Brief directions for the Treatment of  
cases of Poisoning.

EMETICS.

Where an Emetic is ordered, one of the following should be given, unless a special Emetic is mentioned in the directions.

- (a) *Mustard and Water.*—A table-spoonful of mustard stirred up in two-thirds of a tumbler of luke-warm water.
- (b) *Sulphate of Zinc.*—Thirty grains dissolved in half a tumbler of water.
- (c) *Warm Water.*—Given copiously.

DEMULCENT DRINKS.

One or more of the following may be used :—

- (a) **L**inseed Tea.
- (b) Barley Water.
- (c) Milk.
- (d) Compound Almond Mixture.

## VERMIN KILLERS.

Most of the Vermin Killers contain Strychnine,  
Arsenic or Phosphorus.

*Battle's Vermin Killer* contains Strychnine.

*Butler's Vermin Killer* contains Strychnine.

*Gibson's Vermin Killer* contains Strychnine.

*Rat Pastes* contain Phosphorus or Phosphorus and  
Arsenic mixed.

*Burnett's Disinfecting Fluid* is a strong solution  
of Chloride of Zinc,

*Acid Carbohc.*

*Immediate Treatment.*—Emetic followed  
by stomach pump, unless the mucous mem-  
brane is corroded.

*Secondary Treatment.*— $\bar{5}j$  of Liq. Calcis  
Saccharatus freely diluted. Demulcent drinks.  
Brandy by enema or hypodermically.

*Acid Hydrochloric.*

*Immediate Treatment.*—Magnesia, Chalk  
or Carbonate of Soda, mixed with water.

*Secondary Treatment.*—Olive Oil, Demul-  
cent drinks, Morphine hypodermically.

*Acid Hydrocyanic.*

*Immediate Treatment.*—Dash cold water on face and back of neck. Ammonia to nostrils. Emetics. If there is time give a mixture of Sodæ Carb, Ferri Sulph. and Tr. Ferri Perchlor. āā ʒj in a small glass of water.

*Secondary Treatment.*—Artificial respiration. Hypodermic injection of Liq. Atropin. Sulph. ℥ ij.

*Acid Nitric.*—Same treatment as for Acid Hydrochloric.

*Acid Oxalic.*

*Immediate Treatment.*—Chalk and water. Warm water as an emetic.

*Secondary Treatment.*—Brandy for the collapse.

*Acid Sulphuric.*—Same treatment as for Acid Hydrochloric.

*Aconite.*

*Immediate Treatment.*—Emetic, followed by stomach pump. Hypodermic injection of Tinct. Digitalis ℥ xx.

*Secondary Treatment.*—Brandy. Nitrite of Amyl to nostrils. Castor Oil.

*Alcohol.*

*Immediate Treatment.* — Stomach pump. Cold affusions to head.

*Secondary Treatment.*—Hot strong coffee. Keep patient warm.

*Almonds, Essential Oil of Bitter.*—Same treatment as for Acid Hydrocyanic.

*Ammonia.*—Same treatment as for Caustic Potash.

*Antimony, Salts of.*

*Immediate Treatment.* — Tannic Acid. Warm water Emetic, followed by stomach pump.

*Secondary Treatment.*—Demulcent drinks. Opium. Brandy.

*Arsenic.*

*Immediate Treatment.*—Emetic, followed by stomach pump. Freshly precipitated Ferric Hydrate (prepared by mixing Tinct. Ferri Perchlor, and Liquor Ammoniaë) or dialysed iron, given freely.

*Secondary Treatment.* — Brandy for collapse. Anodynes for pain. Enema Opii for diarrhœa and tenesmus. Demulcent drinks. Fomentations to abdomen.

*Atropine.*

*Immediate Treatment.*—Emetic, followed by stomach pump. Hypodermic injection of Nitrate of Pilocarpine gr.  $\frac{1}{3}$ .

*Secondary Treatment.*—Brandy, if necessary.

*Belladonna.*—Same treatment as for Atropine

*Bichromate of Potash.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Olive Oil. Demulcent drinks.

*Calabar Bean.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Hypodermic injection of Liq. Atropinæ Sulph. ℥ ij.

*Camphor.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Stimulants. Fomentations

*Cantharides.*

*Immediate Treatment.*—Mustard and water  
Emetic.

*Secondary Treatment.*—Castor Oil. Demulcent drinks. Opium to relieve pain.

*Carbolic Acid.*—See Acid Carbolic.

*Caustic Potash.*

*Immediate Treatment.*—Vinegar and water or Lemon Juice.

*Secondary Treatment.*—Linseed Tea or Olive Oil. Opium for pain. Brandy, if collapse supervenes.

*Caustic Soda.*—Same treatment as for Caustic Potash.

*Chloral Hydrate.*

*Immediate Treatment.*—Dash cold water on head and face. Emetic, followed by stomach pump. Wrap patient's whole body in hot blankets, and put hot bottles to feet.

*Secondary Treatment.*—Hot strong coffee. Rouse patient by forced exercise or galvanism. Artificial respiration, if necessary. Hypodermic injection of Liq. Strychniæ ℥ v.

*Chlorodyne.*—See Opium.

*Chloroform (swallowed).*

Dash cold water on face. Nitrite of Amyl to nostrils. Stomach pump. Artificial respiration, if necessary.

*Chloroform (inhaled).*

Clear the fauces. Pull forward the tongue. Put the head low. Nitrite of Amyl to nostrils. Inversion of patient. Artificial respiration.

*Cocaine.*

*Immediate Treatment.*—Inhalation of Nitrite of Amyl.

*Secondary Treatment.*—Bromide of Potassium, if convulsions occur. Subcutaneous injection of Spiritus Ætheris ℥ xx.

*Conium.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Brandy. Artificial respiration, if necessary.

*Copper, Salts of.*

*Immediate Treatment.*—White of egg. Stomach pump, if vomiting has not occurred.

*Secondary Treatment.*—Demulcent drinks. Morphine and fomentations, if much pain.

*Corrosive Sublimate.*—See Mercury, Salts of.

*Cyanide of Potassium.*—Same treatment as for Acid Hydrocyanic.

*Digitalis.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Aperient. Strong Coffee. Brandy. Keep patient in a recumbent position for a day or two after symptoms have subsided.

*Ergot.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Stimulants. Aperient.

*Eserine.*—See Calabar Bean.

*Hyoscyamus.*—Same treatment as for Atropine.

*Hydrocyanic Acid.*—See Acid Hydrocyanic.

*Hydrochloric Acid.*—See Acid Hydrochloric.

*Iodine.*

*Immediate Treatment.*—Emetic of warm water.

*Secondary Treatment.*—Starch. Demulcent drinks. Morphine and fomentations, pain.

*Lead, Salts of.*

*Immediate Treatment.*—Stomach pump. Sulphate of Magnesium. White of Egg.

*Secondary Treatment.*—Aperients and Iodide of Potash.

*Lemon, Salts of.*—See Acid Oxalic.

*Mercury, Salts of.*

*Immediate Treatment.*—White of Egg and Milk, followed by stomach pump or Emetic at once.

*Secondary Treatment.*—Stimulants.

*Morphine.*—See Opium.

*Nitric Acid.*—See Acid Nitric.

*Opium.*

*Immediate Treatment.*—Emetic, followed by stomach pump. If comatose dash cold water on face and apply Ammonia or Amyl Nitrite to nostrils.

*Secondary Treatment.*—Rouse patient by forced exercise or galvanism. Inject subcutaneously Liq. Atropinæ Sulph. ℥ iv. Give hot strong coffee freely. Artificial respiration, if necessary.

*Oxalic Acid.*—See Acid Oxalic.

*Phosphorus.*

*Immediate Treatment.*—Give 5 to 10 grains of Sulphate of Copper in water. Stomach pump and wash out stomach if vomiting is not produced.

*Secondary Treatment.*—Give ℥ 40 of old Oil of Turpentine or Sanitas Oil in mucilage every 15 minutes for one hour, then four times a day till liver is normal size. Magnesia with demulcent drinks.

*Potash, Caustic.*—See Caustic Potash.

*Savin.*

*Immediate Treatment.*—Emetic, followed by stomach pump.

*Secondary Treatment.*—Opium to relieve pain. Demulcent drinks.

*Silver, Salts of.*

*Immediate Treatment.*—Common Salt freely in milk.

*Secondary Treatment.*—Castor Oil. Demulcent drinks.

*Soda Caustic.*—See Caustic Soda.

*Sorrel, Salts of.*—See Acid Oxalic.

*Stramonium.*—Same treatment as for Atropine.

*Strychnine.*

*Immediate Treatment.*—Emetic, followed by stomach pump (under Chloroform). Bromide of Potassium ℥j dissolved in a tumbler of water, repeated in half an hour. Hypodermic injection of Chloral Hydrate, gr. x in water ℥ xx, repeated as required. Frequent application of Nitrite of Amyl to nostrils.

*Secondary Treatment.* — Inhalations of Chloroform if the convulsions are severe.

*Sulphuric Acid.*—See Acid Sulphuric.

*Tartar Emetic.*—See Antimony, Salts of.

*White Precipitate.*—See Mercury, Salts of,

*Zinc, Salts of.*

*Immediate Treatment.*—White of egg, or milk. Carbonate of Soda in dilute solution.

*Secondary Treatment.*—Demulcent drinks. Warm fomentations and Morphine, if pain.

## Surgical Instruments.

TO MAKE ASEPTIC—PREVIOUS TO OPERATION.

1. Examine each instrument, see that they are in working order and perfectly clean.
2. Make a solution of Pure Carbonate of Soda in distilled water, and boil for fifteen minutes.
3. Then place the instruments in this, and keep at boiling point for ten minutes.
4. Remove, and place in a tray containing weak carbolic solution, keep covered until operation.
5. After operation rinse the instruments, boil in soda solution for five minutes, dry thoroughly and polish.
6. Trocars, Canulas, Aspirators and Forceps require extreme care in cleansing and drying to prevent rust. All metal tubes should have absorbent cotton wool passed through them several times, and finally slightly smeared with Vaseline. The teeth of Forceps should be crubbed with a brush.

7. All instruments, after use in the wards, should be at once cleaned and returned to the dispenser.

## Electro Medical Instruments.

### THE INTERRUPTED CURRENT (Faradism).

To put the battery in action, immerse the Zinc in the cell, and fix by means of the brass clamp. The rod should only be immersed sufficiently to cause the hammer to vibrate. There are two currents, Primary and Secondary. These are produced by inserting the plug at P and S respectively. S is the stronger of the two. The strength of either may be regulated by drawing out the rod, the current being weakest when full out, and *vice versa*. After use, remove, wash, and dry the Zinc. See that all the bearings are dry and clean. Cork up the tank loosely.

## THE CONSTANT CURRENT (Voltaism).

To use, adjust the cords to the slide running in the groove.

Raise the tank by the side handles and fix in the groove. The number of cells brought into action are regulated by moving the slide along the figures denoting the number of cells. The small handle between the wires is used to reverse the current.

After use, at once lower the tank to the bottom of the case.
