AND PHYSICIAN EXTRAORDINARY to His Majesty, &c.

### SIR,

HE honour which you did me, by permitting me to DEDICATE the former EDITION of this Work to you, and the fuccefs which it has met with, emboldens me to entreat the fame favour for this. I have made fome corrections and additions which I hope will alfo meet with your approbation,

There is no one to whom I can with fo much propriety addrefs this little work as to you, becaufe no perfon can be a better judge than yourfelf of the neceffity for early care, to prevent the complaints it treats of, as you have had the most extenfive practice, with the most diffinguished fuccefs in curing them. Befides, the friendship which you had for my worthy patron Mr. Collins, and the many kindneffes which you have shewn to me, demand it as a tribute of gratitude from,

#### SIR,

Your most obedient, And most devoted humble Servant, Hampstead. THOMAS HAYES. Jan. 1st. 1786. Digitized by the Internet Archive in 2015

PREFACE.

THE

T is unneceffary to inform the Public, that great numbers of perfons of both fexes, are afflicted every Winter with most dreadful colds, coughs, and confumptive complaints, in this great metropolis, and in every large town in this kingdom, from the neglecting of flight colds in their early state. But common as this cafe is, the truth of which most men acknowledge, is it not strange that it should not be striking enough to enforce a fricter attention to it than is paid in common? For its confequences are not lefs (to fpeak within compass) than an annual lofs of twenty thousand perfons in the island of Great Britain; besides B the

.....

PREFACE.

6

the numbers who fuffer long and painful illneffes, from rheumatifms, pleurifies, quinfies, &c. arifing from the fame neglect, though they afterwards recover.

Phyficians, from the earlieft date, have cautioned the public against letting colds gain ground upon them; but as few read their writings, except those who make phyfic their profession, and as the world often fuspects that what comes from them must be interesting to themselves only, I do not wonder that this caution is not regarded. It has always been difficult to perfuade men of their true interefts, or Inoculation would not have been fo flow in advancing to the confidence and use we now fee it in with the people; but, through the means of the learned and judicious Baron Dymfdale, it is become familiar and fafe, and a great friend to health and beauty. The Humane Society, through the indefatigable zeal of Dr. Hawes, becomes also daily more and more conspicuously useful, in restoring numerous

humerous members to the flate; notwithstanding the many prejudices which long prevailed against it\*. Facts, fooner or later, will fupport themfelves, though as I have faid they are fome times flow; I have therefore fome hopes that the object of the prefent trifle will be attended to in the course of time, and the more especially when it shall appear to have been undertaken from the very oppolite to interested motives! For were the following hints strictly purfued, the author would have very little bufinefs, and half his brethren of the faculty must then be obliged to feek fome other means of earning a livelihood.

Since the last edition of this pamphlet, I have feen fome extracts from a book B 2 On

\* I fincerely hope that the defigns of the Marine Society, will fucceed equal to the extensive philanthropic views of those worthy characters, who have stepped forward with so noble a plan for the public benefit.

#### PREFACE.

8

on the difeafe called a *Cold*, (written by Mr. Chandler, F. R. S.) in the Gentleman's Magazines for November and December, 1761. The work I have not been able to procure, but from those parts which I have seen, I confider it to be a very sensible work, but too full of technical terms to be understood by any but medical men.

Two very fenfible writers, Tiffot and Buchan, have addreffed themfelves to the public in general, on the fubject of medicine; and many excellent directions they have given refpecting the management of colds, and other difeafes; but on this fubject, they have not entered fo fully as the diforders require; and in others they have not confined themfelves within fuch limits, as to be of ufe without injury: Hence this little tract may not, perhaps, be without its ufe, as a companion to their celebrated works; for beyond a common cold, or a flight fever,

## PREFACE.

fever, perfons are not competent to direct for themfelves. It requires an arrangement, and comparifon, of the feveral conftitutions, and fymptoms, together with a number of other minutiæ, which are not to be acquired but by experience, and a knowledge of the animal æconomy; and with which very few but medical men are acquainted.

The works just now alluded to, are more calculated to inform young practitioners in medicine, and men of letters, than the people in general, who have not an opportunity to fludy the leading characters which diftinguish one difease from another; for this is often attended with difficulty, and miftakes are fometimes made, even by men eminent in the profession. It is well known, that phyficians never prefcribe for themfelves: The embarraffment of mind, and a number of ambiguous fymptoms, that attend the fick, must for ever render it impracticable for him to be a competent judge of

of his own difeafe; and the feveral changes and complications to which it is liable, ferve fill to increase the difficulty. How then, shall the many ignorant perfons, to whom the above-mentioned books are left open, wherein many very potent medicines are recommended, be thought equal to the talk of preferibing, either for themfelves, or for their neighbours; whom they ceafe not on all occafions, from urging to take Dr. James's Powder, or fome other favourite medicine, let the complaint be ever fo different from what they conceive? Certainly the application of fuch powerful medicines, require the most judicious medical abia lity and experience. and gaod transmore. rended out difficulty, and miftakes are

Now to fuch as have a propenfity to prefcribe for the fick, without being very well acquainted with the nature of the difeafe, and the full powers of the medicines they apply, (except upon emergency, and where other advice is not readily to be had) I do most earnestly recommend that they

they read the *fixtb commandment*, and reflect, that by administering powerful drugs, much hazard is run, and many melancholy difasters happen. The intention may be good, but will that excuse or palliate the baneful effects which too often arise from officious perfons tampering with so important a concern as a neighbour's life ? the number of errors which are almost daily committed this way, none but medical men can know or conceive.

The intention of the prefent sheets, is to convince the public of the danger of depending too much upon that fatal expectation, of colds going off spontaneously, of triffing with little complaints, and of trusting to such means as are not likely to remove them,

If a cold comes on with any violence, apply the means here recommended for three or four days; if the patient does not get materially worfe, or the complaint abate in that time, fend for the beft

#### PREFACE.

best affistance in your power; if you are not able to fend for a phyfician, let it be an apothecary of a humane and tender disposition; and one, who studies rather to remove the complaint, than to load you with a number of phials. Such was my worthy friend and patron, Mr. George Collins, furgeon, who was loved and revered by all who knew him. For knowledge in his profession, few furpaffed him; in goodnefs of heart, fewer equalled him; and in his death, the rich and poor had an ineftimable lofs. He was the learned man's companion, and the poor man's friend; all Hampstead, with one accordant voice declare, they

" Ne'er shall fee his like again."

I cannot forbear embracing this opportunity, to pay fo just and grateful a tribute to his memory.

A man of the above principles, will not unneceffarily load you with naufeous drugs, nor will he add to the calamities of the FREFACE.

the poor tradefinan, by extravagant charges, which is too often the rapacious practice of too many in the profession. To this will be faid, ought not every man to live by his bufines; I fairly admit it, and most certainly expect to do fo myself. To the Sharks of the profession I allude, and not to the honess, and others circumstances.

I have given two long quotations to confirm and illustrate my own opinions. I should not have made them so long, had the persons for whom this work is designed, a medical library to confult. They are too valuable not to be generally known.

To the Reviewers I am highly obliged. They have feen my intention, and fpoken more favourably of this work than I thought it deferved, confidering the many inaccuracies it contains. From their 1ecommendation many have been fold, and, what will be a greater pleafure to them

\$3

#### PREFACE.

14

to hear, is, that from many correspondents I am informed, some good has been derived, and some evil prevented.

It is alfo highly flattering to me, that it has met with the approbation of many eminent Phyficians; and I hope the defign will in fome fort apologize for the deficiencies. If it fhould be found of the leaft utility to the public, I have my reward.

After what has been advanced in the former part of the Preface, it may feem ftrange that I fhould attempt to prefcribe beyond a common cold. My reafons for it are :

First, Because many persons have defired me to make the additions which are here made.

Secondly, I have taken great care to advife fuch things only as cannot do injury, ufed with the precautions here directed. Thirdly, Thirdly, I have been more minute in fome very effential means of recovery, than medical men's time, in much practice will permit; and I expect more attention from addreffing myfelf to the understanding than from a mere injunction,

Fourthly, I have taken more pains to fhew what is injurious than what is beneficial; at the fame time hoping that no perfon will depend upon my book only, for the cure of fo dangerous a difeafe, but I rather offer thefe additional reafons to warn the reader of the dangers which attend neglected Coughs and Colds, and to induce thofe who have unhappily got bad ones, to apply a fimple, rational and approved method of cure, in preference to the thoughtlefs, imprudent means generally purfued.

With refpect to the additions which are now made, the following are my reafons,

Firft,

PREFACE.

First, I have been informed by those who very well know, that I ought to have given some directions relative to Confumptions arising from spitting of blood,

Secondly, Many perfons afflicted with Afthmatic Coughs, feemed difappointed that nothing was faid on that head.

Thirdly, The Hooping Cough has been rife this fummer, all over Great Britain, and ftill continues to rage; and as many children and young perfons become confumptive from the violence of that cruel difeafe, and many from mifmanagement in the dietetic part, I have here touched upon it.

The author has much occasion for indulgence from his critical readers. As his professional avocations will not permit him to attend much to correctness in writing,

16.

they must overlook many imperfections. He hopes that the object of the prefent work, will fully clear him of any other vanity, than that of defiring to be useful to his fellow creatures.

# A SERIOUS A D D R E S S,

Gr. Gr.

A COLD arifes from the effect of cold or moift air, applied to the furface of the body and lungs, from going too thinly clad, or exposing the body to cold air, after having been heated by exercise; or, when the pores are opened from drinking warm li= quors. &c.

Some perfons will bear every poffible change without much injury; whilft others cannot take the leaft liberty with themfelves without fuffering moft feverely. Therefore, every man fhould know enough of his own conftitution, to regulate himfelf, as indeed, he, in this refpect, may, if he will but give himfelf the trouble to think; and from hence, whatever

whatever experience has taught him is improper, or difagrees with him, he fhould most carefully avoid.

Almost every body knows the fymptoms of a cold, or what are the common fensations, or effects of what is called *the baving a Cold*; but as these begin on some more violent than on others, I shall mark the common symptoms as they generally arise.

A Cold then, is a fense of chilliness on the skin, attended with a laffitude or wearinefs, and flight thivers at times, with a degree of headach, and flying pains in the fmall of the back, and limbs, a stuffing of the nose, frequent sneezing, and running of a clear limpid water from the eyes, and the nofe, with, or without, a dry tickling cough, or hoarfenefs. Sometimes the fneezing, fuffing of the nofe, or cough, give the first intelligence of its approach, and fometimes it is preceded by fome of the other fymptoms. These, as they are found to come on with more or lefs violence, permit the patient to continue in his usual employment, or pleasure, until they get fo far increased, or have laid fuch hold on the conftitution, as to oblige him to defift, unlefs nature, by fome happy effort, reftore the obstructed veffels to their proper offices, and caufe

caufe the feveral fluids to be circulated through the proper tubes. If the patient is not relieved this way, Fever, Rheumatifm, Inflammation of the Lungs, or fome other difeafe must enfue:

As coughs are the most common and violent effects of cold, and fo generally difregarded; and as these are its most infidious attendants; and capable of bringing on the moft ferious complaints, one cannot too ftrongly enforce a proper fense of the danger that attends them: Inflammation in the lungs is excited, or increafed by the perpetual action which is given to the cheft by coughing; and great injury is done to the fine membrane, which lines, or covers, the paffage to the lungs, and the whole cavity of the cheft, as well as to the lungs themfelves, from the fame caufe. The least inflammation happening to the pleura, or lungs, it is very much to be feared, may pave the road to confumption and death; and I am of opinion that three parts of the confumptions; which happen; arife fromthose commonly neglected trifling colds, (as they are but too commonly called,) caufing inflammation, &c.

It is not unufual for a patient to tell you, that he ails nothing, except having a cough; when, in fact, his pulfe is full, quick, and hard; his tongue coated with a thick white fur; and he makes thick muddy water, or fuch as is very high coloured; he has cold chills running down his back, forenefs in the cheft, and on the muscles of the belly, befides other fymptoms of fever: But he will infift he has not the leaft fever, and that the cough is the caufe of all thefe fymptoms, if he happens to be informed of them; but it fometimes happens, that all these are difregarded, till he is obliged to take to his bed; for he perfuades himfelf he cannot be feverish, because he feels himfelf cold; and, to remove which coldnefs, he continues to drink warm cordials, or hot fpicey drinks; and, becaufe he has no appetite, he eats rich relifting things, as he thinks, to give him one, and to keep him from being flarved; all of which have a full tendency to encourage, or create inflammation, and would be the direct means to employ for that purpofe, to an enemy, were one fo difpofed.

By thefe improper things, a triffing cold, in the first instance, is increased, and a fever and inflammation are caufed; and efpecially if the perfon С

perfon be full of blood, and accustomed to live what is called well. The many varieties of the fymptoms, and danger attending them, depend greatly upon the age, ftrength, and conftitution of the patient, and the manner in which he has lived; for a perfon who has been accustomed to eat hearty fuppers of grofs animal food, and drink ftrong, viscid liquors, may be cut off in the courfe of a few days; while a thin, fpare, or more delicate perfon, will linger many months, in confequence of having fewer materials in the habit for violent inflammation. The late Sir John Pringle, a diffinguished ornament to his profession, fays - " Diseafes, " arifing from cold, are all of the inflamma-" tory kind, viz. coughs, pleurifies, perip-" neumonies, rheumatic pains, and the like, " together with confumptions, which, in the " army, are almost always owing to neglected " colds."-There is no doubt but it is fo in the cities of London, and Westminster. In confirmation of which, permit me to lay before my readers, part of a valuable paper written by the late Dr. Fothergill, upon this fubject. out like v

" The moft trifling cold or cough, fays he, " if it continues, may either advance gradually, " till it ends in immediate mifchief, or may " leave

\*\* leave fuch imprefions as may fubject the
\*\* patient to frequent returns: a cough, there\*\* fore; in children, or young perfons, or in
\*\* perfons of a certain make, at any time of life,
\*\* ought fpeedily to be cured."

The way in which Colds do injury to the lungs and other parts, and lay a foundation for future mifchief, is, by the action of cold upon the very fine veffels, which occasions obstructions, and a fmall degree of inflammation, but not violent enough, at prefent, to be very observable; but fuch a degree of tenderness is deft on the parts affected, as often establishes an habitual cough, which is rendered more troublesome and dangerous by every additional cold; and which, fooner or later, caufes. the death of the patient; unless that care be taken, which we wish to point out, as necesfaty to prevent it. It is obferved by Dr. Fothergill, that a cough; in perfons of a certain make, should speedily be cured, and for this reafon; fuch as are tall and thin, with long necks, flat chefts, and with shoulders flicking out like wings; and otherwife of a delicate texture, are the most common victims to confumptions, and are what he means by a certain make: and, for the generality, those who

C 2

are

are faid to be born of confumptive parents, or those who often, indeed, die of what is termed hereditary confumption, mostly answer this description, and are of that certain make, just now alluded to, and which is found to run thro' whole families. To fuch perfons I cannot but recommend the greateft care, as colds, on them, commit the greatest ravages, and they are always fusceptible of the finallest impression. It requires, I very well know, more perfuation than I am mafter of, to leffen this common, but fatal inattention: but, left I should be fuspected of having reprefented danger in too high a degree, and of having given an opinion not well founded, the continuance of that excellent paper of Dr. Fothergill's, wherein he fo feelingly expresses the diffreffing fituation to which neglect fubjects the human frame, is here inferted : and I hope that any who may read it. will bear it ftrong enough in their minds, to make them carefully avoid every tendency to fuch neglect.

"I know, gentlemen \* (fays Dr. Fothergill) that you (addreffing himfelf to a Society of

\* See Medical Obfervations and Inquiries, vol. iv. Phyficians)

CODGHS AND CO

Phyficians) as well as myfelf, often have " occasion to look back at the fatal neglect, " committed both by the fick themfelves, as " well as those who ought to have had their " future health more at heart. With what eafe " would many of the most incurable confumptive " cafes have been prevented, or cured, at their "first commencement? A perfon, whofe " emaciated figure ftrikes one with horror, his "forehead covered with drops of fweat, his se cheeks painted with livid crimfon, his eyes " funk, all the little fat that raifed them in " their orbits, and every where elfe, being waft-" ed; his pulse quick, and tremulous, his nails " bending over the ends of his fingers; the " palms of his hands as dry as they are pain-" fully hot to the touch; his breath offenfive, " quick, and laborious; his cough inceffant, " fcarce allowing him time to tell you, that "fome months ago he got a cold; but " perhaps, he knew not how he got it; he " neglected it for this very reason, and neglected " every means of affiftance, till the mifchief was " become incurable, and fearcely left a hope of " palliation. You fee multitudes of fuch objects " daily, and fee them with a mixture of anger " and compation for their neglect and their " sufferings. Excuse me for trespatting in this 102022 C 3 " manner

"manner on your time and your humanity. "Though it is not in your power to prevent all "thefe factfices to ignorance and inattention, "yet, if the faculty combine in prompting "their fellow citizens to neceffary care, and prompt them to fuffer no flight beginnings to "pafs unregarded, however they may be acting against their own interess, they will have the fatisfaction of contributing to the prefervation of many a useful life; for, pertions, there are many who, in respect to the excellencies both of body and mind, have given indications of becoming confpicuous "ornaments of humanity."

Can there be a more affecting picture of a common and diffreffing fcene! and fhall one fee the fame want of care continue to prevail after fuch a pathetic and feeling exhortation? Yet, I very much fear, from the numbers who have applied to me in the laft ftage of the difeafe, without having been enjoined to follow any particular or proper regimen, that the fault does not always lie with the fick only. Since the First Edition of this work, I have feen no lefs than ten perfons in the laft ftage of confumption, who had never been bled, bliftered, or directed

rected to follow any regimen, yet had been fwallowing greafy emulfions and opiates to appeafe the cough, and nothing to remove the original caufe of it.

Now that I have attempted to point out the dangerous confequences of neglecting coughs and colds, I fhall next advife a plain and fimple method of cure, which is in every one's power to make use of. If they begin very violent, or continue long, truft not too much to your own conjectures, but feek the best advice you can. If you are poor, there are numbers of Hospitals, Dispensaries, &c. in the metropolis, always ready to give the best directions; and, if in better circumftances, it will be found a folly to put it off.

#### Can there be a more

AILW SHI SVEWIS JOK

As fome of my readers may with to know how cold air proves injurious to the conftitution, and as it may furnish an additional caution for them to avoid exposing themselves more than is neceffary, particulary those perfons who have tender lungs, I shall give the manner as plain as poffible. ricular or DI DOM

The human body is furnished with innumerable minute veffels, which open their C 4 over ban odw mouths,

mouths, or beginnings, on the external part of the skin, all over the frame; and these communicate with every part of the body internally; thefe veffels are what are called the pores; they carry a moifture out of the conftitution, called infenfible perfpiration, and the fweat, which is fenfible; the infenfible perfpiration is conftantly and invifibly exhaling from every conflicution in health in very large quantities, even to the amount of feveral pounds, every twelve hours, in adult perfons. The lungs are furnished with a very large quantity of it, which is very vifibly feen on glafs, or in a chaife, and which is thrown out by every respiration; every part of the chaife being equally moift at the fame time, though the glafs only points it out.

\* Cold and damp air has the peculiar property of caufing a spasm, or some other means of

\* Dr. Blane, in a valuable work juft publifhed on the difeafes of Seamen, fays, " that moifture is pernicious both in itfelf, and as an inftrument of putrifaction. All the complaints, called Colds, are more owing to wet than cold; and moifture may be the means of producing, or at leaft of exciting dangerous Fevers, when they would not otherwife appear."

acting

acting upon the veffels, or nerves, furrounding them fo as to close up their mouths, and prevent the natural and neceffary discharge of perspiration, fometimes over the whole body, and fometimes but in parts; and wherever this happens, the evil is prefently felt by the patient. If it is only in one particular part, as in a fore throat, stiff neck, inflamed eye, or pains in any one particular place, it is termed local, and does not always affect the health; but if it happens in a larger degree, the health becomes injured from fympathy, or confent of parts, if not from general diforder. If much of the infenfible perfpiration is thrown into the habit, or, in other words, if much of the fkin is obstructed, fo as not to have a proper circulation, cold chills, and a fense of cold water being poured down the back, and loins, is prefently felt; pain in the limbs, flight headach, and a kind of laffitude, or wearinefs, comes on, and is fucceeded by fever, more or lefs.

As the lungs, and paffage to them, are most exposed to cold, moist or noxious air, they the most frequently receive the first impression; then the cough is the harbinger of the effect. Inflammation either arises from the spass on the

the part, in the first instance, or from the degree of agitation which is given to the cheft, by the act of coughing. One remarkable effect of confined perfpiration arifing from colds in the eyes, nofe, and throat, of the ferum or limph, which is difcharged, of contracting fuch a degree of fharpness and acrimony, \* as to feald the parts it comes in contact with; it is this which irritates the upper part of the wind pipe, and causes the perpetual coughing; and, perhaps, it is this kind of irritability, which may be the internal cause of fevers in general. And from hence it appears, why colds fometimes are eafily cured, having more or less of this acrimony, and why they become so dangerous, fome-

\* It has been advanced by a very ingenious author, Dr. Reid, that the juices do not imbibe any acrimonious qualities in confumptive complaints. But the above is too common a fact to be difputed. If they contract it in one cafe, why not in another? for the catarrhal defluction undoubtedly by fome means gets a hot, fharp, cauftic, or acrimonious quality. It is not my intention to enter minutely into these things at present, but to point out the dangers arfing from the effects. The Doctor's book deferves the attention of every medical reader. See Dr. Reid, on Phthis Pulmonalis.

ny

times, from trifling neglect, or after having indulged in heating fpirituous liquors, &c. and from hence the abfurdity of the adage of "feeding a cold, whatever justice there may be in farving a fever," clearly appears.

which is difcharg

gree of fharphels and actiniony, \* as to feald the parts it comes in contact with ; it is this which trinates the upper part of the wind pipe, and caules the perpetual coughing ; and, perhaps, it is this kind of irritability, which may be the internal caule of fevers in general. And from hence it appears, why colds fometimes are cathly cured, having more or lefs of this actimoany, and why they become fe dangerous, fome-

It has been advanced by a very ingenious authors Dr. Reid, that the juices do not imhibe any atringonious qualities in confumptive complaums. But the above is too common a fact to be diffuted. If they contract it in one cafe, why not in another? for the catarrhal defaction bidoubtedly by fome means gets a hot, fharp, to entar minutely into their things at prefent, but to point out the dapgers' aring from the effects. The Dochor's book 'deferves their attained or every medical trader. "See Dr. Rud, on Phillin Folconality.

# CURE of COLDS, COUGHS,

# 8c. 8c.

I N curing colds, three things are effentially neceffary; to open the obftructed pores; to difcharge any irritable matter out of the confitution; and to obferve fuch a kind of diet, as fhall confift of a mild and innocent nature, and fuch as is calculated to prevent fever, and inflammation, and at the fame time be conducive to recovery.

As foon as a cold, or cough, is found to come upon a perfon, he fhould immediately leffen the quantity of his food; it fhould confift of fuppings moderately warm, efpecially at night, fuch as fmall broths, water gruel, and the like; the folids fhould be rice, fago, light puddings, fruits and vegetables; the drinks fhould be barley-water, fmall beer, apple-water, lin-feed tea, toaft and water, or any other cooling liquid, that is free from irritable, or heating qualities.

A friend

A friend of the author's, as foon as he finds a cold come upon him (and he is very much exposed to the inclemency of the weather, from the nature of his bufines) confines himself entirely to this kind of plan, particularly to water gruel, fweetened with honey, which never fails to carry it off in a few days; he never is kept close to his house, but by attending to it early, prevents mischief, which would otherwise ensue; and most fimple fevers, as well as colds, might be removed by such early attention and prudent care.

Perhaps it will be afked, is a man, with every trifling cold or cough, to lay himfelf up, and keep his house or bed ? if fo, he may be always nurfing and codling himfelf, neglect his bufinels, and other important concerns. To which I reply, there is a medium to be obferved in every thing; the time for confinement to the houfe must always depend upon the violence of the difeafe; neither is it always neceffary to be confined at home for a cold. But suppose I really thought fo, no prudent man, when he comes to confider ferioufly, that he stakes his health, and perhaps his life, to a day or two's confinement at home, or retrenching himfelf from rich food, wine, or heating things, will think

think much of the penalty to prevent it; for the enjoyment of health is the moft important concern of human life; riches, honour, and power, are burdens without it; therefore every prudent means of obtaining it, is an indifputable duty implanted in our nature; and nothing more contributes to that end, than attending early to flight colds, in order that they may not prove the fource of greater mifchief.

If on approaching the cold air, it caufes a violent coughing, it is neceffary to keep in a warm room till the tendernefs of the lungs is gone off, otherwife, except in the cafe of fever, it is not requifite to be kept to the houfe, but to attend to the diet, warm fuppings at night, &c. which we fhall mention elfewhere.

Fevers and colds become heightened by the continuing to eat animal foods, rich fauces, and drinking of wines and fpirits, which are defigned to fupport animal ftrength, and furnish the body with activity and fire, for exercise, pleasure, or bufines, which at this time, instead of being wholesome and friendly to the constitution, become its enemy, and nourish fever and inflammation. For this reason the all-wise Creator has deprived us of appetite in fevers, and rendered

#### ON COLDS AND COUGHS, 1035

dered food loathfome to the fight; the cooling fruits and vegetables, and preparations of them, poffefs more nourifhing properties than is commonly believed; thefe were the physic of the word primitive phyficians; and many of the moderns, who are the greateft ornaments to this country, but perform the numerous cures by a judicious adoption of them. Boiled turnips, roafted apples, afparagus, falfafy, fcorzenera, lettuces, caul-oda liflowers, brocoli, &c. poffess many faponace-lim ous, cooling and antifebrile principles, which correct the blood and juices, diffolve obstructions, and will do \* more in eradicating the fcurvy, and other foulneffes of blood of that nature, than all the Norton's Drops, Frankfort Pills, Mercurials, Antimonials, &c. in the nation, and they are perfectly innocent, which

\* At fome future period, I propole to offer to the world, fome observations on many efficacious fimples of this kingdom; for, while we are traversing from pole to pole, in fearch of new medicaments, we are neglecting many very valuable ones at home. Such a work no doubt will be very useful to the public; but I hope fome more able pen will take the hint, and fuperfede me in fo neceffary an enquiry; in the mean time, whatever future experience or study may throw in my way, to that end, shall be given with candour and truth.

in at baving 15 an

is more than I am able to fay of those medicines before mentioned.

The above kinds of nourifhment, together with a plentiful dilution of foft drinks, involve the floating acrimony, leffen the fpafmodic affection, and tend to promote perfpiration. Small wine, or lemon, or vinegar whey, amazingly contribute to this end. If they are made too ftrong of wine, or fpirits of hartfhorn, &cc. they heat and ftimulate, and have a very contrary effect to what was intended, the patient becomes hot, and reftlefs, inflead of having a moift fkin and a refrefhing and balmy fleep.

lie nadi jonuteo

EQ

Bathing the feet in luke-warm water, or bran and water, a little hotter than milk juft taken from the cow, going to bed, is an excellent fimple mode of producing a regular circulation, and gentle perfpiration. Great caution is neceffary here, not to get frefh cold; the feet fhould be carefully and fpeedily wiped dry, and afterwards wrapped up in a warm dry flannel, and the patient to go immediately into a warm bed. If the water be too hot, it proves a great fimulus, and does injury, and if cold can do no good. It is no uncommon thing for perfons who drink gruel, and other warm liquids,

37

to promote perfpiration, that they take them before they undrefs, by which means, if it happenstobe cold weather, they get frefh cold in undreffing: for the warm drinks make them often break out into a fweat, which becomes check'd before the patient gets into bed. I would therefore advife them to be taken after the patient is in bed, and then for him to lie down immediately, and to keep ftill and quiet for fome time, and no doubt but the expectation will be gratified.

If the patient has a cold, attended with ftuffing of the nofe, a cough, and hoarfenefs, or either of them, very bad; let him receive the fteam or vapour of a large pan of warm water, wherein a few camomile flowers, or elder, or rosemary, have been boiled; this steam should come in contact with the whole head, and face, and be continued for a full quarter of an hour, or more, and fhould be kept hot by fresh fupplies of hot water being put into the pan; the head fhould be covered with a flannel, or fome other warm cloathing, to prevent cold air coming at the fame time, and, after this procefs is over, the fame care is neceffary to keep the perfpiration from being checked; the pa-D tient

tient fhould breath through a handkerchief, that the cold air may be first warmed before it gets to the lungs; if the complaint is only about the head and throat, and no cough attends, a little vinegar added to the other ingredients may be of use. The bathing the feet does neither preclude the warm drinks, or this remedy being made use of.

If the cough is the most trouble fome complaint, befides the means just mentioned, the patient must be perpetually taking fost, mucilaginous drinks, prepared by the boiling of quince feeds in water, and fweetened with honey, or fugareandy, to the palate; or linfeed-tea; a decoction of barley, figs, and raifins, &c. A tea-spoonful of Paregoric Elixir\*, or fyrup of white poppies,

\* Where-ever paregoric elixir is recommended, I would wifh it to be underflood, that where there is much heat, and opiates are thought proper, that the preference fhould be given to the fyrup of white poppies, or a few drops of laudanum; as the elixir is prepared with fpirits of wine, and may be too heating. This obfervation I own efcaped me in the first edition, and I am indebted to Dr. John Jebb, F. R. S. for this neceffary hint. For while I am pointing how to avoid evil, I own it is right to take care of not falling into it myfelf.

in

in half a pint of either of them, may be taken by fpoonfuls, which will fheath the paffage to the lungs, and quiet the cough. Currant jelly, and fome of the foft marmalades, contribute to the fame end. Rob of elder, is a moft excellent medicine for this purpofe, and is aperient, fudorific, and cooling, it is preferable to fpermaceti, and oily medicines in general. But as oils and fpermaceti have fometimes their ufe, I would recommend them not to be taken in fuch large quantities, as is too commonly done, becaufe they are apt to turn rancid upon the ftomach. When they are thought proper, the following fmooth emulfion is deemed excellent.

Take of barley water, fix ounces by measure; white fugar, and powder of gum arabic, of each three drams; incorporate the fugar and gum arabic together in a mortar, with a fmall quantity of the water, and gradually mix one ounce of fresh and sweet oils of almonds, lin-feed, or of olives, and then by little at a time, add the rest of the water, and it will be a foft white emulfion.

D 2

After

After the fame manner, a dram or two of fpermaceti may be diffolved, with double the quantity of mucilage of gum arabic, and a little fugar, with fix ounces of barley water or pure water, and a fmooth emulfion will be prepared. The fpermaceti fhould be free from rancidity, and when the emulfion is made, it fhould not be kept above twenty-four hours, as it is apt to get four, or to ferment.

It is not uncommon for a phyfician to forbid all kinds of animal food, broth, and wines, left his patient fhould be heated by them; when perhaps in his prefeription may be found ftrong cordial water, and the fpermaceti diffolved with the greateft part of the yolk of an egg, which every one knows is not acting with confiftency.

If opiates are proper, half an ounce of fyrup of white poppies, or from ten to thirty drops of laudanum may be put into either of these emultions, and a spoonful taken now and then, according to the urgency of the cough, which will be spoken more of when I come to treat on opiates.

The

The following emulfion may be prepared of white poppy-feeds, or blanched fweet almonds, which will not only fheath the paffage to the lungs, but be nutritious and cooling, and very good in fevers of the inflammatory kind.

Take of almonds blanched fresh and found, or of white poppy-feeds, two ounces, beat them in a marble mortar with the fame quantity of fugar, till they are smooth, adding a small quantity of water to facilitate that purpose; a quart of Bristol, or pure water or barley water may be added to these ingredients, and strain it through a mussion rag or fine fieve, and then it is fit for use; if it is required to be more mucilaginous, an ounce of gum arabic may be dissolved in it. Half a pint of it taken a little warm now and then wonderfully sheaths the sharp mucus, and dilutes the acrimonious juices in the first passages.

I have already fpoken of one fpecies of inhalation, viz. the vapour from a pan of water and camomile flowers, but to anfwer a different purpofe than what I am now going to advife another for. The great Boerhaave, Baron Van Swieten, and the late Sir John Pringle, very

the prit date

41

ON COUCHS AND COLDS.

very ftrongly recommended the receiving of warm vapours to the lungs, in coughs and complaints of that organ; my experience, if of any weight after fuch authorities, confirms the veracity and ufefulness of them. Mr. Mudge, a very ingenious furgeon at Plymouth, has lately published a book, describing a machine which conveys the vapour very commodioufly to the lungs, which he calls an Inhaler, wherein he declares, that the use of a tea'fpoonful of paregoric elixir, taken at bed-time in fome warm liquid, and the use of the warm vapour of fimple water through his machine, will cure a catarrhous cough in a night's time. The public are much indebted to Mr. Mudge for his ingenious invention, but many of the poorer fort of people cannot afford to pay half a Guinea for it, a price certainly extravagant for fo fimple a machine. I Loculd with the poor to receive the advantages of health equally with the rich, and the means of obtaining it, when they unhappily want it. I

inhalation, viz the vapour from a

Those who cannot afford to buy the Inhaler, may make use of a large coffee-pot, half filled with warm water, or by receiving the steam through a funnel, by inverting the broad part over

over a veffel of hot water, and apply the mouth to the fmall end; this will be a good fuccedaneum where an Inhaler is not to be had.

Every cough, whether moift or dry, attended with, or without inflammation, receives benefit from the ufe of the Inhaler : as alfo pleurifies, fore-throats, afthmas, and every affection of the cheft, except in fpitting of blood. Mr. Mudge recommends the vapour of warm water only : but I believe that many different herbs, boiled in water, would furnifh certain ufeful virtues in particular cafes. Indeed Sir John Pringle fays, in his difeafes of the army, that Dr. Huck Saunders † (a name as refpectable as any among thofe who practife phyfic) had found great benefit from the addition of a little vinegar, where tough phlegm abounded.

+ This gentleman is lately dead, to the great lofs of fcience, and every one who had the happinefs of knowing him. His humanity, and fkill, were great, and he was always ready to communicate the refult of his extensive experience to those who had not those opportunities. I am indebted to him for many valuable communications.

D 4

Nothing

Nothing can more ftrongly recommend the act of inhalation than the following quotation from the very eminent Dr. Huxham, and as it confirms my mode of treatment, I beg leave to give it at large.

"But nothing more effectually promotes ex-" pectoration, (by attenuating and refolving the " impacted matter) than drinking freely and " frequently of cooling, relaxing and gently " faponaceous liquors ; fuch as thin whey, the " barley ptifan, with liquorice, figs, &c. the " decoction, or rather infusion, of the pectoral " herbs, as ground-ivy, maiden-hair, colt's-" foot, hyfop, &c. thefe flould be gently aci-" dulated with juice of lemon, or Seville-" oranges ; if any thing more detergent in the "above drinks is wanted, honey may be added, " an admirable natural cordial foap, thrown " almoft out of the modern Materia Medica, " I know not why, nor how, for where it gripes " or purges one, it agrees with a thousand, " and even its griping and purging quality " may be eafily corrected by boiling. Hip-" pocrates used oxymel and mulfum in fuch " cafes, and advised against drinking mere " water, in pulmonic cafes, as neither good er for

" for the cough, nor to promote expectorafo tion ; - any of all these things by turns drank " warm, answer the above intention exceedingly " well, if taken in frequent but finall quanti-" ties, fipping them as it were perpetually; for " by this means much of the relaxing and re-" folving vapour is also drawn into the lungs, F and much of them abforbed by their imbi-" bing veffels, fo that the relaxing and diluting " is thus carried on in a double manner, and " of courfe very effectually. Very large f' draughts fhould not be taken at once; for " they overcharge the ftomach, produce indif' geftion and flatulence, and force up the mid-" riff too much, which greatly embarraffes the " refpiration; therefore Hippocrates advifes " to drink in those difeases, out of a cup with a " narrow mouth, probably both that the liquor " and vapour might be preferved warm longer, " and that lefs might be drank at a time, and " alfo that the fteam might be more copioufly " carried into the mouth and nofe .- Many "kinds of drink he advises for this purpose, " but particularly recommends barley water, " honey and water, oxymel, and vinegar and " water."

From

From hence it appears that warm vapour is of fignal benefit; I would not recommend any other in fimple coughs or colds, than the vapour from water in which have been boiled camomile, or elder-flowers, milk and water, marfh mallow tea, or fome fuch fimple things. There is a liquid called Stern's Æther, which I think a great deal too irritating for lungs in any degree inflamed. For the great intention of inhaling, is to relax the rigid or irritable membrane that lines the trachea, or paffage to the lungs; to fheath the parts that are excoriated by the fharp mucus, or to leffen the fharpnefs of that mucus, and caufe it to be more eafily fpit away.

The cold air fhould be carefully prevented from coming to the lungs after having inhaled; it is better done in bed than up, for this reafon, and alfo becaufe it generally promotes perfpiration.

If a cold be at all fevere, nothing can fo foon contribute to leffen that feverity, and prevent a fever, as gentle purging. I prefer the mild fimple things, to fuch as are more active and violent, for it is not the very great number of

of motions that are procured, that give the expected relief, as the ftronger purges hurry through the bowels, and do not carry the irritating caufes out of the body, nor do they tend to cool the blood and juices, and thereby prevent both fever and inflammation, which is the material object a Preferiber fhould have in view. Manna, and Glauber's-falt, cream of tartar, tamarinds, rhubarb, and fal polychreft, lenitive electuary, or indeed any other gentle cooling means, which the patient has been accuftomed to ufe, will be right to have continued. The following mixture is very well calculated for this end, and will agree with moft conflicutions:

Take of Epfom, Glauber, or Rochelle falt, one ounce; boiling water, or fimple peppermint-water, four ounces; tincture of rhubarb, or of fena, one ounce and a half +; mix. Half or a third of the whole may be taken in the morning, and repeated once in two hours

+ When there is much heat or fever, the tinctures being made of fpirit must be omitted, and a dram of fena leaves infused in the liquids, to make the medicine more active, if necessary.

till a motion or two be procured. An ounce of manna may be added to it, if the patient pleafes. As a perfon, hard to purge, can take the whole of the above mixture, it must be properly proportioned to fuch as are more cafily moved.

Such as cannot take a liquid, may use the following pills, and dilute with barley-water, warm tea, or water-gruel.

engo

RUG

115

material object a Preicher mould have in

Take of rhubarb in fine powder, and fal polychreft, of each one fcruple; ealx of antimony unwafhed ten grains; of fyrup of buckthorn a fufficient quantity to make eight pills, four of which may be taken at night, and the reft in the morning, if no effect be produced before; if thefe fhould not be found quick enough, for any particular conflictution, a few grains of extract of jalap may be added.

For those who are used to take an electuary, cream of tartar, and lenitive electuary, mixed together, will often answer the purpose. A teaspoonful taken night and morning, so as to procure two motions a day, is very sufficient.

till of the whole an

After

11

After the body has been fufficiently opened, (or indeed before, if the fymptoms are preffing), that is, if there be much fever, pains in the limbs, head, or back, the cough hard and troublefome, or there be any darting pains in the cheft, or under the breaft bone, or if the mufcles of the belly be made fore by the perpetual coughing, bleeding is abfolutely neceffary : for these pains denote inflammation having feized fome part, and as nothing ftops the progrefs of inflammation io much as bleeding, from fix to ten ounces of blood, may be taken away immediately; a few ounces taken away now, may prevent the repetition of the operation very many times, if this period be miffed, and the inflammation fuffered to go on for the want of it. You will perpetually hear of danger arifing from bleeding, of producing agues, or that it is not right to bleed. in cold weather, or some other simple reason given why the operation fhould not be performed. Wherever there is a tendency to inflammation, and particularly in the lungs, none that are in their fenfes will hefitate to take blood away. Suppose you are nervous, gouty, or low, (terms very vague and uncertain, and often miflead) the loss of a few ounces of blood will

49

will do no great harm, but the omiffion may. The quantity must be proportioned to the neceffity, age, and strength of the patient, and to the manner in which he has been used to live; for one would not bleed a delicate perfon, and one who lives regular, in the fame quantity as one is who lives freely, and is more robust.

The great fault is, that bleeding, like other means neglected too long before it be performed, lofes much of its power. For when mifchief has taken place, the difeafe will have its regular courfe, and twenty repetitions will not have fuch falutary effects, or be fo able to reduce the inflammatory flate of the blood, as one timely one would in the beginning. A few ounces of blood in coughs may generally with fafety be loft; but a repetition requires able advice to direct properly.

After a proper regimen has been obferved, the body been opened, and a few ounces of blood taken away, if the cold fhould not have been attended to in time, or not get any better with the above mentioned treatment, antimonials, given in mild dofes, very much contributes to relax the fkin, open the pores, and remove

remove fever and inflammation; and indeed it requires all those very often to remove bad colds.

In administering antimonials, I am not prejudiced in favour of any particular preparation, whether antimonial wine, kermes mineral, emetic tartar, or Dr. James's powder; I think indeed that all the virtues of antimony, may be received from emetic tartar, or kermes mineral, the former in doses of a quarter of a grain, to half a grain, given once in three, four, or fix hours, in any vehicle; and the latter, from one to three grains in the fame diftance of time, as they may be found to operate: A naufea, or ficknefs being produced, and fucceeded by fweat, or a few gentle motions, or both, is the operation I would wifh, but not with violence; for perfons often encreafe their colds by being obliged to get out of be dfrequently when in a profuse perfpiration, from the violence of the antimonial. Indeed, when there is much bile in the first paffages, it ferves to encrease that violence. The opening the body with my mild purge, previous to the administering antimony, prevents this taking place.

In

In twelve hours, fever, and cold will often be carried off by a prudent use of antimonials ; but bleeding and purging should precede their use. If Dr. James's powder be preferted, from three to five grains, may be given every three, four, or fix hours, as was before advised. The patient does not reap benefit from being ruffled by it; and perfons full of blood, and those that are weakly, receive much injury from this cause, and I fear that the indiferiminate and officious use that is made of it, does much harm. The more mild and regular it operates, the better and fafer; that is, by gentle fickness, sweating, urine, or stool, or all together moderately.

One caution is neceffary to be obferved by those who give James's powder, according to the directions in the packets, or papers, which are fold. Always to weigh the quantity with nicety which they mean to give, and never to truft to what their paper states it to contain. They profess to put into each paper, twenty grains and a fraction, but the Author has weighed them often, and found fome to contain twenty-nine grains in each fingle paper, and in others, fourteen grains only; and any candid

candid perfon may eafily judge the mifchief that may be done by feven or eight grains, given to weakly perfons, when five were only intended; and what delay, and of courfe injury, must accrue to others, in giving and depending, upon the operation of five grains, when three, or three grains and a quarter, had only been taken. It is a medicine of great power, and great virtue, given properly; but in these uncertain dofes, and when not properly adapted to each particular cafe and conflitution, is capable of proving mischievous. The public have a right to exactness from the proprietors of the powder, confidering how well they are paid for it; but above all, when it is confidered that the health and lives of his Majefty's fubjects are at ftake.

If the body and fkin fhould be very hot and feverifh, five or fix grains of nitre, in barley-water, or the almond emulfion, will leffen the heat and not interfere with the antimonials, when taken between the hours of taking the antimony.

The following mixture is one of the beft general medicines to cure fevers in most con-E stitutions

54

flitutions that can perhaps be prefcibed, and poffeffes no quality likely to do harm, a circumftance which the author would wifh a prefcriber to have always in view.

. Take of the fresh juice of lemons, three ounces; falt of wormwood, two drachms; emetic tartar, one grain; fimple spear-mint-water, five ounces; fugar as much as may be palatable. The whole of this mixture, will make four dofes, for an adult perfon, and may be taken at the diftance of four, five, or fix hours between each dofe; younger perfons may take two fpoonfuls at the fame diftances of time, as may be found neceffary; but I would advife people not to truft to this, or to any general medicine too long, for fear fome fymptom, attending particular cafes and conflitutions, fhould indicate fome other mode of treatment, and which none but the experienced can diftinguish or discover.

Dr. Buchan has very ftrongly recommended a plafter of Burgundy pitch, to be applied to the back for an obftinate cough; I have known it of fervice, but a blifter is often as little troublefome and more fpeedily beneficial. Where

Where a blifter is objected to, ufe the other, but depend not on externals only, of any kind.

Opiates are often given in troublefome coughs, and no doubt are effentially neceffary to abate the violence of them, and to procure reft, for the continual action of the cheft and lungs, and mufcles furrounding them, which is occafioned by the pain and agitation of coughing : but as opiates encreafe the heat of the body, they fhould not be given before bleeding and purging, or where there be much fever, but by the hand of a mafter. Dr. Fothergill held this opinion.

After the heat and fever are abated, and there is a free expectoration, and the cough fill very urgent, a tea fpoonful of fyrup of white poppies, or five drops of liquid laudanum, may be taken at going to bed, in a teacup of any of the before-mentioned emulfions, or mucilaginous drinks; if this fhould not be fufficient, a larger quantity may be taken to anfwer the purpofe; but make the addition with caution.

E 2

Very

-

56

Very obftinate hoarfeneffes, when unattended with fever, I have known cured in a day, by taking a tea-cupful now and then, of a ftrong decoction of horfe-reddifh; where there is a fever, it might be too heating, and likely to encreafe it.

Farther with medicine I mean not to go, nor even quite fo far, if violent fymptoms come on, without calling in good advice, as I have all along intimated. But as fo many people have a propenfity to *Quackery*, I would wifh them to do it with as little mifchief as poffible, and as near the regular practice as may be, and for this reafon, there is held out to them, fafe, and mild remedies, with cautious rules for adminiflering them, and I doubt not but if they are given properly, they will have the defired end.

I think it my duty, after having given fome directions how to remove colds, and prevent them from becoming dangerous, to offer a few remarks, whereby colds may be prevented, and conflictutions, fubject to catch them, rendered lefs liable to do fo to, to make the weakly to become ftrong—and the ftrong more vigorous.

In

In a variable climate like ours, much will depend upon regularity in living, and the mode of dreffing agreeably to the feafon of the year, and feverity of the weather. In England, we are very neglectful in this particular, but a great deal depends upon cuftom begun early in life, and regularly continued. Very weakly conflications may be very much improved, and ftrengthened, by training them gradually to bear the viciffitudes of this changeable atmosphere, and make them become what is called hardy. But I have feen this very often carried too far; the vigour of the body as well as the mind, in fome conflitutions, may be very largely encreafed, whilft in others, if you press it beyond a certain pitch, you injure both. Parents, who have these objects in view, would do well to confider the natural ftrength of both body and mind, and to bend the bough very gradually; otherwife, they will often break it in the attempt. So it is in perfons that are ill, or recovering from ficknefs. When the body is in good health, it may be made, by degrees, to bear almost every change without inconvenience, but whilft discafe, or its effects, remain upon it, the most trifling innovation in diet, clothing, &c. is not without hazard of danger.

E 3

I am

58

I am informed by a gentleman who has travelled much, and often been in China, that, the changes from heat to cold, and from cold to heat, are more regularly progreffive there, than in any other country he had feen, or heard of; and that the natives as carefully attend to putting on, or pulling off, their cloaths, as the cold is found to encreafe or diminifh, with the moft religious obfervance. What a pity it is that Britons, fo famed for *Philofophy* and the *Arts*, fhould be as carelefs in general, in the moft valuable of all arts, *that of preferving health*, as if they were not acquainted with either.

Nothing, perhaps, contributes more to firengthen the conflictution, and render the body lefs liable to catch cold, than bathing in the Cold Bath, or in the Sea. Yet this fhould never be used whilft the patient has a cough or cold upon him; but if it is begun in relaxed or weakly conflictutions, or fuch as are called nervous, colds and their confequences will be prevented. It may be used twice or thrice a week.

I have

I have often observed that children and others have been fent to the fea for the fake of bathing in the falt-water, when it has been attended with much inconvenience in other refpects; the fea air has fome advantages in fome particular complaints, but in general, every advantage of fea water may be derived from pure water, just pumped or drawn from a well into a large veffel; or those who have an opinion of falt, may put a pound or two of bay falt into the water; this will make a large tub equal in faltnefs to fea water. Those who dip children for the ricketts, or any other weaknefs, particularly in fummer, fhould change the water three times a week, and not let it receive the heat of the fun; and the addition of the falt in fummer will have fome advantage in making it colder, and therefore more ftrengthening. Is shat and sha is your yo

The advantages derived from washing children in cold water every morning, cannot be too often enforced on the attention of parents: it ftrengthens their tender limbs, and keeps them from the ricketts, and the habit of taking cold. Children cannot be too foon inured to bear all kinds of weather.

E 4

Warm

59

Warm cloathing now demands my moft ferious recommendation, and the readers moff ferious observance, as it is of the utmost confequence, to prevent catching cold, for a varicty of changes frequently happen in one day, and often in the space of a few hours, in this uncertain climate. The keennefs of the North, and North-east winds, and the many ways and fituations in which the human body becomes neceffarily exposed, render it proper to fly to cloaths fufficiently warm to prevent their baneful effects. We fee what destruction they make on the tender herbage, and even upon hardy vegetables, defigned by nature to defy their piercing powers. And as Dr. Akenfide, in the Pleafures of Imagination obferves. autor area of the fall in think of to

# They fourly check the progress of the year.

SACCE IN DISC

As vegetable life is deftroyed by cold, fo is the life of man very frequently, by its producing fevers, rheumatifms, &c. but it very often happens from his own neglect of doing what is right in time to prevent it. Moifture is alfo very injurious to the human body; but cold and moifture conjoined together, are more power-

powerfully bad then either of them feparately. Therefore whoever is fubject to catch cold, or have winter coughs, or afthmas, fore throats, rheumatifms, &c. will find their intereft in feeking the friendly aid of a flannel waiftcoat worn next to the fkin, and put on before the cold weather fets in, and alfo in warm flockings and floes; for the confent between the feet and the lungs, throat and bowels is very great; and many a fit of the colic, &c. may be prevented by attending to this little matter.

It may not be improper to remark, that those who for the generality are most exposed to cold air, are the least subject to get cold, and will be found to enjoy the best state of health. But such performs as have tender lungs, cannot bear much exposure to cold in the winter of this climate. As there cannot be any certain rules laid down for the prefervation of the health and life of man; the favage of the woods, and the citizen of the world, being both liable to difeases, therefore what most agrees, or most offends, is not only the duty, but the interest of every man to study, as the knowledge of it is within the reach of every man to obtain. If any are very chilly,

or

or much pinched by the cold, when in good health, it will be right to put on cloaths fufficient to remove that inconvenience. If any can bear the cold, and viciffitudes of winter with thinner cloathing, and enjoy good health, there can be no reafon for them to alter any mode which agrees with them; fo that every man must judge for himfelf. People in health have powers which refift many evils of climate, &c. but when once the body has been weakened by previous illnefs, it requires much caution, and much time to regain to those powers, equal efficacy and strength, which they had before,

So it is with that useful body of fubjects the labourers in agriculture, and in other arduous employments in the open air: habit begun from infancy fo far fteels their nerves, as to refift almost always the effects of heat and cold; but they very often fall victims to their own incaution, though they know that it is bad for them, as by drinking cold drinks, and lying on the cold grafs, or ftanding ftill, when they are in a fweat, or much heated by violent exercise. If this were frequently spoken of from the pulpit, or by gentlemen, and farmers

mers to their feveral labouring men, it is not improbable but it would be better obferved, then if left to their own diference.

The fitting in rooms after they have been just washed, as is too often the case of the lower orders of people, is the cause of much mischief. The living in damp stone kitchens is also the destruction of many hundreds of fervants yearly.

The letting wet cloaths dry upon the back has caufed many a grievous rheumatifm, colic, and ague, which might have been avoided. Many young workmen, fuch as mafons, plaifterers, carpenters, paperhangers, painters, &c. are cut off in their prime, from the ill effects of cold damp houses, wet walls, &c. I have often known perfons get very fevere colds, by fitting in cold damp churches during the time of fervice, and others have been equally hurt by having fat in a beft drawing-room, which was appropriated to receive company and used only now and then; a fire has perhaps been lighted a quarter of an hour before the company met, which draws out the damp of the furniture into the room, but does not diffipate it.

it. The perfons fitting still all the time, are in no fituation to refist the bad effects.

Beds not having been lain in fome time, contract a damp particularly hurtful to many; ill-dried linen is alfo another mighty evil, and those who have the health or happiness of others at all at heart, would do well to be careful of the above particulars \*.

No

\* I am forry a fo defervedly great phyfician as Dr. Hebberden, fhould even doubt that wet rooms, damp beds, wet linen, &c. fhould not occafion illnefs to the human body, when it has not only been recorded by phyficians from the earlieft ages, to the prefent day; but almost every day's experience produces fomebody who has fuffered from one or other of the above caufes.

It is true that much prejudice has prevailed againft the bark and many other valuable medicines; and prejudice once received, is very difficult to be rooted out of the mind of man; and who fhall fay that he will refift it, when fo learned and difcreet a man as Dr. Hebberden is found to be open to its influence. He deferves highly from his country, who endeavours to difpel the leaft mift from any part of obfcured fcience; but furely the mifcheivous effects arifing from damp beds,

### ON COLDS AND COUGHS. 65

No body of men enjoy better health than coachmen and chairmen, who go through every viciffitude of weather, and I attribute it to their going fo warmly cloathed as they do. Their health would be ftill more permanent, if they had not a bad cuftom of drinking warm purl, and other warm drinks, and immediately after going into the cold air; whereas a glafs of any fpirits, or a pint of cold ftrong beer, fortifies the body againft cold much more, be-

beds, and wet linen cannot poffibly be ranked in that clafs.

This fubject has attracted my attention ever fince the Doctor's paper was published, and many cafes I have collected which would put the matter beyond all doubt, did the public require them, or could fo feeble an evidence as mine have any weight.

On any other fubject, I fhould not dare to differ from fo eminent a man; and I do it here with diffidence, urged on by truth, arifing from facts, the refult of careful obfervation, made with this particular defign, and not from any pre-conceived notions, or prejudices got from others. See Medical Tranfactions, vol. 2.

caufe

caufe the warm drinks open the pores, and the cold ones do not.

I am forry to fee fo many abfurd fashions invented for my fair country-women, fraught with fo much danger to their health, and of courfe to their beauty. If they are to wear great hoops, fhort flays, and petty-coats up to their knees, they require warm flannel drawers, and warm under coverings to keep them from the influence of cold. It is a matter of fome furprife, that delicate as they really are, more mischief does not accrue from such modes of dreffing. In a morning they are wrapped up, with those close warm gowns, and the face, neck, and cheft, carefully guarded from cold by a warm cap and handkerchief; and in the evening, are feen half naked in the fireet, the play-houfe, or in a cold coach. Or, perhaps, after fitting in a warm room, heated with large fires, a number of candles, and full of people for three hours together, then, all on a fudden, they walk through a cold airy gallery, and winding flairs, with currents of wind blowing up; and afterwards are driven a mile or two in a cold coach, through pinching froft, or a damp midnight air.

Our

Our young men are equally carelefs in conducting themfelves in the fame things, as well as in their cloathing : one minute they are in a hot crouded play-houfe, and the next exposed to the cold piercing eddies, and great currents of air that are felt round its avenues, the larger ftreets, and St. Paul's ; and fo indiferent is pride, that you feldom fee them in a great coat when they are dreffed for the evening, although they have been wearing it almoss the whole day before.

I obferve many of our *public Offices* are kept remarkably warm with fires, and that the clerks belonging to them are very fubject to have confumptions, afthmas, and other complaints of the cheft; partly as I apprehend from their fedentary way of life, and the certain pofition of the body for hours together when writing; and partly from the fudden and unguarded manner of expofing themfelves to the cold when they leave their employments. The mouth and noftrils fhould be guarded with a handkerchief, for fome time after they go out as well as the having a great coat on, for the cold air does mifchief this way very often.

Our

## ON COUGHS AND COLDS.

Our young citizens are very regardlefs of this circumftance, one part of the day they, are in a clofe warm compting-houfe, and in the evening you fee them with thin light cloaths, with the breaft open, and perhaps under a courfe of mercury. Mercury is bad for the body when troubled with a cold, and it is alfo dangerous to be exposed to wet and cold during the time of using it. I could wish the morals of the people were such, as not to require its fo frequent exhibition; but as I cannot be expected to reform the age, it is my duty to recommend such means as will prevent its doing mischief, where its specific virtues are required.

Too warm cloathing relaxes and debilitates the body, and promotes too plentiful perfpiration; a medium is therefore to be obferved, but a want of that which is proper, is attended with more ferious mitchief than too warm a cloathing, if it be not imprudently thrown by *Juddenly*.

Children, that are fubject to gripes, convulfions, coughs, &c. fhould always wear warm ftockings; thefe, and many of their complaints,

68

## ON COUGHS AND COLDS. 69

plaints, arife, from their limbs being chilled, by the fevere cold of our winters, and their legs and feet not being covered at all—A pernicious cuftom!

To conclude, if every perfon who finds himfelf afflicted with a cold, would take the trouble to read this pamphlet with attention, fo . as to understand its contents well, and not curforily to catch one part, without attending to the other; and afterwards carefully to apply the means here recommended, I flatter myfelf, without prefumption, that the complaint would foon be removed, and the patient, inftead of languishing many months of a confumption, in confequence of having neglected this care, would enjoy good health, and vigour. Was this to be attended to in general, it would foon put an end to the difputes of the learned, whether our births, or our burials, exceed each other; by the great numbers of fubjects it would fave to the ftate, and fhew foreigners, that confumptions are rarely, if ever contagious in England, and by no means fo common as they are in Spain, Portugal, and Italy. The great contagion here is, sareless of colds in their origin, which I hope

Millions have died of medicable wounds. Description of the second secon

s; and others to prefs upon the cheft,

confectivently to the circulation of th

HERE is no difeafe which robs the world of fo many useful members of fociety as Confumptions; the merchant, the mechanic, and the fcholar, alike become victims to its fatal influence; for not only men of the greateft talents, but women, of the faireft forms and livelieft fenfibility, who might have become fhining ornaments to the nation, and patterns of domeftic happinefs, are untimely fnatched away by this cruel diftemper.

F 2

Con.

72

Confumptions have always been common in this country, and I very much fear, they are found rather to increase than diminish, and probably from fome of the following caufes. Our youth are not fo robuft and ftrong as they used to be, owing to the prefent modes of living, and other bad habits. We have many more perfons employed in fedentary trades than used to be, in large towns, and in many bufineffes, which furnish the furrounding air with unwholefome materials, which are drawn in with the breath, and injure the lungs; many are also engaged in employments which require an almost constant bending of the body forwards; and others to prefs upon the cheft, and fo caufe additional labour in refpiration; and confequently to the circulation of the blood.

Pleafure, and diffipation, are alfo fought after by all ranks of people; the numerous places of public amufements, are fo many feed beds, and nurferies for colds. In fummer, as well as in winter, the fame danger prevails; owing to perfons not confidering fufficiently the nature of our climate. At Vauxhall, and other nocturnal amufements, what numbers may be feen

feen at midnight, as thinly cloathed, as they were in the middle of a hot day? The hotter the day, the larger quantity of dew naturally falls, and fometimes the whole atmofphere is loaded with watery vapour, and a brifk eaft, or north eaft wind, blowing at the fame time; the pores being opened by the heat of the day, more readily become fuddenly clofed, a check of perfpiration takes place, the lungs at the fame time imbibe the damp, and cold air, and a foundation is often thus laid for future ferious mifchief.

> But while the chilling dews defcend, Let nothing tempt you to the cold embrace Of humid skies.

CERCING DE CIN

DR. ARMSTRONG.

Our boys, particularly in the metropolis and other large places, have too early and too frequent a knowledge of the fex, which leffens the growth and ftrength of their conftitutions. Nor does the mifchief ftop here, for a *certain diforder* is too often the confequence of fuch purfuits; and the means neceffary for its cure often debilitates the body, breaks down the  $F_3$  crafts

73

74

crafis of the blood, weakens the elaftic fibres, and renders the body more liable to receive, and lefs able to refift, the fudden changes, which they are perpetually exposing themfelves to.

puere is loaded with waters

There is alfo a practice, too common in large fchools, and fometimes in private life, which has very bad effects on the confliction, which is Onanifm. Parents, and guardians, and thofe who have the charge of youth about the time of puberty, cannot be too watchful to prevent it, or depict it in too hateful colours, in order to keep it from growing into a habit, and therefore become, like all other habits, difficult to remove.

Whether I am right in the above conjecture, it is not for me to determine; but I fear it is too true, and hope this hint will ferve to remove fome part of it.

There is also a pernicious custom of my fair country women, to confume great quantities of cosmetics to beautify the skin, and to remove pimples from the sace, &c. These are all prepared with white lead, and other deleterious poisons; for they not only repel the

the humours, but communicate their poifonous qualities to the lungs, and other tender parts of their conflitutions. Dr. Huck Saunders told me, that two young ladies, fifters, died one after the other very quickly of confumptions, and the latter confeffed to him, that the was fenfible it was in confequence of a white lead wafh, which they had ufed to whiten their fkin.

To these occasional causes many more might be added; but as it is not my design, to write a regular and compleat treatise on Consumptions, I shall content myself, with just stating the general appearances and effects of the disease, and such means as I have observed to be beneficial, or detrimental, to those who have had the disorder.

The generality of Confumptions, as I have before obferved, are brought on by the neglecting colds in their early flate, or by fome other caufe, which might have been as timely removed, had it been attended to; in this I include fuch perfons as are faid to be born of confumptive parents, or in whofe family fome have died of this difeafe. For although F 4 I admit

26

11144035

I admit that many difeafes are hereditary; and that very diffrefling cafes frequently happen, where this proves fatal to feveral, in one and the fame family; yet I cannot but think, that many of them might have been prevented, by attending to the rules flated in this, and the former part of this work.

In the beginning of these fheets, I have expreffed myfelf, as ftrongly as I was able, of the numerous evils which arife for the want of care; and although, I have my hopes, yet I have my fears, left it fhould happen in this cafe, as it happens in general, that advice gives no new powers of refiftance. Yet I cannot again forbear warning fuch perfons as have coughs or other diforders in the lungs, to avoid if poffible the fate of as amiable a young lady in my neighbourhood as ever the fun fhone on; the beauty of whofe perfon could only be equalled by the goodness of her heart, and other endearments of mind! a cafe which will not now admit of relief, although it most probably would have done fo, had the taken the proper care in time, or had the difeafe been thought ferious, when it was remediable. It worked, like a worm in the bud, to the unfpeakable diffress

diffrefs of one of the beft parents, and other lamenting friends \*.

It is perhaps worthy of remark, that most of our youth, of both fexes, who shew very extraordinary marks of genius early, are generally of very weak and delicate constitutions. Their natural eagerness to improve, and to excel, is equally pleasing to themselves, their parents, and their friends. In this case, the very numerous, and arduous studies, and other necessary qualifications for the completion of the charac-

\* And, alas! fhe and feveral others are fince numbered with the duft, who might have been now confpicuous ornaments to human nature, and a bleffing to their friends and acquaintance. And what a heartfelt fatisfaction would it have been to the Author of this work, could any of these precautions been seen and observed by any one of these aniable young perfons. And all the trouble and anxiety, which he has had in fending this work to the world, is more than repaid, by having been the means of fnatching, as it were, an amiable Lady from the grave, who was in this predicament, to the great comfort of a deferving and tender husband, and the unknown benefit which a mother is to a young family.

ter

ter of a bright genius, become too mighty for them to undergo with fafety to their health. Nature, at this time of life, has many important offices to perform, which are impeded, by too great exertions of any kind; the folids become weakened, inftead of accumulating ftrength; the fmaller veffels are unfit for their feveral functions, for the want of that principle which nature employs in giving firmness, power, and exertion to the conflitution, when it is weak from any caufe, and particularly in fuch perfons as out-grow their ftrength. The whole frame infenfibly becomes difeafed, and is fometimes in the greatest danger, before the patient, or the friends, fufpect that medical affiftance is neceffary; and happy is it, when that affiftance can reach the real caufe, or do any permanent good. Therefore ye parents ! who have children of this defcription, confider that fhining abilities will make their own way, and will not be obfcured by time, that the fruit will be ripe in due feafon, that bodily ftrength is neceffary to great exertions of the mind, and that many of the choicest plants, and most beautiful flowers, require the minuteft, as well as the most diligent care to bring them to mature ftrength and beauty, 101

beauty, and when arrived to that certain pitch, will bear many a nipping froft, and piercing cold, with impunity, which but a little before, would have deprived them of exiftence. The above cafes often end in confumption, therefore great judgement is neceflary to diffinguish the true cause, and to apply proper means. And whoever is thus circumstanced, I cannot but urge them to guard against fo distressing a fituation in time.

The most frequent causes which occasion confumptions, are the finall pox, meafles, and feveral other species of eruptions repelled upon the lungs; cuffomary evacuations having been stopped fuddenly, fuch as iffues,) fweaty feet, the menfes, &c. colds neglected, ill cured inflammation, spafmodic afthmas, scrofulous affections, tubercles, a fpitting of blood from the lungs, a malformation of the bones of the cheft, tight flays, and other caufes which impede the free action of refpiration. Abforption of matter from an abicefs, women giving fuck beyond their firength, or when emaciated by other profuse natural drains, the materials of feveral manufactures being drawn into the lungs in the act of respiration, such as barbers, meal-

DCAR C. P.

mealmen, glass-grinders, stone-cutters, &c. &c. all tend to the fame destructive end.

a sud daina ridiana mira

If the Confumption arife from violent colds, the fymptoms may be gradually traced from the beginning; but, if from any of the above mentioned causes, it requires discernment to discover what its cause may be, that it may have its correspondent cure, as may be feen by the following cafe, A lady, without any previous known caufe, or apparent neglect, feemed to be becoming confumptive, very able phyficians had been frequently confulted, and every rational means were used for her cure, but without effect. One day I afked her, if the had any objection to an iffue? fhe answered no, that she had had one all her life, till within a few months, when the was defired to dry it up, but now the began to recollect, the had never been well fince, An iffue was inftantly made, and fhe very foon after got well, and ftill continues fo; this is four years ago.

Perfons, who are most fubject to become confumptive, are of a delicate make, fair complexion and florid countenance, fost skin, long necks, narrow chests, prominant shoulders and hips

24

hips flicking out like wings, with hollow temples, thick upper lips, and teeth of a milky whitenefs. Many of the above defeription have conflictutionally weak lungs, and the glands of the neck, lungs and bowels, are often obftructed, but thefe do not always produce mifchief, till colds or fome other caufe, fet them in a flame, which ends in fuppuration, hectic fever, ulcers, and confumption.

Sometimes, where tubercles are the immediate caufe, and have been made tender, from too great exercife, breathing bad air in hot crouded rooms, improper food, colds, &c. the beginnings are hardly perceivable, the cough not being very frequent at first, generally dry, or unaccompanied with much expectoration, and that, mostly, of a light frothy mucus, mixed with air, and moftly in a morning, and exciting vomiting; the patient feels an uncafinefs about the cheft, or a fenfe of pain on lying. down, on one, or both fides, or under the breaft bone; the breathing is also oppreffed with the least quickened motion, and particularly fo in hot rooms, or in moift weather; his **i**pirits

fpirits are very irregular, being fometimes very lively or very fad, without any known reafon; a red flush will appear upon one, or both cheeks, efpecially after meals, with a drynefs and heat in the palms of the hands ; a particular quicknefs in fpeaking may be obferved, as well as an unnatural peevifuncis, which gains upon them, though before of the fweeteft difpofitions; all or most of these fymptoms, may be feen by a careful obferver many months before the patient thinks of complaining, or will acknowledge that he is ill, and then the cough perhaps may be found to grow more troublefome, and all he ails is attributed to it, and to appeafe which the family apothecary is fent for, and is defired to administer fome foft balfamic, but if he talks of bleeding or regimen, which now is abfolutely neceffary, he is fupposed to have some private views of his own to answer, or the patient replies that he is not bad enough to fubmit to that yet; when, God knows, this is the very time that he can be of real fervice. By a little care, and attention, the urgency of the cough becomes abated,' the foreness of the cheft is also leffened, and being tired of medicines, and conftraint or confinement, A B CITER

finement, the patient thinks the reft will wear off; thus half cured he immediately flies to the fame round of diffipation, or exposure to colds, or other means which first brought it on, which does not fail to add to the already dangerous heap, which daily accumulates till it ends in the difease in queftion.

It is remarked by a very ingenious writer \*, that it is very common for young ladies at boarding fchools to contract colds, which the governefs, from a good intention, neglects to inform the parents of, for fear of alarming them, while perhaps they are loaded with oily medicines, or other palling fweets, till danger comes on, and no means taken to remove the caufe of the diforder. If this be true, which I am not inclined to difpute, I would recommend to their notice the example of a fchool-mafter, my next door neighbour +, who, when a child's complaints do not immediately give way to proper evacuations, (which however moft childrens complaints do), fends for an emi-

\* Dr. Reid. + Mr. Alexander.

nent

nent phyfician. This mode is feldom objected to by the parents, as it is not only the most fafe for both master and feholar, but very often the cheapest; at least the parents are not fo apt to suspect that medicines preferibed by a physician can be unneceffary.

After having given a full defcription of this difeafe, I hope my readers will excufe my frequent repetition of advice relative to taking care in time; it is from a conviction that it cannot be too often repeated or enforced, and not from a tautological ufe of the term, which it might otherwife appear to be; for I would rather that a critic fhould fay I had ufed fuch a fentence too often, than that one perfon fhould receive any injury for the want of attending to it. Or if this be a blemifh to the work, I hope it will be obferved by every reader.——

I shall not fay much with respect to medicine here, for the reasons before given; the principal things which I shall advise, will be more to regulate the conduct of patients, by apply-

Mir. Alexander.

3000

\$.

ing

ing to their reafon, matters within their comprehenfion, and fuch minutiæ as phyficians have not always time to direct, but which in my opinion are effentially neceffary. pod en

In the beginning of Confumptions, bleeding is a principal remedy, and in almost all conflicutions, abfolutely neceffary, which must be repeated often, in fmall quantities, according to the urgency of the difeafe, and the ftrength Mate fevering ness a state r of the patient.

If pain in the fide, or under the breaft bone, firiking firait to the back bone, or oppreffion in breathing, or the cough be remarkably troublesome, or the expectoration streaked with blood, no medicine can be fo ufeful as bleeding. Three or four ounces of blood may be fafely taken from very weakly perfons in the above cafes; for these fymptoms indicate inflammation; which will do more mifchief, than the temporary inconvenience, which may arife from the weakness from bleeding .- Those who are not very weak, may be bled once in three, four, or ten days, if the pains, or other preffing evils remain. By these means the

G

the root of the difease is struck at, and its progress stopped.

At the fame time that bleeding is neceffary, the body must be kept open, with cooling neutral falts, fuch as fal polychreft, cream of tartar, foluble tartar, &c. or the following powder taken three, or four times a day, in thin barley water, or any other fimple vehicle, will answer that purpose, and contribute to abate feverish heat, and inflammation.

Take of fal polychreft, fugar, and compound powder of gum tragacanth, of each a fcruple, mix for one dofe. This may be increafed or diminished, in proportion to the effects; or a tea cupfull of the following pleafant apozem, may be taken three, or four times a day, for the above purposes.

Take of cream of tartar, and purified nitre. of each two drams, pearl barley half an ounce, honey two ounces.—Boil these gradually in three pints of water, till half is confumed, then ftrain off the clear for use; liquorice root may be added or not at pleasure; or where the honey does not agree, it may be omitted.

If

If the body be too much opened by the above recited medicines, the following draught may be used, to abate the fever, or inflammation, and should be taken two or three times a day, or oftener if needful:

Take of fugar, prepared chalk, and powder of gum arabic, of each half a dram, nitre purified, fifteen grains, pure water, or fimple mint water, two ounces.

If the nitre fhould be found to occasion gripes, or prove too cold for the ftomach, it may be leffened to four or five grains. The faline\* mixture with or without the emetic tartar, may be taken for the like cafe, as in fome conftitutions it agrees beft; a dram of of prepared chalk may be added to the mixture, and the emetic tartar omitted, where too many motions abound.

The inhaler fhould be used frequently with the fame cautions as directed in the first part; this will lubricate the inflamed lungs, less the cough, and cause the mucus to be spit away with more ease and fasty.

G 2

Blifters

\* See page, 54.

Blifters are most fafe efficacious things in all complaints of the cheft; it is not perhaps. fo much from the quantity of discharge which they draw away, as from a particular effect they have of inviting the inflammation from within outwardly, as is found in cafes of fore throats, &c. I therefore advise finall ones to be applied from time to time, to different parts to the cheft, where the pain is, or upon the back, pit of the ftomach, or fides; when one has been on the part affected a day or two let it be healed, and in a day or two after apply another to fome other part, if wanted. This is lefs painful and more efficacious, than what is called a perpetual bliffer, for with that there are fresh flies applied and more trouble in general. of prepared chaik may be added to the mix-

Iffues between the fhoulders, or between the ribs, in many defperate cafes, 1 have known of fingular advantage. Mr. Mudge, and others, lay great ftrefs upon them; I have myfelf a good opinion of their ufe, and therefore recommend them.

As many very potent medicines might be preferibed, and perhaps applied improperly, I shall forbear mentioning any more, except for violent

4

88 .

violent coughs, left I fhould myfelf, be guilty of what I condemn in others; I fhall therefore mention a few fimple medicines, which will do no injury, and yet contain confiderable virtue, in allaying fever in the lungs, and be at the fame time lightly nutritious.

within during the antion of the second of the second second

For this purpose I recommend decoctions, or infufions of liquorice root, figs and raifins, marsh mallow, dandelion, colts foot, comfrey, ervngo and mullein roots, either of thefe, fliced, and boiled in water until pretty much impregnated with the virtues of the plant; an ounce or two to a quart of water, and boiled to a pint, will be of fufficient ftrength; fuch as are very glutinous, as comfrey, lefs of the root will be fufficient; thefe, fweetened with honey, are most excellent healing pectorals. If the fever is much abated, or if the patient be weak, or in fuch a flate as bark may be thought adviseable, for the bitter pectoral herbs, will generally be found more beneficial as they do not bind the cheft. For this purpose, I recommend infusions of hoarhound, ground ivy, lungwort, maiden hair, elecapane, wild fuccory, oak lungs, &c. The juice of lemons, or oranges, or any other vegetable G 3 ag bac bedracid.

89.

acid, may be put in great plenty, in any of the drinks, if they agree; they cool, and abate fever, ftrengthen the ftomach, and check night fweats, and in general are to be preferred to mineral acids.

Where there be much feverifh heat, the patient has alternate fits of heat and cold, and and is fometimes worfe one day than another, not unlike to an ague; this often leads the patient to afk for the bark, and the doctor to confent to its application, but it is rarely of real advantage; and oftener *producetb* mifchief in this difeafe, although it is the boafted fpecific in the former.

Honey, for almost all diforders of the break and lungs, is a most admirable remedy; Doctors Huxham, Arbuthnot, and many other great men, have very justly extolled it; and as it does not agree with all constitutions, I apprehend, that clarifying it, would make it do fo; indeed, fome care is necessary to procure it genuine, as it is a very common base practice for dealers in it, to adulterate it, and in this case no one knows what they eat. It may be used,

ufed, in common drinks, in medicine, and on bread inftead of butter.

As the cough is a very troublefome fymptom, during the progress of confumptive diforders, it may not be amils to give a few directions, in addition to those I have already, to keep the violence of it from doing more mifchief, while the caufe is being removed, by the means just recited; and fuch others, as I shall have occasion to mention. The pectoral infusions, and decoctions, above advifed, will generally answer the end very well, but as there are many cafes, which they will not cure, I shall give a prefcription for a good expectorant mixture to appeale the cough, and procure reft, and if any thing more anodyne is wanted, one, or two, of the expectorating pills may be applied for that purpofe.

Take of mucilage of quince feeds fix ounces, oxymel of fquills half an ounce, ipecacuanha wine one dram, liquid laudanum ten drops. Mix. If the ipecacuanha or the oxymel of fquills occafion ficknefs, the whole or part may be omitted. Of which mixture a defert fpoonful may be taken now and then to help the cough and to fheath the paffage to the ftomach; it  $G_{A}$  fhould

fhould be fwallowed gradually, and will thereby be more efficacious. This may be called the Healing Expectorating Mixture. And the following, Anodyne Expectorating Pills:

AWAY THORE EX Jedition funning indiced more

. Take of laudanum, conferve of roles of each five grains, dried fquills in powder, ipecacuanha in powder, of each four grains. With any fyrup, make thefe up with care into ten pills, one or two of which may be taken at night going to bed, when neceffary. One caution is very neceffary whenever opiates be given; to take care that they do not make the patient coffive, which they generally do; the fquills and ipecacuanha may probably prevent it; but if they do not, use fome of the opening medicines already advifed.

When the lungs are loaded with tough phlegm, and unattended with pains in the fide, or under the cheft, or other fymptoms of inflammation, from five grains to ten of ipecacuanha, may be given once or twice in a week, in a difh of tea, in the morning in bed, the patient fhould lye down after it; in half an hour, more or lefs, it will caufe a gentle effort to reach, and another difh or two of tea may be

e Smull A

be drank, and it will come off eafy. I do not mean this as a regular puke, but only as a means to loofen the tough phlegm in the lungs, and by the little exertion of puking, to bring it away more expeditioufly, and indeed more fafe and pleafant, than by much coughing,

The moft difficult tafk, I am now going to impofe, which is a rigid adherence to a particular regimen, without which the choiceft medicines lofe their proper effects, and the beft advice is thrown away. The difeafe cannot be cured by medicine without the diet correfponds, and of the two, I would fay, rather neglect your medicine than your food, for one improper meal may do more mifchief than any phyfic can be able to remove in a week.

In almost every cafe of confumption of the lungs, where recovery is much to be expected, (fome few exceptions to the contrary being allowed) flesh meats, and every preparation of them, must be forbidden. Fish, as partaking in fome degree of the fame nature, is alfo improper. Calves feet jellies, nourishing foups, and such things as are confidered by good housewives, and people in general, as neceffary

01

neceffary to recruit the ftrength of the fick, are much too rich and ftimulating, and too heavy to digeft properly. In their place, a diet confifting of fruits, vegetables, milk, and farinaceous fubftances, muft be fubftituted. Thefe will be quite fufficient to fupport the powers of life, while the nature of the food will furnifh a mild foft nutriment to the body, free from irritating qualities, to agravate the difeafe: the fimplicity of which in time changes the whole mafs of blood and juices, from a hot inflammatory ftate, to that of a pure healing kind, which renders the folids lefs fufceptible of feverifh heat.

For when the lungs, or the membranes leading to, or furrounding them, are become inflamed from colds, or any other caufe, the blood which is prepared from eating any of the above-mentioned things, is of a very flimulating nature, and produces that kind of effect, as urine does when applied to the eyes, or falt water to a wound. Irritation caufes fpafm, and, by its effects, the blood is hurried through the lungs fafter than it ought, to be properly firained, and purified, and mixed with air, (which is the natural office of the lungs to per-

perform) this also makes the pulle beat as quick again as it does in health, and creates a difturbance to the whole frame; the fever is thus kept up, and the conflictution worn out, by the conflant action, and re-action of nature, in attempting to remove it.

There is fo much observance neceffary in this matter, that even very mild food may produce bad chyle, and therefore an irriating property to the blood, animal fibres, nerves, or whatever elfe conveys the active principle of life or difease, I will not dispute with cafuists, which of them does it; be it sufficient, that in my opinion, a very hearty meal taken of rice, or any other food equally innocent, may, by diftending the stomach, lessen the free action of the heart and lungs, and by overloading the powers of digestion, and by filling the intestines with more chyle than can be properly prepared, may produce all the mischief we want to avoid.

Therefore, for the above reafons, I recommend, that confumptive perfons fhould take only a little food at a time, but repeat it the oftener; they fhould not be fo careful to attend

95

to

06

to regular meals, but fludy more what will remove the cause of the difease, than please the palate. An ingenious perfon, may make, or prepare, an almost endless variety of dishes, from the vast tribe of fruits, vegetables, &c. to fatisfy the defires of a reafonable being, without meat; potatoes may be boiled, baked, roafted, and prepared in a variety of ways-Rice, fago, millet, falep, tapioka, pearl barley, &c. will make a numerous tribe of pleafing reparts. Salads, and ripe fruits; marmalades, and preferves; jellies, and preparations of them; with good light well baked bread, will furnish most delicious banquets in their turn. But of all the most generally useful and acceptable foods, milk claims the preference, and will admit of abundance of means to make it palatable and ufeful. Rennet whey, in confumptive cafes, as well in many others, is beyond all praife, in my opinion; the living entirely upon rennet whey and a little white bread, and baked apples \*, for about fix weeks,

\* Dr. Baynard fays, that apples and milk faved his life twice in a most deplorable and confirmed phthiss. He gives many examples of the like kind. See Floyer, on cold bathing:

reftored

reftored to health the author of this, from a ftate the most dangerous; and he truly may fay he was ftarved into life. A quart or three pints or more, should be drank daily.

Permit me here to remark, that much mifchief is done by a common cuftom, of weakly perfons going to drink the milk from the cow, (as it is termed) it is in general too rich for the ftomach, and is apt to curdle, and especially when rum is mixed with it. A very common, but a very pernicious cuftom. Doctor Fothergill took great pains to abolish this very dangerous practice-In general milk is beft for confumptive perfons, and other valetudinarians, after it has been skimmed, or the groffer parts separated by cream of tartar, oranges, lemons, forrel, raifins, or fome other grateful acid. Buttermilk, affes, goats, or mares milk, may be taken in their natural flate, being much lighter than that of cows. When milk occafion gripes, or is apt to run off by purging. it may be corrected by mixing one half, or a third of fimple lime water with it, or with the fame quantity of the following drink.

barley, fago, a

tint.

go root, of each one ougerfamil

Take

68

Take of calcined, hartfhorn prepared, guin arabic, conferve of rofes, pearl barley, of each one ounce. Boil these in a quart of water till it is reduced to a pint and a half. This is a light aftringent nutritious drink, and will sheath the bowels, and abforb any acid which may arife from the milk, or other caufes. Some phyficians have held opinions, that milk would be more falutary, were the cattle to be fed on particular herbs; but in mine, this purpofe will be better answered, by making a strong infusion of the herbs you want, and mixing milk with it, as you will then certainly know the exact proportion of the herbs which you . receive, otherwife not. Turnips baked in equal parts of milk and water, and the juice afterwards ftrained, and fweetened wirh fugarcandy, and drunk often, is very uleful for coughs, as well as nourifhment.

The following is a most excellent food, which may be made and taken at pleasure; it may receive a variety of flavours from role water, orgeat, orange flower water, &c.

Take of rice, pearl barley, fago, and of candied eryngo root, of each one ounce, boil these

thefe in three quarts of water, till half is confumed, and towards the end put in a quart of milk, then let the whole boil a little and firain it for ufe; or thofe who choofe, may eat it all as it is; thofe who are very weakly had better firain it; it will be as light as affes milk, and more nourifhing, and not fo liable to caufe a purging. A quarter of a pint flould be taken three or four times a day a little warm.

Lettuces, favoys, cauliflowers, artichokes, peafe, beans, turnips, fcorzenera, falfafy, afparagus, &c. &c. may be freely indulged in, and cooked in a variety of ways. It is very obfervable, that the hiftory of medicine furnifh us with a number of cafes of perfons, having recovered, after, both phyficians and friends, had given them up to die. Thefe perfons have been reftored by living entirely upon cucumbers, grapes, melons, water-creffes, milk and bread, or fome one of them\*. There may be a few cafes of

I am furprifed to find Dr. Simmons recommendanimal food in confumptive cafes. Dr. Reid a defender of vegetable diet gives too great latitude in allowing

99

4 340-11776 m

of confumption, or of confumption of a particular kind, where more generous nourifhment muft be allowed, but thefe are rare. But fo long as appetite is more confulted than health, and fo long as medical men continue to indulge it, rather than difpleafe their patients, confumptions will be common, and will prove fatal. An indulgent phyfician, in thefe cafes, is like a mild judge to a defperate criminal, who injures fociety by miftaken lenity

tes. Stc. Stc. may be freely indulted in sini

Lettuces, favoys, cauliflowers, artichokee, adTie, beans, turnips, fcorzenera, falfafy, afpa-

pllowing fome animal foods, and feveral fpecies of fifh in hectic fever arifing from confumption: I have been teifed into an admition of animal food, but always faw by the event the impropriety of it, the heat and reftleffnefs' were encreafed, and the feverifh paroxifm lafted longer than when other food was taken. It is often allowed I very well know under the idea, that a confumption is but feldom cured, and that it is right to indulge the patient the little time they have to live. Such reafoning, our limited knowledge of the caufes and events of difeafes, and the uncertain flate of the infide of the patient, abfolutely forbids. My practice encourages me to judge differently, to begin, when many others have done, and often with the defired

luccels.

The drinks should be rennet whey, the common emulfion, Briftol water, Seltzer water, or any light pure cooling drinks; they may be acidulated with oranges, lemons; apples, currants, tamarinds, or other fruits : or fweetened with honey, capillaire, orgeat, &c. But wines, beer, ales, and all spirituous, or fermented liquors, should be confidered as improper; they promote fever, and inflammation, excite coughing, and encreafe the difeafe. Coffee, or tea, cocoa, &c. may be drunk, provided they be not taken too hot, or in two large a quantity at a time, and with one third of fkimmed milk mixed with them. -Butter, cheese, and cream, are too rich, irritating and grofs to be allowed with propriety.

I have frequently (fays Sir William Fordyce\*) feen the neceffity of quitting London
air, to temper heat, and compose the hurry
of the circulation where the hectic fever
had been continued for five or fix weeks, in
despite of the best medicated regimen; and
oftener than once, I have known the patient
H "return

<sup>64</sup> return to town in twenty four hours as free
<sup>64</sup> from both as if neither had formerly exifted.
<sup>64</sup> I have likewife feen the moft flubborn infi<sup>64</sup> dels on this fubject reduced to the neceffity
<sup>66</sup> of fubmitting to a diet of whey, milk por<sup>67</sup> ridge, water gruel, fruits, or farinaceous
<sup>66</sup> foods, when, in compensation for a penance
<sup>66</sup> which they thought fo dreadful, they received
<sup>66</sup> back their fpirits, their lungs, and their con<sup>66</sup> fitutions; and I have known many, who had
<sup>66</sup> been given over by their anxious friends on
<sup>66</sup> account of hectic complaints, recovered, by
<sup>66</sup> forere a regimen, as only tended to com<sup>66</sup> plete the triumph of their phyficians.<sup>77</sup>

Next to proper food, drinks, and medicines, pure air is of the greateft importance to the recovery of confumptive perfons; and we are well affured that it is not fufficiently attended to by the faculty, or we fhould not fee fo many perfons in the laft ftage of the diforder, before they are fent out of London, and other large towns.

It is not infrequent for perfons of a flender delicate make, with thin fkins, and of delicate fyftem of blood veffels, to be fubject to lofe blood from the lungs, or what is called, fpitting

ing of blood. This at all times is an alarming circumftance, becaufe it may prove inftantly fatal, or end in confumption.

In women, it is not fo univerfally dangerous, as in men, for many reafons which nature takes in providing against particular exigencies in their constitutions. It is of moment to know, whether the blood comes from the lungs, the ftomach, or the paffages to them. I have feen fome of the faculty puzzled to diftinguish which, therefore, it is always right immediately to call in the beft affiftance. What I shall fay on this head is chiefly by way of prevention, after the first alarm is over. Had I not feen many perfons fall very quickly into declines, for the want of having ufed fuch precautions, I fhould have thought this part totally unneceffary. It is the duty of the medical attendants to ferioufly impress this on the minds of their patients; but it is too often neglected; if directions are given, it is too often in a defultory way, and when the doctor is gone the patient thinks no more of them.

I have been told by fome of the faculty that it was for fear of alarming their patients, and making H 2

making them low, that they had not enforced the regimen, &c. more ftrongly; but they fhould have confidered that fear is one of our beft inftruments to produce obfervance, for all are not to be governed by reafon. It is too true that eight perfons out of ten who fpit blood, die confumptive, in the courfe of two or three years; and I believe many of them for the want of being attentive to fuch neceffary rules.

The medical means to be taken in fpittings of blood, are frequent fmall bleedings, fo as to prevent a fullnefs in the veffels, as well as to act by revulfion as it is called, that the ruptured parts may never be too much preffed with blood, and that they may completely heal, and become ftrong, that others may not happen.

The cooling neutral falts, as fal polychreft, nitre, and elixir of vitriol, tincture of rofes, &c. are to be liberally taken, fo as to keep the body open, to empty the veffels, and to allay all preternatural heat in the conftitution. The following clectary Dr. Huck Saunders, recommended to me as the beft general medicine he had found for this purpofe.

Take

Take of conferve of rofes three ounces, fpermaceti powdered fine, nitre purified, and finely powdered, of each fix drachms, mix for an electary, of which a patient fhould take the quantity of a large nutmeg, three, or four times a day, and to drink freely of barley water afterwards. If the nitre fhould be found too cold for any delicate bowels, the quantity may be leffened, and where there be a cough, a little fyrup of white poppies may be added at bedtime, or in the electary. I think a great deal depends upon medicine, as well as other things, but no man fhould depend upon his own judgment in this cafe, fo I fhall fay no more on that head.

What is moft in the patients own power and difcretion, is, the regulation of his diet, exercife, and paffions of the mind, and as the intention of thefe cautions are to prevent mifchief after the bleeding is ftopped, as well as while it is on, he will fhew his wifdom moft, who moft obferves them, for it is neceffary to do it for a confiderable time after, and to return warily, and gradually, to his ufual habits of living.

H 3

For

105

306

ON CONSUMPTIONS.

It often happens that the patient thinks himfelf too foon well; a week or two after the bleeding is stopped, his spirits feel good, his ftrength and appetite do not fail him, and he thinks it a work of fupererogation, to reftrain himfelf from doing whatever offers itfelf in his bufinefs or pleafure; yet in general if he is examined clofely at this time, he will be found to have an internal fenfe of tightnefs across the cheft, a fort of obstruction and tendernefs in the lungs in fetching a deep infpiration, and rather fhort breathed, on going up hill; but thefe are fo flight as not to draw his attention except he is afked about them, and even if he had difcovered them, they are all attributed to weaknefs : and a little good living is thought, will bring all about again foon. Thus he will go on till the bleeding is brought on again, or till the ruptured veffels become inflamed, or an ulcer fuceeds, and death finishes the dreadful scene. A gentleman applied to me very lately after having spit blood, for whick fome good woman had recommended him to take Friar's Balfam to heal the veffels; which had nearly done more mifchief in a few days, than my art could repair in as many weeks. Let

mę

me again advise good women from thus innocently as it is thought, destroying their neighbours.

The diet fhould be very fparingly ufed, that is a little at a time, and of a mild cooling nature, it fhould confift of milk, butter-milk, fruit, vegetables, and farinaceous fubftances. Skimmed milk, water, lemonade and many other fimple grateful liquids might be converted into ice, and have wonderful effects in allaying heat in the lungs, and be a powerful means to ftop bleeding from them, and the ftomach.

The drinks fhould be rennet whey, toast and water, or pure water made grateful with any fort of fruit or preparations from them. Wine, or spirits, or beer, or any fermented liquors, are so many poisons, from their natural qualities and effects in heating and stimulating the system of blood vessels.

The exercise should be very gentle and not long continued so as to produce heat or fatigue.

H 4

Sec.

The

Any violent paffions of the mind fhould be more than ordinarily watched; gufts of paffion fhould be particularly reftrained. Venerial pleafures are very hurtful.

A man who is thus unhappily circumftanced, muft call forth his own reafon; for he may hurt himfelf a thoufand different ways which cannot be enumerated here.

The patient fhould lie moderately cool in bed, and fhould carefully avoid extremes of heat and cold, particularly the play houfes, heated rooms, or where much company reforts. Dancing, fpeaking loud, finging, or blowing wind inftruments, are are alfo bad.

The air which they breath fhould be pure and foft, and not open to the eaft, or north eaft, nor in a bottom, but of a fufficient ventilation, the air of large towns is particularly irritating in this flate of the complaint, as well as in all others of a confumptive tendency.

An almost universal evil prevails of the faculty keeping patients with difeased lungs, too long in

in large populous towns in bad air; and when they can do no more for them, fend them into the country to try at laft what ought to have been done almost the first. The air of large towns is very bad for confumptive complaints, and the places where patients are fent to, near London, I fear have not all the advantages which might be wished. Islington, is too populous and too near London to be eligiable. Brompton, has the like difadvantages, only it is more fouth. The villages in the vicinity of the river, and those in the midst of, or near to, large nurferies, abound with bad air arifing from putrid vegetables, or stagnant waters. It is unpleafant to think that the convenience of being near to the beft London medical advice, fhould oblige the fick to want fo neceffary a means of recovery, as pure air. The fituation must be fuited to the nature of the difeafe and the time of year, as it would be abfurd to fend a very weakly perfon in the middle of winter to the fummit of Hampftead, or Highgate hills. There are fituations to the fouth and fouth west of these places, which are sheltered from the colder winds, and enjoy the advantages of pure air and fufficient ventilation. But I have known perfons recover

in

#### SEO ON CONSUMPTION'S.

in winter at Hampftead, who have tried other places in vain. The faculty have in general a miftaken idea of the air of this neighbourhood, faying it is too fharp; indeed fo it is on the fummit in winter, but where there is a hill, there is a dale, and the hill must naturally defend the dale from cold.

The following compliment was paid to Hampftead very defervedly by Dr. John Armftrong, who knew it well, in his elegant poem on the art of preferving of bealth.

But if the bufy town, Attract thee ftill to toil for power or gold, Sweetly thou mayft thy vacant hours poffefs In Hampftead, courted by the weftern wind.

Much might be faid on the variety of fituations which would be injurious or falutary to confumptive perfons, but would take more time than I can here admit; fuch a work, executed with ability and candour, in my opinion, would be a valuable acquifition to the public<sup>\*</sup>.

The

\* My mind has often fuggested to me, and very fure I am, that a building or Hospital might be so conftructed

### ON CONSUMPTIONS. III

The next thing which I have to recommend, is a proper regulation of exercise. There is nothing

ftructed as to fupply almost all the advantages of a foreign climate for difeases of the lungs.

Both the rich and poor might be preferved during the colder months of our winters. Here diet, air, exercife &c. might be fo regulated by a phyfician and proper perfons upon the fpot fuitable to each cafe; here my worthy ingenious friend Dr. A Fothergill's \* hint, of ufing dephlogiftigated air, or air any otherwife modified, as to be made foft, pure, and falubrious, may be carried into full effect, and at much lefs expence and danger and more eafe to friends and relations, than feeing fo many of our amiable youths go upon a forlorn hope which fo feldom fucceeds (if not taken very early in the difeafe, as indeed it rarely is foon enough.)

It perhaps may be faid that phyficians have hitherto confidered an hofpital or building as an improper place for confumptive perfons, and therefore have rejected them in general from their hofpitals; and it may be afked why I fhould attempt what has been fo long the contrary practice of the heads of the profession? to which I reply that a building fuch as I conceive to be useful in the

\* See hints, to reftore fuspended animation by Dr. A. Fothergill, F. R. S.

thing more injurious to confumptive perfons than riding on horfe-back at improper times, or in an improper degree, for although it flands recommended by the higheft authorities, both ancient and modern, yet it has not been fufficiently limited to prove of benefit, without very frequently being injurious. If there be fever, fpitting of blood, violent coughs, attended with pains in the cheft or fide, or a very quick pulfe, much exercife of any kind is improper. But where thefe do not prevail, gentle riding, encreafed by degrees, as the conflitution can bear, by giving a general and equal exercife to the whole frame, prove falutary and agreeable, if taken properly. For

these cases, should be very different from those intended for other purposes. The rooms may be so constructed as to receive nothing but pure warm air properly strained of all the cold irritrating particles, the regimen and every other minutiæ could be so regulated, as the patient could not easily do amiss. The cure of confumptions, depend greatly on such observances, the place would also be chosen naturally, in a warm, dry and well ventilated flutation, and not in the midst of fmoke, and other impurities arising from populous cities, and towns.

2018011

the

the times of riding, require attention to direct judicioufly; the feafon of the year, temprature of the climate, and the fituation, must be all well confidered.

The common cuftom in the country of ordering confumptive perfons to follow the plough, is like other means capable of benefit, and injury, according as it is used. Some phyficians have held opinions, that a peculiar virtue arofe out of the fresh turned ground very falutary for difeafed lungs ; perhaps there may; but for a weekly perfon with a fever upon him, to walk over the land as fast as it is ploughed, (and in general this is fuppofed to be neceffary), is more apt to encrease the fever and injure the patient than to affift him; for the fame reasons, that riding at improper times, and in an improper manner proves mifchievous.

The benefit of the cooling particles which may chance to be drawn from the earth by the power of the fun, or abforbed by the body of the patient, will be better obtained by walking, or riding gently through the furrows fome little time after, than by being heated

## ti4 ON CONSUMPTIONS.

heated and fatigued, directly walking by the horfes.

To ride very early in the morning, before the fun has warmed the air, and difperfed the dew, or fog, is very injurious, and likely to encreafe the cough; or if the patient be recovering, may bring on a return of the complaint. It is equally improper to ride in the middle of a hot day, or to be expofed to the fervid heat of the fun; or to be out late in the evening, when the dews are falling, for the lungs are fufceptible of the leaft impropriety in thefe refpects, and those who know the hazard, will do well not to venture. The riding in a coach or chariot, failing in a boat, or any other eafy exercise in the open air is preferable to walking, or any other that occasions much fatigue.

The minds of confumptive perfons fhould be kept as tranquil as poffible; as great anxiety after bufinefs, pleafure, or ftudy, or any other thing, which has a tendency to ruffle the nerves or diforder the frame is bad; but fuch light things as will antufe the mind, and pafs the time away chearfully, will contribute to the cure. Nor need I fay that anger, or any violent paffion,

paffion, proves extremely injurious to confumptive perfons. Dancing, fhouting, reading, or talking loud, finging, or blowing wind inftruments, or any means which call for much exertion of the lungs, is improper. The patient fhould keep the body in as eafy an upright pofture as poffible, therefore fhould be careful avoid leaning on the cheft : and to let the blood, have a free equal circulation by refraining from tight garters, tight flays, &c. It frequently happens, that friends and relations out of humanity and affection, attend upon confumptive and other fick perfons; and either fleep with them in the fame bed, or are confantly about their perfons, and imbibe the effluvia, which neceffarily efcapes from their lungs, and their bodies, and efpecially if they fweat much; this contaminates the forrounding; air, and when there is not a fufficient ventilation, must be drawn into the lungs, both by the patient and the attendants. Let me therefore entreat fuch to attend to the proper ventilation of the room, and for the attendant to go feveral times a day into the free air. Thofe who have tender lungs, or are of a delicate make, fhould be very cautious not to fleep with the fick, and if poffible not in the fame room; for

## tt6 ON CONSUMPTIONS.

for it is the bad quality of the air which irritates their tender lungs, and fo gives rife to a cough, &c. and not Specific Contagion, which is thought by foreigners, and afferted by fome of our own countrymen. The frequent changing the linen and blankets about a fick perfon, has many advantages, and for a patient to remove from one room to another, (where it be convenient), greatly contribute to a cure. It is bad for a patient to lie in bed long in a morning, efpecially when they have profuse fweats, for it relaxes the body, and weakens them much, and the fkin abforbs the feted fweats, which nature had just cast out of the constitution as unwholefome, which adds to the difeafe.

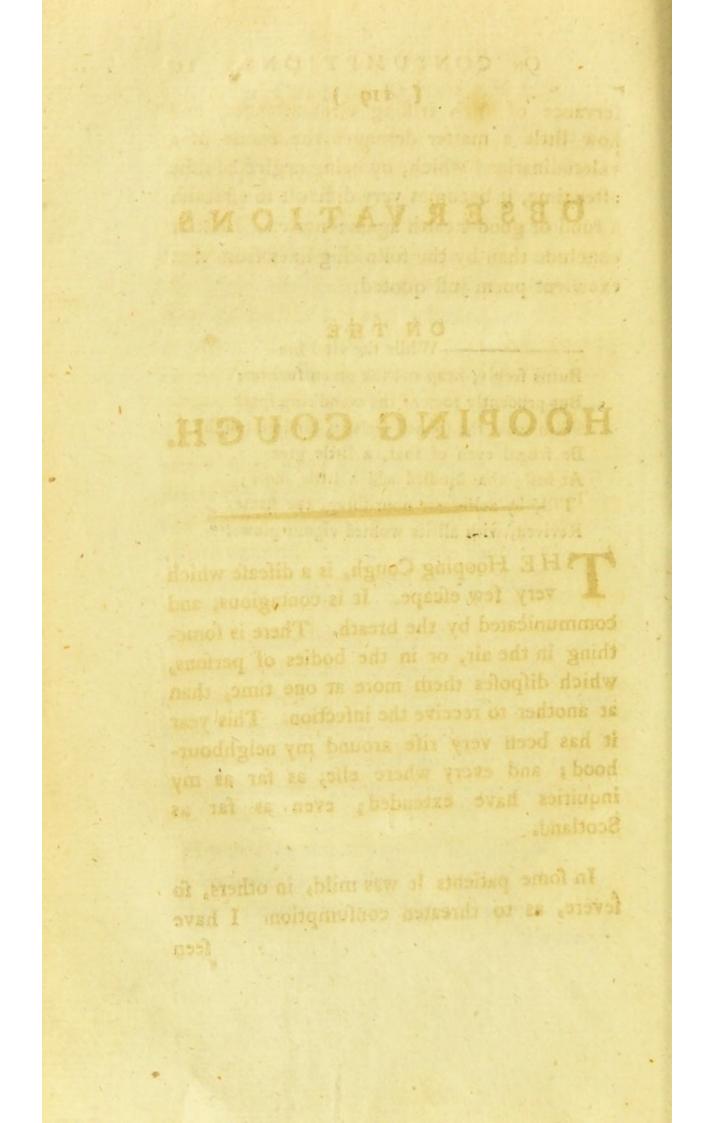

The patient fhould fleep on a matrafs, and not have too many cloaths on the bed, and as the fweats come on to leffen them. I have known the fick better from getting up when the fweats began to come on. The early going to bed, and early rifing is highly neceffary.

It would be much happier if patients could be brought to confider how much a fpeedy and permanent recovery depends upon the obfervance

fervance of fuch trifling circumstances, and how little a matter deranges the frame of a valetudinarian! which, by being neglected time after time, it becomes very difficult to establish a fund of good health again; nor can I better conclude than by the following lines from that excellent poem just quoted.

While the vital fire Burns feebly, heap not the green fuel on; But prudently foment the wand'ring fpark With what the fooneft feels its kindred touch : Be frugal even of that, a little give At firft; that kindled add a little more; 'Till, by deliberate nourifhing, the flame Revived, with all its wonted vigour glows;

I

( i1g )

## **OBSERVATIONS**

## ONTHE

# HOOPING COUGH.

THE Hooping Cough, is a difeafe which very few efcape. It is contagious; and communicated by the breath. There is fomething in the air, or in the bodies of perfons; which difpofes them more at one time, than at another to receive the infection. This year it has been very rife around my neighbourhood; and every where elfe; as far as my inquiries have extended; even as far as Scotland:

In fome patients it was mild, in others, fo fevere, as to threaten confumption. I have feen

ON THE HOOP

feen fome mifchief arife from the want of timely care, and have given here the refult of my obfervations and fuccefs, which I hope will prove of fome utility; the means are not new to medical men, but may be fo to those, for whom I write.

Women, and nurfes frequently attempt to cure this difeafe, and fometimes in the milder flages of it, with fuccefs; but as practitioners do not always deferiminate between the original difeafe, and the effects arifing from the violence of it, no wonder that the women fhould fail; and by miftake do mifchief.

The complaint is certainly fpafinodic when in a fimple flate; but is often complicated with a fever, and inflammation of the cheft and lungs, which require a different mode of treatment. Hence, bleeding, emetics, the bark, hemlock, cupmofs, woodlice, and many other medicines applied with judgement, fucceed in fome cafes, and do injury when ignorantly, and promitcuoufly given in others.

Puking, with fmall dofes of emetic tartar, from time to time, is recommended by the late Dr.

Dr. Fothergill, and others: and this is a very general practice, but a practice may be too general, and now and then do harm. The extract of hemlock, has been highly fpoken of by Dr. Butter, but my experience, leads me to have no dependence upon it, though it may be good in fome cafes. Bark and caftor for the fame reafons, cannot be called fpecifics in this difcafe.

As I have had fome hundreds of children, and grown perfons under my care, this fummer (rich and poor) in the Hooping Cough, and have not loft one by it; I fhall give my general mode of treatment, as far as particular cafes will admit it to be fo called.

The time which the complaint takes, coming on, and going off, is various; fometimes fix weeks and lefs, and fometimes a much longer period; as the fick are liable to relapfe from colds and other caufes.

I begin, by giving a couple of purges, with fal polychreft, and rhubarb, and if worms be fufpected, I add a grain of calomel to each dofe.

For a child of two years old, the following will generally be a proper dofe.

Take of fal Polychreft, fifteen grains; rhubarb in powder, feven grains; calomel prepared one grain. Mix.

Younger children may take magnefia, manna, &c. with, or without half a grain of calomel, if it be neceffary. In all complaints in children, cleanfing the bowels greatly forwards the cure.

After two or three purges have been given, I puke them twice or thrice in a week, or oftener if need be, especially if children; grown persons do not bear puking so often, nor so well as children.

The following is a pleafant, and efficacious mixture to puke children with.

Take of emetic tartar, four grains; pure water, four ounces; fugar, two drams. Mix. From one to two, or three tea fpoonfuls, may be given to a child of a year old, early in the morning, or about noon, and repeat it every quarter

quarter of an hour, till it puke freely. It would do good to give them fome tea, or water, to drink before the medicine is given, as they will not drink, when they are fick; and they will puke eafier for it. By this means the glands of the throat, ftomach, and parts adjacent, will be emptied and cleanfed.

When the fits of coughing, are very violent, and difturb their reft, from a half a drop of, Laudanum, to three or four; or a tea fpoonful of fyrup of white poppies, may be given to appeafe it, either in water, or in other drinks, or in fome of the following mixture.

Take of Syrup of red poppies, oil of fweet almonds, of each fix drams, antimonial wine, one dram, of oil of amber, ten drops. Mix. A tea fpoonful of this, and one drop of laudanum, may be given to a child of a year old, at bed time; to older children rather more, fo as to produce the defired effect. A tea fpoonful without the opiate may be given three or four times in a day. This is a fimple balfamic medicine, and a good antifpafmodic, and alleviates the little fever which comes on towards evening. It will be right to begin always, with I A I A I Mall

a fmall quantity of the opiate, leaft it fhould not agree with fome conflicutions.

If the fever be conftant, and the patient hot, and thirfty, encourage him to drink freely of faline mixture\*, without the emetic tartar; or four drops of antimonial wine, and ten of fweet fpirit of nitre taken in any liquid, three or four times a day, have good effects in reducing the fever.

When the breathing is very difficult, and the violence of the cough occafion a blacknefs in the face, and neck, with fymptoms of fuffocation, it is neceffary to take away a little blood, either from the arm, or from fome other part. I have known an ounce or two of blood from the nofe, give a critical turn to the difeafe. The blood being detained in the lungs, and the great veffels leading to the head, when the bleeding is long fufpended by coughing, makes it neceffary to bleed, in proportion to the age and ftrength of the patient,

See page 54.

and

of dragthered

and to repeat it, if the difficulty be not removed.

A Blifter in the above fituation, applied to the pit of the flomach, or, if that be objected to, between the floulders, from time to time, will do fervice. A Plafter of equal parts of mithridate, and oil of mace, will alfo contribute to appeafe the violence of it, if applied to the pit of the flomach, when there is no blifter there.

All the above means, and many others are neceffary fometimes, to leffen the force of the diforder, and prevent its proving immediately fatal.

Others I shall now speak of, to strengthen the constitution, and make it bear up against, and result the destructive effects, which the fever, and other violent parts of the disease do it; that a confumptive, or some other evil may not be the confequence.

As I think I have feen good effects from effluvias; I have often contrived that the fick fhould

1

fhould be furrounded with the fmell of affafetida, garlic, oil of amber, or camphor, either by caufing fome one of them to be worn in a bag, or by diffolving them in fome kind of fpirit, as rum, &c. and rubbed down the back, and about the cheft twice a day. But I give the preference to two drams of camphor diffolved in an ounce of oil of fweet almonds, for the above purpofe.

This method, I continue, for about a fortnight or three weeks, more or lefs, as the cafes require; and if the cough continue, and there be no material fever, I endeavour to give the bark in as large dofes as I can. Children will fometimes take it in milk, or treacle; half a dram, three times a day, for a child of two years old, will foon cure the difeafe in this ftage of it; from five to ten grains of faffron, or caftor joined with it, will help the effects of the bark,

Where it cannot be given by the mouth, a ftrong decoction of the bark, with half a dram of affafetida diffolved in it, and given. by way of clyfter, will often fucceed. I have known

known a cure, by quilting three or four ounces of the powder of bark, between two pieces of old linen, and worn round the body night and day, for a time. In fome cafes, bark boiled in milk, and ufed as a bath, where we have been anxious for its peculiar virtues has proved beneficial. For children at the breaft, the nurfes may take the bark, and fome virtue will be conveyed that way. Adult perfons are foon relieved by large dofes of bark, when the inflammatory fymptoms are gone. Caftor and opiates, may be occafionally conjoined.

Cupmofs, is a common remedy in the hands of old women, and does fervice very often; its virtues are pretty fimilar to the bark, only weaker.

Woodlice infufed in wine, I have known of fervice, but the juice of them, when bruifed and ftrained, is much better; wine in any large quantities being not good for children.

Mufk

Mufk is a pleafanter remedy than any I have yet mentioned, and perhaps not at all inferior to any, as an antifpafmodick; where there be much convultion with the cough, from ten grains to a fcruple, or half a dram ground with fugar, thould be given three or four times a day, if you expect real benefit from it. Given in large dofes it is a powerful drug; but its dearnefs makes it not be ufed fo often, or in fuch large dofes as it ought, and only those of large fortunes can afford to pay for it,

I hardly know how to feperate what may be neceffary to all, from that which might be only ufeful to fome particular perfons. Some fond mother may receive a hint from fome of thefe medicines, and fuggeft the application of them to her medical attendant; or it may teach her how, to go hand in hand with him, and not to let a favorite nurfe miflead her, to do improper things.

But I truft no perfon can do mifchief by litterally following what I advife, provided they

they have a previous knowledge of the flate of the difeafe, and without which, whatever the givers of any Medicine may think, they may depend upon it, that it is highly finful, as well as dangerous. The intention in these cases, justify the deed but very feldom !

The diet for fuch as have the difeafe unattended by inflammation, fhould confift of milk porridge, weak broth, fruits, rice, &c. and in fome cafes animal food, fifh, &c. may be allowed; but where the fever, or cough, is very violent, and continues any length of time, meat fhould not be permitted; but the diet in every refpect fhould be as ftrictly managed, as is directed in confumptions; for there is great danger of producing one.

All the bad cafes which I have feen, have had the fame fymptoms as those have, who are confumptive from other causes, only that they whoop in their coughing; and this whoop often remains from weakness of particular organs, or from the power of habit on those parts,

parts, after the infection is gone: and they have all been cured by the fame means as I have directed for confumptions:

01023

Pure air is of the greateft importance in the cure of the Hooping Cough. It is neceffary in all its ftages; but abfolutely fo; where it is very bad, and has haid great hold on the conftitution. I have fometimes thought that changing the air from place to place has proved of advantage; but in general, where the diet and other things are conducted right, they have done very well in my neighbourhood. The foil is chiefly gravel, and fand mixed with a good loom, and free from ftagnant waters, and corrupting vegetables, and near enough to town to have all its conveniencies, yet out of the influence of the fmoke arifing from it.

The air of large towns, and populous places, always agravates the Hooping Cough, and however proper it may be for the fick, to ftay in them, till the very dangerous part is over; it is really neceffary for him?

him to go, fome where into the country afterwards, to remove the confequences of the difeafe, to prevent a relapfe, or a confumption, which too often fucceeds, this tedious, and frequently fatal complaint.

ceffary in all its frages; but abfolutely for where it is very bad, and has haid great hold on the conflitution. I have formetimes thought that changing the air from place to place has proved of advantage; but in general, where the diet and other things are conducted right, they have done very well far any neghbouthood. The foil is chicfly gravel, and fand mixed with a good loom, and free from flagnant waters, and corrupting vegetables, and near enough to town to have all its cohveniencies, yet out of the influence of the find the foil is chicfly gra-

A Biffler

bers have it heriditarily; many from particles arifing from materials made use of in trades, and manufactures, and from various other causes.

Neglect of colds is a frequent caufe of Afthma. But from whatever caufe it may originate, it is rarely attended to, till neceffity obliges the fick to apply for relief; and often from the lateness of the application in vain. For from a neglected cold, only, for a little while, the lungs may receive fuch an impression as can never be removed : and an Afthma, or confumption; may be the confequence.

#### It may be ranked as one of thole difeates which

There are feveral species of Asthma, some are dry and spasmodick, attended with great difficulty in breathing; and the fick has the sense of being suffocated; this kind is not always accompanied with a cough, but often with a train of nervous symptoms. Others are of the humid kind, as they are called, being attended with a constant expectoration of phlegm, together with difficulty of breathing, cough, and sense of fuffication.

ceptions it is rat dels true, thei Eofford's Stichdu

A

## ON THE ASTHMA.

In all cafes of Afthma, the blood is impeded in its circulation through the lungs, either by fpafm, phlegm, or other offending matter acting upon the fenfible parts.

Where there be a fenfe of fuffocation, much difficulty in breathing, great heat in the cheft, a full pulfe, and flufhings in the face; bleeding muft be the firft remedy. The quantity taken away muft depend upon the violence of the fymptoms: It is faid by writers, that we muft not bleed in the fpafmodick Afthma; but if the above fymptoms come on, bleeding is a fuperior remedy to any I know. In the above diftreffing ftate, if fomething be not done foon to move the fprings of life; this difeafe will foon prove fatal. Bleeding is therefore proper, except fome evident weaknefs forbid it. But to repeat it, will require much confideration.

After bleeding, unload the lungs of the phlegm, or whatever elfe may obftruct them : this fhould be done by emetics, which by ftimulating the ftomach, agitate the furrounding parts, and empty them of the offending matter.

K 2

A blifter

135

A blifter fhould be put on the pit of the ftomach, or between the fhoulders, to roufe the fmaller veffels, and to draw off, or prevent inflammation. Oxymel of fquills, milk of ammoniacum, and volatile alkaline falts, &c. contribute to take off fpafm, and encourage expectoration.

In many cafes opiates are proper, but like the above medicines muft be administered by judges. Great attention should be paid that the body be kept open; and if not, a clyster of a pint of water-gruel, two ounces of honey or fugar, and a spoonful of common falt, and sweet oil may be used. Those who are accustomed to be costive, should have occasional recours to fome of the opening remedies recommended, where I treat of the cure of colds. There is great content between the bowels and the lungs; if the bowels be loaded, the lungs always fuffer.

Persons subject to have fits of Afthma, should never be without something by the bedside, to appeale the violence of it, as it frequently happens in the night. Sometimes penny royal water, or rue water distilled, or made into tea,

After bleeding, unload the lungs of the

tea, and ftrongly impregnated with the virtue of the plants, do fervice. A tea fpoonful of fal volatile, or hartfhorn in water, will relieve fometimes. A cup of muftard whey may alfo fucceed.

From the experience which I have had of the following medicine, I would advife no Afthmatic perfon to be without it by the fide of their bed. It will relieve the urgency of the fymptoms, till other advice can be had.

Take of gum ammoniacum, gum fagapenum, of each a dram and a half, diffolve them in feven ounces of water, or penny-royal water, by beating them in a marble mortar; then add of oxymel of fquills, one ounce, antimonial wine, two drams, elixir paregoricum, three drams. Mix. From two to four table fpoonfuls of this mixture, may be taken every two, four, or fix hours, according as the complaint is more or lefs fevere.

To enumerate all the varieties of Afthma, with the particular treatment neceffary for each, would carry me beyond my prefent defign. I give a prefeription for a medicine, which

#### ON THE ASTHMA.

138

which will relieve in many cafes, but may not fuit in all. For in violent fits of Afthma, medical aid is neceffary, and the profficients in the art, are now and then, obliged to change the method of cure in the courfe of a few hours. Therefore perfons not of the faculty, fhould not attempt to administer medicine, except on emergency, where other advice is not to be had. Neither will any perfon receive much good perhaps, by taking medicines of his own prefcribing.

Many perfons who have habitual Affhma, and are accuftomed to expectorate a great deal of phlegm, feel no great inconvenience, except it become checked by the effects of cold and moifture, the fumes of metals, &c.

A cold eafterly wind, damp air, wet feet &c. will in the courfe of a few hours caufe fuch a ftoppage of the ufual expectoration, or fuch a degree of fpafm as to reduce the patient even in that time to a ftate of danger. In this cafe put the feet into warm water, with the precautions before directed, let the patient have a fimple glyfter, give warm drinks, fuch as wine whey, (or vinegar whey, except where the

## ON THE ASTHMA.

the gout is in the habit) or water gruel fweetened with honey. Put the patient into a warm bed and try to produce a perfpiration.

Bleeding perhaps may be neceffary, as well as other means, but judges must adopt them. A little of the asthmatic mixture may be given here with advantage.

Some perfons, during the winter feafon, are very much troubled with difficult breathing, and are not well, except they difcharge a good deal of phlegm, night and morning, or perhaps during the whole day. Such perfons will find relief from the following pills.

Take of gum ammonicacum, gum fagapenum, balfam of tolu, flowers of Benzoin, of each one dram, dried fquills in powder, powdered ginger, and venetian foap, of each half a dram, with a fufficient quantity of fyrup of balfam, make fifty pills; two, three, or four of which may be taken at bed time, or night and morning when neceffary.

Frequent vomiting with fmall doses of ipecacuanha, is recommended by Dr. Akenfide,

K 4

and

and other eminent phyficians, for afthmatig perfons. It is a practice I have purfued with advantage. From three, to five grains of ipecacuanha powder, may be given two, three, or four times a week, to empty the glands of the phlegm, and of whatever elfe may impede the breathing.

Dr. Cheyne was very fond of Æthiops mineral, as well for the fulphur it contains, as the quickfilver; both of which he ftrongly recommended in Afthma. Dr. Dover, deferves the thanks of fociety, for the prefeription of his fweating powder; and fome attention for his advifing the ufe of quickfilver, in the cure of Afthma. He has publifhed the cafes of many refpectable perfons, in his *Phyficians Laft Legacy*, wherein quickfilver proved remarkably ufeful. And although it may not be fo generally efficacious as he wifhed the world to think, there is abundant reafon to believe, that it may be given to afthmatic perfons very often with advantage.

Many patients have taken it with fuccefs, within my own knowledge, when all other means had been tried in vain.

In

In affhmas of the humid kind, and where the common means do not give the defired relief, I would advife a trial of an ounce of quickfilver every morning, for fome continuance.

I know not how it cures, but I am contented with my ignorance, if it will produce the expected relief. Dr. Dover hurt the medicine, by ordering it without fufficient limitation. And many perfons are too apt to think, that if a medicine will not cure every thing, that it is good for nothing. A medicine of much power, or of much virtue, will never fubmit, to fashion or caprice, nor be always successful by promifcuous application.

To relieve Affhma, and to prevent frequent returns of the fits, requires a confideration of the feveral caufes which have influence on the patients conftitution. It is proper to know, how far other difeafes may contribute to produce it. The frequent complications of gout, fcurvy rheumatifm, dropfy, &c. make it peceffary to attend to this, if we would adapt a judicious method of cure.

How

How often has Afthma, and many other chronic complaints, originating from fuppreffed fourvy, gout, and fome other latent evil in the conflictution, been relieved by medicines given for those complaints !

The caufes of difeafes are fometimes very obfcure. No philofopher has yet been able to fay, what are the component parts of a mite, or an atom of matter; neither has any phyfician been able to fay, in what manner difeafes are caufed in the human body; or what the nature of those qualties are which produce them; nor is it always known how a fimple medicine can work the wonderful benefit which one fees fometimes arifing from it,

Let not the valetudinarian be difmayed, though his complaints do not give way, fo foon as he might wifh, or expect; nature may have many valuable flores yet untried, which may be called forth by cautious experiment. Let him chufe a prudent careful and attentive man for his medical guide, live flrictly temperate himfelf, and time, and patience together,

E 42 1

-1100

ther, with other means, may remove many stubborn chronic diforders.

In afthmatic cafes, the advantages which may be derived from fimples, are very great, decoctions, or infufions of the following plants, according, as they are, more or lefs powerful, or the difeafe, more or lefs violent, may be applied. They are all in a degree bitter, aromatic, and ftimulating; fome more than others.

astrian extrant to another manual

They have a tendency to brace the ftomach, correct vifcid juices, to roufe the remoter veffels to action, and fome other powers over the human frame, in particular complaints, which are to me inexplicable, where there is much fever, they are feldom proper; but in weaknefs of habit, in laxity of fibres, and in cold phlegmatic conftitutions, they are very useful. These are hoare-hound, Paul's betony, carduus benedictus, elecampane, ground-ivy, garlic, wake-robin, buck-bean, muftard, foapwort, wild camomile, Iris, and many others. These are not new, but not so often used as they fhould be ; they only want to be adapted to each particular cafe. Gartic infused in any fpirit,

144

fpirit, or in water, in moift afthmas, and dropfical complaints will give great relief. Dr. Lind fays, it is the beft prefervative against the effects of cold and moifture in northern climates; and I think it would be an excellent preventative against the ague, and other complaints in many of our marshy, and fenny counties, and the poor may have it in plenty on account of its cheapness.

The affhmatic patient will receive much benefit from fome artificial drain. A large iffue between the fhoulders, or on one, or both thighs would be ufeful, or at leaft mitigating.

Half an ounce of muftard-feed just bruifed, and taken in a glass of water, in the morning early for the humid kind of Afthma, is very often beneficial.

From a tea spoonful, to three or more, of Æther, may be taken in a pint of barley water, for very obstinate spasmodic Asthma twice a day, with much benefit. Begin with a finall quantity first, and dilute it largly.

The.

These conten analy

The juice of millepedes, or woodlice, have been celebrated for obstructions of the bowels, and not without reason. It is a faste and easy remedy, but it requires to be taken in large doses, and for some time, as do most other things in this disease, to produce any permanent effect.

Four large fpoonfuls of the juice fhould be taken twice, or thrice a day; which is prepared by bruifing the woodlice alive in a mortar, and then firain the juice through a muflin rag.

The diet of afthmatic perfons fhould always be of light and eafy digeftion, and nutritious. The tender animal foods, fifh, &c. may be taken where there is no fever. But pork, bacon, falted meats, and the like fhould be avoided. People are not aware how much thefe clog, and fill the conflitution with coarfe juices, and how much additional labour the flomach, and the lungs are obliged to undergo, after a hearty meal of this fort of food. An afthmatic perfon fhould never eat what one would call a hearty meal, or a bellyful, for the above reafons: by greatly diffending the flomach,

# 146 .OF THE ASTHMA.

a day, than twice.

remedy, but it requires to be taken in large

New baked bread, rich pye cruft, boiled flower puddings, hot roles and butter, buttered toaft, muffins, &c. all tend to diforder the flomach, produce bad juices, which produce phlegm, and flimulate the lungs. I cannot enter minutely into all improper foods; but any perfon may fee my idea plain enough, and refrain from things that are of a doubtful nature.

Many perfons refrain from taking milk, becaufe they fuppofe that it turns to phlegm; this is a vulgar error. Milk is an excellent nutriment where it will agree. It is lighter, and better fkimmed, than when juft taken from the cow: for when there is acid in the ftomach, the thick parts of the milk is apt to curdle, and caufe uneafinefs. A little lime water, or prepared oyfter fhell powder, will correct the acefcent qualities of the milk where it is ufed to gripe; if put into the milk when it is taken. Affes, goats, and mares milk, are excellent in complaints of the lungs, where milk

are the fo

talk is neceffary; being cooling, light, and nut itious; they fhould be taken in largor quantities than is commonly ordered.

lavender, and

Nothings

Tea to many conftitutions is very injurious, efpecially to fuch as are nervous. Where it agrees, or is particularly grateful and defired, it fhould not be drank too hot, and fhould confift of one half or a third of milk.

To coffee, there are also objections in some conflications; but in nervous Asthma, coffee made very strong will relieve a fit. It was usual for Dr. James, to order four ounces of coffee to be boiled in a pint, or a pint and a half of water, and a cup of it to be drank every half hour, or oftener, till the spasm abated.

Milk chocolate, or milk coffee, which is not made too firong of the tea, or too thick with chocolate, may be taken in common, as breakfaft or fupper; milk porridge, leek porridge, &c are very proper. Dry toafted bread, with honey, or fome preferve, or marmalade of fruit, &c. may be eaten with the tea, choclate, &c. where tea, or any of the above things do not agree, fome of the aromatic herbs may be

be used as such, viz. the outer rind of orange peel cut fine, or the leaves of the orange used as tea, are very grateful and wholesome as are the flowers of rosemary, lavender, and the leaves of mint, balm, and sage, &c.

ciperially to tuch as are nervous. Where it

What I am now going to advise, I do not expect will be followed by many of my countrymen. The cuftom of drinking fuch quantities of beer, wines, and fpirituous liquors they are fo habituated to, that it will be hard for them to conquer their defires; but it is the act of a wife man, " of two evils to chufe the leaft ;" pain is an evil, and drink produceth pain : therefore a wife man would refrain from drinking. Perfons troubled with Afthma, fhould drink toast and water, or rennet whey. They are the most wholesome diluents in nature. Many ferious complaints are produced by the poifonous qualities in fermented liqours, which are erroneoufly attributed to other things. Those who cannot refrain from the habit of drinking them, fhould take care that their liquors be fufficiently aged; as time which deftroys moft other things, improves liquors, and renders them lefs permicious. anti lo binot . saton I

Nothing

Nothing will be more conducive to health, or to prevent the fits of the Afthma, than proper cloathing; particularly fuch as keep the feet warm and dry. It is not uncommon for perfons who are fond of gardens, to ftand ftill on the wet cold ground, and afterwards to let their wet fhoes and ftockings dry on their feet; and perhaps their cloaths, if they happen to be only a little wet; this fort of negligence has deftroyed its thoufands.

Those who are subject to Asthma, gout, &c. &c. should wear warm stockings, and cork shoes, as a means of prevention. A flannel waistcoat worn next to the skin in winter is also proper.

That ornament to his country, the Honourable Mr. Robert Boyle, preferved his life many years, by regulating the thickness of his cloaths, by the degree of cold pointed out by thermometer. Every perfon cannot, and perhaps ought not to do this; but the week and tender valetudinarian would find his account in it, and many are untimely fnatched away from a neglect of fuch neceffary and practicable cautions.

High

High and elevated fituations are found beft to agree with afthmatic perfons; efpecially fuch places as are not near to marfhes, or flagnant waters, or frequented by much rain or fog. A fine thin pure air expands the lungs, while thick moift air oppreffes them, and adds to the heap.

But there are fome perfons that bear the air of towns, better than that which is more pure, these however are not many.

Those fituations are best, which face the South, and South-west, and are defended from the North, and North-east winds. Some particular warm defended places on the sea coast; and in some of the interior counties, agree with Asthma very well.

The weft fide of Hampftead, is alfo very falutary for afthmatic perfons; indeed afthmatic [patients do very well any where in this neighbourhood, except on the very fummit of the hill in very cold weather. Many other places may be as good, but my experience does not enable me to point them out.

With

With refpect to exercife, where the Afthma is unaccommpanied by fever or inflamation, the more a patient is able to take fo much the better; particularly if it be on horfeback.

Exercife promotes a regular, and equal circulation of blood, takes the foul matter out of the glands; and ftimulates the fmaller veffels, and animal fibres, to do their proper offices of action and fecretion. Chronic complaints in general require this.

Where horfe exercife cannot be borne, the dumb bell, a chamber horfe, or a daily ufe of the flefh brufh is really neceffary. Sedentary perfons fhould attend to this, as many of their complaints arife from inaction.

It is to be lamented that very fludious men, and many of the greateft fcholars, and beft writers, are very negligent in this refpect, They would be able to do themfelves, and the world more fervice, did they pay more attention to it. They would prolong their lives, have better health, and confequently more enjoyment.

151

joyment. And I shall confider it as one of the happiest circumstances of my life, should this paper fall into the way of one thus situated, and become the means of ferving either him, his relations, or the publick.
