Prescriptions in this formulary are written for single doses only, in the case of preparations for internal use, and for any convenient quantity in the case of preparations for external and local use. In prescribing, the physician should write in the patient's prescription book the date, name of prescription as stated in the formulary, and directions for use. The apothecary will dispense a quantity sufficient for not more than four days unless more is required, in which case the physician should write below his prescription the words "double quantity."

In order to lessen the chances of mistake in administering medicine, the use of "drop" doses should be avoided as much as possible.

To facilitate the prompt handling of prescriptions in the Apothecary's Department, and thus save annoying delay to patients, it is of much importance that the formulary be adhered to in prescribing.
