions. Distil off the spirit, boil the remainder in water, to which a little sulphuric acid and animal charcoal are added, and strain. Lastly, the charcoal being well washed, evaporate the liquors to the consistence of syrup, and add aqua ammoniæ q. s. to precipitate the veratria; then wash and dry it. [The different salts of veratria are obtained as the corresponding salts of morphia.]

Med. Prop. A powerful irritant, both externally and internally; diuretic.

Use. Chiefly externally, in the form of alcoholic solution, or ointment, in neuralgia and paralysis.

VERATRUM ALBUM. U.S., D. [Veratrum, L., E.] White Hellebore. The rhizoma of Veratrum album.

Med. Prop. A violent emeto-cathartic.

Use. Formerly in mania, epilepsy, dropsy, and other obstinate disorders; occasionally in gout; also as an errhine.

VERATRUM VIRIDE. U.S. American Hellebore. The rhizoma of Veratrum viride.

Med. Prop. and Use. Very similar to the preceding;—it has been employed as a substitute for colchicum, in gout, and neuralgia.

VERBASCUM THAPSUS. D. Mullein Leaves.

Med. Prop. Demulcent, and emollient; reputed anodyne.

VINUM. U.S. [Vinum Xericum, L.; Vinum Album, E.; Vinum Album Hispanum, D.] Sherry Wine. [Good Madeira

and Teneriffe wines, may also be substituted.]—For the relative strength of the different wines, see Appendix.

Med. Prop. and Use. As a cordial stimulant, in low forms of disease, and sometimes in convalescence.

VINA MEDICATA. Medicated Wines are prepared in the same general manner as Tinctures. From their liability to undergo decomposition, they should be prepared in small quantities at a time, without heat, and be kept in well-closed vessels, in a cool place.

VINUM ALOES. U.S., L., E., D. Powdered aloes 3j, cardamom seeds bruised, ginger bruised, each, 3j, sherry wine Oj; macerate for 14 days, with occasional agitation, and filter through paper.

Med. Prop. A warm, stomachic purgative.

Use. In chlorosis, amenorrhœa, dyspepsia, gout, &c.

VINUM ANTIMONII. U. S. [Vinum Antimonii Potassio-Tartratis, L.; Vinum Antimoniale, E.; Liquor Tartari Emetici, D.] Antimonial Wine. Tartar emetic \ni j, sherry wine f3x; dissolve.

Med. Prop. As Tartar Emetic.

Use. A very convenient mode of administering tartar emetic in small doses, especially to children.

VINUM AROMATICUM. P. Aromatic species Ziv, vulnerary spirit Zij, red wine Zxxxij.—For outward use, M. RICORD sometimes adds 1 to 6 per cent. of tannin.

Use. Chiefly as a detergent application to chancres and bubos; also as a wash for ulcers.

VINUM COLCHICI RADICIS. U. S. [Vinum Colchici, L., E.] Dried colchicum cormus, bruised, fbj, sherry wine Oij; macerate for 14 days, with occasional agitation; then express strongly, and filter through paper. [Also by percolation.]—Dose, mx to f3j.

Med. Prop. and Use. An excellent and certain preparation of colchicum, much employed in gout, combined with magnesia

and its sulphate; also with morphia.

VINUM COLCHICI SEMINIS. U.S. Colchicum seeds, bruised, 3iv, sherry wine Oij; macerate for 14 days, with occasional agitation; then express, and filter through paper.—Dose, f3j—ij. Med. Prop. and Use. As the preceding.

VINUM COLCHICI OPIATUM. (EISENMANN.) Wine of colchicum seeds 3iij, tincture of opium 3ss.—Dose, 20 to 30 drops, in gout.

VINUM ERGOTÆ. U.S. Bruised ergot 3x, sherry wine Oj; macerate for 14 days, with occasional agitation; then express, and filter through paper.—Dose, f3j to f3iij.

Use. To facilitate labour; also in uterine hemorrhage.

VINUM FERRI. P. Macerate for 6 days, in a matrass, 3j of pure iron filings, with 3xxxij of good white wine, stirring from time to time; then decant, and filter.—(Soubeiran.) Prototartrate of iron gr. xvj, tartaric acid gr. xvj; triturate in a glass mortar, add Ojss of white wine, and filter.

Med. Prop. and Use. A mild chalybeate, well borne by the stomach.

VINUM FERRI ACETATIS. (SOUBEIRAN.) Acetate of iron gr. xxxij, white wine 3xvj; mix.

Med. Prop. and Use. As the other chalybeates.

VINUM FERRI IODIDI. (PIERQUIN.) Iodide of iron 3iv, Bordeaux wine Oj.—(CALLOUD.) Sulphate of iron gr. xij, iodide of potassium gr. xvj, white wine 3j; mix together.—Dose, f3ss to f3j.

Med. Prop. and Use. As Liquor Ferri Iodidi.

VINUM GENTIANÆ. E. Gentian 3ss, yellow bark 3j, canella 3j (each in coarse powder), dried orange peel, sliced, 3j, proof spirit f3ivss; digest for 24 hours, add f3xxxvj of sherry wine, digest for 7 days, express, and filter.

Med. Prop. and Use. As Tinctura Gentianæ.

VINUM IPECACUANHÆ. U.S., L., E., D. Bruised ipecac. 3ij,

sherry wine Oij; macerate for 14 days, with occasional agitation, then express, and filter through paper.

Med. Prop. and Use. As Ipecacuanha, for which it is an excellent substitute where small doses are required.

VINUM OPH. U. S., L., E., D. Sydenham's Laudanum. Opium, in powder, Zij, cinnamon and cloves, bruised, of each Zj, sherry wine Oj; macerate for 14 days, with occasional agitation, then express, and filter through paper.

Med. Prop. Narcotic, and stomachic.

Use. As laudanum, where the latter disagrees with the stomach; also, externally to the eye, in passive inflammation.

VINUM OPH FERMENTATIONE PARATUM. Rousseau's Laudanum. Black drop. Choice opium ziv, honey zxij, hot water lbv, yeast zij. Dissolve the opium and honey, separately, in hot water; mix, and add the yeast, keep it at about 86° F., for a month; express, filter, and distil off zxvj, and evaporate the residuum to zx. Add to this zivss of strong spirit, mix, and filter. [Four drops are considered equal to half a grain of extract of opium, or nearly one grain of crude opium.]

VINUM QUINÆ AROMATICUM. (DR. COLLIER.) Sulphate of quinia gr. xviij, citric acid gr. xv, sound orange wine f\(\mathcal{z} \) xxiv.

Med. Prop. and Use. As Sulphate of Quinia.

VINUM RHEI. U.S., E. Bruised rhubarb 3ij, bruised canella 3j, diluted alcohol f3ij, sherry wine Oj; macerate for 14 days, with occasional agitation, then express, and filter through paper.

Med. Prop. A warm, cordial laxative.

Use. In debilitated states of the system, requiring a cathartic.

VINUM SCILLÆ. P. Dried squill 3j, Malaga wine 3xvj; macerate for 12 days.

Med. Prop. and Use. As Tinctura Scillæ.

VINUM SCILLÆ COMPOSITUM. (RICHTER.) Dried squill 3j, orange-peel 3iij, calamus 3iij, juniper berries 3ij, white wine 1biv; digest for 3 days, filter, and add 3ij of oxymel of squills.

Med. Prop. A stimulant diuretic.

Use. In passive dropsies.

VINUM TABACI. U. S., E. Tobacco, cut in pieces, 3j, sherry wine Oj; macerate for 14 days, with occasional agitation, then express, and filter through paper.—Dose, as a diuretic, mx—xxx. It is very seldom used.

VINUM VERATRI ALBI. U. S. [Vinum Veratri, D.] White hellebore root, bruised, Ziv, sherry wine Oj; macerate for 14 days, with occasional agitation, then express, and filter through paper.—Dose, mx, gradually increased, 3 times a day.

Med. Prop. and Use. As Vinum Colchiei; but it is very seldom employed, on account of its uncertainty.

VINUM VERATRI OPIATUM. Mr. Moore's substitute for Eau Medicinale. Wine of white hellebore 3iij, tincture of opium 3j; mix.

Med. Prop. and Use. As Vinum Colchici.

VIOLA. U. S. (Sec.) Violet. The herb of Viola pedata.

VIOLA ODORATA. Flores. D. Flowers of Sweet Violet. (Viola odorata.)

Med. Prop. Both species of violet are emollient, mucilaginous, and slightly laxative. The root is emetic and cathartic.

Use. Chiefly as an adjuvant.

WINTERA. U.S. (Sec.) Winter's Bark. The bark of Wintera Aromatica (Drymis Winteri).

Med. Prop. and Use. A stimulant, aromatic tonic, used for the same purposes as Canella.

XANTHORRHIZA. U. S. (Sec.) Yellow-root. The root of Xanthorrhiza apiifolia.

Med. Prop. Tonic.

Use. As the simple bitters.

XANTHOXYLUM. U. S. (Sec.) Prickly Ash. The bark of Xanthoxylum fraxineum.

Med. Prop. Stimulant and diaphoretic; somewhat resembling Mezereon and Guaiac.

Use. In chronic rheumatism, &c.

ZINCI ACETAS. U.S. Dissolve Ibj of acetate of lead in Oiij of

distilled water, and filter; add Zix of granulated zinc to this solution, and agitate them occasionally together in a stopped bottle, until the liquid yields no precipitate with iodide of potassium. Filter, evaporate to one-fifth, and set it aside to crystallize. If coloured, re-dissolve it in distilled water, heat the solution and drop it, while hot, into a filtered solution of chloride of lime, until it ceases to let fall sesquioxide of iron; then filter, acidulate with a few drops of acetic acid, evaporate, and crystallize. [It was formerly prepared by double decomposition, between acetate of lead and sulphate of zinc.]

Med. Prop. Astringent, similar to the sulphate.

Use. Only externally, as a collyrium, and as an injection in gonorrhœa, &c.

ZINCI CARBONAS. U. S. [Calamina, L.; Zinci Carbonas Impurum, D.] Native Calamine.

ZINCI CARBONAS PRÆPARATUS. U. S. [Calamina Præparata, L.; Zinci Carbonas Impurum Præparatum, D.] Heat calamine to redness, and pulverize; then reduce it to very fine powder, by levigation and elutriation.

Med. Prop. and Use. A mild astringent and exsiccant;—in excoriations, and superficial ulcerations.

ZINCI CHLORIDUM. U. S., P. Zinc, in small pieces, Zijss, put it in a glass or porcelain vessel, and add, gradually, muriatic acid q. s. to dissolve it; strain, and add nitric acid Zj, and evaporate to dryness.—Dissolve the dry mass in water, add prepared chalk Zj, let it stand for 24 hours, filter, and again evaporate to dryness. [M. Righini prepares it by decomposing the sulphate of zinc by chloride of barium.]

Med. Prop. Alterative, and antispasmodic; externally, escharotic. Use. In scrofula, epilepsy, chorea, and facial neuralgia; but chiefly externally, in scirrhous and cutaneous affections.

ZINCI CYANIDUM. P. To a solution of pure sulphate of zinc, add, gradually, a solution of cyanide of potassium; collect the precipitate, and carefully wash and dry it.—Dose, gr. 4.

Med. Prop. and Use. As a substitute for hydrocyanic acid.

ZINCI FERROCYANIDUM. As the former, substituting solution of ferrocyanuret of potassium for cyanide of potassium.—Dose, gr. i—iv.

Med. Prop. and Use. As the preceding.

ZINCI IODIDUM. Digest iodine with half its weight of finely divided zinc, in a little water, and agitate frequently till the solution is colourless. Evaporate with a gentle heat.

Med. Prop. Tonic, astringent, and resolvent.

Use. Chiefly as an external application to enlarged tonsils.

ZINCI LACTAS. (WOEHLER.) To fbij of sour milk, add 3j of sugar of milk in fine powder, and 3j of clean zinc filings. Digest with a gentle heat for several days, adding more sugar of milk as it dissolves; heat to boiling, filter whilst hot, and cool gradually in a close vessel. If not sufficiently pure, it may be re-crystallized. [Also made by decomposing sulphate of zinc by lactate of lead.]

ZINCI OXIDUM. U. S., E. [Zinci Oxidum, L., D.] Dissolve by of sulphate of zinc in Oxij of distilled water; dissolve zvjss carbonate of ammonia in Oxij of distilled water; strain and mix the solutions, wash the precipitate frequently in water, and expose it to a strong heat, so as to drive off the carbonic acid.

Med. Prop. Tonic, and antispasmodic.

Use. As the Sulphate.

ZINCI SULPHAS. U. S., L., E., D. White Vitriol. To Ziv of zinc, in fragments, and Oiv of water, placed in a glass vessel, add, by degrees, Zvj of sulphuric acid; filter through paper, then boil down till a pellicle begins to form, and set it aside to crystallize.

Med. Prop. Tonic, and astringent; in large doses emetic.

Use. In chorea, epilepsy, hysteria, pertussis, and obstinate intermittents; externally, in inflammations of all the mucous membranes; also as a prompt emetic, in cases of poisoning.

ZINCI VALERIANAS. Saturate valerianic acid with freshly preci-

pitated carbonate of zinc, and crystallize by slow evaporation.— Dose, gr. ss, to gr. ij.

Med. Prop. Antispasmodic.

Use. In neuralgia, and other nervous derangements.

ZINGIBER. U.S., L., E.D. Ginger. The rhizoma of Zingiber officinale.

Med. Prop. A grateful stimulant, and carminative.

Use. In dyspepsia, flatulent colic, and atonic gout; much employed as an adjuvant; externally, as a rubefacient.

APPENDIX.

I.

DIETETIC PREPARATIONS.

As the medical attendant is frequently called upon to give directions and rules for preparing the diet for the sick and convalescent, it is obviously a matter of no little importance, that he should be acquainted with these preparations. It is true that they most appropriately belong to the province of the nurse, but as the physician will find more or less ignorance upon the subject almost universally prevalent, a proper knowledge of the modes of preparing these articles will secure to him, frequently, a greater confidence on the part of the patient and his friends. It was remarked by the late Dr. Rush, in his lectures, that a physician should spend six months in a kitchen before entering upon his practical career;—an observation which will serve to show the estimate in which this matter, however apparently trifling it may appear to some, was held by that distinguished practitioner.

The rules to be observed in giving nourishment to the sick, will generally present themselves; but there is one in particular, which should not be overlooked. In all low diseases, the attendant should be directed never to give too much at once, but frequently to repeat a small portion. The lapse of a very short time without

food will frequently, in cases of great prostration, reduce the patient very low, and may even endanger his life.

The following are selected from the many dietetic preparations as those which are the most useful and the most frequently used:

BISCUIT JELLY.

Take of white biscuit 4 ounces, water 4 pints; boil down one half, strain, evaporate to 1 pint, add white sugar 1 pound, red wine 4 ounces, cinnamon water 1 drachm.—To be used in debility of the digestive organs.

BREAD JELLY.

Boil a quart of water, and suffer it to cool. Take one-third of a sixpenny loaf of bread, slice it, pare off the crust, and toast to a light brown. Then put it into the water, place it on hot coals in a covered pan, and boil it gently, till you find, by putting some in a spoon to cool, that the liquid has become a jelly. Strain through a cloth, and set it away for use. When it is to be taken, warm a teacupful, sweeten it with sugar, and add a little grated lemon-peel.

ISINGLASS JELLY.

Take of isinglass 2 ounces, water 2 pints; boil it to one, strain, and add milk 1 pint, white sugar-candy 1 ounce.—Nutritive; in convalescence.

HARTSHORN JELLY.

Take of hartshorn shavings 1 ounce, water 4 pints; strain;

warm again with orange-juice 1 ounce, white sugar 6 ounces, sherry wine 5 ounces.—As the last.

ALMOND JELLY.

Take of sweet almonds, blanched, 1 ounce, white sugar 6 drachms, water 4 ounces. Rub into an emulsion, strain, and add melted hartshorn jelly 8 ounces, orange-flower water 1 drachm, essence of lemon 3 drops.

A pleasant and nutritious article of diet.

RICE JELLY.

Mix a quarter of a pound of rice, picked and washed, with half a pound of loaf-sugar, and just sufficient water to cover it. Boil till it becomes a glutinous mass, then strain, and season with whatever may be thought proper.

SAGO JELLY.

Soak sago in water for an hour, pour it off, adding more, boil till the sago is transparent, then add wine and sugar.

TAPIOCA JELLY.

Take of tapioca 2 tablespoonfuls, water 1 pint; boil gently for an hour, or until it assumes a jelly-like appearance. Add sugar, wine, and nutmeg, with lemon-juice, to suit the taste and nature of the case. [This is improved by washing the tapioca well, and allowing it to steep for five or six hours, changing the water three times; then proceed as before.]

CHICKEN JELLY.

Cut a chicken into small pieces, bruise the bones, and put the whole in a stone jar with a cover that will make it water-tight. Set the jar in a large kettle of boiling water, and keep it boiling for three hours. Then strain off the liquid, and season it slightly with salt, pepper and mace, or with loaf-sugar and lemon-juice, according to the condition of the patient for whom it is intended.

CALF'S FEET JELLY.

Take two calves' feet, and add to them 1 gallon of water, which reduce by boiling to 1 quart. Strain it, and when cold, skim the fat entirely off. Add to this the white of six or eight eggs well beaten, a pint of wine, half a pound of loaf-sugar, and the juice of 4 lemons, and let them be well mixed. Boil the whole for a few minutes, stirring constantly, and then pass it through a flannel strainer.

This forms a very nutritious article of diet for the sick and convalescent. It is superior to the isinglass-jelly. The wine may be omitted or added at option.

JELLY OF CARRAGEEN OR IRISH MOSS.

Take of carrageen half an ounce, fresh milk a pint and a half. Boil them down to a pint; remove any sediment by filtering or otherwise, and then add the requisite quantity of sugar, with lemon-juice, or peach-water, to give it an agreeable flavour.—To be used freely.

The moss, before being used, should be well washed in cold water, to remove its saline taste.

DECOCTION OF BARLEY; OR, BARLEY-WATER.

Take of pearl barley 2 ounces, boiling water 2 quarts. Before adding the boiling water, let the barley be well washed. Then boil it to one-half, and strain the liquor. A little lemon-juice and sugar may be added if desirable.—To be taken ad libitum, in inflammatory diseases.

RICE-WATER.

Take of rice 2 ounces; let it be well washed, and add to it water 2 quarts. Boil it for an hour and a half, and then add sugar and nutmeg as much as may be required.—To be taken ad libitum.

Rice, when boiled for a considerable time, assumes a gelatinous form, and, mixed with milk, is a very excellent diet for children. It possesses, in some measure, a constipating property, which may be increased by boiling the milk.

DECOCTION OF BRAN.

Take of wheat bran, recent, 1 pint, water 3 quarts. Boil down one-third, strain off the liquor, and add sugar, honey, or molasses, according to the taste of the patient.

Bran Tea may be made by using boiling water, and suffering the mixture to stand in a covered vessel for three or four hours.

SAGE TEA.

Take the dried leaves of sage half an ounce, boiling water 1 quart. Infuse for half an hour, and then strain. Sugar and lemonjuice may be added in the proportion required by the patient.—In the same manner may be made balm and other teas.

These infusions form very agreeable and useful drinks in fever, and their diaphoratic powers may be increased by the addition of sweet spirits of or antimonial wine.

INFUSION OF MALT.

Take of ground malt 1 pint, water, not quite brought to the boiling point, 3 pints. Infuse for two hours, and strain off the liquor, to which may be added sugar or lemon-juice, if required.

This was a favourite preparation with the late Dr. Parrish, in inflammatory fevers.

LEMONADE.

Take of fresh lemon-juice 4 ounces, fresh and very thin peel of lemon half an ounce, white sugar 4 ounces, boiling water 3 pints. Let them stand until cool, then strain off for use. When employed in fevers, a little nitrate of potash, or sweet spirits of nitre, may be added. It can be further diluted to the taste of the patient.

This preparation, when freely taken, sometimes produces pain in the bowels. It must, therefore, be used with some reserve as a daily drink.

WATER GRUEL.

Take of oatmeal 2 ounces, water 1 quart. Boil for ten or fifteen minutes, and strain, adding sugar and salt, to make it agreeable.

RICE GRUEL.

Take of ground rice 1 ounce, cinnamon 1 drachm, water 1 quart.

Boil for forty minutes, adding the aromatic near the conclusion. Strain and sweeten. Wine may be added if necessary.

INDIAN GRUEL.

Put three large tablespoonfuls of Indian meal, sifted, into a quart of water, in a large bowl; wash with several waters, turning off the water as the meal settles; then boil for twenty minutes, stirring all the while; add a little salt, then strain and sweeten, adding a little butter, wine, and nutmeg, if the case require. It should be taken warm.—Oatmeal Gruel may be prepared in the same way; but if made of coarse grits, it should be strained after boiling, and then seasoned.

PANADA.

Boil some slices of soft bread in a quart of water for five minutes. Then beat the bread smooth in a deep dish, mixing with it a little of the water in which it had been boiled; mix with it a bit of fresh butter, sugar, and nutmeg, according to circumstances.

—Or, it may be made by grating some bread, or grating or pounding a few crackers; pour on boiling water; beat it well, and add sugar and nutmeg, or cinnamon.

MILK FOR INFANTS.

Take of cows' milk one part, water two parts, loaf sugar as much

as may be agreeable.

It is necessary, when children are to be raised by the hand, to dilute the milk. These proportions may be altered as the child advances in age. The object is to make a diet as near the qualities of the maternal milk as possible. [Some use a mixture of cream and barley-water.]

ARROW-ROOT.

Take of arrow-root a tablespoonful, sweet milk half a pint, boiling water half a pint. Boil them a few moments over the fire.

Sweetened with loaf-sugar, it is one of the best aliments for

children, especially when the bowels are irritable.

The farinaceous substance called Canna is prepared by simply boiling in milk, and adding sugar.

FARINA.

This substance, lately introduced as an article of diet, consists of the fecula of wheat in combination with a considerable quantity of gluten. It is prepared for use by stirring a tablespoonful, or more, into a pint of boiling milk or water, and then boiling for a quarter or half hour. It forms a mixture like arrow-root; and it can be prepared as a jelly by using a larger quantity of the farina. It may be flavoured to suit the taste.

BOILED FLOUR.

Take of fine flour one pound; tie it up in a linen cloth as tight as possible, and, after frequently dipping it in cold water, dredge the outside with flour, till a crust is formed around it, which will prevent the water from soaking into it while boiling. It is then boiled until it becomes a hard, dry mass.

Two or three spoonsful of this may be grated, and prepared in the same manner as arrow-root, for which it forms an excellent substitute.

It is used in the bowel affections of children.

VEGETABLE SOUP.

Take one potato, one turnip, one onion, with a little celery, or

celery seed. Slice, and boil in one quart of water for an hour; add as much salt as is agreeable, and pour the whole upon a piece of dry toast.

To be used when animal food would be improper.

MUTTON BROTH.

To one pound of lean mutton, allow one quart of water; season with a little salt and some parsley, and put in some large pieces of the crust of bread; boil slowly for two or three hours, skimming carefully.—Beef, veal, or chicken broth may be made in the same manner. Vegetables, barley, rice, &c., can be added, if expedient. Mutton broth may be made more speedily by taking three chops; beat the meat on both sides, and slice thin; put it into a saucepan with a pint of water, a little salt and some crusts of bread, or some parsley, and a small onion, sliced thin. Cover the saucepan, and boil fast; skim, and in half an hour it will be ready for use.

CHICKEN WATER.

Take half a chicken divested of all fat, and break the bones; add to this half a gallon of water, and boil for half an hour. Season with salt.

This water is directed by some physicians in the early stages of cholera. Taken warm, it promotes vomiting, and washes out the stomach.

BEEF TEA.

Take of lean beef, cut into shreds, one pound, water one quart; boil it for twenty minutes, taking off the scum as it rises. After it grows cold, strain the liquor.

This preparation is more nourishing than ordinary broths, and

very palatable.

ESSENCE OF BEEF.

Take of lean beef, sliced; put a sufficient quantity into a porter bottle to fill its body, cork it *loosely*, and place it in a pot of cold water, attaching the neck by means of a string to the handle of the vessel. Boil this for an hour and a half or two hours, then decant the liquor, and skim it.

To this preparation may be added spices, salt, wine, brandy, &c., according to the taste of the patient and nature of the disease. It contains a large amount of nourishment in a small bulk, and is consequently very useful in very low forms of disease.

SUET PTISAN.

Take of sheep's suet 2 ounces, milk 1 pint, starch half an ounce; boil slowly for half an hour.

This may be used as a common drink in dysentery.

WINE WHEY.

Boil a pint of milk, and, when boiling, add a large wine-glassful of Sherry or Madeira wine; let it boil again, and then remove it from the fire, and let it stand a few minutes; then remove the curd from the whey into a bowl, and sweeten it.

RENNET WHEY.

Take of new milk one quart, rennet (the water in which it has been steeped) a large spoonful. Heat the milk, and then add the rennet; boil until the curd separates, and is all taken off.

To many persons this forms a very agreeable nutriment.

VINEGAR WHEY.

Take of milk one pint, vinegar half an ounce; boil for a few minutes, and separate the curd.

TARTAR WHEY.

Take of milk one quart, cream of tartar half an ounce; boil until the curd separates.

TOAST WATER.

Toast some pieces of bread brown, (not burnt,) then put them into a pitcher and fill it up with boiling water. Let it stand till cold, then strain.—A pleasant drink in fevers, &c.

TAMARIND WATER.

Put tamarinds into a pitcher or tumbler until it is one-third full; then fill it up with cold water, cover it, and let it infuse for a quarter of an hour or more.

An agreeable refrigerant drink in fevers.

COCOA.

Boil two ounces of good cocoa in a quart of water, and as soon as it boils, set it on coals to simmer gently for an hour or more.

To be used hot.

CHOCOLATE.

Chocolate should be suffered to stand until cold, after having been made in the usual way. The oily parts thus collect on the surface, and should be taken off. The liquid should then be boiled again, and sugar, &c., added.

II.

POISONS—THEIR ANTIDOTES AND TESTS.

Cases of poisoning are so sudden and alarming, that no time can be lost in administering relief. In no position of responsibility which the physician may be called upon to occupy, can the possession of accurate medical (and especially *chemical*) knowledge, be more imperatively demanded of him, than when required to direct the treatment necessary in cases of poisoning. Certainly there is none in which his ignorance or deficiency in these respects, will be more disastrous, both to his patient, and himself.

The following memoranda are added, as embracing, in a succinct form, all the *essential* facts relating to Poisons, their Antidotes, and Tests.

The arrangement closely follows that of M. Orfila's Traité des Poisons.

CLASSIFICATION.

- I. IRRITATING AND CORRODING (Mineral, Animal, and Vegetable) Poisons.
- II. NARCOTIC OR STUPIFYING POISONS.
- III. ACRID NARCOTIC POISONS.

I.—IRRITATING AND CORRODING POISONS.

(THE ENERGETIC MINERAL ACIDS.)

ARSENIC AND ITS PREPARATIONS.

Object. Ejection of the poison by vomiting; its decomposition; and, at the same time, protection of the stomach from its action.

Treatment. Abundant draughts of sweet milk, gruel, decoctions of starch, or oily mixtures; tickling the fauces, &c., to induce vomiting; the stomach-pump; emetics of sulphate of zinc. Hydrated sesquioxide of iron, in large doses, is the only antidote of reliance, made according to the following formula: - Dissolve sulphate of iron 3iv, in water Oij, and add thereto commercial sulphate acid Ziijss; then boil the solution, and next add by small portions, nitric acid (density 1.380) 3ix, boiling the liquid for a minute or two after each addition, until it acquires a yellowishbrown colour, and yields a precipitate of the same hue with ammonia. Filter, and when the liquid cools, add, in full stream, stronger aqua ammonia Ziijss, stirring the mixture smartly. Collect the precipitate on a calico filter, and wash it till the washings cease to precipitate with nitrate of baryta; squeeze out the water as much as possible, and dry the precipitate at a temperature not exceeding 180°. It is best, as an antidote, to employ it in the moist state. [Magnesia has lately been asserted to be a good antidote.]

TESTS.

In the solid state:—Entirely sublimed by heat. If previously mixed with charcoal (and placed in a suitable test-tube), deoxidated arsenic will be obtained in form of a metallic coating inside the tube, and this may be re-converted into arsenious acid, by urging it in various directions along the tube, with the aid of a (spirit-lamp) flame; the facets of the crystals thus formed (on the cooler situations) will be seen, in some places, with the unassisted eye, but more distinctly by means of a lens of low power.

In solution:—Ammoniacal nitrate of silver produces a lemon-coloured (arsenite of silver) precipitate. Ammoniacal nitrate of copper throws down a fresh grass-green (arsenite of copper) precipitate. Transmission of sulphuretted hydrogen produces a bright yellow (sesquisulphuret of arsenic) precipitate. Lime-water precipitates a white (arsenite of lime) powder; but this test is not one of reliance.

Placed with zinc, and diluted sulphuric acid, in Marsh's apparatus, the arseniuretted hydrogen thence arising, when lighted, will deposit metallic arsenic on a piece of glass or porcelain, held over the flame.

The precipitates referred to, if washed and dried, may be treated as directed above for arsenic in the dry or solid condition.

[Note. In testing suspected matters obtained from the stomach, these (and in cases of death, the stomach itself), must be cut or broken down, and boiled during at least three quarters of an hour: if not sufficiently fluid, add distilled water. Strain, and, with addition of a small quantity of potash, again boil during a quarter of an hour, and filter. If this liquor manifests either acid or alkaline reaction, neutralize with potash, or with acetic acid, as may be required; then acidulate it faintly with hydrochloric acid. Solution of nitrate of silver will remove this acid, and solution of chloride of sodium will precipitate any excess of silver. The liquor may now be experimented on with the above tests.]

NITRIC ACID.

Obj. To render the acid inert by neutralizing it with earthy carbonates, and then to withdraw it.

Treat. Mixtures composed of chalk or magnesia with sweet milk or water; linseed decoction or other mucilaginous drinks; soap dissolved in water; and enemata of the same ingredients.

TESTS.

By addition of copper or lead-filings, and application of heat, rich red fumes are evolved.

HYDROCHLORIC (OR MURIATIC) ACID.

Obj. Same as in preceding.

Treat. Chalk must be avoided, in case of chloride of calcium

being formed; but the other means directed for the foregoing acid are proper.

TESTS.

Characteristic acid taste. The presence of muriatic acid (in small proportion) is at all times demonstrable in the juices of the stomach, therefore, proof of its presence in excess is required in cases of poisoning. When a piece of glass, wetted with this acid, is held close to liquor ammoniæ, so as to let the vapours of both meet, white (muriate of ammonia) fumes are formed. Solution of nitrate of silver produces a white (chloride of silver) candy-looking precipitate.

NITRO-MURIATIC ACID.

Obj. and Treat. As for the preceding.

OXALIC ACID AND ITS SOLUBLE SALTS.

Obj. To neutralize the acid, and then evacuate the stomach by immediate vomiting.

Treat. Mixtures of magnesia, chalk, whiting (or plaster scraped from off the inside wall of an apartment), mixed with water (the amount of the latter being as small as convenient for swallowing); abundant drinks subsequently. No alkalies should be employed.

TESTS.

In solid state.—Has the characterizing sour taste of most acids; and produces the same changes as they do on vegetable blues. When placed in water, a crackling sound accompanies solution of its crystals.

In solution: Solution of chloride of lime produces a white (oxalate of lime) precipitate, which is insoluble in hydrochloric acid; but soluble in nitric acid. Solution of nitrate of silver also throws down a white precipitate, which, on being carefully dried, by aid of heat, on bibulous paper, acquires a brownish outline, and towards the end, shows some slight explosions.

SULPHURIC ACID.

Obj. and Treat.—Same as for Nitric Acid.

TESTS.

Solution of chloride of barium, or of nitrate of baryta, produces a white (sulphate of baryta) precipitate, which is insoluble by alkalies or acids.

TARTARIC ACID.

Obj. To neutralize the acid, and afterwards to remove it by vomiting.

Treat. Alkaline carbonates in solution; chalk and water. [This acid is now all but excluded from the list of poisons.]

ALKALIES.—ALKALINE EARTHS.

SOLUTION OF AMMONIA.

Obj. To clear out the stomach as quickly as possible, and protect it from the action of the poison.

Treat. Irritate the fauces with a feather, to promote vomiting,

and, with the same view, give repeated teacupfuls of warm fluids, containing olive or almond oil, (or either of these oils undiluted,) or gum mucilage, mixed with vinegar, citric or other vegetable acids; glysters of similar ingredients are also required. Inhalation of the fumes of muriatic acid, or of heated vinegar, has sometimes proved efficacious.

TESTS.

Its powerfully pungent odour, and its alkaline action on vegetable colours; infusion of red cabbage will afford full illustration; (this effect is destroyed by subsequent boiling.)

Added to sulphate of copper in solution, a blue (ammoniacal sulphate of copper) precipitate is obtained; and if more solution of ammonia be added, said precipitate is dissolved. [When in the state of being nearly dissolved, it forms one of the important tests for arsenic.]

LIME.

Obj. See preceding.

Treat. Induce vomiting by irritation of throat, &c., and administer copious demulcent or oily drinks.

TESTS.

In substance.—Its peculiar odour, and austere styptic taste. When triturated with muriate of ammonia, fumes and odour of ammonia are evolved.

In solution.—Changes the vegetable blues to green. When exposed in an open vessel to the air, a pellicle (of carbonate of lime) forms on the surface; this will effervesce, and dissolve on addition of acid. Oxalic acid produces a white (oxalate of lime) precipitate.

POTASSÁ.—SODA.—AND THEIR CARBONATES.—NITRATE OF POTASH.

Obj. Same as preceding.

Treat. Large doses of fixed oils and mucilaginous draughts; until the matters ejected cease to show alkaline qualities.

TESTS.

Potassa in the solid state.—Its appearance. Deliquesces on exposure to the atmosphere.

In solution.—Changes the vegetable blues to green; turns the yellow of turneric to a brown colour. Addition of chloride of platinum throws down a yellow precipitate.

Soda, in substance.—In sensible and general alkaline properties resembles potash, but is less deliquescent.

In solution.—No yellow precipitate from addition of chloride of platinum (which distinguishes it from potassa). Alcohol, when mixed with soda (or any of its salts), burns with a fine yellow flame, which is probably the most decided test for this alkali.

Nitrate of Potash, in substance.—Dissolved in distilled water, and a small amount of sulphuric acid added, deep red fumes are disengaged whenever heat (from a spirit-lamp flame) is applied.

In solution.—Chloride of platinum precipitates a yellow substance, as in the case of Potassa, (vid. above.)

CHLORIDE OF BARIUM, AND PREPARATIONS OF BARYTA.

Obj. Speedy decomposition of the poison, and its withdrawal. Treat. Sulphate of magnesia, or of soda; the stomach-pump.

TESTS.

In solution.—Sulphuric acid throws down a profuse, dense, white (sulphate of baryta) precipitate.

Solution of nitrate of silver also produces a white (chloride of silver) precipitate. Sulphuretted hydrogen produces no change of appearance,—which circumstance, being peculiar to salts of barium, is valuable as a negative test.

METALLIC POISONS.

ANTIMONY, TARTAR EMETIC, AND ANTIMONIAL PREPARATIONS GENERALLY.

Obj. To empty the stomach completely, and to neutralize what remains.

Treat. Encourage vomiting by irritation of the throat, or employ the stomach-pump, if requisite; repeated warm water draughts; decoctions of galls, or of cinchona (with tincture of the latter), or green tea; together with stimulants, both internal and external.

TESTS.

In a solid state.—If first dried and charred, and then exposed in a test-tube to intense heat (by aid of a blowpipe), globules of metallic antimony appear at the bottom.

In solution.—Transmission of sulphuretted hydrogen produces a reddish or orange (hydrated sesquisulphuret of antimony) precipitate. Should matters from the stomach be present, the solution must be well agitated, along with a small portion of muriatic and tartaric acid, then filtered, previous to being experimented on.

BISMUTH-THE TRISNITRATE.

Obj. Complete ejection of the poison.

Treat. Induce vomiting by tickling the fauces, &c., and give continuous full draughts of sweet milk.

TESTS.

In substance.—Dissolve in nitric acid, without change of colour, and without effervescing (which distinguishes it from a carbonate). Sulphuric acid produces no precipitate (disproving the possible idea of its being a preparation of lead). Dissolve it in nitric acid, and add solution of potash so long as any precipitate is thrown down; gather this in a filter, and after washing and drying it, place it on charcoal (and treat it as directed for preparations of lead), when its reduction to the metallic condition will be effected.

COPPER-ITS SALTS, AND PREPARATIONS GENERALLY.

Obj. To decompose the poison, and remove it from the stomach. Treat. Copious draughts of warm liquids containing albumen of eggs; continue to give eggs in the raw state for some time after the vomiting ceases. If metallic copper has been swallowed, give magnesia, or its carbonate, to prevent oxidisement.

TESTS.

The Sulphate, in a solid state.—Bright blue colour, astringent metallic impression on the tongue.

In solution.—Transmission of sulphuretted hydrogen affords a brownish-black (sulphuret of copper) precipitate. Solution of ammonia precipitates a pure blue substance, which on further addition of ammonia becomes dissolved; but when only a small amount of the poison is present, no precipitation occurs, a clear violet-coloured solution being then at once presented. Ferrocyanide of potassium throws down a reddish-brown (ferrocyanide of copper) precipitate. A piece of polished zinc or iron (as the blade of a penknife) acquires a plating of copper, if placed in a liquid containing the above salt. The tests for sulphuric acid will indicate its presence here as the combining acid. (See Sulphuric Acid.)

The Acetate.—Same tests as preceding, excepting the two last.

The Ammonio-Sulphate.—Has a brilliant violet-blue colour, and an ammoniacal odour. Solution of arsenious acid affords a fresh apple-green precipitate. (This experiment is, conversely, that for arsenious acid.)

The Diacetate.—Same tests as for the sulphate, with exception of that which is placed last.

If, in either of the foregoing cases, matters from the stomach are present, boil the whole, and when cool add distilled vinegar; filter, and retain both the liquor which has passed through, and the substance left in the filter. Pass sulphuretted hydrogen through the former, and then boil; when the brownish product has subsided (after pouring off the supernatant liquid), wash it several times in distilled water. Incinerate it within a test-tube, add a small amount of nitric acid, and then apply moderate heat. When cool, a few drops of solution of ammonia will produce the violet colour above referred to, if copper exist in the solution. The substance left in the filter must be burnt (at a red heat) in a crucible; and, after addition of diluted nitric acid, exposed to a gentle heat, then filtered. In this state it may be examined by the tests for Sulphate of Copper, in solution.

LEAD—ITS ACETATE, CARBONATE, AND PREPARATIONS GENERALLY.

Obj. To decompose the poison, and then promote its ejection. Treat. Administer solution of sulphate of zinc, or ipecacuanha, followed by Epsom salts, in full doses; induce and continue vomiting. If red lead is the poison, almond or olive oil must at first be given, in considerable quantity.

TESTS.

In a solid state.—Mixed with potash and charcoal, and exposed to a red heat, (or placed in a suitably sized hollow in a piece of 26*

charcoal, and exposed to a blowpipe flame,) metallic lead is formed.

In solution.—Sulphurie acid, and sulphates, throw down a white (sulphate of lead) precipitate. Solution of carbonate of soda gives a white (carbonate of lead) deposit. Solution of chromate of potash a rich yellow (chromate of lead) precipitate. Transmission of hydrosulphuric acid produces a blackish (sulphuret of lead) precipitate. Zinc precipitates lead from solution of any of its salts.

To render the *carbonate* amenable to the foregoing tests, it must first be dissolved in a sufficiency of nitric acid diluted with distilled water.

MERCURY — CORROSIVE SUBLIMATE, THE BICYANIDE, CALOMEL, IODIDE, RED PRECIPITATE, SUBSULPHATE OR TURPETH MINERAL, ETC., ETC.

Obj. Decomposition of the poison, and its ejection from the stomach.

Treat. Albumen of eggs in continuous large doses, and infusion of catechu afterwards; sweet milk; mixtures of flour with water (for sake of gluten) in successive cupfuls; iron filings; (emetics of tartrate of antimony have been recommended, to combat ptyalism, when present.)

TESTS.

Corrosive sublimate in a solid state.—Is sublimed when heated in a test-tube; and the acrimonious fumes speedily condense into a crystalline, semitransparent mass. Placed in a test-tube and potassa or soda added in solution, a yellow (peroxide of mercury) precipitate is thrown down; (lime has the same effect.) Triturated with an equal weight of well-dried carbonate of potassa, metallic gobules of mercury will become visible.

In solution.—Ammonia throws down a white (ammonio-chlo-ride of mercury) precipitate. Solution of proto-chloride of tin

affords a (perchloride of tin) precipitate, which at first is white, but acquires a leaden colour on adding more of said test; when this precipitate (after being well agitated) is dried, minute globules of quicksilver are formed. Transmission of sulphuretted hydrogen produces a (bisulphuret of mercury) precipitate, which at first is leaden-coloured, and then black. Solution of iodide of potassium affords an intensely brilliant scarlet (protoioduret of mercury) precipitate.—Corrosive sublimate may be reduced to the metallic state through galvanic influence, applied as follows:—A drop of the suspected fluid laid on a piece of polished gold, and both it and the gold touched at the same instant by a point of iron (as a thick needle, or the end of a penknife), a small silvery coating of mercury soon becomes apparent on the gold. (Being most soluble in sulphuric ether, addition of this fluid is of more service when the poison is found mingled with organic or other matters.)

The Bicyanide.—When sublimed within a test-tube, it condenses in yellow crystals, these, on being touched with any small point, gradually acquire a fine scarlet colour.

Calomel.—Is sublimed by heat. Mixed with solution of potash or lime, it gives a black precipitate. When heated along with potash, it at first assumes a black appearance, and then quicksilver globules are observed. Sulphuric ether is equally valuable in treatment of calomel as in the case of corrosive sublimate.

The Iodide.—On cautious application of heat, it sublimes in red-coloured crystals, which soon change to yellow, and subsequently to a dusky hue. On exposure to a sufficient degree of heat, iodine fumes are disengaged. When mixed with potash (in equal weights) and heated in a test-tube, decomposition occurs, metallic mercury being sublimed, and iodide of potassium deposited in the tube.

Red Precipitate.—Exposed to heat in a test-tube, metallic mercury is sublimed; evolution of oxygen being at the same time demonstrable.

The Subsulphate.—Treated in same manner as foregoing, sublimation of the mercury takes place; and sulphurous acid gas is perceptibly evolved.

SILVER-THE NITRATE.

Obj. Speedy decomposition of the poison, and its subsequent evacuation from the stomach.

Treat. Give, in repeated draughts, a strong solution of chloride of sodium (common salt) and continue its employment although vomiting should have been complete.

TESTS.

In solution.—Muriatic acid or a soluble chloride throws down a curdy-looking (chloride of silver) precipitate, which acquires a brownish-black colour on short exposure to the light; this substance, after being washed and dried, fuses on being heated; and, when cool, has a horny appearance. Solution of ammonia produces a deep brown (oxide of silver) precipitate; if the solution of ammonia is added in excess, the precipitate will be dissolved; when only almost dissolved, the turbid mixture thus afforded forms the ammoniaco-nitrate of silver test for arsenious acid, and may itself be tested with a solution of the latter.

PHOSPHORUS.

Obj. Decomposition of the poison, and its total evacuation.

Treat. Mixture of magnesia and cold water, in repeated draughts; promote continuous vomiting, by tickling the fauces, &c.

TESTS.

The peculiarity of its odour; its highly inflammable property, when only moderately heated.

IRRITATING AND CORRODING ANIMAL POISONS.

CANTHARIDES.

Obj. Immediate evacuation of the poison, and protection of the stomach and intestines from its energetic action.

Treat. Promote vomiting by repeated draughts of warm water; enemata of water with opium, &c.; camphor.

TESTS.

Characteristic green and glistering appearance of the flies, when a portion of them can be obtained.

THE MUSSEL, LOBSTER, DOLPHIN, CONGER EEL,

And some more varieties of fish (crustaceous, testaceous, and others) are poisonous under certain (diseased) conditions.

Obj. Their removal from the stomach and intestines.

Treat. Induce full vomiting by exhibition of sulphate of zinc; mustard, in tepid water; or warm decoction of chamomile, in repeated emetic quantities. Castor oil.

TESTS.

None by chemical agency.

IRRITATING AND CORRODING VEGETABLE POISONS.

COLOCYNTH, ELATERIUM, EUPHORBIUM, GAMBOGE, MEZEREON, SAVINE.

Obj. Evacuation of the poison from the stomach and bowels.

Treat. Copious demulcent drinks in a warm state, succeeded

by liquid cordial, stimulant or opiate medicines, suited to particular circumstances.

TESTS.

None by means of reagents. The rich yellow colour of gamboge may sometimes prove a means of its detection; and familiar acquaintance with others of the above substances may lead to their recognition by smell, taste, &c.

II. NARCOTISING OR STUPIFYING POISONS.

OPIUM, MORPHIA, HYOSCYAMUS, LACTUCA VIROSA, LACTUCARIUM,
AND THEIR PREPARATIONS GENERALLY.

Obj. To empty the stomach as speedily as possible.

Treat. The stomach-pump; copious administration of warm diluents; with full emetic doses of tartrate of antimony, sulphate of zinc, or sulphate of copper, and ipecacuanha. After sufficient evacuation, give vegetable acids in a suitably diluted state. During said treatment, application of cold water to the head, &c., should be persevered in, and in many instances, mustard applications to the feet, and the patient strenuously aroused whenever he subsides into a lethargic condition. Artificial respiration should be employed after other means fail.

TESTS.

Opium in substance.—Its peculiar taste, colour, and odour, (especially the latter quality, when arising from opium in a soft-ened or moist state, and more so, if it be moderately heated, as when just obtained from the stomach.)

In solution.—Nitric acid throws down a red coloured (nitrate of morphia) precipitate. Tincture of the muriate of iron produces a (meconate of iron) deposit, which is also red.

When the suspected fluid has been procured from the stomach, it usually contains a mingling of organic substances; these must be broken down, and the whole rendered sufficiently fluid, by addition of distilled water when necessary, then slightly acidulated with acetic acid; the liquor thus obtained, when well agitated, and afterwards filtered, must be evaporated to the thickness of syrup; and after being digested with alcohol, it must be boiled, and again concentrated to nearly the consistence of syrup. When this alcoholic extract (as it has been called) is dissolved in distilled water, solution of ammonia, cautiously added, produces a (morphia) precipitate, which acquires a yellow colour when nitrie acid is dropped into it. When the last-named precipitate is removed by filtration, and acetate of lead added to the supernatant (meconate of ammonia) liquor, a (meconate of lead) deposit is afforded, which, when suspended in water, is decomposed by transmission of sulphuretted hydrogen; a dark precipitate (sulphuret of lead) being thereby thrown down. The fluid remaining from this last process acquires a deep cherry-red hue, on addition of the sesquichloride of iron.

Morphia, in a solid state.—Is soluble only in a slight degree of water. Nitric acid turns it first to an orange, and then to a yellow colour. When suspended in water, it is changed to a dull blue, on addition of tincture of muriate of iron.

HYDROCYANIC (OR PRUSSIC) ACID.

CHERRY-LAUREL OIL, AND CHERRY-LAUREL WATER; BITTER ALMOND (AND ITS OIL).

Obj. Endeavour to counteract the deadly sedative, congestive influence of the poison.

Treat. The internal remedies best calculated to act chemically on this poison, are, carbonate of potash in solution, quickly succeeded by watery solutions of sulphate of iron, (with the inten-

tion of decomposing the acid, and forming the less injurious substance named Prussian blue:*) the instances of successful treatment by these, or indeed by any other kind of treatment, are extremely rare, however. Inhalation of chlorine gas, ammonia, &c., artificial respiration, exhibition of energetic stimulants—such as brandy, liquid ammonia, chlorine-water, chloride of soda, and of lime, have all been extolled, and may be tried; also mustard poultices to the stomach, and cowhage applied over the chest: venesection at the neck, temples, &c., and affusion of cold water to the head and spinal district, are more likely to prove timely excitant and effective remedies. Employment of the stomach-pump, emetics, &c., seems here a most improbable means of relief, or rather a waste of time.

TESTS.

The (bitter almond) peculiarity of its odour. When a little potash is mixed with liquids containing the poison, and solution of sulphate, or sesquichloride of iron added, a grayish-green precipitate is thrown down, which deepens to a Prussian-blue tint, on addition of a few drops of sulphuric acid. The nitrate of silver produces a white (cyanide of silver) precipitate, which, after being washed and dried, and then held on a watch-glass over a flame, burns with a fresh rose-colour, cyanogen being at same time evolved.

When a mixture is to be examined, containing matters from the stomach, &c., if alkaline, it must first be neutralized by addition of sulphuric acid, then one-eighth part cautiously distilled therefrom into a receiver immersed in some frigorific mixture; and the product may then be tested by nitrate of silver, as above.

* Messrs. J. & J. H. Smith, of Edinburgh, recommend, as an antidote for Prussic acid, a mixture of the sulphates of the protoxide and sesquioxide of iron, associated with carbonate of potassa. So soon as the antidote comes in contact with hydrocyanic acid, sulphate of potassa is formed, and the poison is converted into Prussian blue. (American Journal of Medical Science, January, 1845, from the Lancet.)

GASEOUS (NARCOTIC) POISONS.

CHLORINE, CARBONIC ACID, CARBURETTED HYDROGEN, SULPHURETTED HYDROGEN, ETC.

Obj. To avert suffocating symptoms, in the first place.

Treat. Remove the patient from the situation or apartment in which the poison had been inhaled, or open the doors, windows, &c., for admission of pure air: continued application of cold water to the head and neck. Venesection may be necessary, or cupping at the back of the neck; cautious inhalation of steam from warm water placed in a convenient vessel.

TESTS.

Chlorine.—Take a bottle containing distilled water into the tainted apartment, and after pouring out more than half, cork the bottle, and (to the retained portion of water) apply the tests directed for muriatic acid.

Carbonic Acid.—Proceed with a bottle of (lime) water, as just described; the solution of lime acquires a milky appearance on being well agitated, if the said gas may have been in the atmosphere of the apartment. A lighted candle will detect the presence of carbonic acid gas (if in excess), by being immediately extinguished in the tainted atmosphere; it must, for this purpose, be held near the floor. [The utmost caution is required to be observed in introducing lighted tapers into close situations supposed to contain this gas, lest an explosive hydrocarbon may, instead, be met with.]

III.—ACRID NARCOTIC POISONS.

ALCOHOL, BELLADONNA, COCCULUS INDICUS, COLCHICUM AUTUM-NALE, DIGITALIS, FOOLS' PARSLEY, HELLEBORE, WATER HEM-LOCK, SPOTTED HEMLOCK, HYPOPHYLLUM (MANY VARIETIES), POISONOUS MUSHROOMS, NUX VOMICA, STRAMONIUM, SABA-DILLA, TOBACCO, VERATRIA, VERATRUM ALBUM, ETC., ETC.

Obj. To relieve the stomach and bowels of their poisonous contents as speedily as possible.

Treat. The stomach-pump, tickling the fauces, emetics, warm diluents, demulcents, sulphate of magnesia or of soda, and similar treatment to that directed above for Opium, Morphia, &c.

TESTS.

By sensible qualities chiefly. In fatal cases from *alcohol*, the stomach should, with its contents, be cut and broken down; and after sufficient fluidity given to the mixture by addition of distilled water, it should be submitted to repeated distillation at a heat under 212°.

POISONED WOUNDS OF EVERY KIND.

Obj. To prevent absorption of the virus.

Treat. If on the extremities, tie a ligature tightly round the limb, &c., between it and the heart; apply cupping-glasses, so as to include the wound; then, or at first, apply caustic potassa, nitrate of silver, or the actual cautery; removal of the part by the knife. Peculiar directions for the management of accidents of this nature, however, are here unnecessary, as they more properly belong to works on Surgery.

III.

TABLE OF SIGNS AND ABBREVIATIONS, SOME OF WHICH ARE EMPLOYED IN THIS WORK, AND ALL OF WHICH OCCUR FREQUENTLY IN PRESCRIPTIONS.

ABBREVIATION.	LATIN NAME.	ENGLISH NAME.
R	Recipe.	Take.
aa	Ana.	Of each.
tb	Libra, vel libræ.	A pound, or pounds.
3	Uncia, vel unciæ.	An ounce, or ounces.
3	Drachma, vel drachmæ.	A drachm, or drachms.
Э	Scrupulus, vel scrupuli.	A scruple, or scruples.
0	Octarius, vel octarii.	A pint, or pints.
f3	Fluidrachma, vel — drachmæ.	A fluidrachm, or - drachms.
f3	Fluiduncia, vel — unciæ.	A fluidounce, or - ounces.
m	Minimum, vel minima.	A minim, or minims.
Ad lib.	Ad libitum.	At pleasure.
Ad saturand.	Ad saturandum.	Until saturated.
Add.	Adde, vel addantur.	Add, or let be added.
Aq. bull.	Aqua bulliens.	Boiling water.
Aq. ferv.	Aqua fervens.	Hot water.
Aq. font.	Aqua fontana.	Spring water.
Aq. fluv.	Aqua fluvialis.	River water.
Aq. distil.	Aqua distillata.	Distilled water.
Bull.	Bulliat, vel bulliant.	Let boil.
Cap.	Capiat.	Let the patient take.
Chart.	Chartula, vel chartulæ.	A small paper, or papers.
Coch.	Cochlear, vel cochlearia.	A spoonful, or spoonfuls.
Coch. mag.	Cochlear magnum.	A tablespoonful.
Coch. parv.	Cochlear parvum.	A teaspoonful.
vel mod.	Cochlear medium, vel modi- cum.	A dessertspoonful.
Col.	Cola.	Strain.
Colet.	Coletur.	Let it be strained.
Colent.	Colentur.	Let them be strained.

Vit. ov.

Vitellum ovi.

TABLE OF PROPORTIONATE DOSES FOR DIFFERENT AGES.

GAUBIUS' TABLE.

-							Examples.
Uno	der ½	year	, 1-15th of	a full	dose,	or	4 grains.
61	1	46	1-12th	66	66	66	- 5 "
66	2	66	1-8th	66	66	66	71 "
66	3	66	1-6th	66	44	66	10 "
61	4	66	1-5th	66	66	66	12 "
	7	66	1-8d	66	66	66	20 "
66	14	66	1-half	66	66	66	30 "
66	20	"	2-3ds	66	66	66	40 "
66	21	66	the full dose	9,			1 drachm.
	63	66	11-12ths	66	66	66	55 grains.
66	77	66	5-6ths	66	66	66	50 "
66	100	"	2-3ds	**	44	46	40 "

The following is the more simple rule of Dr. Young:

"For children under 12 years, the doses of most medicines must be diminished in the proportion of the age, to the age increased by 12. Thus, at 2 years, the dose will be †th of that for

adults, viz:
$$\frac{2}{2+12} = \frac{1}{7}$$
. At 21 the full dose may be given."

To the above rule there are certain exceptions; thus calomel and castor oil require to be given in larger proportionate doses, while opium and the narcotics generally should be administered in smaller proportionate quantities.

Sex, temperament, and idiosyncracy have also a modifying effect upon the dose, and they should always be kept in view in the administration of medicines. Females usually require a smaller dose than males; and persons of sanguine temperament bear depletory medicines better than the phlegmatic.

TABLE EXHIBITING THE NUMBER OF DROPS OF DIFFERENT LIQUIDS EQUIVALENT TO A FLUID DRACHM.

Liquid medicines, in small quantities, are frequently estimated by drops, which are often incorrectly considered equivalent to a minim, or the sixtieth part of a fluid drachm. The drop of water and of watery fluids is, on an average, about this size; but this is by no means the case with all liquids. Even in the same liquid the size of the drop varies, according to the shape of the vessel, and of its mouth, from which it is dropped. The following table was compiled by Mr. E. Durand, of Philadelphia.

Drops.	Drops.
Acid, acetic (crystallizable) - 120	Tincture of assafætida, fox-
Acid, hydrocyanic (medicinal) 45	glove, guaiac, and opium 120
Acid, muriatic 54	Tincture of chloride of iron 132
Acid, nitric 84	Vinegar, distilled 78
Acid, nitric, diluted, (1 to 7) 51	Vinegar of colchicum - 78
Acid, sulphuric 90	Vinegar of opium (black drop) 78
Acid, sulphuric (aromatic) - 120	Vinegar of squill 78
Acid, sulphuric, diluted (1 to 7) 51	Water, distilled 45
Alcohol (rectified spirit) - 138	Water of ammonia (strong) 54
Alcohol, diluted (proof spirit) 120	Water of ammonia (weak) - 45
Arsenite of potassa, solution of, 57	Wine (Teneriffe) 78
Chloroform 250 to 300	Wine, antimonial 72

PARTE COM							

^{*} Somewhat different results have been obtained by other chemists. Dr. Christison's analyses exhibit a rather smaller amount of alcohol in most wines, than the above table of Mr. Brande. Thus, according to

Christison, the average strength of Port is 18.68; of Sherry, 18.47; of the strongest Madeira, 20.35. Dr. C. considers it a mistake to suppose that wines become stronger by age, although it is well known, that up to a certain period, their flavour is improved; while, at the same time, their body, or apparent strength, is increased.

Wines are very frequently adulterated, and counterfeit mixtures are often sold as genuine wine. Formerly, wine-dealers were in the habit of putting litharge into wines that had become sour; by which sugar of lead was formed (from the action of the acetic acid of the wine upon the oxide of lead). This corrected the defect of the wine, but, at the same time, rendered it highly poisonous. This adulteration may easily be detected by the action of sulphuretted hydrogen, which causes a black, flocculent precipitate. This criminal practice is now, however, abandoned. According to Brande, the presence of lead, in minute quantities, may often be detected in wines, but it is derived, invariably, from shot in the bottle, or some analogous source.

Spurious mixtures, sold in imitation of genuine wines, though not absolutely poisonous, may, nevertheless, prove very injurious to the stomach, and always occasion mischief and disappointment, when depended upon as therapeutic agents. The wines most frequently imitated are Port and Madeira, and cider is usually the chief ingredient in the spurious mixture. English port is sometimes made of a small portion of real port mixed with cider, juice of elder-berries, and brandy, coloured and rendered astringent by logwood and alum.

Brandy is almost universally added to wines (especially the stronger) to increase their strength. By the custom-house regulations of England, ten per cent. of brandy may be added to wines after importation; but to good wines not more than four or five per cent. is added. Colouring matters are also frequently added, as caramel, must, and (as in the case of port) logwood. Champagne wine is sometimes imitated by very sparkling cider, slightly brandied.

VII.

A TABLE EXHIBITING THE COMPOSITION OF THE PRINCIPAL NA-TURAL MINERAL WATERS OF EUROPE AND THE UNITED STATES.

I. CARBONATED WATERS, or such as contain an excess of carbonic acid, which gives them a sparkling appearance and the power of reddening litmus paper. These waters frequently contain the carbonate of iron, lime, and magnesia, which are held in solution by the excess of carbonic acid, and which are deposited when the water is boiled, or exposed for some time to the air.

III. CHALYBEATE WATERS are characterized by their inky taste, and by striking a blue-black colour with an infusion of galls, and a blue colour with ferrocyanuret of potassium. The iron is generally in the state of carbonate of the protoxide, held in solution in the water by excess of carbonic acid. By standing, or boiling, the carbonic acid is driven off, and the protoxide, by absorbing oxygen, is precipitated as a hydrated sesquioxide, of an ochreous colour.

IV. Saline Waters comprise those which contain a sufficient amount of neutral salts to give them a marked, and generally a purgative operation. The salts most usually present are the sulphates and carbonates of lime, magnesia, and soda, and the chlorides of calcium, sodium, and magnesium. Iodine and bromine have been found in a few saline springs; and some of them contain carbonic acid and iron, which might entitle them to be classified, respectively, with the carbonated or chalybeate waters.

V. Acidulous Waters. This division of Mineral Waters is intended to comprise such as contain a *free* acid, other than carbonic acid. They are, comparatively, of rare occurrence. The following is an analysis of *Sulphuric Acid Springs*, lately brought into notice:

OAK ORCHARD SPRINGS .- (New York.)

							In	a gallon.

pen a a age			Т	otal,	-	-		160.62
						[DR.	J. R	. CHILTON.

The Alum Spring of Virginia is also stated to contain free sulphuric acid.

VI. SILICEOUS WATERS. These Mineral Waters are extremely rare; and in those hitherto discovered, the silica appears to have been dissolved by means of soda. The most remarkable of these are the boiling springs of Geyser, in Iceland, of which the following is the analysis, as given by Black. (Edin. Phil. Trans. iii. 95.)

Croton oil, gtt. ss-j.

Cowhage, electuary of, f3j-iv.

Cream of tartar, 3ss-3j.

Creasote, gtt. j.

Cubebs, powder of, 3ss-3j.

oil of, gtt. v-xx.

extract of, gr. v-x.

Cyanuret of iron, gr. iij—v.
of potassium, gr. \(\frac{1}{4}\).
of zinc, gr. \(\frac{1}{4}\).

Dalby's carminative, f3ss.

Dandelion, extract of, 9j—3ss.

infusion of, f3ij.

Digitalis, powder of, gr. j.
infusion, f3ss.
tincture, gtt. x-xx.

Dogwood, decoction, f3ij.

Dover's powder, gr. v-x.
Dulcamara, decoction, f3ij-iv.

Elaterium, gr. $\frac{1}{8}$ — $\frac{1}{4}$. Elaterin, gr. 1-16th—1-12th.

Elixir of vitriol, gtt. x-xx.

of opium (M'Munn), gtt. xxv. proprietatis, f3j.

Emetic, tartar, gr. j-ij.

Epsom salts, 3j.

Erigeron, infusion, f3ij.

Ergot, powder of, gr. x-xx.

tincture, f3j—ij. wine, f3j—ij.

Essence of peppermint, gtt. x.

Ethiops mineral, gr. v—xx.

Ether, spirits of nitric, f3ss-f3j.

sulphuric, f3ss—f3j.

Extract of aconite, gr. ss—j.

of butternut, 9j—3ss.

of chamomile, gr. v-xx.

of colocynth, gr. x-xv.

of dandelion, 9j-3ss.

of gentian, gr. v-xxx.

of hemlock, gr. ij-iij.

of henbane, gr. j—ij.

of jalap, gr. v-xx.

of lettuce, gr. iij-v. of logwood, gr. v-xx.

of nux vomica, gr. 1-j.

of Peruvian bark, gr. x-

XXX.

of quassia, gr. ij-v.

of rhatany, gr. x-xv.

of taraxacum, 9j-3ss.

of male fern, gr. x-xx.

Fern, male, 3j—ij.
Ferrocyanide of iron, gr. iij—v.
Foxglove. See Digitalis.
Fowler's solution, gtt. v—x.

Garlie, syrup of, f3j. Galls, powder, gr. x-xxx. syrup, f3j-ij. tincture, f3j-ij. Gamboge, gr. iij-vj. Gentian, powder, gr. x-9ij. extract, gr. v-3ss. tincture, f3j-ij. Ginger, powder, gr. x-xxx. infusion, f3j-ij. tincture, f3j-ij. Gout cordial, Warner's, f3ss-ij. Godfrey's cordial, f3ss-j. Glauber's salts, 3j. Guaiac, (gum,) gr. x-xxx. tincture, f3j. ammoniated tinc., f3j. Gunja, extract of, gr. j-iij. tincture, gtt. v-x. Hartshorn, aromatic, gtt. x-xv. Hellebore, black, gr. x-xx. extract, gr. v-x. tincture, f3j. white, gr. j-ij. American, gr. j-ij. Hemp, Indian, see Gunja. (Apocynum Cannabinum) decoction f3j —ij. Henbane, extract, gr. j-ij. tincture, f3j. Hive syrup (Coxe's,) gtt. x-f3j. Hiera picra, gr. x-xx. Hoffman's anodyne, gtt. xxx-f3j. Hops, infusion, f3j-ij. tincture, f3j-ij. Huxam's tincture of bark, f3j-ij. Hyoscyamus. See Henbane. Hydrocyanic acid (medicinal), gtt. j-ij.

Iodide of iron, gr. ij-v. solution, gtt. xvof arsenic, gr. 1-16th-1-12th. of barium, gr. 1-1. of potassium, gr. v-xx. Iodine, tincture of, gtt. v-xx. Iodo-hydrargyrate of potassium, (Channing's solution,) gtt. ij-v. Indigo, powder, 9j-3j. Ipecacuanha, (emetic,) gr. xv-xxx. American, 9j-3ss. syrup of, f3ss-j. wine of, fzss-ij. Iron, pure, (reduced,) gr. v-x. acetate of, gtt. x-xx. ammoniated, gr. iv-x. bromide of, gr. ss-j. citrate of, and quinia, gr. v-x. ferrocyanide of, gr. iij-v. iodide of, gr. ij-v. solution, gtt. xv-xl. lactate of, gr. iij-v. muriated tincture of, gtt. x-XXX. phosphate of, gr. v-x. rust of, gr. v-xx. subcarbonate, gr. v-xx. sulphate of, gr. j-v. (dried,) gr. ss-iij. tartrate of, and potassa, gr. x -xxx. Valet's carbonate of, gr. v-x. wine of, gtt. xx-f3j. Jalap, powder of, gr. x-xx.

Jalap, powder of, gr. x—xx.

compound powder of, 3ss—j.
extract of, gr. x—xx.
tincture of, f3j—ij.

James's powder, gr. iij—viij.
Juniper berries, oil of, gtt. v—xv.

Kino, gr. x—xxx.
infusion of, f3ss—jss.
tincture of, f3ss—j.
Krameria. See Rhatany.

Lac assafætidæ, f3ss—j.
sulphuris, 3j—ij.
Laudanum, gtt. xxv.
Lactucarium, gr. v—xx.
Lime-water, f3ss—j.
Lobelia, powder of, gr. v—x.
tincture of, f3j.
Logwood, extract of, gr. x—xxx.
decoction of, f3ij.

Lupulin, gr. v—x. tincture of, f3j.

Magnesia, calcined, 3j.
carbonate of, 3j—ij.
sulphate of, 3j.

Male fern, Jj—ij.

May apple, extract, gr. x—xx.

Manna, Jj—ij.

Meadow saffron. See Colchicum.

Mercury, acetate of, gr. j.

black oxide of, gr. j—iij.
black sulphuret of, gr. v
—xx.
bicyanide of, gr. 1-16th—
1-8th.
biniodide of, gr. 1-16th—
1-12th.
corrosive chloride of, gr.

\frac{1}{8} - \frac{1}{4}.
iodide of, gr. ss—j.
mild chloride of, gr. ss—x.
yellow sulphate of, gr. ij
—v.

with chalk, gr. v—xx.

Mindererus, spirits of, f3ss—j.

Monesia, extract of, gr. x—xv.

Morphia, acetate of, gr. ½—4.

Morphia, muriate of, gr. $\frac{1}{6}$.

sulphate of, gr. $\frac{1}{6}$.

solution of, f3j

—ij.

Muriated tincture of iron, gtt. x-xxx.

Muriatic acid, gtt. v—xx. ether, gtt. v—xxx.

Musk, gr. v—3j.

artificial, gr. x.
tincture of, f3j.

Mustard seed, (whole), 3ij—iv. powder, (emetic), 3j.

Naphtha, wood, gtt. x—xv.

Nightshade, decoction of, f3ij—iv.

Nitrate of potassa, gr. v—xx.

of silver, gr. ¼—iij.

Nitre, sweet spirits of, f3ss—j.

Nitric acid, gtt. iij—x.

Nitro-muriatic acid, gtt. ij—x.

Nitrous powders, gr. v—x.

Nux vomica, extract of, gr. ss—ij.

powder of, gr. v.

tincture of, gtt. v—xx.

Oil of amber, gtt. v—xv.
of cajeput, gtt. ij—v.
castor, f3ss—j.
croton, gtt. ss—j.
of cod liver, f3ss—j.
of cubebs, gtt. v—xx.
of juniper, gtt. v—xv.
of male fern, gtt. xx—f3j.
of sassafras, gtt. ij—v.
of turpentine, gtt. v—xx.
of valerian, gtt. iv—vi.
of wormseed, gtt. iv—viij.
Opium, gr. j.

elixir of, gtt. xxv.

tincture of, gtt. xxv.

acetated, gtt. xx.

Opium, tincture, camphorated, f3j.
vinegar of, gtt. x—xv.
wine of, gtt. xxv.
Oxymel of squills, f3j—ij.

Parsley, infusion of, f3iv. Paregoric elixir, f3j. Peruvian bark, 3j.

decoction of, f3ij.
infusion of, f3ij.
extract of, gr. x—
xxx.

tincture of, f3j—iv. Phosphate of ammonia, gr. x—xx.

of iron, gr. v-x. of soda, 3j.

Phosphorus, gr. 1-16th. Pill, blue, gr. j—viij.

Pink-root, powder of, gr. x—xxx. infusion of, f3ss—j.

Pipsissewa, decoction of, f3ij.
Pomegranate bark, powder of, 9j—

3ss.

decoction of, f3j.

Potassa, acetate of, 9j—3j.

bicarbonate of, 3ss—j.

bitartrate of, 3ss—j.

carbonate of, gr. x—xxx.

nitrate of, gr. v—xx.

sulphate of, 3ss.

tartrate of, 3ss—j.

Potassium, iodide of, gr. v—xx.

cyanide of, gr. 4.

iodo-hydrargyrate of,
gtt. ij—v.

Prussic acid (medicinal), gtt. j—ij.
Protiodide of mercury, gr. ss—j.
Pulvis antimonialis, gr. iij—viij.
Doveri, gr. x.

Quassia, extract of, gr. ij—v. infusion of, f3ij.

Quassia, tincture of, f3j.

Quinia, sulphate of, gr. j—v.

(impure), gr. v—x.

and iron, citrate of, gr. ij—
v.

Rhubarb, powder of, gr. x—xxx.
syrup of, f3j—ij.
aromatic, f3j—ij.
tincture of, f3ij—f3ss.
Rhatany, extract of, gr. x—xv.
tincture of, f3j—ij.
Rochelle salts, 3ss—j.

Sage, infusion of, f3j—ij.
Sanguinaria. See Bloodroot.
Sassafras, oil of, gtt. ij—v.
Savin, powder of, gr. v—xx.
oil of, gtt. ij—v.
Sarsaparilla, decoc. of, f3iv.
fluid extract of, f3j.
syrup of, f3ss.
compound, f3ss.

Scabious, infusion of, f3ij.

Scammony, gr. v—x.

Secale cornutum. See Ergot.

Seneka, infusion of, f3j—ij.

powder of, gr. x—xx.

syrup of, f3ss—j.

Senna, confection of, 3j—3ss.

infusion of f3iv.

infusion of, f3iv.
fluid extract of, f3j.
syrup of, f3j—f3ss.
Simaruba, extract of, gr. ij—v.
infusion of, f3ij.

Silver, nitrate of, gr. 4—iij.
oxide of, gr. ij—iij.
chloride of, gr. ij—iij.

Soda, bicarbonate of, 9j—3j.

carbonate of, gr. x—xxx.

phosphate of, 3j.

sulphate of, 3j.

Spirit of nitre, sweet, f3ss-j. Spigelia, infusion of, f3ss-j. powder of, gr. x-xxx. Sponge, burnt, 3j-ij. powder of, gr. iij-x. Valerian, infusion of, f3ij.

extract of, gr. j—v.

oil of, gtt. iv—vj.

tincture of, f3j—f3ss.

"ammoniated, f3j
—ij.

Vallet's carbonate of iron, gr. v—x.

Veratria, gr. 1-16th—1-8th.

Veratrum album, gr. iij—vj.

tincture of, gtt. iij—vj.

Vinegar of colchicum, gtt. xxx—
f3ij.

of opium, gtt. x—xv.
of squill, f3j.

Virginia snake-root, powder of, gr. x—xxx.
infusion of, f3j—ij.
tincture of, f3j—ij.

Warner's gout cordial, f3ij-f3ij.

Wormseed oil, gtt. iv—viij.

White oak bark, decoction of, f3ij.
extract of, gr. xx.

Wild cherry bark, infusion of, f3ij.
syrup of, f3j.

Wine, antimonial, f3ss—j.
of aloes, f3ij—iv.
of colchicum, f3ss—j.
of ergot f3j—iij.
of ipecacuanha, f3ss—f3j.
of iron, gtt. xx—f3j.
of opium, gtt. xxv.

Zinc, oxide of, gr. iij—v. sulphate of, gr. ss—ij. valerianate of, gr. j—ij.

INDEX.

THE alphabetical arrangement adopted in the American Formulary renders a general index unnecessary, each article being easily found (under its Latin or officinal title) by reference to its initial letter. The following is a list of the English names of most of the articles mentioned in the work, together with the corresponding officinal titles.

Acetic Acid, Acidum Aceticum. (Other Acids will be found under the title Acidum.)

Aconite, Aconitum.

Alder, black, Prinos.

Almonds, bitter, Amygdala Amara.

Almonds, sweet, Amygdala dulcis.

Alum, Alumen.

Amber, Succinum.

American Centaury, Sabbatia.

Ammoniac, Ammoniacum.

Aniseed, Anisum.

Antidotes. See Appendix II.

Antimonial Wine, Vinum Antimonii.

Arrow-root, Maranta.

Arsenic, Acidum Arseniosum.

Ash, prickly, Xanthoxylum.

Balm, Melissa.

Balsam of Peru, Myroxylon.

Balsam of Tolu, Tolutanum.

Bark, Peruvian, Cinchona.

Bark, Winter's.

Barley, Hordeum.

Barley Water. See Appendix I.

Baths, Balneum.

Bearberry, Uva Ursi.
Bittersweet, Dulcamara.
Blackberry Root, Rubus Villosus.
Black Drop, Acetum Opii.
Blood-root, Sanguinaria.
Borax, Sodæ Boras.
Bromide of Iron, Ferri Bromidum.
Bromine, Brominum.
Broom, Scoparius.
Buchu, Diosma.
Butter-nut, Juglans.

Calomel, Hydrargyri Chloridum Mite. Camphor, Camphora. Caraway, Carum. Cardamom, Cardamomum. Carrageen, Chondrus. Carrot Seed, Carota. Castor Oil, Oleum Ricini. Catnip, Cataria. Cayenne Pepper, Capsicum. Cerates, Ceratum. Chalk, Creta. Chamomile Flowers, Anthemis. Charcoal, Carbo. Charcoal, Animal, Carbo Animalis. Cherry-laurel, Lauro-cerasus. Chloride of Gold, Auri Chloridum. Chlorine, Chlorinum. Cinnamon, Cinnamomum. Cloves, Caryophyllus. Cod-liver Oil, Oleum Morrhuæ. Colocynth, Colocynthis. Colombo, Colomba. Confections, Confectio. Copaiva (Balsam of), Copaiba. Copper, Cuprum. Coriander, Coriandrum. Cowhage, Mucuna. Cranesbill, Geranium. Creasote, Creasotum. Cubebs, Cubeba.

Dandelion, Taraxacum.

Decoctions, Decocta.

Dewberry-Root, Rubus Trivialis.

Dock, Rumex.

Dog's Bane, Apocynum Androsæmifolium.

Dog-wood, Cornus Florida.

Doses, estimated according to the age. See Appendix.

Doses, Table of. See Appendix.

Dover's Powder, Pulvis Ipecac. et Opii.

INDEX.

Eau de Cologne, Aqua Coloniensis.

Effervescing Draught. Haustus Effervescens.

Egg, Ovum.

Elder Berries. Sambucus.

Elixir of Vitriol, Acidum Sulphuricum Aromaticum.

" Proprietatis, Tinctura Alöes et Myrrhæ.

" Salutis, Tinctura Sennæ et Jalapæ.

" Sacrum, Tinctura Rhei et Aloës.

Epsom Salts, Magnesiæ Sulphas.

Ergot, Ergota.

Ether, Æther.

Ethiops Mineral, Hydrargyri Sulphuretum Nigrum. Extracts, Extracta.

Fennel Seed, Fæniculum.
Figs, Ficus.
Figwort, knotty, Scrophularia Nodosa,
Flaxseed, Linum.
Flies, Spanish, Cantharis.

" Potato, Cantharis vittata.
Flour, Farina.
Fowler's Solution, Liquor Potassæ Arsenitis.
Fox-glove, Digitalis.

Friar's Balsam, Tinc. Benzoini Composita.

Galls, Galla.
Gamboge, Gambogia.
Garlic, Allium.
Ginger, Zingiber.
Ginger, wild, Asarum.
Ginseng, Panax.
Glauber's Salts, Sodæ Sulphas.

Godfrey's Cordial. See under Tinc. Opii Camphorata. Gold, preparations of, Aurum.

Goldthread, Coptis.

Goulard's Cerate, Ceratum Plumbi Subacetatis.

Goulard's Extract, Liquor Plumbi Subacetatis.

Green Vitriol, Ferri Sulphas.

Griffith's Antihectic Mixture, Mistura Ferri Composita.

Gruel, Indian, Oatmeal, &c. See Appendix.

Gum Arabic, Acacia.

Hardhack, Spiraa.

Hellebore, American, Veratrum Viride.

" Black, Helleborus.

White, Veratrum Album.

Hemlock, Conium.

Hemp, Indian, Apocynum Cannabinum.

Hemp, Indian (Gunjah), Cannabis Indica.

Henbane, Hyoscyamus.

Hiera Picra, Pulvis Aloës et Canellæ.

Hive Syrup, Syrupus Scillæ Compositus.

Hoffman's Anodyne, Spiritus Ætheris Sulphurici Compositus.

Honey, Mel.

Honeys, Mellita.

Hooper's Pills. See Pilulæ Ferri cum Aloe.

Hops, Humulus.

MEDICAL BOOKS

RECENTLY PUBLISHED BY
LINDSAY & BLAKISTON, PHILADELPHIA.

(JUST READY.)

The Druggist's General Receipt Book: BY HENRY BEASLEY.

Comprising a Copious Veterinary Formulary and Veterinary Materia Medica; Patent and Proprietary Medicines, Druggists' Nostrums; Perfumery, Skin Cosmetics, Hair Cosmetics, and Teeth Cosmetics; Beverages, Dietetic Articles, and Condiments; Trade Chemicals, Miscellaneous Preparations and Compounds used in the Arts, &c. One Volume, 12mo.

CAZEAUX'S GREAT WORK ON MIDWIFERY.

(JUST READY.)

A Theoretical and Practical Treatise on Midwifery,

Including the Diseases of Pregnancy and Parturition.

BY P. CAZEAUX,

Adjunct Professor of the Faculty of Medicine of Paris, &c.

Translated from the Second French Edition, with occasional Notes, and a copious Index, by Robert P. Thomas, M.D., Member of the Philadelphia County Medical Society, &c., &c.

A Coloured Frontispiece, and 116 Woodcut Illustrations.

PUBLISHERS' ADVERTISEMENT.

The great value of this work has been sufficiently attested by its adoption as a Text Book by the Royal Council of Public Instruction in France, and the very favourable opinion expressed of it by many members of the medical profession in this country, during its progress through the press; the publishers therefore confidently offer it as a valuable accession to the medical literature of the United States.

RANKING'S

Half-Yearly Abstract of the Medical Sciences.

Published half-yearly, 75 cts. per number, \$1 50 per year. BOUND VOLUMES of this valuable Digest of Medical Literature can be furnished at a small additional cost; also back numbers to complete sets.

Anæsthesia:

Or, the Employment of Chloroform and Ether, in Surgery, Midwifery, &c. By J. Y. Simpson, M.D., F.R.S., Professor of Midwifery in the University of Edinburgh, &c., &c.

"This timely and useful book contains a vindication of the new methods of annihilating pain, in the practice of Surgery, &c.; and although addressed to the profession alone, yet the subject is so interesting that it will be highly acceptable to every class of readers."

CHEMICAL TEXT BOOKS.

Chemical and Pharmaceutical Manipulations:

A Manual of the Mechanical and Chemico-Mechanical Operations of the Laboratory: Containing a complete description of the most approved Apparatus, with Instructions as to their Application and Management, both in the Manufacturing Process and in the more exact details of Analysis and Accurate Research.

BY CAMPBELL MORFIT,

Practical and Analytical Chemist, author of "Applied Chemistry," &c., &c., assisted by Alexander Muckle, Chemical Assistant in Professor Booth's Laboratory. In one volume, 8vo., with over 400 illustrations.

"This work is one that ought to be in the hands of every student of Pharmacy and Chemistry. It contains a variety and amount of information for which he will seek in vain in any of the professed treatises on Chemistry. The author has had in his mind the admirable treatises of Prof. Faraday, and has given in a condensed form nearly all that is valuable for ordinary use in that work, besides much original matter and much collected from other sources—all of which has been rendered far more useful and intelligible by the aid of excellent illustrations."—American Journal of Pharmacy.

"The object of this work has been accomplished in a manner creditable to the author as an expert and careful analysis, and exhibits throughout a familiarity with the minutiæ of detail, and the necessity in all cases of acquiring habits of strict attention to care and order in these, as can only be acquired by constant operation in the laboratory itself."—American Medical Journal.

Chemical Analysis, Qualitative and Quantitative.

BY HENRY M. NOAD,

Lecturer on Chemistry at St. George's Hospital; author of "Lectures on Electricity," "Lectures on Chemistry," &c., &c. With numerous additions, by Campbell Morfit, Practical and Analytical Chemist; author of "Chemical and Pharmaceutic Manipulations," and co-editor of the "Encyclopedia of Chemistry." With illustrations, in one volume, demi-octavo.

"This work is a very valuable one on many accounts, both to the experienced chemist and student. The American edition is much superior to the London one, both on account of the typography and the additions which have been made to it."—Scientific American.

"This work will be found to supply the student of practical chemistry with a thorough teacher and guide, amid all the varied and intricate processes of chemical analysis."—North American.

ELEMENTS OF GENERAL PATHOLOGY.

A PRACTICAL TREATISE ON THE CAUSES, FORMS, SYMPTOMS, AND RESULTS OF DISEASE.

BY

ALFRED STILLÉ, M. D.

Leturer on Pathology and the Practice of Medicine in the Philadelphia Medical Association, &c. &c

"It is a real and valuable addition to our medical literature; conceived and executed at the best spirit of medical philosophy, inculcating facts that are known and proven, with scarce any admixture of doubtful hypothesis, and therefore a safe and proper book

place in the hands of a student.

We are happy, also, to have it in our power to speak thus highly of an original American book. Of translations, republications, and compilations, we have an abuntance; but it is with a prouder feeling that we receive a sterling native production like the present, and point to it as proof that our country contains sound and accomplished thysicians, imbued with a true notion of the importance of their science, and competent to produce works which are really ornaments to medical literature."—The American Medical Journal, Oct., 1848.

"Dr. Stillé has supplied a want which we, at least, as a public teacher, have long left. The Introductory Essay on medical truth, its nature, sources and means of attainment, is finely written, and contains much important truth. The author presents to us very extensive and very rich bill of fare, and we can say in all sincerity, if every one terives as much pleasure and satisfaction from the feast as we have done, a second mitton will soon be called for. To the young physician it is especially valuable. It will teach him how to investigate his cases methodically and thoroughly, the general rules that should guide him in his diagnosis and prognosis, and the manner of conducting his post-mortem examinations so as to profit instead of confusing him. Again we say, as our best recommendation of the book, buy it."—Ohio Medical and Surgical Journal.

From Harvey Lindsley, M. D., Prof. of Pathology and Practice of Medicine, Medical

Department, Columbia College, Washington, D. C.

"I have examined with some care the 'Elements of General Pathology,' by Dr. Stillé, and take pleasure in testifying to the ability and accuracy displayed in the work. It is correctly stated by the author in his preface, that such a work was a desideratum English medical literature, and it was one seriously felt by all who, like myself, had becasion to lecture on the subject of Pathology. I trust the undertaking will be extensively and liberally patronized by the Profession."

From H. Gibbons, M. D., Prof. Institutes of Medicine and Medical Jurisprudence,

Philadelphia College of Medicine.

"I have read with much satisfaction Dr. Stille's 'Elements of General Pathology.'
The work fills an important niche in the library of the American physician, in which other book will fit. I have no doubt it will be highly acceptable, not only to the student, but to practioners."

From Geo. Mendenhall, M. D., Lecturer on Pathology, &c., &c., Cincinnati, O.

"I have carefully perused it, and am highly pleased with the work, as supplying a deficiency in our English literature on that subject, particularly in the departments of Diagnosis and Semeiology. It ought to be patronized by American students and practitioners. I esteem it much, and will cheerfully recommend it to such students as I can influence. It ought to be in the hands of all students, and carefully studied by them."

"We consider the volume before us a work of great merit. Pathology is a subject which has been too much neglected by the profession, in the United States. The author justly remarks, in his preface, that "he is convinced that among the most serious defects in the present system of medical education, are an almost total neglect of logical analysis, and a tendency, where generalization is at all encouraged, to speculate on fanciful analogies, rather than to extract truth from facts."—Missouri Med. and Surg. Jour.

"It bears internal evidence that the author is an accurate observer, a careful, as well as diligent student, and a philosophical thinker. It contains much valuable information; it inculcates a true scientific spirit, and is written in a perspicuous, chaste, and even elegant style."—Buffalo Med. Jour. and Monthly Review.

PRINCIPLES AND PRACTICE OF MIDWIFERY,

DAVID H. TUCKER, M. D.,

Professor of the Principles and Practice of Medicine, and late Professor of Midwifery in the Franklin Medical College, Philadelphia.

WITH NUMEROUS ILLUSTRATIONS.

From Jas. P. White, M. D., Prof. of Obstetrics, Sc., University of Buffalo. "It brings the student down to the present hour in the theory of generation, and embraces all the improvements of modern practice in Surgical Midwifery, and so far as I am aware, furnishes the most complete and systematic work of its size now extant. The illustrations are appropriate and well executed."

From W. P. Johnston, M. D., Prof. of Obs., Nat. Med. College, Washington, D. C. "I have been very favourably impressed with the manner in which Dr. Tucker has performed his task. In a small compass, he has condensed all that relates to practical Aidwifery, including a clear and accurate description of the more modern physiological views relating to menstruation, generation, the development of the ovum, &c. I consider the work of Dr. Tucker as a useful addition to what we already have upon midwifery.

From John Wiltbank, M. D., Prof. of Obstetrics, &c., Penna. Med. Col. "I have read Prof. Tucker's work on the Principles of Midwifery with much satisfaction. He has given, in a small compass, a large amount of valuable knowledge upon the art and science of Midwifery. It is the only book with which I am acquainted that contains an account of the recent improvements in this branch of medicine; the student

will here find the new views that have been broached upon certain physiological and pathological principles, that now occupy the attention of obstetricians, set forth with clearness and precision, together with a concise description of all the improvements in

the obstetric art which have received the sanction of the profession.

From C. R. Gilman, M. D., Prof. of Obs. &c., Col. Phy. and Surg., N. Y. "I have received the copy of Tucker's Midwifery, and have given the work such an examination as satisfies me of its merit. It is really an excellent work; the views of the best authorities upon all points, both theoretical and practical, seem to have been carefully studied, and are presented with very great clearness and simplicity. I shall recommend the book to my class. The mechanical execution of it does you great credit. I shall look with great pleasure for the future volumes of your library, which, I hope, will succeed each other rapidly."

From M. M. Pallen, M. D., Prof. of Obs., &c., St. Louis University, Med. Depart. "I have looked over with some attention, the copy of Tucker's Midwifery, and I am pleased to bear testimony to its merits. It brings up to the present time, the state of Obstetrical Science in a concise and pleasing style. To the student, and also to the practitioner, who has not leisure to consult the various authorities on many new and interesting discoveries which have been lately made in this department of medicine, the work will be a valuable acquisition."

From Walter Channing, M. D., Prof. of Obs., &c., Med. Col., Harvard University. "Let me now say, that the plan of the work is excellent. That the authorities which are quoted, deserve the highest professional confidence; and that from the freedom of quotation, the physician here is made fully acquainted with opinions of men abroad, who deserve the sincerest respect."

"The treatise of Dr. Tucker is confessedly a compilation from the works of the standard writers on Obstetrics. In the execution of it, the author has exhibited considerable judgment, and by the skilful arrangement and weaving together of his materials, has given to the work all the oneness and completeness of an original treatise. The wood-cut illustrations are numerous and well executed, while the mechanical execution of the whole work is deserving of praise."-Am. Jour. for April, 1848.

"This manual of Midwifery, is one of the best with which we are acquainted, and, with the author, we indulge the hope that it may prove useful to the medical student, for whom it is especially intended. Each subject treated of by the author has been ably done, and the latest authorities, in every instance, fairly alluded to. The publishers deserve much credit for the manner in which this work has been got up. The

paper, printing, and cuts, are unusually good."-Annalist. March 1 1849

MINOR SURGERY, DRESSINGS, ETC.

THE PRACTICE OF SURGERY,

EMBRACING

MINOR SURGERY, THE APPLICATION OF DRESSINGS, &c.

BY JOHN HASTINGS, M.D.,

Lecturer on Surgical Anatomy, Operative Surgery, &c.

With 140 Illustrations.

"The present work differs, we think, in several respects from any of its predecessors: it is neither prolix nor very brief; but occupying a place midway between the two extremes, it seems to fill a place heretofore unoccupied; it is intermediate between those smaller works on minor surgery, and the most lengthy text-books of the day. It embraces enough of minor surgery to be useful to the young practitioner, and enough of the principles of that department to bring it up to the dignity of even the more advanced practitioner. The author, in his very modest preface, hopes that the work may serve as a guide-book to the student and young practitioner; and in this hope we trust he may not be disappointed, and he certainly will not be, if the attention of the profession is properly directed to his work.

"In addition to the merits of the work, we should not forget that it is the production of our own countryman, and that it is a sacred obligation resting upon us to give him our aid and countenance, so far as the merits of his production will warrant such a preference. In any view of the subject, therefore, we cheerfully commend Dr. Hastings' excellent little volume to the favourable notice of our countrymen—but especially to students—believing that it will prove useful to a large class of pupils and practitioners. We trust the publishers will meet with ample remuneration. It will be remembered that they have engaged in an effort to supply a series of text-books by American authors,—and this is one of that series."—Western Lancet.

NEW AND IMPROVED EDITION.

MANUAL OF AUSCULTATION AND PERCUSSION,

TRANSLATED BY F. G. SMITH, M. D.

Lecturer on Physiology, Fellow of the Royal College of Physicians, &c.

A Second Edition with Additions.

"On the whole, there is no better or more succinct account of this important branch of medical diagnosis, than the manual of MM. Barth and Rogers. The arrangement of its contents is natural and lucid, and the reasoning of its authors is marked by a mathematical conciseness and precision, which enable the reader to follow their analysis with the most perfect satisfaction; it has been translated into various languages, and already reached a second edition in this country."—Medical Examiner.

A PRACTICAL TREATISE

ON THE

DISEASES OF CHILDREN,

BY

J. FORSYTH MEIGS, M. D.

Lecturer on the Diseases of Children, in the Philadelphia Medical
Association, and Fellow of the College of
Physicians of Philadelphia.

Dr: Meigs' descriptions of diseases are clear and concise; his pathological views are, in the main, sound, and his practical directions plain, simple and judicious. His work is far from being a mere compilation from the best authorities, or a simple array of the various and often discordant views of the leading writers on the diseases of children. He has, with judgement, selected his materials, testing them, in most instances, by the result of his own experience, and endeavouring throughout, to present an exact exposition of the present state of our knowledge on the several forms of diseases of which he treats."—Amer. Med. Jour., Oct., 1848.

"The author is a son of the eminent Professor of Obstetrics in Jefferson Medical College, and, like him, is distinguished for his ardent devotion to obstetrics, and to the study and treatment of the diseases of women and children. In the preparation of the work no pains has been spared to make it both methodical and accurate, and as complete as the limits of the series would allow.

"The reader will find it to contain, in a brief compass, the most approved views o modern authoritative writers, expressed in plain and appropriate language."—Medica.

Examiner.

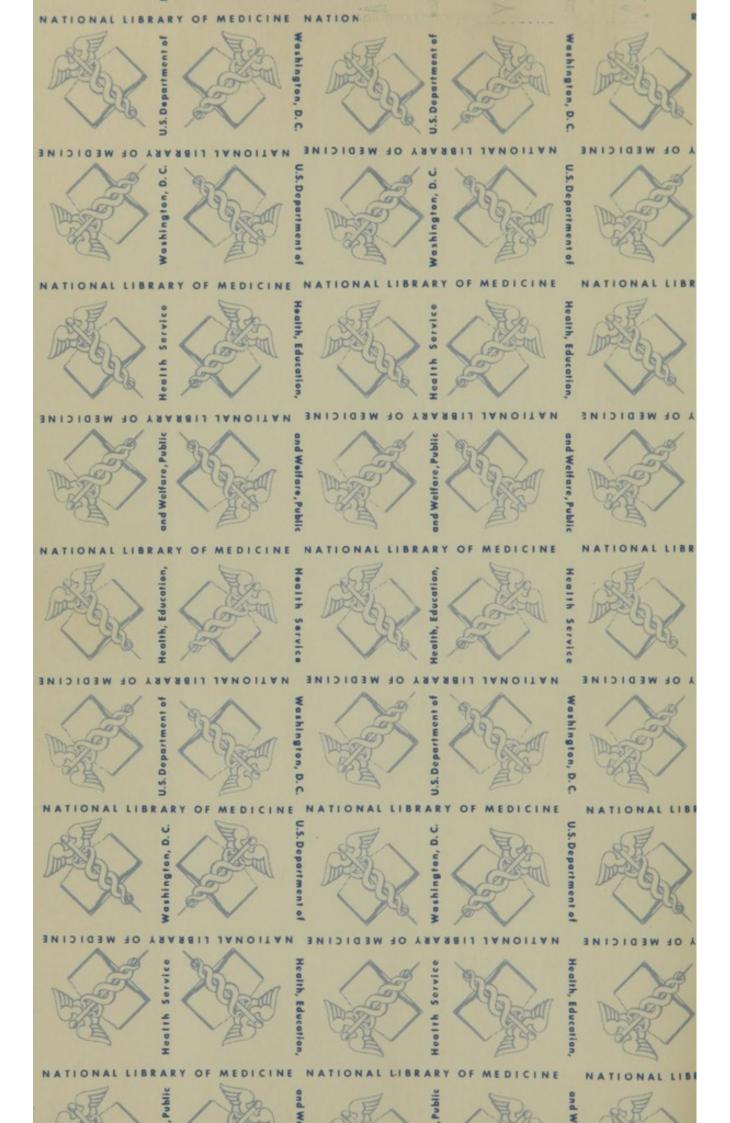

"One of its essential recommendations is, it is not necessary to ramble through a forest of propositions to find the thing sought; the definition, for example, synonymes, causes, nature of the disease, symptoms, diagnosis, prognosis and treatment, follow each other in an orderly manner, so that there is no confusion in the general arrangement, and therefore none likely to be engendered in the mind of the reader. For students, we cannot divest ourselves of the idea, that this work is precisely what they need."—British Med. and Surg. Journal.

"We have given the greater part of the work a careful perusal, and in our opinion, it is a production in every way creditable to the author. That he has prosecuted personal observation in a careful, philosophical manner, and turned his opportunities to the best account, the work bears evidence. His arrangement of topics, and the practical conclusions at which he arrives, appear to us to be sound and judicious. Moreover, the work embodies, in a small compass, the most valuable precepts of the most approved modern authorities, on the subjects of which it treats."—Buffalo Med. Jour. for August.

"The diseases are arranged (and very properly, as we think,) according to the systems which they affect; and the work is both methodical and accurate, and as complete as the limits of the series will allow. The author has freely availed himself of the labours of others, with due acknowledgement, and especially of those of Rilliet and Barthèz, and has incorporated with the text not a little practical experience of his own. He has produced, we think, a very sensible, accurate, and useful volume, which we unhesitatingly recommend to all who may need a compendium of truly practical character, upon this interesting and important branch of Medical Science. Dr. Meigs, we think, deserves great credit and many thanks, for the good service he has done to humanity and to the profession, for the lucid, able, scientific and practical compilation he has made of what was best known upon the subject, not less than for the additions he has made from his own experience to the common stock."—" The Annalist."

"The work is throughout systematic, well written, and highly creditable to the author; and may be read profitably by every practitioner and student in the country."—N. Y. Jour. of Med., Sept., 1848.
