PREFACE

I HAVE been induced to write this book because, from my experience as mistress of cookery in King Edward's High School for Girls, Birmingham, I have felt the great need of a suitable text-book. My aim has been to write a clear, concise, and methodical manual, which will contain everything that the ordinary Englishwoman of the middle class need know about cookery. It has a wide range, insomuch as it includes artisan, household, and a little high-class cookery, so that I believe the book will be as useful to those who have £200 a year at their disposal as to those who have £1,000.

The lack of such a text-book is no doubt due to the tardiness with which the advantages of including cookery in the modern high-school curriculum have been realized.

Surely the art of cookery is an important one both for its own sake and as a training for other things. If arranged so as to come in the school course when girls are between the ages of twelve and sixteen years, every girl will acquire much necessary and useful knowledge; she will receive a special kind of training in thoroughness, dexterity, accuracy, neatness, method, and order, which will be of great service to her in later years.

As to the practical importance of cookery in itself I need say nothing, for I believe all will agree that ignorance of the

art in the young housewife has been not seldom the cause of a good deal of misery in the home.

As regards the special points of the book, I have sought in my arrangement, as far as possible, to educate readers to think for themselves by giving them principles and rules by which to work. With this object in view, I have given the foundations in most cases separately, and in cakes the principal methods of mixing also. If these are thoroughly learnt, all cake-making will be much simplified. This applies also in the case of soups and sauces.

I think the appendices will be found useful, and also the chapter on afternoon teas, especially now that this form of entertainment is such a favourite one.

Although written in the first instance for my pupils here, I have every reason for hoping that this book will find its way, not only into many other secondary schools where cookery is taught, but into domestic circles, where a simple and practical manual is always welcome.

FLORENCE A. GEORGE.

INTRODUCTION

SCULLERY WORK

Too great care cannot be taken of the utensils we use for cooking; they must be kept scrupulously clean and bright, or they will be liable to cause disease. All utensils must be carefully washed in hot water to which a little soda has been added; the soda by softening the water removes grease more effectually. No soda must be used, however, when scrubbing boards and tables or anything wooden, as the soda discolours wood; this is only allowable when the wood is very greasy: a little must then be added.

Copper Saucepans, Moulds, etc.—These must be washed in soda water, and the inside cleaned with soap and silver sand. Clean the outside with a few drops of vinegar mixed with salt and a little sand; this makes the copper a good colour. Rinse quickly and clean all over with soap and sand to prevent it from tarnishing. Rinse again and dry with a hot swab wrung out very tightly, then polish with a leather and whiting, using a brush for the crevices.

Tins, Steel Stewpans, Patty-pans, Baking-sheets, etc.—Wash these in soda water, cleaning them inside and out with soap and sand. Rinse thoroughly, dry with a swab, and polish with a leather and whiting.

Skewers and Trussing-needles.—Wash these in soda water and polish with emery-paper.

Iron Saucepans.—Clean the inside with soap and sand, and wipe the outside with a swab.

Sieves.—Wash in *warm* water, no soda. The water should not be too warm, for if the sieve has been used for meat or fish it will cook it, so rendering it more difficult to remove.

Hair Sieves.—Scrub with a strong scrubbing-brush, using a little sand for the wooden parts only. Rinse thoroughly and dry.

Wire Sieves.—Scrub all over with soap and sand, rinse, and dry.

Brass Taps.—Clean with vinegar and salt, rinse. Clean with soap and sand, rinse. Dry thoroughly and polish with a leather and whiting. It is not necessary to use polish, which is expensive.

Brass Kettles.—Wash well and dry. Rub with a little metal polish, rubbing it off with a soft cloth. Polish with a leather and whiting.

Wooden Tables and Boards.—Wash with warm water, sprinkle with sand, rub a little soap on a scrubbing-brush, and scrub well the way of the grain. Rinse several times and dry with a swab.

For cleaning brass, copper, or steel stewpans, the following will be found an excellent mixture :

1 lb. whiting,
1 lb. soft soap,
1 lb. silver sand,
1 quart water.

To Mix.—Put all the ingredients into a saucepan together, stir until they come to boiling-point, stir frequently until the mixture becomes thick. Put into jars, tie down, and use as required.

COOKING RANGES AND STOVES

CLEANING OF RANGES.

Rake out the ashes from the firebox. Remove all the flue-doors and the plate-rack, pull out the dampers. Sweep the flues well with a flue-brush, using a small brush for the flues

above the oven. Rake out the soot from underneath the ovens, which will have fallen from the flues, into a dustpan, and then sweep with a brush. Brush the hot-plate, empty the ash-box, and leave the ashes ready to be sifted. Wash the ovens thoroughly with strong soda and water.

To blacklead the Range.—Moisten the blacklead with a little water, and put on as little as possible, rub off with another blacking-brush and polish with a third. Put back the flue-doors. Polish the plate-rack with emery-paper and put back in its place. Clean the handles of the oven doors with emery-paper.

TO CLEAN A GAS STOVE.

Wipe the bars and wash with hot soda and water, lift them off, and wash the rings, removing all grease, etc. Wipe the pipes, scrub the plate underneath with soap and sand, dry well and put the rings and bars back. Wash the oven with soda and water and wipe all the bars inside, clean the tray underneath. Clean the pipe in front of the hot plate and the taps with emery-paper, then polish the brass taps with whiting and a leather.

Lighting a Range Fire.—Put a few cinders or small pieces of coal in the firebox, then put a little crumpled paper, lay some dry sticks across lattice fashion, then a few pieces of coal on top. Pull out the dampers and light the fire with a match; as it begins to burn well add more coal, and make up a good fire. When well burnt through push in the dampers except those which are required.

It is very important to have a good cooking apparatus. There are various modes of heating—viz., by coal, gas, oil, charcoal, and electricity; coal and gas being the most general. Coal ranges may be either opened or closed, the latter being the most convenient and economical.

In an open range it is necessary to have a large fire to do a small amount of cooking, and a great deal of the heat is lost

passing up the chimney, also the saucepans get very dirty and frequently the contents smoky; whereas in a perfectly constructed closed range, where the firebox has a movable bottom, by which it can be raised or lowered as required, only a small amount of fire is necessary to keep all the saucepans on the hot-plate boiling.

Then, again, the heat of the oven in the open ranges is very uneven.

In the closed ranges the flues are so arranged that the heat can be directed over the top and down the side of the oven as required for roasting, or down the side and along the bottom as required for baking.

A closed range is no detriment to roasting in front of the fire, as when the firebox is at its lowest there is as great a surface of heat as in an open range.

In choosing a range, it is best to have one with iron flues; there is less chance of their getting out of order through the expansion and contraction caused by the heat. There is no danger of defective setting, which is often the case when one is dependent upon brick flues.

Gas stoves are very convenient, especially in the summer, when heat is only required for cooking. The oven only requires from five to ten minutes to heat. Gas stoves are cleaner and save time, as no stoking is required. If properly fixed and ventilated, there is little or no smell. They can be rented from 2s. 6d. per quarter.

Thermometers can be fitted to the ovens of either. They cost about 12s. 6d., and are a guide in regulating the heat of the oven.

Although a good cooking range is a great comfort, it is possible for an experienced cook to turn out very successful dishes from a poor apparatus.

CULINARY HEATS

Failure in turning out a dish successfully is often due to lack of knowledge of the various heats required. If a thermometer is used, it is easy to obtain the requisite degree of heat.

The following is a list of the necessary degrees for different modes of cooking :

BAKING.

Bread	340° to 350° F.
Puff pastry	340°
Short pastry and cakes	300° to 320°
Meat pies	290°

OVEN ROASTING.

Pork...	320°
Beef and veal	310°
Game and poultry	310°
Mutton	300°

FRYING.

Whitebait	400°
Meat...	370° to 380°
Fish	350° to 375°
Fritters	340° to 375°

No cooking is done at a temperature of less than 180° F.

USEFUL WEIGHTS AND MEASURES

1 teaspoonful (medicinal) = $\frac{1}{4}$ oz. or 60 drops.

1 dessertspoonful (water) = $\frac{1}{2}$ oz.

1 tablespoonful (water) = 1 oz.

*1 tablespoonful (cornflour, etc.) = 1 oz. (about).

1 gill or $\frac{1}{4}$ pint (water) = 5 oz.

1 gill or $\frac{1}{4}$ pint (treacle, jam, etc.) = 8 oz. or $\frac{1}{2}$ lb.

* When using spoons for measuring dry ingredients, take as much above the bowl of the spoon as you have in it.

CHAPTER I
STOCKS AND SOUPS

STOCKS.

STOCK forms the basis of most soups and many sauces. It is the liquid in which bones, meat, or vegetables have been boiled. It should not be strongly flavoured, as it would render it unsuitable for the more delicate sauces and soups. It should be clear, and of a pale colour.

Stock made from meat must be simmered very gently; boiling would harden the meat, and prevent the complete extraction of the juices. But in making stock from bones, boil quickly, as the goodness to be extracted will consist chiefly of gelatine, and this can be more thoroughly extracted by a high temperature. The lid of the stockpot should fit well to prevent unnecessary loss of steam. This stock will set to a firm jelly when cold. It will have less flavour than that made with meat, but will be more suitable for making glaze and for braising.

There are several kinds of stock, viz. :

1. First stock, or clear stock.
2. Good economical stock.
3. Second stock.
4. Game stock.
5. Fish stock.
6. Vegetable stock.

The **first or clear stock** is cleared with meat, or meat and white of egg, and is used for all consommés.

The **good economical stock** is a cheaper stock, and is used for such soups as brown soup, macaroni soup, etc., without being artificially clarified.

Second stock, the stock which is made by using the meat and bones left from making first stock, with the addition of fresh vegetables.

Game stock, used for game soups, gravy to be served with game, kromeskies, etc.

Fish stock, made from white fish, is used for fricassees of fish, sauces, and fish soups.

RULES FOR STOCK.

1. If you have no stockpot, use a saucepan with a closely fitting lid.
2. Chop bones into small pieces, cut meat into pieces.
3. Use cold water to extract all goodness, add salt before the water gets hot (1 teaspoonful to 1 gallon water).
4. Bring slowly to boiling-point.
5. Skim well.
6. After skimming add vegetables, herbs, and peppercorns. Use vegetables and herbs sparingly.
7. When making stock from bones boil quickly, but if from meat simmer gently.
8. Herbs when fresh should be tied up in bundles, when dry in a piece of muslin.
9. Lid to be kept tightly on to keep in the steam.
10. Stock should be made the day before it is wanted, so that all fat can be removed before it is used.
11. Boil for five or six hours, strain into an earthenware basin. The bones can be used for making more stock, but the vegetables should be thrown away.
12. Never leave stock to get cold in the saucepan.
13. The saucepan to be thoroughly cleaned each day.
14. To keep stock good in hot weather, boil it up every day, and put it in a clean basin.

15. In hot weather use no turnip *in stock*, and very little vegetable of any kind.

Cut the meat into small pieces, prepare and cut up the apples and vegetables. Fry the vegetables and herbs in the butter, add the apple. Sprinkle over the curry-powder, put on the lid of the saucepan, and cook for a few minutes, slightly shaking the pan to prevent the contents from burning. Add the liquor and the meat. Bring to boiling-point, skim, add the flour (mixed smoothly with a little cold water) and the sugar, simmer gently for an hour and a half. Rub through a sieve, return to the saucepan, add lemon-juice, pepper, and salt. Simmer for five minutes. Serve with boiled rice.

N.B.—If raw meat is used, water can be used instead of liquor, and allow three hours and a half to cook.

Ox-tail Soup.

2 tablespoonfuls flour.	1 onion.
Pepper and salt.	1 clove.
2 oz. dripping.	12 peppercorns.
2 quarts water.	1½ tablespoonfuls cornflour.
2 carrots.	A little browning.
2 turnips.	

(Enough for 6 or 7 persons.)

Blanch and dry the tail, cut it into joints, trim off some of the fat. Roll the pieces in flour, seasoned with pepper and salt, and fry them in the dripping. Pour away the fat that remains after frying, put back the tail, add the water and salt. Bring slowly to boiling-point, skim, add the peppercorns, clove, and vegetables, reserving one carrot and turnip. Simmer very gently with the lid on for four hours; strain into a basin, putting back the pieces of tail into the liquor. When cold, remove all the fat before re-heating. Thicken with the cornflour, add the browning and the carrot and turnip. The carrot and turnip should be cut into fancy shapes, and cooked in boiling water with a little salt, before adding them to the soup.

Aspic Jelly (1).

1 pint jellied chicken stock.	Small piece of carrot, onion, turnip, and celery.
½ gill sherry.	½ oz. gelatine.
¼ gill mixed vinegars: tarragon, chilli, malt.	Whites and shells of 2 eggs.
Rind and juice of ½ lemon.	

Remove the fat from the stock, and wipe with a hot cloth. Put into the saucepan, keeping back any sediment there may be, and add all other ingredients, except whites and shells of eggs. Stir over the fire with a whisk until the gelatine has dissolved, then add the white (slightly whisked), and the shells crushed. Whisk vigorously until it comes to the boil;

let it come well up, and then simmer for ten minutes by the side of the fire, with the lid partly on. Strain through a hot tea-cloth.

Aspic Jelly (2).

1 calf's foot.	3 sticks of celery.
2 pennyworth of giblets.	Bunch of herbs.
2 quarts water.	Rind and juice of 1 lemon.
1 teaspoonful salt.	$\frac{1}{4}$ gill malt vinegar.
12 peppercorns.	$\frac{1}{4}$ gill tarragon vinegar.
1 clove.	1 tablespoonful chilli vinegar.
1 carrot.	1 gill sherry.
1 turnip.	$\frac{1}{2}$ oz. gelatine.
1 shallot.	Whites and shells of 3 eggs.

Blanch the calf's foot, and cut in pieces. Clean the giblets. Put these, with the calf's foot, into a saucepan, with the water and salt. Bring to boiling-point, skim well, add the vegetables, peppercorns, herbs, and clove. Boil gently for five hours, skimming frequently. Strain through a hair sieve. When cold, remove all fat, put the stock into a saucepan, and if it is not a stiff jelly add the gelatine. Put in the lemon-juice, vinegars, the sherry, the whites of eggs slightly beaten, and the shells broken up. Clear (as in No. 1).

Clarified Fat.

Cut the fat into small pieces, and put them into a saucepan with enough water to cover. Boil rapidly with the lid on for five or ten minutes to soften and whiten the fat. Remove the lid, and continue the boiling until all the water has evaporated, when the liquid will be clear instead of milky in appearance.

Stir occasionally to prevent the pieces of fat from adhering to the bottom of the saucepan, which causes a good deal of spluttering. Gradually the pieces will render down, leaving little pieces of shrivelled skin and clear oil or fat. Allow this to cool for a few minutes, then strain into a tin.

This fat when cold should be nearly as white as lard, and free from a meaty flavour. It will be found most useful for frying purposes, also for pastry and plain cakes. It is an excellent way of using up superfluous fat or suet.

CHAPTER II

FISH

CHOOSE fish which is in season ; it is more wholesome, and has a finer flavour.

Choose very fresh fish, as it soon deteriorates and becomes unwholesome.

When fresh the flesh is firm and a good colour, the eyes bright, and gills red. The skin of haddock, whiting and smelts is silvery, and shiny when fresh. The red spots on plaice are bright and distinct, but gradually fade as the fish becomes stale.

Plenty of scales are a good sign. The smell is one of the best tests.

Fish must be carefully and thoroughly cleaned before cooking. The blood near the backbone must all be removed, and the yellow part near the head ; it has a bitter flavour. The black skin from the inside of cod, haddock, and other fish can be removed by rubbing with salt.

It must not be left in water to soak, as it destroys the flavour and makes the fish sodden.

The fins and tails should be trimmed off, except the fins of turbot, which are considered a delicacy.

White fish is the lightest and most digestible for invalids, especially whiting, soles, and plaice ; in these the fibre is very tender.

Oily fish, such as salmon, herrings, and mackerel, contain more nourishment, but are more difficult to digest.

Fish is highly nitrogenous, and a good brain food. It contains a much higher percentage of water than butcher's meat, and is therefore not such a highly concentrated food.

NOTES AND RULES FOR BAKING FISH.

This is one of the nicest ways of cooking fish, as none of the flavour is lost and it is neither rich nor watery. The fish may be first seasoned, coated with egg and crumbs, and baked to resemble fried fish. Or placed on a well-buttered tin, seasoned and covered closely with buttered paper, and baked to resemble steamed or boiled fish. A more delicate way is to place the fish between two buttered plates.

Rules.—1. Crumbs to be freshly made, and browned in the oven before using.

2. Well wash and dry the fish.

3. Do not overcook. It can be tested by piercing with a skewer.

RULES FOR BOILING FISH.

1. Well clean the fish and weigh it.

2. Have only just enough hot water to cover it.

3. Allow 2 oz. salt and 2 tablespoonfuls vinegar to every gallon of water.

4. Skim well.

5. Cook very gently until tender.

6. Allow six minutes to the pound for cod, haddock, hake, etc., and ten minutes for very large cod, salmon, turbot or halibut. Small fish, such as whiting, from six to ten minutes.

7. Put all fish, except salmon, into hot water, as boiling would crack the skin, and cold would draw the goodness out. Salmon must be put into boiling water to preserve its colour.

8. Drain well and place on a hot dish on a d'oyley with a strainer underneath; garnish with parsley and lemon, and serve with a suitable sauce.

Steaming is a better way of cooking fish; it loses less of its flavour and nourishment.

For Frying.—See notes and rules at the beginning of Meat section (p. 45).

CHAPTER III

MEAT

NOTES AND RULES ON BOILING MEAT.

BOILING is one of the easiest ways of cooking, and the secret of success is in allowing plenty of time and cooking very slowly.

Meat should be fresh. Very fat joints are unsuitable for boiling. The best joints are generally reserved for roasting, while the more gelatinous and sinewy parts are used for boiling. The moist heat softens, and to a great extent dissolves, the gelatine, which dry heat would render hard and indigestible.

Our object is to soften the fibres while retaining all the juices. When meat is put into boiling water, the sudden change to a paler colour shows that the albumen on the surface has coagulated. In this way the outside of the meat is hardened, thus preventing the escape of the red juices.

If cooked at 212° F. (boiling-point) the whole of the albumen in the meat would become hard and leathery, rendering the meat very tough. This is why it is necessary to cook at a lower temperature after the meat is once hardened on the outside. Five minutes is long enough to accomplish this hardening process. After that it should be kept at a temperature of 180° to 200° F., which is known as simmering-point.

In simmering, the water should barely move at one side of the saucepan, and *not gently bubble* all over, as this would register 212°, as in more violent bubbling. There is no better way of showing the reason for this than to take an egg and

see the difference between the tenderness of it when cooked at the different temperatures.

NOTE.—Poultry should be put into *hot*, not *boiling*, water, the fibres, being more delicate than in meat, are easily hardened.

The rules for boiling salted or pickled meat and fish will be found under their respective headings.

Rules for boiling Fresh Meat.

1. Wipe the meat with a damp cloth. If a neck or loin, see that it is well jointed.

2. Weigh it, and allow for beef and mutton a quarter of an hour to the pound, and a quarter of an hour over; for veal and lamb twenty minutes to the pound, and twenty minutes over; for pork twenty-five minutes to the pound, and twenty-five minutes over. For thin joints, such as neck of mutton, breast of veal, etc., this rule will not apply, as the thickness does not increase proportionally with the weight. Allow from two to two and a half hours for any weight over a pound.

3. Put the meat into boiling water with a teaspoonful of salt to every quart.

4. Bring to boiling-point and skim well.

5. Boil for five minutes — this is to harden the outside and keep in the goodness; then add a little cold water, and draw the saucepan to the side of the fire; simmer very gently till done. This is to prevent the albumen or fibrin from hardening.

6. When possible, cook meat in stock. It improves the flavour and enriches the stock. Keep the lid on the saucepan.

7. After skimming add vegetables, which are served with the meat.

8. Coat the meat with sauce before serving, and garnish with the vegetables.

Rules for boiling Salt Meat.

1. Salted or pickled meat should be washed before cooking.
2. Allow twenty minutes to the pound, and twenty minutes over for any weight up to 8 or 9 lbs. For larger pieces quarter of an hour to the pound will be found sufficient.
3. Put into warm water.
4. Bring to boiling-point and skim well.
5. Boil for five minutes—this is to harden the outside and keep in the goodness; then add a little cold water and draw the saucepan to the side of the fire, and cook very gently until done. This is to prevent the albumen and fibrin from hardening.
6. After skimming add the vegetables, which are served with the meat.
7. If to be served cold, take out the meat when cooked, put into a pan, and pour over the liquor, leave till nearly cold, then lift on to a dish, and when quite cold glaze.
8. If the liquor is wanted for stock, change the water after the meat has cooked one hour. This prevents the stock from being too salt. In this case the vegetables should not be added till the water has been changed.

NOTES AND RULES ON FRYING.

Frying is cooking in hot fat. There are two ways of frying, called 'shallow frying' and 'deep frying.'

In *shallow frying* you use a frying-pan and very little fat. This method is suitable for sausages, pancakes, and meats.

In *deep frying* you use a stewpan, and for small things a wire basket will be found a great convenience for lifting them in and out of the fat. Sufficient fat must be used to well cover whatever you are frying. This method is used for croquettes, fish, fritters, etc., and these things must be dished quickly and lightly, or they soon lose their crispness. The inside should be soft and lightly cooked, and the outside a golden brown colour. Oil, lard, or clarified fat may be used,

and this method of frying is not as extravagant as it appears, for the same fat can be used again and again if care be taken not to let it burn.

Success depends largely upon the temperature being right. If there is any water in the fat, it will begin to bubble directly it reaches 212°. After a time the bubbling ceases, and as the fat reaches a higher temperature a faint blue smoke will be seen rising from it. Soon after this the fat begins to smoke a little, and is ready for use. If left on the fire without using it will burn. If in doubt as to the temperature, test by throwing in a small piece of white bread. If it browns quickly the fat is ready.

It is dangerous to leave the fat on an open fire unless there are bars for the pan to rest upon.

Rules for Frying.

1. Have everything as dry as possible, and coated with flour, batter, or egg and crumbs.
2. Have the fat smoking hot—about 385° F.
3. Drain everything on paper after frying to absorb the fat.
4. After using deep fat, allow it to cool before straining for future use, or the great heat will melt the strainer.
5. Keep the fat used for frying fish for that only.

To Egg and Crumb.—Beat up the egg in a soup plate, put the breadcrumbs on a piece of paper. Use a small brush for the egg, and be careful to brush well all over, or the crumbs will not stick. Lift out of the egg with a knife into the middle of the crumbs, and move the paper from side to side until the fish or meat is coated. When the egging and crumbing are finished, wipe the knife, and use it to press the crumbs on firmly to prevent any loose ones from falling into the fat.

To fry Parsley.—Choose fresh parsley, wash it, and put in on a sieve to dry; then put it in a frying-basket. Allow the fat to cool after frying the meat, fish, etc., then put in the parsley, and fry until crisp. Do not let it get brown. Drain on paper.

NOTES AND RULES ON GRILLING.

Grilling is a very convenient way of cooking, it is so quickly done. It is very wholesome and savoury. It is only suitable for small pieces of meat or fish. Only the tender parts of meat should be used, and they must not be too thin. Oily fish are better than white fish for grilling. Double gridirons are very convenient, especially for fish, which is often difficult to turn without breaking.

Avoid sticking a fork or skewer into the meat when turning, as this allows the juices to escape. It is best to use two spoons, or a knife and spoon, or small tongs, for turning when you are using a single gridiron.

The time for cooking depends on the thickness of the meat. A well-grilled chop or steak should be tender and juicy.

Rules for Grilling.

1. Have a good clear fire, free from smoke.
2. Trim off a little of the fat, sprinkle the meat with pepper, and brush over the lean with butter. White fish should be well brushed with butter and sprinkled with pepper. Oily fish, such as herrings, do not require butter.
3. Before beginning to cook, let the gridiron get hot; then rub the bars with a piece of suet to prevent the meat from sticking.
4. If there is any choice, put the cut surface towards the fire first—*e.g.*, kidneys.
5. Turn the meat continually.
6. Send to the table as soon as cooked.

NOTES AND RULES ON ROASTING.

Roasting is nicest when done in front of the fire; it is a very savoury way of cooking meat. Only the best joints are suitable, and they should be well hung; the fibres will then be more tender.

For small joints, or birds, a Dutch oven may be used, placing it on a trivet which has been hung on the bars. The meat must be kept well basted and turned, and the thickest part of the joint should be hung downwards, as the greatest heat comes from the bottom of the fire.

For large joints a jack must be used. This saves turning, for when the jack is wound up the meat is kept revolving. A meat-screen is of great service in retaining and reflecting the heat.

In these days it is more usual to roast meat in the oven. Great care must be taken that the oven is perfectly clean and well ventilated. A double meat-tin should be used, so that water can be placed in the under tin. This will prevent the dripping from browning, and giving a disagreeable flavour to the meat. A well-roasted joint should be brown and crisp on the outside, while the inside should be tender and retain all its juices.

Rules for Roasting.

1. Choose the best joints, tender, fat, and well hung.
2. Have a bright, clear fire.
3. Weigh the meat, and allow for beef and mutton a quarter of an hour to the pound, and a quarter of an hour over ; for veal and lamb twenty minutes to the pound, and twenty minutes over ; for pork twenty-five minutes to the pound, and twenty-five minutes over. Boned and stuffed meats require a longer time to cook than plain joints.
4. See that the meat is well jointed.
5. Wipe the meat with a damp cloth, and fasten into shape with string. Never use skewers.
6. Hang the thickest part of the joint downwards, the greatest heat being at the bottom of the fire.
7. If meat has been frozen, bring it into the kitchen several hours before cooking, as it should be thawed slowly.
8. Put meat near to the fire at first to close the pores and keep in the juice ; then cook more slowly till tender.

9. Baste the joint often ; it prevents the meat from burning and from shrinking so much.

10. Serve with good gravy made in the tin in which the meat was cooked, first pouring off the dripping.

11. Use stock that has been seasoned with pepper and salt *only*, and made with mutton or beef bones or trimmings according to the joint.

12. When roasting a leg or shoulder of mutton, the shank or shoulder should be used for making the stock.

NOTES AND RULES ON STEAMING AND BRAISING.

Steaming and braising are modes of cooking by steam. It is a most perfect way of cooking, as there is no danger of hardening the meat by too high a temperature. A proper steaming apparatus consists of two vessels, one of which fits into the top of the other and is perforated at the bottom. The under one is for the water, the upper one for the meat, which is cooked by the steam passing up through the holes.

It is quite possible to carry out this mode of cooking by using an ordinary saucepan, and supporting the joint on jam-jars to prevent it from coming in contact with the water. The lid must be fixed on tightly to prevent loss of steam.

In braising, the meat is resting on a bed of vegetables which is covered with stock. This is more savoury than simply steaming, as the meat imbibes the flavour of the vegetables. It is a favourite way of cooking boned and stuffed joints and birds. In a proper braising-pan the lid is indented for the purpose of holding live charcoal, so that the meat is partly roasted while steaming. Much the same result is attained by browning the meat in the oven after it is taken out of the saucepan, and basting with its own liquor.

Rules for Steaming and Braising.

1. Choose lean joints.

2. Allow fifteen minutes to the pound, and thirty minutes over, for beef and mutton ; allow twenty minutes to the

pound, and thirty minutes over, for veal and lamb; allow thirty minutes to the pound, and thirty minutes over, for pork.

3. In steaming, put the meat in the steamer, fill the under vessel with boiling water, and keep it boiling all the time the meat is cooking

4. In braising, make a bed of vegetables, cover with stock, rest the meat on the top, and cover it with buttered paper.

5. Keep the lid tightly on.

NOTES AND RULES ON STEWING.

Stewing is cooking very slowly in a small quantity of liquid. By this method the toughest meats may be rendered tender and digestible, and also very savoury. The secret is long, slow cooking.

The process is sometimes confused with boiling, but it is almost the reverse. In boiling we aim at softening the meat while retaining all its juices, and the hot water acts merely as a medium for conveying the heat. In stewing the juices are more or less extracted, and form with the water the liquid in which the meat is softened, and the gravy with which it is served. The meat, being partly cooked in its own juices, is more savoury.

In boiling we plunge the meat into boiling water to close up the pores and keep in the juices. In stewing we use cold or warm liquid, in order to draw out some of the juices before sealing up the pores.

In many cases the meat is lightly fried before stewing; this prevents the loss of so much of the red juice when put into the warm water, it also makes the stew more savoury and a better colour.

In some cases the separation of the juices is the sole object, as in beef-tea, soups and stocks. The meat is finely cut up, in order to expose more of its surface to the water. It is then put into *cold* water, and brought *very* slowly to boiling-point, and stewed until all the juices are extracted; in this case the meat is of no value.

The juices of meat contain a large amount of albumen. Albumen is soluble in cold water, but coagulates in hot water. It is possible to extract the juices from meat without cooking by mincing the meat finely and soaking it in cold water for one or two hours.

Rules for Stews.

1. Use warm liquid.
2. Allow $\frac{3}{4}$ pint of liquid to every pound of meat, and 1 oz. of thickening to every pint of liquid.
3. Keep the stewpan closely covered.
4. Simmer very gently.

Rules for beef-tea and stock will be found elsewhere.

NOTES ON MUTTON CUTLETS AND SMALL MEAT DISHES.

Choose the best end of the neck, do not have it chopped, but have the chine-bone sawn off, so that the cutlets can be easily divided; and if the bones measure more than $4\frac{1}{2}$ inches, saw a piece off the other side to make them the right length.

It is best to get very small mutton, as there will be less fat.

Divide the cutlets evenly, trim off most of the fat, and scrape an inch of the meat from the end of each cutlet bone. Frills can be put on just before serving if liked.

If nicely trimmed, they will make a dainty entrée. They can be fried, braised, or sautéed, and served with various sauces and vegetables.

For a cold entrée, after cooking they may be set in aspic jelly, then cut out and served with a salad and chopped jelly, or braised and coated with chaudfroid sauce or tomato sauce in which a little aspic jelly or gelatine has been mixed to enable it to set.

The whole of the neck of small mutton or lamb will be found an economical and useful joint from which to get a variety of dishes. *E.g.*, the best end is suitable for cutlets or roasting; the middle for boiling, stewing, or haricot mutton; while the scrag end can be used for an Irish stew or Scotch broth.

The sirloin of beef (a small piece), with the undercut or fillet, may be used as follows :

The undercut or fillet removed, and either braised or cut into fillets and made into an entrée, as directed in 'Fillets of Beef.' The rest of the joint may be roasted as it is, or boned and rolled, and some good soup made with the bones ; or the thin end of the meat may be cut off and stewed (if not too fat), or pickled and boiled for a cold luncheon dish.

The ribs or chine of beef is a cheaper joint, and though it has not such a fine flavour as sirloin, it is suitable for many dishes.

A joint of three or four pounds may be used as follows :

Cut off a thick slice, spread with veal stuffing, and roast ; serve with brown sauce. Another portion of it may be used for a pie or pudding, using a little kidney with it, while the rest can be either stewed, jugged, or used for beef olives, or minced and made into a dish of 'Fillets of Beef with Kidney Beans.'

Boiled Beef (served Cold).

10 lb. rump of beef (pickled).	2 allspice.
1 carrot.	2 cloves.
1 turnip.	20 peppercorns.

1 bunch of herbs.	Glaze.

(Enough for 20 people.)

Well wash the beef, tie in a cloth, put into a saucepan with enough hot water to cover, bring to boiling-point, skim, and simmer gently for one hour. Pour off the water and cover with fresh boiling water. Add the vegetables, herbs, and spice. Simmer gently for about three hours longer. Lift out into a large pan, pour over the liquor, cover and leave till cold, then put on a dish, remove the cloth, and glaze. Strain 1 quart of the liquor, put it into the saucepan with the gelatine, add a teaspoonful of tarragon vinegar, stir over the fire till dissolved, pour into a basin and leave till set. Serve the beef on a dish, garnished with the chopped jelly.

Boiled Beef (served Hot).

10 lb. pickled silverside or rump of beef.	4 bay-leaves.
10 potatoes.	1 sprig of parsley and thyme.
3 carrots.	3 allspice.
3 turnips.	20 peppercorns.
1 onion.	2 cloves.
1 lb. Brussels sprouts.	1 pint caper sauce.

(Enough for 20 people.)

Well wash the beef, tie in a cloth, put into enough hot water to cover, bring to boiling-point. Skim, simmer gently for one hour; pour off the water, and cover with fresh boiling water. Add the onion stuck with the cloves, the herbs, allspice, and peppercorns; simmer gently for three hours longer. Prepare the vegetables and tie them up separately in pieces of muslin, and add them as follows: Allow two hours for the carrots, one hour for the turnips, half hour for the potatoes, and fifteen minutes for the Brussels sprouts. Make the caper sauce (see p. 148), using $\frac{1}{2}$ pint of the liquor in which the beef has boiled, instead of all milk, and, if liked, the yolks of two eggs may be added, giving the sauce a nicer colour. Put the beef on to a hot dish, coat with a little of the sauce, serving the remainder in a tureen. Garnish with the vegetables.

Hot Galantine of Beef.

$1\frac{1}{2}$ lb. beefsteak.	1 teaspoonful anchovy sauce.
$\frac{1}{4}$ or $\frac{1}{2}$ lb. ham.	1 egg.

(Enough for 8 persons.)

Mince the beef and ham, and mix with them the breadcrumbs, thyme and marjoram parsley, pepper, salt, anchovy

sauce, gravy, and yolk of egg; form into a roll, brush over with white of egg, and roll in breadcrumbs (these are not included in the 3 tablespoonfuls). Fry in deep fat, put $\frac{1}{2}$ oz. of butter into a saucepan, stir in the flour, let it brown, add the stock, bring to boiling-point, add browning if necessary. Put in the roll, cover the pan tightly, and simmer slowly for one hour and a quarter. Add the jelly and wine, put the roll on to a hot dish, strain a little of the gravy round, and pour the rest into a tureen.

Beef à la Mode.

1 cow-heel.	2 quarts water.
3 lb. shin of beef.	Pepper and salt.
1 Spanish onion.	$1\frac{1}{2}$ oz. dripping.
3 or 4 carrots.	2 oz. flour.
3 or 4 turnips.	Suet dumpling (see recipe for
Bunch of herbs.	Suet Crust, p. 226).

(Enough for 10 persons.)

Cut the cow-heel into four pieces, cut up the beef, prepare the vegetables and cut into quarters. Fry the beef in the dripping with the herbs. When brown take out the meat and mix the flour into the dripping, let it brown. Add 1 pint of the water and stir till boiling. Then add the rest of the water, the beef, cow-heel, vegetables, and seasoning. Stew slowly in a saucepan with a closely-fitting lid four hours. Half an hour before serving put in the dumplings.

Roast Sirloin of Beef.

Sirloin of beef.	$\frac{3}{4}$ pint stock.
Dripping.	Horseradish sauce.

Wipe the meat, remove suet, weigh, and allow a quarter of an hour to the pound, and a quarter of an hour over (see rules). Place the meat on a *dry* meat-tin (on a trivet if there is one), the right side up, pour some boiling water in the under tin, put into a hot oven for ten minutes; then open the oven door and cook gently until done, basting often, adding some dripping

if there is not enough from meat. Turn the meat so that the undercut will get properly cooked. When the meat is done lift it on to a hot dish, pour off the dripping into a jar containing a little cold water, keeping back the gravy and brown particles; put the tin (single tin only) over the fire, sprinkle in a little pepper and salt, add the stock (boiling), and stir over the fire until boiling, mixing in the brown particles from sides of the tin. Pour a little round the meat, and serve the rest in, a tureen. Serve with horseradish sauce or cranberry sauce.

Beef Roll.

6 oz. ham.	1 egg.
1½ lb. steak.	1 gill stock.
¼ lb. breadcrumbs.	2 hard-boiled eggs.
1 teaspoonful chopped parsley.	Glaze.

Turn on to a board, flatten it out with a knife, and arrange the hard-boiled egg (cut in pieces lengthways) on the top; make carefully into a roll, tie in a cloth. Simmer gently for an hour and a half in the stockpot. Untie, and tie up again firmly; press till cold. Glaze, cut off the ends, and serve with chopped meat jelly.

¾ pint brown sauce.	1 cauliflower, or 1 lb. Brussels sprouts.

(Enough for 6 or 7 persons.)

Cut the meat into eight slices, spread each with the forcemeat, roll up and tie with fine string, fry lightly; then put them into a saucepan with the sauces, and simmer gently until tender, about an hour and a half. Make the potato into a border

on a hot dish, remove the string from the olives, and arrange them in a circle on the potato. Divide the cauliflower into pieces and arrange in the centre. Skim the sauce and strain it round.

N.B.—Veal olives may be made by this recipe, using fillet of veal.

When cold and set take off the crust carefully, put it on to a dish top side up, turn the contents of the pie on to the crust, taking care not to break it. If the meat adheres too firmly to the dish, dip it into hot water, as you would a jelly. Garnish with the aspic jelly, chopped up. Serve with lemon salad.

NOTES ON CURRIES.

Curries are made in perfection in India, the herbs and spices being picked fresh and pounded, thus making a more

delicious dish than is possible by using dry curry-powder. They can be made either of meat, fish, vegetables, or hard-boiled eggs. It is also a good way of using up cooked meat, but fresh meat is preferable. The meat should be cut into small squares, poultry into small joints.

For white curry use white meat, such as veal, chicken, or rabbit, with almond or cocoanut milk, or cream, to keep it a pale colour, the onions and meat being *sautéd*, not fried.

For brown curries fry the onions and meat, and use brown stock. After the meat is *sautéd*, or fried, the flour, curry-powder, paste, and chutney are mixed together and sprinkled over the meat. The lid is put on the saucepan, which is moved slowly backwards and forwards over the fire to keep the contents from burning whilst the flavour is being absorbed by the meat. Lemon-juice is added to keep it a good colour, and a small quantity of acid fruit. The acid acts on the fibres of the meat, rendering it more tender. A tomato improves the flavour of a cold meat curry.

Curries require long, slow cooking, that all the flavours may be well blended. After the curry is all prepared, put it into an earthenware jar, casserole or gourmand, and place it on the top of the stove or in the oven, that it may cook gently without the risk of burning.

Boiled rice is always served with a curry, either handed separately on a folded napkin or forming a border round the dish on which the curry is served. It is essential to use good curry-powder. Veerasawmy's curry-powder, paste and chutney will be found excellent.

Rules for Curries.

1. Chop the onions finely.
2. Fry the onions in butter for a brown curry. *Sauté* them for a white curry.
3. Cut the meat into square pieces, rabbits and chickens into very small joints, and fry or *sauté* it.

4. Mix the chutney, flour, curry-paste and powder together, and sprinkle them over the meat; add lemon-juice. Put on the lid of the saucepan, and move it slowly backwards and forwards over the fire for a few minutes.

5. Add the stock, stir until boiling, skim.

6. Put it into a casserole or gourmand, and cook slowly for two or three hours.

7. Add the almond milk, season, and serve with rice.

CHAPTER IV

COLD MEAT COOKERY

IN this section will be found many excellent ways of using up cold meat and producing very savoury dishes.

As warmed-up meat has less flavour than freshly-cooked meat, good gravy or stock should be used, and special care taken in seasoning. There is often some jellied gravy under the dripping, which is the essence of meat, and may be used to advantage. Trimmings of game, poultry, pickled beef, ham and tongue will also assist. Herbs, essence of anchovy, and mace may be used in small quantities.

Uncooked flavourings, such as onion, tomato, and mushrooms, must be cooked before mixing with the meat.

The most important point to remember is that the meat is already *cooked*, and only needs rewarming.

Underdone meat is preferable for cold meat cookery.

For Scotch eggs, rissoles, croquettes and minces the meat is passed through a mincing-machine or chopped very finely, and then mixed with a sauce made of butter, flour and stock, or good gravy. This sauce must be well cooked before adding it to the meat.

Rissoles and croquettes should be moist and creamy inside, to effect which it is necessary to add enough sauce to make the mixture to the right consistency while hot, then to allow it to cool, when it will become firm enough to shape. On reheating the sauce is liquefied, producing the creaminess we desire.

For a hash the meat should be added to the sauce an hour or more before serving, in order that it may become well flavoured and softened, taking care it does not boil. It is safer to use a double saucepan or bain-marie, or stew-jar placed in boiling water.

Poached eggs are a nice garnish for minces, especially those made of veal. Borders of rice and macaroni may also be used.

RULES FOR WARMING UP COOKED MEAT

1. Trim away any gristle and most of the fat.
2. Use good gravy or stock.
3. Season well.
4. Cook raw vegetables, such as onion, mushroom, etc., in a little butter before adding them to the meat.
5. Only reheat the meat ; do not cook it again.
6. For a hash, mince, or curry use a double saucepan or bain-marie after the meat is added, and let it remain in the sauce for an hour or so before serving.
7. For croquettes, etc., put the meat mixture on to a plate, make it into a flat cake, and leave until cold, then divide into equal portions and shape.
8. When vermicelli is used for coating, crush it finely.
9. For a mince, *chop* the meat in preference to passing it through a mincing-machine.

To egg and crumb, see 'Rules on Frying,' also 'How to fry Parsley.'

CHAPTER V

POULTRY AND GAME

NOTES ON GAME

SOME kinds of game can be obtained all the year round, but there is very little choice from March to September. The following is a list of those most used, and the dates when in season :

<i>In season.</i>				
Blackcock	August 20 till December 10.
Grouse	August 12 till December 10.
Hares	October to March.
Larks	November till February.
Partridges	September 1 to February 1.
Pheasants	October 1 to February 1.
Plovers	November till March.
Pigeons	All the year round.
Ptarmigan	November till March.
Quails	March to October.
Snipe	November till March.
Teal	September to February.
Venison : Buck venison	June to September.
Doe venison	October to December.
Wild duck	September to February.
Widgeon	August to March.
Woodcock	November till March.

Game should be hung in a cool, dry place. It is hung for some time to make it ripe, or 'high,' but should never have an unpleasant smell. Water-fowl, such as wild duck, teal, widgeon, etc., should not hang more than a day.

When the breast feathers come out easily it is a sign that the bird is ready for plucking.

For pheasants, another test is when the blood drops from the beak. Pheasants hang longer than partridges. Both require to be well cooked. Game, as a rule, should be slightly underdone.

Wild duck is always served either with an orange or lemon salad, or with some accompaniment having orange or lemon as the characteristic flavour.

A salad is usually served with game. Cranberry sauce or cranberry jelly is frequently served.

The four usual adjuncts for game are : a good brown gravy, bread sauce, fried crumbs, potato chips, watercress being used as a garnish.

Woodcock are never drawn, for the trail is considered a delicacy by gourmets.

To tell when Birds are Young.

Grouse, partridges, snipe, quails, and ortolans, when young have short round spurs.

Old grouse and partridges have yellow legs and dark bills. They are not good for roasting, but may be used for salmis, etc.

Woodcock when old have pointed spurs, and the feet hard and thick ; when young their spurs are blunt.

When the bills look soft and unsightly, and the throat muddy, it is always a sign that the birds have been killed long.

In venison, when young, the fat is clear and bright.

If hares have sharp claws, ears damp, and the cleft in the lip narrow, it is a sign that they are young.

NOTES ON POULTRY DRAWING AND TRUSSING.

Poultry should be fresh ; it is spoilt if the least high. A turkey may be hung for several days in a cold dry place, and in cold weather will keep for a week or ten days.

Poultry should never be served underdone, but be well cooked. It requires more cooking than game in proportion to its size. A very large fowl will take quite two hours if cooked slowly, a good-sized fowl an hour and a half, a medium size from one to one and a quarter hours, a spring chicken from forty to fifty minutes.

If young and tender, the skin of the breast will look fine and transparent, and the bone will bend easily. A good test is to pierce the flesh with a pin ; it should go in quite easily. The claws should bend without cracking, and the legs should be smooth. Choose dark legs for roasting, and white ones for boiling. The weight should be great in proportion to the size.

Fowls are in season all the year round, also chickens, spring chickens in April, May, and part of June. The price varies from 2s. 6d. to 4s., according to size and season.

An old fowl is good for broth. It is also very good if it is steamed for three or four hours, and then roasted and well basted.

To prepare Fowls for Cooking.

After removing the feathers, singe off the hairs that remain with a lighted taper, wipe with a damp cloth, turn the bird on to its breast, make a slit between the shoulders, and with your fingers loosen the skin all round the neck until it is quite free ; then cut it off close to the body. Now cut the skin of the neck, leaving quite 2 inches hanging to the body. Remove the crop (a bag of skin in front of neck), put in your first finger, and work it gradually round inside the bird, keeping near to the carcass, and loosen all the ligaments you come across. Now make a small slit at the other end by the side of the leg, put in your finger, and loosen in the same way. Take hold of the gizzard and pull. If you have broken all the ligaments properly, the whole of the inside will come out with the gizzard. Wipe out the bird with a damp cloth, and rub in some salt and lemon. Remove the gall-bag from the liver, pull the neck from the head. Cut the skin of the

gizzard through the fleshy part, and peel it off; in the middle is a bag full of stones. You must be careful not to cut into this, or it will be more difficult to remove.

Wash the giblets well in warm water.

Truss the bird into shape.

For roasting, the legs are chopped off near the thighs. Draw out the sinews, twist the pinions backwards so that the tips are under the body, force the legs well down and into the sides so that it will stand firmly on the dish.

Run the needle through the second wing-joint into the upper joint of leg, through the body, and turn the fowl on its breast. Fold over the loose piece of skin at the back, pass the needle through the top of the wing, through the back, catching up the piece of skin, and out through the top of opposite wing, draw tightly, and tie. At the other end, run the needle into the back, press the legs closely together, take a stitch through, passing the string over each leg and out at the back.

For boiling, cut the legs off at the first joint. Put your fingers in at the lower slit by the leg, and loosen the skin all round the legs, taking care not to break it. Press the leg from you with your thumb, and draw the skin towards you at the same time with your other hand, so that the legs can be slipped underneath and inside the body. Now pass a trussing-needle and string through the end of the back, over the legs, and out through the back. Tie the ends tightly together—this will keep the legs well down inside the body—bend the tail upwards, draw the skin over, and tie securely with string.

Turkeys are trussed in the same way as fowls.

How to bone a Fowl.

The fowl should not be drawn. Singe and wipe it with a damp cloth, make a slit in the skin at the back of the neck, loosen it round as far down as possible, and cut off the neck. Sever the tendons that connect the wings, and scrape off the flesh close to the bones. Next remove the merry-thought,

and with the fingers loosen the flesh round the carcass until you come to the leg-joints. Disjoint them, and loosen the rest of the flesh until it is all free from the carcass. Now remove the bones from the legs and wings.

If for a galantine, cut off the first joints of the wings before boning. When boned, draw the legs and wings inside, and lay the meat flat on the board ready for stuffing.

Chaufroid of Chicken.

1 boiled chicken.	1 truffle.
3 gills béchamel sauce (see p. 152).	Salad.
1 pint aspic jelly.	Mayonnaise sauce.

(Enough for 6 or 7 persons.)

Cut the chicken into joints, remove the skin, put the pieces on to a strainer with a dish underneath; warm the sauce, add $\frac{3}{4}$ gill of aspic, mask the chicken with this. When set coat with aspic, put a little salad in the middle of a dish, arrange the chicken in a heap, garnish with the rest of the jelly chopped and a little salad. If liked, the chicken may be decorated with truffles cut into fancy shapes before coating with aspic.

Devilled Chicken-legs.

2 legs of cooked chicken.	2 teaspoonfuls white sauce.
3 tablespoonfuls breadcrumbs.	2 teaspoonfuls chutney.
1 oz. butter.	Cayenne, pepper, and salt.
2 teaspoonfuls mixed mustard.	

Remove the skin from the chicken. Spread the crumbs on a tin, and put them in the oven to brown. Melt the butter and dip the chicken-legs in it, masking them well all over. Chop the chutney, and mix it with the mustard, sauce, and seasoning; spread this all over the chicken, roll in the breadcrumbs, and place on a buttered tin with some pieces of butter on the top. Bake for twenty minutes. Sprinkle with Worcester sauce, garnish with parsley, and serve at once.

Chicken Mould (Cold).

1 gill cream.	Small cress.
$\frac{1}{2}$ pint aspic.	$\frac{1}{2}$ lb. cooked chicken.
3 oz. tongue.	Pepper, salt and cayenne.

(Enough for 6 persons.)

Whip the cream until stiff. Pour a little jelly into a mould or cake-tin, arrange strips of tongue (cut in fancy shapes) and cress in a pattern, set with more liquid jelly. Whip the aspic until quite white and stiff, and mask the mould with it. Mince the chicken and tongue, mix with the cream and seasoning, fill mould with it. Cover with a layer of whipped aspic. Leave until set, then turn out, and serve with salad or chopped jelly.

Chicken Mould.

Quenelle meat (made with $\frac{3}{4}$ lo. veal fillet ; see p. 80).	Pepper and salt.
7 oz. chicken meat or half a cooked chicken.	Pinch of cayenne.
2 oz. tongue.	1 teaspoonful lemon-juice.
1 gill white sauce.	$\frac{3}{4}$ pint white sauce (made with 2 gills chicken stock and 1 gill milk).

Line a buttered mould ($1\frac{1}{4}$ pints) with quenelle meat. Cut the chicken meat and tongue into dice, mix with the sauce, add seasoning and lemon-juice. Put into the mould and cover with the rest of the quenelle meat. Steam thirty to forty minutes. Turn on to a hot dish, coat with the sauce.

Chicken à la Russe.

1 chicken.	Pepper and salt.
3 oz. ham.	1 pint white sauce (made with the chicken stock and milk).
3 hard-boiled eggs.	1 lemon.
2 tablespoonfuls breadcrumbs.	White of 1 egg.
1 teaspoonful chopped parsley.	
1 oz. butter.	

(Enough for 6 or 7 persons.)

Bone the chicken, draw in the legs, lay it flat on a board. Put a layer of ham cut in thin slices, then two of the eggs cut in quarters lengthways. Sprinkle over the breadcrumbs,

parsley, pepper, salt, and butter mixed together. Roll up, and tie in a cloth. Put the bones into a saucepan with enough water to cover, a few peppercorns, and salt. When boiling put in the chicken, and simmer gently for an hour and a half. Take out, remove the cloth, put on to a hot dish, coat with the sauce, with which you have mixed the white of egg chopped finely. Decorate with the yolk rubbed through a sieve, garnish with the slices of lemon, egg, and parsley.

Roast Ducks.

A couple of ducks.	1 pint stock.
Sage stuffing (see p. 158).	Seasoning.
Flour.	Watercress.
Dripping.	1 pint apple sauce.
$\frac{1}{2}$ pint brown sauce.	

(Enough for 6 or 7 persons.)

Hang the ducks for a day or two; pluck, draw, and singe them. Stuff one, and truss them both nicely, spread with good beef dripping. Put the giblets into a saucepan with the stock and some peppercorns, stew them for the gravy. Roast the ducks before a clear fire or in the oven from one to one and a quarter hours, basting well. Take out of the oven, untruss, and put them on to a hot dish. Pour off the dripping from the tin, mix in a little flour, put over the fire to brown, mix in the brown particles from the sides of pan. Add the stock and brown sauce and seasoning, boil for five minutes. Strain into a tureen. Garnish the ducks with watercress. Serve with apple sauce, green peas, and potatoes.

Boiled Fowl.

1 fowl.	Pepper and salt.
Stock to cover.	Parsley.
1 pint white sauce.	Boiled ham or bacon.
1 hard-boiled egg.	

(Enough for 5 or 6 persons.)

Draw and truss the fowl, wrap it in buttered paper, and tie with string. Put it into hot stock with the giblets (the stock

must not be boiling, as it causes the skin to contract too quickly), simmer very gently until tender. When cooked lift out on to a hot plate, remove the paper and string, untruss, wipe with a clean cloth. Put it on to a hot dish, coat with sauce, and decorate with the yolk of egg (rubbed through a sieve) and the parsley. Serve with boiled ham or bacon, and the rest of the sauce in a tureen.

Roast Fowl.

1 fowl.
1 onion.
1 pint stock.
6 peppercorns.
2 bay-leaves.

Dripping for basting.
 $\frac{1}{2}$ lb. bacon (cut in thin rashers).
 $\frac{1}{4}$ pint brown sauce.
Bread sauce (see p. 154).

Draw and truss the fowl for roasting, rub it all over with an onion, wrap it in buttered paper, and tie with string if it is to be cooked in front of the fire. Put the giblets into a saucepan with the stock, some peppercorns, two bay-leaves, and salt, and stew well for the gravy. Put the fowl into a meat-tin, with water in the under one, and put it in a hot oven for the first ten minutes, then cook very gently, basting often. Thirty minutes before serving take off the paper, sprinkle the bird with a little flour, put back into a hot oven, and keep it well basted that it may look well browned and frothy. Trim the bacon, roll up, thread it on a skewer, and put in the oven for ten or fifteen minutes. Dish up the fowl, remove the string, put it on a hot dish. Pour off some of the fat in the tin, sprinkle in a little flour, put the pan over the fire and let the flour brown, then add the stock and the brown sauce. Boil for five minutes, season well, and if necessary add a little browning. Pour a little round the fowl, and garnish with the rolls of bacon. Serve with bread sauce and the rest of the gravy and vegetables.

White Fricassee of Fowl.

Remains of cold boiled fowl.	1 yolk of egg.
Liquor in which fowl was cooked.	1 gill milk or 3 tablespoonfuls cream.
1 onion.	Juice of 1 lemon.
1 oz. butter.	1 teaspoonful chopped parsley.
1 oz. flour.	

Cut up the chicken into neat joints, break up the bones that have no meat on them, and put them into a saucepan with the liquor in which the fowl was cooked and a small onion. Cook well for an hour or more. Strain off the stock and put the bones in the stockpot. Melt the butter in a saucepan, stir in the flour, add enough stock to make a thick sauce, put in the pieces of chicken, and simmer *very* gently for half an hour. Mix the milk with the yolk of egg, and add it gradually to the contents of saucepan. Stir in a teaspoonful of lemon-juice and the parsley. Pile on a hot dish, garnish with slices of lemon.

Galantine of Fowl.

1 fowl.	Onion.

$\frac{1}{2}$ lb. tongue.	A little glaze.
Carrot.	Some aspic jelly.
Turnip.	

(Enough for 9 or 10 persons.)

Bone the fowl, make a forcemeat of the veal and ham, season well. Cut the egg into slices and the tongue into strips. Lay the fowl on a board with the skin side downwards, and draw in the legs and wings. Spread half of the forcemeat over, then arrange the egg and tongue in alternate strips, spread the rest of the forcemeat over. Roll this up, tie firmly in a cloth. The giblets, after being prepared, should be put into a saucepan with the bones from the fowl and enough

cold water to cover. Bring to boiling-point, skim, add a small piece of turnip, carrot, onion, parsley, and a bay-leaf. Put in the fowl, and simmer gently from one and a half to two hours. Take it out and leave it for ten minutes, then untie it, roll up again firmly, put between two dishes with some weights on the top; leave until cold. Take off the cloth, wipe the galantine with a hot cloth to remove any fat, then glaze it. Cut off the ends. Put on a dish and garnish with chopped jelly. Serve with salad.

N.B.—The aspic jelly may be made from the stock the galantine is cooked in (see Aspic Jelly, p. 17).

Jugged Hare.

1 hare.	½ lemon.
1½ lb. steak.	2 bay-leaves.
Pepper, salt, cayenne.	1½ pints stock.
3 oz. flour.	1 glass port wine.
3 oz. butter.	2 teaspoonfuls red currant jelly.
1 onion.	Forcemeat balls, (see p. 158).
2 cloves.	

Well wash the hare, cut up into joints, and wipe with a clean cloth. Cut the steak into pieces. Mix the flour, pepper, salt, and cayenne. Fry the hare in the butter, first dipping it into the flour; then fry the steak and put it into a stewing-jar; then add the hare, the onion stuck with the cloves, the bay-leaves, and lemon. Cover with the stock in which you have mixed half of the port wine and the red currant jelly. Cover the jar closely, stand in a saucepan of boiling water, and cook gently for three hours. When ready to serve remove the onion, bay-leaves, and lemon. Pour off some of the gravy into a saucepan, thicken it with flour, put in the forcemeat balls to get thoroughly hot, and add the rest of the wine. Cook for ten minutes. Pile the pieces of hare in the middle of the dish, put the steak round. Pour over a little of the gravy, garnish with forcemeat balls. Serve with red currant jelly.

Roast Hare.

1 hare.	1 bay-leaf.
Veal stuffing No. 1 (see p. 158).	2 teaspoonfuls lemon-juice.
$\frac{1}{4}$ lb. butter.	1 tomato.
Slice of fat bacon.	Wineglass port wine.
$\frac{1}{2}$ pint milk.	Red currant jelly or orange
1 pint brown sauce.	salad.

(Enough for 10 persons.)

Supposing the hare is already paunched, wipe it well inside and out, fill with forcemeat, sew it up, truss into shape. Spread all over with butter or dripping, put the bacon upon the back of the hare. Place in a meat-tin with a little milk, roast it in the oven, basting frequently. Cook for about an hour and a half; time depends upon the size of the hare. Put the brown sauce into a saucepan with the bay-leaf, lemon-juice, and the tomato sliced. Stew slowly for about an hour. When the hare is cooked put it on to a hot dish, remove string. If there is much fat in the tin, pour off a little of it, sprinkle the tin with flour, let it brown by placing the pan over the fire. Pour in the brown sauce, add the wine, boil for a few minutes, strain, and serve in a tureen. Garnish the hare with watercress, and serve with red currant jelly or orange salad. If liked, Italian sauce may be used instead of brown sauce.

Chaufroid of Larks.

12 larks.	Macédoine (mixed vegetables).
1 jar foie gras.	1 pint aspic jelly.
1 lb. quenelle meat.	Glaze.
2 truffles.	

(Enough for 12 persons.)

Bone the larks and stuff with the foie gras. Mix the truffles (chopped) with the quenelle meat, butter some small moulds and line with this mixture, put a lark in each and press the meat round, making them a nice shape at the top (not covering up all the lark). Put these into a sauté-pan with enough water to come halfway up the moulds, cover with buttered paper, and

put in the oven to cook for twenty minutes. Turn out, and when cold glaze. Arrange on rounds of aspic jelly, decorate with aspic and macédoine. The glaze may be made by cooking the bones in butter, adding some brown sauce, and leaving it to simmer. Strain, and add a little melted aspic jelly to it.

N.B.—This can be made into a hot entrée by omitting the aspic and serving with sauce.

Pheasant Pie.

1 pheasant (partly roasted).
1 tablespoonful good gravy.
 $\frac{1}{2}$ lb. veal.
2 oz. ham.
 $\frac{1}{2}$ lb. sausages.

Pass the veal and ham through a mincing-machine, add the sausage-meat, seasoning, nutmeg, mace and parsley. Line a buttered pie-mould with the crust, spread the meat mixture all round inside, put in the game, add the gravy. Cover with the rest of the meat mixture, then cover with pastry. Decorate according to taste. Bake two to two and a half hours. When nearly cooked unmould and brush all over with yolk of egg, return to the oven till cooked. When cool fill up with nearly cold aspic. Garnish with aspic jelly.

Roast Pheasant.

1 brace of pheasants.
A little fat bacon.
 $\frac{1}{4}$ lb. butter.

2 croûtons or hot buttered toast.
Watercress.

The birds should be hung for about four days in a cold, dry, airy place. Pluck, singe, and draw them, scald and skin

the legs, chopping off the claws ; truss for roasting, tie a piece of fat bacon over the breast, and cook for about one hour, basting frequently with the butter ; remove the bacon and untruss. The pheasants should be placed on the croûtons or buttered toast, and garnished with watercress. Serve with bread sauce, red currant jelly, fried crumbs, and good gravy made from the giblets of the pheasants, and some stock made from poultry or game trimmings.

For Fried Breadcrumbs.—Make some white breadcrumbs, put some butter into an enamelled stewpan ; when melted put in the crumbs, and stir over the fire until they begin to brown. Put them on tissue or blotting paper in the oven for a few minutes. Serve on a d'oyley.

Put the trimmings into a stewpan with the celery, onion and herbs, pour in the stock. Bring to boiling-point, put in the pigeons, cover them with buttered paper, put on lid of stewpan, and cook gently for three-quarters of an hour if large pigeons, half an hour for small ones. Lift them out on to a tin, brush over with glaze, put the bacon on the tin, and put it into the oven for ten minutes. Strain the stock, and let it boil very rapidly with the lid off, until reduced to about $1\frac{1}{2}$ gills ; keep it well skimmed. Boil the fancy vegetables in a little salt and water for fifteen minutes. Put the pigeons on to a hot dish, remove string, strain over the sauce, garnish with little heaps of bacon and vegetables.

CHAPTER VI

VEGETABLES AND SALADS

RULES FOR GREEN VEGETABLES.

1. CHOOSE freshly gathered vegetables.

2. Wash well; cut leeks down one side, so that all grit can be easily removed. Soak cauliflowers and cabbages in salt and water to draw out the insects, cut across the stalks several times. Wash spinach in several waters—it is apt to be very gritty—remove the stalk and mid-rib from each leaf. Brush celery well, scrape the stalks of asparagus, and trim them evenly. Wash kidney beans well before cutting them up.

3. Burn all parings and waste vegetable matter if possible; they quickly decay, and the gases given off are very poisonous. The water in which they are boiled should not be poured down the sink while it is hot.

4. Cook in plenty of boiling water with 1 oz. of salt to each gallon of water, and if the water is very hard a small piece of soda should be added. Exception: *spinach*, which is cooked without any soda, and only enough water to cover. It is very watery, and is often cooked in its own juices only, but is then rather dark in colour. *Peas* should have a little sugar and mint boiled with them, but no soda. *Cabbages* are more wholesome if blanched before cooking.

5. Put into boiling water, and cook with the lid off.

6. Bring to boiling-point as quickly as possible after they are put into the saucepan, and keep the water boiling fast. Skim well. *Peas* should be boiled slowly.

7. Try with a skewer or trussing-needle to see if they are tender.

8. Drain well. Cabbages and greens must be well pressed after draining. Cut them across before serving.

9. Serve as quickly as possible after they are cooked.

RULES FOR ROOTS AND TUBERS.

1. Wash well, and prepare according to the vegetable. *Potatoes* should be scraped or peeled very thinly unless cooked in their skins; *carrots* should be scraped, *turnips* peeled thickly, *onions* skinned and blanched before cooking; *parsnips* scrubbed and cooked in their skins, removing them just before serving, and cutting the parsnips in quarters lengthways.

2. Put roots and tubers into boiling water, except old potatoes, which are put into cold.

3. Cook gently with the lid on. Skim well.

4. Try with a skewer or needle to see if cooked.

5. Potatoes should never be cut through. Young potatoes may have a little mint boiled with them.

CHAPTER VIII

SAUCES, FORCEMEATS, AND FLAVOURING BUTTERS

SAUCES.

A SAUCE is a liquid seasoning which always contains some kind of a liaison. It differs from a gravy in that a gravy is transparent, and osmazome forms its characteristic flavour.

The art of sauce-making consists in preparing liquids from the various ingredients employed, and cleverly blending the various flavours.

Sauces may be divided into two kinds, viz. :

- a.* Plain sauces, or those which are quickly prepared.
- b.* Rich sauces, or those which require much preparation.

Sauces are thickened by means of a liaison, which is a thickening or binding.

Liaisons may be of several kinds :

1. Roux, which may be white, fawn or brown.
2. Egg liaisons, consisting of yolks of eggs and cream.
3. Butter and cream.
4. Farinaceous products, as flour, cornflour, etc.

Sauces should be cooked for some time, so as to extract the flavour of the different ingredients. Overcooking, however, renders a sauce oily, but if a teaspoonful of cold water is added its original consistency will be restored.

When adding hot liquid to a sauce use a whisk, and so avoid the formation of lumps.

Espagnole and béchamel sauce are known as foundation sauces. From espagnole we derive the brown sauces, and from béchamel the white sauces.

COMPOSITION OF SAUCES.

Fats.	Thickening.	Liquids.	Flavouring.	Seasoning.
Clarified fat. Dripping. Lard. Oil. Butter.	Flour. Cornflour. Roux. Eggs.	Water. Milk. Cream. Gravies. Stocks. Syrups. Wine. Fruit juices.	Vegetables. Essences. Lemon-juice. Vinegar. Wine. Mirepoix. Liqueurs. Flavouring butters. Bouquet garni.	Salt. Peppers. Cayenne. Sugar. Mustard. Spices.

A mirepoix is a flavouring consisting of ham or bacon, vegetables, thyme, and bay-leaves. If required for a brown sauce, it is browned.

A bouquet garni consists of a few sprigs of parsley, sprig of thyme and marjoram, a bay-leaf, two cloves, a spring onion, and a strip of lemon-rind.

Flavouring butters take their name from their characteristic ingredient, as horseradish butter, coral butter, etc. They are much used for sauces, and will keep for some time if put into a small jar and covered over.

Plain sauces are nearly all made from the same foundation, a simple white sauce. This sauce, with the addition of essence of anchovy, a few shrimps, a hard-boiled egg, or sugar, at once becomes anchovy, shrimp, egg or sweet sauce. The sauce should be gently reheated after these additions till the added matter is warmed through. If cream is used it should be added at the very last, just before serving. Thus, when the art of making the foundation is thoroughly understood a variety of sauces can be easily made.

Flavouring butters are added to sauces by whisking in a little at a time after the sauce is made. This restores to the sauce the flavour of butter that it would lose during long cooking. If added too quickly the sauce will become oily-looking, and whilst the butter is being added the saucepan should be lifted from the fire.

Sauces may be strained through a fine strainer, or by means of a tammy cloth. Tammy cloth costs about 2s. per yard, and one cloth will last for a considerable time.

A sauce that has been tammied is of a much smoother consistency; it is also a less wasteful method.

To reduce a sauce, allow it to boil quickly with the lid off the saucepan.

CHAPTER IX

OMELETS AND SOUFLÉS

NOTES ON OMELETS.

OMELETS are composed chiefly of eggs, and may be either savoury or sweet. When cooked they should be of a pale-brown colour on the outside, and of a soft creamy consistency inside.

The pan used for omelets should be of tinned iron or copper, and be kept for omelets only.

The preparation of the pan is of the greatest importance. It should not be washed, but cleaned by putting in a handful of salt, and placing the pan over the fire for a few minutes, until the salt begins to burn, then throwing it away and rubbing the pan with soft paper until it is bright. For savoury omelets a shallot cut in half and rubbed over the pan will give a delicious flavour.

Directly the mixture is poured into the pan it should be stirred until it begins to set, when great care must be taken that it is folded and served before the eggs become overcooked. A few seconds too long will render the omelet tough and leathery.

Savoury omelets are often served with a sauce. They are never served on a dish paper. Soufflé omelets (sweet) may be.

Omelets require practice, as it is only by observation and dexterity that one can become proficient in the making of them.

Rules.

1. Do not wash the pan, but clean it with salt.
2. Mix the eggs well with a fork, but do not beat them, except when the yolk and whites are separated, as for sweet omelets, when it is necessary to beat both yolks and whites thoroughly.
3. Let the butter get hot before pouring in the mixture.
4. Stir until the mixture begins to set, then fold.
5. Serve a savoury omelet on a hot dish, with or without sauce, as preferred. Serve a sweet omelet on a dish paper.
6. Serve all omelets directly they are made.

NOTES ON SOUFFLÉS.

A soufflé is a light, spongy pudding, consisting of a foundation sauce made of butter, flour, and milk or stock, lightened with the whipped whites of eggs. It can be either baked or steamed, and may be savoury or sweet.

Care must be taken not to use too much flour, or it will be too firm. Biscuit flour is generally used, being more starchy, but a small quantity of cornflour added to ordinary flour will answer the same purpose. It must be cooked slowly and steadily, as it is apt to fall when cooked quickly. It should be served directly it is firm enough to turn out, as beyond this point it shrinks and becomes tough and leathery.

Rules.

1. Well butter the tin, and use clarified butter.
2. Tie a band of stiff paper round the top of the tin to come about 4 inches above. When baking soufflés in small cases, butter them, and tie a band of stiff paper round to come about 1 inch above the case.
3. Cook the sauce or panada thoroughly.
4. Beat well after adding each yolk of egg.
5. Whisk the whites stiffly and mix them in at the last.
6. If the soufflé is to be steamed, cover it with a piece of buttered paper.

7. Cook slowly and steadily.

8. Serve a baked soufflé in the tin in which it is baked. Remove the paper, and wrap a dainty dish paper or folded d'oyley round the tin. Serve without sauce.

9. Turn a steamed soufflé out, and pour the sauce round, if a syrup sauce. A custard sauce may be poured over if preferred.

CHAPTER X

PUDDINGS AND SWEETS

RULES FOR SUET PUDDINGS.

1. WHEN *boiling* a pudding allow sufficient water to cover it. When *steaming*, only enough to come half-way up the sides of the basin. In the case of a proper steamer being used, nearly fill the under vessel.

2. Steaming is suitable for very light mixtures, and when the basin or mould is not quite full.

3. Allow longer for steaming than for boiling, and be careful the saucepan does not boil dry.

4. Puddings containing a large quantity of suet require a long time to cook, and in most cases it is more satisfactory to boil them.

5. Breadcrumbs mixed with the flour help to make the pudding lighter.

6. When baking-powder is used less suet is required to lighten the pudding.

7. Use from 6 to 12 oz. suet to 1 lb. of flour.

8. Well butter the pudding-basin. For a boiled pudding cover the pudding with a piece of buttered paper before tying on the cloth. For a steamed pudding cover with buttered paper only.

9. For rich Christmas puddings, after covering with paper put over a paste of flour and water, then tie over the cloth. When cooked remove the cloth and paste without disturbing

the grease-proof paper. Tie a clean cloth over, or cover with brown paper.

10. When only a cloth is used it must be well floured. The pudding mixture must then be made into a good shape, and tied up firmly in the cloth. When a pudding is cooked in this way a plate should be put into the saucepan to prevent the cloth from sticking to the bottom.

11. Put the pudding into boiling water, and keep it boiling all the time.

12. Fill up the saucepan from time to time with boiling water.

13. Serve with a suitable sauce or custard.

RULES FOR MILK PUDDINGS.

1. Use very fresh eggs and milk. In warm weather a pinch of carbonate of soda will prevent the milk from curdling.
2. If skim milk is used a little butter should be added to supply the loss of cream.
3. Be careful to use very clean saucepans, moulds, pie-dishes, etc., and see that the oven is quite clean, as milk quickly absorbs any flavour.
4. Always add a little salt.
5. Essences used as flavourings, such as vanilla or almonds, should, where possible, be added after the pudding is cooked.
6. For baked puddings, to every pint of milk allow 2 oz. rice, sago, tapioca, macaroni, semolina, etc. For a mould or shape allow 3 oz. if serving cold, and 4 oz. when hot.

7. Of cornflour, farola, wheat crystals, or any of the preparations specially prepared for moulds, allow 2 oz. to every pint.

8. The moulds must be well scalded, rinsed in cold water, and left wet for cold puddings, but buttered for hot.

9. Macaroni, and tapioca, should be soaked in milk for two or three hours before using. Rice also is the better for being first soaked.

10. All starchy foods require to be well cooked.

11. Eggs require very light, slow cooking; therefore they should be added if possible after the cereal is cooked, just before finishing the pudding.

12. The dishes in which milk puddings are baked should be placed in a tin containing a little water. This will help to prevent the pudding from burning or boiling over. The dish must not be filled too full.

13. For a baked custard the pie-dish should be lined with pastry to absorb the moisture. Never move a custard while baking.

14. If using an ordinary saucepan for steaming a custard a folded paper placed in the bottom of the saucepan will reduce the heat somewhat, and the custard will not be so liable to curdle.

NOTES AND RULES ON BATTER.

Batter comes from the word *battre*, 'to beat,' thus implying that all batter has to be well beaten. It is composed chiefly of flour, eggs, and milk.

A frying batter is rather thick, and is used for coating fish, meat, fruit, and vegetables. Beaten up white of egg is added to lighten it and make it very crisp.

Frying batter for fish is improved by the addition of lemon-juice.

Batter should not be fried at such a high temperature as rissoles or croquettes.

Very clean a ft should be used, and not any that has been

discoloured by much using, or the colour of the fritters will be spoilt.

Batter should be left to stand for a few hours before using ; this makes it lighter.

The batter used for pancakes is much thinner than frying batter and made rather differently. This is also used for Yorkshire pudding, steamed batter pudding, toad in the hole, etc.

RULES FOR PANCAKE BATTER, ETC.

1. Sift the flour and add a pinch of salt.

5. Serve as soon as cooked.

NOTES AND RULES ON CREAMS.

There are three types of creams :

1. Whole creams—those made entirely of cream.
2. Fruit creams, consisting of cream and a purée of fruit.
3. Custard creams, made of custard and cream.

In each case the cream is whipped first. There is no difficulty in doing this in the winter, providing the cream is thick, but in hot summer weather it is apt to become buttery. It should be whipped in a cold place, and not too quickly. Use only enough gelatine to insure the cream turning out. Whole creams will set with less gelatine than fruit or custard creams. They should not be turned out of the moulds until they are wanted. Put them in a very cold place—on ice if possible. They are easier to turn out if the moulds are masked with clear jelly. This can be set with some suitable decoration, such as gold-leaf, fruit, or nuts. To mask a mould, stand it on ice, pour in enough jelly to cover the bottom ; when set pour in a little more, and turn the mould slowly round and round on the ice until the sides are coated. Arrange the decoration tastefully, and set it with more jelly. Tinned copper moulds will be found best for moulding jellies and creams. They are easier to unmould than china ones.

Rules.

1. Use double cream (*i.e.*, cream that has stood on the milk for twenty-four hours), unless separated by machinery.
2. Mask the mould with clear jelly, and set it with some suitable decoration. If gold or silver leaf is used it must be mixed with a little jelly.
3. Whisk the cream in a cold place until it clings to the whisk.
4. For fruit creams rub the fruit through a hair sieve with the sugar. Some fruit requires stewing first.
5. Use very little gelatine—about $\frac{1}{2}$ oz. to a pint in the summer, and less in the winter.

6. Dissolve the gelatine in water, using 1 gill to 1 oz. of gelatine. It must be only lukewarm when added, or the heat will destroy the lightness of the cream. If too cold it will not mix properly, and the cream will be rough and lumpy. For a custard cream dissolve the gelatine in the custard.

7. Pour the mixture into the mould as soon as the gelatine is properly mixed in, and before it begins to set, or the cream will be rough and lumpy.

8. To unmould dip the mould in warm water and turn on to a cold dish.

Meringues.

4 whites of eggs.	$\frac{1}{2}$ teaspoonful essence of vanilla.
$\frac{1}{2}$ lb. castor-sugar.	$\frac{1}{2}$ pint cream.

(Enough for 12 meringues.)

Choose a flat board about an inch thick, soak it in cold water, and cover with a sheet of stiff white paper dipped in cold water. Mix the vanilla with the sugar, beat the whites of eggs until very stiff, mix in the sugar lightly, put the mixture into a forcing-bag with a plain tube at the end, and force on to the prepared board in egg or pyramid shapes ;

sift well with castor-sugar ; bake in a slow oven until crisp. Lift the cases carefully from the board, scoop out the soft part from underneath, put them on a clean dry piece of paper or a baking-sheet with the hollow side upwards, sift with sugar, and put back into the oven to dry. Fill with the cream, joining two together. The cream must be whipped and flavoured with vanilla and sugar. Coffee essence and chocolate are nice for flavouring.

Rules for Clear Jelly.

1. Have all utensils perfectly clean. Scald them before using, and do not dry them.
2. Have no flour about, as jelly is easily clouded ; a few grains would spoil the brilliancy.
3. Put the sugar, gelatine, and water into a saucepan first (letting the gelatine rest on the sugar), so that it will be softening while the other ingredients are being prepared. If Nelson's opaque gelatine is used, it should be soaked several hours before using.
4. The stiffening properties of gelatine vary in different makes, therefore it is safer to keep to one kind, so that you may know exactly the amount to use. The proportion is from 1 to 1½ oz. to each quart of liquid. The jelly should be only just stiff enough to stand. Use a little more gelatine in summer than winter.
5. Pare the lemons very thinly without any of the white.
6. Use whites and shells of eggs to clear the jelly. Wash the eggs before breaking. The whites should be slightly beaten, and the shells broken up.
7. Whisk the jelly well until boiling.
8. Have a good fire and bring quickly to boiling-point.
9. Remove the whisk directly the jelly begins to boil ; let it stand for five or ten minutes before straining.
10. Use a tea-cloth in preference to a jelly-bag.
11. Strain in a warm place, have the basins and cloth hot ;

plenty of boiling water should be poured through just before the jelly.

12. Jelly for keeping must be boiled after it is cleared and strained, to reduce it a little.

13. Wait until the jelly is cool before moulding; the steam is apt to cloud it.

14. Rinse the moulds in cold water before using.

15. To unmould dip the mould in warm water and turn on to a cold dish.

Lemon Jelly.

6 oz. loaf-sugar.	1 inch cinnamon.
1½ oz. Marshall's gelatine.	1 clove.
1½ pints water.	Whites and shells of 2 eggs.
5 juicy lemons.	

(Enough for 1½-pint mould.)

Put the sugar, gelatine and water into a saucepan. Peel the rind from three of the lemons very thinly, strain the juice of all five, and make it up to ½ pint with water. Put the saucepan with the gelatine, etc., over the fire and stir with a whisk until the gelatine has dissolved, then add the lemon rind and juice, cinnamon, clove, the whites slightly beaten and the shells broken. Whisk well until boiling. Take out the whisk, let it stand by the side of the fire for five or ten minutes, strain through a tea-cloth. The first that runs through will be muddy; return it to the cloth, and wait until it runs clear. When cool mould.

Claret Jelly.

6 oz. sugar	1 clove.
1 pint water.	1 inch cinnamon.
1¼ oz. Marshall's gelatine.	1 tablespoonful red-currant jelly.

Make as for Lemon Jelly, adding the brandy after clearing.

Russian Jellies.

1 pint pineapple jelly.
Cochineal and green colouring.

(Enough for 8 or 9 dariole moulds.)

Strawberries in Jelly.

1 pint wine jelly.
About ½ lb. firm, ripe strawberries.

(Enough for 6 or 7 persons.)

Rinse a pint mould in cold water, put a little of the jelly in the bottom; pick the stalks from the strawberries, which should be as nearly of a size as possible. When the jelly in the mould has nearly set, arrange a few strawberries on it in

a pattern, first dipping them in a little jelly ; then add a little jelly, and when well set add enough jelly to well cover the strawberries. Fill the mould in this way with the jelly and strawberries. When cold turn out into a glass dish. If the mould is stood on ice or in water while being filled the jelly will set much sooner.

Surprise Oranges.

6 oranges.
1 quart jelly.
Carmine.

(Enough for 10 or 12 persons.)

Cut a small round from each orange, remove the inside with as much of the white part as possible, put in water, colour half of the jelly red. N.B.—This sweet may be varied by whipping the whites to a stiff froth and stirring them in lightly at the end.

Orange Jelly.

1 oz. Marshall's gelatine.		2 lemons.
3 gills water.		6 large juicy oranges.
$\frac{1}{2}$ lb. loaf-sugar.		

(Enough for 9 dariole moulds.)

Soak the gelatine in the water with the sugar and the rind of one lemon and two oranges for fifteen minutes. Put it

into a saucepan and stir over the fire until dissolved, strain into a basin. When cool strain in the orange and lemon juice.

Beat the whites to a very stiff froth, add the gelatine, water, etc., whisk well till it begins to stiffen, pour into a wet mould. When set turn out on to a glass dish.

Pineapple Sponge (1).

$\frac{1}{2}$ tin of pineapple.	Whites of 3 eggs.
$\frac{1}{2}$ oz. gelatine.	$1\frac{1}{2}$ oz. castor-sugar.

(Enough for 7 or 8 persons.)

Dissolve gelatine in the syrup, which should be made up to $\frac{1}{2}$ pint with water. Cut the pineapple into small pieces, reserving some larger ones for decorating. Beat whites to a stiff froth, add the gelatine, which should be cool, and whisk until it is nearly setting; add the sugar and small pieces of pineapple, whisk a moment or two longer. Pile roughly in a glass dish and decorate with the rest of the pineapple.

Pineapple Sponge (2).

$\frac{1}{2}$ tin of pineapple.	4 oz. sugar.
3 whites of eggs.	1 tablespoonful red-currant jelly.

(Enough for 5 or 6 persons.)

Cut up the pineapple in small pieces and put into a glass dish. Whip the whites to a stiff froth, add a little sugar and

a little syrup and jelly in turns until it is all mixed in, add a little cochineal. Put the mixture into a forcing-bag and decorate the pineapple.

NOTES AND RULES FOR STEWING FRUIT.

1. For apples, plums, apricots, green gooseberries, etc., make a syrup of sugar and water. Allow for each pound of fruit $\frac{1}{4}$ lb. of sugar and 2 gills of water. Boil the sugar and water together for ten minutes, prepare the fruit, put it into the syrup, and cook till tender.

2. For very juicy fruit, such as raspberries, currants, rhubarb, etc., about half the quantity of water should be used in making the syrup.

3. Dried fruit, such as prunes, pippins, French plums, pears, apricots, apples, or apple-rings, should be washed, and then soaked overnight in enough water to cover them. Then stew in the water in which they have been soaked till tender, adding the sugar (2 or 3 oz. to the pound) and suitable flavourings.

4. For hard stewing pears allow $\frac{3}{4}$ pint of water and 3 oz. of sugar to each pound; being so hard, they require long stewing and the water evaporates.

Juice of 1 lemon.
2 tablespoonfuls apricot jam.
1 teaspoonful cornflour.

Crack the stones and remove the kernels, put a little of the liquid jelly in the bottom of a glass dish, arrange some of the apricots in a layer with the cut side uppermost and half a kernel in each half apricot, pour over a little jelly at the point of setting, and when set sprinkle over some chopped jelly. Arrange rest of the apricots, liquid jelly, and chopped jelly in this way, building them up in a pyramid shape. Sprinkle over a little chopped jelly and decorate with the pistachio-nut.

Compote of Fruit.

Make a syrup of the sugar and water and lemon-juice, stew the whole apples in it till tender, decorate them with the blanched almonds, and fill up centres with the jam. Arrange the prunes in a glass dish, put the apples on top, and then the apricots round. Reduce the syrup, and when cool pour it over the compote.

CHAPTER XI

BREAD AND PASTRY

RULES FOR BREAD-MAKING.

1. FOR a good home-made loaf use household flour; it is more nourishing and makes a moister loaf.
2. For milk rolls and fancy bread use pastry flour; it is lighter.
3. Use good, fresh German yeast; it should be pale in colour, breaking cleanly, and not sticky.
4. Use tepid water for mixing. To get this take one-third of boiling water to two-thirds of cold.
5. Use a warm pan, and keep the dough at an even temperature.
6. Knead well.
7. Let the dough rise well before making it into loaves.
8. Have a very hot oven at first, allowing it to cool down gradually.
9. Time the bread, allowing one hour for a half-quartern loaf, and from one and a quarter to one and a half hours for a quartern.
10. For tin bread the dough should be left to rise for ten minutes after it is put into the tins before baking.
11. Bread should be turned upside down when it comes out of the oven.

Brown Bread No. 1.

1 lb. whole meal.	1 teaspoonful salt.
$\frac{1}{2}$ lb. white flour.	$\frac{1}{2}$ pint milk.
2 large teaspoonfuls home-made baking-powder (see p. 232).	$\frac{1}{2}$ pint water.

(Enough for 2 half-quartern tins.)

Mix the whole meal, flour, baking-powder, and salt together; add the milk and water, mix quickly, put into two buttered bread-tins, bake for one hour.

N.B.—White bread may be made in the same way.

Brown Bread No. 2.

2 $\frac{1}{2}$ lb. whole meal.	2 teaspoonfuls salt.
1 lb. white flour.	1 teaspoonful sugar.
1 oz. yeast.	1 $\frac{1}{2}$ pints tepid water.

Make as for White Household Bread.

White Household Bread.

3 $\frac{1}{2}$ lb. flour.	1 teaspoonful castor-sugar.
1 oz. German yeast or 2 table- spoonfuls brewer's yeast.	1 $\frac{1}{2}$ pints tepid water.
	$\frac{1}{2}$ oz. salt.

Pass the flour through a sieve into a warm basin, make a hole in the middle of the flour. Break up the yeast, add the sugar, cream together until liquid, pour into the hole, in the flour, add the water, and stir in enough flour from the sides to form a thick batter. Sprinkle with flour, put the salt round the sides (this is called setting the sponge), cover the pan with a cloth, and put in a warm place for half an hour. Knead into a firm dough. The pan should be quite clean, and on cutting the dough through it should be smooth and free from dry bits. Put again in a warm place for one and a half or two hours. It should swell to more than double the size. Turn the dough when ready on to a floured board, and

make into two loaves. Put them on a floured tin, and bake for one hour.

N.B.—The oven must be very hot when the bread is put in.

Milk Rolls.

1 lb. flour.	1 oz. butter.
1 teaspoonful salt.	$\frac{1}{2}$ pint milk (barely).
$\frac{1}{2}$ oz. yeast.	1 egg.
1 teaspoonful sugar.	

(Enough for 18 rolls.)

Pass the flour and salt through a sieve into a warm basin, cream the yeast and sugar together. Put the butter and milk into a saucepan; when warm add them to the egg (well beaten) and the yeast. Add these to the flour, and mix into a light dough with a wooden spoon. Leave in a warm place until well risen—from one to one and a half hours. Turn the dough on to a board, divide into eighteen pieces, make into shapes. Put on a buttered tin, and leave in a warm place for fifteen minutes. Bake in a hot oven for about fifteen minutes. Brush over with milk.

NOTES AND RULES ON PASTRY.

The variety in pastry depends chiefly on the way in which the butter is added.

In *short crust* it is rubbed into the dry flour.

In *flaky* the flour is mixed into a paste, and the butter spread all over. It is then folded up many times, thus forming when baked a number of layers or flakes.

In *rough puff* the butter is cut into large pieces, and mixed with the flour.

In *puff* the flour is mixed into a smooth paste, and after being rolled out the butter is placed in the centre and wrapped up, and then rolled out with the paste, forming large flakes of fat.

In the process of rolling and folding these flakes become more or less mixed up, causing a puffiness which we do not get in short or flaky.

Rules for Pastry.

1. Use the finest flour, passing it through a sieve with the salt and baking-powder if used.
2. Keep everything as cold as possible.
3. For short crust the butter must be rubbed in with the tips of the fingers until it looks like breadcrumbs.
4. Use water sparingly, especially for short crust.
5. Mix with a knife.
6. Use very little flour in rolling, merely dusting the paste and board with a brush.
7. For glazing tarts use one white of egg and two teaspoonfuls of water. Beat them up together slightly, brush over the pastry, and sift with castor-sugar.
8. Have a very hot oven for puff pastry, and a cooler one for short crust.
9. Do not take it out of the oven until quite cooked; it should then feel firm.
10. While the pastry is baking avoid opening the oven door wide, or shutting it quickly. Cold air or a sudden draught makes the pastry sink.
11. Pastry should always be left to cool in a warm, dry place.
12. Keep it in a dry and well-ventilated place.

Choux Pastry.

$\frac{1}{4}$ lb. flour. Pinch of salt. 1 teaspoonful cornflour.		2 oz. butter. $\frac{1}{2}$ pint water. 2 whole eggs and 1 yolk.
--	--	--

Mix the flour, salt, and cornflour together. Put the butter and water into a saucepan; when boiling stir in the flour. Cook well until it leaves the sides of the saucepan. Take off the fire, and beat in the eggs one at a time. Season or flavour as required.

Flaky Crust.

$\frac{1}{2}$ lb. flour.		About 1 gill water.
Pinch of salt.		$\frac{1}{4}$ lb. butter.

Mix the flour into a smooth paste with the water, roll out thinly to a square shape, spread the butter all over it, sprinkle with flour, fold in three beginning from the top, then in three beginning from the sides. Roll out thinly, fold in three beginning from the top. Press the edges together, turn pastry round, roll out again, fold in three. The pastry is now ready to use.

Puff Pastry.

$\frac{1}{2}$ lb. flour.		Pinch of salt.
$\frac{1}{2}$ lb. fresh butter.		About 1 gill water.

Rub 1 oz. of the butter into the flour, make a hole in the middle, and pour in water gradually, working it into a stiff paste. Leave for a few minutes. Press out the butter in a floured cloth to a square shape, flour well. Roll out pastry to a long shape, three times the length of the butter, and twice as wide. Place the butter in the centre, fold over the pastry from the top and bottom, then fold over the sides. Press with the rolling-pin, turn over, roll out thinly to a square, fold in three sideways, roll out a little longer, fold in three beginning from the top. Leave in a cool place for ten or fifteen minutes, roll out twice more in the same way.

Note.—Six oz. butter, or even 4 oz., might be used to $\frac{1}{2}$ lb. flour if a cheaper pastry were required.

Rough Puff Pastry.

$\frac{1}{2}$ lb. flour.		Salt.
5 or 6 oz. butter.		About 1 gill water.

Cut the butter into large pieces and mix with the flour, make a hole in middle of flour, and mix gradually with the water, taking care not to break the lumps of butter. Leave for five minutes. Turn on to a floured board, roll out thinly, fold in three beginning from the top, press the edges together,

and put the pastry aside for ten minutes in a cool place. Roll out again, taking care that the side which has not any edges is to your right or left hand. Fold in three beginning from the top, press the edges together, turn round, roll out again, fold in three beginning from the top, roll out, fold up, and it is ready to use.

Raised Piecrust.

1 lb. flour.	1 gill milk.
$\frac{1}{4}$ teaspoonful salt.	1 yolk of egg
5 oz. lard or butter.	

Put the milk and butter into a saucepan; when boiling add to the flour and mix to a stiff paste, then work in the yolk of egg. For plain pies the yolk of egg may be omitted.

Short Crust No. 1.

$\frac{1}{2}$ lb. flour.	$\frac{1}{4}$ lb. butter, lard, or dripping.
1 teaspoonful baking-powder.	About $\frac{1}{2}$ gill water.
Pinch of salt.	

Rub the butter into the flour, mix to a stiff paste with cold water, turn on to a floured board, roll out, and it is ready to use.

Short Crust No. 2 (for Cold Fruit Tarts).

$\frac{1}{2}$ lb. flour.	1 tablespoonful castor-sugar.
Pinch of salt.	1 yolk of egg.
$4\frac{1}{2}$ oz. butter.	1 tablespoonful water.

Rub the butter into the flour, add the sugar, mix with the yolk of egg and water, knead until smooth, roll out and use.

Suet Crust.

$\frac{1}{2}$ lb. flour.	Salt.
$\frac{1}{4}$ lb. suet.	About 1 gill water.
1 teaspoonful baking-powder.	

Mix the dry ingredients together, mix into a stiff paste with the cold water, turn on to a floured board, and roll out to size required.

CHAPTER XII

CAKES

NOTES ON CAKE-MAKING.

THE two most important points in cake-making are the mixing and the baking.

The four chief ways of mixing are as follows :

1. Rub the fat into the flour, then add all the dry ingredients, then pour all the liquid in at once, only stirring just long enough to mix all together. This method is generally used for plain cakes.

2. Cream the butter and the sugar together, then beat in the eggs one at a time with a little of the flour, and stir in all the dry ingredients. This method is used for rich cakes.

3. Beat the sugar and eggs together until light and stiff, then mix in the flour lightly. This method is used for sponge and other light cakes.

4. Warm the sugar, butter, and treacle together, add this mixture to the dry ingredients, with the rest of the liquid, as in gingerbread.

In cakes where the lightness depends chiefly on the baking-powder (as in No. 1) care must be taken that they are put into the oven as soon as possible after the liquid is added.

In cakes where the butter and sugar are creamed together, the baking-powder may be omitted if the mixture is well beaten by hand for twenty minutes or more

RULES FOR CAKE-MAKING.

1. The oven must be quite clean.
2. Heat must be uniform.
3. The temperature of the oven should be highest when the cake is put in; the time of baking depends upon the thickness of the cake, rich mixtures taking longer than plain ones. The heat should be reduced a little after the cake is well risen. To keep a steady heat feed the fire often, putting on little fuel at one time.
4. Cakes should not be moved while baking until quite set, especially very light mixtures; it often shakes them down and makes them close and heavy.
5. The oven door must not be opened very wide when looking at the cakes; the door must not be slammed, as it causes a current of cold air.
6. When baked the centre will feel firm; another test is to pierce the cake with a trussing-needle or skewer: it should come out quite clean.
7. Put on a sieve to cool after taking out of the tins.

PREPARATION OF CAKES.

1. For rich cakes line the tins with well-buttered paper.
2. For plain cakes the tins must be well buttered.
3. Currants must be well washed and dried, then rubbed on a sieve or in a cloth, with a little flour, to remove the stalks.
4. Sultanas must not be washed, only rubbed with a little flour on a sieve or in a cloth to remove stalks.
5. Raisins should be stoned and cut in half.
6. Candied peel should be cut up finely.
7. Eggs should be broken separately, in case of bad ones.
8. Lemon-rind should be grated or chopped very finely, taking care that *no* white is used.

9. When dripping is used, it must always be clarified, or it will give a meaty flavour to the cake.

10. For sponge cakes oil the moulds or brush with clarified butter, then sprinkle with castor-sugar and flour mixed in equal quantities.

Method No. 1.

- (a) 1. Butter the cake-tins and line with buttered paper, except for the very plain cakes.
2. Prepare the fruit.
3. Pass the flour through a sieve with the salt and baking-powder (or cream of tartar and carbonate of soda).
4. Rub in the butter, lard, or dripping.
5. Add the fruit and sugar, mix all these dry ingredients together.
6. Beat up the eggs and add the milk to them.
7. Add the eggs and milk to the dry ingredients, and mix lightly but thoroughly.
8. Pour into the tins. Bake in a fairly quick oven.
- (b) 1. Butter a baking-sheet.
2. Pass the flour through a sieve with the salt and baking-powder (or cream of tartar and carbonate of soda).
3. Rub in the butter, lard, or dripping.
4. Add the fruit and sugar.
5. Beat up the eggs and add the milk.
6. Add the eggs and milk to the dry ingredients, mix all lightly but thoroughly.
7. Turn on to a floured board, divide into equal-sized pieces, make into shapes, handling as little as possible.
8. Put on to the baking-sheet, bake in a quick oven.
- (c) Same as *b*, except Rule 7, which is as follows: Pile the mixture roughly in little heaps on the baking-sheet.

Method No. 2.

- (a) 1. Line the tins with buttered paper.
2. Pass the flour, salt, and baking-powder through a sieve.
3. Prepare the fruit.
4. Cream the butter and sugar well together until the mixture will fall easily from the spoon.
5. Add the eggs one at a time, with a little of the flour, beating well after each.

CHAPTER XIII

ICINGS

RULES FOR ICING.

1. PASS the icing-sugar through a hair-sieve, taking care that the sieve and spoon are perfectly clean.

2. Strain lemon-juice before using.

3. For butter icing use the best fresh butter.

4. If butter icing becomes too soft in mixing, leave it to cool before using.

5. Take care not to let any cake-crumbs, etc., fall into the icing ; they stop up the forciers, causing loss of time and unnecessary trouble.

6. Keep the icing covered over after it is made, with a wet cloth to prevent the surface from getting dry.

7. Mix glacé icing smoothly before warming, and do not let it get very hot, as it loses its shiny appearance.

8. Before using test the consistency by lifting it up on the back of a wooden spoon. More sugar or liquid may be added as required.

9. Icing that is left over should be put into a jar and covered closely for future use.

10. Wash and dry the icing-bags and forciers directly they are done with.

11. For a rich cake that requires keeping for some weeks before it is cut, it is best to give it one coating of icing as soon as it is baked and cold, to keep in the richness, and not to finish icing and decorating until a day or so before it is wanted, in order that it may be as white as possible.

CHAPTER XIV

INVALID COOKERY

NOTES ON SICK-ROOM COOKERY.

ALL food sent into the sick-room should be dainty in appearance and pleasing to the palate.

Only the best materials should be used. Small quantities of each dish should be prepared, and not more sent up than the patient is likely to eat. Jellies set in small moulds, puddings baked or steamed in darioles, present a much more attractive appearance than a spoonful taken from a large jelly or pudding.

Silver should be bright, china shining, cloths spotlessly clean, for all this helps to make the food look inviting, and to tempt the appetite of the invalid.

Extreme care should be taken that all utensils used in the preparation of food are scrupulously clean.

No food should be left in the sick-room, and the patient should have no idea of what is being prepared ; for an unexpected dainty often tempts the appetite. When patients are convalescent there is a large variety of little dishes which are suitable, thus avoiding monotony.

Eggs form a useful part of the diet, and may be prepared in a number of ways. None but the best new-laid eggs should be used.

Beef-tea should be made in small quantities—only sufficient for the coming day. The cup in which it is served should be previously warmed, that the patient may receive it as hot as

possible. Toast may be served with it, unless the patient be on a strictly liquid diet.

Raw beef-tea should be served in a coloured glass, that the colour of the liquid may not be noticed. Brand's essence is particularly useful in cases of exhaustion.

Many dishes suitable for invalids will be found in other sections of this book.

Stimulants and acids should not be used without the doctor's permission.

If preferred, the mixture can be served cold, when the white of egg will be found to be more digestible.

Apple Soufflé No. 2.

NOTES ON BEEF-TEA.

Beef-tea is so valuable in cases of illness that it deserves special attention. It must be regarded as a stimulant rather than a food. The goodness extracted will consist chiefly of albumen and other soluble extractives.

The meat must be finely divided by scraping and shredding, and then soaked in cold water that the albumen may be drawn out, and afterwards cooked very lightly, remembering how easily this constituent of meat is rendered hard and indigestible when submitted to a high temperature.

Shin of beef makes very savoury beef-tea, but it contains more sinew and gristle and less of the albumen and red juices than rump or buttock steak.

A small quantity cooked with the steak will be found an improvement. If the beef-tea is required to set in a jelly, it is best to stew the shin of beef separately and mix it afterwards, as the high temperature required to extract the gelatine hardens and renders indigestible the albumen.

RULES FOR BEEF-TEA.

1. Choose fresh lean juicy steak.
2. Remove all fat and scrape or shred the meat finely.
3. Allow 1 pint of water to a pound of meat.
4. Put the meat into a basin with the water and salt to soak for twenty minutes before cooking.
5. Cook in a double saucepan or stew-jar placed in water.
6. Do not boil.

7. If beef-tea is required to set in a jelly when cold, stew a little shin of beef separately to mix with it afterwards, or add some isinglass.

8. When cooked, strain and remove all fat with tissue or blotting paper.

9. If allowed, add a little cayenne and celery salt before serving.

10. Dip a teacup in hot water, pour in the beef-tea, and serve at once.

11. In warming up beef-tea, put it in a jar and stand it in boiling water until hot.

Stir from time to time, turn into a basin, and it is ready to warm up the next morning. Serve with hot or cold milk or cream.

N.B.—A double enamelled saucepan is convenient for making porridge, as the inside only can be used at first to boil up the water and to cook the oatmeal until it has thickened. It can then be put inside the other, with water underneath, and cooked for three hours, and there is no danger of the porridge burning.

CHAPTER XV

PRESERVES AND PICKLES

NOTES AND RULES ON PRESERVING.

FOR preserve to keep well, it is necessary that a large proportion of the water in the fruit should be evaporated. Therefore it is better to cook it quickly; also, the jam will be a bad colour if long in making.

The fruit should be picked in dry weather, or the jam is likely to become mouldy.

Crushed loaf is the best sugar to use. The quantity depends somewhat upon the fruit, and varies from $\frac{3}{4}$ lb. to 1 lb. for each pound of fruit.

A copper preserving-pan is not so liable to burn as an enamelled pan, but it must be kept quite bright.

Rules.

1. Preserve the fruit as soon as possible after gathering.
2. Have a clear fire or gas-stove.
3. Allow room in the preserving-pan for the jam to boil well.
4. Keep the jam at a gentle heat until the sugar has dissolved.
5. Use a wooden spoon for stirring.
6. Allow the jam to boil quickly, taking care that it does not burn, as sugar burns easily.
7. Stir frequently and skim well.

8. To see if the jam is cooked, test by putting a little on a plate and leaving till cold. If cooked sufficiently it will set. Jam insufficiently boiled is apt to ferment.

9. See that the jars are perfectly dry and warm. Glass jars are best, as the condition of the jam can more easily be seen.

10. To tie down, cut rounds of tissue-paper the size of the jars. Dip them into brandy and put on the top of the jam. Then tie over some parchment-paper and label with name of jam and date of making. It should be covered up as soon as cold.

11. Store in a dry and airy place.

Apple Jam.

12 lb. apples.

7½ lb. sugar.

3 lemons.

Wash and peel the apples, cut them in quarters, remove the cores, put into a jar, and cover closely; stand the jar in a saucepan of boiling water, cook until the fruit begins to soften; put the cores and parings into a preserving-pan with about 6 pints of water, boil quickly for an hour, strain. Put the syrup back into the saucepan with the sugar, lemon-rind, and juice; stir until the sugar is dissolved, then boil quickly for ten minutes. Add the apples and cook until the jam will set; pour into hot, dry jars. When cold cover and tie down.

Apple Jelly.

6 lb. apples.

5 pints water.

1 lemon.

¾ lb. sugar to every pint of juice.

apple-juice, the lemon-juice, and the sugar in the above proportion. Boil fast, and skim well for about half an hour, until it will set. Put into small jars, cover, and tie down.

Apricot Jam.

To every pound of apricots allow 1 lb. crushed loaf-sugar.

Black Currant Jam No. 2.

To every pound of black currants allow :

To each pound of pulp add 1 lb. of sugar, place over a gentle fire, stir until boiling, cook well for about one hour. Put into small jars and tie down.

Bottled Damsons.

To every pint of juice add 1 lb. of loaf sugar, boil from twenty to thirty minutes, pour into small pots. When cold it should be lightly set, as it stiffens with keeping. This is a beautiful red jelly.

Lemon Cheese.

3 eggs.		Juice and grated rind of 2 lemons.

(Makes $1\frac{1}{2}$ lb.)

Beat up the eggs, melt the butter in a saucepan, add eggs, sugar, lemon rind and juice, stir over the fire till it thickens and is near boiling-point. Pour into jars and cover over.

CHAPTER XVII

AFTERNOON TEAS

FOR afternoon tea there are many dainty cakes and sandwiches which may be served with a choice of tea and coffee, and so prevent monotony. The tea should only be allowed to infuse for three minutes; it should be made with quite boiling water to insure the full flavour being extracted. Water that has boiled twice will quite spoil it.

The cream should be fresh from the dairy; the preserved cream sold in jars is too thick, and imparts a disagreeable flavour to the tea.

Coffee is often served as well for those who may not care for tea.

Thin brown and white bread and butter is cut; if liked it may be rolled. Sandwiches of preserve may be cut into rounds or fancy shapes.

White tin bread one day old is the best for cutting thinly, as fresh bread is liable to crumble; but brown bread is nicer new. Milk and rasped rolls are better new; these are a change sometimes from the ordinary loaf.

As some people do not care for sweet cake, savoury sandwiches will prove a welcome addition to the tea-table.

Sandwiches should be cut into small triangles or squares, dished lightly on a d'oyley, and garnished with cress.

Sardine and cress sandwiches should be made with brown bread and butter; shrimp sandwiches are nicest made from milk or rasped rolls; watercress and cucumber and tomato

sandwiches are most acceptable in the summer, being cool and refreshing.

The yolk of a hard-boiled egg pounded with a little butter and anchovy or bloater paste is a very good mixture for sandwiches. If sandwiches are cut some time before they are wanted, a damp cloth placed over them will keep them perfectly fresh.

Small scones, potato cakes, pikelets, tea cakes, etc., buttered and served hot are suitable for the cold weather.

There is such a variety of cakes and biscuits that, with a little care and forethought, the tea-table may be made very attractive.

Fingers of rich cake, crisp biscuits, small iced cakes, shapes of almond paste, little cakes, all give a light and attractive appearance. They may be mixed or served separately, and only a few of each kind should be used. Recipes for these will be found elsewhere.

In summer iced tea is sometimes served. This is prepared by making a quantity of tea several hours before it is wanted. After the tea has infused for three minutes it should be poured off, a little lemon-juice added, and allowed to get perfectly cold. Serve with ice and thin slices of lemon. See Beverages.

CHAPTER XVIII
MENUS AND THEIR COMPILATION

Order of serving a Complete Dinner.

HORS D'ŒUVRES.

POTAGES.

POISSON.

ENTRÉES.

RELEVÉS.

RÔTI.

ENTREMETS.

DESSERT.

CAFÉ.

THIS forms a complete dinner. Sometimes one or two of the courses are omitted, but the order of serving them remains the same. A dinner of the present day consists of more courses than formerly, but fewer dishes are served in each course.

Hors d'œuvres are usually served cold. They should be small and inviting in appearance.

Potages.—The clear soup should precede the thick. Two soups are more usually served than three. If only one soup is served, preference should be given to a clear or thin cream soup.

Poissons may be either plainly boiled or dressed fish. When two fish are served, the plain comes before the dressed. Dressed fish should be served in small pieces.

Entrées are served either before or after the relevés. They consist of dressed or made dishes, usually composed of many ingredients. Entrées should always be served daintily. If two are served, one should be brown and the other white. The light entrée comes first, the heavy one later. One may be cold and the other hot.

Relevés.—This course, as a rule, consists of solid joints roasted, boiled, or braised. The garnish gives the characteristic name to each dish, and a vegetable is usually served with the remove. Sorbets or liquid ices are served after the remove.

Rôti, consists of game or poultry. Sometimes when joints are served the remove is omitted. A salad is always served with the rôti, and usually fried potatoes.

Entremets.—This course usually consists of three things: (1) Dressed vegetables, which follow the roast, and often goes under the name of 'Légume,' and is served as a separate course. (2) Sweet entremets, which may be served either hot or cold. If two are served, one should be hot, the other cold. (3) Savouries, which precede the dessert, and are usually served hot. Cheese is often served.

Care should be taken in compiling a menu to choose dishes which are in season, and to alternate the methods of cooking (*e.g.*, two fried dishes should not succeed one another), and the character of the dishes (*e.g.*, a rich soup should be followed by a plain fish course).

Oysters should never appear on the menu during the months of May, June, July, and August.

The dishes should be varied as much as possible both in colour and taste.

Well-known dishes should not have new names given to them.

Most dishes have standard garnishes, and are known by this characteristic name all over the world.

A garnish should always please the eye and satisfy the palate.

For simple garnishes aspic, beetroot, cucumber, eggs, lemon, parsley, watercress, olives, cut vegetables, truffles, horseradish, etc., may be used. Sometimes a thick sauce forms the only garnish (*e.g.*, fricassee of chicken).

CHAPTER XIX

NOTES ON CHEESE

CHEESE is served after the sweet entremets.

It is not easy of digestion, but a small quantity taken at the end of a meal aids digestion.

Cheese is the curd of milk dried. The milk is slightly heated, then the curd is separated from the whey by the addition of an acid. The curd is then dried and pressed, a process that usually takes several months.

Skimmed milk cheeses are very hard, and are the most indigestible. Cheese made from new milk, with or without the addition of cream, is much softer, being usually known as 'fat' cheese. Stilton is the finest of English cheeses, but varies very much in quality, sufficient care not being taken whilst it is ripening.

Gorgonzola and Wensleydale most resemble Stilton. Gorgonzola has a strong and peculiar odour, Wensleydale is little known, only 200 of the cheeses being made annually in a little village of that name in Yorkshire.

Sage cheese is made by mixing chopped sage with the curd before being dried. It is not often seen except in the country.

Cheddar is one of the best-known cheeses. It is a mild cheese, and one of the least expensive.

American cheeses are a little cheaper, and have a stronger flavour than English.

Parmesan is a skimmed-milk cheese. It is very hard, and is much used grated in culinary preparations.

The best Parmesan is kept for three or four years before sending to market.

Swiss cheeses are noted for their fine flavour, Gruyère being one of the best known.

Camembert is a cream cheese made in Brittany. It is a small round yellow cheese with a dark rind. Great care is taken in regulating the temperature of the room in which the cheese is dried, or it is spoilt.

Cream cheese is not properly cheese, merely being cream well dried.

Roquefort is a very rich cheese made in the South of France. Dutch cheeses are round, and have a dark-red rind.

The best-known cheeses are as follows :

American.	Derby.	Parmesan.
Brie.	Double Gloucester.	Roquefort.
Camembert.	Dutch.	Porte Salute.
Cheddar.	Gorgonzola.	Stilton.
Cheshire.	Gruyère.	Wensleydale.
Cottenham.	Neuchâtel.

10 drops rennet.
