CONSPECTUS OF THE LONDON, EDINBURGH,

AND DUBLIN PHARMACOPŒIAS,

AND

FORMULARY OF EXTEMPORANEOUS PRESCRIPTIONS.

BY THOMAS WHARTON JONES,

SURGEON.

MACLACHLAN & STEWART, EDINBURGH;
BALDWIN & CRADOCK, LONDON.
MDCCCXXXIII.

Medicines to the Medical Practitioner are what utensils or instruments are to the Mechanic; unless he knows all their uses he cannot succeed in his designs, and will be like a Mechanic attempting to work without knowing the use of his tools.

Anonymous.

ADVERTISEMENT.

The object of this little work, which is a mere compilation, is to enable the medical Student and young Practitioner to obtain, at one glance, information regarding the therapeutical effects and uses of the various substances used in Medicine, the preparations of them which are officinal in the British Pharmacopæias, and the mode of combining them for administration in the various diseases in which they have, by experience, been found useful.

The names adopted by the Edinburgh Pharmacopæia have been placed at the head of all the articles in large type, and those of the London and Dublin Pharmacopæias in smaller; and where there are Edinburgh, London, and Dublin preparations of the same kind, the formula of the Edinburgh College only has been given.

Under each substance of vegetable origin, the name of the plant producing it is stated, then the natural order (according to De Candolle's modification of the Natural System of Jussieu) to which it belongs, its original place of growth, and, lastly, the botanical characters,

h to signify that the	plant is a	shrub or	tree,
-----------------------	------------	----------	-------

4 that it is perennial,

*	.1 .	., .	1 1
3	that	It Is	biennial,

()	that	t it	is	annual.
	una	0 10	19	annuar.

The italic capitals L. E. D. after the names of the different medicinal substances and preparations, denote that the substance or preparation is officinal in the London, Edinburgh, or Dublin Pharmacopæia.

The arrangement of the work, which is at once a Compendium of Materia Medica, a Conspectus of the London, Edinburgh, and Dublin Pharmacopæias, and a Formulary of Prescriptions, is such as to conduce much to facility of reference, and to admit of the introduction of many more practical points than could have been comprehended under any of those generally adopted.

EDINBURGH, May 1833.

MANUAL

OF

PHARMACOLOGY.

PART FIRST.

CLASSIFICATION OF MEDICINAL SUB-STANCES ACCORDING TO THEIR THERAPEUTICAL EFFECTS.

NARCOTICS.

Taken in a moderate dose, narcotic medicines generally produce increased action of the nervous and vascular systems; but this excitement is soon followed by depression of the vital powers—an effect which is at once produced by a large dose.

VEGETABLE.

Aconiti Napelli folia. Arnicæ montanæ flores, folia, radix. Atropæ belladonnæ folia, radix. Conii maculati folia, semina. Daturæ stramonii herba, capsulæ, semina. Digitalis purpureæ folia, semina. Humuli lupuli strobili. Hyoscyami nigri herba, semina. Lactucæ virosæ succus concretus. Lactucæ sativæ succus concretus. Laurus cam-

phora camphora. Menispermi cocculi semina. Nicotianæ Tabaci folia. Opium. Papaveris somniferi capsulæ. Pruni Lauro-cerasi folia. Rhododendri Chrysanthi folia. Rhois toxicodendri folia. Strychnos nux-vomica.

INORGANIC.

Alcohol. Æther. Acidum hydrocyanicum.

ANTISPASMODICS

Are medicines which have the power of allaying that inordinate muscular action known by the name of spasm. It may be remarked, that many spasmodic affections are merely the symptoms of irritation of the brain and spinal marrow; hence antiphlogistics must, in those cases, be employed as antispasmodics.

ANIMAL.

Castoreum. Moschus. Oleum animale empyreuma-

VEGETABLE.

Bubonis galbani gummi resina. Croci sativi stigmata. Ferulæ assæfætidæ gummi resina. Ammoniacum. Melaleucæ Leucodendri oleum volatile. Sagapenum. Valerianæ officinalis radix.

INORGANIC.

Ammonia. Petroleum.

Narcotics, used as Antispasmodics:— Æther. Camphora. Opium.

Tonics, used as Antispasmodics:—
Cinchona. Cuprum. Hydrargyrus. Zincum.

TONICS.

Tonics impart strength and vigour to the body, without producing very evident general phenomena. Their action is for the most part slow but permanent; and, to produce their full effect, their administration should be continued for some time.

Carminatives are medicines which, by stimulating the stomach, enable it to expel accumulated gases.

VEGETABLE.

Acori calami radix. Amomi repentis semina. Amomi zingiberis radiv. Anethi fœniculi semina. Anethi graveolentis semina. Angelicæ archangelicæ radix. Anthemidis nobilis flores. Aristolochiæ serpentariæ radix. Artemisiæ Absinthii folia, summitates. Bonplandiæ trifoliatæ cortex. Colombæ radix. Canellæ albæ cortex. Capsici annui fructus. Cari Carui semina. Centaureæ benedictæ herba. Chironiæ centaurii summitates. Cinchonæ officinalis cortex. Citri aurantii cortex fructus. Citri medicæ cortex fructus. Coriandri sativi semina. Crotonis eleutheriæ cortex. Cumini cymini semina. Dorsteniæ contravervæ radix. Eugeniæ caryophyllatæ flores nondum expliciti. Gentianæ luteæ radix. Hyssopi officinalis herba. Lauri Cinnamomi cortex. Lauri cassiæ cortex, flores. Marrubii vulgaris herba. Menthæ Piperitæ herba. Menthæ Pulegii herba. Menthæ viridis herba. Menyanthidis trifoliatæ herba. Myristicæ moschatæ nucleus, involucrum nuclei. Myrti Pimentæ fructus. Pimpinellæ Anisi semina. Piperis cubebæ fructus. Piperis longi fructus. Piperis nigri fructus. Pterocarpi Santalini lignum. Quassiæ excelsæ lignum. Quassiæ Simaroubæ cortex.

INORGANIC.

Argentum. Arsenicum. Bismuthum. Cuprum. Ferrum. Hydrargyrum. Zincum. Murias sodæ. Murias barytæ. Murias calcis. Acidum nitricum.

ASTRINGENTS

Act by corrugating and condensing fibres and coagulating fluids. When used locally for the purpose of stopping hæmorrhage, they are called *Styptics*.

VEGETABLE.

Acaciæ Catechu extractum. Anchusæ tinctoriæ radix. Arbuti Uva-Ursi folia. Gallæ. Hæmatoxyli campechiani lignum. Kino. Krameriæ triandræ radix. Lythri Salicariæ radix. Polygoni Bistortæ radix. Punicæ granati flores, radicis cortex, fructus cortex. Quercus Roboris cortex. Rosæ Gallicæ petala. Tormentillæ erectæ radix. Salicis albæ, fragilis, capræ cortex.

INORGANIC.

Acetas plumbi. Acidum sulphuricum. Alumen. Calx. Murias ferri. Sulphas cupri. Sulphas zinci.

EMETICS

Act by producing evacuation of the stomach. Their operation is assisted by repletion of that organ; and, where great torpor exists, titillation of the fauces will sometimes provoke vomiting.

VEGETABLE.

Anthemidis nobilis flores. Asari Europæi folia. Ipecacuanhæ radix. Nicotianæ Tabaci folia. Scillæ maritimæ bulbus. Sinapis nigræ seminum pulvis.

INORGANIC.

Ammoniæ carbonas. Antimonii tartras. Cupri sulphas. Zinci sulphas.

CATHARTICS

Increase the evacuation from the intestines. They are divided into Laxatives and Purgatives; the former merely quicken the natural evacuation, the latter produce purging. Cathartics act either by stimulating the muscular fibres of the intestines, or by exciting an increased secretion from their mucous membrane, or from the liver and pancreas.

LAXATIVES.

VEGETABLE.

Cassiæ fistulæ fructus. Manna. Ricini communis semina et oleum fixum. Tamarindi Indicæ fructus.

INORGANIC.

Magnesia. Sulphur.

PURGATIVES.

VEGETABLE.

Aloes extractum. Cassiæ Sennæ folia. Convolvuli Jalapæ radix. Convolvuli Scammoniæ gummi-resina. Crotonis Tiglii oleum. Cucumeris colocynthidis pulpa. Elaterium. Gambogia. Hellebori nigri radix. Nicotianæ Tabaci folia. Rhamni cathartici baccæ. Rhei palmati radix. Terebinthina Veneta. Oleum Terebinthinæ.

INORGANIC.

Murias sodæ. Phosphas sodæ. Submurias hydrargyri. Sulphas magnesiæ. Sulphas potassæ. Sulphas sodæ. Supertartras potassæ. Tartras potassæ et sodæ.

EMMENAGOGUES.

These are medicines which act by exciting the evacuation from the uterus called the menstrual discharge, when this is morbidly suppressed. Increased action of the uterus may be produced by any stimulus directly applied, as electricity, friction, or heat; or by sympathy, by stimulating the rectum, bladder, and neighbouring parts.

VEGETABLE.

Juniperi Sabinæ folia. Rorismarini officinalis cacumina. Rubiæ tinctorum radix. Rutæ graveolentis herba. Sinapis albæ semina.

From the class of Antispasmodics:

Castoreum. Bubonis galbani gummi-resina. Ferulæ assæfætidæ gummi-resina. Valerianæ officinalis radix.

From the class of *Tonics*:—
Cinchona officinalis. Ferrum. Hydrargyrus.
From the class of *Cathartics*:—
Aloës extractum. Hellebori nigri *radix*. Gambogia.

DIURETICS

Produce evacuation by increasing the urinary secretion.

ANIMAL.

Cantharis vesicatoria.

VEGETABLE.

Colchici autumnalis bulbus. Copaiferæ officinalis resina. Digitalis purpureæ folia. Gratiolæ officinalis herba. Juniperi communis baccæ et oleum volatile. Lactucæ virosæ succus concretus. Nicotianæ Tabaci folia. Leontodi Taraxaci radix. Pini sylvestris oleum volatile. Scillæ maritimæ bulbus. Solani Dulcamaræ caules. Spartii Scoparii summitates.

INORGANIC.

Spiritus ætheris nitrosi. Potassa. Acetas potassæ. Nitras potassæ. Supertartras potassæ. Murias ammoniæ.

DIAPHORETICS AND SUDORIFICS

Increase the natural exhalation of the skin. When this takes place slowly, so that the effused fluid passes off insensibly in the form of vapour, diaphoresis is said to take place. When, on the contrary, the fluid is so copiously effused as to appear in the liquid form, sweating is said to take place.

VEGETABLE.

Camphora. Cochleariæ armoraciæ radix. Daphnes Mezerei cortex. Guaiaci officinalis lignum, resina. Lauri sassafras cortex. Opium. Smilacis sarsaparillæ radix. Salviæ officinalis herba.

INORGANIC.

Ammonia. Acetas ammoniæ. Citras ammoniæ. Murias ammoniæ. Antimonialia. Submurias hydrargyri. Sulphur.

EXPECTORANTS.

Expectorants are medicines which facilitate the excretion of mucus from the trachea, bronchi, and air-cells of the lungs. Some produce their action by being applied in the form of gas or vapour to the mucous membrane of the lungs; others by being taken into the stomach, and acting through the circulation.

VEGETABLE.

Allii sativi bulbus. Ammoniacum. Amyridis gileadensis resina. Digitalis purpureæ folia. Ipecacuanhæ radix. Myrrha. Myroxyli Peruiferi balsamum. Nicotianæ Tabaci folia. Polygalæ Senegæ radix. Scillæ maritimæ bulbus. Styracis Benzoini balsamum. Styracis officinalis balsamum. Toluiferæ balsami balsamum.

INORGANIC.

Tartras antimonii.

SIALAGOGUES

Excite evacuation by the salivary glands and mucous membrane of the mouth and fauces. Mercury is the only substance which produces salivation through the medium of the circulation.

VEGETABLE.

Amomi Zingiberis radix. Anthemidis Pyrethri radix. Cochleariæ Armoraciæ radix. Daphnes Mezerei cortex. Nicotianæ Tabaci folia.

INORGANIC.

Hydrargyrus.

ERRHINES OR STERNUTATORIES

Are substances which, when applied topically to the pituitary membrane, excite sneezing, and occasion a discharge from the nostrils, either of a mucous or serous fluid. Every substance possessed of any degree of acrimony may act as an errhine.

VEGETABLE.

Asari Europæi folia. Euphorbiæ gummi-resina. Iridis Florentinæ radix. Lavandulæ spicæ flores. Nicotianæ Tabaci folia. Origani Marjoranæ herba. Veratri albi radix.

INORGANIC.

Subsulphas hydrargyri flavus.

EPISPASTICS AND RUBEFACIENTS.

These are external applications to the skin, which excite inflammation, the result of which may be, either a simple redness of the skin, or the effusion of serum under the cuticle, and the consequent formation of a vesicle or blister. They act as counter-irritants.

ANIMAL.

Cantharis vesicatoria.

VEGETABLE.

Allii sativi bulbus. Daphnes Mezerei cortex. Juniperi Sabinæ folia. Melaleucæ leucodendri oleum volatile. Oleum terebinthinæ. Pix Burgundica. Sinapis albæ semina.

INORGANIC.

Ammonia.

Dry friction may be employed as a rubefacient, and boiling water as a vesicant.

REFRIGERANTS

Act by diminishing the force of the circulation, and re-

ducing the heat of the body.

The most powerful, if not the only refrigerant, is cold; cold air, cold bath, cold drink; all of which not only abstract heat from the body, but have a tendency to reduce the calorific function.

VEGETABLE.

Citri aurantii fructus succus. Citri medicæ fructus succus. Oxalidis Acetosellæ folia. Tamarindi Indicæ legumen.

INORGANIC.

Acida mineralia diluta. Acida vegetabilia. Boras sodæ-Nitras potassæ. Supertartras potassæ.

ANTACIDS,

When taken into the stomach, act by combining with, and neutralizing, the acid which may be there present, and giving rise to morbid symptoms.

INORGANIC.

Ammonia. Calx. Carbonas calcis. Magnesia. Potassa. Soda.

ANTILITHICS AND LITHONTRIPTICS.

Antilithics are medicines which prevent the formation of those deposits from the urine, which give origin to calculous concretions.

Lithontriptics are remedies which are capable of dissolving calculous concretions already formed.

Calx. Potassa. Carbonas potassæ. Soda. Carbonas sodæ. Sapo durus.

ESCHAROTICS

Are substances which disorganize, burn, and reduce to an eschar, the living parts to which they are applied.

VEGETABLE.

Juniperi Sabinæ folia.

INORGANIC.

Acida mineralia. Acetas cupri. Sulphas cupri. Calx. Murias antimonii. Murias hydrargyri. Hydrargyri oxidum rubrum. Nitras argenti. Oxidum arsenici album. Potassa.

A red-hot iron is used as an escharotic, under the name of the actual cautery.

ANTHELMINTICS

Are substances which have the power of destroying and expelling worms from the intestinal canal.

VEGETABLE.

Artemisiæ Absinthii folia, summitates. Artemisiæ Santonici summitates. Dolichi prurientis pubes. Geoffrææ inermis cortex. Gambogia. Oleæ Europeæ oleum. Oleum Terebinthinæ. Polypodii filicis maris radix. Punicæ Granati cortex. Spigeliæ Marilandicæ radix. Tanaceti vulgaris folia.

INORGANIC.

Ferri limatura. Stanni pulvis. Submurias hydrargyri.

DEMULCENTS.

Substances which, from their blandness and viscidity, protect sensible and irritable surfaces from the action of acrid matter.

ANIMAL.

Ichthyocolla. Spermaceti. Cera.

VEGETABLE.

Acaciæ Arabicæ gummi. Althææ officinalis radix. Amygdalus communis. Astragali Tragacanthæ gummi. Avenæ sativæ semina. Fici Caricæ fructus. Glycyrrhizæ glabræ radix. Hordei distichi semina. Lichen Islandicus. Lini usitatissimi semina. Malvæ sylvestris herba. Oleæ Europææ oleum. Pyri Cydoniæ semina. Tritici hyberni semina.

DILUENTS

Increase the fluidity of the blood, and thus render the secreted and excreted fluids less viscid.

Watery liquors.

EMOLLIENTS

Are substances which soften the tissues to which they are applied. The action of these, as well as of demulcents, is purely local. Heat, conjoined with moisture, applied in the form of cataplasms and fomentations, is the principal emollient.

Unctuous substances, as lard, spermaceti, &c.

ALTERATIVES.

Alteratives are medicines which, by a continued use, gradually, and almost imperceptibly, correct disordered actions. Their mode of operation is little known, but their effects are not the less appreciable.

To this class belong all the medicines called by the an-

cients Dissolvents and Deobstruants.

The medicine in most common use as an alterative is calomel in small doses. But the alterative effect of any remedy is owing, rather to the mode of exhibiting it, than to its particular nature.

ON THE ART OF PRESCRIBING.

THE objects to be attained by mixing and combining medicinal substances are:

lmo, To promote the action of the basis or principal medicine. This may be effected—

By combining together several different forms, or pre-

parations, of the same substance : Or,

By combining the basis with substances which are of the same nature, that is, which are individually capable of producing the same effect, but with less energy than when

in combination with each other: Or,

By combining the basis with substances of a different nature, and which do not exert any chemical influence upon it, but are found, by experience, to be capable of rendering the stomach or system, or any particular organ, more susceptible of its action.

2do, To correct the operation of the basis, by obviating any unpleasant effects it might be likely to occasion, and which would pervert its intended action, and defeat the objects of its exhibition. This may be effected,

By mechanically separating, or chemically neutralizing,

the offending ingredient : Or,

By adding some substance capable of guarding the stomach, or system, against its deleterious effects.

3tio, To obtain the joint operation of two or more me-

dicines. This is to be accomplished,

By uniting those substances which are calculated to produce the same ultimate results, although by totally different modes of operation: Or,

By combining medicines which have entirely different powers, and which are required to obviate different symptoms, or to answer different indications.

4to, To obtain a new and active remedy, not afforded

by any single substance. This may be effected,

By combining medicines which excite different actions in the stomach and system, in consequence of which new

or modified results, are produced: Or,

By combining substances which have the property of acting chemically upon each other; the result of which is the formation of new compounds, or the decomposition of the original ingredients, and the development of their more active elements: Or,

By combining substances, between which no other chemical change is induced than a diminution or an increase in the solubility of the principles in which their

medicinal virtues reside. This is accomplished,

By the intervention of substances that act chemically:

Or,

By the addition of ingredients, whose operation is entirely mechanical.

5to, To afford an eligible form:

By which the efficacy of the remedy is enhanced: Or, By which its taste and appearance are rendered more agreeable: Or,

With reference to its consistence or strength: Or,

By which it is preserved from the spontaneous decom-

position to which it is liable.

A medicinal formula, when complete, has been divided into four parts, the *Base*, the *Adjuvant*, the *Corrective*, and the *Excipient*.

1mo, The base is the active ingredient of the prepara-

tion.

2do, The adjuvant is a substance intended to assist and promote the operation of the base; either by increasing its action, or, in some cases, developing it.

3tio, The corrective is an ingredient intended to dis-

guise the taste of the base, or to moderate its activity. It is usually an aromatic, demulcent, or saccharine matter.

4to, The excipient is the substance which imparts form and consistence to the preparation. It is water in

an infusion; honey or sugar in a conserve, &c.

These elements are not all necessarily present in every formula, for many bases are so active as not to require any adjuvant; or so mild and tractable, as to render the addition of a corrective unnecessary; whilst many are in themselves of such a nature, as to be fit for exhibition without the intermedium of any vehicle or excipient.

Compound Medicines have been divided into two classes, viz.

1mo, Officinal preparations, which are those kept ready made in the druggist's shop, and are prepared according to formulæ which are given in the Pharmacopæias.

2do, Extemporaneous preparations, which are prepared as they are ordered, according to formulæ constructed by the practitioner at the moment. These formulæ, which are called *magistral* or *extemporaneous*, may be either arrangements altogether new, or officinal preparations, with additions or modifications.

When any officinal preparation is to be prescribed, all that is necessary for the practitioner to do is to write down the name of it, the dose in which it is to be given, and the mode of administering it. But if an extemporaneous form of preparation is to be prescribed, the practitioner must, in writing the formula, attend to the following circumstances:—

1mo, To specify the pharmaceutical form (as pill, powder, &c.) of the medicine, and, as far as possible, its mode of

action, as tonic pill, &c.

2do, Before writing down the substances which are to compose the preparation, to make this sign R, which

stands for Recipe.

3tio, To write down the different ingredients on as many separate lines, beginning with the base, which is to be followed by the adjuvant, then the corrective. With regard

to the *excipient*, it should be placed next the particular element to which it is intended to impart convenience or efficiency of form, or a capability of mixing with the other ingredients.

The quantities of the ingredients must be very accurately mentioned. For this purpose, the usual signs for representing the different weights and measures may be employed, or they may be written entirely in letters.

4to, To indicate the particular mode of preparation (modus faciendi), if the substances employed require one; if not, it is sufficient to add these letters, F. S. A. (fiat or fiant secundum artem), along with the pharmaceutical

form of the preparation, as pilulæ.

Finally, To point out the manner in which the medicine is to be taken, its dose, whether it is to be administered one or more times in the day, by glassfuls, spoonfuls, drops, &c. This indication is to be preceded by sig. (signetur), which is a direction to the apothecary to mention it on the label. The formula is now to be dated and signed, and, to avoid mistakes, the name of the person for whom it is intended should be added.

The mass or sum of all the ingredients should be an exact multiple of the base, or the most active substances of the preparation. If, for example, the physician prescribes 2 drachms of senega root, for an infusion intended to make part of a potion, he will not order 6 ounces of infusion and 1 ounce of syrup, which would make a potion of 7 ounces, but he will prescribe 5 ounces of infusion and 1 ounce of syrup, which makes a potion of 6 ounces; by this means each spoonful or half ounce of the liquid contains the infusion of 10 grains of senega, whilst, if there were 7 ounces of potion, the same dose would contain 8 and grains.

In like manner, a solution of corrosive sublimate, which is ordered to be taken in the dose of \$\frac{7}{2}\$ss., should contain exactly half a grain in the ounce, or 8 grains in \$\frac{7}{2}\$xvj., and not 5, 6, or 10 grains. Many practitioners prefer prescribing the composition of a single dose of a powder, or of a pill, and order the druggist to make a certain number, multiplying each partial dose by the

number of doses or of pills.

In the composition of a formula, attention should be paid to the chemical actions which the different ingredients may exert on each other, the decompositions that may take place, and the new products which may result. For this reason, we must avoid mixing together

incompatible substances.

For example, if tartrate of antimony, and any substance containing gallic acid or tannin, be mixed together, the tartrate will be decomposed, and lose its properties. Or, if two soluble salts, such as the sulphate of soda and the muriate of barytes be mixed together, there must necessarily be decomposition; the sulphuric acid will unite with the barytes, and form an insoluble salt, which will be precipitated, whilst the muriatic acid will form with the soda a muriate of soda, which is soluble. The same phenomena will take place if we mix a soluble muriate with the nitrate of silver; these two salts will be decomposed, and their disunited elements will form new combinations.

It is therefore indispensable to mix together only those substances which do not react on each other, so as to produce decomposition, unless such be our intention in order to take advantage of the new products to which it gives origin, as in the common effervescing draught, in which the citric acid which is added to the solution of the carbonate of potass, is intended to decompose that salt, in order to generate the carbonic acid gas, which, in some respects, constitutes the base of this draught *.

In prescribing, we should remember that the operation of medicines is influenced by the age, sex, temperament and strength of the patient; by habit, diet, profession, climate, duration of the disease, state of the stomach, idiosyncrasy, and the variable activity of the medicinal substances. The time of day at which remedies should be administered

^{*} This application of chemical knowledge to the art of prescribing, will also guide us in the choice and nature of the vessels in which medicines are prepared; thus, acid substances must not be put into vessels of copper, iron, lead, or marble, on which they would act, but, on the contrary, into vessels of porcelain or glass, which resist decomposition. The same caution should be applied to metallic salts.

likewise deserves attention, as well as the *intervals be*tween each dose, which must be regulated by the nature of the remedy, and that of the objects which it is intended to fulfil.

This cannot be better inculcated than in the following

quotation from an anonymous author.

"The virtues of medicines are very numerous; they agree with some constitutions only, from particular idiosyncrasy; they are specifics in some disorders, are proper at particular periods, and under peculiar circumstances. Thus ipecacuanha is a vomit and diaphoretic, and in still less doses an excellent tonic and astringent, increasing the appetite and strength; and the same dose does not fulfil these indications in all persons. Opium also is narcotic, sudorific, and astringent; but in some constitutions it excites vomiting, restlessness, and convulsions, causing an effort of the stomach to expel it. It is necessary to know the powers of each medicine, the symptoms requiring its exhibition, and the particular circumstances of constitution which may forbid it. If there was but one circumstance in disease, the exhibition of remedies would be simple and easy; but there are almost always several diseased actions going on at the same time, nor is the disease similar in two persons."

The doses of medicines may be graduated according to

age by the following Rule:

For children under twelve years, the doses of most medicines must be diminished in the proportion of the age, to the age increased by 12.

Thus at 2 years to 1-7th, viz. $\frac{2}{2+12} = \frac{1}{7}$ At 21 the full dose may be given.

OF THE PARTICULAR FORMS OF MEDICINES.

AQUÆ STILLATITIÆ, Distilled Waters.

These are waters impregnated with the essential oils of vegetables. They are chiefly used as grateful vehicles for the exhibition of more active remedies.

SPIRITUS STILLATITII, Distilled Spirits,

Are solutions of the essential oils of vegetables in diluted alcohol, or proof spirit. Like the distilled waters, they serve as vehicles for the exhibition of more active medicines, and are also occasionally employed as grateful stimulants.

INFUSA, Infusions.

These are watery solutions of vegetable matter, obtained by maceration, either in cold or hot water, without the assistance of ebullition. Unless the dose of them be otherwise stated, it is generally from \(\frac{7}{2} \)j.—\(\frac{7}{2} \)ij.

DECOCTA, Decoctions.

These are solutions of the active principles of vegetables, obtained by boiling them in water. The substances submitted to this mode of preparation are those, the principles of which are fixed and unalterable by heat. The proportion of the substances to the water may be stated in a general way, thus: Of roots, barks, or dried woods, from 3ij.—3vj. to every 3xvj. of water; of herbs, leaves, or flowers, half that quantity will suffice.

A decoction should never be used forty-eight hours after it has been made.

TINCTURE, Tinctures,

Are solutions of various substances, chiefly the proximate principles of vegetable or animal matter; such as sugar, resin, extractive, tannin, cinchonia, camphor, volatile oils, morphia, emetin, conin, elatin, tiglin, several acids, and gum-resins, in alcohol, pure or diluted, or combined with ammonia or æther.

In combination, it is of importance not to mix a tincture containing a resin or essential oil with a watery liquid, unless care be taken to favour the admixture by means of mucilage or yolk of egg.

VINA, Medicated Wines.

These are solutions of several of the principles of vegetables and certain mineral bodies in wine. The Vina of the London Pharmacopæia are prepared with weak spirit instead of wine.

ACETA, Medicated Vinegars,

Are solutions of certain vegetable principles in weak acetic acid or vinegar. Acetic acid does not dissolve true resins, but it has some action on gum resins.

EXTRACTA, Extracts.

Extracts are prepared by evaporating the infusions, decoctions, or tinctures, of vegetables, and the native juices obtained from fresh plants by expression, to masses of a tenacious consistence.

EMULSIONES, Emulsions.

These are preparations, in which an oil or resin is suspended in water, by means of sugar, mucilage, or yolk of egg *.

^{*} A new laid egg weighs about two ounces two drachms: the white, one ounce, three drachms; yolk, five drachms: an ounce of blanched almonds usually contains twenty-six; one drachm of mucilage of gum arabic, made of equal parts of gum and water, will form two drachms of any oil into an emulsion with one ounce of water.

SYRUPI, Syrups.

These are solutions of sugar in water, watery infusions, or vegetable juices. The proportion of the sugar

is generally two parts to one of the fluid.

Syrups are used in combination: to correct or disguise the flavour of disagreeable medicines; to produce medicinal effects; to communicate peculiar forms; or to impart an agreeable odour. Honey is also used, combined with different medicinal substances. To a syrup made of honey and vinegar, the name of oxymel is given.

LINCTUS, Linctus.

This name is generally applied to a soft, and sometimes oily, substance, of the consistence of honey or syrup, which is licked off the spoon, it being too solid and adhesive to be taken otherwise. Allowed to dissolve slowly in the mouth and gradually swallowed, a linetus is a useful form of medicine in cynanche tonsillaris, and other affections of the fauces.

Pulveres, Powders.

The form of powder is, in many cases, the most efficient and eligible mode in which a medicinal substance can be exhibited. This form is proper for such materials only as are capable of being sufficiently dried to become pulverizable, without the loss of their activity. The dose of a powder ought not to exceed 3j.; and, when taken, should be diffused in water, wine, or any other convenient liquid: resinous and metallic powders require a thick and consistent vehicle, as syrup or honey, since they subside from those which are more fluid.

PILULE, Pills.

These are masses of a consistence sufficient to preserve the globular form, and yet not so hard as to be of too difficult solution in the stomach. Their component ingredients are reduced to the proper consistence by mucilage, syrup, vegetable extracts, soap, bread-crumb, &c. This form of medicine is employed for substances which act in small quantities, or which have a disagreeable taste

and odour.

A pill, the bulk of whose ingredients is vegetable matter, ought not to exceed five grains in weight; but where the substances which compose it are metallic and ponderous, it may, without inconvenience, weigh six or even eight grains.

Bolus, Bolus.

This differs from a pill only in its greater size and softer consistence.

TROCHISCI, Troches or Lozenges.

These are formed by combining powders or extracts with a large quantity of sugar and mucilage and isinglass, to give them a solid consistence.

As they are intended to be kept some time in the mouth, where they dissolve slowly, they should have an

agreeable taste.

This form of medicine is principally useful in cases where it is an object that the remedy should pass gradually into the stomach, in order to act as powerfully as possible upon the pharynx and top of the trachea, as in certain demulcents and astringents; for instance, nitre, when intended to operate in relaxed or inflamed states of the tonsils, is best applied in this manner; so is sulphate of zinc in chronic coughs, attended with inordinate secretion.

Suppositories.

These are medicinal preparations of a solid consistence, a conical form, and of the size of a quill or the little finger, intended to be introduced into the rectum, and to remain there some time.

They are made with medicinal substances, combined with soap to give to them the proper consistence.

Electuaria, Electuaries.

Conserve, Conserves.

Electuaries are in general extemporaneous preparations. They are of a soft consistence, being composed of dry

powders, formed into a proper consistence by the addition

of syrup, honey, or mucilage.

They differ from *Conserves* in this, that the sugar in the latter preparations is in a greater proportion, and is intended to *preserve* the ingredients; whereas, in the former, it is merely intended to impart convenience of form.

In making extemporaneous electuaries, it must be kept in view, that one part of the following substances absorb

of syrup, to acquire the requisite consistency:—
Vegetable and other dry powders, three parts.

Gum-resins, one part.

Resins, three-fourths of a part.

Mineral substances, as antimony and calomel, which do not absorb water, half a part.

Salts, half a part.

Alkalies and deliquescent salts, one-tenth of a part.

The quantity of an electuary directed at a time in extemporaneous prescription, is rarely more than a teaspoonful.

MISTURE, Mixtures,

Are generally extemporaneous preparations, in which different ingredients are mingled together in the liquid form, or, in which solid substances are diffused through a liquid, by the medium of mucilage or syrup. A mixture should seldom contain more than 3ss. of a vegetable powder; Dij. of an electuary and conserve; or gr.xv.—Dj. of an extract, in the ounce.

HAUSTUS, Draughts.

A draught differs from a mixture merely in quantity; it is usually taken at once, and should not exceed 3jss.

ENEMATA, Clysters.

These are liquid medicines intended to be injected in a certain quantity at a time into the rectum. This form of applying a medicine, furnishes the practitioner with many valuable resources.

When it is intended that the enema should be retained some time, its bulk should seldom be more than Ziij.—

Ziv. of liquid.

The proportions of fluid vehicle necessary for the dif-

ferent ages, under ordinary circumstances, may be stated thus:—An infant at its birth, or soon after, requires about f.\(\frac{5}{2}\)j.; a child between the age of one and five years f.\(\frac{5}{2}\)ij.—\(\frac{7}{2}\)iv.; a youth of ten or fifteen f.\(\frac{7}{2}\)vi.—\(\frac{7}{2}\)viij.; and an adult \(\frac{7}{2}\)xij. With regard to the dose of the active ingredient of a clyster, it may be estimated as triple of that taken by the mouth.

INJECTIONES, Injections.

These are liquid medicines intended to be injected into certain cavities or canals of the body, particularly into the urethra for the cure of gonorrhæa, and into the vagina for that of the different discharges to which females are liable.

They are solutions, infusions, or decoctions.

INHALATIONES, Inhalations,

Are the dry fumes and watery vapours of certain substances which, by inhaling, are brought into immediate contact with organs, particularly the lungs, which are inaccessible to such remedies in every other state of aggregation.

In order to apply such inhalations, there are different instruments called inhalers in use, but for them the spout of a teapot, or a common basin with an inverted funnel,

will be found very convenient substitutes.

LOTIONES, Lotions,

Are remedies in a liquid form, designed for external application. They comprehend—

Embrocationes, *Embrocations*.—These are compositions of spirit, decoctions, infusions, or other liquids, applied

by sprinkling or rubbing them on an affected part.

Fomenta, Fomentations,—Are liquid medicines of various degrees of temperature, applied to the different parts of the body, by means of linen or flannel compresses. They may consist, according to the objects intended, of emollient, anodyne, astringent, or stimulant decoctions, &c.

Collyria.-Liquid applications to the eyes, composed of

mucilaginous or astringent infusions and decoctions, or solutions of different saline substances.**

Gargarismata, Gargles,—Are liquid medicines used as a wash in different diseases of the throat and mouth.

CATAPLASMATA, Poultices.

These are pultaceous preparations, intended to be applied externally. They are generally extemporaneous preparations, and are calculated to act as stimulants (cataplasma sinapis), or Antiseptics (cataplasma fermenti), or Sedatives (a cataplasm composed of conium, &c.), or Refrigerants (a cataplasm containing the subacetate of lead), or Emollients; for this latter intention they are in most common use. An emollient poultice has been well defined, a local warm bath.

LINIMENTA, UNGUENTA, CERATA, EMPLASTRA.

These are all combinations of fixed oils, or animal fat, with other substances, and differ from each other only in consistence.

Linimenta, Liniments,—Are the thinnest of these compositions, being only a little thicker than oil. They differ from embrocations, in being of an oily or mucilaginous density, which increases their efficacy, by imparting a certain emollient power, in addition to their other virtues.

Unguenta, Ointments,—Have generally a degree of

consistence like that of butter.

Cerata, Cerates,—Are firmer, and contain a larger pro-

portion of wax.

Emplastra, *Plasters*,—Are the most solid, and derive their firmness, either from a large proportion of wax, resin, &c., or from the presence of some metallic oxide, such as that of lead. Plasters are employed for two objects; either *mechanically*, to afford support to muscular parts, and to prevent the access of air; or *medicinally*,

^{*} We also speak of dry and soft collyria; the former are composed of very fine powders which are blown into the eye, or applied by means of a hair-pencil; the latter are ointments with which the eye and edges of the eyelids are anointed.

to operate as stimulants, discutients, rubefacients, or anodyne applications.

BALNEA, Baths.

The temperature of the cold-bath (balneum frigidum) is considerably below the heat of the body.

The temperature of the tepid-bath (balneum tepidum) is

from 62° to 96° Fahrenheit.

The temperature of the warm-bath (balneum calidum)

is from 97° to 100°.

The temperature of the vapour-bath (balneum vaporis) is from 100° to 130°.

FUMIGATIONES, Fumigations.

The fumes of certain substances, as chlorine, sulphurous acid, the preparations of mercury, &c. are applied medicinally to the outer surface of the body. They are principally useful in cutaneous diseases. Fumigations are also employed as a means to destroy contagious miasmata or effluvia. The most efficacious substance for this purpose is chlorine; next to it the vapour of nitric acid; and, lastly, that of the muriatic.

Gallon Pints Fluid Ounces. Fluid Drachms.	(Congius). (Octarius 1 = 8	0 1				

The Dublin Pharmacopoeia directs, that whenever it prescribes a pound (libra), it is solids and fluids to be weighed, but also allows the latter to be measured in proper vessels understood to be a measured pound, or pint. The Edinburgh Pharmacopæia orders both having the medical pound and its divisions marked off.

OF CERTAIN MEASURES NOT RIGOROUSLY DETERMINED.

I. FOR SOLIDS.

Handful (manipulus). As much as can be taken up in the hand.

Pinch (pugillus). The quantity which can be taken up between the thumb and the fore-finger.

II. FOR LIQUIDS.

A tea-cup (vasculum pro thea). Commonly contains Ziij.— Ziv. of an infusion, decoction, or mixture.

A wine-glass (cyathus). About Ziss.

A table-spoon (cochleare amplum). About \(\frac{7}{2} \) ss. of watery fluids, and \(\frac{7}{2} \) ij. —\(\frac{7}{2} \) iij. of alcoholic.

A dessert-spoon (cochleare mediocre). More than Zij.

A tea-spoon (cochleare minimum). Əss.—Əj. of a light powder, such as magnesia. Zss.—Əj. of a heavier powder, as sulphur. Zj.—Əiv. of a metallic oxide. Əj.—Zss. of alcoholic fluids. Zss.—Əj. of watery fluids. Əj.—Zij. of tinctures and syrups. Zj.—Zij. of electuaries.

A drop (gutta). Contains about a grain.

The measure of temperature used in Britain is Fahrenheit's thermometer, 212° on the scale of which marks the boiling point of water at the ordinary pressure of the atmosphere, and 32° the freezing point; between 90° and 100° is the gentle heat (calor lenis) of the Pharmacopæias.

CONTRACTIONS COMMONLY USED IN PRESCRIPTIONS, &c.

A. Aa. Ana. Of each ingredient. Abdom. Abdomen. The belly.

Abdominis. Of the belly.

Abdomini. To the belly.

Abs. febr. Absente febre. In the absence of the fever.

Ad 2 vic. Ad duas vices. At twice taking.

Ad gr. acid. Ad gratam aciditatem. To an agreeable sourness.

Ad libit. Ad libitum. At pleasure.

Add. Adde, or addantur. Add.

____ Addendus. To be added.

— Addendo. By adding.

Admov. Admoveatur, or admoveantur. Apply.

Adst. febr. Adstante febre. When the fever is on.

Aggred. febr. Aggrediente febre. While the fever is coming on.

Altern. horis. Alternis horis. Every other hour.

Alvo adst. Alvo adstricta. When the belly is bound.

Aq. bull. Aqua bulliens. Boiling water. Aq. ferv. Aqua fervens. Boiling water.

Bis ind. Bis indies. Twice a-day.

B. M. Balneum maris. A water bath.

Bull. Bulliat. It should boil.

____ Bulliant. They should boil.

B. V. Balneum vaporis. A vapour bath.

Cærul. Cæruleus. Blue.

Cap. Capiat. Take.

Capill. abrad. Capillitium abradatur. Let the head be shaved.

C. M. Cras mane. To-morrow morning.

Coch. ampl. Cochleare amplum. A table spoon.

Coch. infant. Cochleare infantis. A child's spoon.

Coch. magn. Cochleare magnum. A table spoon.

Coch. med. Cochleare mediocre. A dessert spoon.

Coch. parv. Cochleare parvum. A tea spoon.

Col. Colatus. Strained.

Colet. Coletur. It should be strained.

Colat. Colaturæ. Of or to the strained liquor.

Colent. Colentur. They should be strained.

Comp. Compositus. Compounded.

Cont. med. Continuantur medicamenta. The medicines should be continued.

Contr. Contritus. Ground to a fine powder.

Coq. Coque. Boil.

____ Coquantur. They should boil.

Crast. Crastinus. To-morrow.

Cucurbit. cruent. Cucurbitulæ cruentæ. This expression is used, when blood is to be drawn by scarification and cupping.

Cuj. Cujus. Of which.

Cujusl. Cujuslibet. Of any.

Cyath. theæ. Cyatho theæ. In a cup of tea.

Deb. spiss. Debita spissitudo. A proper consistence.

Decub. Decubitus. Of lying down.

De d. in d. De die in diem. From day to day.

Dej. alvi. Dejectiones alvi. Stools.

Det. Detur. It should be given.

Dieb. alt. Diebus alternis. Every other day.

Dieb. tert. Diebus tertiis. Every third day.

Dim. Dimidius. One half.

Dir. prop. Directione propria. With a proper direction.

Donec alv. bis dej. Donec alvus bis dejiciat. Until two stools have been obtained.

Donec alv. sol. fuer. Donec alvus soluta fuerit. Until a stool has been obtained.

Ejusd. Ejusdem. Of the same.

Enem. Enema. A clyster. — Enemata. Clysters.

Ext. sup. alut. Extende super alutam. Spread upon leather.

F. pil. xij. Fac pilulas duodecim. Make twelve pills. Feb. dur. Febre durante. During the fever.

Fem. intern. Femoribus internis. On the inner part of the thighs.

F. S. A. Fiat secundum artem. Make according to art.

F. venæs. Fiat venæsectio. Bleed.

Fist. arm. Fistula armata. A clyster-pipe and bladder fitted for use.

Fl. Fluidus. Liquid; also by measure.

Gel. quav. Gelatina quavis. In any kind of jelly.

G. G. G. Gummi guttæ gambogiæ. Gamboge.

Gr. Granum. A grain.

Grana. Grains.Gtt. Gutta. A drop.

- Guttæ. Drops.

Gutt. quibusd. Guttis quibusdam. With a few drops.

Har. pil. sum. iij. Harum pilularum sumantur tres. Three of these pills should be taken.

Hor. decub. Hora decubitus. At going to bed.

Hor. som. Hora somni. Just before going to sleep, or on retiring to rest.

Hor. un. spatio. Horæ unius spatio. At the expiration of an hour.

Hor. interm. Horis intermediis. At the intermediate hours between what has been ordered at stated times.

Ind. Indies. From day to day.
In pulm. In pulmento. In gruel.

Inj. enem. Injiciatur enema. A clyster should be given.

Lat. dol. Lateri dolenti. To the side that is affected.

Lb. Libra. A pound weight, or a wine pint.*

M. Misce. Mix.

Mensura. By measure.
 M. Manipulus. A handful.

Mane pr. Mane primo. Very early in the morning.

Min. Minium. The sixtieth part of a drachm measure.

Mtt. Mitte. Send.

— Mittatur. There should be sent.

^{*} When preceded by Arabian figures, Avoirdupois weight is generally meant; but when succeeded by Roman numerals, Troy weight, or pint measure.

Mitt. sang. ad 5xij. saltem. Mittatur sanguis ad uncias duodecim saltem. Blood should be taken away to twelve ounces at least.

Mod. præsc. Modo præscripto. In the manner directed. Mor. sol. More solito. In the usual manner.

N. M. Nux moschata. A nutmeg.

O. Octavius. A wine pint, being one-eighth of a gallon. Ol. lini s. i. Oleum lini sine igne. Cold drawn linseed oil.

Omn. hor. Omni hora. Every hour.

Omn. bid. Omni biduo. Every two days. Omn. bih. Omni bihorio. Every two hours.

Omn. man. Omni mane. Every morning. Omn. noct. Omni nocte. Every night.

Omn. quadr. hor. Omni quadrante horæ. Every quarter of an hour.

O. O. O. Oleum olivæ optimum. Best olive oil.

Oz. The ounce Avoirdupois, or common weight, as distinguished from that prescribed by physicians in their orders.

P. Pondere. By weight.

Part. vic. Partitis vicibus. In divided doses, instead of all at once.

Per. op. emet. Peracta operatione emetici. When the operation of the emetic is finished.

Post sing, sed. liq. Post singulas sedes liquidas. After every loose stool.

P. r. n. Pro re nata. According to circumstances. Occasionally.

P. rat. at. Pro ratione atatis. According to the age of the patient.

Pug. Pugillus. A pinch between the forefinger and thumb.

Q. p. Quantum placet. As much as you please.

Q. s. Quantum sufficit. As much as may suffice.

Quor. Quorum. Of which.

B. Recipe. Take.

^{*} For this the older authors, and the French still, use the sign U, being the old heathen invocation to Jupiter.

Red. in pulv. Redactus in pulverem. Powdered.

Redig. in pulv. Redigatur in pulverem. It should be reduced to powder.

Reg. umbil. Regio umbilici. The parts about the navel.

Repet. Repetatur. It should be continued.

- Repetantur. They should be continued.

S. A. Secundum Artem. According to art.

Semidr. Semidrachma. Half a drachm.

Semih. Semihora. Half an hour.

Sesunc. Sesuncia. An ounce and a half.

Sesquih. Sesquihora. An hour and a half.

Si n. val. Si non valeat. If it does not answer.

Si op. sit. Si opus sit. If necessary.

Si vir. perm. Si vires permittant. If the strength will allow.

Sign. n. pr. Signetur nomine proprio. Write upon it the, usual name.

Sing. Singulorum, Singularum. Of each.

Ss. Semi. A half.

St. Stet. It should stand.

— Stent. They should stand.

Sub fin. coct. Sub finem coctionis. When the boiling is nearly finished.

Sum. tal. Sumat talem. Take one like this.

S. V. Spiritus vinosus. Ardent spirit of any strength.

S. V. R. Spiritus vinosus rectificatus. Spirit of wine.

S. V. T. Spiritus vinosus tenuis. Proof spirit, or halfand-half alcohol and water.

Temp. dext. Tempori dextro. To the right temple.

Trit. Tritus. Ground to powder.

Ult. præscr. Ultimo præscritus. The last ordered.

V. O. S. Vitello ovi solutus. Dissolved in the yolk of an

Vom. urg. Vomitione urgente. When the vomiting begins.

Z. A mark in writing that a word is contracted, as in oz. for ounce.

Zz. Zingiber. Ginger.

PART SECOND.

HISTORY OF SIMPLE AND COMPOUND MEDICINES.

ACA

ABIETIS RESINA. Vide PINUS ABIES.

ABSINTHIUM. Vide ARTEMISIÆ ABSINTHII, &c.

ACACIÆ ARABICÆ GUMMI, E. A. veræ Gummi, D. Acaciæ Gummi, L.—Gum Arabic.

(Acacia vera. Leguminosæ. Africa. h.)

Gum Arabic is demulcent. Dose 3j.—3j. Given in substance, powder, or solution; and combined with syrups, infusions, and decoctions in general, according to the objects in view.

Officinal Preparations.

MUCILAGO ACACIÆ ARABICÆ, L. E. D.—Mucilage of Gum Arabic.

(Gummi Acac. Arab. partem j., Aquæ bullientis, partes ij. &c.)

An excellent demulcent. Dose 3j.—3j. Combined with syrup of poppies, in tickling coughs, &c. Used chiefly to suspend insoluble matters in water, &c.

EMULSIO ACACIÆ ARABICÆ, E. D.—Gum Arabic emulsion.

(Mucilag. Acac. Arab. Zij., Nucleorum Amygdali comm. Zj., Sacch. purif. Zss., Aquæ, fbijss, &c.)

Diluent and Demulcent. Given ad libitum in Ardor urinæ, Strangury, &c. A vehicle for other medicines.

TROCHISCI GUMMOSI, E .- Gum Troches.

(Gummi Acac. Arab. partes iv., Amyli partem j., Sacch. purif. partes xij. &c.)

Used for allaying tickling coughs.

ACACIÆ CATECHU EXTRACTUM (ex ligno) E.

D. Catechu extractum, L.—Catechu.

(Acacia Catechu. Leguminosæ. India. 4.)

Catechu is one of the most convenient and powerful astringents. Dose gr. x.—Dj. In the form of bolus, thus:

R Extract. acac. catechu triti gr. xij. Extracti opii . . . gr. ss. Conservæ rosæ Gallicæ . q. s. Fiat bolus.

In diarrhœa.

A piece allowed to dissolve slowly in the mouth, or lozenges such as the following:

Ut fiat massa in trochiscos formanda.

In relaxation of the uvula and fauces.

Combined with an equal quantity of Peruvian bark, and one-fourth the quantity of myrrh, catechu forms an excellent dentifrice, especially when the gums are spongy.

Officinal Preparations.

INFUSUM ACACIÆ CATECHU, L. E. D.—Infusion of Catechu.

(Extract. Acac. Catechu triti Zijss., Cort. Laur. Cinnamom. contus. Zss., Aq. bullientis Zvij., Syrup. simpl. Zj. &c.)

In diarrhœa from a laxity of the bowels. Dose Zjss. —Zij. after every loose stool.

TINCTURA ACACIÆ CATECHU, L. E. D.—Tincture of Catechu.

(Extract. Acac. Catechu triti Ziij., Cort. Lauri Cinnamom.

contus. Zij., Alcohol. dilut. Ibijss. &c.)

In chronic dysentery, diarrhœa, leucorrhœa, &c. Dose 3j.—3ij. in chalk mixture, some bitter infusion, or red wine.

ELECTUARIUM CATECHU COMPOSITUM, E. D.—Compound Electuary of Catechu.

(Extract. Acac. Catechu Ziv., Kino Ziij., Cort. Laur. Cinnamomi, Nuclei Myrist. Moschat, and Zj., Opii in Vin. alb. Hispan. q. s. diffusi Zjss., Syrup. Rosæ Gallicæ, ad mellis spissitudinem cocti fbij4, &c.)

Dose Dj.—Zj. as a bolus, or dissolved in any liquid. The compound electuary of Catechu contains about gr. ijss. of opium in each ounce.

ACETOSÆ FOLIA. Vide RUMICIS ACETOSÆ FOLIA.

ACETOSELLA, L.-Wood Sorrel.

(Oxalis acetosella. Geraniaceæ. Indigenous. 4.)

The leaves of wood sorrel contain a considerable quantity of super-oxalate of potass, and have a pleasant acid taste. They may be given in infusion, or made into a conserve with sugar, or boiled with milk to form an acid whey.

ACETUM, E. L. Acetum vini, D. Vinegar.

ACIDUM ACETICUM TENUE, E. Acetum distillatum, D. Acidum aceticum dilutum, L.—Weak Acetic Acid.

Refrigerant. Useful in inflammatory diseases and

scurvy; and may be advantageously administered in hamorrhage, especially after the exhibition of the acetate of lead, the solubility of which is increased by it. Given to counteract the effects of narcotic poisons, after the stomach has been cleared out. Dose 3j.—3ss. diluted with water or barley-water, with or without syrup. In clysters, 3j.—3ij. Externally, used in the form of this lotion:

In bruises, sprains, burns, and chronic ophthalmia.

The vapour of vinegar is inhaled in putrid sore throat.

Officinal Preparations.

Syrupus Aceti, E .- Syrup of Vinegar.

(Aceti partes v., Sacch. purif. partes vij.)

Refrigerant and antiseptic. Dose 3i — 3ij. diluted with water, as a beverage in fevers.

ACIDUM ACETICUM AROMATICUM, E.—Aromatic Acetic Acid.

(Cacum. Rorismarin. off., Fol. salviæ off., sing. siccatorum, Zi., Flor. lavand. spic. sicc. Zss., Flor. Eugen. caryophyll. contus. Zss., Acidi acetici ten. fbij.)

Used as a grateful perfume.

ACIDUM ACETICUM FORTE, E. Acidum aceticum fortius, L. Acidum aceticum, D.—Strong Acetic Acid.

Is not used internally. Applied to the skin, and prevented from evaporating, it acts as a rubefacient. Used as an escharotic to destroy warts, especially venereal, and chancres. The vapour of it is applied to the nostrils as an excitant in syncope and asphyxia, and as an antispasmodic in nervous headachs.

Officinal Preparation.

ACIDUM ACETICUM CAMPHORATUM, E. D.—Camphorated Acetic Acid.

(Acidi acetici fort. Zvi. Camphoræ Zss.)

The vapour is snuffed up the nostrils in syncope.

ACIDUM BENZOICUM, L. E. D .- Benzoic Acid.

Obtained from Gum benzoin, STYRACIS BENZOINI BALSAMUM, which see.

ACIDUM CITRICUM, L. E. D .- Citric Acid.

Obtained from lemon juice. Refrigerant and antiscorbutic. Dose gr. x.—3ss. daily, dissolved in any watery fluid, so as to acidify it pleasantly.

Lemonade Powder is made by mixing 3j. of citric acid and fbiv. of fine sugar passed through a tamis sieve. It

is flavoured with volatile oil of lemons.

ACIDUM HYDROCYANICUM. Acidum Prussicum, D.—Prussic Acid.

(Cyanureti hydrargyri Zj., Acidi muriatici, mensura Zvij., Aquæ, mensura Zvij. Distil off eight fluid ounces from a glass retort, into a cool receiver. The product is to be kept in a well stoppered phial, and in a cool and dark place. Sp. gr. 998.)

This acid, when pure, is one of the most violent poisons. The above preparation, which is called Medicinal Prussic Acid, contains one part of pure prussic acid, and eight and a half parts of water. It is colourless and transparent; its odour resembles that of bitter almonds; its taste is sweetish and bland at first, but afterwards pungent and acrimonious; it is very volatile, and is decomposed by a high temperature, and light.

Prussic acid exists in a great number of vegetables,

particularly those of the family of Rosaceæ.

Sedative. Used in all cases in which the irritability of the pulmonary organs is morbidly increased, as in nervous and chronic coughs, asthma, hooping cough, and as

a palliative in phthisis; also in hiccough, and to allay the irritability of the stomach in dyspepsia. Dose Gtt. ij., gradually and cautiously increased to Gtt. viij., in distilled water or almond emulsion, or according to this formula:

Misce. Sumat cochl. med. i. tertia quaque hora. Applied externally in the form of lotion, thus;—

R. Acidi prussici medicin.

Alcohol. dilut.

Aquæ distillatæ

Sit pro lotione utendum.

to allay the itching and tingling, so distressing in impe-

tigo and pruriginous affections.

The poisonous effects of prussic acid are counteracted by hot brandy and water, ammonia, and other diffusible stimulants.

ACIDUM MURIATICUM, L. E. D.—Muriatic Acid.

The specific gravity of this acid is to that of distilled water as 1170 to 1000. Escharotic.

ACIDUM MURIATICUM DILUTUM, D.—Dilute Muriatic Acid.

(Acidi Muriatici, partes x., Aquæ distillatæ, partes xi.)

Dose 3ss.—3j.

Exhibited according to the following formula:

Misce. Sumat Zij. - Ziv.; bis, ter, sæpiusve quotidie.

Muriatic acid has been found useful in the most malignant cases of typhus and scarlatina. It is also given in venereal cases and the *phosphatic* calculus diathesis.

As a gargle it may be exhibited, combined thus:

M.

A C I 39

Or in the form of linctus thus:

R Mellis rosæ . 3x.

Syrupi rhœados . Zij. (pro colore.)

Acidi muriat. . gtt. xx. Simul agita ut fiat linetus.

in inflammatory and malignant sore throat, and in aph-

Muriatic acid may be used as an injection in gonor-rhoea, in the proportion of gtt. xvj. of the diluted acid to Ziv. of water.

ACIDUM NITRICUM, L. E. D ... Nitric Acid.

(Obtained by decomposing Nitrate of Potass, by sulphuric acid.)

Sp. gr. 1.500. Escharotic.

ACIDUM NITRICUM DILUTUM, L. D.—Dilute Nitric Acid. (Acid. nitric. (partes iij. D.) Zj., Aquæ (partes iv. D.) Zix.)

ACIDUM NITROSUM, E .- Nitrous Acid.

Sp. gr. 1.520. Escharotic.

The method of using nitric acid as an escharotic is to smear all the sound parts in the immediate vicinity of the ulcer, &c. with *Ung. Resin. Nig.*, or other ointment, and then to apply pledgets of lint firmly upon the place for a few seconds, by which the whole surface will be deadened, and a deep slough remain.

ACIDUM NITROSUM DILUTUM, E.—Dilute Nitrous Acid.

(Acidi nitrosi, Aquæ, pondera paria.)

Nitric acid is tonic, antiseptic, and antisyphilitic. Dose of the diluted acid gtt.x.—xxx. in Ziij. of water twice or thrice a-day.

Nitric acid may be given, combined as in the following

formula:

Misce. Tubuli vitrei ope, et partitis vicibus, sumatur Zxvj. quotidie.

in typhoid fevers, in liver and venereal complaints, and in dyspepsia: may be also used as a gargle.

Given thus:

M. ft. haustus, ter in die sumendus; in dropsies following reiterated courses of mercury, which is not unfrequent in broken-down constitutions.

Combined thus, it proves expectorant, and is very efficacious during the paroxysm of asthma.

M. Ft. Haustus tertiis horis sumendus.

Applied externally in the form of this lotion:

R. Acidi nitrici . . . gtt. l. Aquæ distillatæ . . lbijss.

M. Fiat lotio.

as a stimulant, to sloughing and indolent ulcers, attended with a thin ichorous discharge, and in caries of the bones.

Nitrous acid vapour is used for the purposes of fumigation. It may be disengaged thus: Six ounces of powdered nitre are put into a saucer, which is placed in a pipkin of heated sand. On the nitre four ounces of sulphuric acid are then poured, when the fumes of nitrous acid immediately begin to arise.

Officinal Preparation.

UNGUENTUM ACIDI NITROSI, E. D .- Ointment of Nitrous Acid.

(Adipis suilli fbi., Acidi nitrosi Zvj.)

Applied as a stimulant to foul ulcers and herpetic eruptions.

ACI 41

ACIDUM NITRO-MURIATICUM, D.—Nitro-Mu-riatic Acid.

(Acidi Nitrici, mensura, partem j., Acidi Muriatici, mensura, partes ij.)

Stimulant and antiseptic. Dose gtt. viij.—xxx. twice or thrice a-day, in \(\frac{7}{2} \)iv. of barley water and a little syrup. Has been much recommended in syphilis and disordered states of the liver, also in scarlatina maligna. Used externally in the form of bath, (for this purpose \(\frac{7}{2} \)jss. of the acid is to be added to the gallon of water, so that this may have the sourness of weak vinegar), it is highly praised as a preventive of biliary obstructions.

ACIDUM SULPHURICUM, L. E. D.—Sulphuric Acid.

Sp. gr. 1845. Escharotic, stimulant and rubefacient; produces a superficial eschar.

Officinal Preparations.

UNGUENTUM ACIDI SULPHURICI, D ... Ointment of Sulphuric Acid.

(Acidi sulphurici Zj., Adipis suilli præparat. Zj.)

Used in local pains, and, diluted with an equal quantity of lard, has been found useful in scabies.

ACIDUM SULPHURICUM DILUTUM, L. E. D.—Diluted Sulphuric Acid.

(Acid. sulphurici, partem j., Aquæ, partes vij.)

This is an excellent tonic in dyspepsia. As an astringent it is used in hæmorrhages; and as a refrigerant in febrile diseases. Dose gtt. x.—xxx. largely diluted. Used externally as a gargle, thus:

R. Aquæ
Syrup. simpl.
Acid. sulphurici
Misce.

Siv.
3ss.
3ss.
3ss.—3j.

in quinsy, but particularly in putrid sore throat, and in aphthous mouth, and to check salivation. It may also

be used, the syrup being omitted, as a lotion in cutaneous eruptions, and ill-conditioned sores; and if more diluted, as a collyrium in the chronic stages of ophthalmia, and as an injection in chronic gonorrhoea.

ACIDUM SULPHURICUM AROMATICUM, E. D.—Aromatic Sulphuric Acid.

(Alcohol. fort. fbij., Acid. sulphurici Zvj., Cort. Laur. cinnamom. contus. Zjss., Rad. amom. zingib. contus. Zj. &c.)

Stimulant and tonic. Given in dyspepsia. Dose gtt. x.—xxx. several times a-day, in some fluid, such as the decoction of cinchona, or other tonic barks.

ACIDUM TARTARICUM, L. E. D ... Tartaric Acid.

Used for the same purposes as, and as a substitute for, Citric Acid. Dose, gtt. x.—3ss. dissolved in water. United with carbonate of soda, in the following proportions, to form the sodaic powders:

R Sodæ carbonatis Əij. ft. pulvis, in chart. cœrul.

R Acidi tartarici pulv. gr. xxxv. fit pulvis, in chart. alb.

This quantity is to be taken in Zviij. of water.

Midgeley's sodaic powders are formed by adding gr. 7 of the tartrate of antimony to each paper of acid.

ACONITI NAPELLI FOLIA, E. Aconiti folia, L. Aconitum paniculatum, D.—Aconite or Wolfsbane-leaves.

(Aconitum Napellus. Ranunculaceæ. Mountains of

Germany. 4)

Narcotic and deobstruant. Has been recommended in chronic rheumatism; in gout; in intermittent fever, complicated with visceral disease; paralysis; cancer; scrofula. Dose, gr. j. gradually increased to gr. v. twice or thrice a-day.

Officinal Preparation.

Succus spissatus (Extractum, L.) Aconiti Napelli, E. D.—Inspissated juice of Aconite.

(The expressed juice inspissated without defecation.)

Dose gr. 1, formed into a powder with gr. x. of white sugar, or made into a pill with any convenient addition, twice or thrice a-day, gradually increased to gr. vj.

Given combined thus, as a diaphoretic:

R Succ. spissati Aconiti Antimonii sulphureti

Tere simul ut fiat pulvis.

ACORI CALAMI RADIX, E. Calami radix, L.—
Sweet-flag root.

(Acorus calamus. Junceæ. Europe. h)

This is an agreeable stomachic. It is best given in form of infusion, thus:

Dose, a cupful.

ADEPS OVILLUS, E. D. Sevum, L .- Mutton Suet.

(Ovis aries. Cl. Mammalia. Ord. Ruminantia.)

Mutton suet is principally used in the preparation of ointments and plasters, but it is sometimes exhibited internally, in chronic diarrhoea, boiled in milk, thus:

Sumat Ziij .-- Ziv. pro re nata.

ADEPS SUILLUS, E. D. Adeps, L.—Hog's Lard. (Sus scrofa. Cl. Mammalia. Ord. Pachydermata.)

ADEPS PREPARATA, L. Adeps Suillus præparatus, D. —Prepared Lard.

This is an emollient. Used in the composition of liniments, ointments, and plasters.

ÆRUGO. Vide CUPRI SUBACETAS.

ÆTHER NITROSUS, D Nitrous Æther.

This has the same properties as Sulphuric Æther.

Spiritus Ætheris Nitrosi, E. Spiritus ætheris nitrici, L. Spiritus æthereus nitrosus, D.—Spirit of Nitrous Æther.

This is much employed as a refrigerant in febrile affections; and, as a diuretic, it is frequently of much use in dropsy. Dose gtt. xx.—3j. in any watery vehicle. Combined with a small quantity of Spiritus Ammoniæ Aromaticus, it is diaphoretic and diuretic.

ÆTHER SULPHURICUS, L. E. D. — Sulphuric Æther.

ÆTHER SULPHURICUS RECTIFICATUS.—Rectified Sulphuric Æther.

Taken internally, is antispasmodic, narcotic, and diffusibly stimulant. Dose 3ss.—3j. Applied externally, if allowed to evaporate, refrigerant; if, on the contrary, it is prevented from evaporating, it is a powerful stimulant and rubefacient.

ÆTHER SULPHURICUS CUM ALCOHOLE, E. Spiritus ætheris sulphurici, L. Liquor æthereus sulphuricus, D.—Sulphuric Æther with Alcohol.

(Ætheris Sulphurici, partem j., Alcoholis fort. partes ij. Misce.)

This possesses similar properties with the above, but in an inferior degree. Dose 3ss.—3iij. A useful gargle in slight inflammation of the fauces, may be formed thus:

R Æther. sulph. cum alcohole
Decoct. hordei
Syrup. althææ
Misce.
F. gargarisma.

ETHER SULPHURICUS CUM ALCOHOLE AROMATICUS, E. Spiritus ætheris aromaticus, L.—Aromatic Sulphuric Æther with Alcohol.

(Cort. Laur. cinnamom. contus., Sem. amom. repent. contus. āā 5.j., Fruct. pip. long. trit. Zij. Ætheris sulph. cum alcohole fbijss. &c.)

Given as a stimulant in faintings and nervous faintings.

OLEUM ETHEREUM, L .- Æthereal Oil.

(Formed during the distillation of Æther.)

Used in the composition of the following preparation.

Spiritus Ætheris Sulphurici compositus, L. Liquor æthereus oleosus, D.—Compound Spirit of Sulphuric Æther.

(Spirit. æther. sulph. 0j., Olei ætherei Zij. Misce.)

This is stimulant and anodyne. Dose 3ss.—3ij. in any convenient vehicle.

May be combined as in the following narcotic mixture:

Alcohol fortius, E. Spiritus rectificatus, L. D.—
Stronger Alcohol. Rectified Spirit of Wine.

Specific gravity .835.

Alcohol. Proof Spirit. Spiritus tenuior, L. D.—Diluted Alcohol. Proof Spirit.

(Prepared by mixing stronger alcohol with an equal part of water. Specific gravity .935.)

Alcohol is a powerful and diffusible stimulant. Taken internally much diluted, it acts as a cordial and tonic, raises the pulse, stimulates the stomach, and promotes digestion. When taken to excess, its bad effects are to be obviated by emetics; either oil alone, or oil mixed

with æther, or a drachm of aqua acetatis ammoniæ in a glass of water.

Dose. Of stronger alcohol Zij.—Ziv. Of diluted alcohol Zss.—Zj.

ALLII CEPÆ BULBUS, D .- The Bulb of the Onion.

(Allium Cepa. Liliaceæ. Europe. 4)

Odour strong and penetrating; taste sweetish, and pungent; stimulant, diuretic, and expectorant. Chiefly used externally as a stimulant poultice for suppurating tumours.

ALLII SATIVI RADIX, E. Allii radix, L. Allium sativum, D.—Garlic Bulbs.

(Allium sativum. Liliaceæ. Sicily. 4)

Stimulant, expectorant, diaphoretic, and diuretic. Dose, one to six cloves swallowed without chewing twice or thrice a-day. An ounce of bruised garlic infused in a pound of milk, is the mode in which it has been given to children for the expulsion of tænia.

Externally, garlic is used as a suppurative cataplasm. A drop of the juice introduced into the ear five or six

times a-day is a good remedy in atonic deafness.

ALOES EXTRACTUM._Aloes.

a. Aloe Hepatica, E. D.—Barbadoes Aloes.

(Aloe vulgaris. Liliaceæ. Barbadoes, Greece. 4)

b. Aloe socotorine Aloes. D. Aloes spicatæ extractum, L.—Socotorine Aloes.

(Aloe spicata. Liliaceæ. Cape of Good Hope. 4)

Aloes is purgative in a dose of gr. x .- Dj.; stomachic

in doses of gr. j .- gr. ij.

Aloes is also emmenagogue, and forms the basis of numerous anthelmintic suppositories. Hurtful in hæmorrhoids. It is said to act primarily on the liver, and consequently not to exert any purgative effect when exhi-

bited in clyster. The best form for the exhibition of aloes is that of pill.

As an aperient and tonic it may be given combined

thus:

Misce inter se, et subige in massam cum syrupo Citri Aurantii.

Sumat gr.v.-gr.x. ante cibum.

Or thus:

Simul contunde, et in pilulas cxx. divide. Dosis. a ij. ad iv. semel, vel bis quotidie.

in leucophlegmatic and strumous habits, when the alvine excretion is irregular.

May be combined with pilulæ hydrargyri thus:

R. Pil. hydrarg.

Aloes socotorin. āā Đj.

Fiat massa in pil. vj. dividend. e quibus sumantur binæ h. s.

Aloes is well calculated to obviate the costiveness so generally produced by opium; these two may therefore

be given in combination.

In the London and Edinburgh Pharmacopæias, the socotorine aloes is ordered for all the preparations; in the Dublin Pharmacopæia the Barbadoes aloes is more frequently prescribed.

Officinal Preparations.

Pulvis Aloes compositus, L. D.—Compound Powder of Aloes.

(Aloes. spic. ext. \(\frac{7}{2}\)jss., Guaiaci gum. res. \(\frac{7}{2}\)j., Pulv. cinnam. comp. \(\frac{7}{2}\)ss. &c.)

Dose gr. x.— 9j.

Pulvis Aloes cum Canella, D.—Powder of Aloes with Canella.

(Aloes hepaticæ lbj., Canellæ albæ Ziij., &c.)
Dose gr. x.—Dj.

PILULE ALOETICE, E .- Aloetic Pills.

(Extracti aloes socotorinæ in pulv. triti, Saponis duri, āā partes æquales, &c.)

Dose gr. x .- 9j.

PILULE ALOES COMPOSITE, L. D.—Compound Pills of Aloes.

(Aloes spic. extract. cont. Zj., Ext. gentianæ Zss., Ol. carui gtt. xl., Syrup q. s.)

Dose gr. x .- Dj.

PILULE ALOES ET ASSÆFŒTIDÆ, E.—Pills of Aloes and Assafætida.

(Extract. aloes socotorinæ triti, Gummi-resinæ ferulæ assæfoetidæ, Saponis duri, āā partes æquales, &c.)

Dose gr. x. twice a-day.

PILULÆ ALOES ET MYRRHÆ, L. E. D.—Pills of Aloes and Myrrh.

(Extract. aloes socotor. partes iv., Myrrhæ partes ij., Stigmatum croci sativi partem j., &c.)

Dose gr. x.—Dj.

TINCTURA ALOES SOCOTORINA, L. E. D.—Tincture of Aloes.

(Extract. aloes socotorinæ triti Zss., Extract. glycyrrhizæ glabræ Zjss., Alcoholis fort. Ziv., Aquæ lbj. &c.)

Dose Zss.—Zjss.

TINCTURA ALOES ÆTHEREA, E.—Æthereal Tincture of Aloes.

(Extracti aloes socot. trit., Myrrhæ trit., sing. 3jss., Stig-

mat. croci sativi concis. \(\frac{1}{2}\)j., \(\frac{1}{2}\)Etheris sulphurici cum alcohole \(\frac{1}{2}\)j., \(\frac{1}{2}\)C.)

Dose 3j.-3ij.

TINCTURA ALOES ET MYRRHÆ, L. E. D .- Tincture of Aloes and Myrrh.

(Tinct. myrrhæ fbij., Extract. aloes socot. trit. \(\frac{7}{2}\)jss., Stigmat. croc. sativ. concis. \(\frac{7}{2}\)j., &c.)

Dose 3j.—3ij.

TINCTURA RHEI ET ALOES, E. D.—Tincture of Rhubarb and Aloes. Vide Rheum palmatum.

VINUM ALOES SOCOTORINE, L. E. D .- Wine of Aloes.

(Extract. aloes socotorinæ trit. \(\frac{7}{2}\)j., Seminum amom. repent. contus., Rad. am. zingib. contus. \(\bar{a}\)a \(\frac{7}{2}\)j., Vini albi hispani lbij. &c.)

Dose 3j.—3ij. as a stomachic; 3j.—3ij. as a purgative.

DECOCTUM ALOES COMPOSITUM, L. D.—Compound decoction of Aloes.

(Ext. glycyrrh. Ziv., Potassæ subcarb. Əij., Aloes spic. ext. contrit., Myrrhæ contrit., Croci stigmat. sing. Zj., Aquæ 0j., Decoque ad Zxij. et cola, dein adde, Tinct. cardamom, comp. Ziv.)

Dose zss.—Zij. taken in the morning.

EXTRACTUM ALOES PURIFICATUM, L. D.—Purified Extract of Aloes.

Dose gr. v.-xv.

EXTRACTUM COLOCYNTHIDIS COMPOSITUM, L. D. — Compound Extract of Colocynth. Vide Cucumeris colocynthidis pulpa.

ALTHÆÆ OFFICINALIS RADIX, E. Althææ radix, folia, L. D.—The root and leaves of Marsh Mallow.

(Althæa officinalis. Malvaceæ. Indigenous. 4)

Officinal Preparations.

DECOCTUM ALTHEE OFFICINALIS, E. D.—Decoction of Marsh Mallows.

(Rad. althææ off. sicc. et contus. Ziv., Fruct. vitis vinif., demptis acinis Zij., Aquæ lbvij.)

Taken internally, particularly useful in diseases of the bladder, lungs, and intestines. Applied externally as an emollient fomentation, glyster, or gargle.

SYRUPUS ALTHÆÆ OFFICINALIS, L. E. D.—Syrup of Marsh Mallows.

(Rad. althææ off. recent. concis. partem j., Aquæ partes x., Sacch. purif. partes iv.)

Dose 3j.—3iij. added to demulcent drinks in fevers.

ALUMEN, L. E. D ._ Alum.

(Sulphas aluminæ et potassæ.)

Tonic and astringent. Serviceable in restraining hamorrhages and immoderate secretions; also in painter's colic. Dose gr. v.—Dj. every hour, combined with an aromatic thus:

R Aluminis contrit. gr. v. Myristicæ nucl. mochat. contrit. gr.v. Extract. gentianæ luteæ . q. s. ut fiat massa in Pil. iij. dividenda.

Sometimes given in the form of whey prepared by boiling 3ij. of the powder in 3xvj. of milk, and straining; the dose of which is a cupful occasionally.

May be made into a gargle thus:

Sit pro gargarismate. to be used in relaxation of the uvula.

Officinal Preparations.

ALUMEN EXSICCATUM, E .- Dried Alum.

Applied externally as an escharotic, the powder being sprinkled on fungous ulcers. Sometimes used internally

in colic, the pain of which it relieves, and at the same time gently moves the belly. Dose gr. x.—Эj.

Pulvis aluminis compositus, E.—Compound Powder of Alum.

(Aluminis, partes iv., Kino, partem j.)

Astringent. Dose gr. x.—xv. Given in intestinal hæmorrhages and obstinate diarrhæa. The solution of alum is decomposed by a solution of kino.

LIQUOR ALUMINIS COMPOSITUS, L.—Compound Solution of Alum.

(Aluminis, Zinci sulphatis, sing. 3ss., Aq. ferventis 0ij.)

Serviceable in chilblains. Used hot as a lotion three or four times a-day, for cleaning ulcers and removing cutaneous eruptions. Diluted with six or seven waters, it forms a good collyrium or injection in gonorrhœa and fluor-albus.

CATAPLASMA ALUMINIS, D .- Cataplasm of Alum.

(Ovorum duorum Albumen, Aluminis Zj. Shake together until they form a coagulum.)

Applied, inclosed between two folds of very fine linen, to the eye in purulent and ichorous ophthalmia and in ecchymosis. Also to chilblains, and bruised surfaces in typhus fevers.

AMMONIA .- Ammonia.

Officinal Preparations.

Ammoniæ aqua, E. Liquor Ammoniæ, L. Aqua ammoniæ causticæ, D.—Water of ammonia.

(Prepared by passing ammoniacal gas through water, which absorbs it.)

Applied externally to the skin as a rubefacient.

AQUA AMMONIÆ DILUTA, E.—Diluted Water of Ammonia.

(Aq. ammoniæ, partem, j., Aq. distillatæ, partes, ij.)

Applied in the form of vapour to the nostrils, as a stimulant in syncope, hysteria, and to the eyes in chronic ophthalmia.

Given internally as a stimulant, and as an antacid. Dose gtt.xv.—3ss. diluted with water or milk, or combined thus:

F. Haustus ter die sumendus.

in acidity of the stomach.

OLEUM AMMONIATUM, E. Linimentum ammoniæ fortius, L. D.—Ammoniated Oil.

(Ol. oleæ Europ. partes viij., Aquæ ammoniæ partem j.)

Rubefacient.

A flannel moistened with this liniment, applied round the external fauces and renewed every four or five hours, is very efficacious in cynanche tonsillaris.

A more stimulating liniment may be prepared accord-

ing to the following formula:

R. Aquæ ammoniæ
Ol. ol. Europææ
Ol. terebinthinæ
Ol. limonis
Agita simul donec misceantur.

Or this:

Adipi ovillo liquefacto adde ol. terebinth., et aquam ammon. et misce agitando.

LINIMENTUM CAMPHORÆ COMPOSITUM, L. D.—Compound camphor liniment.

(Camphoræ Zij., Aq. ammoniæ Zvj., Spir. lavand. 0j.)

Stimulant and anodyne. Used for sprains, bruises, and chronic rheumatic pains.

ALCOHOL AMMONIATUM, E .- Ammoniated Alcohol.

(Prepared by passing ammoniacal gas through alcohol.)

This is a pungent diffusible stimulant and antacid.

Dose 3ss.—3j. much diluted. Externally, it is a powerful rubefacient; saturated with camphor, it forms a most stimulating liniment.

TINCTURA AROMATICA AMMONIATA, L. E. D.—Ammoniated Aromatic Tincture.

(Alcohol. ammoniat. Zviij., Ol. volat. citr. medicæ Zj., Ol. volat. Rorismarin. off. Zjss.)

Properties the same as the above, but a more agreeable medicine. Dose gtt. x.—lx., in any convenient vehicle.

Spiritus ammoniæ succinatus, L.—Succinated Spirit of Ammonia.

(Mastiches Ziij., Spir. rect. Zix., Lavand. ol. gtt. xiv., Succini ol. gtt. iv., Liquoris ammoniæ Zx.)

Stimulant and antispasmodic. Dose gtt. x. - 3ss.

SUB-CARBONAS (CARBONAS, D.) AMMONIÆ,
L. E. — Sub-carbonate of Ammonia. Carbonate of
Ammonia.

Similar in its action to ammonia, but weaker. Dose gr. v.—xv. in pills. In combination thus:

M. ft. mistura, cujus sumat cochlear ij. ampl. quaque hora si opus fuerit.

it may be advantageously administered in the syncope and depressed state of the system arising from severe accidents.

As an antacid sub-carbonate of ammonia may be given thus:

R. Ammoniæ sub-carb. . . . gr. v. Extract. Rhei . . . gr. viij.

F. massa in pil. iij. dividenda.

The sub-carbonate of ammonia is also used as smellingsalts in syncope and hysteria, and sometimes as an emetic in the dose of 3ss.

Officinal Preparations.

Solutio Sub-Carbonatis ammonia, L. E. D.—Solution of the Sub-carbonate of Ammonia.

(Sub-carb. ammon. partem j., Aquæ distillatæ partes iv. Solve.)

Dose 3ss.—3ij.

LINIMENTUM AMMONIÆ SUB-CARBONATIS, L.—Liniment of the Sub-carbonate of Ammonia.

(Liquoris ammoniæ sub-carb. Zj., Olivæ ol. Zij.)

Rubefacient.

AMMONIÆ BICARBONAS, D.—Bicarbonate of Ammonia.

(Prepared by saturating the solution of the sub-carbonate with carbonic acid gas.)

Diaphoretic, antispasmodic, and antacid. Dose gr. vj. — Dj. dissolved in water.

ACETAS AMMONIÆ. __Acetate of Ammonia.

AQUA ACETATIS AMMONIÆ, L. E. D.—Water of the Acetate of Ammonia.

(Sub-carb. ammon. trit. q. v., Acid. acet. ten. q. s.)

This is a useful diaphoretic in febrile and inflammatory diseases. By exposure to a cool air its action is determined to the kidneys. Dose 3ss. by itself, or combined with other substances, as in the following formulæ:

I.

F. haustus 4tis horis sumendus.

As a diaphoretic in low fevers.

II.

Emuls. camp	horæ		zvj.
Syrup. rosæ			3ss.

F. S. A. mistura. Dosis, coch. iij. 3tiis vel 4tis horis. As a diaphoretic in inflammatory fevers.

III.

R	Aq. ammon. acet.		zss.
	Potass. acet.		3.j.
	Aquæ puræ .		3j.

F. haustus ter in die sumendus.

As a diuretic.

The acetate of ammonia is used externally, in the form of lotion, thus:

R Aq. ammon. ace		Zviij.	
Alcohol. dilut.			ξvj.
Aq. distillatæ			3x.

in erysipelatous and other external inflammations, but more particularly in the *early stage* of inflammation of the mammary gland, during suckling; also in sprains and bruises.

As a collyrium, thus:

R Aq. ammoniæ	acet.			Ξij.
Tinct. opii				Zij.
Mist. camph.		٠		ξvj.

Twenty-five drops of the water of the acetate of ammonia in a glass of sweetened water has been recommended as a means of dissipating drunkenness, and also relieving headachs.

HYDRO-SULPHURETUM AMMONIÆ, E. D.— Hydro-sulphuret of Ammonia.

(Prepared by passing sulphuretted hydrogen gas through aqua ammoniæ.)

Sedative. Has been used in diabetes in doses of gtt. v. —x. twice or thrice a-day.

MURIAS AMMONIÆ, L. E. D.—Muriate of Ammonia. Deobstruant in doses of gr.x.—7ss. in the form of

powder mixed with powdered gum or sugar, or dissolved with syrup, mucilage, &c.; but it is seldom used internally. Applied externally as a lotion, thus:

M. ft. lotio tumori applicanda.

Or thus:

These are most efficacious lotions, for promoting the absorption of extravasated blood in cases of ecchymosis, contusions, sprains, &c., when the inflammation has subsided.

When applied as soon as made, they act beneficially in abating the heat and pain of inflammation, and in relieving headachs, &c. by the cold produced during the solution of the salt.

Muriate of ammonia is an ingredient in a plaster, which is composed of soap Zj., lead plaster Zij., liquefied together, to which, when nearly cold, Zss. of muriate of ammonia finely powdered is added. A decomposition takes place and ammonia is slowly evolved, on which the virtue of the plaster depends. It acts as a powerful stimulant and rubefacient. Useful in rheumatic affections, and applied to the chest in pulmonary complaints, and to the knee in that affection to which house-maids are liable. It should be applied immediately after it is formed.

AMMONIACUM, GUMMI RESINA, E. D. Ammoniacum, L.—Ammoniac.

(Heracleum gummiferum? Umbelliferæ. Persia.)

Ammoniac is stimulant, antispasmodic, and expectorant. Externally, discutient and resolvent. Dose gr. x. —3ss. in pills.

May be given as an expectorant, combined thus:

B Ammoniaci .		Zjss.
Pulveris scillæ		3ss.
Extract. conii		Zss.

Contunde simul, et divide massam in pilulas æquales xxx. quarum sumat ij. sextis horis. in asthma and chronic catarrh.

Dissolved in nitric acid as in the following formula:

donec emulsio evadit.

Dosis, cochl. mediocr., ex liquore aliquovis demulcente.

it is an excellent expectorant in cases where large accumulations of purulent or viscid matter exist, with feeble and difficult expectoration.

Officinal Preparations.

MISTURA AMMONIACI, L. D .- Mixture of Ammoniac.

(Ammoniaci Zij., Aquæ Zviij.)

Expectorant. Dose zss.—zj. May be given in combination, thus:

B. Misturæ ammoniaci,

Fiat mistura, cujus sumatur cochl. unum ampl. urgente tussi.

in Hooping-cough.

EMPLASTRUM AMMONIACI, L. E. D.—Plaster of Ammoniac.

(Ammoniaci partes v., Acidi acetici ten. partes viij. &c.)

Stimulant. Applied over indolent tumours, and in pains of the joints.

EMPLASTRUM AMMONIACI CUM HYDRARGYRO, L. D Plaster of Ammoniac with Mercury.

(Ammoniaci pur. fbj., Hydrarg. pur. Ziij., Ol. sulph. Zj. &c.)

Resolvent and discutient. Applied to indolent tumours, nodes, tophi, and to joints affected with syphilitic pains, &c.

AMOMI REPENTIS SEMINA, E. Cardamomi semina, L. Cardamomum amomum; Semina, D.—
Lesser Cardamom Seeds.

(Amomum repens. Drymyrrhizæ. India.)

Cardamom seeds are carminative and stomachic. They are chiefly used as a corrective of other remedies. Dose of the powder gr. x.— $\exists j$.

Officinal preparations.

TINCTURA AMOMI REPENTIS, L. E.—Tincture of Cardamoms.

(Sem. Amom. repent. contus. Ziv., Alchohol. dilut. Hijss. &c.)

Dose 3i.—3iv.

TINCTURA CARDAMOMI COMPOSITA, L. D.—Compound Tincture of Cardamoms.

(Cardam. sem., Carui sem., Cocci, sing. contrit. Zij., Cinnam. cort. cont. Ziv., Uvarum passarum demptis acinis Ziv., Spir. ten. 0ij.)

Dose 3j.—3ij.

AMOMI ZINGIBERIS RADIX, E. Zingiberis radix, L. D.—Ginger root.

(Amomum Zingiber. Drymyrrhizæ. East Indies. 4)

Ginger root is stimulant, stomachic, and sialogogue. May be applied externally as a rubefacient. Chiefly used as an adjunct to other remedies, particularly as a corrective of the griping effects of drastic purgatives.

Dose gr. x .- 3j.; in any mucilaginous liquid. An over

dose is apt to produce spasmodic stricture.

Officinal preparations.

SYRUPUS AMOMI ZINGIBERIS, L. E. D.—Syrup of Ginger.

(Rad. amom. Zingib. trit. Zvj., Aquæ bullient. lbj., Sacch. purif. Zxxij. &c.)

Used as an adjunct to bitter and tonic infusions. Dose 3j.—3iij.

TINCTURA AMOMI ZINGIBERIS, L. E. D.—Tincture of Ginger.

(Rad. amom. Zingib. contus. Zij., Alcohol. dilut. Ibijss., &c.)

Carminative, and a corrective of griping purgatives. Dose 3j.—3ij.

AMYGDALI COMMUNIS NUCLEI—AMYGDALÆ DULCES EX VARIETATE SATIVA, E. Amygdalæ dulces—amaræ, L. D.—Sweet and Bitter Almonds.

(Amygdalus communis. Rosaceæ. Africa. 1)

The kernels of one variety of the Amygdalus communis are sweet almonds, of another, bitter almonds; the former are demulcent; the latter, sedative.

Officinal preparations.

OLEUM AMYGDALI COMMUNIS, L. E. D .- Almond Oil.

(Expressed both from sweet and bitter almonds.)

Demulcent and emollient. May be exhibited in the form of this linetus:

Misce, Cochlear. minim. subinde deglutiatur.

in common catarrhal cough, attended with abrasion of the fauces, and thin copious expectoration.

May be formed into an anodyne liniment, thus:

R Ol. amygd. communis Camphoræ Tinct. opii F. linimentum.	:	•	3ij. 3j. 3ss.
Or this stimulant liniment:			
R. Ol. amygd. communis Camphoræ Aq. ammoniæ Tinct. Benzoin. comp. Ol. volat. rorismarin. F. S. A. linimentum.			Zij.Zj.Zjss.Zij.gtt. xij.
An injection composed thus: R. Ol. amygd. comm. Sol. sub-acet. plumb. Misce.		:	ξίν. gtt. viij.

is said to be useful at the commencement of gonorrhœa.

EMULSIO (MISTURA, L. D.) AMYGDALI COMMUNIS, E. —Almond Emulsion.

(Nucleorum Amygdali communis Zj., Sacch. purif. Zss., Aquæ lbijss. &c.)

Demulcent and cooling. Given in ardor urinæ and strangury. Dose Zviij. or more. If bitter almonds are used, it is sedative.

CONFECTIO AMYGDALARUM, L. D. - Confection of Almonds.

(Amygd. dulc. Zj., Acac. gum. Zj., Sacch. alb. Ziv. &c.)

Ordered by the London and Dublin Colleges for the preparation of almond mixture.

AMYGDALUS PERSICA, FOLIA, D .- Peach leaves.

(Amygdalus Persica. Rosaceæ. Persia. h)

Sedative. An infusion of peach-leaves has been recommended in morbid irritability of the bladder and urethra. The infusion is made thus:

AMYLUM, L. E. Tritici farina, D.—Starch. (Triticum Hybernum. Gramineæ. ())

Starch is used for making Mucilago amyli.

Officinal preparation.

MUCILAGO AMYLI, L. E. D .- Mucilage of Starch.

(Amyli Ziij., Aquæ lbj. &c.)

This is given as a demulcent, both by the mouth and in the form of clyster in dysentery and diarrhoea. It is the common vehicle for the exhibition of opium per anum.

AMYRIDIS GILEADENSIS RESINA, RESINA LIQUIDA, E.—Balm of Gilead.

(Amyris Gileadensis. Terebinthacea. Arabia. 1)

Balm of Gilead is stimulant and expectorant; but scarcely ever used.

AMYRIS ELEMIFERA, RESINA. Vide ELEMI.

ANCHUSÆ TINCTORIÆ RADIX, E.—Alkanet root.

(Anchusa tinctoria. Boragineæ. Europe. 4)

Alkanet root is used to give a red colour to oils, ointments and plasters.

ANETHI SEMINA, L.—Dill Seed.

(Anethum graveolens. Umbelliferæ. South of Europe.

Dill seed are used as a carminative in flatulent colic. Dose gr. x.—3j.

Officinal Preparation.

AQUA ANETHI, L.—Dill Water.

A valuable carminative for children. Dose 3j.-3iij.

ANETHI FŒNICULI SEMINA, E. D. - Seeds of Sweet Fennel.

(Anethum Fœniculum. Umbelliferæ. South of Europe. 4)

The seeds of sweet fennel are carminative and diuretic. Dose 9j.—3j. bruised.

Officinal Preparations.

AQUA FŒNICULI, L. D.—Sweet Fennel Water. Dose Zj.—Ziij.

OLEUM FŒNICULI DULCIS, D.—Oil of Sweet Fennel.

(By distillation from the seeds.)

Dose gtt. ij.—gtt. xx.

ANGELICÆ ARCHANGELICÆ RADIX, E. SE-MINA, D.—Angelica root and Seeds.

(Angelica Archangelica. Umbelliferæ. Northern Alps.

Angelica root is very aromatic; stomachic and carminative. Dose 3ss.—Ziij.

ANGUSTURA. Vide BONPLANDIÆ TRIFOLIATÆ COR-

ANISI SEMINA. Vide PIMPINELLÆ ANISI SEMINA.

ANTHEMIDIS NOBILIS FLORES, L. E. D. _ Chamomile flowers.

(Anthemis nobilis. Compositæ. Indigenous. 4)

Chamomile flowers are used as a tonic in flatulent colic, dyspepsia, gout, and intermittents; also found useful in spasmodic diseases. Employed externally in fomentations and poultices.

Dose of the powder 3ss .- 3ij. In the form of electu-

ary in any convenient vehicle.

Officinal Preparations.

INFUSUM ANTHEMIDIS NOBILIS, L. E. D.—Infusion of Chamomile.

(Flor. Anthemidis nobilis Zij., Aquæ Zviij. &c.)

Drunk warm, to promote the action of emetics; or cold, as a stomachic. Dose 3j.—3ijí

May be given combined thus:

R Infus. anthem. nob.

Aq. menth. virid. āā . . - ʒij.

Syrup. papav.

Syrup. altheæ āā 3ss.

M.

Dosis, coch. min. j. omni quadrante horæ.

in the griping pains of children.

DECOCTUM ANTHEMIDIS NOBILIS, E. D.—Decoction of Chamomile.

(Flor. Anthem. nob. sicc. Zj., Sem. Cari carui contus. Zss., Aquæ lbv. &c.)

A simple bitter. Used as a clyster and fomentation.

EXTRACTUM ANTHEMIDIS NOBILIS, E. D.—Extract of Chamomile.

(Ex. floribus siccatis.)

A simple bitter, as the volatile oil is dissipated. Dose gr. x.—Jj. in pills, twice or thrice a-day.

OLEUM ANTHEMIDIS NOBILIS, L. E.—Oil of Chamomile. (By distillation from the flowers.)

Antispasmodic and carminative. Dose gtt.v.-gtt.x.

ANTHEMIDIS PYRETHRI RADIX. E. D. Pyrethri radix, L.—Pellitory of Spain.

(Anthemis pyrethrum. Compositæ. Arabia. 3)

Acrid and sialogogue. May be chewed, combined with mastich, thus:

B. Anthemid. pyrethri rad. cont.

Fiant secundum artem, ad ignem, masticatoria

duo; teneat æger sæpius in ore, et manducit hujusmodi medicamentum, expuatque salivam.

in toothach, and in paralysis of the tongue and muscles of the throat.

Made into a gargle thus:

Decoque ad dimidium et cola, et colaturæ frigifactæ adde

to be used in relaxation of the uvula and soft palate, and enlargement of the tonsils.

ANTIMONIUM .- Antimony.

The general effects of antimonials are, in small doses, diaphoresis and nausea; in large doses, full vomiting and purging.

SULPHURETUM ANTIMONII, L. E. D.—Sulphuret of Antimony.

Sulphuret of Antimony. D.—Prepared Sulphuret of Antimony.

(Metallic antimony combined with sulphur.)

Sulphuret of antimony is diaphoretic and alterative. Principally given in scrofula, rheumatism, and cutaneous diseases. Dose gr. x.—3ss. in powder or bolus, combined with conium, dulcamara, and guaiacum.

Its medicinal action depends on the state of the stomach; if acid be present it acts with extreme violence.

Sulphur antimonia præcipitatum, L. E.—
Sulphur antimoniatum fuscum, D.—Precipitated Sulphuret of Antimony.

(The protoxide combined with sulphur.)

Diaphoretic, cathartic, or emetic, according to the dose. Given in chronic rheumatism and cutaneous affections. Dose gr. i.—v. twice or thrice a-day, in the form of pill,

generally combined with mercury. If acid is suspected to be present in the stomach, it should be given combined with soap or magnesia.

ANTIMONII VITRUM, L .- Glass of Antimony.

(The sulphuretted oxide of antimony vitrified.)

Ordered by the London College for preparing the tartrate of antimony.

ANTIMONII OXYDUM NITRO-MURIATICUM, D.—Butter of Antimony.

(The metal combined with chlorine.)

Employed as a caustic, though rarely. When used it should be in the form of a liquid, and applied by means of dossils of lint. The eschar it produces is white, dry, and more exactly defined than that caused by potassa.

OXIDUM ANTIMONII CUM PHOSPHATE CALCIS, E. Pulvis antimonialis, L. D.—Antimonial Powder.

(Oxide of antimony with the phosphate of lime.)

This is a substitute for James' Fever Powder. Alterative. Given as a diaphoretic in febrile diseases. Dose gr. iij.—viij. in the form of powder or pill; in large doses, purgative and emetic.

Said to be much improved when combined as in the

following formula:

R. Oxid. antimon. c. phosph. calcis . 3v. Sulphuret. antimon. præcip. . . 3i. F. pulvis. Dosis, gr. v. pro ætate adulta.

It may also be combined thus:

Ut fiant pilulæ x. quarum sumat unam hora decubitus, et repetatur. p. r. n.

TARTRAS ANTIMONII, olim TARTARUS EMETICUS, E.

Antimonium tartarizatum, L. Antimonii et potassæ tartras, D.—Tartar Emetic.

(Protoxide combined with the supertartrate of potass.)

Emetic, and sometimes cathartic, in doses of gr. i.—iij.; in smaller doses, such as gr. $\frac{1}{8}$ — $\frac{1}{4}$, it excites nausea, and is a powerful diaphoretic: in still smaller doses, such as gr. $\frac{1}{16}$, it is expectorant. Sometimes given in very large doses dissolved in a small quantity of water, in order to depress the system, in inflammatory diseases.

Tartar emetic should always be exhibited in solution; in divided doses at short intervals, as an emetic; at greater intervals, and in smaller doses, as a diaphoretic and ex-

pectorant.

Formulæ for the exhibition of Tartar Emetic:

As an emetic,—

R. Tartrat. antimonii

Aquæ distillatæ

Solve—Hujus danda sunt cochlearia duo mediocria, singulis horis quadrantibus, donec supervenerit vomitus.

Fiat haustus emeticus.

As a diaphoretic,—

Misce. Ft. mistura, cujus capiat coch. ampl. 3tiis vel 4tis horis.

A very useful diaphoretic, and nauseating remedy in febrile, and inflammatory diseases.

Officinal Preparations.

VINUM (LIQUOR, L.) TARTRATIS ANTIMONII, L. E.— Wine of Tartar Emetic.

(Tart. antimon. gr. xxiv., Vini albi Hispan. lbj.)

Contains two grains in the ounce. Dose as an emetic

3ss.—3iij. every five or ten minutes until it operates; as a diaphoretic gtt. vj.—3i. every three or four hours.

May be combined with diaphoretics thus:

					may.
Be	Emuls. camphor	æ			SSS.
	Aq. ammon. ace	t.			3ss.
	Vin. tartrat. an	time	onii		gtt. xx.
	Tinct. opii .				gtt. x.
T	int haustus				

Or cathartics, thus:

Fiat mistura, de qua sumantur cochlearia duo ampla ter quotidie.

Unguentum Tartari emetici, D.— Tartar Emetic Ointment.

(Antimon. et Potass. Tart. Zi., Adipis Suilli præparat. Zi.)

Used to excite artificial eruptions on the skin, in order to produce counter determination, in inflammation of internal organs.

The size of a nutmeg is to be rubbed on the skin until

pustules are produced.

AQUA DISTILLATA, L. E. D. Distilled Water.

In extemporaneous preparations, distilled water should be always ordered whenever the formula contains any of the following substances: Acidum citricum, Acidum sulphuricum, Acetas plumbi, Ammoniaretum cupri, Argenti nitras, Aqua ammoniæ, Aqua potassæ, Hydrargyri murias, Liquor plumbi subacetatis, Solutio muriatis barytæ, Sulphas ferri, Sulphas zinci, Tartras antimonii, Tartras potassæ et ferri, Vinum ferri.

AQUÆ STILLATITIÆ, E. Aquæ distillatæ, L. D. —Distilled Waters.

For these and the solutions called Aquæ, see the substances which form their base.

ARBUTI U	VÆ-URSI	FOLIA,	E. D.	Uvæ-ursi folia,
	leaves of W			,

(Arbutus Uva-ursi. Ericinea. North of Europe b.)

The leaves of Uva-ursi are astringent and tonic. Used in calculous and nephritic disorders, and in various fluxes. Dose Di __ Zi. of the powder three or four times a-day. May be also given in the form of infusion thus:

terve die.

Combined with alkaline carbonates, hyosciamus, or opium, in chronic affections of the urinary organs, thus:

> R. Infusi Uvæ-ursi Potass. carbonat. . . 3ij. Extract. conii . Extract. papaveris . . . gr. xxv. Syrup zingib. .

F. mistura cujus capiat Zi.—Ziss.

Or with dilute sulphuric acid, and digitalis, in chronic inflammation of the larynx, trachea, and mucous membrane of the urinary organs, thus:

Misce.

ARCTH LAPPÆ SEMINA ET RADIX, E. D .-Burdock Root.

(Arctium Lappa. Compositæ. Indigenous. 4) Burdock root is aperient, diuretic, and sudorific. Given in decoction, thus:

R Arctii Lappæ rad. recent. . .

in rheumatism, gout, cutaneous disorders, &c.

seeds are diuretic. Dose 3j. given in the form of emulsion or in powder.

ARGENTUM, L. E. D ._ Silver.

Used to prepare the nitrate.

ARGENTI NITRAS, L. E. D ... Nitrate of Silver.

Taken internally, it is tonic and antispasmodic. Has been given in epilepsy, chorea and other spasmodic diseases, and in dyspepsia. Dose gr. ½.—gr. ½.—gr. j. in a pill, with crumb of bread and some sugar, three times a day, or combined thus:

F. S. A. pilulæ xlviij. quarum sumat. pil. ij.—iij. in die.

The fused nitrate of silver is in common use as a caustic, under the name of Lunar Caustic. A solution of gr. ij. in \(\frac{7}{2}\)i. of distilled water may be applied as a stimulus to indolent ulcers; or injected into fistulous sores; or used as a gargle in ulcerations of the fauces; and in ringworm it is said to be almost specific. A solution of gr. 1\(\frac{1}{2}\).—gr. x. or even more, to \(\frac{7}{2}\)j. of distilled water, dropped into the eye, is a very useful application in ulcers of the cornea, after acute inflammation has been subdued; and in pustular ophthalmia. A solution of common salt is an antidote to its poisonous effects.

ARISTOLOCHIÆ SERPENTARIÆ RADIX, E. D. Serpentariæ radix, L. Virginian Snake Root.

(Aristolochia serpentaria. Aristolochia. Virginia. 4.)

Stimulant, tonic, and diaphoretic. Dose of the powder D.j.—3ss. after evacuating the bowels; or of this infusion:

Macera in vase clauso per horas duas, cola et adde,

Tinct. Aristoloch. serpent. . 3j.

Dosis \(\frac{2}{3} \) j.—\(\frac{2}{3} \) ij.

in dyspepsia and low fever. May be used as a gargle in putrid sore throat.

Officinal Preparation.

TINCTURA ARISTOLOCHIÆ SERPENTARIÆ, L. E. D.— Tincture of Snake-root.

(Rad. Aristoloch. Serpent. contus. Zij., Cocci cacti triti Zj., Alcoholis dilut. Ibijss.)

Diaphoretic. Dose a spoonful or more every five or six hours.

ARMORACIÆ RADIX. See Cochleariæ armora-CIÆ RADIX.

ARNICÆ MONTANÆ FLORES ET RADIX, E. D. et FOLIA, D.—German Leopard's Bane.

(Arnica Montana. Compositæ, Corymbiferæ. Mountains of Europe. 4)

Stimulant, narcotic, diaphoretic, and emmenagogue.

Given in the form of infusion. emetic

One or two scruples may be infused in half a pound of water, and drunk at proper intervals. If the flowers are used, they should be wrapt up in a piece of linen, or the infusion should be filtered, as the down is apt to be diffused in the liquid, and cause irritation of the throat.

When given in too large doses, the deleterious effects are best counteracted by vinegar, particularly after the

stomach has been evacuated by vomiting.

ARSENICUM ._ Arsenic.

OXYDUM ARSENICI, E. Arsenicum album, Seu acidum arseniosum, L. Arsenici oxydum album, D.—Oxide of Arsenic or Arsenious acid.

ARS 71

ARSENICI OXYDUM SUBLIMATUM, L .- Sublimed Oxide of Arsenic.

Arsenic is well known as a virulent poison; but, administered in very small doses, and with the greatest circumspection, it has been found useful as a tonic in intermittent fevers, periodical headachs, and as an alterative in many anomalous diseases of the skin. Doses gr. 10. gr. 1. in a pill, thus:

R. Arsenici alb. sublimat. . . gr.j. Sacch. purif. . . . gr.x. Micæ panis . . . q. s.

Tere saccharum cum arsenico dein cum pane optime contunde et in pilulas æquales x divide.

Or thus:

R Arsenici alb. sublim. . . gr. ij.

Fiat massa in pilulas xxiv æquales dividenda, quarum sumat unam ter die.

Externally, used as an escharotic in cancer, in the form of lotion, thus:

R Arsenici albi sublim. Sub-carbonat. potassæ . āā gr.viij.

Solve.

Or in ointment, thus:

R. Arsenici albi sublim. . . gr.iv. M.

To be spread very thin upon linen.

Officinal Preparation.

SOLUTIO ARSENICALIS, L. E. D.—Arsenical Solution.

(Oxid. arsenici in pulv. subtiliss. triti. Subcarb. Potass. puriss, ana. gr.lxiv., Aquæ distillat. Zxiv., Coque simul in vase vitreo, lento igne, donec oxidum omne solutum fuerit. Liquori frigefacto adde spirit. Lavand. comp. Zss., Aquæ distillat. q. s. ut sint totius liquoris \(\frac{7}{2} \text{xvj.} \)

This is the best form for the exhibition of arsenic.

A drachm of this solution contains gr. 1. of arsenic. Dose gtt. v.—gtt. xx. twice a day, gradually increased. It may be given, combined thus:

Aq. distillatæ
M. ft. mistura.
Dosis, \(\frac{2}{3} \)jv.
Dosis, \(\frac{2}{3} \)jv.

Or thus:

M. ft. mistura: capiatur pars quarta ter die.

Arsenic should always be exhibited after meals.

When taken as a poison, the best known antidote is lime water, or a solution of soap. One pound of soap being dissolved in four pounds of water, and a cupful drunk lukewarm every three or four minutes after the stomach has been evacuated by the pump or emetics.

ARTEMISIÆ ABSINTHII FOLIA—SUMMITA-TES, E. D. Absinthium, L.—Wormwood.

(Artemisia absinthium. Corymbiferæ. Indigenous. 4)

The leaves and flowering tops of wormwood are stomachic, and anthelmintic. Dose, in substance, $\exists j.-\exists j$, or of an infusion (made in the proportion of $\exists j$ of the plant to $\exists xvj$ of water), $\exists j.-\exists j$ ss three or four times a-day.

Officinal Preparation.

EXTRACTUM ARTEMISIÆ ABSINTHII, D. - Extract of Wormwood.

(A decoction defæcated and evaporated.)

Dose gr.x.—Dj., in pills, twice or thrice a-day. Given in stomach complaints, intermittents, dropsy, jaundice,

and against worms.

The roots of the common wormwood (Artemisia vulgaris) are much recommended for the cure of epilepsy. Dose 3j. of the powder half an hour before the paroxysm is expected.

A S A 73

ARTEMISIA INDICA, ET A. CHINENSIS, D .-

The leaves of the Indian and Chinese Wormwood. Moxa.

(Composite_Corymbifere. India and China. 4)

The down of the leaves, *mova*, formed into small cones, is burned on a part where it is wished to produce counter irritation. It operates by producing an eschar of small extent, but of considerable depth. It is chiefly useful in diseases of the joints, carious vertebræ, sciatica, &c.

ARTEMISIÆ SANTONICÆ CACUMINA, E.— SEMINA, D.—Wormseed. Tartarian Southernwood tops.

(Artemisia santonica. Corymbiferæ. Levant. 4)

Wormseed have been long used as a vermifuge, especially in the lumbrici of children. Dose gr. x.—3ss. of the powder made into an electuary with treacle or honey, three or four times a day. Their use is to be followed by an active cathartic, such as jalap and calomel.

Formed into a decoction thus:

Decoque leni igne ad Zxvj. dein cola; which may be given in the form of an anthelmintic enema, combined, thus:

Misce. F. enema pro re nata injiciendum, against ascarides. Half this for a child.

ASARI EUROPÆI FOLIA, L. E. D.—A; arabacca leaves.

(Asarum Europæum. Aristolochiæ. Europe. 4)

Asarabacca leaves are errhine. The root is emetic and purgative, and was the usual vomit before the introduction of ipecacuanha.

Officinal Preparation.

Pulvis Asari compositus, E.—Compound Powder of Asarabacca.

(Fol. Asari Europæi, partes iij., Herb. orig. marjoranæ, Flor. lavand. spic. āā partem j., tere, &c.)

A few grains of this, snuffed up the nostrils at bed time, is often found to be beneficial in toothach and chronic ophthalmia, by producing counter determination to the mucous membrane of the nose.

ASPIDII FILICIS MARIS RADIX, E. D. Filicis radix, L.—Male Fern root.

(Aspidium filix mas. Filices. Indigenous. 4)

Much celebrated as an anthelmintic, particularly for destroying tænia. Dose of the powder 3 jss. diffused in 3vj. of cinnamon water, at night, and the same in the morning on an empty stomach, followed up by a strong purge.

ASSÆFŒTIDÆ GUMMI RESINA. Vide Ferulæ Assæfætidæ Gummi-resina.

ASTRAGALI TRAGACANTHÆ GUMMI, E. Tragacantha, L. Astragalus creticus. Gummi, D.—Gum Tragacanth.

(Astragalus Tragacantha—verus. Leguminosæ. Persia. b.)

Gum tragacanth is demulcent.

Officinal Preparations.

MUCILAGO ASTRAGALI TRAGACANTHÆ, E. D.—Mucilage of Gum Tragacanth.

(Gummi astrag. tragacanth. Zij., Aq. bullientis Zviij.)

Demulcent. Used to sheath the fauces in tickling coughs. The following mixture is excellent for allaying the troublesome irritation which excites the paroxysm of coughing:

Misce. Ft. mistura, cujus capiat coch. ampl. sæpius, urgente tussi, gradatim deglutiendum. Di. of gum tragacanth makes as thick a mucilage as Zi. of gum arabic with the same quantity of water.

Pulvis Tragacanthæ compositus, L.—Compound Powder of Tragacanth.

(Tragacanth. cont., Acac. gummi cont., Amyli, sing. \(\frac{7}{2}\)jss., Sacch. pur. \(\frac{7}{2}\)ij. &c.)

Demulcent. Used in hectic fever; tickling coughs; combined with nitre in strangury; and with ipecacuanha powder in dysentery. Doss 3ss.—3iij. frequently repeated.

ATROPÆ BELLADONNÆ FOLIA, E., ET RA-DIX, D. Belladonnæ folia, L.—Leaves and Root of Deadly Nightshade.

(Atropa belladonna. Solaneæ. Indigenous. 4.)

Belladonna is a powerful sedative and narcotic; also

diaphoretic and diuretic.

Used internally in obstinate intermittents and nervous diseases; given also by Dupuytren in scrofulous ophthalmia and retinitis. Recommended by Hahnemann and others as an antidote to the contagion of scarlet fever. Applied externally as an anodyne to cancerous and scrofulous sores. For this purpose the leaves may be made into a poultice, or the powder of them may be sprinkled over the parts.

A solution of the extract dropped into the eye, or the extract itself smeared over the eyelids, produces dilatation of the pupil, for which purpose it is much used by oculists in iritis, and previous to operations on the eye. Dose, of the powdered leaves or root gr. ss. gradually in-

creased to x .- xij. daily, combined thus:

Each of these powders contains gr. \(\frac{1}{4}\). of belladonna. Given in hooping cough and tic douloureux, in the dose of one or more of the powders daily, according to the age of the person.

May be also given in the form of infusion, thus: R. Fol. Atrop. belladonnæ Aq. bullientis Macera, et post refrigerationem, cola. Dosis Zij. Formed into an ointment, thus: R. Fol. recent. Atrop. belladonnæ. Adipis suilli āā Adipis suilli āb Ad
Succus Spissatus (Extractum, L.) Atropæ Bella- Donnæ, E.—Inspissated juice of Belladonna. (Ex foliis.)
Dose gr. ½., gradually increased to gr. v., in pills, thus: R. Succ. spiss. belladonn gr. j.—ij. Extract. cinchonæ
facilitating the dilatation of the neck and orifice of the uterus, in cases of spasmodic constriction and rigidity of these parts during parturition. To apply it, he employs a small syringe, rounded at its extremity, with an aperture there sufficiently large to admit the point of the little finger: the dose is 3ij. As a prophylactic in scarlet fever, belladonna may be
given thus: R. Succ. spiss. recent. belladonn

To a child of one year, gtt. iij. are to be given daily, and a drop to be added for each additional year of the child's

age.

When taken as a poison, vomiting is to be excited as soon as possible, the operation of which will be facilitated by the exhibition of vinegar and water, in large doses, or the cold affusion.

Belladonna contains an alkaloid narcotic principle, called *Atropia*, which occurs in very small brilliant transparent prisms of a shining white colour.

AURANTII BACCÆ, &c. Vide CITRI AURANTII CORTEX, &c.

AVENÆ SATIVÆ SEMINA. Semina decorticata, L. E. D.—Groats.

AVENÆ SATIVÆ FARINA. Ex seminibus, E. D.—
Oatmeal.

(Avena sativa. Gramineæ. ①)

Used for making gruel, which is an excellent drink in diarrhœa, dysentery, coughs, hoarseness, and ulcerations of the fauces.

Fine oatmeal is the best substance for preparing the fermenting poultice, as wheat flour is too adhesive.

Officinal Preparation.

Pulvis pro cataplasmate, D.—Powder for a Poultice. § (Seminum lini, quæ restant post oleum expressum, partem j., Farinæ avenaceæ, partes, ij. Misce).

A poultice is prepared merely by mixing the powder

with boiling water.

BALSAMUM CANADENSE. Vide PINUS.

BALSAMUM PERUVIANUM. Vide Myroxyli Peruiferi Balsamum.

BALSAMUM TOLUTANUM. Vide TOLUIFER & BALSAMI BALSAMUM.

BARYTA.—Baryta.

CARBONAS BARYTA, E ... Carbonate of Baryta.

SULPHAS BARYTÆ, E. D.—Sulphate of Baryta.

Both used for preparing the muriate.

MURIAS BARYTE, E. D .- Muriate of Baryta.

Officinal Preparation.

Solutio Muriatis Baryta, E. D.—Solution of muriate of baryta.

(Muriatis barytæ partem j., Aquæ distillatæ, partes iij., solve).

Recommended as a tonic in cases of scrofula; as a deobstruant in glandular obstructions and tumours; as an anthelmintic; and in cutaneous diseases. Dose gtt. v.—x. twice or thrice a-day, to be gradually and cautiously increased till nausea is produced. Applied externally to fungous ulcers and specks on the cornea.

BELLADONNÆ FOLIA. Vide ATROPÆ BELLADON-NÆ FOLIA.

BENZOINUM. Vide STYRACIS BENZOINI BALSAMUM.

BISMUTHUM.—Bismuth.

BISMUTHI SUBNITRAS, L. D.—Subnitrate of Bismuth.

(Oxide of bismuth in combination with some water and a little nitric acid.)

Tonic and antispasmodic. Very efficacious in pyrosis and spasmodic gastrodynia, attended with acidity. Dose gr. v.—gr. xv., in the form of pill, powder, or mixture May be combined thus:

R. Bismuthi subnit. Dj

Tere simul et distribue in portiones quatuor.

Or thus:

Tere simul, et adde

Emuls. amygdal. . . 5j.

Fiat haustus.

To this may be added, according to circumstances,— Tinct. opii. gtt. v.—x., morphiæ acetatis gr. ss., or tinct. hyosciami 3ss.

BISTORTÆ RADIX. Vide POLYGONI BISTORTÆ

BITUMEN PETROLEUM, E. D. Petroleum, L.—
Barbadoes Tar.

Has been given internally as a sudorific, and in asthma, and coughs unattended with inflammation. Dose gtt. x.—7ss. Applied by friction externally, as a discutient and stimulant.

BOLETUS IGNIARIUS, E.—Touchwood, or Agaric of the Oak.

(Boletus igniarius. Fungi. Europe.)

Cut into slices, and softened by beating, this is used for stopping external hæmorrhages. By being boiled in a solution of nitre, dried, and again beaten, it forms German tinder, *Amadou*.

BONPLANDIÆ TRIFOLIATÆ CORTEX,—An-GUSTURA, E. D. Cuspariæ cortex, L.—Cusparia or Angustura Bark.

(Bonplandia trifoliata—Cusparia febrifuga. Rutaceæ—Cuspariæ. South America. 5.)

Angustura bark is aromatic, and intensely bitter. Tonic and stimulant, it is very useful in dyspepsia, diarrhæa, and dysentery. Dose of the powder gr. v.— Dj. alone, or combined with rhubarb, magnesia or carbonate of lime.

Officinal Preparations.

INFUSUM CUSFARIA, L. D .- Infusion of Angustura.

(Cuspariæ cort. contus. Zij., Aq. ferventis Oss.)

Tonic. Dose Zj.—Ziij. three or four times a-day. May be combined as in this astringent draught:

R Infus. Cuspariæ
Tinct. Catechu
Pulv. Ipecacuan.
Opii
Fiat haustus.

TINCTURA BONPLANDIÆ TRIFOLIATÆ, E. D.—Tincture of Angustura.

(Cort. Bonpland. trif. triti \(\frac{7}{2}\)ij., Alcoholis dilut. \(\frac{1}{2}\)ijss.)

Dose \(\frac{7}{2}\)j.—\(\frac{7}{2}\)ij.

False or Fine Angustura Bark, Angustura spuria, contains an alkaline principle called Brucia, which was discovered by Pelletier and Caventou. When pure, it crystallizes in oblique prisms, with parallelogram bases, or in talcy plates. It is soluble in 500 parts of boiling, and 850 parts of cold water. It is also soluble in alcohol, but

not in sulphuric æther.

By combining with acids, brucia forms crystallizable salts, which are poisonous, and, like strychnia, exert a special action on the spinal marrow, producing tetanus, but with less intensity. From several experiments made by Andral, it appears that brucia may be substituted for strychnia in the treatment of paralysis; as strychnia, particularly when pure, is one of the most violent poisons of the vegetable kingdom, and its use is not always without danger. M. Andral has found that it requires six grains of brucia to produce the same effects as one grain of impure strychnia, or one quarter of a grain of pure strychnia. Brucia may be made into a tincture thus:

Dose gtt. x .- xxx. in a mixture, thus:

Fiat mistura.

Dosis, Coch. ampl. j. nocte maneque.

Given in paralysis.

BUBONIS GALBANI GUMMI RESINA, E. D. Galbani gummi resina, L.—Galbanum.

(Bubon Galbanum. Umbelliferæ. Cape of Good Hope. 1/2)

Antispasmodic, expectorant, and deobstruant. Dose gr. v.—xv. two or three times a day, in the form of pill.

Officinal Preparations.

PILULÆ GALBANI COMPOSITÆ, L. D.—Compound Pills of Galbanum.

(Galbani Zj., Myrrhæ, Sagapeni, sing. Zjss., Assæfætidæ Ziv., Syrupi q. s.)

Antihysteric and emmenagogue. Dose gr. x.—Dj. every night.

TINCTURA GALBANI, D ... Tincture of Galbanum.

(Galbani minutim concis. Zij., Spiritus ten. fbij.)

A tea-spoonful or two of this, combined with as much *Tinct. Cardamomi* and *Spiritus pimentæ* in a tea-cupful of hot-water, has been found particularly efficacious in relieving hiccough and flatulency.

EMPLASTRUM GALBANI, D.—Plaster of Galbanum.

(Emplast. Lithargyri fbij, Gummi Galbani fbss., Rament. ceræ flavæ Ziv. &c.)

Stimulant and suppurative.

EMPLASTRUM GALBANI COMPOSITUM, L.—Compound Plaster of Galbanum.

(Galbani gum. res. pur. \(\frac{7}{2}\text{viij.}\), Emp. Plumb. \(\frac{1}{2}\text{iij.}\), Terebinth. vulg. \(\frac{7}{2}\text{x.}\), Abietis res. cont. \(\frac{7}{2}\text{iij.}\) &c.)

Digestive and suppurative. Applied over the whole lumbar region of children in rickety affections; over the joints in arthritic pains; and for discussing the induration which remains after discharged abscesses.

CAJEPUTI OLEUM. Vide MELALEUCÆ LEUCODEN-DRI OLEUM VOLATILE.

CALAMI RADIX. Vide ACORI CALAMI RADIX.

CALAMINA. Vide CARBONAS ZINCI IMPURUS; Art. ZINCUM.

CALUMBA. Vide COLUMBÆ RADIX.

CALX. Recens usta, L. E. D .- Quicklime.

(Prepared by calcining marble, shells, or native carbonate of lime.)

Quicklime is escharotic, but not used as such alone.

Officinal Preparations.

AQUA CALCIS, L. E. D .- Lime-Water.

(Calcis recentis lbss., Aquæ Ziv., Aquæ lbxij., &c.)

Astringent, tonic, antacid, anthelmintic, and lithon-triptic. Dose Zij.—Ziv. in luke-warm milk, frequently repeated. When long continued, it is apt to weaken the stomach. Applied externally to ill-conditioned ulcers and gangrenous sores. It may be used as a lotion combined thus:

R. Aquæ calcis
Sulphuret. potass.
Alcoholis
Sapon. dur.
Tiat lotio.

in tinea capitis, and scabies.

LINIMENTUM AQUÆ CALCIS, E. D.—Liniment of limewater or Carron-oil.

(Ol. lini usitatiss., Solutionis calcis, ana, partes æquales.)

C A L 83

Applied spread on fine old linen to burns and scalds, where the cuticle has been destroyed.

AQUA CALCIS COMPOSITA, D. Vide Guaicum off.

CARBONAS CALCIS .- Carbonate of lime.

a, Mollior, creta alba.

b, Durior, marmor album.

c, Ex cancro Paguro, vulgo Chelæ Cancrorum. d, Ex cancro Astaco, vulgo Lapilli Cancrorum.

Officinal Preparations.

CARBONAS CALCIS PRÆPARATUS, E. Creta præparata, L. D.—Prepared carbonate of lime.

Applied externally to scalds, and burns, and fœtid ulcers, to absorb the serum and pus effused. Internally, antacid. Dose 9ss.—3j.

Pulvis carbonatis calcis compositus, L. E. D.—
Compound powder of carbonate of lime.

(Carbonat. calcis præparat. Ziv., Cort. laur. cinnam. Zjss., Nucl. myrist. mosch. Zss.)

Given as a stomachic and antacid, in weakness and acidity of the stomach, and in looseness from acidity.

Pulvis CRETÆ COMPOSITUS C. OPIO, L. D .- Vide Opium.

Potio carbonatis calcis. E. Mistura cretæ, L. D.—
Chalk mixture.

(Carbonat. calcis præp. \(\frac{7}{2}\)i., Sacch. purif. \(\frac{7}{2}\)ss., Mucilag. Acac. arab. \(\frac{7}{2}\)ij., tere simul, et dein sensim adde, Aquæ lbijss., Spirit. laur. cinnamom. \(\frac{7}{2}\)ij.)

Antacid and absorbent. Dose bj. or more in the course of the day, in acidities of the stomach, and combined with opium and catechu in diarrhœa.

CALCIS MURIAS .- Muriate of Lime.

SOLUTIO (LIQUOR L.) MURIATIS CALCIS, E. D.—Solution of the muriate of lime.

Tonic and deobstruent. Used in scrofula and cases of general debility. Dose gtt. xxx. for children, and 3j.

for adults, twice a day, in a cupful of water. In cases of ascarides and lumbrici, after the intestines have been well cleared out, the solution of the muriate of lime is said to be an excellent remedy.

CALCIS PHOSPHAS, L. Cornu ustum.—Phosphate of lime. Burnt Horn.

Recommended in rickets. Dose 9ss .-- 3ss. united with phosphate of soda.

Officinal Preparations.

PULVIS CORNU USTI CUM OPIO, L. Vide Opium.

MISTURA CORNU USTI, L. Vide Cervi Elaphi cornu; Cornu ustum.

CAMBOGIA. Vide GAMBOGIA.

CAMPHORA, L. E. D.—Camphor.

(Laurus camphora. Laurineæ. India, 7. Dryobalanops camphora. Guttæferæ. Borneo, h.)

Camphor is stimulant, narcotic, and diaphoretic. Dose gr. v. repeated at short intervals, or Di. at once. Too large a dose occasions anxiety, vomiting, syncope, and delirium, which effects are best counteracted by opium.

Alcohol and the yolk of egg are the common solvents of camphor. In order to reduce it to powder, it is triturated with some drops of alcohol.

May be given combined thus, as a diaphoretic:

R Camphoræ Pulv. antimonialis ā ā . gt. iij. Opii puri . . . gt. j. Elect. aromatici

Ut fiat bolus, h. s. sumendus.

May be given in the form of lavement against ascarides, thus:

B. Camphoræ (alcohole solutæ) . 3j.

Olei oleæ Europææ
Misce, fiat enema. Injiciatur h. s. tertia quaque nocte, ad tres vices: dein repetatur alternis noctibus ad quartam usque vicem, si opus fuerit.

Rubbing up one of the following powders with water is a ready method of forming an emulsion, which is the best form for the exhibition of camphor:

Ft. terendo pulv. dein adde

Misce. Ft. pulvis, et in chart. x. æquales distribue.

Officinal Preparations.

EMULSIO (MISTURA, L. D.) CAMPHORÆ, E.—Camphor Emulsion.

(Camph. Dj., Nucleor. amyg. comm., Sacch. purif. āā Zss., Aquæ lbjss. &c.)

Dose a table spoonful every three or four hours in typhoid fevers, generally united with cordial tinctures. When combined with a little of the extract of conium, or syrup of poppies, it is an excellent medicine in dentition and diseases of irritation.

May be exhibited in combination thus:

With narcotics-

Misce. Ft. haustus.

for a night draught.

As an antispasmodic, thus:

Fiat haustus, urgente flatu, sumendus.

Combined with aromatic stimulants, thus:

R. Emuls. camphoræ

Æther. sulph. c. alcohol.

Tinct. cardamom. comp.

Spir. anisi
Olei cari carui

Stir. 2j.

3j.

3vi.

3vi.

r coemearia duo am-

R Emuls. camphoræ
Aq. ammon. acet.
Vin. tart. antimonii
Tinct. opii
Fiat haustus.

Or in an effervescing draught, thus-

Ft. haustus cum succi limonum cochleari uno amplo, in impetu ipso effervescentiæ sumendus.

MISTURA CAMPHORÆ C. MAGNESIA, D.—Camphor Mixture with Magnesia.

Same use and dose as the preceding.

TINCTURA (SPIRITUS, L. D.) CAMPHORÆ, E.—Tincture of camphor.

(Camph. Zj., Alcohol. fort.. lbj. Misce ut solv. camph. Ft. quoque cum camph. duplice vel triplice.)

Used externally against rheumatic and gouty pains, chilblains, paralytic numbness, and gangrene.

TINCTURA (CAMPHORÆ COMP. L.) OPII CAMPHORATA, E. D.—Camphorated Tincture of Opium.

(Camphoræ Djj., Acid. benzoici, Opii āā Z j., Alcohol. dilut. lbijss., &c.)

Anodyne. Given in pertussis, and to allay the tickling cough in catarrh after the inflammatory symptoms have subsided. Dose to children gtt. x.—xx., to adults 3 j.—3iij., in almond emulsion. 3j. by measure contains about gr. ij. of opium.

CAN

OLEUM (LINIMENTUM, L.) CAMPHORATUM, E. D.— Camphorated Oil.

(Ol. ol. Europ. partes iv., Camphoræ partem j.)

Applied externally to sprains, bruises, local pains, and glandular swellings. This oil, combined with a fifth part of Aq. sub-carb. potass., was recommended by Mr Ware to be applied to the edges of the eyelids night and morning, in incipient amaurosis.

LINIMENTUM CAMPHORÆ COMPOSITUM L. D. — Compound Camphor Liniment.

(Camph. Zij., Liq. ammon. Zvj., Spir. lavand. 0j.) Used externally as a rubefacient.

CANELLÆ ALBÆ CORTEX, E. D. Canellæ cortex, L.—Canella bark.

(Canella alba. Meliaceæ. West Indies, b)

Stimulant and antiscorbutic. Added as a corrective to other remedies. Dose gr. x.—3ss. of the powdered bark.

Officinal Preparation.

PULVIS ALOES CUM CANELLA, D. Vide Aloes.

CANCRORUM CHELE, E.—Crabs' Claws.

(Cancer pagurus. Crustacea—Brachyura.)

CANCRORUM LAPILLI, E.—Crabs' Eyes.

(Cancer astacus. Crustacea—Macroura.)

Crabs' Claws and Crabs' Eyes are chiefly composed of carbonate of lime, and when reduced to an impalpable powder (Cancrorum, lapilli præparati, Chelæ præparatæ) are given as an antacid in dyspepsia. Dose 3ss.—3i. occasionally.

CANTHARIS VESICATORIA, E. D. Cantharis, L.

—The Blistering or Spanish Fly.

(Cantharis vesicatoria. Insecta—Coleoptera. South of Europe.)

Taken internally, cantharides are powerfully stimular t

and diuretic. On account of their operation being particularly determined to the genito-urinary mucous system, they are administered, as a stimulant, in gleet, leucorrhœa, retention of urine from atony of the muscular fibres of the bladder, or incontinence of urine from loss of action of the sphincter. Internal use requires caution.

Dose gr. j. twice a day, united with opium or extract of hyosciamus; or, as a stimulant, combined thus:

R. Cantharid. in pulv. trit. . . gr. j.

Ammoniæ sub-carb. .

Ut fiat bolus, quartis vel sextis horis sumendus, cum haustu infusi armoraciæ compositi.

Cantharides are chiefly employed for external use, under the form of blistering plasters. A strong decoction in oil of turpentine furnishes a most powerful epispastic, and may be easily applied by means of dossils of lint.

Whether used internally or externally, they are apt to produce strangury and bloody urine; but ebullition in water deprives them of all power of occasioning these bad effects.

When taken in an overdose, the bad effects of cantharides are to be counteracted by copious bleeding, warm bath, local fomentations, mild and mucilaginous drinks; and opium, especially in the form of clyster or suppository.

The blistering principle of cantharides has been ob-

tained in a separate state, and called Cantharidin.

It occurs in the form of small crystalline plates, having a micaceous lustre, not unlike spermaceti.

Officinal Preparations.

TINCTURA CANTHARIDIS VESICATORIÆ, L. E. D.—
Tincture of Cantharides.

(Cantharidis vesicatoriæ contus. 3j., Alcoholis dilutioris lbj.,

&c.)
This tincture contains gr. j. of cantharides in gr. xcvj.
Dose gtt. x.—3j. in some demulcent infusion, or combined, as in the following stimulating diuretic draught:

89

R Tinct. cantharidis vesicat. gtt. x.
Spir. ætheris nitrosi . 5j.
Emuls. camphoræ . 5jss.
Syrup. zingiberis . 5j.
Fiat haustus ter in die sumendus.

The tincture of cantharides is principally used as an external stimulant application, united with camphorated tincture of soap or tincture of soap and opium, or camphorated oil in the proportion of \$\frac{7}{2}\$ss. to \$\frac{7}{2}\$vss. of either of the latter.

EMPLASTRUM CANTHARIDIS VESICATORIÆ, L. E. D.—
Plaster of Cantharides.

(Cantharid. Vesicat. in pulv. ten. trit., Resinæ alb., Ceræ flavæ, Adipis ovilli, āā paria pondera, &c.)

This spread on a bit of leather is the most commonly used blister. The part to which it is to be applied is to be previously bathed with vinegar; and for children and persons whose skin is delicate, it is advisable to cover its surface with a piece of very fine gauze. To produce a perfect blister, it is necessary to keep it applied for twelve hours.

EMPLASTRUM CANTHARIDIS VESICATORIÆ COMPOSITUM, E.—Compound Plaster of Cantharides.

(Terebinth. Venetæ, partes xviij., Picis Burgund., Canth. vesicat. āā partes xij., Ceræ flav. partes iv., Sub-acetatis cupri partes ij., Semin. Sinapis alb., Fructus Piperis nig. āā partem j., &c.)

More active than the preceding.

Unguentum pulveris cantharidis vesicatoria, E.

—Ointment of the Powder of Cantharides.

(Ung. resinos. partes vij., Cantharid. vesicat. in pulv. ten. trit. partem j., &c.)

Used to keep up a discharge from blistered surfaces, but too irritating.

Unguentum infusi cantharidis vesicatoria, L. E. D.—Ointment of the Infusion of Cantharides.

(Canth. vesicat., Resin. alb., Ceræ flav. āā partem j., Terebinth. Venet., Adip. suilli āā partes ij., Aquæ bullient. partes iv., &c.)

For keeping up a discharge from blistered surfaces.

CAPSICI ANNUI FRUCTUS, E. Capsici baccæ, L. Capsici Annui capsulæ c. seminibus, D.—Berries of the Capsicum.

(Capsicum annuum. Solaneæ. South America. ()

Stimulant and tonic; externally rubefacient.

Dose of the powder gr. iij. x. Advantageously combined with rhubarb in the form of pill, thus:

R Fruct. capsici ann. pulv. . . . 3j. Rhei rad. pulv. . . Theriac. purificat. . . 51].

Misce. Ft. massa, in pilulas lx. distribuenda; quarum sumat ij. vel iij. paulo ante prandium, quotidie.

in dyspepsia with impaired appetite. To be washed down with a glass of tepid water.

This infusion:

Aquæ bullient. . . Macera et cola.

is the best gargle in cynanche maligna and relaxed sore throats.

Cataplasms of capsicum are useful in coma and delirium.

Officinal Preparation.

TINCTURA CAPSICI, L. D .- Tincture of Capsicum.

(Capsici baccarum Zj., Spiritus tenuioris 0ij.)

Stimulant. Dose 3ss .- 3ij. in any aqueous vehicle. Used as a gargle.

CARBO LIGNI, L. E. D .- Charcoal of Wood.

Antiseptic. Given in doses of gr. x.—3j. united with rhubarb, to correct the putrid eructations in some cases of dyspepsia. In the state of fine powder it forms the best dentifrice.

Officinal Preparation.

CATAPLASMA CARBONIS LIGNI, D.—Cataplasm of Charcoal.

(Carbonis ligni, ab igne candentis, arena sicca superfusa recens extincti, et in pulverem subtilissimum triti, q. s. To be added to the simple cataplasm.)

Applied to gangrenous and fœtid ulcers.

CARBONAS BARYTÆ .- Vide BARYTA.

CARBONAS CALCIS .- Vide CALX.

CARBONAS PLUMBI .- Vide PLUMBUM.

CARBONAS POTASSÆ. - Vide POTASSA.

CARBONAS SODÆ. - Vide Soda.

CARDAMINES PRATENSIS FLORES, L. E. D.— Cardamine Flowers.

(Cardamine pratensis. Cruciferæ—Siliquosæ. Indigenous. 4.)

Antispasmodic. Dose 3j.—3ij. of the powder twice or thrice a-day.

CARDAMOMI SEMINA .- Vide Amomi REPENTIS SEMINA.

CARICÆ FRUCTUS .- Vide FICI CARICÆ FRUCTUS.

CARI CARUI SEMINA, L. E. D.—Caraway Seeds.
(Carum Carui. Umbelliferæ. North of Europe. 3)

Caraway seeds are stomachic and carminative.

Dose Dj.—3j. in flatulent colic, chiefly used in combination with other remedies.

Officinal Preparations.

OLEUM CARUI, L. D.—Oil of Caraway.

(By distillation from the seeds.)

Dose gtt. j.—gtt. x.

AQUA CARUI, L. D.—Water of Caraway.

Dose Zij.—Ziv.

Spirit us cari carui, L. E. D.—Spirit of Caraway.

(Car. car. sem. contus. fbss., Alcohol. dilut. fbix., Aquæ q. s. ad evitandum empyreuma, &c.)

Dose 3j.—3ss.

- CARYOPHILLI.—Vide EUGENIÆ CARYOPHILLATÆ FLORES.
- CASCARILLÆ CORTEX.—Vide CROTONIS ELEU-THERIÆ CORTEX.
- CASSIÆ FISTULÆ FRUCTUS, E. Pulpa leguminis, D. Cassiæ pulpa, L.—Cassia Pulp. (Cassia fistula. Leguminosæ. India. 7) Cassia pulp is a gentle cooling laxative; given in the dose of 3iv.—3j. combined with aromatics.

Officinal Preparation.

ELECTUARIUM (CONFECTIO, L.) CASSIÆ FISTULÆ, E. D. —Electuary of Cassia Pulp.

(Pulp. cass. fist., partes iv., Pulp. tamarind. Ind., Mannæ, ana, partem j., Syrup. Ros. centif. partes iv., &c.)

Dose 3j.—3j.

CASSIÆ SENNÆ FOLIA, E. D. Sennæ folia, L.— Senna Leaves, or rather Folioles.

(Cassia Senna. Leguminosæ. Egypt. (O)

C A S 93

Senna is a useful cathartic. Its griping qualities and nauseous flavour are best corrected by some aromatic substance as cardamom, ginger, cinnamon, &c.

Dose Di.- 3j. in substance, but it is more conveniently

given in the form of infusion.

Senna contains a purgative principle, which has been called *Cathartine*. It is of a reddish-yellow colour, deliquescent, soluble in all proportions in alcohol and water, insoluble in æther.

Officinal Preparations.

Pulvis sennæ compositus, L.—Compound Powder of Senna.

(Sennæ Fol., Potassæ supertart. sing. \(\frac{7}{2}\)ij., Scamm. gum. res. \(\frac{7}{2}\)ss., Zingib. rad. \(\frac{7}{2}\)ij., &c.)

Dose 9j.—3j.

Infusum cassiæ sennæ (compositum, L. D.) E.—Infusion of Senna.

(Fol. cass. senn. Zvj., Rad. amom. zingib. contus. Dj., Aq. bullient. Zix., &c.)

Dose \(\frac{7}{2}\)j.—\(\frac{7}{2}\)iv. Generally combined as in the following formulæ:

R. Infus. cass. sennæ

1	& Fol. cass. senna	e				Ziij.

nus:

Sulphat. sodæ . Aq. bullientis . . Macera et cola, ut fiat enema.

INFUSUM SENNÆ (CUM TAMARINDIS, D.) COMPOSITUM, E.—Compound Infusion of Senna.

(Fol. cass. sennæ Zj., Fructus tamarindi Ind. Zj., Sem. coriand. sat. contus. 3j., Sacch. non purif. 3ss., Aquæ bullientis Zviij., &c.)

Dose Zij.—Ziv.

TINCTURA SENNÆ COMPOSITA, L. E. D. - Compound Tincture of Senna.

(Fol. cassiæ sennæ Zij., Rad. Convolv. jalap. contus. Zj., Sem. coriand. sativ. contus. 3ss., Alcohol. dilut. Thijss., Sacch. purif. 31v.)

The London and Dublin tinctures do not contain the jalap. Dose Ziv.

ELECTUARIUM SENNÆ COMPOSITUM (CONFECTIO, L.) E. D.—Compound Electuary of Senna.

(Fol. cass. sennæ Zviij., Sem. coriand. sativ. Ziv., Rad. glycyrrh. glab. contus. Ziij., Fructus fici caricæ, Pulpæ pruni domest., ana, fbj., Pulp. tamarind. Ind. fbss., Sacch. purif. Thijss., Aquæ Thiv., &c.)

Dose 3j.—3iv. The electuary of senna combined thus:

e electrically of periods of	022200	LALOU U	
R Elect. sennæ .			Zjss.
Sulphuris sublim.			3ss.
Syrup. ros			q. s.

Ut fiat electuarium. Dosis 3j.—3ij. ter vel quater quotidie pro re nata.

is one of the most useful laxatives which can be given in hæmorrhoids and other affections of the lower intestines attended with costiveness.

May be united with tartarized iron thus:

Fiat electuarium ad nucis moschatæ magnitudinem sumendum,

Syrupus cassiæ sennæ, L. E .- Syrup of Senna.

(Fol. cass. sennæ \(\)\fiji., Aquæ bullientis \(\)\fiss., Syrup. empyreumat. \(\)\fivial \(\)\jyrij.)

Dose Zij.—Zss.—Zj.

CASTOREUM, L. E. D .- Castor.

(Castor fiber. Cl. Mammalia. Ord. Rodentia. Russia. Canada.)

Castor is contained in large follicles near the genitals of the Beaver. It contains a peculiar matter called Castorine, supposed to be its active principle.

It is antispasmodic and emmenagogue. Dose gr. x .-

Dj., and in clysters to Zj. or more.

May be given in substance combined in this manner:

R. Castorei gr. vjss.
Opii gr. ss.
Pulv. digitalis . . . gr. j.
Syrup. simpl. . . q. s.

Ut fiat bolus, bis, terve die sumendus.

in spasmodic asthma and dyspnœa.

Officinal Preparations.

TINCTURA CASTOREI, L. E. D .- Tincture of Castor.

(Castorei triti \(\frac{7}{2}\)jss., Alcoholis fortioris \(\text{lbj.}\))

Dose gtt. xx.—Zij. combined, as in the following antispasmodic draught:

B. Tincturæ castorei gtt. x.

TINCTURA CASTOREI COMPOSITA, E.—Compound Tincture of Castor.

(Castorei triti Z.j., Gummi-resinæ ferulæ assæfætidæ Zss., Alcoholis ammoniati fbj.)

Antispasmodic. Dose gtt. xv.- 3j.

CATAPLASMA. For the different Cataplasms, see the substances which form their bases.

CATECHU EXTRACTUM. Vide Acaciæ Catechu Extractum.

CENTAUREÆ BENEDICTÆ HERBA, E. Cnici Benedicti folia, D.—Blessed Thistle.

(Centaurea Benedicta. Cynarocephalæ. Greece. ())

A strong decoction of this herb is sometimes used as an emetic, and a strong infusion as a diaphoretic; whilst, from a weak infusion such as this,

R. Centaur. benedict. herbæ . zvj. Aquæ frigidæ . zxvj.

Infunde et macera.

Dosis, Zij. quater quotidie,

good effects have been experienced in loss of appetite, brought on by irregularities.

CENTAURII CACUMINA. Vide CHIRONIÆ CEN-TAURII SUMMITATES.

CEPHAELIS IPECACUANHA. Vide IPECACUANHE RADIX.

CERA ALBA, FLAVA, L. E. D.-White and Yellow Wax.

(Apis mellifica. Insecta—Hymenoptera.)

White bees' wax has been given as a demulcent in

CER 97

dysentery, in the form of emulsion. For this purpose, Dj.—3ss. of wax is to be melted with a little oil, and then triturated with the yolk of egg; to this mixture \(\frac{7}{2}ij. \) of gruel are to be added. This may be given twice or thrice a day. Wax, however, is principally used in the composition of cerates, ointments, and plasters.

Officinal Preparations.

LINIMENTUM SIMPLEX, E. Ceratum, L.—Simple Liniment.

(Olei Oleæ Europææ partes iv., Ceræ albæ partem j.)

Unguentum simplex, E.—Simple Ointment. (Olei Oleæ Europææ partes v., Ceræ albæ partes ij.)

CERATUM (CETACEI, L.) SIMPLEX, E. Unguentum cetacei, D.—Simple Cerate.

(Olei Oleæ Europææ partes vj., Ceræ albæ partes iij., Spermaceti partem j.

UNGUENTUM CERÆ ALBÆ—CERÆ FLAVÆ, D.—Ointments of White and Yellow Wax.

(Ceræ albæ vel flavæ lbj., Adipis suilli præparat. lbiv.)

These cerates and ointments are emollient and cooling. For the other officinal cerates, see the substances which form their bases.

CEREVISIÆ FERMENTUM, L. E. D .- Yeast.

This is the frothy matter which forms on the surface of fermenting liquors. It has been recommended as an antiseptic in putrid fevers, in the dose of a table-spoonful in wine and water. Used to make the fermenting poultice.

Officinal Preparation.

CATAPLASMA FERMENTI CEREVISIA, L. D.—Yeast Poul-tice.

(Farinæ lbj., Cerevisiæ fermenti Zviij. M.) Applied to foul and gangrenous sores.

Fine oat-meal is better adapted for making this poultice than flour.

CERVI ELAPHI CORNU, E. Cornua, L. Cornua Cervina, Ramenta, D.—Stag's or Hart's Horn.

(Cervus Elaphus. Cl. Mammalia. Ord. Ruminantia. Europe.)

The shavings of hart's horn, yield, by boiling in water, a light nutritious jelly; for which purpose, Ziv. of the shavings should be boiled in Zvij. water, until reduced to Zvj.

Officinal Preparations.

CORNU USTUM, L .- Burnt Hartshorn.

This consists of phosphate of lime, carbonate of lime, and phosphate of magnesia. It is used in the following preparation:

MISTURA CORNU USTI, L.—Mixture of Burnt Horn.
(Cornuum ust. Zij., Acaciæ gummi cont. Zj., Aquæ 0iij. &c.)
A useless preparation.

CETACEUM. Vide Spermaceti.

CHIRONIÆ CENTAURII SUMMITATES FLO-RENTES, E. Centaurii cacumina, L. Erythræa centaureum, folia, D.—Common Centaury Tops.

(Chironia Centaurium. Gentianeæ. Indigenous. ①)

Bitter and stomachic. May be given in the form of infusion.

CHLORINIUM .- Chlorine.

Chlorine is a gas, of a yellowish-green colour, a disagreeable suffocating odour, and a strong sharp taste. This gas is employed, in the form of fumigations, as a means of destroying contagion. It is obtained by mixing together ten parts of muriate of soda, with two parts of black oxide of manganese in powder, and pouring upon the mixture, first, four parts of water, and then six parts of sulphuric acid, then applying heat sufficient to disengage the chlorine.

CIN 99

The vapours of chlorine are to be avoided, as they occasion great irritation of the mucous membrane of the bronchi. A more simple method of applying chlorine to the purposes of fumigation, is to employ a concentrated solution of the chloride of lime, diluted with water, for the purpose of washing the walls and floors of the chambers where the air is vitiated, &c.; by this means there is no occasion to remove the patient.

The Chloro-Sodaic Solution of Labarraque, which is prepared by dissolving gr. 2187.5 of pure crystallized carbonate of soda in \(\frac{7}{2}xx\). of distilled water, and saturating the solution with chlorine gas, is also useful for disinfecting foul air and destroying animal putrefaction. It is also an excellent lotion for chilblains, feetid and gangrenous sores. It is the best lotion in ptyalism. Dose for a lotion or gargle \(\frac{7}{2}jss\). in \(\frac{7}{2}vj\). of distilled water. Given internally in the dose of gtt. xx.—\(\frac{7}{2}j\). in a cupful of water.

Chlorine may be dissolved in water as in the following

Officinal Preparation.

AQUA CHLORINII, D .- Chlorine Water.

(Prepared by transmitting a stream of chlorine gas through distilled water, in a proper apparatus.)

This is stimulant; has been employed with advantage in scarlatina maligna, in divided doses, to the extent of 7ss.—3j., mixed with eight ounces of distilled water, in the course of the day. Inhalation of the vapours of chlorine has been used against phthisis. For this purpose, five drops of chlorine water are to be added to three or four ounces of water, at the temperature of 90° F., contained in an inhaling apparatus. The inhalation should continue about five minutes, and may be repeated four or eight times a-day.

CINCHONÆ CORDIFOLIÆ CORTEX, CORTEX CINCHONÆ FLAVUS, L. E. D.—Yellow Bark.

(Cinchona Cordifolia. Rubiaceæ. South America. 4)

Yellow Bark is very bitter. In this the alkaloid principle Quinia predominates.

CINCHONÆ LANCIFOLIÆ CORTEX, CORTEX CINCHONÆ COMMUNIS, L. E. D.—Pale Bark.

(Cinchona lancifolia. Rubiaceæ. South America. 4)

This is essentially aromatic. In it the alkaloid principle Cinchonia predominates.

CINCHONÆ OBLONGIFOLIÆ CORTEX, CORTEX CINCHONÆ RUBER, L. E. D.—Red Bark.

(Cinchona oblongifolia. Rubiaceæ. South America. 4)

The red bark contains Quinia and Cinchonia in nearly

equal proportions, and is particularly astringent.

CINCHONA BARK is tonic, febrifuge and antiseptic. Much used for the cure of intermittent fevers. Given, after evacuating the stomach and bowels, in the dose of Dj.—Zij. of the powder, every two or four hours, so as to get an ounce administered between each fit. Employed also in confluent smallpox, cynanche maligna, scarlatina, &c. being of great use in stopping the progress of gangrene.

Cinchona is combined with opium to prevent purging,

and with rhubarb to obviate costiveness.

It may be given in the form of powder, combined as in the following formulæ:

R. Cinchonæ lancif. contritæ . 3ss. Magnesiæ sulphatis . 3vj.

Tere optime simul, et divide in quatuor partes, ex quibus sumatur una alternis horis inter paroxysmos.

TINCTURA CINCHONÆ AMMONIATA, L. — Ammoniated Tincture of Cinchona.

(Cinch. lancif. cort. cont. Ziv., Spirit. ammon. arom. 0ij.)
Dose gtt. xxx.—Zjss. Stimulant and tonic.

Cinchonia was discovered by the late Dr Duncan jun., and particularly described by Pelletier and Caventou. It is white, transparent, crystallizable, sparingly soluble in water, very soluble in alcohol, and has a very bitter taste. To obtain Cinchonia,—dissolve the alcoholic extract of pale bark in boiling water, strongly acidulated with muriatic acid; add to the solution calcined magnesia, and boil for a few minutes till the liquor is clear. When cold, strain, and wash the sediment left on the filter with cold water; dry it, and then digest it in boiling alcohol until all the bitterness is extracted. The tincture thus obtained, on cooling, deposits crystals of Cinchonia.

The Sulphate of Cinchonia has been used in medicine, but the Sulphate of Quinia is generally preferred in this

country.

Quinia was discovered by Pelletier and Caventou in yellow bark; it also exists in red bark, along with an equal proportion of Cinchonia. Its sulphate is officinal in the Dublin Pharmacopæia.

QUININÆ SULPHAS, D .- Sulphate of Quinia.

(Cort. cinchonæ cordifoliæ in pulv. crass. trit. Hiv., Aq. distillatæ mensura fiviij., Acidi sulphurici diluti Zij.)

Mix and digest in a proper vessel, with a heat from 200° to 212°, with frequent agitation for four hours, and then strain. Mix the bark which remains with an equal quantity of water, and filter. Repeat this a third time.

CIN 105

Add to the mixed liquors as much recently burnt and slaked lime as will neutralize the acid. Separate the precipitate formed, by bibulous paper, and add to it three pints of rectified alcohol; digest them together, with frequent agitation, for six hours, and filter. Add an equal quantity of rectified spirit to the powder which remains, digest again, and strain. Repeat this a third time. Mix the tinctures, and evaporate them almost to dryness in a water bath. Gradually add to the residuum diluted sulphuric acid, in such quantity that the liquor may contain a very slight excess of acid. Lastly, crystallize by evaporation and refrigeration.

The Sulphate of Quinia thus obtained is a white powder, soluble in alcohol, but very slightly so in water. Four grains and a-half are equal to two drachms and ahalf of cinchona in powder, of which it possesses all the

tonic and febrifuge properties.

Spirit of Horse-Radish.

(Armor. rad. recent. concis., Aurant. cort. exsicc. sing. lbj., Myrist. nuc. contus. \(\frac{7}{2}ss., \) Spirit. ten. cong. j., Aquæ q. s., ad prohibendum empyreuma.)

Stimulant. Dose 3j.—3iv.

COCHLEARIÆ OFFICINALIS HERBA, D.—Common Scurvy-Grass.

(Cochlearia officinalis. Cruciferæ. North of Europe. ()

The fresh plant is a gentle stimulant and diuretic. Eaten raw in any quantity, or of the juice, \(\frac{7}{3}i - \frac{7}{3}i v., \) for the cure of sea-scurvy.

109

COCI BUTYRACEÆ OLEUM FIXUM. Ex Nucibus, E.—Palm Oil.

(Cocos Butyracea. Palmæ. South America. b)

Palm oil is obtained from the kernels of the nuts. It is emollient, and used externally for burns, sprains, &c.

COLCHICI AUTUMNALIS RADIX, E. Colchici bulbus et semina, L. D.—The recent bulbs and seeds of the Meadow Saffron.

(Colchicum Autumnale. Colchiaceæ. Europe. 1/1)

Colchicum is a very powerful sedative, diuretic, and expectorant. Used in dropsies, gout and rheumatism,

rheumatic iritis, and all inflammatory affections.

Dose gr. ij.—gr. viij. combined with sulphate of potass, Dj. every four or six hours. Has been given with success in rheumatic gout, combined according to the following formula:

R. Pulv. colchici . . . gr. vij. Pulv. Doveri . . gr. v. Sulph. potass. c. sulphure . Dj.

Ft. pulvis, quarta quaque hora sumendus.

And in pleuritis after bleeding, thus:

R. Pulv. colchici gr. vij.
Potassæ nitrat. . . . gr. x.
Submur. hydrarg. . . gr. j.

Ft. pulvis, quartis horis sumendus.

Officinal Preparations of the Bulb.

VINUM COLCHICI, L. Wine of Colchicum.

(Colchici rad. recent. concis. bj., Spir. ten. Ziv., Aquæ distillatæ 0j., &c.)

Dose 3ss.—3j. combined with magnesia, in any mild fluid.

ACETUM COLCHICI, L. D .- Vinegar of Colchicum.

(Colchici rad. recent. concis. \(\frac{7}{2}\)j., Acidi acetici 0j., Spir. ten. \(\frac{7}{2}\)j.)

Dose 3ss .- 3ij. in any mild fluid.

OXYMEL COLCHICI, D .- Oxymel of Colchicum.

(Bulbi recent. colchici in laminas tenues secti Zj., Aceti distillat. lbj., Mellis despum. pond. lbij., &c.)

Dose 3j. twice a-day, gradually increased.

SYRUPUS COLCHICI AUTUMNALIS, E.—Syrup of Colchicum.

(Rad. colchici autum. recent., in frusta tenuia sectæ \(\)\footnote{\bar{z}}.,
Aceti \(\)\footnote{\bar{z}}\times, Sacchari purificati \(\)\footnote{\bar{z}}\times,\(\)\end{z}.)

Chiefly employed as a diuretic, in the dose of 3j.—Zij.—Zj.

Of the Seed.

TINCTURA SEMINUM COLCHICI, D.—Tincture of Colchicum Seeds.

(Seminum colchici autum. Zij., Spirit. ten. lbj., &c.)

Dose 3ss.—3ij.

The active properties of Colchicum depend on an alkaloid called *Veratria*, which also exists in White Hellebore and seeds of the Veratrum Sabadilla. It is a dangerous substance; in a very small dose, it produces vomiting and copious alvine evacuations.

COLOCYNTHIDIS PULPA. Vide CUCUMERIS Co-LOCYNTHIDIS PULPA.

COLOMBÆ RADIX, L. E. D .- Colomba root.

(Cocculus Palmatus. Menispermiæ. Africa. h)

Colomba root is bitter and aromatic. Stomachic, tonic, and anti-emetic. Dose gr. xv.—3ss. frequently in the course of the day, combined with chalybeates, aromatics, saline purgatives, or rhubarb.

May be given in the form of pill, thus:

Fiant pilulæ xx., quarum sumat. iv.-vj. in die.

CON 111

in spasmodic vomiting. Their action being assisted by effervescing draughts.

Combined according to the following formula:

R. Pulv. colombæ rad. . . . gr. vj. Sulph. potass. . . . gr. x. Pulv. rhei rad. . . . gr. iii.

Misce. Bis terve die sumend.

Colomba has been found of great efficacy in the mesenteric fever of infants, when assisted by long-continued friction of the abdomen, with soap liniment.

Externally the powder of colomba has been sprinkled

on foul ulcers as a detergent.

Officinal Preparations.

Infusum Colombæ, L. E. D .- Infusion of Colomba.

(Rad. colombæ concis. Zj., Aq. bullient. Zviij.)

A stomachic bitter. Much used, combined with supercarbonate of potass, in various cases of dyspepsia, particularly when accompanied with acidity; also in vomiting, diarrhæa, dysentery, &c. Dose 3jss.—3iij. three or four times a-day.

TINCTURA COLOMBÆ, L. E. D .- Tincture of Colomba.

(Rad. colombæ tritæ Zij., Alcohol. dilut. fbij.)

Dose 3ss.—3iv. More easily borne by the stomach than the powder or infusion.

CONII MACULATI FOLIA, E. D. Conii folia et semina, L.—Hemlock leaves and seeds.

(Conium maculatum. Umbelliferæ. Indigenous. (O)

Hemlock is very poisonous; its best antidote is vinegar. Narcotic and anodyne, it is very efficacious in allaying morbid irritability.

Dose gr. iij. gradually increased until some effect is

produced.

May be given in the form of infusion thus:

R. Conii maculati fol. exsice. Coriandri semin. contus. āā . . . Macera per horas duas et cola.

Dosis Zj.—Zij. bis, ter, sæpiusve quotidie.

This infusion, combined with aqua ammoniæ acetatis, a small quantity of tinctura conii, and syrup. papaveris, forms a very efficacious medicine for allaying pulmonary irritation.

Applied externally in the form of fomentation, thus:

(vel exsiccat. 3j.)

Coque ex aquæ 0ijss. ad . . 0ij.

et cola.

Panni lanei hocce decocto calido madefacti, deinde expressi, parti affectæ imponantur, et sæpius renoventur.

In carcinomatous, venereal, and sordid ulcers.

Officinal Preparations.

TINCTURA CONII MACULATI, E. D.—Tincture of Hemlock.

(Fol. conii maculat. sicc. Zij., Sem. amom. repent. contus. Zss., Alcohol. dilut. Zxvj.)

Dose 3ss.—3j.

Succus spissatus (extractum, L.) Conii maculati, E. D.—Inspissated juice of Hemlock.

Dose gr. iij. gradually increased to Dj., twice or thrice a-day.

May be given in the form of pill, thus:

R Succ. spiss. conii maculati; et

Folior. conii maculati exsiccat. et in pulverem trit. āā part. æq.

Syrupi . . . q. s.

ut fiant pilulæ, singulis grana tria pendentibus.

One to be taken morning and evening at first, afterwards two, then three or four, and lastly the dose is to be increased as far as possible.

Or thus:

B. Succ. spiss. conii maculat.

Extract. hyoscyami āā . . . gr. iij. Contunde simul, et ft. pilula bis quotidie sumenda.

May also be exhibited in t	this :	form:

UNGUENTUM CONII, D ... Ointment of Hemlock.

(Fol. conii recent., Adipis suilli præparati āā lbij.)

Applied to cancerous and irritable ulcers.

CATAPLASMA CONII, D .- Hemlock Poultice.

(Fol. conii maculat. exsicc. Zj., Aquæ fbjss., Decoque ad fbj., et liquori colato adde Pulveris ejusdem q. s., ut fiat cataplasma.)

Applied to open cancer and painful sores.

CONTRAYERVÆ RADIX. Vide DORSTENIÆ CONTRAYERVÆ RADIX.

CONVOLVULI JALAPÆ RADIX, E. D. Jalapæ radix, L. Jalap.

(Convolvulus jalapa. Convolvulaceæ. Mexico. 17)

Jalap is a very effectual purgative in doses of gr. x.— 3ss. in powder. Its operation is promoted by the addition of small quantities of tartrate of antimony, or ipecacuan, thus:

Pulv. ipecacuanhæ gr. xv. Ol. cinnamomi gtt. ij. Fiat pulvis, ex vehiculo aliquo idoneo sumendus. It is a good adjuvant to calomel and other purgatives of slow operation, thus: P. Convolv. jalap. rad. contrit gr. xv. Submuriat. hydrarg gr. v. Conserv. rosæ canin q. s. ut fiat bolus.
Officinal Preparations.
Fulvis Jalapæ compositus, E. D.—Compound Powder of Jalap.
(Pulv. rad. convolv. jalapæ, partem j., Supertart. potassæ, partes ij., &c.)
Dose 9j.—9ij. advantageously combined with a fortieth part of cayenne pepper, which obviates the griping qualities of jalap.
Extractum convolvuli jalapæ, L. E. D.—Extract of Jalap. (A spiritous tincture and an aqueous decoction inspissated
and mixed together.)
Dose gr. v.—x.
May be given in the form of pill, thus: R. Extract. jalapæ. Sap. dur. āā
Dosis gr. viij. nocte, maneque. Or thus:
R Extract. jalapæ, Calomelanos,
San, dur, āā
Sap. dur. āā
F. massa in pilulas xxxvj. dividenda, quarum su- mat j., omni semi-hora, donec soluta sit alvus.

115

The extract of jalap may also be given in the form of
emulsion, thus:
R Extract. jalapæ Dj.
Sacch. purif
Tere simul in mortario et gradatim adde vitellum
unius ovi dimidium, agita et in misturam
paulatim affunde:
Emulsion. simpl
Misce, et denique adde.
Aq. cinnamomi
Divide in partes quatuor, quarum sumat unam
omni hora.
TINCTURA CONVOLVULI JALAPÆ, L. E. D Tincture of

(Rad. convolv. jalap. trit. Ziij., Alcohol. dilut. Zxv.,)
Dose 3j.—iv. added to purgative draughts.
Desc ,), under to purguire drugitos
CONVOLVULI SCAMMONIÆ GUMMI-RESINA,
E. D. Scammoniæ Gummi-resina, L.—Scammony.
(Convolvulus scammonia. Convolvulaceæ. Aleppo. [7]
Scammony, when reduced to powder by trituration
with loaf sugar or sulphate of potass, is one of the best
vegetable purgatives. Dose gr. iij.—xij.
Scammony may be given combined thus:
R. Scammon. gum. res. pulv gr. v.
Pulv. rhei gr. xv.
Sub-carb. ammon gr. v.
Fiat pulvis, ex vehiculo aliquo idoneo sumendus.
Or in the form of emulsion thus:
R. Scammon. gum. res. pulv. gr. ij.
Mucilag. acac. arab. gum Zij.
Sulphat. potass gr. x.
Tere simul, et adde
Emuls. amygdal
Spir. myristicæ mosch \(\frac{7}{3}\ss. \) Fiat haustus.

Combined with calomel, it forms a very efficacious vermifuge purgative for children, thus:

Officinal Preparations.

Pulvis Scamonii compositus, L. E. D.—Compound Powder of Scammony.

(Gum. res. convolv. scammon., Super-tart. potassæ, utriusque, partes æquales.)

Dose Dj.—Zj.

CONFECTIO (ELECTUARIUM, D.) SCAMMONIÆ, L.—Confection of Scammony.

(Scammon. pulv. \(\frac{7}{2}\)jss., Caryoph. cont., Zingib. rad. pulv., sing. \(\frac{7}{2}\)vj., Ol. carui \(\frac{7}{2}\)ss., Syr. ros\(\pi\) q. s. &c.)

Dose 3ss.—3j. in a bolus.

COPAIFERÆ OFFICINALIS RESINA—RESINA LIQUIDA, E. D. Copaiba, L.—Copaiba Balsam.

(Copaifera officinalis. Leguminosæ. South America. h)

Copaiba is purgative in large doses; stimulant and diuretic in smaller. It is generally used in chronic discharges from the mucous membrane of the urinary and uterine organs, as well as in similar affections of the trachea and bronchi. Also in hæmorrhoidal complaints.

Dose gtt. x.—xxx.—lx. administered in the form of

emulsion, thus:

R. Copaif. off. resinæ
Syrup. toluif. balsam. āā
Mucilag. acac. arab.
Aquæ rosæ
Spirit. æther. nitros.
M. S. A. ut fiat emulsio, cujus sumat. ʒss.—ʒj.
bis terve die.

This emulsion is used in chronic gonorrheas.

It may also be exhibited according to the subjoined formula:

R. Copaif. off. resin. Syrup. toluif. balsam.	55	. 3	711
Duorum ovorum vitel),1,
Vini albi			iv.
F. S. A. mistura. Coch	. maj. j	. ter di	e sumend.
In gleet.			
Copaiba may be also given c diuretic mixture:	combine	ed as in	the follow-
R Copaif. off. resin

F. S. A. mistura.

Dosis, Coch. ampl. iij.—iv. quotidie. In chronic nephritis.

Copaiba may be exhibited in the form of clyster thus:

Unius ovi vitellum,

Extract. opii . . . gr. j.

Misce pro enemate, quod mane nocteqe injiciatur. In gonorrhoea. It is to be continued for some days after the running has ceased.

The use of copaiba sometimes produces urticaria.

CORIANDRI SATIVI SEMINA, E. D. Coriandri semina, L.—Coriander Seeds.

(Coriandrum sativum. Umbelliferæ. South of Europe.

Coriander seeds are stomachic and carminative. Used in combination with senna and other active purgatives as a corrective of their griping effects.

Dose Dj.—3j.

CORNUA. Vide CERVI ELAPHI CORNU.

CRETA PRÆPARATA. Vide CALX.

CROCI SATIVI STIGMATA, E. D. Croci stigmata, L.—Saffron.

(Crocus sativus. Iridea. The East. 4)

Saffron is the summits of the pistils, dried. Aromatic, exhilarating, diaphoretic, and emmenagogue. Dose gr. v.—3ss. Seldom used but for its colour, whith is owing to a peculiar principle called *polychroite*.

Officinal Preparations.

SYRUPUS CROCI, L. Syrup of Saffron.

(Croci stigmatum Zj., Aq. fervent. 0j., Sacch. purif. lbjss.)
Cordial. Dose Zj.—Zij.

TINCTURA CROCI SATIVI, E.—Tincture of Saffron. (Croci sativi concis. Zj., Alcohol. dilut. Zxv. &c.)
Dose Zj.—Ziij.

CROTONIS ELEUTHERIÆ CORTEX, E. Cascarillæ cortex, L. D.—Cascarilla bark.

(Croton Eleutheria. Euphorbiaceæ. Bahamas. b)

Cascarilla bark is a good stomachic in dyspepsia and flatulent colic. May be given in diarrhœa and after dysentery, and as an adjuvant to cinchona in intermittents. Dose of the powder gr. xv.—3ss.

Officinal Preparations.

TINCTURA (CASCARILLÆ, L. D.) CROTONIS ELEUTHE-RIÆ, E.—Tincture of Cascarilla.

. (Cort. croton. eleutheriæ trit. Ziv., Alcohol. dilut. lbijss.)
Dose Zj.—Ziv.

INFUSUM CASCARILLÆ, L. D.—Infusion of Cascarilla.

(Cascar. cort. cont. 3ss., Aq. ferventis 0ss., &c.)

In diarrhœa, &c. Dose Zjss.—Zij. twice or thrice aday, in combination, as in this tonic mixture:

Ft. mistura, cujus sumat. coch. ampl. j.—iij. ter in die.

Or this draught: R. Infus. cascar. Tinct. cascar. Tinct. zingib. āā F. haustus. in-loss of appetite from drinking.			ʒjss. ʒj∙
CROTONIS TIGLII OLEUM.	Vide	Tig	LII OLEUM.

CUCUMERIS COLOCYNTHIDIS PULPA. Ex FRUCTU, E. D. Colocynthidis pulpa, L.—Colocynth. Bitter Cucumber pulp.

(Cucumis Colocynthis. Cucurbitacea. Cape of Good Hope. (*)

Colocynth is a drastic purgative. Generally given in combination, as it is too violent to be used alone. May be administered in a stimulating purgative clyster thus:

Coque paulisper, et cola, dein adde

in coma, stupor, and other affections of the brain.

Officinal Preparations.

EXTRACTUM COLOCYNTHIDIS, L. D.—Extract of Colocynth.

(A gummy extract, obtained by water from the pulp.)

This is milder in its operation. Dose gr. v.—3ss. in pills, combined with other purgatives.

EXTRACTUM COLOCYNTHIDIS COMPOSITUM, L. D.—
Compound extract of Colocynth.

(Colocynth. pulp. concis. 3vj., Aloes spic. ext. contrit. 3jss.,

Scammom. gum. res. cont. 3ss., Cardamom. sem. contr. 3j., Spirit. rectificat. 0ij.)

One of the most powerful and useful of our cathartics. Dose gr. vj.—3ss. in pills. May be combined thus:

R Extract. colocynth. comp.
Opii puri gr. iij.
Ol. nucis moschatæ . . . gtt. iv.

Fiat massa in pilulas xij. dividenda, e quibus capiat duas, omni hora, donec bis dejicerit alvus.

PILULÆ COLOCYNTHIDIS COMPOSITÆ, E. D.—Compound colocynth pills.

(Extract. aloes socot., Gummi-res. scammon. āā partes viij., Pulpæ cucum. colocynthid. partes iv., Sulph. potass., Ol. volat. Eugen. caryophill. āā partem j., &c.)

Simul contunde in mortario lapideo, donec massa æqualis sit; et in pilulas lx. æquales distribuenda. Dosis ab j. ad v. pro re nata.

Colocynth contains an active principle, called Colocynthine, which is a resinoid substance, more soluble in alcohol than water.

CUMINI SEMINA, L.—Cummin seed.

(Cuminum Cyminum. *Umbelliferæ*. Egypt. ①)
Cummin seeds are carminative; externally stimulant.

Officinal Preparation.

EMPLASTRUM CUMINI, L ... Plaster of Cummin.

(Cumini sem., Carui sem., Lauri bacc., sing. Ziij., Picis aridæ lbiij., Ceræ flav. Ziij.)

Applied to indolent tumours, and to the hypogastric region in flatulence and a cold state of the bowels.

CUPRUM .- Copper.

CUPRI SUBACETAS, E. D. Ærugo, L.—Subacetate of copper or verdigris.

Seldom or never used internally. Applied externally as an escharotic.

The following plaster:

R Ammoniaci purif.

Ammoniaco balneo in aquoso liquefacto, adde ceram, et, ab igne remotis, paulo antequam concrescant, æruginem adjice, atque omnia misce, ut fiat emplastrum.

is said to be an infallible cure for corns. Spread the plaster on a piece of soft leather or linen; very carefully pare away as much of the corn with a knife as may be done before the plaster is applied.

Officinal Preparations.

LINIMENTUM ÆRUGINIS, L. Oxymel cupri subacetatis, D.—Liniment of Verdigris.

(Æruginis cont. Zj., Aceti Z vij., Mellis despumati, pond.

Zxiv.)

Stimulant and escharotic. Mixed with any digestive ointment, this is applied to spreading foul ulcers of the face and scalp, and to destroy fungous flesh; properly diluted, as a gargle in venereal ulcerations of the mouth and tonsils; but its use is hazardous. May be made into a lotion thus:

UNGUENTUM SUBACETATIS CUPRI, E. D.—Ointment of Verdigris.

(Unguent. resinos. partes xv., Subacetat. cupri in pulv. te-

nuiss. trit. partem j.)

Very efficacious in curing the ring-worm scall. For this purpose the scalp should be kept closely shaved, and the head washed clean every night with warm soap and C U P 123

water, and afterwards with bran and water, and then rubbed dry. The ointment may be applied either on lint or with the finger; an oil-skin cap should be worn whilst the ointment is used. Applied also to foul and fungous ulcers; and, diluted with lard, to scrofulous ulcerations of the palpebræ.

CUPRI ACETAS—CRYSTALLI, D.—Acetate of copper. Sometimes used in pharmacy for yielding acetic acid.

CUPRI SULPHAS, L. E. D .- Sulphate of copper.

Taken internally in a dose of gr. v.—x., dissolved in Zij. of water, it acts speedily as an emetic. In smaller doses, as gr. \(\frac{1}{8}\)—\(\frac{1}{4}\), combined with opium, in the form of pill, it has been exhibited in chronic dysentery. Chiefly used externally as an escharotic, or as a stimulant application to fungous and ill-conditioned ulcers. The following preparation,

Solve et cola.

is very useful in the purulent ophthalmia of infants.

Officinal Preparations.

Solution of the sulphate of copper.

(Sulphat. cupri., Aluminis, ana Ziij., Aqua fbij., Acid. sulphurici Zjss.)

Used as a styptic to bleeding surfaces.

AMMONIARETUM CUPRI, E. Cuprum ammoniatum, L. D.—Ammoniaret of copper.

(Sulphat. cupri puriss. partes ij., Subcarbonat. ammon. partes iij.)

Tonic and antispasmodic.

PILULE AMMONIARETI CUPRI, E.—Pills of the ammoniaret of copper.

(Ammoniareti cupri in pulv. ten. trit. gr. xvj., Micæ pa-

nis Div., Aq. subcarbonat. ammon. q. s., Subige in massam, dividendam in pilulas xxxij. æquales.)

Each pill contains somewhat more than half a grain of the ammoniaret. Dose one pill twice a-day, gradually increasing the number to five for a dose; in epilepsy and chorea.

LIQUOR (AQUA, D.) CUPRI AMMONIATI, L.—Solution of ammoniated copper.

(Cupri ammoniat. 3 j., Aq. distillat. 0j.)

Applied externally to foul ulcers; and, diluted with an equal part of water, dropped into the eye to remove specks of the cornea.

CURCUMA LONGA-RADIX, D.-Turmeric root.

(Curcuma Longa. Drymyrrhizæ. India. 4)

Turmeric root is aromatic, stomachic, and heating; an essential ingredient of curries. Dose 3ss.—3ij. of the powder; or of this infusion, Curcum. long. rad. 3iij., Aquæ 3xvj., three table-spoonfuls three times a-day.

CUSPARIÆ CORTEX. Vide Bonplandiæ Trifo-Liatæ Cortex.

CYDONIÆ SEMINA, L.—Quince seed.

(Pyrus Cydonia. Rosaceæ. Crete. h)

Quince seed contain much mucilage in their external coat or episperm.

Officinal Preparation.

DECOCTUM CYDONIÆ, L.—Decoction of Quince seed. (Cydoniæ seminum Zij., Aquæ 0j., &c.)
Demulcent.

DAPHNES MEZEREI CORTEX. Ex RADICE, E. D. Mezerei cortex, L.—Mezereon.

(Daphne Mezereon, Thymaleæ. North of Europe. h)
Mezereon is acrid, stimulant and rubefacient. Taken

internally in the dose of only a few grains, it is a dangerous drastic, producing both vomiting and purging. Used externally as an exutory, softened in vinegar, or made into this ointment:

R Aq. ammon.

Misce. Ft. unguentum.

Mezereon bark contains an active principle, Daphnia.

Officinal Preparation.

DECOCTUM DAPHNES MEZEREI, E. D.—Decoction of Me-zereon.

(Cort. Daphnes mezerei Zij., Rad. glycyrrh. glabr. contus. Zss., Aquæ fbijj., &c.

In obstinate syphiloid and rheumatic affections. Dose Ziv.—Zviij. four times a-day.

DATURÆ STRAMONII HERBA, E. D. ET SEMI-NA, D.— The herbaceous part and seed of Thorn Apple.

(Datura Stramonium. Solaneæ. America. ①)

Stramonium is narcotic and antispasmodic. Has been given in mania and melancholy, and in convulsive and epileptic affections. Dose gr. j., gradually increased to gr. viij. in the course of the twenty-four hours. Smoked like tobacco, it gradually relieves the paroxysms of asthma. Used externally in the form of ointment, to alleviate the pain of hæmorrhoids, and in the form of fomentation to discuss hard indolent tumours.

The properties of thorn-apple depend on a peculiar al-

kaloid, called Daturia.

Officinal Preparation.

EXTRACTUM STRAMONII, D .- Extract of stramonium.

(A decoction of the seeds inspissated.)

Anodyne and antispasmodic. In painful diseases and asthma. Dose gr. 4, gradually increased. May be given in the form of pill thus:

R Extract stramonii			3 j.
Sapon. dur			3 ij.
Acac. arab. gum. pulv.			Đi.
Glycyrrh. rad. pulv.			Đij.
Mucilag. tragacanth			q. s.
Ut ft. massa, in pilulas		enda	a. Dosis j.
nocte maneque vel ter	are.		

DAUCI CAROTÆ RADIX, E. D. Dauci radix, L.— Carrot root.

(Daucus Carota. Umbelliferæ. Indigenous. 3)

The carrot is saccharine and alimentary. Used to make the

Officinal Preparation.

CATAPLASMA DAUCI, D .- Carrot poultice.

(Dauci carotæ hortens. rad. q. v., Coque in aqua donec ita mollescat ut fiat cataplasma .)

An excellent application to carcinomatous and foul ul-

The carrot poultice may be made combined with hemlock thus:

The same of the sa	auci carot				lbj
	e simul, e			٠	3j.
	Vini opii	· auc			Ziij.
Fia	t cataplasi	na.			0

DAUCUS CAROTA var. SYLVESTRIS—SEMINA, D.—Seeds of the Wild Carrot.

(Daucus sylvestris. *Umbelliferæ*. Indigenous. 3)
Carminative, and said to be diuretic. Dose of the bruised seeds $\exists j$.— $\exists j$.

^{*} Carrots, finely rasped; and applied over the surface of the bread and water poultice, is the best form of the cataplasma dauci; or, if preferred, it may be prepared by bruising fresh carrots, expressing the juice, afterwards boiling them until they become quite soft, and mashing them up into a pulp, to which the previously expressed juice is to be added.

DELPHINII STAPHISAGRIÆ SEMINA, E. D. Staphisagriæ semina, L.—Stavesacre Seeds.

(Delphinium Staphisagria. Ranunculaceæ. South of Europe. 3)

Stavesacre seeds are acrid and nauseous; violently purgative and emetic. Dose gr. iij.—gr. x. of the powder. Chiefly employed to destroy pediculi, from which circumstance it has received its name in different languages, as Louse-wort, Eng., Pedicularia, Lat., Herbe aux poux, Fr., Lauskörner, Ger.

Contains an alkaloid principle, called Delphinia.

DIANTHI CARYOPHYLLI FLORES, E. D.—Clove Gillyflower.

(Dianthus Caryophyllus. Caryophylleæ. Italy. 4) Clove gillyflower is aromatic.

Officinal Preparation.

Syrupus Dianthi Caryophylli, E.—Syrup of Clove Gillyflowers.

(Petal. Dianth. Caryophyll. recent. unguibus resectis, partem j., Aquæ bullientis partes iv., Sacch. purif. partes vij.)

Aromatic. Dose 3j.—3ij. Used chiefly to impart its colour to mixtures.

DIGITALIS PURPUREÆ FOLIA, E. D. Digitalis folia et semina, L.—Foxglove Leaves and Seed.

(Digitalis Purpurea. Personatæ. Indigenous. 3)

Foxglove diminishes the frequency of the pulse, and the irritability of the system; it increases the action of

the absorbents, and the secretion of urine.

Given in inflammatory diseases, aneurisms, and active hæmorrhages, phthisis, spasmodic affections, and dropsies. Applied externally to scrofulous tumours. Dose gr. j., gradually increased by one-fourth of the original dose every second day, in a pill, combined with ammoniacum or soap, twice a-day, till it acts upon the kidneys, sto-

mach, pulse, or bowels, when its use must be discontinued, or suspended. During its operation the use of diluents is necessary. Great caution is required in its exhibition, as it is apt to accumulate in the system, and produces symptoms of poisoning, even after its use has been left off. In this case cordials and opium are to be administered, and a blister applied over the stomach.

Officinal Preparations.

INFUSUM DIGITALIS PURPUREA, L. E. D.—Infusion of Foxglove.

(Fol. digitalis purp. sicc. Zj., Aq. bullient. Zviij., Spirit. lauri cinnamom. Zj. &c.)

Dose \(\frac{7}{2} \) ss.\(-\frac{7}{2} \) twice a-day in dropsical complaints. It may be combined as in the following diuretic mixture:

Fiat mistura, cujus sumatur, Coch. ampl. j. bis terve in die.

TINCTURA DIGITALIS PURPUREA, L. E. D.—Tincture of Fox-glove.

(For digitalis purp. sicc. 3j., Alcohol. dilut. 3viii. &c.)

Dose gtt. x. gradually increased to xl. Combined thus:

Fiat haustus, bis quotidie sumendus. it is of great service in palpitation of the heart, accompanied with great nervous irritability.

DIOSMA CRENATA-FOLIA, D.-Buchu Leaves.

(Diosma crenata. Rutacea. Cape of Good Hope. 4)

Stimulant, sudorific, and diuretic. Used in affections of the mucous membrane of the urinary passages, and likewise in chronic rheumatism.

Officinal preparations.

INFUSUM BUCHU, D .- Infusion of Buchu.

(Fol. Diosmæ crenat. Zss., Aquæ ferventis lbss.)

Dose 5j.—5ij. twice or thrice a-day.

TINCTURA BUCHU, D Tincture of Buchu.

(Fol. diosmæ crenatæ Zij., Spirit. tenuior. lbj.)

Dose 3j.—3iv.

DOLICHI PRURIENTIS PUBES. EX LEGUMINE, E. D. Dolichi Pubes, L..—The stiff hairs which cover the pods of Cow-itch.

(Dolichos Pruriens. Leguminosæ. India. 7)

A mechanical anthelmintic. One pod is to be dipped into syrup or treacle, which is to be scraped off, along with the hairs, and given as a dose in the morning, fasting. After two or three doses, a brisk purgative should be administered.

It has been recommended in combination according to

this formula:

B. Pubis dolichi prurient.

Pulv. artem. sant. cac. āā . 3ss.
Calomelanos . . . gr. x.
Syrup. simpl. . . . q. s.

Fiant boli x. quorum sumat. v. quotidie.

DORSTENIÆ CONTRAJERVÆ RADIX, E. Contrajervæ radix, L.—Contrajervæ Root.

(Dorstenia Contrajerva. Monimieæ. South America. 4)

Contrajerva root is said to be gently stimulating and diaphoretic. Dose gr. v.—3ss. of the powdered root. Frequently combined with snake root.

- DULCAMARÆ CAULES. Vide SOLANI DULCAMA-RÆ CAULES.
- ELATERIUM. Ex Momordica Elaterio, E. Momordica Elaterium—Fructus fæcula. Folia, D. Elaterii pepones.—Wild Cucumber.

(Momordica Elaterium, Cucurbitaceæ. South of Europe. ①)

The fresh ripe fruit, Elaterii pepones, yield, by expression, a juice from which a fecula subsides, which is the

Officinal Preparation.

Extractum Elaterii, L. D .- Extract of Elaterium.

This is a drastic hydragogue cathartic. Dose gr. ss. —gr.j. in the form of a pill, thus:

Potassæ sulphatem et elaterium simul tere, dein cum zingibere, et postea cum sapone contunde, et adde aquæ q. s. ut fiat massa, in pilulas lx. dividenda.

Dosis j.—ij. omni hora donec plene soluta sit alvus. in dropsies.

ELEMI, L. Amyris Elemifera, Resina, D.—Elemi.

(Amyris Elemifera. Terebinthaceæ. Carolina. 1/2)

Elemi is stimulant. Used chiefly for forming an oint.

Elemi is stimulant. Used chiefly for forming an ointment.

Officinal Preparation.

Unguentum Elemi compositum, L. D.—Compound Ointment of Elemi.

(Elemi fbj., Terebinthinæ vulg. Zx., Sevi præp. fbij., Olivæ olei Zij. &c.)

Stimulant and digestive. Used to promote the discharge from blisters, issues and setons.

ERGOTA. Vide SECALE CORNUTUM.

EUGENIÆ CARYOPHILLATÆ FLORES. FLORES NONDUM EXPLICITI, E. D. Caryophilli, L.—Cloves.

(Eugenia Caryophyllata. Myrti. Moluccas. h)

The flower-buds, before they open, smoked and dried, are what are called *Cloves*. They are chiefly used as correctives of other medicines. Dose gr. v.—x. in powder.

Officinal Preparation.

INFUSUM CARYOPHILLORUM, L. D .- Infusion of Cloves.

(Caryophillorum contusorum 3j., Aquæ ferventis 3viij.)

Aromatic and stimulant. Dose 3jss.—Zij. three or four times a-day.

EUGENIÆ CARYOPHILLATÆ OLEUM VOLA-TILE. Ex floribus nondum explicitis, E. D.

Caryophillorum oleum, L.—Oil of Cloves.

Stimulant. Dose gtt. ij.—gtt. vj. on sugar. Added to griping extracts; dropped into the cavity of a carious tooth it relieves the pain of toothach. Applied externally as an embrocation in hooping-cough combined thus:

R Olei olææ Europææ . . . Zviij.

Olei succini

Olei caryophillorum āā . . Ziv.

Misce.

EUPHORBIÆ GUMMI-RESINA, L. D.—Euphor-bium.

(Euphorbia Officinarum. Euphorbiaceæ. Africa. 4)
Euphorbium is very acrid. Never used but as an errhine, diluted with some mild powder.

FARINA, L.-Flour.

(Triticum Hybernum. Graminea. ①)

Wheat flour is ordered by the Dublin Pharmacopæia for the preparation of the Cataplasma fermenti Cerevisiæ.

FERRUM .- Iron.

FERRI FILA—LIMATURA, E. Ferri ramenta et fila, L. Ferri fila et scobs, D.—Iron Filings and Wire.

FERRI LIMATURA PURIFICATA, E. - Purified Iron Filings.

Taken internally, iron has probably no effect on the body unless it be oxidized, and that this has taken place in the stomach we know by the fœtid eructations and black stools, which are considered as a proof that the medicine has taken effect. Given as a tonic, astringent, and anthelmintic. Dose gr. v.—Ŋj. in the form of powder with some aromatic, or made into an electuary or bolus, or pill with some bitter extract, thus:

R. Limaturorum ferri.

Gum. ammoniaci.

Extracti taraxaci āā . . . 3j. F. pilulæ xxx. quarum sumat j. ter die.

SULPHURETUM FERRI, E. D .- Sulphuret of Iron.

Used in pharmacy for the preparation of hydrosulphuret of ammonia.

CYANURETUM FERRI, D.—Cyanuret of Iron, or Prussian Blue.

Used in remittent and intermittent fevers. Dose gr.j. several times a-day. Has been given with success in doses of gr. ½ to gr. iij.—vj. daily in epilepsy; and in dysentery in doses of gr. iv. every four hours in sugar and water.

OXIDUM FERRI NIGRI PURIFICATUM, E. D. —Purified Black Oxide of Iron.

Tonic. Dose gr. iij.—x. When taken into the stomach this does not produce the distention and flatulence occasioned by the use of the filings.

OXIDUM FERRI RUBRUM, E. D.—Red Oxide of Iron.

Tonic and stimulant. Dose gr. v.—x., but rarely used except for making the

Officinal Preparation.

EMPLASTRUM (THURIS, D.) OXIDI FERRI RUBRI, E.—
Plaster of the Red Oxide of Iron.

(Emplast. oxid. plumb. semivit. partes xxiv., Resin. alb. partes vj., Ol. ol. Europ., Ceræ flav., ana, partes iij. Oxidi. ferri rubr. trit. partes viij.)

Used in weakness of the large muscles, as of the loins; and in weakness of the joints after sprains. Acts merely by giving mechanical support.

SUBCARBONAS (RUBIGO, L. D.) FERRI PRÆ-PARATUS, E.—Prepared Subcarbonate (Rust) of Iron.

Tonic and anodyne. Dose gr. v.—3ss. combined with pulvis aromaticus.

CARBONAS FERRI PRÆCIPITATUS, L. E. D.—Carbonate of Iron.

(Precipitated from a solution of Sulphate of Iron by a solution of Carbonate of Soda.)

Tonic and anodyne. Given with success in neuralgia in doses of 3ss.—Div. three times a-day. Used in smaller doses, as gr.v.—xv. united with rhubarb and aromatics, in dyspepsia and chlorosis, thus:

Or thus:

Or combined thus:

R. Carbonatis ferri.

Extracti conii maculat. āā . 3j.
Distribue in pilulas æquales xxiv. Dosis, ij. bis die.
in scrofula and fluor albus.

MISTURA FERRI COMPOSITA, L. D.—Compound Mixture of Iron.

(Myrrhæ cont. 3j., Potassæ subcarb. gr. xxv., Aq. rosæ.

Zvijss., Ferri sulph. cont. Dj., Spir. myrist. Zss., Sacch. pur. Zj.)

The sulphate of iron is here decomposed and converted into the subcarbonate.

Tonic and emmenagogue. Given in chlorosis, anæmia, and chronic catarrh. Dose 3j.—3ij. two or three times a-day. May be given thus:

PILULÆ FERRI COMPOSITÆ, L. D.—Compound Pills of Iron.

(Myrrhæ cont. Zij., Sodæ subcarb., Ferri sulphatis, Sacch., sing. Zj.

The sulphate of iron is in this preparation converted into the state of subcarbonate.

Tonic and emmenagogue. Dose gr. x.—Dj. twice or thrice a-day in dyspepsia and chlorosis.

SULPHAS FERRI, L. E. D .- Sulphate of Iron.

Given in doses of gr. j.—iij. as a tonic, emmenagogue, astringent, or anthelmintic. In large doses it causes vomiting, and griping in the bowels.

Has been given in solution thus:

in the dose of half a glassful to one or two glassesful; or combined in the form of bolus, thus:

Fiant boli vij. quorum capiat j. secunda quaque hora.

against intermittent fevers, being taken during the apyrexia.

Officinal Preparations.

PILULÆ SULPHATIS FERRI COMPOSITÆ, E.—Compound Pills of the Sulphate of Iron.

135

(Sulphat. ferri in pulv. trit. \(\frac{1}{2}\)j., Extract. anthemid. nob. \(\frac{1}{2}\)jss., Ol. volat. menth. pip. \(\frac{1}{2}\)j., Syrup. simpl. \(\quad \text{q. s.}\)

Tonic. Dose gr. x .- xx.

SULPHAS FERRI EXSICCATUS, E. - Dried Sulphate of Iron.

(Sulphate of iron exposed to a moderate heat, until it becomes white and perfectly dry.)

Used for preparing the red oxide.

TINCTURA (LIQUOR, D.) MURIATUS FERRI, L. E.—Tincture of the Muriate of Iron.

Given as a tonic in the dose gtt. x. to 3ss.—3j. twice or thrice a-day in any proper vehicle, such as chamomile tea, and often in combination with the muriate of lime or of baryta in scrofula. It has been found to be a specific in dysuria, gtt. x. being given every ten minutes, until a sensible effect be produced. Has also been used as an astringent in uterine hæmorrhage, thus:

Combined thus as an emmenagogue and antispasmodic:

R. Tinct. muriat. ferri
Tinct. aloes comp. āā
Tinct. Castorei
Misce.

Dosis, Coch. minim. j. ex infusi anthemid. nob. cyatho, ter die.

And thus as a diuretic:

MURIAS AMMONIÆ ET FERRI, E. Ferrum ammoniatum, L.—Muriate of Ammonia and Iron.

Has been found useful in scrofula, mesenteric obstructions and rickets; also in hysterical and hypochondriacal cases. Dose gr. iij.—x. combined with the extract of

gentian in the form of bolus, or in pill with a purgative, thus:

Contunde simul, et divide massam in pilulas xxx., quarum sumat ij., ter quotidie.

As an emmenagogue, thus:

Syrup. zingib. . . q. s.

Ut fiat electuarium, de quo sumatur ad myristicæ nuclei magnitudinem quotidie.

TINCTURA FERRI AMMONIATI, L.—Tincture of Ammoniated Iron.

(Ferri ammoniati Ziv., Spiritus tenuioris, 0j.)
Dose Zss.—Zj.

FERRI ACETAS, D.—Acetate of Iron.

TINCTURA ACETATIS FERRI, D.—Tincture of the Acetate of Iron.

(Potass. acetat. partes ij., Sulphat. ferri partem j., Spir. rectif. partes xxvj.)

A useful chalybeate. Dose, a tea spoonful or two in water or ass's milk.

LIQUOR FERRI ALKALINI, L.—Solution of Alkaline Iron.

(Ferri Zijss., Acid. nit. Zij., Aq. distillat. Zvj., Liq. potass. subcarbonat. Zvj. &c.)

Tonic. Dose 3ss.—3jss.

TARTRAS POTASSÆ ET FERRI, E. Ferrum Tartarizatum, L. Ferri Tartarum, D.—Tartrate of Potass and Iron.

R Tart. potass. et ferri . . . gr. x. Pulv. columbæ rad. . . gr. xv.

F. pulvis, quarta quaque hora sumendus.

In scrofulous tumours and dyspepsia after diarrhœa.

VINUM FERRI, L .- Wine of Iron.

(The tartrate of iron and potass dissolved in water, to which a proportion of spirit is added.)

Dose 3j.—3ss. twice or thrice a-day. In chlorosis.

MISTURA FERRI AROMATICA, D.—Aromatic Mixture of Iron.

(Pulv. cinchon. lancif. in pulv. crass. redact. \(\frac{7}{2}\)i., Rad. Colombæ concis. \(\frac{7}{2}\)iij., Caryophill. aromat. contusi \(\frac{7}{2}\)ij., Limatur. ferri \(\frac{7}{2}\)ss., Aq. menth. piperit. \(\quad q.\) s.)

A weak chalybeate. Dose 3ss.-3ij.

FERULÆ ASSÆFŒTIDÆ GUMMI-RESINA, E.

D. Assafætidæ Gummi-resina, L.—Assafætida.

(Ferula Assafœtida. Umbelliferæ. Persia. 4)

Assafætida acts as a stimulant, antispasmodic, expectorant, emmenagogue; and anthelmintic when exhibited as a clyster. Useful in spasmodic croup; in dyspepsia, amenorrhæa and chlorosis; in asthma, dyspnæa, and hysteria; in tympanitis and worms. Dose gr. x.—3ss. May be combined with cinchona in the form of pill, thus:

Ut fiat massa; in pilulas xlviij. divide; quarum capiat iij.—iv. nocte maneque.

in debilitated states of the stomach attended with flatulency.

Exhibited in the form of enema thus:

Officinal Preparations.

MISTURA ASSÆFŒTIDÆ, L. D.—Assafætida Mixture. (Assæfætidæ Zij., Aquæ Zviij.)

Dose 3ss.—3jss.

Assafœtida mixture may be given combined, thus:

in hysteria.

TINCTURA ASSÆFŒTIDÆ, L. D.—Tincture of Assafætida. (Assæfætidæ Ziv., Spir. rectif. 0ij.)

Dose gtt. x.—3j. The addition of water makes it turbid. 3ij. added to the *Enema catharticum* forms the *Enema fætidum*.

TINCTURA FERULÆ ASSÆFŒTIDÆ AMMONIATA, E. (Spir. Ammon. fætid. L. D.)—Ammoniated Tincture of Assafætida.

(Gum. res. fer. assæfætidæ Zss., Alcoholis ammoniati Zviij.)
Dose Zss.—Zj. Stimulant and antispasmodic.

PILULE (GALBANI, D.) ASSÆFŒTIDÆ COMPOSITÆ, E.—
Compound Pills of Assafætida.

(Gum. res. Fer. assæfætid., Gum. res. Bubon. Galban., Myrrhæ, sing. partes viij., Ol. succini puriss. partem j., &c.) Emmenagogue. Dose gr. x.— j. every night.

EMPLASTRUM ASSÆFŒTIDÆ, E.—Plaster of Assafætida.

(Emplast. oxidi Plumb. semivit., Gum. res. Fer. assæfætid. āā partes ij., Gum. res. Bubon. Galb., Ceræ flav. āā partem j.)

Applied over the umbilical region in flatulence and hysteria.

FICI CARICÆ FRUCTUS .- Fructus siccatus, E. D. Caricæ fructus, L.—Figs.

(Ficus Carica. Urticeæ. Persia. h)

Demulcent and suppurative. A decoction made thus:

R. Fici caricæ fructus . . . 5ij: Aquæ Coque et cola.

is useful in inflammatory diseases, and is a good gargle in cynanche tonsillaris during suppuration. A roasted fig, split, forms an excellent poultice.

- FILICIS RADIX. Vide ASPIDII FILICIS MARIS RADIX.
- FŒNICULI SEMINA. Vide ANETHI FŒNICULI SEMINA.
- FUCUS, L. Fuci vesiculosi Herba cum fructu, D.— Bladder Wrack.

(Fucus Vesiculosus. Algæ. British shores.)

Reduced to charcoal by burning in close vessels, this is known by the name of Æthiops vegetabilis. It is composed of charcoal, carbonate of soda, and iodine.

- GALBANI GUMMI-RESINA. Vide BUBONIS GAL-BANI GUMMI-RESINA.
- GALLA, EX VARIIS QUERCUS SPECIEBUS, E. Gallæ, L. D.—Nut Galls.

(Quercus Infectoria.* Amentaceæ. Asia Minor. 1) Galls are very astringent. Dose gr. x.—Dij.

^{*} Nut galls are excrescences developed on the shoots of the young boughs of this tree, in consequence of the puncture of an insect (Cynips quercus folii. Linn. Diplolepis Quercus folii. Latreille,) for the purpose of depositing its eggs. Those from which the insect has not escaped, blue galls, are most esteemed.

They are advantageously employed in the form of decoction, thus:

Decoque ad Ibij. et cola, dein adde

Officinal Preparations.

TINCTURA GALLARUM, E. D .- Tincture of Galls.

(Gallarum trit. Zij., Alcoholis dilut. Zxvj., &c.)

Dose 3j.—3iij. in protracted diarrhœa, intestinal hæmorrhages; and also a good dentifrice either alone or diluted.

UNGUENTUM GALLÆ, E. D.—Ointment of Galls.

(Gallæ in pulv. tenuiss. trit. partem j., Adipis suilli partes viij probe misce.)

This, mixed with powdered opium in the proportion of gr. iv. to the ounce, is an excellent application to hæmorrhoids.

An ointment for the same purpose may be made according to the following formula:

Tere optime simul, et adde

Fiat unguentum.

GAMBOGIA—GUMMI-RESINA, E. D.—Cambogia, L. —Gamboge.

(Stalagmitis Cambogioides.* Guttæferæ. Siam. h)

It is a hydragogue cathartic and anthelmintic. Given in dropsy, combined with sugar, cream of tartar or jalap. Dose gr. iij.—iv. every three hours until it operates.

^{*} By breaking the leaves and young shoots Gamboge is obtained.

As an anthelmintic it has been given to the extent of gr. xv. with an equal quantity of sub-carbonate of potash, in the morning, and repeated in two or three hours if necessary. It may also be given thus:

R Gambogiæ . . . gr. viij. Sub-muriat. Hydrarg. . gr. v. Mucilag. acac. arab. gum. . q. s.

Ut fiat bolus, mane sumendus.

Against tænia.

Officinal Preparation.

PILULÆ GAMBOGIÆ COMPOSITÆ, L. E. D.—Compound Gamboge Pills.

(Gambog. trit., Extract. aloes socot. trit., Pulv. aromat. sing. partem j., Sapon. dur. partes ij.)

Dose gr. x .- Dj. occasionally.

GENTIANÆ LUTEÆ RADIX, E. D. Gentianæ Radix, L.—Gentian Root.

(Gentiana Lutea. Gentianeæ. Mountains of Europe. 4)

Gentian root is very bitter and tonic; in large doses aperient. Contains a principle called *Gentianin*, which is very bitter, has no odour, and appears to be neither alkaline nor acid.

Dose of the powder gr. x.—Dij. In weakness of the stomach and general debility. Applied externally to foul ulcers.

Officinal Preparations.

Infusion of Gentian.

Infusion of Gentian.

(Rad. gent. lut. concis. \(\frac{7}{2}\ss.\), Cort. sicc. fruct. cit. aurant. contus., Sem. coriand. sat. contus. \(\bar{a}\bar{a}\), \(\frac{7}{2}\bar{j}\), Alcohol. dilut. \(\frac{7}{2}\bar{v}\), Aquæ \(\frac{1}{2}\bar{j}\bar{v}\), &c.)

Tonic and stomachic. Dose \$\frac{2}{3}j.-\frac{2}{3}ij. three times a-day. Combined with neutral salts, diuretic, as in the following mixture:

Spir. ætheris nit			3ss.
Tinct. cinnamomi.			3 j.
F. haustus, pro re nata su Or this:	imen	dus	
R Infus. gent. comp.			3vj
Acet. potass			Zjss.
Sp. junip. comp.			
Sp. armorac. comp. āā			Zss.
Sp. æther. nit.			Zijss.
Misce. Dosis, Coch. am			

TINCTURA GENTIANÆ COMPOSITA, L. E. D.—Compound Tincture of Gentian.

(Rad. gent. lut. concis. et contus. Zij., Cort. sicc. fruct. cit. aurant. contus. Zj., Cort. canell. alb. contus. Zss., Cocci cact. trit. Zss., Alcohol. dilut. fbijss., &c.)

Stomachic. Dose Zij.—Ziij.

EXTRACTUM GENTIANE LUTEE, L. E. D.—Extract of Gentian.

(Radicis concisæ et contusæ decoctum spissatum.)

Dose gr. x.—3ss. twice or thrice a-day. Much used as a vehicle for metallic preparations.

VINUM GENTIANÆ COMPOSITUM, E.—Compound Wine of Gentian.

(Rad. gent. lut. \(\frac{7}{2}\ss.\), Cort. cinch. lancif. \(\frac{7}{2}\signi\), Cort. sicc. fruct. cit. aurant. \(\frac{7}{2}\signi\), Cort. canell. alb. \(\frac{7}{2}\signi\), Alcohol. dilut. \(\frac{7}{2}\signi\), Vin. alb. Hispani \(\frac{1}{2}\signi\), &c.)

Dose Zij .- Zvj. twice or thrice a-day.

GEOFFRÆÆ INERMIS CORTEX, E. D.—Cabbage Tree Bark.

(Geoffræa Inermis. Leguminosæ. Jamaica. h)

Cabbage tree bark is a powerful anthelmintic, especially in cases of lumbrici. Best given in the form of decoction.

Fifteen grains of the powder combined with as much jalap, is said to be a good purgative.

Officinal Preparation.

DECOCTUM GEOFFRÆÆ INERMIS, E. D.—Decoction of Cabbage Tree Bark.

(Cort. geoffrææ inermis triti \(\frac{7}{2}\)j., Aquæ lbij.)

Dose to children Zij.; to adults Zss.—Zij. An over dose, or drinking cold water during its operation, produces vomiting, delirium, and fever; which are to be relieved by the use of warm water, castor oil, or a vegetable acid.

GEUM URBANUM-RADIX, D. - Common Avens Root.

(Geum Urbanum. Rosacea. Indigenous. 4)

Common avens root, when recent, is scented like cloves. It is astringent and febrifuge. Dose 3ss.—3j. four times a-day in powder; or, in the form of decoction, two table spoonsful every hour. It may also be made into a tincture thus:

Macera, &c.

Dose, a table spoonful three or four times a-day.

GLYCYRRHIZÆ GLABRÆ RADIX, E. D.—EX-TRACTUM, E. Glycyrrhizæ radix, L.—Liquorice Root and Extract.

(Glycyrrhiza Glabra. Leguminosæ. South of Europe. 4) Liquorice root is sweet, mucilaginous and demulcent. Contains a peculiar sweet principle called Glycion.

Officinal Preparations.

DECOCTUM GLYCYRRHIZÆ, D.—Decoction of Liquorice. (Rad. glycyrrhizæ contus. Zjss., Aquæ fbj.)

Demulcent. Used as a vehicle for other medicines.

EXTRACTUM GLYCYRRHIZE, L. D.—Extract of Liquorice.

(The evaporated Decoction.)

This is what is called Spanish liquorice or black sugar; it is demulcent, and is very useful to sheath the fauces in the tickling cough of catarrh.

TROCHISCI GLYCYRRHIZÆ GLABRÆ, E.—Liquorice troches. (Extract. Glycyrrh. glabr., Gum. acac. arab. āā, partem j., Sacch. purif. partes ij., Aquæ bullient. q. s., &c.)
Used to allay tickling cough.

TROCHISCI GLYCYRRHIZÆ CUM OPIO, E. — Liquorice troches with Opium. Vide OPIUM.

GRANATI CORTEX, L. Punica Granatum—Baccæ tunica exterior, Flores, Radicis cortex, D.—Pomegranate Bark, and Flowers, and Bark of the Roots.

(Punica Granatum. Myrti. South of Europe. b)

Astringent. Chiefly used externally in the form of decoction, as lotions or gargles. For the latter purpose it may be exhibited thus:

The bark of the root has been found very efficacious in expelling the tapeworm. It may be exhibited thus:

The worm is often voided twelve hours after the first dose is taken. The use of the remedy must be suspended, if the patient feels vertigo and an uneasy state of the bowels. Castor oil is commonly given after the four draughts, even when the worm has been voided.

GRATIOLÆ OFFICINALIS HERBA, E.—Hedge-Hyssop.

(Gratiola Officinalis. Personatæ. South of Europe. h)
Very acrid, drastic, vermifuge. Has been given against
lumbrici and ascarides, and in dropsy. Dose, in substance
gr. x.—3ss.; in infusion 3iij. Use requires caution.

GUAIACI OFFICINALIS LIGNUM—RESINA, E.

D. Guaiaci resina et lignum, L.—The Resin and Wood of Guaiacum.

(Guaiacum Officinale. Rutaceæ, Zygophylleæ. West Indies. h)

Stimulant and diaphoretic, in doses of gr. v.—Ŋj.; and purgative in doses of gr. xv.—Ŋij. The wood is exhibited in decoction. The resin may be exhibited in substance made into pills. Combined thus as a diaphoretic:

R. Guaiaci res. pulv. . . . gr. x.
Pulv. ipecacuan. et opii . . gr. v.
Conserv. rosæ . . . q. s
ut ft. bolus.

Or as in the following pills:

Dosis ij .- iij. nocte maneque.

All the secondary symptoms of syphilis have yielded to these pills, after a month or six weeks' continuance of them, when the more usual means had failed.

Officinal Preparations of the Wood.

AQUA CALCIS COMPOSITA, D. — Compound solution of Lime.

(Ramentorum lig. guaiaci lbss., Glycyrrh. rad. incis. et contus. \(\frac{7}{2}\)j., Cort. sassafras contus. \(\frac{7}{2}\)ss., Sem. coriand. \(\frac{7}{2}\)ij., Aquæ calcis lbvj. &c.)

Used for the same purposes as

DECOCTUM GUAIACI COMPOSITUM, E. D. — Compound decoction of Guaiac.

(Scobis lig. guaiaci off. Ziij., Fruct. vitis vinif. Zij., Rad. laur. sassafras concis., Rad. glycyrrh. glab. contus., ana Zj., Aquæ lbx.)

A stimulating diaphoretic. Dose Ziv. twice, thrice, or

four times daily. Used in scrofula, rheumatism, and cutaneous affections; and the sequela of syphilis.

Of the Resin.

TINCTURA GUAIACI OFFICINALIS, L. E. D .- Tincture of Guaiac.

(Resin. guaiaci off. tritæ Zvj., Alcohol. fort. Ibijss.)

A powerful stimulating sudorific. Dose 3ss. triturated with mucilage or some viscid substance, as water alone precipitates the guaiacum. In rheumatic and arthritic cases.

TINCTURA GUAIACI AMMONIATA, L. E. D.—Ammoniated Tincture of Guaiac.

(Res. guaiaci off. trit. Ziv., Alcohol. ammoniat. Ibjss.)

Given as a sudorific in chronic rheumatic cases, in the dose of a tea-spoonful or a table-spoonful, morning and evening, in milk or any other convenient vehicle.

MISTURA GUAIACI, L.—Guaiac Mixture.

(Guaiaci gummi-res. Zjss., Sacch. pur. Zij., Mucilag. acaciæ gum. Zij., Aq. cinnam. Zviij.)

Dose zss.—zij. night and morning, with barley water or gruel. In rheumatism, retrocedent gout and dropsy.

An ammoniated guaiac mixture may be made according to this formula:

F. S. A. mistura. Zss.—Zj. bis terve quotidie.

HÆMATOXYLI CAMPECHIANI LIGNUM, E.

D. Hæmatoxyli lignum, L.—Logwood.

(Hæmatoxylon Campechianum. Leguminosæ. Jamaica. h)

Logwood is astringent. Contains a peculiar matter called *Hæmatin*, on which the colour depends.

May be given in the form of this decoction:

Decoque ad lbj. et cola.

Dosis \(\frac{2}{3}\)j.—\(\frac{2}{3}\)ij. ter, quaterve die.
in obstinate diarrhœa and chronic dysentery.

Officinal Preparation.

EXTRACTUM HEMATOXYLI CAMPECHIANI, L. E. D.— Extract of Logwood.

(The evaporated decoction.)

Dose gr. x.—3j. in pills, or dissolved in cinnamon water.

HELENIUM, L. Inula helenium—radix, D.—Root of Elecampane.

(Inula Helenium. Corymbiferæ. South of Europe. 4)

Elecampane root is aromatic, and slightly bitter; it is gently stimulant, and has been found useful in asthma, chronic coughs, and in uterine and exanthematous diseases. Dose 3j. in the form of infusion, twice or thrice a-day.

The root contains a substance analogous to starch,

called Inuline.

HELLEBORI FŒTIDI FOLIA, L.—The Leaves of the fætid Hellebore.

(Helleborus Fætidus. Ranunculaceæ. Indigenous. h)

Vermifuge; but seldom used. May be given in the form of decoction; or the juice, a little vinegar being added to moisten the bruised leaves, may be made into a syrup, of which a tea-spoonful may be given at night, and one or two in the morning.

HELLEBORI NIGRI RADIX, L. E. D.-Black Hellebore root.

(Helleborus Niger. Ranunculaceæ. Mountains of the south of Europe. h)

The root of Black Hellebore is a drastic purgative in

the dose of gr. x.—Dj.; diuretic and emmenagogue in doses of gr. ij.—iij. three times a-day.

May be made into a decoction thus:

Dosis Zj.

Officinal Preparations.

TINCTURA HELLEBORI NIGRI, L. E. D.—Tincture of Black Hellebore.

(Rad. hellebori nigri contus. Zij., Cocci cacti triti gr. xv., Alcohol. dilut. Zxv.)

Alterative. Dose, a tea-spoonful twice a-day, in any convenient vehicle, in uterine obstructions, particularly in cases where chalybeates would be hurtful.

EXTRACTUM HELLEBORI NIGRI, E.—Extract of Black Hellebore.

(The evaporated decoction of the bruised root.)

Dose gr. x.—)j. as a cathartic; gr. iij.—x. as an emmenagogue.

HIRUDO MEDICINALIS, D .- The Leech.

(Hirudo medicinalis. CL. Annelides. OR. Helmintheca.)

This animal is generally of a black hue, striped with yellow above; yellow, and spotted with black below. Mouth three cornered; anal extremity, a circular sucker. Its propensity to suck blood is taken advantage of when it is desired to abstract blood locally; a large leech sucks about Zj. of blood, but much blood flows afterwards from the wounds, particularly if favoured by warm fomentations.

HORDEI DISTICHI SEMINA *_Semina Decorticata, E. D. Hordei Semina, L.—Pearl Barley.

^{*} Malt is the entire seed of barley, which has been made to germinate by watering it, and then the vitality destroyed by drying it in a kiln. It is demulcent and nutritious. A decoction of malt with hops (wort) forms, by fermentation, beer, ale, or porter.

(Hordeum Distiction. Graminea. ①)
Used to make the

Officinal Preparations.

DECOCTUM HORDEI DISTICHI, L. E. D .- Decoction of Barley.

(Seminum hordei distichi Zij., Aquæ bullientis lbv. &c.)

Decoction of Barley. L. D.—Compound Decoction of Barley.

(Decocti hordei 0ij., Caricæ fructus concisi Zij., Glycyrrhizæ radicis concisæ et contusæ Zss., Uvarum passarum demptis acinis Zij., Aquæ 0j. &c.)

These decoctions are given ad libitum as diluting drinks in fevers, and other acute diseases.

HUMULI LUPULI STROBILI, E. D. Humuli Strobili, L.—Hops.

(Humulus Lupulus. Urticeæ. Europe. 4)

Hops are the foliaceous cones of the female plant .

Hops are tonic, anodyne, and diuretic. Used in gout and rheumatism. Dose of the powder gr. iij.—Dj. twice or thrice a day; or Zjss. of the following infusion:

R Humuli lupuli strobilorum . 3ss. Aquæ bullientis . . 3xvj. Macera, &c.

A pillow stuffed with hops is used to procure sleep in mania.

The active matter of hops is called *Lupuline*. This consists of small yellow brilliant grains, of an aromatic odour, which lie on the outside of the scales of the corolla and calyx. It is composed of resin, volatile oil, and a bitter principle.

Dose gr. vj.—xij.

^{*} The plant which bears the male flowers is not cultivated, and is called the wild hop.

Formulæ	for the	exhibition	of Luj	puline:
---------	---------	------------	--------	---------

R Lupulinæ, . . . partem j. Sacch. purif. contrit. . partes ij.

Contunde lupulinam in mortario, et, saccharo gradatim addito, tere simul.

R Lupulinæ g. v.

Contunde ut fiat massa, in pilulas (gr. iij. pendentes) dividenda.

Digere per dies sex, in vase clauso, exprime liquorem et cola. Colaturæ adde alcoholis q. s. ut sint tincturæ Zviij.

Dosis Zj.—Zij.

Lupuline is useful "in diseases which are the consequence of exhausted excitability, or more directly of a deranged state of the stomach and bowels." Used to alleviate the pain in the last stage of cancer, in the form of ointment, thus: Take of lupuline bruised, one part; fresh lard, three parts. Heat them in a water bath, in a close vessel, for six hours; strain; allow it to cool; scrape off any sediment; liquefy it anew, and pour it off.

Officinal Preparations.

TINCTURA HUMULI LUPULI, L. E. D.—Tincture of Hops. (Strobilorum humuli lupuli Zv., Alcoholis dilut. lbijss. &c.)

Dose Zss.—Ziij. in articular rheumatism.

EXTRACTUM HUMULI, L. D.—Extract of Hops.

(The decoction evaporated.)

Dose gr. v.—3j. in pills.

HYDRARGYRUS, E. Hydrargyrum, L. D.—Mercury or Quicksilver.

Mercury, in its metallic state, exerts no action on the body when taken into the stomach. It has, however, been given in constriction of the bowels and intus-susception, from a mistaken idea that it would, by its gravity, make its way along the canal, and thus relieve the obstruction.

SULPHURETUM HYDRARGYRI NIGRUM, L.

E. D.—Black Sulphuret of Mercury.

(Prepared by triturating metallic mercury with sulphur, until the globules disappear.)

Used as an alterative in glandular affections, and in cutaneous diseases. Dose gr. v.—3ss.

HYDRARGYRI SULPHURETUM RUBRUM, L.

D ._ Red Sulphuret of Mercury.

(Prepared by mixing mercury with melted sulphur, and then subliming.)

Used in fumigation against cutaneous affections of a syphilitic nature, and venereal ulcers of the nose, mouth, fauces, and anus; and pudendum of women. The fumes are produced by throwing on a red-hot iron plate the sulphuret united with olibanum, thus:

SUBMURIAS HYDRARGYRI MITIS, SIVE CALO-MELAS, E. Hydrargyri submurias, L. Calomelas sublimatum, D.—Submuriate of Mercury or Calomel.

(A Protochloride of Mercury.)

Calomel is one of the best mercurials. Alterative in small doses, purgative in larger. Given in doses of gr.j.—ij. morning and evening, combined with opium to prevent purging, thus:

Fiant pilulæ xx. Sumat j. omni mane et nocte. it excites ptyalism.

In doses of gr. v. and more it is an excellent purgative when combined with jalap, rhubarb, or thus:

R. Submuriat. hydrarg. . . . gr. x.
Pil. gambogiæ comp.
Extract. colocynth. comp. āā . gr. xv.

Syrup. zingib. q. s. ut fiant pilulæ xij. e quibus sumantur binæ, hora decubitus vel summo mane, ad alvum excitandam.

Or thus:

R. Calomelanos gr. xij.
Sulphat. magnes. . . . gr. xvj.
Syrupi Rhamni . . . q. s.

ut fiant boli iv.

United with diuretics, it is diuretic, thus:

Fiat massa in pilulas xv. dividenda, quarum sumantur ij. singulis noctibus.

With sudorifics it is sudorific. See Oxidum antimonii

cum phosphate calcis.

Externally, combined with an equal quantity of finely pounded sugar-candy, it is blown into the eyes to remove specks of the cornea, and in chronic ophthalmia. Also snuffed up the nostrils, it is a powerful errhine.

Officinal Preparation.

PILULE SUBMURIATIS HYDRARGYRI COMPOSITE, L. E. D.—Compound Calomel or Plummer's Pills.

(Submuriat. hydrarg., Sulphuret. antimon. præcipit. utriusque partem j., Gummi-res. guaiaci trit., partes ij.)

These are commonly called Plummer's pills. Alterative and diaphoretic. Dose gr. v.—x. night and morning, a decoction of sarsaparilla being generally taken at the same time.

MURIAS HYDRARGYRI CORROSIVUS, E. D.

Hydrargyri oxymurias, L.— Corrosive Muriate of Mercury.

(A bichloride of mercury.)

This is a most violent poison, for which the best anti-

dote is white of egg diffused in cold water.

Corrosive sublimate is useful in quickly bringing the system under the influence of mercury. Dose gr. ½—gr. ss. made into a pill, thus:

R Muriat. hydrarg. corros. Muriat. ammon. āā . . . gr. v.

Aquæ distillatæ			Zss.
Glycyrrhiz. rad. pul	v.		Div.
Mellis opt			Zss.

Cogantur in massam, quam divide in pilulas xl. e quibus sumatur una ter die.

Externally it acts as an escharotic. Used in the form of lotion, thus:

R Muriat. hydrarg. corros. Tere cum		•	٠	gr. iv.	
A 1 1 1 . C				S. • 1	Зij.
Aquæ distillatæ Misce, ft. lotio.					ξxvj.

in many affections of the cuticle of an herpetic nature; in psora used as a wash night and morning. May be considered as a specific in psorophthalmia. As a gargle in venereal sore throats, and for breaking the abscess in cynanche tonsillaris.

Made into a collyrium thus:		
B. Muriat. hydrarg. corros		gr. 1/2.
Aquæ distillatæ		May 8
Solve, et adde		1.00
Mucilag. astrag. tragacanth.		Ziij.
Vini opii		3.j.
In specks of the cornea remaining after	ule	cers.

The following formulæ show the manner in which it was employed by Sir W. Adams in chronic ophthalmia:

improyed by Bit V	v . Ata	ms m	cmro	me	орисная
D	rops, A	Vo. 1.			
R Vini opii .					₹j.
Muriat. hydra	arg. con	ros.			gr. i.
Acid. muriat. Misce.				•	gtt.j.
I	Props,	No. 2.			
R. Vini opii .					Зj.
Muriat. hydra	irg. con	ros.			gr. ij.
Acid. muriat. Misce.				•	gtt. ij.

Strong Drops, No. 3.

R Muriat. hydrarg. corros. gr. iij.
Acid. muriat. gtt. iij.
Vini opii . žj.
Misce.

Strong Drops, No. 4.

Officinal Preparations.

LIQUOR HYDRARGYRI OXYMURIATIS, L.—Solution of Corrosive Sublimate.

(Hydrarg. oxymuriatis gr. viij., Aq. distillat. \(\frac{7}{2}\times \text{v.}, \) Spir. rectif. \(\frac{7}{2} \text{j.} \)

This contains in each fluid ounce half a grain of corrosive muriate.

Dose 3j.—3ss. in mucilage, or syrup and water.

HYDRARGYRI CYANURETUM, D.—Cyanuret of Mercury.

This possesses the same virtues as hydrocyanic acid, and is better adapted for external application, for which purpose it may be made into an ointment, thus:

F. S. A. unguentum.

OXIDUM HYDRARGYRI CINEREUM, L. E. Hydrargyri oxydum nigrum, D.—Grey Oxide of Mercury.

Alterative. Dose gr. j.—v.; but, from its liability to form peroxide, not safe for internal use.

Prepared in the following manner—

it is known under the name of Black Wash, which is one of the best applications to syphilitic and unhealthy sores, and for removing fungous excrescences situated about the roots of the nails.

Unguentum oxidi hydrargyri cinerei, E.—Ointment of the Grey Oxide of Mercury.

(Oxid. hydrarg. cin. partem j., Adipis suilli partes iij.)
Used for the same purposes as the mercurial ointment.

IN THE FOLLOWING PREPARATIONS THE MERCURY EX-ISTS IN THE STATE OF PROTOXIDE.

UNGUENTUM HYDRARGYRI, L. E. D.—Mercurial Ointment.

(Hydrarg. purif., Adipis ovilli, utriusque, partem j., Adipis suilli partes iij., Tere, &c. Fit quoque cum hydrargyro duplice et triplice.)

This contains gr. xij. of mercury in each drachm. Made with a double quantity of mercury, each drachm contains gr. xxjv. Antisyphilitic, alterative, and discutient. Dose 3j. of the strong ointment is rubbed on the inside of the thigh or fore-arm every night until the system is affected.

LINIMENTUM HYDRARGYRI, L .- Mercurial Liniment.

(Ung. hydrarg. fort., Adipis præp., sing. \(\frac{7}{2}\)jv., Camphoræ \(\frac{7}{2}\)j., Spir. rect. gtt. xv., Liquoris ammon. \(\frac{7}{2}\)iv.)

Stimulant and discutient. Dose 3j. rubbed night and morning on the parts affected with chronic venereal pains, indolent swellings, &c.

EMPLASTRUM AMMONIACI CUM HYDRARGYRO, L. D. _____ Ammoniac Plaster with Mercury.

(Ammoniaci pur. fbj., Hydrarg. pur. Ziij., Ol. sulph. Zj.) Resolvent and discutient.

EMPLASTRUM HYDRARGYRI, L. E .- Mercurial Plaster.

(Ol. ol. Europ., Res. alb. sing. partem j., Hydrarg. purif. partes iij., Emplast. oxid. plumb. semivit. partes vj.)

Resolvent and discutient. Contains about gr. xvj. of mercury in each drachm.

PILULE HYDRARGYRI, L. E. D .- Mercurial Pills.

(Hydrarg. purif., Conserv. rosæ gallicæ, utriusque, Zj., Amyli Zij., Mucilag. acac. Arab. q. s.)

One of the best preparations of mercury. There are about gr. xv. in each drachm of the mass, or one grain in each pill of four grains. Dose gr. jv.—vj.

A mild purgative in doses of gr. x .- Dj. May be com-

bined thus:

R. Pil. hydrarg.

Aloes socot. āā · · · · · · · · · · · · · j.

Fiat massa in pil. vj. dividenda, e quibus sumantur binæ h. s.

HYDRARGYRUM CUM CRETA, L. D.—Mercury with Chalk.

(Hydrarg. pur. Ziij., Cret. præp. Zv. Tere. &c.)

Given as an alterative to children, who have loose bowels. Eight grains contain three grains of mercury. Dose gr. iij.—jv.

HYDRARGYRUM CUM MAGNESIA, D.—Mercury with Magnesia.

(Hydrarg. pur., Mannæ, sing. partes ij., Carbonat. magnes. partem j.)

Used for the same purposes and in the same manner as the preceding, only preferred when the bowels are constipated. Three grains contain one grain of mercury.

IN THE FOLLOWING PREPARATIONS THE MERCURY EX-ISTS IN THE STATE OF PEROXIDE.

HYDRARGYRI OXIDUM RUBRUM, L. D.—Red Oxide of Mercury.

(Prepared by the action of heat and air.)

Not used internally. Applied externally for the same purposes and in the same manner as the following:

OXIDUM HYDRARGYRI RUBRUM PER ACI-DUM NITRICUM, E. Hydrargyri oxydum niH Y D 157

tricum, D. Hydrargyri nitrico oxydum, L.—Red Oxide of Mercury by Nitric Acid.

(Prepared by the action of nitric acid.)

Ut ft. massa, in pilulas lx. dividenda. Dosis j.—ij. nocte maneque statim post cibum;

in order to bring the system under the mercurial influence in obstinate cases of syphilis, where the mouth could not be affected by any other preparation.

The red oxide is chiefly used externally, in the form of a very fine powder as an escharotic. It is a common application to chancres.

Unguentum oxidi hydrargyri rubri, E. Ung. hydrargyri nitrico-oxydi, L. D.—Ointment of the Red Oxide of Mercury.

(Oxid. hydrarg. rub. per acid. nitric. in pulv. tenuiss. trit. partem j., Adipis suilli partes viij.)

An excellent stimulating ointment. Used with great advantage in indolent and ill-conditioned sores; and as an eye ointment, invaluable in inflammations of the conjunctiva, with thickening and swelling of the palpebræ, and in indolent ulcers and specks of the cornea.

Sir W. Adams used the red oxide ointment in chronic ophthalmia prepared in the following manner:

Red Ointment.

R Hyd. nit. oxid.		3jv.
Adipis opt Misce.		zxij.

Blue Ointment, No. 1.

B. Hyd. nit. oxyd.			Zij.
Ferri prussiat.		*	Zjss.
Adipis opt	*		zxij.

Blue Ointment, No. 2.

Blue Ointment, No. 3.

Blue Ointment, No. 4.

Dupuytren uses an ointment composed thus:

IN THE FOLLOWING PREPARATIONS THE MERCURY EXISTS IN THE STATE OF PROTOXIDE COMBINED WITH ACIDS.

Unguentum nitratis hydrargyri fortius, vulgo Unguentum citrinum, L. E. D.—Stronger Ointment of the Nitrate of Mercury.

(Hydrarg. purif. partem j., Acid. nitros. partes ij., Ol. ol. Europ. partes ix., Adipis suilli, partes iij.)

Unguentum nitratis hydrargyri mitius. E.—Mild Ointment of the Nitrate of Mercury.

(Fit eodem modo cum oleo, et adipe triplice.)

Very efficacious in herpes, porrigo, and similar obstinate cutaneous affections. The weaker ointment is almost specific in ophthalmia tarsi. In obstinate cases, a collyrium composed of a weak solution of corrosive sublimate should be used along with it.

ACETAS HYDRARGYRI, E. D.—Acetate of Mercury.

The active ingredient of the pills called Keyser's, which are prepared thus:

Subige in massam et divide in pilulas grana vj. pendentes. Dosis ij.—xxiv. nocte maneque.

In solution thus:

it has been recommended in cutaneous eruptions and freckles.

IN THE FOLLOWING PREPARATIONS THE MERCURY EXISTS IN THE STATE OF PEROXIDE COMBINED WITH ACIDS.

HYDRARGYRI SUBMURIAS AMMONIATUM,

D. Hydrargyrum præcipitatum album, L.—Ammoniated Submuriate of Mercury, or White Precipitate.

Only used in the following

Officinal Preparation.

UNGUENTUM HYDRARGYRI SUBMURIATIS AMMONIATI, D.—White Precipitate Ointment.

(Hydrarg. submuriat. ammoniat. Zj., Adipis suilli præp. Zjss.)

Frequently used in the cure of obstinate cutaneous af-

SUBSULPHAS HYDRARGYRI FLAVUS, E. Hydrargyri oxydum sulphuricum, D.—Yellow Subsulphate of Mercury.

Emetic in a dose of gr. ij.—viij. Alterative and diaphoretic in a dose of gr. j.—ij. One grain mixed with a little powder of liquorice root or starch, forms a very powerful errhine.

Has been used externally in the form of ointment, thus:

in diseases of the skin.

HYOSCIAMI NIGRI HERBA—SEMINA, E. Hyosciamus niger —Folia, D.—Henbane Leaves and Seed.

(Hyosciamus Niger. Solaneæ. Europe. 3)

Hyosciamus is much employed as an anodyne in those cases in which there are objections to opium, from the constipating effect of which it is free. Dose of the powder gr. v.—x.

Used externally in cancerous and scrofulous ulcers, and painful swellings, in the form of cataplasm or of a

powder sprinkled on the sores.

Narcotic principle Hyosciama.

Officinal Preparations.

Succus spissatus (extractum, L.) Hyosciami nigri, E. D.—Inspissated Juice of Henbane.

(The expressed juice inspissated without defecation.)

This is the form in which hyosciamus is generally exhibited. Dose gr. v. gradually increased to \ni j. twice a-day. A solution of this dropped into the eye produces dilatation of the pupil.

May be given combined thus:

Camphoram primum cum alcohole in pulverem tere, dein simul contunde, et divide massam in pilulas xij. e quibus sumantur tres omni nocte.

The extract of henbane combined with nitric acid, thus:

R. Succ. spiss. hyosciami nig. . 3ss. Acid. nitric. dilut. . . 3v.

M. ft. mistura.

Dosis 5j. secundis horis.

is very efficacious during the paroxysm of asthma.

TINCTURA HYOSCIAMI NIGRI, L. E. D .- Tincture of Henbane.

(Fol. hyosciam. nigri sicc. 3j., Alcohol. dilut. 3viij.)

Used in certain cases instead of laudanum. Dose Dj.

HYSSOPI OFFICINALIS HERBA, E.—Hyssop.

(Hyssopus Officinalis. Labiata. Germany. h)

The herb and leaves are stimulant and expectorant. Chiefly used in the form of infusion.

IODINIUM, D .- Iodine.

Dr Coindet of Geneva introduced iodine and its preparations into the practice of medicine. He first employed it in goitre with variable success. Since this it has been used in scrofula and as an emmenagogue.

Iodine may be given in substance in the dose of gr. 1.

-gr. iv. made into pills with crumb of bread.

Or thus:

Ut fiat massa in pil. ij. dividenda.

But it is more commonly exhibited in the form of tincture, hydriodate of potass and ointment.

Officinal Preparations.

TINCTURA IODINII, D .- Tincture of Iodine.

(Iodinii Dij., Spirit. rectif. Zj.)

This should be kept in a closely stopped phial. Twenty drops contain one grain of iodine. Dose gtt. x. gradually

increased to gtt. xv.-xx. in syrup and water, three times a-day.

UNGUENTUM IODINII, D.—Iodine Ointment.

(Iodinii Dj., Adipis suilli præparati Zj.)

Used to discuss tumours, as goitre and strumous glands.

POTASSÆ HYDRIODAS, D.—Hydriodate of Potass.

Given in the form of solution thus:

Solve.

Dose gtt. x.—xx. three times a-day in syrup. In scro-

fula and bronchocele. Will not keep.

If to the preceding solution gr. x. of iodine be added, a solution of the ioduretted hydriodate of potass is obtained, which is used for the same purposes.

Pills of the hydriodate of potass may be made accord-

ing to the following formula:

Micæ panis . . . q. s.

F. S. A. pilulæ ccc. quarum sumat ij. mane nocteque.

UNGUENTUM POTASSÆ HYDRIODATIS, D .- Ointment of the Hydriodate of Potass.

(Potassæ hydriodatis Dj., Adipis suilli præparati Zj.)

This does not colour the skin like the iodine ointment.

IPECACUANHÆ RADIX, L. E. D .- Ipecacuan Root.

(Cephaëlis Ipecacuanha. Rubiaceæ. Brazil. 4)

Ipecacuan root is emetic in a dose of gr. x.—3ss. It may be exhibited thus:

drante horæ donec supervenerit vomitus.

IPE 163

Expectorant in a dose of gr. j.—ij.; for this purpose it is advantageously combined with squill or myrrh. United with opium it is diaphoretic, as in the following formula:

R. Pulv. ipecacuan. rad. . . . gr. ij.
Pulv. opii gr. j.
Potassæ nitrat. . . . gr. xvj.

Fiat pulvis, hora somni sumendus.

When combined with cathartics, ipecacuan aids and accelerates their operation.

Ipecacuanha has been given in combination, against

hooping-cough, thus:

Macera per horas duas, et liquori colato, adde

Oxymel. scillit.

Syrup. Toluif. balsam. āā . \ \frac{2}{3}j.

Misce. F. mistura, cujus sumat cochlear. min. tuss. urg.

The active principle of ipecacuan is *Emetina*, which was discovered by Pelletier and Magendie. To obtain it pure: Digest powdered ipecacuanha first in æther and then in alcohol, distil off the spirit, and dissolve the residue in water; add calcined magnesia in sufficient quantity to combine with all the gallic acid which it contains; pour off the liquor, wash the remainder with a little very cold water to separate the colouring matter; dry it and digest it in alcohol, which dissolves the emetina. Filter, and then evaporate the tincture; dissolve the extract in diluted acetic acid; clarify the solution by purified

animal charcoal. Lastly, to the solution, when filtered,

add ammonia, to precipitate the emetina.

Emetina occurs in the form of a white powder, unalterable in the air, sparingly soluble in water, but very soluble in alcohol and æther. It has a slightly bitter taste.

Emetina may be given in the dose of gr. 1. gr.iij.

In the form of syrup, thus:

Misce. Dosis 3 j.—3iij. in catarrh and hooping-cough.

Emetina has been discovered by M. Boullay in the root, flowers, and leaves of the Viöla odorata.

Officinal Preparations.

VINUM IPECACUANHÆ, L. E. D .- Ipecacuan wine.

(Rad. ipecacuanhæ contus. partem j., Vini alb. Hispani partes xv.)

Dose, as an expectorant, gtt. x.—gtt. xl.; as an emetic, \(\frac{7}{2}ss.\)—\(\frac{7}{2}j. \) It may be combined with the tartrate of antimony thus:

F. haustus emeticus, pro re nata sumendus.

May be combined as in the following effervescing expectorant draught:

Sumatur cum succi limon. Ziij. In impetu effervescentiæ.

Pulvis ipecacuanhæ et ofii, E. Pulvis ipecacuanhæ compositus, L. D.—Powder of ipecacuan and opium, or Dover's Powder.

(Pulv. rad. ipecacuanhæ, Opii, utriusque, partem j., Sulphatis potassæ, partes viij.) This is what is commonly called Dover's Powder. Sudorific. Dose gr. x.—Jj. diffused in gruel, or in the form of bolus. In chronic rheumatism, &c. May be combined with antimonial powder thus:

R Pulv. ipecacuanhæ et opii . . gr. x. Ox. antim. cum phos. calcis . . gr. ij.

Ft. pulvis, hora decubitus sumendus, superbibendo haustulum tepidum.

Or Guaiac thus:

R Guaiaci res. gr. x.
Pulv. ipecacuanhæ et opii . . gr. v.
Conserv. rosæ q. s.

Fiat bolus h. s. sumendus.

The composition of Dover's Powder may be varied thus:

R Sulphatis potassæ

Nitratis potassæ āā . partes iv.

Pulv. ipecacuan. rad.

Opii contriti

Pulv. Glycyrrhizæ rad. āā partem j. Fiat pulvis. Dosis gr. x.—Ŋj. hora somni.

IRIDIS FLORENTINÆ RADIX, E.—Florentine orris

(Iris Florentina. Irideæ. South of Europe. 4)

The fresh root is a drastic hydragogue; when dried, sialagogue and errhine. Used to give the odour of violets to oils; and, on the Continent, cut into peas from one to two lines in diameter, and pierced with a hole, to keep open issues.

JALAPÆ RADIX. Vide Convolvuli Jalapæ Ra-DIX.

JUNIPERI COMMUNIS BACCÆ, E. ET CACU-MINA, D. Juniperi baccæ et cacumina, L.—Juniper berries and tops.

(Juniperus Communis. Coniferæ. North of Europe. 1)

Juniper tops and berries are diuretic and diaphoretic.

Used in dropsies as an adjuvant to digitalis and squill.

Dose Dj.—3ss. of	the	berries	triturated	with	sugar:	or
of this infusion:					0	1000

Macera in vase leviter clauso per horas ij., et cola, dein adde,

Et insuper pro re nata

Dosis Zij. ad iv. ter, quaterve quotidie.

Officinal Preparations.

OLEUM VOLATILE JUNIPERI COMMUNIS, L. E. D.—Volatile oil of juniper.

(By distillation from the berries.)

Dose gtt. ij .- x. rubbed up with sugar or mucilage.

Spirit of juniper. Compositus, L. E. D.—Compound Spirit of juniper.

(Bacc. juniperi comm. contus. lbj., Sem. aneth. fæniculi, Sem. car. carui, sing. contus. \(\frac{1}{2} \) jss., Alcohol. dilut. lbix., &c.)

Dose \(\frac{1}{2} \) j.—\(\frac{2}{2} \) ss.

JUNIPERI LYCIÆ GUMMI-RESINA, E. Boswellia serrata—gummi-resina, D. Olibanum, L.—Frank-incense.

Juniperus lycia, said by Linnæus to yield olibanum, which, however, is the product of

(Boswellia Serrata. Terebinthaceæ. Nagpur.)

Olibanum is chiefly used for fumigations and plasters. It is, however, stimulant and diaphoretic, and may be given combined as in the following mixture:

KIN 167

The olibanum, powdered and mixed with the copaiba, is to be incorporated with the honey and mucilage, and the cinnamon water afterwards added.

In the dose of two or three table-spoonfuls twice or thrice a-day, this mixture will be found of considerable service in gleet, and in the latter stages of gonorrhoea.

JUNIPERI SABINÆ FOLIA, E. D. Sabinæ folia, L. —Savine leaves.

(Juniperus Sabina. Coniferæ. Siberia. 4)

Savine leaves are stimulant, diaphoretic, vermifuge, and emmenagogue; externally escharotic. A conserve of the fresh leaves may be exhibited in doses of 3ss.—3j.

Officinal Preparations.

OLEUM VOLATILE JUNIPERI SABINÆ, E. D .- Volatile oil of Savine.

(By distillation from the dried leaves.)

Emmenagogue. A very active remedy, and said to produce abortion. Dose gtt. ij.—vj.—x.

CERATUM JUNIPERI SABINÆ, L. E. D .- Savine cerate.

(Fol. recent. junip. sabinæ partes ij., Ceræ flavæ partem j., Adipis suilli partes iv. &c.)

Much used to keep up an issue from blistered surfaces.

KINO, L. E. D .- Kino.

(Pterocarpus Erinacea. Leguminosæ. Africa. b)

Kino is astringent, and as such is used in chronic diarrhæa and dysentery, internal hæmorrhages, fluor albus, &c. Dose gr. x.—3ss. in substance, or in the form of this solution.

B. Pulv. kino			3.j.
Mucilag. acac. arab.			3j.
Aq. cinnamomi Misce. Dosis, Coch. ma	.: ::	ou bis	Ξv.

Kino is also used externally as a styptic.

Officinal Preparations.

Pulvis kino compositus, L. D .- Compound powder of kino.

(Kino Zxv., Cinnamomi cort. Ziv., Opii duri Zj.)

Gr. xx. contain gr. j. of opium. Dose gr. v .- Dj. in a cupful of aqua menthæ viridis twice a-day.

TINCTURA KINO, L. E. D .- Tincture of kino.

(Kino triti Zij., Alcoholis dilut. Ibjss.)

Dose 3ss.—3 j. triturated with mucilage to mix it with watery liquors.

KRAMERIÆ RADIX, L. ET EXTRACTUM, D. -Rhatany root.

(Krameria triandra. Polygaleæ. Java. 1)

Rhatany root, and the extract of the root, are astringent and tonic. Dose Dj. - 3 j. in powder, or in infusion thus:

> R Krameriæ rad. contus. Aq. bullientis . .

Macera, per horas sex, in vase leviter clauso, et liquorem cola.

This infusion may be prescribed as follows:

R. Infus. krameriæ rad. . .

Tinct. catechu

Tinct. cinnamomi āā . . . 3vj.

Misce. Fiat mistura, cujus capiat coch. ij.—iij. ampl. 4tis. horis.

in chronic dysentery, diarrhœa, and indigestion.

Astringent gargle:

in relaxation of the uvula and fauces.

The extract of rhatany may be given as in the following mixture:

F. S. A. mistura, in die sumenda. Coch. ampl. j. subinde.

LACTUCÆ SATIVÆ HERBA. LACTUCARIUM, E. Lactuca, L. Lactuca sativa—herba, D.—Garden lettuce and Lactucarium.

(Lactuca Sativa. Cichoraceæ. Europe. 3)

The flowering stems of garden lettuce yield by incision a juice which, when inspissated, forms what is called *Lactucarium*. From the experiments which have been made with this medicine, it appears that it is anodyne like opium, without possessing any of its injurious effects. It is used in doses of gr. iij.—gr. v. in circumstances in which the use of opium is indicated.

Officinal Preparation.

Succus spissatus (extractum, L.) lactucæ sativæ, E.—Inspissated juice of garden lettuce. (Ex herba.)

LACTUCE VIROSE HERBA, E. Lactuca virosa—folia, D.—The herb of strong-scented lettuce.

(Lactuca Virosa. Cichoraceæ. Indigenous. 3)

When in flower, the inspissated juice of the leaves

SUCCUS SPISSATUS LACTUCÆ VIROSÆ, E.

is gently laxative, powerfully diuretic, and somewhat diaphoretic. Dose gr. iij.—gr. xv. daily in obstinate dropsies.

LAURI CASSIÆ CORTEX, E. D.—FLORES. Flores nondum expliciti, E.—The bark and unexpanded flower-buds of the Laurus cassia.

(Laurus Cassia. Laurineæ. Ceylon. 4) Cassia has the same properties as cinnamon.

Officinal Preparation.

AQUA LAURI CASSIÆ, E.—Cassia water.
(By distillation from the bruised bark.)

LAURI CINNAMOMI CORTEX, E.D. ET OLEUM VOLATILE. D. Cinnamomi cortex, L.—Cinnamom bark.

(Laurus Cinnamomum. Laurineæ. Ceylon. 4)

Cinnamon bark and its essential oil (cinnamomi oleum) are aromatic, stimulant, tonic, and carminative. Dose of the powdered bark gr. x.—Dj; of the oil, gtt. j.—iij. rubbed up with sugar. Used in combination with other remedies chiefly as a corrective. A drop of the oil inserted into a decayed tooth alleviates the pain of toothach.

Officinal Preparations.

AQUA LAURI CINNAMOMI, L. E. D.—Cinnamon water.

(By distillation from the bruised bark.)

SPIRITUS LAURI CINNAMOMI, L. E. D.—Spirit of Cinnamon.

(Cort. cinnam. contus. fbi., Alcohol. dilut., fbix. &c.) Stimulant. Dose 3j.—3iv.

TINCTURA LAURI CINNAMOMI, L. E. D.—Tincture of Cinnamon.

(Cort. lauri cinnamom. contus. Ziij., Alcohol. dilut. fbijss., &c.)

Astringent and stomachic. Dose 3 j .- 3ij.

TINCTURA CINNAMOMI COMPOSITA, L. E.—Compound tincture of cinnamon.

(Cort. laur. cinnam. contus., Sem. amom. repent. contus. āā 3 j., Fruct. piperis longi trit. 3 ij., Alcohol. dilut. lbijss., &c.)

Dose, a tea-spoonful or two may be given, combined with wine, in languor, weakness of the stomach, flatulence, &c.

Pulvis (cinnamomi comp. L.) aromaticus, E. D.—Aromatic powder.

(Cort. lauri. cinnam., Sem. amom. repent., Rad. amom zingib. sing., partes æquales, &c.)

心口部

A hot carminative. Dose gr. x .-- 9j. and upwards.

ELECTUARIUM (CONFECTIO, D.) AROMATICUM, E.—
Aromatic electuary.

(Pulv. aromat. partem j., Syrupi cit. aurant. partes ij. &c.)
A cordial astringent. Dose gr. x.—3j. in the form of bolus or mixture, as a vehicle for other substances.

LAURI NOBILIS BACCÆ—OLEUM EXPRES-SUM. Ex baccis, E. Et folia, L. D.—Bayberries, leaves, and oil.

(Laurus Nobilis. Laurineæ. Italy. 为)
Only used externally as a stimulant.

LAURI SASSAFRAS LIGNUM—RADIX, E. D. Sassafras lignum et radix, L.—Sassafras wood and root.

(Laurus Sassafras. Laurineæ. Virginia. 4)

Stimulant, sudorific, and diuretic. Used in chronic rheumatism and cutaneous diseases. Best given in infusion, as the oil is dissipated by decoction. \(\frac{7}{2}ss.-\frac{7}{2}ij.\) of sassafras may be infused in fbij. of water.

Officinal Preparation.

OLEUM VOLATILE LAURI SASSAFRAS, E.—Volatile oil of sassafras.

(By distillation from the bruised root.)

Dose gtt. ij.—x. rubbed up with sugar.

LAVANDULÆ SPICÆ FLORES, E. D. Lavandulæ flores, L.—Lavender flowers.

(Lavandula Spica. Labiatæ. South of Europe. 1)

Lavender flowers are very odoriferous. Stimulant and errhine.

Officinal Preparations.

OLEUM VOLATILE LAVANDULÆ SPICÆ, L. E. D.-Volatile oil of lavender.

(By distillation from the flowers.)

Used as a stimulant in hysteria and nervous headach. Dose gtt. j.—v. on a lump of sugar.

SPIRITUS LAVANDULÆ SPICÆ, L. E. D .- Spirit of lavender.

(Flor. lavand. spic. recent. fbij., Alcohol. fort. fbviij. &c.) Used as a perfume, and in the following preparation.

SPIRITUS LAVANDULÆ COMPOSITUS, L. E. D.—Compound spirit of lavender.

(Spir. lavand. spic. fbiij., Spir. rorismarini off. fbj., Cort. laur. cinnam. contus. Zj., Flor. Eugen. caryophill. contus. Zij., Nucleor. myrist. moschat. contus. Zss., Lig. pterocarp. santalin. rasi Ziij. &c.)

Stimulant. Dose 3ss. - 3ij.

LEONTODI TARAXACI HERBA—RADIX, E. D. Taraxaci radix, L.—The herb and root of Dandelion.

(Leontodon Taraxacum. Cichoraceæ. Indigenous. 4)
Diuretic, tonic, and deobstruant. Given in liver and
dyspeptic complaints.

Officinal Preparations.

DECOCTUM TARAXACI, D .- Decoction of Dandelion.

(Leontodontis taraxaci recent. herbæ et radicis Ziv., Aquæ lbij. &c.

Dose Zij.—Ziij. three or four times a-day, combined with alkaline carbonates, extract of taraxacum, &c., and in conjunction with small doses of calomel, in slow chronic inflammations of the liver.

EXTRACTUM TARAXACI, L. D .- Extract of Dandelion.

(A strained decoction inspissated.)

Dose 9j.-3iij. united with sulphate of magnesia, su-

pertartrate, or acetate of potass.

Dandelion is an important ingredient in the visceral clysters, so much lauded by Kämpf, of which this is the formula:

This serves for two clysters, to be given daily, one before and the other after the dejection.

LICHEN ISLANDICUS, E. Lichen, L. Cetraria Islandica—Planta, D.—Iceland Liverwort or Moss.

(Lichen Islandicus, Lichenes. Iceland. 4)

This is slightly bitter and mucilaginous, tonic and nutritive. Its bitter taste is removed by steeping it in a weak solution of the carbonate of potass. Used in phthisis, coughs, and emaciation from previous disease.

Officinal Preparation.

DECOCTUM LICHENIS ISLANDICI, L. E. D.—Decoction of Iceland Moss.

(Lichenis Islandici 3j., Aquæ fbij.)

Dose 3ss.—Zij. three or four times a-day for some time.

LIMONES. Vide CITRUS MEDICA.

I.INUM CATHARTICUM, L.—Purging Flax.

(Linum Catharticum. Linea. Indigenous. O)

Purgative. Dose 3ss.—3j. in substance; or a handful of the fresh herb infused in water or whey.

LINI USITATISSIMI SEMINA, L. E. D. ET OLEUM EX SEMINIBUS EXPRESSUM, D. —Linseed and Linseed Oil.

(Linum Usitatissimum. Linea. Egypt. (O)

Demulcent and emollient.

Combined as in the following laxative glyster:

R Sem. lini. usitatiss. Fol. sennæ āā .

. 3ss.

Coque simul paulisper, et cola cum expressione. The meal makes an excellent poultice.

Officinal Preparations.

OLEUM LINI USITATISSIMI, L. E. D.-Linseed Oil.

(Expressed from the bruised Seeds.)

Demulcent, emollient, and laxative. Dose \(\frac{7}{2} \)ss.\(\frac{7}{2} \)j. Chiefly used in the form of glyster alone, in the dose of \(\frac{7}{2} \)ij.\(\frac{7}{2} \)vj.

Linseed oil is used externally in burns, made into a liniment with an equal part of lime water. Vide Lini-

MENTUM AQUÆ CALCIS.

INFUSUM LINI USITATISSIMI, L. E. D.—Infusion of Linseed.

(Sem. lini usitatiss. Zj., Rad. glycyrrh. glab. contus. Zij., Aq. bullientis lbij.)

Demulcent. Used in gonorrhœa, strangury, and pectoral complaints. Dose a tea-cupful, at pleasure.

PULVIS PRO CATAPLASMATE, D.—Powder for a Cataplasm.

(Sem. lini, quæ restant post oleum expressum, partem j., Farinæ avenaceæ partes ij.)

A cataplasm is prepared by mixing this powder with boiling water, in the requisite quantities, and smearing the surface of the mass, while hot, with olive oil.

LITMUS. Vide ROCELLA TINCTORIA.

LYTHRUM SALICARIA. HERBA, D .-

(Lythrum Salicaria. Salicaria. Indigenous. 4)

Mucilaginous and astringent. Used in diarrhœa in the form of decoction, thus:

Decoque ad dimidium. Dosis, Ziij. bis terve die.

MAGNESIA.—Magnesia.

MAGNESIA (L. D.) USTA, E.—Calcined Magnesia.

Antacid, and laxative when it meets with acid in the stomach; does not occasion flatulence, like the carbonate. Dose gr. x.—3j. combined with rhubarb occasionally in water, or thus:

F. haustus, pro re nata sumendus.

As a carminative, it may be given thus:

R. Magnesiæ ustæ
Pulv. rhei
Sacch. purif.
Ol. anisi
Tinct. castorei
Tinct. opii
Aq. fontanæ
Misce.

gr. xxxv.
gr. viij.
gtr. v.
gtt. v.
gtt. v.
gtt. iv.

Dose 3j.—3iij. for infants.

Given in very small doses, thus:

Tere simul et adde

Emuls. amygdal. gtt. xx.

Fiat haustus.

magnesia is very efficacious in affections complicated with irritation of the mucous surfaces of the intestinal canal.

CARBONAS MAGNESIÆ, L. E. D.—Carbonate of Magnesia.

Antacid, and laxative if there be acid in the stomach, or if acid liquors be taken after it. Apt to produce flatulence. Dose 3ss.—3ij. in water, or combined as the preceding. Used also as a lithontriptic against the uric acid calculus.

SULPHAS MAGNESIÆ, L. E. D.—Sulphate of Magnesia.

Epsom salt is a mild and gentle purgative. Dose 3j.— Zij. dissolved in lbj. of Infusum rosæ, or any other aqueous vehicle. The addition of a little common salt increases its cathartic powers; magnesia renders the taste less nauseous; and tartrate of antimony quickens its operation. Said to have a peculiar effect in allaying the pain of colic.

Combined as in the following purgative mixtures:

	I.				
R Sulph. magnesi Sulph. sodæ āā Aq. menth. vir Liq. tart. antin Fiat mistura, de quotidie.	id.				3J-
	II				
R. Sulph. magnesi	æ,				
Sulph. sodæ āā					Zss.
Sulph. sodæ āā Sulph. ferri					gr. v.
Emuls, campho	oræ,				zvijss.
Fiat mistura cujus	suma	at coc	h. ma	j. ij	bis indies.
	III				
R. Sulph, magnesia					Zvi.
R. Sulph. magnesia Infusi sennæ					Ziss.
Tinct. jalapæ					3i.
Tinct. opii					gtt. x.
Tinct. castorei					3.j.
Fiat haustus.					

Officinal Preparations.

ENEMA CATHARTICUM, D .- Cathartic Enema.

(Mannæ Zj., Decocti Chamæmeli comp. Zx., Ol. olivar. Zj., Sulph. Magnes. 3ss.)

ENEMA FETIDUM, D .- Fætid Enema.

The preceding, with the addition of Tincturæ assæfætidæ Zij.

MALVÆ SYLVESTRIS FLORES_HERBA, L. E. _Common Mallow.

(Malva Sylvestris. Malvaceæ. Indigenous. 2/)

Properties similar to those of Marsh-mallow, but inferior.

Officinal Preparation.

DECOCTUM MALVÆ COMPOSITUM, L.—Compound Decoction of Common Mallow.

(Malvæ exsiccatæ Zj., Anthemidis florum exsiccat. Zss., Aquæ 0j.)

Used for clysters and fomentations.

MANNA. SUCCUS CONCRETUS FRAXINI ORNI, L. E. D. -Manna.

(Fraxinus Ornus. Oleineæ. South of Europe. h)

Laxative in a dose of Zij.—Zss. for children, and Zij. for adults, in warm milk. Generally given along with purgative salts, senna, rhubarb, &c. as in this purgative draught:

Rhei rad. contus.

Fol. sennæ āā

Sulphat. sod. vel magnes.

Sem. anisi

Aq. bullientis

Aq. bullientis

Coque mannam, rhei radicem et sulphatem per horæ quadrantem, dein adde fol. sennæ et sem. anisi. Macera per horam dimidiam et cola.

Mannite is the saccharine principle obtained from different species of manna, but it does not appear to have any purgative qualities.

MANGANESII OXYDUM, D .- Black Oxide of Manganese.

Used for pharmaceutical purposes. Chlorine gas for fumigation may be obtained in the following manner:

Mix the acid and water, and pour the mixture over the other ingredients, in a china basin, placed in a pipkin of hot sand.

MARRUBII VULGARIS HERBA, E. Marrubium, L. Murrubium vulgare, D.—White Horehound.

(Marrubium Vulgare. Labiatæ. Europe. 4)

White Horehound is tonic and deobstruant. May be given in the form of infusion, thus:

Macera per horam et cola. Dosis, Zjss.—Zij. ter in die.

in asthma, and obstinate chronic coughs where much general debility exists. Each dose may be advantageously combined with Tinct. opii camphorat. 3j.

MASTICHE. Vide PISTACHIÆ LENTISCI RESINA.

MEL, L. E. D .- Honey.

(Collected from flowers by the Apis mellifica. Insecta.)

Honey taken internally is aperient; externally it is employed as a detergent.

Officinal Preparations.

MEL SUBBORATIS SODE, L. E. D-Honey of Borax.

MEL ROSÆ GALLICÆ, L. E. D.-Honey of Roses.

OXYMEL SIMPLEX, L. E. D .- Simple Oxymel.

OXYMEL CUPRI SUBACETATIS, D .- Oxymel of Verdigris.

OXYMEL COLCHICI, D .- Oxymel of Colchicum.

OXYMEL SCILLE, L. D .- Oxymel of Squill.

MELALEUCÆ LEUCADENDRI OLEUM VOLA-TILE, E. Cajuputi oleum, L. Melaleuca leucodendron. Oleum volatile cajuput, D.—Cajuput Oil.

(Melaleuca Leucadendron. Myrti. Amboyna. h)

Stimulant, antispasmodic, and carminative. Chiefly recommended in hysteria, epilepsy, flatulent colic, and paralysis of the tongue. Dose gtt.j.—iv. on a lump of sugar. Used externally, as an embrocation, in rheumatism, gout, and to weak joints; it relieves the pain of toothach when applied to the decayed tooth.

Cajuput oil may be exhibited according to the follow-

ing formula:

Fiat mistura. Dosis, 7j.—7ss.

It may also be given in combination with tonics, purgatives and antispasmodics.

MELISSÆ OFFICINALIS FOLIA, E. Melissa officinalis—herba, D.—The Leaves of Balm.

(Melissa Officinalis. Labiatæ. Alps and Pyrenees. 4)

Stomachic and diuretic. Used in the form of infusion as a diluent in fevers.

MENISPERMI COCCULI BACCÆ, E. Cocculus suberosus—fructus. Vulgo, Cocculus indicus, D.—Coculus Indicus.

(Cocculus Suberosus. Menispermeæ. Malabar. 4)

The berries are acrid, narcotic, and poisonous. Used, made into an ointment, in cases of tinea capitis, and in cycosis menti, and to kill vermin on the head.

Contain a bitter poisonous principle called *Picrotoxa*, which resembles camphor in its action on the living sys-

tem, but is much more powerful and deleterious.

It is prepared by digesting for a day the decoction of the berry upon caustic magnesia. It is then to be treated with alcohol, which takes up the *picrotoxia*, which may be purified by repeated evaporation and solution, and, if much coloured, by the addition of animal charcoal.

An ointment made with ten grains of picrotoxia and an ounce of lard, has been used with much success in tinea capitis.

MENTHÆ PIPERITÆ HERBA, E. Mentha piperita, L. Herba, D.—Peppermint.

(Mentha piperita. Labiatæ. Indigenous. 4) Carminative and antispasmodic.

Officinal Preparations.

AQUA MENTHÆ PIPERITÆ, L. E. D.—Peppermint Water. (Ex herba.)

Given in flatulent colic.

OLEUM VOLATILE MENTHÆ PIPERITÆ, L. E. D.—Oil of Peppermint.

(Ex herba.)

Given with advantage in doses of a few drops rubbed up with sugar, in cramp of the stomach.

SPIRITUS MENTHÆ PIPERITÆ, L. E. D.—Spirit of Peppermint.

(Menth. pip. herb. fbjss., Alcohol. dilut. fbix., Aquæ q. s. &c.)

Dose 3ss.—3iij. Stimulant and carminative.

MENTHÆ PULEGII HERBA, E. Pulegium, L. Mentha pulegium—herba, D.—Pennyroyal.

(Mentha pulegium. Labiatæ. Indigenous. 1/2)

Somewhat similar to spearmint, but less agreeable Seldom used.

Officinal Preparations.

AQUA MENTHÆ PULEGII L. E. D.—Pennyroyal Water. (Ex herba.)

OLEUM PULEGII, L. D.—Oil of Pennyroyal.

(By distillation from the dried plant.)

Stimulant and antispasmodic. Dose gtt. j.—v. on a lump of sugar.

Spiritus pulegii, L .- Spirit of Pennyroyal.

(Ol. pulegii Dvij., Spir. rectif. 0ivss., Aquæ q. s. &c.)
Dose Zj.—Ziv.

MENTHA VIRIDIS, HERBA, L. D .- Spearmint.

(Mentha viridis. Labiatæ. Indigenous. 4)

Stomachic and carminative. The following compound infusion is powerfully anti-emetic:

Mentha et rosæ petalis superinfunde aquam cum acidi dimidio mistam et macera, dein liquorem effunde, et saccharum adjice.

Dosis, \(\frac{7}{3} \)j.—\(\frac{7}{3} \)ij. bis ter sæpiusve quotidie.

Officinal Preparations.

AQUA MENTHÆ VIRIDIS, L. D .- Water of Spearmint.

OLEUM MENTHE VIRIDIS, L. D .- Oil of Spearmint.

(By distillation from the dried plant.)

Dose gtt. ij.—v. on a lump of sugar, in flatulence and loss of appetite.

Spiritus Menthæ Viridis, L. D .- Spirit of Spearmint.

(Ol. menthæ viridis Dvjss., Spir. rectif. 0ivss. &c.)

Dose 3ss.—3ij. in any proper vehicle. Useful in nausea, flatulence, and faintings.

INFUSUM MENTHE SIMPLEX, D.—Simple Infusion of Mint.

(Fol. menthæ viridis sicc. Zij., Aq. ferventis q. s. ut colentur f. Zvj.)

INFUSUM MENTHÆ COMPOSITUM, D.—Compound Infusion of Spearmint.

(Fol. menth. virid. sicc. Zij., Aq. ferv. q. s. s. ut colentur Zvj. Digere, &c., dein adde sacch. purif. Zij., Ol. menth. virid. gtt. iij., solutas in T. card. comp. Zss.)

Diaphoretic, and as a vehicle for other remedies. Dose

₹j.—ξiij.

MENYANTHIS TRIFOLIATÆ FOLIA, E. D. Menyanthes, L.—Buck Bean.

(Menyanthes trifoliata. Gentianea. Europe. 4)

Bitter, tonic, diuretic, and purgative; in large doses, narcotic. Dose of the powder, 9j.—3j. Given in the form of infusion thus:

Macera in vase clauso, per horas duas, et cola.

Dose zj.—zjss. united with Spiritus ætheris nitrosi zj.

zji. in rheumatism, arthritic affections, and in cachectic and cutaneous diseases.

MEZEREI CORTEX. Vide DAPHNES MEZEREI CORTEX.

MOMORDICA ELATERIUM. Vide ELATERIUM.

MORI BACCÆ, L. Morus nigra—Baccæ, D.—Mulberries.

(Morus nigra. Urticeæ. Italy. h)
Cooling and laxative.

Officinal Preparation.

SYRUPUS MORI, L -Syrup of Mulberry.

(Mori succi colati 0j., Sacch. purif. Ibij.

An adjuvant to cooling drinks and gargles. Dose 3j. — 3iv.

MOSCHUS. Ex moscho moschifero, E. Moschus, L. Moschus moschiferus—Concretum Moschus dictum, D.—Musk.

M O S 183

(Moschus moschiferus. Cl. Mammalia. Ord. Ruminantia. Asia.)

A pouch, situated before the prepuce of the male, contains the musk, *moschus*. This is stimulant, antispasmodic, and diaphoretic. Dose gr. x.—3ss. three times a-day. It may be administered in combination according to the following formulæ:

R Moschi
Camphoræ
Alcoholis
Conserv. rosæ Gall.
Camphoram primum cum alcohole tere et

Camphoram primum cum alcohole tere et deinde, secundum artem, fiat bolus.

R. Moschi gr. xvj.
Valerianæ off. rad. contr. . gr. xxjv.
Camphoræ . . . gr. vj.

Fiat pulvis, cujus sumantur gr. viij.—xij. bis terve quotidie.

R. Moschi
Oxidi zinci
Oxidi zinci
Mucilag. acac. arab. gum. q. s.

Ut fiat massa in pilulas vy dividenda

Ut fiat massa in pilulas xx. dividenda. Dosis iij.—jv. in die.

Simul tritis admisceantur jusculi cujusvis tenuioris Zjv. ut fiat enema, alternis vel tertiis horis injiciendum.

Officinal Preparations.

MISTURA MOSCHI, L.—Musk Mixture.

(Moschi, Acac. gum. cont., Sacch. pur., sing. 3j., Aq. rosæ 3vj., &c.)

Dose \$\frac{7}{2}\ss.\$_\frac{7}{2}\sij. every four or five hours. Combined with ammonia \$\frac{7}{2}\ss.\$, spirit of lavender \$\frac{7}{2}\sig.\$, and spirit of juniper \$\frac{7}{2}\sij.\$, the musk mixture is of great use in sloughing phagedenic ulcers of a syphilitic or scrofulous nature.

It may be given combined thus:

Fiat haustus quarta quaque hora sumendus.

in hysteria and convulsive affections, after the bowels have been well cleared.

TINCTURA MOSCHI, D.—Tincture of Musk.
(Moschi in pulv. redact. Zij., Spirit. rect. lbj., &c.)
Dose Zj.—Zjss.

MOXA. Vide ARTEMISIA.

MYRISTICÆ MOSCHATÆ NUCLEUS—INVOL-UCRUM NUCLEI vulgo MACIS, E. Myristicæ nuclei, L. Myristica moschata.—Nucleus. Oleum volatile, et involucrum Macis dictum, D.—Nutmeg, Mace and the Essential Oil.

(Myristica moschata. Myristiceæ. Moluccas. 17)

Stimulant and stomachic, and in large doses, such as 3ij., narcotic. By distillation they yield an essential oil, and by expression a concrete oil. Dose of the nutmeg and mace gr. v.—Dj., of the volatile oil of nutmeg gtt. ij.—vj.

Officinal Preparation.

Spiritus Myristicæ Moschatæ, L. E. D.—Spirit of Nutmeg.

(Myristicæ moschatæ nucleor. contus. Zij., Alcohol. dilut. tbjx., Aquæ q. s., Macera et distillatione tbjx. elice.)

Cordial and carminative. Dose 3ss. -3j.

MYROXYLI PERUIFERI BALSAMUM, E. Balsamum Peruvianum, L. Myroxylum Peruvianum —Balsamum, D.—Peruvian Balsam.

(Myroxylon Peruiferum. Leguminosæ. South America. 15)

Peruvian balsam is a warm, aromatic, stimulating medicine. It has been used both externally and internally with considerable benefit, for promoting the granulating process in old indolent ulcers of the lower extremities, particularly in females, in whom the habit is leucophlegmatic or dropsical. It is also efficacious in paralytic numbness, or in chronic rheumatic pains, in chronic asthma, gleet, and leucorrhœa. Dose gtt. x.—xxx. twice or thrice a-day, given in the form of mixture, thus:

Aquæ distillatæ . . zvij. Dosis zj.—zij., bis, ter quaterve quotidie.

Or in the form of pill combined with myrrh and other tonic medicines, thus:

M. fiant pilulæ xxx. e quibus sumantur binæ vel tres, bis terve de die.

Exhibited along with an aperient, as in the following formula, Dr Paris has found it useful in sluggish states of the intestinal canal:

Tere simul, et adde

Fiat mistura. Dosis 3.jss. bis quotidie.

For external application Peruvian balsam may be made into an ointment, thus:

Unguento	balneo in aquoso liquefacto, adjice balsa-
mum	Peruif, ut fiat unguentum.
	ill-conditioned ulcers.

Combined thus:

Misce.

it is a good application when dropped into the ear, in cases of a fœtid discharge.

It may also be injected into the ear in chronic otitis, combined according to this formula:

MYRRHA.—Gummi-Resina, L. E. D.—Myrrh.

(Amyris kataf. Balsamo-dendron myrrha. Arabia Felix.)

Stimulant, expectorant, and emmenagogue. Dose gr. x.—3j. united with nitre, camphor, sulphate of potass, of zinc, or of iron according to circumstances. As a stimulant, it may be given thus:

Simul tere, et cola. Dosis \(\)j. bis vel ter quotidie. Singulis dosibus interdum adde,

Misce.
in the latter stages of phthisis pulmonalis, when languor
and debility are great,

As an expectorant, thus:

Tere optime simul ut fiat pulvis, partitis dosibus quotidie sumendus, in vehiculo aliquo idoneo.

R	Myrrhæ .				Zjss.
	Scillæ exsice				Zss.
	Extract. hyo	scyan	ni		Đij.
	Aquæ .				q. s.

Ut fiant pilulæ xxx. e quibus sumantur binæ, nocte maneque.

R Myrrhæ pulveris . . . gr. xij.
Pulv. ipecacuanhæ rad. . gr. vj.
Pulv. nitratis potassæ . . 3ss.

Misce et divide in doses æquales quatuor, quarum sumat unam quartis horis.

As an emmenagogue:

R. Myrrhæ pulv. gr. vj.

Tere simul et adde

Syrup. zingiberis . . . q. s.

Ut fiat electuarium, de quo sumatur ad myristicæ moschatæ nuclei magnitudinem bis quotidie.

As a tonic, it may be given thus:

Misce. F. massa in pilulas lxxx. dividenda, quarum sumat vj.—viij. quotidie.

Officinal Preparations.

TINCTURA MYRRHÆ, L. E. D .- Tincture of Myrrh.

(Myrrhæ tritæ Ziij., Alcohol. fort. Zxx., Aquæ Zx., &c.)

Chiefly used externally for cleansing foul ulcers, and promoting the exfoliation of carious bones; also as a wash for the mouth when the gums are spongy. Recommended internally as a tonic, deobstruant and antiseptic. Dose $\exists j.-3j.$

TINCTURA ALOES ET MYRRHÆ, E. Wide Aloes.

PILULE ALOES ET MYRRHE, L. E. D .- Vide Aloes.

PILULÆ FERRI CUM MYRRHA, L.-Vide Ferrum.

MYRTI PIMENTÆ FRUCTUS, E. D. PIMENTÆ BACCÆ, L.—Pimenta Berries.

(Myrtus Pimenta. Myrti. Jamaica. h)

Pimenta berries dried before they are thoroughly ripe are commonly called Jamaica Pepper.

Heating and aromatic. Dose gr. v.—Dij. Used principally to mask the disagreeable taste of other remedies.

Officinal Preparations.

AQUA MYRTI PIMENTÆ, L. E. D.—Pimenta Water. An excipient for more active medicines.

OLEUM VOLATILE MYRTI PIMENTA, L. E. D .- Oil of Pimenta.

(Obtained by distillation from the fruit.)

Dose gtt. iij.-gtt. v., rubbed up with sugar.

Spiritus myrti pimentæ, L. E. D.—Spirit of Pimenta. (Piment. fructus contus. Zvj., Alcohol. dilut. lbjx., Aquæ q. s. ad evitandum empyreuma.)

Dose 3j.—3jv.

NICOTIANÆ TABACI FOLIA, E.D. TABACI FOLIA, L.—Tobacco Leaves.

(Nicotiana Tabacum. Solaneæ. America. ()

Narcotic, sedative, diuretic, emetic, cathartic, and errhine. Very poisonous even when applied externally. Active principle, *Nicotianine*, which is a white, foliated, crystalline substance.

The following tincture of tobacco, used externally, is

a valuable anodyne:

Aquæ distillatæ āā . . . ʒjv.

Digere per dies octo et cola.

3ss.—3ij. of this rubbed with the finger on the temple and forehead, removes the distressing pain which so often attends inflammation of the eye.

Tobacco applied in the form of cataplasm to the pit of the stomach, thus:

Simul contunde, ut fiat epithema, regioni epigastricæ admovendum.

operates as an emetic.

Officinal Preparations.

INFUSUM TABACI, L. D .- Infusion of Tobacco.

(Tabaci foliorum 3j., Aq. ferventis 0j.)

Used as a clyster in a dose of Zviij., in ileus, strangulated hernia, and obstinate constipation and suspended animation. The smoke of tobacco is sometimes used instead, being injected into the anus by a bellows adapted to that purpose.

Applied externally in psora, tinea, and other eruptions;

and to the eye in cases of purulent ophthalmia.

VINUM NICOTIANÆ TABACI, E .- Wine of Tobacco.

(Fol. nicot. tabaci partem j., Vini alb. Hispani partes xij.)
Powerfully diuretic. Used in cases of dropsy and dysuria. Dose gtt. x.—xxxvj. twice a-day.

NUX MOSCHATA. Vide MYRISTICÆ MOSCHATÆ NUCLEUS.

NUX VOMICA. Vide STRYCHNOS NUX VOMICA.

OLEÆ EUROPÆÆ OLEUM FIXUM. Ex fructu, E. D. Olivæ oleum, L.—Olivæ Oil.

(Olea Europæa. Oleineæ. South of Europe. 1)

Olive oil is gently laxative, and as such is given in cases of worms. Dose \(\frac{7}{3}ij \).—\(\frac{7}{3}jv \). triturated with mucilage, or mixed with water by means of a few drops of aqua ammoniæ or aqua potassæ. Given also in large quantities as a demulcent and emollient when acrid substances have been taken into the stomach. Used chiefly in the composition of liniments, ointments, and plasters.

OLIBANUM. Vide JUNIPERI LYCLE GUMMI-RESINA.

OPIUM. Succus concretus papaveris somniferi, L. E. D.—Opium.

(Papaver Somniferum. Papaveraceæ. Asia. ①)

Opium is the concrete juice of the capsules of the white poppy before they are quite ripe, obtained by incision.

Stimulant, anodyne, and narcotic, it is one of the principal instruments of the medical practitioner. It may be made to produce very opposite effects, according to circumstances, thus, by the repetition of small doses, such as gr. 4.—gr. ss., it acts as a stimulant, increasing the energy of the mind, the frequency of the pulse, the heat of the body, &c.; whilst, by giving a full dose at once, such as gr. j.—gr. ij. or more, it is anodyne and narcotic. But it is to be remembered that, to produce these effects, the dose must be regulated by the habits of the patient, his having been used to it or not, and the disease that is present.

It is necessary at all times, in giving opium, to attend to the state of the bowels, so that costiveness may not be

induced.

The poisonous effects of opium are best obviated by evacuating the stomach by means of the stomach-pump, or powerful emetics, such as the following:

Misce ft. mistura emetica. Sumat partem dimidiam omni semihora donec supervenerit vomitus.

This, in conjunction with the affusion of cold water on the head, and afterwards the exhibition of lemon juice or other acidulous liquids, has been found of the greatest advantage in cases of poisoning from opium and other narcotics.

Opium may be exhibited in combination according to

the following formulæ:

R. Opii puri . . . gr. jv.

Extract. conii āā gr. xv. Simul contunde, et fiat massa in pilulas sex dividenda, e quibus sumatur una omni nocte. When we wish to continue the operation of opium, and not to obtain its full effect at once, it may be advantageously combined with some substance capable of retarding its solution in the stomach, as gum resins, thus: R. Opii puri gr. j. Pil. aloes et myrrhæ gr. iv. Fiat pilula, h. s. sumenda.
R. Opii puri gr. j. Extract. aloes socot gr. iij. Extract. gent gr. v. Fiat massa in pil. duas dividenda, et sint pro dosi.
Opium may be given as a stimulant, thus: R. Opii puri gr. ij. Elect. aromatici
joined lotion: R. Opii concisi
to parts in a state of irritation, and to painful ulcers of every description.
In a plaster, thus: R. Opii puri Camphoræ āā
In an enema, thus: R. Opii puri gr. ij. Mucilag. amyli
Lactis tepefacti

ENEMA OPII, D .- Opiate Enema.

(Tincturæ opii 3 j., Aquæ tepidæ 3vj.)

Mucilage of starch may be advantageously substituted for the water. This enema may be administered in cases of diarrhœa, pain in the rectum from fistula or piles, irritability of the bladder, diseases of the prostate, &c.

TINCTURA OPII CAMPHORATA, L. E. D.—Camphorated Tincture of Opium.

(Camphoræ Dij., Acid. benzoici, Opii, ana Z j., Alcohol. dilut. lbijss.)

Contains gr. ij. of opium in \(\frac{7}{2} \) Dose to children gtt. v. \(-\text{xx.} \); to adults gtt. \(\text{xx.} \)—c., in almond mixture. Given in hooping-cough, the tickling which provokes frequent coughing, and chronic asthma.

TINCTURA OPII AMMONIATA, E.—Ammoniated Tincture of Opium.

(Opii Zij., Stig. croc. sat. concis., Acid. benzoici, ana, Ziij., Ol. volat. pimpinell. anisi Zss., Alcohol. ammoniat. Zxvj.)

Contains about a grain in each drachm. Dose 3ss.—

Zij. In pertussis, and to allay the tickling cough in catarrh.

TINCTURA SAPONIS ET OPII, E. D.—Tincture of Soap and Opium.

(Sapon. dur. rasi. Ziv., Opii Zj., Camphoræ Zij., Ol. volat. rorismarin. officin. Zss., Alcohol. fort. Hij.)

Contains Dj. of opium in Zj. Used externally to remove local pains, being rubbed on the part affected.

ACETUM OPII, D .- Vinegar of Opium.

(Opii Turcici Ziv., Acet. distillati. 1bj.)

Stronger than the tincture of opium in the proportion of three to two; gtt. xx. of the vinegar being equal to gtt. xxx. of the tincture of opium. Dose gtt. xv.—l.

VINUM OPII, L. E. D .- Wine of Opium.

(Opii \(\)\; j., Cort. laur. cinnam. cont., Flor. eugen. caryophill. cont., sing. \(\)\; j., Vini albi Hispan. \(\)\; xvi.)

Contains gr. j. of opium in gr. xv. Dose gtt. xx.—lx. Externally, used as a stimulant application in chronic inflammation of the eyes.

Pulvis ipecacuanhæ et opii, L. E. D.—Powder of Ipecacuan and Opium. Vide Ipecacuanha.

Pulvis (cretæ compositus cum opio, L. D.) opiatus, E.—Opiate Powder.

(Opii partem j., Carbonatis calcis præp. partes ix.)

Gr. x. contains gr. j. of opium. Anodyne. Dose gr. v. _x. _xx. The London and Dublin preparations contain only gr. j, in jij.

Pulvis cornu usti cum opio, L.—Powder of Burnt Hartshorn with Opium.

(Opii duri cont. Zj., Cornuum ust. et præp.Zj., Cocc. cont. Zj.)

Contains one grain of opium in ten. Anodyne and absorbent. Dose $\exists j.-\exists ij$ for adults. In diarrhœa from irritation of the intestinal canal.

PILULÆ SAPONIS CUM OPIO, L. D.—Pills of Soap with Opium.

(Opii dur. contrit. Ziv., Sapon. dur. Zij.)

Gr. v. contains gr. i. of opium. Sedative.

PILULÆ E STYRACE, D .- Storax Pills.

(Resin. styracis off. Ziij., Opii Turcici, Croci, sing. Zj.)
Contains gr. j. of opium in gr. v. Sedative.

PILULE OPIATE, E .. Opiate Pills.

(Opii partem j., Extract. glycrrh. glab. partes vij., Fruct. myrt. piment. partes ij.)

Gr. x. contain gr. j. of opium. Sedative.

ELECTUARIUM CATECHU COMPOSITUM, L. D.—Compound Electuary of Catechu. Vide Catechu.

ELECTUARIUM (CONFECTIO, L. D.) OPIATUM, E.—Opiate Electuary.

(Pulv. aromat. \(\frac{7}{2}\text{vj.}\), Rad. aristoloch. serpent. in pulv. ten. trit. \(\frac{7}{2}\text{iij.}\), Opii in vini albi Hispani. q. s. diffusi \(\frac{7}{2}\text{ss.}\), Syrup. amom. zingib. \(\frac{1}{2}\text{bj.}\))

A drachm contains nearly gr. jss. of opium. The London confection contains gr. j. of opium in gr. xxxvi. Narcotic and stimulant. Dose 3ss.—3j.

TROCHISCI GLYCYRRHIZÆ CUM OPIO, E.—Troches of Liquorice with Opium.

(Opii Zij., Tinct. toluif. balsam. Zss., Syrup. simpl. Zviij., Extract. glycyrrh. glab. aqua calida moliti, Gum. acac. arab. in pulv. triti. Zv.

3j. contains about gr. j. of opium. Dose two or more occasionally, to allay tickling cough.

EMPLASTRUM OPII, L. E. D .- Opiate Plaster.

(Opii triti \(\frac{7}{2}\)ss., Picis Burgundica \(\frac{7}{2}\)iij., Emplast. ox. plumb. semivit. \(\frac{1}{2}\)bj.)

Applied in rheumatisms and other local pains.

OPIUM contains two active principles, narcotine and morphia.

Narcotine was first known under the name of the crystallizable salt of Derosne, from the name of the chemist who

first discovered it. To obtain it, the soft watery extract of opium is to be acted on, five different times, by double its weight of æther, which dissolves the narcotine. Evaporate this solution to dryness, and dissolve the residuum in boiling water, which does not take up the resin. Filter and precipitate by ammonia. Redissolve the precipitate in muriatic acid, and again precipitate by ammonia. The narcotine thus obtained, when purified by repeated solutions in æther, crystallizes in rectangular prisms with rhomboidal bases. It is sparingly soluble in cold alcohol, more soluble in warm; is easily dissolved in sulphuric æther. by the assistance of heat. It unites with acids and forms The experiments of Magendie go to prove that this substance is the acrid and exciting principle of opium. On the contrary, Orfila has not been able to perceive that narcotine is more exciting than morphia. It is not used in medicine.

OPI

The opium from which narcotine has been removed is used under the name of "Extract of Opium exhausted of Narcotine" (Opii extractum narcotina privatum), in all cases requiring a narcotic, in which stimulants are inju-

rious. Dose gr. j.—gr. vj.

Morphia was first discovered by Derosne and Sertuerner, and since carefully studied by Robiquet, Pelletier, Caventou, &c. It is prepared by Robiquet thus: Take a concentrated solution of opium, and boil it with magnesia, in the proportion of ten grains for each pound of opium used. Filtrate, and wash the deposit on the filter with cold rain or distilled water; and when it is dried, digest it in a heat under 212° with weak alcohol. Filtrate and wash this deposit with a little cold alcohol; then boil it in a large quantity of rectified alcohol, and filtrate whilst the liquor is hot. The crystals are deposited as the liquor cools, and may be purified by repeated solution and crystallization.

The salts of morphia which are used in medicine are

the acetate, muriate, and sulphate.

Acetate of morphia, morphiæ acetas, is prepared thus: Take of morphia four parts, distilled water eight parts; mix them in a porcelain vessel, and then add acetic acid,

O P I 197

specific gravity 1.075, until litmus paper is slightly reddened. Evaporate slowly to dryness, and reduce to powder. To be kept in a phial with a ground stopper. Dose gr. \(\frac{1}{4}\).—gr. iij. The acetate of morphia has the good properties of opium without its inconveniences.

It may be given in the form of pill, thus:

F. S. A. pilulæ xvj., quarum capiat j.—ij. mane nocteque.

Syrupus Morphiæ Acetatis.—Syrup of the Acetate of Morphia.

R. Acet. morphiæ
Syrup. purif.
Misce diligenter.

Ft. syrupus.

gr. iv.
tbj.

Dose 3j.—3iv. Used for the same purposes as the syrup of poppies.

SOLUTIO ACETATIS MORPHIE. — Solution of the Acetate of Morphia.

R	Acet. morphiæ			gr. xvj.
	Acid. acetici			gtt. iij.
	Aquæ distillatæ			3j.
	Alcoholis .			3 j.

Anodyne. Dose gtt. vj.—xxx. in any bland vehicle.

The muriate of morphia, Morphia murias, is prepared thus: A concentrated aqueous infusion, prepared with water at 90°, is precipitated by a slight excess of ammonia. The precipitate is to be collected on a filter, washed moderately with cold water, and dried at a temperature below 212°. When dry, it is to be reduced to powder, and rubbed up with cold water. Diluted muriatic acid is now to be added by degrees: the first portions are speedily neutralized, but fresh acid must be added until a slight but permanent excess be manifest. This will dissolve both the morphia and narcotine of the opium, forming a dark-brown solution, which must be filtered in

order to separate it from some very dark and insoluble matter. The filtered solution is, in the next place, to be evaporated nearly to the consistence of syrup, when, on cooling, it will form a brown mass of crystals, moistened with a very dark liquid. This mass is to be subjected to strong pressure between folds of bibulous paper, which, by absorbing the liquid containing the narcotine and colouring matter, will leave the muriate of morphia comparatively pure, although still of a brownish colour. A second solution, crystallization, and expression, will yield the salt nearly white, and free from narcotine, while, by a third crystallization, it may be obtained in radiated bunches of crystals of snowy whiteness. A solution of the muriate of morphia may be prepared thus:

The sulphate of morphia is much less frequently employed than the acetate or muriate. It is prepared thus: Take of morphia six parts; distilled water twelve parts; sulphuric acid diluted with twice its bulk of water, a quantity sufficient to saturate the morphia. Evaporate slowly and crystallise. To be kept in a phial with a ground stopper. Dose gr. j.—iij. A syrup of the sulphate of morphia may be made and administered in the same manner as that of the acetate.

A solution of morphia in oil furnishes a convenient mode of administering morphia as an enema, thus:

R. Ol. amygdal.

Morphiæ

Tere optime simul, et adde infus. lini q. s. ut fiat enema.

In like manner may be formed sedative liniments.

OPOPONACIS GUMMI-RESINA, L. Pastinaca opoponax—Gummi-resina, D.—Opoponax.

(Pastinaca opoponax. Umbelliferæ. Italy. 4)

* Dr William Gregory in Edin. Med. and Surg. Journ.

Formerly considered emmenagogue. Dose gr. x.—3ss. Seldom used.

ORIGANI MARJORANÆ HERBA, E. D.—Sweet Marjoram.

(Origanum marjorana. Labiatæ. Portugal. (O)

The herb powdered is errhine, and an infusion is used externally as an embrocation.

Officinal Preparation.

OLEUM VOLATILE ORIGANI MARJORANA, E. - Volatile Oil of Marjoram.

(Ex herba.)

Acrid. A drop put into a carious tooth relieves toothache.

ORIGANUM, L. Origanum vulgare—Oleum ex herba, D.—Common Marjoram.

(Origanum vulgare. Labiatæ. Indigenous. 4)

Used externally in fomentations. An infusion has been used internally as a tonic and stomachic.

Officinal Preparation.

OLEUM ORIGANI, L. D .- Oil of Origanum.

(Distilled from the dried plant.

Acrid. Used externally.

OSSA, E. D .- Bones.

Bones consist chiefly of phosphate of lime, gelatine, and a little carbonate of lime. They are used in pharmacy for the preparation of the following

Officinal Preparations.

CALCIS PHOSPHAS PRÆCIPITATUM, D. Vide Calx.

SODÆ PHOSPHAS, E. D. Vide Soda.

OVUM, L—Egg.

(Phasianus gallus. CL. Aves. ORD. Gallinæ.)

The contents of the egg are the white and yolk. The former is albumen combined with a little soda and sulphur; the latter also albumen, but containing a bland oil and colouring matter. Used in pharmacy in the preparation of emulsions.

PAPAVER RHŒAS—Petala, D. Rhœados petala, L.—The petals of the Red Poppy.

(Papaver rhœas. Papaveraceæ. Indigenous. ①)
Slightly anodyne. Principally used for the sake of their red colour.

Officinal Preparation.

SYRUPUS RHEADOS, L. D.—Syrup of Red Poppy.

Used as a red colouring ingredient in medicines.

PAPAVERIS SOMNIFERI CAPSULÆ, E. Papaveris capsulæ, L. Fapaver somniferum.—Capsulæ maturæ, D.—Poppy heads or capsules.

(Papaver somniferum. Papaveraceæ. Asia. ①)
Poppy heads are used to make the following

Officinal preparations.

SYRUPUS PAVAPERIS SOMNIFERI, L. E. D.—Syrup of Poppies.

(Capsul. P. somnif. sicc. seminibus exemptis, partem j., Aquæ bullient, partes xv., Sacch. purif. partes ij., &c.)

Anodyne. Dose for children Zij.—Ziij.; to adults Zss.—Zj. It may be given combined thus:

Or thus:

	erv. ros					3j
	sulph.					Zij.
Misce.	Dosis	coch.	minim.	subi	inde.	

in obstinate coughs, and pertussis.

DECOCTUM PAPAVERIS, D .- Decoction of Poppies.

(Papav. somnif. capsul. concis. Ziv., Aquæ 0iv., &c.)

In common use as an anodyne and emollient fomenta-

PASTINACA OPOPONAX. Vide OPOPONAX.

PETROLEUM. Vide BITUMEN PETROLEUM.

PIMENTÆ BACCÆ. Vide MYRTI PIMENTÆ BACCÆ.

PIMPINELLÆ ANISI SEMINA, E. D. Anisi semina, L.—Aniseed.

(Pimpinella anisum. Umbelliferæ. East. (•))

Stimulant and carminative. Dose gr. xv.—3j. bruised. May be given in this form:

Dosis, Coch. min. pro re nata.

in tormina and flatulences of infants.

It may be combined to form this stimulant fomenta-

Officinal Preparations.

OLEUM VOLATILE PIMPINELLE ANISI, L. E. D.—Volatile Oil of Aniseed.

(By distillation from the seeds.)

Dose gtt. v.—gtt. xv. rubbed up with sugar and camphor mixture.

Spiritus anisi, L. (Compositus, D.)—Spirit of Aniseed. (Anisi sem. cont. lbss., Spirit. ten. cong., Aquæ quod. s. s. ad prohibendum empyreuma.)

Dose 3j.—3iv.

PINUS ABIES—Resina—Thus, D. Abietis resina, L.—Resin of the Spruce Fir, common Frankincense.

PIX BURGUNDICA, (ABIETINA, L.) E. D.—Burgundy Pitch.

(Pinus abies. Conifera. North of Europe. h)

Common Frankincense is a spontaneous exudation from the spruce fir, whilst Burgundy pitch is obtained by making incisions through the bark, and afterwards boiling the flakes so obtained in water, and then straining the resin through coarse cloths under pressure.

Applied externally, spread on leather, as a rubefacient

in catarrh, pertussis, and dyspnœa.

Officinal Preparations of Frankincense.

EMPLASTRUM AROMATICUM, D.—Aromatic Plaster.

(Thuris Ziij., Ceræ flavæ Zss., Pulv. cort. cinnamom. Zvj., Ol. essent. pimentæ, Ol. essent. limonum, sing. Zij. &c.)

A stimulating plaster to be applied over the stomach.

EMPLASTRUM THURIS, D .- Plaster of Frankincense.

(Emplast. lithargyri fbij., Thuris fbss., Oxydi ferri rubri Ziij.)

A strengthening plaster.

Of Burgundy Pitch.

EMPLASTRUM PICIS COMPOSITUM, L.—Compound Pitch Plaster.

(Picis aridæ lbij., Abietis resinæ lbj., Resinæ flav. sing. Ziv., Myristicæ olei express. Zj. &c.)

Stimulant and rubefacient.

EMPLASTRUM CALEFACIENS, D.—Heating Plaster.

(Emplast. cantharid. partem j., Picis Burgund. partes vij. &c.)

PINUS BALSAMEA—Resina Liquida, E. D. Terebinthina Canadensis, L.—Canada Balsam or Turpentine.

(Pinus balsamea. Coniferæ. Canada. h)

PINUS LARIX—RESINA LIQUIDA—TEREBINTHINA VENETA, L. E. D.—Venice Turpentine.

(Pinus larix. Coniferæ. South of Europe. h)

PINUS SYLVESTRIS—RESINA. TEREBINTHINA VULGARIS, L. E. D.—Common Turpentine.

(Pinus sylvestris. Coniferæ. Indigenous. b)

The turpentines are stimulant, diuretic, and cathartic. Given in gleets, leucorrhœa, and other chronic fluxes. Dose 9j.—3j. in bolus with powdered liquorice root, or emulsion with egg or mucilage, but most frequently administered in the form of clyster, as in the

Officinal Preparation of Common Turpentine.

ENEMA TEREBINTHINE, D .- Turpentine Enema.

(Terebinthinæ vulg. \(\frac{7}{2}ss., \) Ovi unius vitellum, tere simul et adde gradatim Aquæ tepidæ \(\frac{7}{2}x. \)

Combined with ol. ricini 3j. in cases of obstinate constipation, depending on atony of the large intestines.

PINI OLEUM VOLATILE, E. Terebinthinæ oleum, L. Pinus sylvestris—oleum volatile, D.—Oil of Turpentine.

Used to prepare

OLEUM VOLATILE PINI PURISSIMUM, E. Oleum terebinthinæ rectificatum, L. D.—Rectified Oil of Turpentine.

Oil of turpentine is cathartic in large doses, diuretic in small.

Has been administered with advantage in the dose of gtt. x.—3j. in sciatica and lumbago.

Given also with success in epilepsy, a large dose being

first given, and small doses afterwards.

In iritis, puerperal peritonitis, purpura hæmorrhagica, and diseases of the urinary passages, oil of turpentine has likewise been recommended.

It may be exhibited in the form of linctus, thus:

ut fiat linctus; de quo sumatur cochl. parv. nocte maneque, cum haustu cujusvis potus tenuioris tepefacti.

Or in the form of emulsion, thus:

Ovi unius vitellum.

Sumat cochleare magnum ter indies.

Oil of turpentine, in large doses, is an excellent remedy in obstinate constipation, and may be said to be a specific in tænia, which it discharges in all cases dead, after two or three doses.

Dose zss.—zij. repeated every eight hours until the worm is ejected. Given floating on some liquid aromatic

vehicle, or combined thus:

PIN 205

Given in the form of enema made thus:

R. Ol. volat. pini puriss. . . \(\frac{7}{3}\ss.\tag{3}\frac{7}{3}\).

Ovi unius vitellum.

Tere simul et gradatim adde

Decoct. avenæ tepid. . . $\frac{7}{3}x$.

Injiciatur pro enemate, semel in die pro re nata. in flatulent colic, tetanus, and violent attacks of stone in the bladder. When it is required to evacuate the lower bowels, \(\frac{7}{3} \)j. of castor oil may be added.

A mixture of gtt. x. with \(\frac{7}{2} \)j. of almond oil, introduced upon cotton into the ears, is serviceable in cases of deafness from a diseased action of the cerumeniferous glands.

Applied externally to indolent tumours; to bruises, sprains, and chilblains, after the inflammatory action has subsided. It may be combined thus:

Seminibus contusis aquam affunde, et macera per horas ij. dein liquorem leniter exprime. In hoc solve saponem, adde oleum et simul agita.

Oil of turpentine, as hot as the patient can bear it, has been used as a styptic to bleeding vessels.

Officinal Preparation.

LINIMENTUM TEREBINTHINÆ, L. D.—Turpentine Liniment.

(Cerati resinæ lbj., Ol. terebinthinæ 0j. &c.)

Dr Kentish's application to burns.

PINI RESINA OLEO VOLATILI PRIVATA, vulgo Resina alba, E. D. Resina flava, L.—White and Yellow Resin.

White resin is chiefly used in the composition of plasters and ointments.

Officinal Preparations.

CERATUM RESINA, L .- Cerate of Resin.

(Resinæ flavæ, Ceræ flavæ āā fbj., Olivæ ol. 0j.)

An ingredient of the turpentine liniment.

UNGUENTUM RESINOSUM, E. D .- Resinous Ointment.

(Adipis suilli, partes viij., Resinæ albæ, partes v., Ceræ flavæ, partes ij.)

For cleansing foul indolent ulcers.

EMPLASTRUM SIMPLEX (CERA, L.) E .- Simple Plaster.

(Ceræ flavæ, partes iij., Adipis ovilli, Resinæ albæ, āā partes ij. &c.)

Used to keep up a discharge from a blistered surface.

PINI RESINA EMPYREUMATICA, vulgo Pix Li-Quida, L. E. D.—Tar.

Tar is heating, diuretic, and sudorific. The inhalation of the vapour of boiling tar has been much recommended in the cure of pulmonary consumption. Externally detergent. May be used in the form of the following lotion:

R. Picis liquidi
Calcis
Aq. bullientis
Decoque ad dimidium.

Officinal Preparations.

UNGUENTUM PICIS LIQUIDÆ, L. E. D.—Tar Ointment.

(Picis liquidæ, partes v., Ceræ flavæ, partes ij. &c.)

Chiefly used in tinea capitis, and some other cutaneous diseases.

AQUA PICIS LIQUIDÆ, D.—Tar Water.

(Picis liquidæ fbij., Aquæ cong. j.)

Tar water, so much recommended by Bishop Berkely, is stimulant, diuretic, and diaphoretic. It may be taken to the extent of 0j.—0ij. in the course of the day, in scurvy and cutaneous diseases.

PIPER CUBEBA. Vide CUBEBA.

PIPERIS LONGI FRUCTUS, E. Baccæ, L. Semina, D.—Long Pepper.

(Piper longum. Urticeæ. Amboyna. 4)

207

The unripe fruit dried. This is the hottest of all the peppers. Dose gr. v.—Dj.

PIPERIS NIGRI FRUCTUS, E. Baccæ, L. Piper nigrum—semina, D.—Black Pepper.

(Piper nigrum. Urticeæ. Ceylon. h)

The unripe berries dried in the sun.

Stimulant. Dose gr. x.—Di.

Piperine is a crystallizable matter discovered in black pepper by Œrstaed, and considered by him as an alkali. Said to be a most energetic febrifuge; may be given to the extent of gr. xxiv. in the twenty-four hours.

Officinal Preparations.

Confection Piperis Nigri, D. — Confection of Black Pepper.

(Piperis nigri, Inulæ helenii radicis, sing. lbj., Sem. fæniculi lbiij., Mellis, Sacch. purif. sing. lbij. &c.)

A hot carminative. Dose, the size of a nutmeg, three times a-day.

Unguentum piperis nigri, D. — Ointment of Black Pepper.

(Adipis suilli præparat. lbj., Piperis nigri in pulv. triti Ziv.)

Stimulating and irritating.

PISTACHIÆ LENTISCI RESINA, E. D. Mastiche, L.—Mastich.

(Pistachia Lentiscus. Terebinthaceæ. Chios. h)

Used as a masticatory, and to fill up the cavities of carious teeth.

PISTACHIA TEREBINTHUS. Vide TEREBIN-

PIX ABIETINA. Vide PINUS ABIES.

PIX BURGUNDICA. Vide PINUS ABIES.

PIX LIQUIDA. Vide PINI RESINA EMPYREUMATICA.

PIX NIGRA, L.—Black Pitch.

(Pinus Sylvestris. Coniferæ. North of Europe. 4)
Stimulant. Used for preparing the following

Officinal Preparation.

UNGUENTUM PICIS NIGRÆ, L.—Pitch Ointment.

(Picis nigræ, Ceræ flavæ, Resinæ flavæ, sing. Zix., Ol. olivæ 0j. &c.)

A very stimulant ointment. Used in foul eruptions.

PLUMBUM.—Lead.

CARBONAS PLUMBI, vulgo Cerussa, E. D. Plumbi subcarbonas, L.—Carbonate of Lead or Ceruse.

Astringent and sedative. Used externally, being sprinkled on parts affected with local inflammation.

Officinal Preparation.

Unguentum carbonatis plumbi, E. D.—Ointment of the Carbonate of Lead.

(Unguent. simpl. partes v., Carbonat. plumbi in pulv. tenuiss. trit. partem j.)

A good cooling ointment. Applied to burns and irritable sores.

OXIDUM PLUMBI SEMIVITREUM, L. E. D.— Semivitrified Oxide of Lead or Litharge.

Officinal Preparation.

EMPLASTRUM OXIDI PLUMBI SEMIVITREI, L. E. D.—

Plaster of the semivitrified Oxide of Lead.

(Oxid. plumb. semivit. trit. partem j., Ol. ol. Europ. partes ; ij., Aquæ q. s.)

Applied to excoriations of the skin, slight flesh wounds, &c. serving to keep the part soft, and protect it from the air. Used in pharmacy as the basis of other plasters.

ACETAS PLUMBI, L. E. D.—Acetate of Lead.

Astringent Must be used internally with great caution. Dose gr. 1 gr. j. Given combined with opium, thus:

R Acet. plumbi . . . gr. iii. Opii pulveris . . . gr. j. Extract. conii . . . gr. x.

Fiat massa in pilulas iij. dividenda; quarum sumatur una bis quotidie, superbibendo haustum ex acido acetico compositum.

for the purpose of stopping pulmonary and uterine hæ-

morrhage. Useful also in protracted diarrhœa.

Applied externally, in solution, by means of cloths soaked in it, or mixed with crumb of bread, in the form of poultice, in superficial and phlegmatic inflammations, bruises and diseases of the skin; 3 j. to 3v. of distilled water forms a strong solution, and 3j. to 3x. of water a weak solution, which is that most usually employed. If common water is used for the solution, it is necessary to add about 3j. of acetic acid.

May be made into a collyrium, thus:

Alcohol. camphorat. . gtt. quædam.

F. collyrium. in slight ophthalmia.

Officinal Preparation.

Unguentum acetatis plumbi, E. D.—Ointment of the Acetate of Lead.

(Unquent. simpl. partes xx., Acetat. plumb. in pulv. tenuiss. trit. partem j.)

Used for the same purposes as the *Unguentum carbona-* tis plumbi.

LIQUOR PLUMBI SUBACETATIS, L. D.—Solution of sub-acetate of Lead.

This is what is commonly called Goulard's extract.

One drachm of this diluted with a pint of distilled water, and a drachm of proof-spirit added to it, forms the

Liquor Plumbi subacetatis dilutus, L. D.—Diluted Solution of the Subacetate of Lead.

Which is used for the same purposes as the solution of the acetate of lead, and by many preferred to it.

Goulard's extract may be used less diluted, and com-

bined as in the following resolvent lotion:

R Liquoris subacet. plumb.

Tinct. opii,

which is applied to parts affected with chilblains.

More or less diluted or combined thus:

it may be used as a collyrium.

FOLYGALÆ SENEGÆ RADIX, E. D. Senegæ radix, L.—Rattlesnake Root.

(Polygala Senega. Polygaleæ. Virginia. 4)

Stimulant, expectorant, and diuretic. Dose of the powder 9j.—9ij.

The Senegaro Indians use it against the bite of the

rattlesnake: hence the name.

Officinal Preparation.

DECOCTUM POLYGALÆ SENEGÆ, L. E. D.—Decoction of Rattlesnake Root.

(Rad. polygalæ senegæ 3j., Aquæ fbij. &c.)

This has been used in peripneumonia, after the inflammatory action is reduced, and in dropsical and rheumatic complaints, and as a stimulating gargle in croup. Dose Zij. three or four times a-day. May be given combined thus:

R Decoct. polyg. senegæ
Gum. ammoniac
Syrup. toluif. balsam.

Zvj.
Zss.—Zj.

F. S. A. mistura, cujus capiat coch. ampl. j. omni bihorio.

Or thus:

R Decoct. polyg. senegæ
Oxymellis scillit.

Misce, coch. ampl. omni bihorio sumendum. in chronic pulmonary catarrhs.

Spir. Junip. comp.

Fiat haustus, tertia quaque hora sumendus.

POLYGONI BISTORTÆ RADIX, E. D. Bistortæ radix, L.—Great Bistort Root.

(Polygonum Bistorta. Polygoneæ. Britain. 4)

Astringent, and as such, is employed in hæmorrhages and other fluxes, both internally and externally. Dose 9j.—3j. twice or thrice a-day.

PORRI RADIX, L.—Leek, bulb or root.

(Allium Porrum. Liliaceæ. Europe.)

Expectorant and diuretic, rather alimentary than medicinal.

POTASSA, E. Potassa fusa, L. Potassa Caustica, D. —Caustic Potass.

Used as a caustic. A piece weighing one or two grains will, in the space of three or four hours, produce an eschar, about six lines in diameter, involving the whole thickness of the skin. In order to prevent the caustic from spreading, and to limit the breadth of the eschar, a

piece of adhesive plaster, with a hole in its middle of the proper size, is first applied on the place, and then the potass is laid on the part of the skin exposed, and retained in its place by another piece of plaster.

The eschar produced by potassa is soft, and of a grey-

ish colour.

POTASSA CUM CALCE, L. E. D.—Potassa with Lime. A milder and more easily managed caustic than potassa.

AQUA (LIQUOR, L.) POTASSÆ, E. D .- Solution of Potass.

Diuretic and lithontriptic. Used against uric acid and urate of ammonia calculi. As an antacid, exhibited thus:

in the dose of one or two spoonsful in beef-tea, or added to some bitter infusion.

Has been recommended as an alterative, for the cure of scrofula, in doses of 3j. to a child from four to six years old; 3jss. to a child from six to eight; 3jj. from eight to fifteen; 3jjss. from fifteen to eighteen; 3ij.—3iv. to adults, in barley-water or water-gruel, combined with oil of jumiper in the proportion of a drop or two to a pint of the liquor.

Used externally, much diluted, as a lotion, in rickets and gouty swellings; as a collyrium, thus:

to be dropped into the eye in specks of the cornea.

SUBCARBONAS, POTASSÆ, L. E. Potassæ carbonas, D.—Carbonate of Potass.

Antacid and diuretic. Dose gr. v.—xv.—Эj.

May be combined as in the following diuretic and stimulant draught.

Spir. Ætheris comp. Tinct. cinnamomi Fiat haustus.	:	:	:	ʒss. 3 j ∙	
Or thus:					
R Subcarbonat. potassa	e			Ðj.	
Succi limonum				3ss.	
Aquæ cinnamomi				žj.	
Aceti scillæ .				Zjss.	
Tinct. opii .				gtt. v.

Succi limon, recent.			Zss.		
Tartrat. antimonii			gr. 1/6.		
Aquæ distillatæ .				3xj.	
Syrupi papaveris				3j.	

Fiat haustus quarta vel sexta quaque hora sumendus. Externally; Zviij. of the salt may be added to the water of a pediluvium, to be employed as a revulsive.

Liquor Potassæ subcarbonatis, L. Aqua potassæ carbonatis, D.—Solution of Subcarbonate of Potass.

(Potass. subcarb. fbj., Aq. distillat. Zxij., Solve et per chartam cola.)

Antacid and diuretic. Dose gtt. x.—3ss. in any bitter infusion, or combined thus:

CARBONAS POTASSÆ, L. E. Bicarbonas potassæ, D.—Bicarbonate of Potass.

Same as the carbonate, but more agreeable to the palate and stomach, and better adapted for the preparation of effervescing draughts, for which the following are formulæ:

1					
				Di.	
R Bicarbon. potassæ Aquæ				Zviii	
Solve, et adde				oving.

Demulcent and febrifuge.				30/12	

AQUA SUPERCARBONATIS POTASSÆ, E. — Water of the Supercarbonate of Potass.

(Aquæ lbx., Subcarb. potass. puriss. Zj., Solve, et subjice rivo gasis acidi carbonici.)

Antacid, diuretic, and lithontriptic. Has been used with advantage in the uric acid and urate of ammonia calculus. Dose zvj.—zviij. two or three times a day.

215

ACETAS POTASSÆ, L. E. D.—Acetate of Potass.

According to the dose, this acts either as a mild cathartic or powerful diuretic. It is one of the best saline deobstruants. Dose, as a cathartic, 3ij.—3iij.; as a diuretic, 9ss.—3j., combined thus:

R. Acet. potassæ
Oxymellis colchici
Aquæ puræ
Spir. junip. comp.
Spir. junip. comp.
Spir. junip. comp.

F. haustus pro re nata sumendus.

SUPERTARTRAS POTASSÆ, L. E. D.—Supertartrate of Potass.

Cream of Tartar is a mild cooling laxative and diuretic medicine. Much used in dropsy. Dose, as a purgative, \(\frac{7}{2}ss.-\frac{7}{2}j.\); sometimes combined with gr. ss.—gr. j. of tartar emetic. As a diuretic, \(\frac{7}{2}j.-\frac{7}{2}iij.\), combined with \(\frac{9}{2}j.-\frac{7}{2}iij.\) of the sub-borate of soda; or thus:

R Supertart. Potassæ
Pulv. scillæ exsicc.
Pulv. amom. zingiberis
gr. v.
Sit pulvis, sexta quaque hora sumendus.

in ascites.

TARTRAS POTASSÆ, L. E. D.—Tartrate of Potass.

Is a cooling aperient in doses of $\exists j$.— $\exists j$.; strongly purgative in doses of $\exists j$. A good purgative for maniacal and melancholic patients. Corrects the griping effects of resinous purgatives, and promotes their operation.

May be given combined as in this draught:

F. haustus, quamprimum vel primo mane sumendus.

NITRAS POTASSÆ, L. E. D.—Nitrate of Potass.

Diuretic and refrigerant. Given in doses of gr.v.-xv. dissolved in a cupful of cold water immediately before

- 0	-

of Potass.
(Nitrat. potass. partem j., Sacch. purif. partes iij.)

217

Allowed to dissolve slowly in the mouth they will frequently remove incipient inflammation of the fauces. Dose, one or two occasionally.

SULPHAS POTASSÆ, L. E. D.—Sulphate of Potass.

Purgative. Dose 3ss.—3vj. Chiefly used as an adjuvant to other purgatives. May be combined thus:

Sit mistura, cujus sumat cochlearia duo magna omni bihorio.

SUPERSULPHAS (BISULPHAS, D.) POTASSÆ, L.—Supersulphate of Potass.

Refrigerant and purgative. Given when it is desired to administer sulphuric acid, and at the same time open the bowels. Dose Dj.—Zij. Also used for making an effervescing draught, thus:—Equal weights, as a drachm of supersulphate of potass, and of carbonate of soda, may be dissolved, each separately, in two ounces of water, then mixed and drunk in a state of effervescence.

SULPHAS POTASSÆ CUM SULPHURE, E.—Sulphate of Potass with Sulphur.

Purgative. In its medicinal effects and exhibition it is similar to sulphureous mineral waters. A saline solution somewhat like the Harrowgate water may be made, thus:

SULPHURETUM POTASSÆ, L. E. D.—Sulphuret of Potass.

The sulphuret is to be reduced to powder, and tritu-

Or thus:

Solve sulphuretum in aqua, et adde acidum sulphuricum, dein agita.

The parts of the body affected with porrigo galeata, itch, and lepra, may be washed two or three times a-day with either of these lotions.

The latter preparation may be added to water, to form

a general sulphureous bath.

The sulphuret of potass has been given internally in croup, in doses of gr. j.—iv. to infants, and gr. v.—x. to adults, every three or four hours, either in pills with extract of liquorice, or in solution with syrup.

Has also been used in chronic and atonic rheumatism

and gout, combined with oil of juniper, or thus:

Ut fiant pilulæ xxx., sumat tres quarta quaque hora ex cyatho infusi calidi juniperi baccarum. in cutaneous affections.

POTASSÆ SULPHURETI AQUA, D.—Solution of the Sulphuret of Potass.

Used as a lotion for the itch of infants; added to water to make a sulphureous bath.

PRUNI DOMESTICÆ FRUCTUS. FRUCTUS SIC-CATUS, E. D. Pruna, L.—Prunes.

(Prunus domestica. Rosaceæ. South of Europe. h)
Prunes are demulcent and laxative.

PRUNUS LAURO-CERASUS — Folia, D.—Laurel Leaves.

(Prunus Lauro-cerasus. Rosacea. Italy. 4)

Laurel leaves have the flavour of bitter almonds. They are sedative and diuretic.

Officinal Preparation.

AQUA LAURO-CERASI, D .- Laurel Water.

Sedative and diuretic. Used instead of hydrocyanic acid, being less dangerous, in spasmodic affections and dyspepsia. Dose gtt.xx.—Zj. every two hours.

PTEROCARPI SANTALINI LIGNUM, E. D. Pterocarpi lignum, L.—Red Saunders' Wood

(Pterocarpus Santalinus. Leguminosæ. East Indies. 1) Used as a red colouring matter.

PULEGIUM. Vide MENTHE PULEGII, &c.

PUNICA GRANATUM. Vide GRANATI CORTEX.

PYRETHRI RADIX. Vide Anthemidis Pyrethri Radix.

PYROLA UMBELLATA—Herba, D.—The herbaceous part of Winter Green or Ground Holly.

(Pyrola umbellata. Ericinea. North America. 4)

A cold infusion is given as a palliative in strangury, nephritis, and gravel. Has been also used with success as a diuretic in dropsy. Dose 3j.—3ij. of the tincture; \$\frac{7}{2}ij.—\frac{7}{2}iv. of an infusion, prepared by pouring a pint of boiling water upon \$\frac{7}{2}j\$. of the stalks and leaves.

QUASSIÆ EXCELSÆ LIGNUM, E. D. Quassiæ lignum, L.—Quassia Wood.

(Quassia excelsa. Simarubeæ. Jamaica. h)

Quassia wood is very bitter. Given in the form of infusion, decoction, tincture, or extract.

Officinal Preparations.

INFUEUM QUASSIÆ EXCELSÆ, L. E. D .- Infusion of Quassia,

(Lig. quassiæ excels. rasi 7ss., Aq. bullientis Zviij.)

A pure bitter. Dose 3j.—Ziv. twice or thrice a-day. Given in bilious fevers, in stomachic complaints, hysteria, and gout.

TINCTURA QUASSIÆ EXCELSÆ, E. D.—Tincture of Quassia.

(Lig. quassiæ excels. rasi \(\frac{1}{2}\) j., Alcohol. dilut. \(\text{thijss.}\))

Dose 3 j.—3ij. diluted with water, or as an adjunct to stomachic infusions.

QUASSIÆ SIMARUBÆ CORTEX, E. CORTEX RADICIS, D. Simaroubæ cortex, L.—Simaroubæ Bark.

(Quassia simaruba. Simarubeæ. West Indies. h)

Tonic. Given in obstinate diarrhœa, dysentery, anorexia, indigestion, lientery, and intermittents, Dose in powder 3ss.—3 j. Best given in decoction, thus:

Decoque ad dimidium.

To be drunk in cupfuls in the course of the day.

Officinal Preparation.

Infusum simaroubæ, L. D.—Infusion of Simaruba.

(Simaroubæ cort. contus. 3ss., Aq. ferventis 0ss.)

Bitter, tonic; in large doses emetic. Dose Zij.

QUERCUS INFECTORIA. Vide GALLÆ.

QUERCUS ROBORIS CORTEX, E. D. Quercus cortex, L.—Oak Bark.

(Quercus robur. Amentaceæ, Europe. h)

Very astringent, and is used as such in hemorrhages, alvine fluxes, and other preternatural or immoderate secretions. Dose of the powder gr. xv.—3ss. two or three times a-day.

Officinal Preparations.

DECOCTUM QUERCUS ROBORIS, L. E. D .- Decoction of Oak Bark.

(Cort. Quercus rob. contus. Zj., Aquæ fbijss., &c.) Used as an astringent gargle and injection.

EXTRACTUM CORTICIS QUERCUS, D.—Extract of Oak Bark.

(The decoction evaporated.)

Sometimes so prepared as to be sold for kino.

RANUNCULUS ACRIS—Folia, D.—Leaves of up-right Meadow Crowfoot.

(Ranunculus acris. Ranunculaceæ. Indigenous. 1)
Very acrid, rubefacient, and epispastic.

RANUNCULUS FLAMMULA—HERBA RECENS, D.

—Recent herbaceous part of Lesser Spearwort.

(Ranunculus flammula. Ranunculacea. Indigenous.

Properties the same as those of the preceding.

RESINA ALBA-FLAVA. Vide PINUS RESINA.

RHAMNI CATHARTICI SUCCUS. Ex BACCIS, E. Rhamni baccæ, L. Rhamnus catharticus—baccæ, D.—Purging Buckthorn Berries and their juice.

(Rhamnus catharticus. Frangulaceæ. Indigenous. [7])
Cathartic. Dose, twenty of the fresh berries in substance, an ounce of the expressed juice, or a drachm of the dried berries.

Officinal Preparation.

SYRUPUS RHAMNI, L. D.—Syrup of Buckthorn.

(Rhamni baccar. succ. recent. 0iv., Zingib. rad. concis., Pimentæ baccar. contrit., sing. \(\frac{7}{2}ss., Sacch. purif. \) \(\text{lbiijss., &c.} \)

Cathartic. Seldom used except in clysters. Dose 3iv. —Zij. The operation of buckthorn must be assisted by

drinking freely of gruel and other diluents, as it generally occasions gripes, sickness, and dryness of the mouth, which, together with its disagreeable taste, render it altogether an unpleasant medicine.

RHATANIA. Vide KRAMERIA.

RHEI RADIX, L. E. D.—Rhubarb.

(Rheum palmatum—R. undulatum. Polygonex. China. b)

Rhubarb contains a peculiar principle, called Rhubarbarine, which is not used.

Purgative, astringent, and stomachic. Dose, as a pur-

gative, 9j.—7ss.; as a stomachic gr. vj.—x.

Rhubarb is usually given along with neutral salts or calomel. It may be administered as a purgative in the form of bolus, combined in this form:

> Re Pulv. rhei rad.

Fiant boli x. Dosis ij. omni hora donec soluta sit alvus.

Or this draught:

Aq. cinnamomi . . . Ft. haustus.

It may be given as a stomachic thus:

Officinal Preparations.

Infusum Rhei, L. E. D .- Infusion of Rhubarb.

(Rad. rhei Russ. contus. 3ss., Aq. bullient. 3viij., Spirit. lauri cinnamomi Zj., &c.)

Dose Zij .- Ziv.

VINUM RHEI, E .- Rhubarb Wine.

(Rad. rhei Russ. concis. \(\frac{7}{2}\)ij., Cort. canell\(\alpha\) alb. contus. \(\frac{7}{2}\)j.,
Alcohol. dilut. \(\frac{7}{2}\)ij., Vini albi Hispani \(\frac{7}{2}\)xv., &c.)

Tonic. Dose 3ij .- 3iv.

TINCTURA RHEI, L. E .- Tincture of Rhubarb.

(Rad. rhei Russ. concis. Ziij., Sem. amom. repent. contus. Zss., Alcohol. dilut. fbijss., &c.)

TINCTURA RHEI COMPOSITA, L. D.—Compound Tincture of Rhubarb.

(Rhei rad. concis. \(\frac{7}{2}\)ij., Glycyrrh. rad. contus. \(\frac{7}{2}\)ss., Zingib. rad. concis., Croci stig., sing. \(\frac{7}{2}\)ij., Aquæ \(\frac{7}{2}\)xij., Spir. ten. 0j.)

TINCTURA RHEI ET ALOES, E.—Tincture of Rhubarb and Aloes.

(Rad. rhei Russ. concis. 3x., Extract aloes socot. trit. 3vj., Sem. amom. repent. contus. 3ss., Alcohol. dilut. lbijss.)

TINCTURA RHEI ET GENTIANÆ, E.—Tincture of Rhubarb and Gentian.

(Rad. rhei Russ. concis. Zij., Rad. gent. lut. concis. Zss., Alcohol. dilut. Hijss.)

These tinctures are stomachic in doses of 3j.—3ij.; purgative in doses of 3iv.—3j.

EXTRACTUM RHEI, L. D .- Extract of Rhubarb.

(A decoction defecated and evaporated.)

Dose gr. x ._ 3ss. in pills.

PILULÆ RHEI COMPOSITÆ, E .- Compound Rhubarb Pills.

(Rad. rhei Russ. in pulv. trit. \(\frac{7}{2}\)j., Extract. aloes socot. \(\frac{7}{2}\)vj., Myrrh\(\pi\) \(\frac{7}{2}\)ss., Ol. volat. menth\(\pi\) piperit. \(\frac{7}{2}\)ss. Cum syrupo citri aurantii subige in massam.)

Stomachic and laxative. Dose 9j. twice a-day.

RHODODENDRI CRYSANTHI FOLIA, E.—Yel-low-flowered Rhododendron Leaves.

(Rhododendrum crysanthum. Ericineæ. Siberia. 1)

Stimulant, narcotic, and diaphoretic. Used in rheumatism and gout. Given in the form of infusion thus:

Aquæ bullientis . . .

Macera per horas xij. in vase clauso, et cola. Mane bibendum.

RHEADOS PETALA. Vide PAPAVER RHEAS.

RHOIS TOXICODENDRI FOLIA, E. D. Toxicodendri folia, L .- Sumach Leaves, or Poison Oak.

(Rhus toxicodendron. Terebinthacea. North America. 3)

Stimulant and narcotic. Have been used, in cases of paralysis, in doses of gr. ss .- gr. iv. twice or thrice a-day.

RICINI COMMUNIS SEMINA, L.E.—Seeds of Palma Christi.

RICINI COMMUNIS OLEUM FIXUM. Ex se-MINIBUS, E. Ricini oleum, L. Ricinus communis. Oleum e seminibus, D.—Castor Oil.

(Ricinus communis. Euphorbiaceæ. Indies. ①)

The seeds, from the acrid juice in their skins, are very drastic and emetic.

Castor oil is mildly cathartic, and is particularly eligible in cases where stimulating purgatives would prove hurtful. Dose 3ss.—3j. for an adult; 3j.—3ij. for an infant. Usually taken swimming on peppermint or other distilled water, or on wine; or made into an emulsion thus:

R. Ol. ricini commun. recent. . . 3.j Unius ovi vitellum,

aquam, spiritum et syrupum. Misce.

This draught does not irritate the intestines, and is

useful in cases in which a stimulant would be hurtful, as after the operation for strangulated hernia. Castor oil is also advantageously used in the form of clyster, in the dose of two or more ounces, combined with any emollient decoction.

Contrary to most medicines, castor oil, after frequent

repetition, operates in a less dose.

ROCCELLA TINCTORIA — LITMUS, D.—Canary Archel.

(Roccella tinctoria. Lichenes. Canary Islands. 4)

This has been exhibited internally to allay the tickling cough attendant on phthisis. From it litmus is manufactured, which is chiefly employed as a dye stuff, and as a test for acids.

ROSÆ CANINÆ FRUCTUS, E. D. Pulpa, L.— Hips, or Fruit of the Dog-Rose.

(Rosa canina. Rosaceæ. Indigenous. h.)

The pulp of hips is used to make a fine conserve.

Officinal Preparation.

Conserva (confectio, L.) Rosæ caninæ, E.—Conserve of Hips.

(Rosæ caninæ fructus maturi, a seminibus eorumque pube solicite purgati, partem j., Sacch. purif. partes iij.)

Refrigerant. Used chiefly as a vehicle for other remedies.

ROSÆ CENTIFOLIÆ PETALA, L. E. D.—Petals of the Damask Rose.

(Rosa centifolia. Rosacea. h)

The petals of the damask rose are laxative.

Officinal Preparations.

AQUA ROSÆ CENTIFOLIÆ, L. E. D.—Rose Water.

A very useful and common vehicle for other medicines.

Syrupus Rosæ Centifoliæ, L. E. D.—Syrup of the Damask Rose.

(Petal. recent. ros. centif. partem j., Aquæ bullient. partes iv., Sacch. purif. partes iij.)

Gently laxative. Dose 3ij .- 3 jss.

ROSÆ GALLICÆ PETALA, L. E. D.—Petals of the Red Rose.

(Rosa gallica. Rosaceæ. Europe. h)

The petals of the red rose are astringent and tonic.

Officinal Preparations.

MEL ROSE GALLICE, L. E. D .- Honey of Red Roses.

(Rosæ gallicæ petal. siccat. Zi., Aquæ bullientis lbj., Mellis despum. Zxvj.)

Used in gargles for ulcerations and inflammation of the mouth and fauces. It may be combined thus:

Misce. F. gargarisma.

In Aphtha gangrænosa.

Conserva (confectio, L.) Rosæ Gallicæ, E. D.— Conserve of Red Roses.

(Ros. gallicæ petal. nondum explicit. partem j., Sacch. purif. partes iij.)

Chiefly used as an excipient for more active remedies. Dose 3 j.—3 j.

INFUSUM ROSÆ GALLICÆ, L. E. D.—Infusion of Red Roses.

(Petal. ros. gallicæ siccat. Z j., Aquæ bullient. Hijss., Acidi sulphurici dilut. Zss., Sacch. purif. Z j.)

Refrigerant and subastringent. Used as a gargle in cynanche tonsillaris, and as an excipient of saline remedies, such as sulphate of magnesia, nitre.

SYRUPUS ROSE GALLICE, E .- Syrup of Red Roses.

(Petal. sicc. ros. gallic. partem j., Aquæ bullient. partes ix., Sacch. purif. partes x.)

Mildly astringent. Dose 3 j. - 3 j.

RORISMARINI OFFICINALIS CACUMINA, E. D. Rorismarini cacumina, L.—Rosemary Tops.

(Rosmarinus officinalis. Labiatæ. South of Europe.

Chiefly used, combined with other aromatics, in stimulant and discutient fomentations.

Officinal Preparations.

OLEUM VOLATILE RORISMARINI OFFICINALIS, L. E. D. __Volatile Oil of Rosemary.

(Ex cacuminibus.)

Fragrant, stimulant. Given in nervous headaches. Dose gtt. ij.—vj. rubbed up with sugar.

Spiritus rorismarini officinalis, L. E. D.—Spirit of Rosemary.

(Cacum. rorismarini off. recent. lbij.. Alcohol. fort. lbviij.)
Stimulant. Dose 3ss.—3ij.

RUBIÆ TINCTORUM RADIX, E. D. Rubiæ radix, L.—Root of Madder.

(Rubia tinctorum. Rubiaceæ. Zealand. 11)

Slightly astringent; said to be emmenagogue. Has been used in rickets. Dose in powder 9j.—3ss. united with sulphate of potass, three times a day.

RUMICIS ACETOSÆ FOLIA, E. D. ACETOSÆ FOLIA, L.—Common Sorrel Leaves.

(Rumex Acetosa. Polygoneæ. Indigenous. 4)

The leaves of common sorrel contain tartaric acid, and superoxalate of potass. They are cooling, antiscorbutic, and diuretic. An excellent whey may be made by boiling a few of the leaves in milk.

RUMEX AQUATICUS, RADIX, D.—Root of the Great Water Dock.

(Rumex Aquaticus. Polygoneæ. Indigenous. 4)

Bitter and slightly acidulous; purgative. Much celebrated for the cure of scurvy and cutaneous diseases. Dose of a decoction of \(\frac{7}{2} \)j. of the dried root in water \(\frac{7}{2} \xiv v j \), \(\frac{7}{2} \)ij. two or three times a-day.

RUTÆ GRAVEOLENTIS HERBA, E. RUTÆ FO-LIA, L. RUTA GRAVEOLENS—FOLIA, D. — The herbaceous part of Rue.

(Ruta graveolens. Rutaceæ veræ. South of Europe. 4)
Rue is tonic, stimulant, antispasmodic, and emmenagogue. Dose gr. xv.—Эij.

Officinal Preparations.

OLEUM RUTE, D .- Oil of Rue.

(Distilled from the dried plant.)

Antispasmodic; externally rubefacient. Dose gtt. ij.—gtt. v., rubbed up with sugar or mucilage.

EXTRACTUM RUTÆ GRAVEOLENTIS, E. D.—Extract of Rue.

(A decoction evaporated.)

Tonic, stomachic. Dose gr. x. - 9 j. in pills.

CONFECTIO (CONSERVA, D.) RUTE, L.—Confection of Rue-

(Rutæ fol. exsicc., Carui sem., Lauri bacc., sing. Zjss., Sagapeni Ziv., Piper. nig. Zij., Mellis Zxvj.)

Given in clysters, Dj.—3j. in Zviij. of gruel. In the convulsive affections of children.

SABINÆ FOLIA. Vide JUNIPERI SABINÆ FOLIA.

SACCHARUM, L. E. D.—Sugar.

(Saccharum officinarum. Gramineæ. East Indies. 4)

SACCHARUM NON PURIFICATUM, L. E. D.—Raw or Brown Sugar.

SAC 229

SACCHARUM PURIFICATUM, L. E. D .- Refined Sugar.

Sugar is not, as has been supposed, an antidote to the

poison of verdigris, but is useful as a demulcent.

Applied to spongy and unhealthy granulations, it acts as an escharotic. To abraded or inflamed surfaces it is

gently stimulant.

Refined sugar reduced to a very subtle powder alone, or combined with other substances, as in the following formulæ, is used as an application to the eye, in order to remove specks of the cornea, and in chronic ophthalmiæ.

R Sacch. purif.
Oxid. zinci vel
Nitrat. potassæ exsicc. āā . . . p. æq.
Tere simul in pulverem tenuissimum.

R Sub-nitrat. bismuth.
Sacch. purif. āā . . . p. æq.
Tere simul in pulverem tenuissimum.

R Sub-muriat. hydrarg. mit. Sacch. purif. āā . . . p. æq. Tere simul in pulverem tenuissimum.

These powders are blown into the eye by means of a quill, or they may be applied by means of a hair pencil.

SYRUPUS EMPYREUMATICUS, THERIACA, E. D .- Mo-lasses.

Molasses is the best substance for forming vegetable powders into pills, for it undergoes no decomposition by time, but maintains a proper consistency, and preserves the sensible qualities of the plant unimpaired for many years.

Officinal Preparations.

SYRUPI. CONSERVÆ. ELECTUARIA. TROCHISCI, &c. L. E. D.—

SAGAPENUM, GUMMI-RESINA, L. E. D.—Sagapenum.

Ferula Persica, *Umbelliferæ*, is said to yield *sagapenum*, a gum-resin, which is used for the same purposes as assafætida.

- SALIX ALBA—Cortex, D. Bark of the Common White Willow.
- SALICIS CAPRÆÆ CORTEX, E. D. Salicis cortex, L.—Bark of the Great Round-leaved Willow.
- SALIX FRAGILIS—CORTEX, D.—Bark of the Crack Willow.

(Salix alba-capræa-fragilis. Amentaceæ. Europe. h)

It is tonic and astringent, and has been used with advantage in debility, intermittents, and foul ulcers. Dose of the powder <code>\(\textit{j}\)_j.\(-\textit{z}\)_j, or z_j., of the following decoction, three or four times a-day:</code>

Decoque ad dimidium.

The bark of the willow has been recommended as a substitute for cinchona. It contains a crystallizable principle, which approaches the sulphate of quina in its antifebrile power.

It may be prepared in the following manner:

The bark is to be dried, crushed, boiled for one or two hours in water, and the liquid separated by a cloth, and powerful pressure. Subacetate of lead is then to be added as long as precipitation occurs; the whole filtered; the clear liquor boiled with enough of carbonate of lime to decompose the excess of acetate of lead, saturate the acetic acid, and remove the colour. Being left to settle, the clear liquor is to be decanted, the deposit washed twice or thrice, the washing liquor added to the former, and the whole evaporated to the consistence of an extract. This extract, whilst hot, is to be put into bibulous paper, and pressed for some hours; after which it is to be di-

gested in alcohol of sp. gr. 847, the fluid filtered and concentrated, when it will yield crystallized Salicine, very white and pure.

SALVIÆ OFFICINALIS FOLIA, E.—Sage.

(Salvia officinalis. Labiatæ. South of Europe. 4)

The leaves of sage are tonic, stimulant, and carminative. Given in the form of infusion, thus:

Salv. officin. fol. sicc. 3j., Aquæ bullient. 3xvj. Dose

Zij. three or four times a-day.

In debilities of the stomach and intestines, and to stop night-sweats. A weaker infusion, to which a little lemon juice is added, is a useful diluent in febrile disorders.

SAMBUCI NIGRÆ BACCÆ—CORTEX-FLORES, E. D. Sambuci flores, L.—Common Elder Berries, Bark and Flowers.

(Sambucus nigra. Caprifoliæ. Germany. h)

The inner bark, in a dose of 3ij.—3vj., is a hydragogue purgative; in smaller doses, gr. v.—9j., deobstruant; the flowers are used to make an ointment. The juice of the berries, mixed with sugar, and inspissated, forms what is commonly called *Elder Rob*.

Officinal Preparations.

Succus spissatus sambuci nigræ, E. D.—Inspissated Juice of Elder Berries.

(Succ. bacc. sambuci nig. matur. partes v., Sacch. purif. partem j.)

Cooling and aperient. Dose \(\frac{7}{3} \)j.—\(\frac{7}{3} \)j. diluted with water, as a drink in fever.

Unguentum sambuci, L. D.—Elder Ointment. (Sambuci florum lbij., Adipis præp. lbij.) Emollient.

SAPO DURUS—Ex OLEO OLEÆ EUROPÆÆ ET SODA CONFECTUS, L. E. D.—Hard or Spanish Soap.

Soap is purgative, diuretic, and lithontriptic; exter-

nally detergent and stimulant. Dose gr. v.—3ss. in pills, combined with rhubarb or some bitter extract. May also be given in the form of lohoch, thus:

To be taken in spoonsful in obstruction of the abdominal viscera.

Officinal Preparations.

CERATUM SAPONIS, L .- Soap Cerate.

(Sapon. duri Zviij., Ceræ flavæ Zx., Plumb. oxydi semivit. cont. lbj., Olivæ ol. 0j., Aceti, cong. j.)

Applied, spread on linen, around fractured limbs, when the inflammation has abated; it serves both as an adhesive plaster and as a saturnine application. Applied also to scrofulous swellings.

EMPLASTRUM (SAPONIS, L. D.) SAPONACEUM, E.—Soap Plaster.

(Emplast. oxidi plumbi semivit., partes iv., Emplast. gummosi partes ij., Saponis duri rasi partem j.)

Mildly discutient.

EMPLASTRUM SAPONIS COMPOSITUM, VEL ADHÆRENS, D.—Compound Soap or Adhesive Plaster.

(Emplast. sapon. Zij., Emplast. lithargyr. cum resina Ziij.)
Spread upon linen, this forms the common adhesive plaster.

TINCTURA SAPONIS CAMPHORATA, E. Linimentum saponis compositum, L. D.—Camphorated Tincture of Soap or Soap Liniment.

(Sapon. duri rasi Ziv., Camphoræ Zij., Ol. volat. rorismarini off. Zss., Alcohol. fort. lbij.)

Rubbed on the part affected with local pains.

TINCTURA SAPONIS ET OPII, E. D .- Vide Opium.

S C I 233

SAPO MOLLIS—Ex OLEO ET POTASSA CONFECTUS, L. E. D.—Soft Soap.

Seldom given internally.

SARSAPARILLÆ RADIX. Vide SMILACIS SARSA-PARILLÆ RADIX.

SASSAFRAS. Vide LAURUS SASSAFRAS.

SCAMMONIÆ GUMMI-RESINA. Vide Convolvuli scammoniæ gummi resina.

SCILLÆ MARITIMÆ RADIX, E. SCILLÆ RADIX,
L. SCILLÆ MARITIMÆ—Bulbus, D.—Squill Root or
Bulb.

(Scilla maritima. Liliaceæ. Spain and Portugal. 4)

Acrid, bitter, and nauseous. Emetic and purgative in large doses. Diuretic and expectorant in small. As an expectorant it must not be employed when pulmonary inflammation exists.

Dose of the fresh root gr. v.—gr. xv.; of the dried root gr. j.—gr. iv. The active principle of squill, scillitine, is excessively acrid and bitter.

Officinal Preparations.

Pulvis scillæ, D .- Powder of Squills.

Dose gr. j.—gr. iij.

Exhibited as a diuretic combined thus:

R Pulv. scillæ rad. gr. iij.
Pulv. opii gr. ss.

ACIDUM ACETICUM SCILLITICUM, E. Acetum scillæ, L. D.—Vinegar of Squills.

(Rad. scill. maritim. siccat. Zj., Acidi acetici ten. Zxv., Alcoholis fort. Zjss., &c.)

Dose 3ss .- 3ij. in cinnamon or other aromatic water.

S C I 235

Syrupus scillæ maritimæ, E.—Syrup of Squills.

(Acid. acet. scillit. partes iv., Sacchar. purif. trit. partes vij., &c.)

Oxymel scillæ, L. D.—Oxymel of Squills. (Mell. despum. fbiij., Aceti scillæ 0ij., &c.)

Dose 3ss.—3ss. in some aromatic water, or combined as in the following formulæ:

Ft. mistura. Sumat cochleare magnum omni hora.

Diuretic.

R Oxymel. scillæ
Syrupi althææ
Mucilag. acac. arab. gum. äā . ʒss.
Misce, et fiat linctus, de quo lambat sæpe.

Expectorant.

PILULÆ SCILLITICÆ, E. Pilulæ scillæ compositæ, L. D. —Squill Pills.

(Rad. scill. maritim. exsiccat. et in pulv. ten. trit.)j., Ammoniaci, Seminum amom. repent. in pulv. tritorum, Extract. glycyrrhizæ glabræ, sing. 3j., &c.)

Dose gr. x .- Dj. twice or thrice a-day.

May be united with mercury thus:

Fiat massa in pilulas xv. dividenda, quarum sumantur duæ singulis noctibus.

Squill combined with mercury is particularly efficacious in hydrothorax, especially when it produces inflammation of the gums and of the glands about the throat. In the exhibition of squill, it is a rule to give it to the extent necessary to induce nausea, as affording a test of the medicine being in a state of activity.

SCROPHULARIA NODOSA-FOLIA, D. - Knottyrooted Figwort.

(Scrophularia nodosa. Personatæ. Indigenous. 4) Anodyne and repellant. Used externally in the form of fomentation, to hemorrhoids.

Officinal Preparation.

Unguentum Scrophularia. — Ointment of Scrophularia. (Fol. recent. scrophulariæ nodos., Adip. suilli præparat. āā fbij., Adip. ovilli præparat. fbj. &c.)

SENEGÆ RADIX. Vide POLYGALÆ SENEGÆ RADIX.

SINAPIS ALBÆ SEMINA, E. Sinapis alba—semina, D.—White Mustard Seeds.

(Sinapis alba. Cruciferæ. Indigenous. ()

Swallowed entire, in the dose of a table-spoonful, white mustard seeds are stimulant, diuretic, and generally laxative. Useful in some cases of dyspepsia.

May be given in the form of infusion, thus:

B. Sinapis albæ semin. contus.

Cochlear. armorac. rad. concis. āā zss. Aquæ ferventis . . . zxvj.

Macera per horam, et cola.

Fiat mistura, de qua sumantur cochlearia duo ampla ter quotidie.

in paralysis.

Or a whey may be made thus:

Coquantur simul, donec pars casiosa in coagulum abierit, deinde coletur serum, et sumatur cyathus subinde.

SINAPIS NIGRA—SEMINUM PULVIS, L. D. — The Powder of Black Mustard Seeds.

(Sinapis Nigra. Cruciferæ. Indigenous. ①)

A table-spoonful of powdered mustard, diffused in a pint of tepid water, operates briskly as an emetic.

Ziv. of the powder of mustard may be sometimes advantageously added to the water of a pediluvium.

Officinal Preparation.

CATAPLASMA SINAPIS, L. D. __Mustard Poultice.

(Pulv. sinapis. sem., Lini usitat. sem. pulv. āā lbss., Aceti calidi, q. s. M.)

Applied to the soles of the feet in typhus and comatose affections, to the pained part in rheumatism, and where-

ever it is desired to produce a speedy counter irritation. It is commonly removed in ten or fifteen minutes.

SMILACIS SARSAPARILLÆ RADIX, E. D. Sarsaparillæ radix, L.—Sarsaparilla.

(Smilax Sarsaparilla. Smilaceæ. Virginia. h)

The active matter resides in the cortical part. It is demulcent, diuretic, diaphoretic, and alterative. Used in syphilis, scrofula, chronic eruptions, cachexiæ, and rheumatism. Best mode of exhibition is in infusion, such as this:

Macera per horas xxiv. in vase leviter clauso, et cola; liquoris colati sumat partem tertiam ter quotidie.

Officinal Preparations.

Infusion of Sarsaparilla. Compositum, D.—Compound Infusion of Sarsaparilla.

(Rad. sarsaparillæ prius aqua frigida mundatæ et dein incisæ Zj., Aquæ calcis lbj. &c.)

Dose živ.—viij. twice a-day.

DECOCTUM SMILACIS SARSAPARILLÆ, L. E. D.—Decoction of Sarsaparilla.

(Rad. smil. sarsaparillæ concis. Zvj., Aquæ lbviij. &c.)

Dose Ziv.—viij. two or three times a-day.

Decoctum Sarsaparillæ compositum, L. D.—Compound Decoction of Sarsaparilla.

(Decoct. sarsaparillæ ferv. 0iv., Sassafras rad. concis., Guaiaci lig. rasi, Glycyrrh. rad. cont., sing. \(\frac{7}{2}\)j., Mezerei rad. cort. \(\frac{7}{2}\)ij. &c.)

This is similar to the Lisbon Diet-Drink. Dose ziv.—viij. two or three times a-day.

Syrupus sarsaparillæ, L. D.—Syrup of Sarsaparilla. Dose Zij.—iv.

Extractum Sarsaparillæ, L. D.—Extract of Sarsapa-

Dose gr. x.— Ji. in pills, or added to the decoction to render it stronger and more efficacious.

Extractum sarsaparillæ fluidum, D.—Fluid Extract of Sarsaparilla.

Dose 3ss.—ij.

SODA ._ Soda.

SUBCARBONAS (CARBONAS, D.) SODÆ, E. L.—
Subcarbonate of Soda.

Given in acidity of the stomach, and in the lithic acid diathesis. Dose gr. v.— Dj. either in powder or in solution in bitter infusions, thus:

Fiat haustus bis quotidie sumendus.

Officinal Preparations.

Sodæ Carbonatis Aqua, D.—Solution of Carbonate of Soda.

(Made by dissolving \(\)\forall \(\) of subcarbonate of soda in 0\(\)\forall \(\) of distilled water.)

An ounce of this solution, mixed with half an ounce of lemon juice and water, q. s., forms a pleasant effervescing draught.

Sode subcarbonas exsiccata, L. Sode carbonas siccatum, D.—Dried Subcarbonate of Soda.

Lithontriptic and antacid.

PILULÆ SUBCARBONATIS SODÆ, E.—Pills of Subcarbonate of Soda.

(Subcarbonat. sodæ exsicc. partes iv., Sapon. dur. partes iij. Syrup. simpl. q. s.)

Dose Dj.—ij. in the course of the day. In calculous

complaints and other affections of the urinary organs; also in acidity of the stomach.

CARBONAS (BICARBONAS, D.) SODÆ, E. L.— Carbonate of Soda.

Used for effervescing draughts and mixtures.

Soda powders are contained in two distinct papers, one of which is blue, the other white; that in the former consists of 3ss. of the bicarbonate of soda; that in the latter, of gr. xxv. of tartaric acid. These powders require half

a pint of water.

Seidlitz powders consist of two different powders, the one contained in a white paper consists of Jij. of tartarized soda, and Jij. of bicarbonate of soda; that in the blue paper, of gr. xxxv. of tartaric acid. The contents of the white paper are to be dissolved in half a pint of spring water, to which those of the blue paper are to be added; the draught is to be taken in a state of effervescence.

The carbonate of soda may be given, as a tonic, in the

form of pastilles, thus:

Divide into pastilles of gr. xv.—Dj. of which one, or two, or three, may be taken daily.

Or in mixture, thus:

Solve sales, et adde

Combined thus:

 Ut ft. massa, in pil. xxx. æquales distribuenda, quarum sumat iij., nocte maneque cum infus. lini vel decoct. althææ pro potu communi.

it is very efficacious in calculous irritation from uric acid, and pre-eminently useful in relieving the ardor urinæ in gonorrhœa.

AQUA (CARBONATIS SODÆ ACIDULA, D.) SUPERCARBONATIS SODÆ, E.—Water of Supercarbonate of Soda.

This is in common use under the name of Soda Water. Dose fbss.—j.

ACETAS SODÆ, D .- Acetate of Soda.

Used for the same objects as the acetate of potass, and as it is not deliquescent, more convenient. Dose 9j.—iv.

TARTRAS SODÆ ET POTASSÆ, L. E. D.—Tartrate of Soda and Potass.

First introduced into medical practice by an apothecary of Rochelle, hence the name Rochelle Salt. An excellent purgative in the dose of 3vj.—x.

May be given combined thus:

R Tart. sodæ et potassæ . . . gr. x. Pulv. rhei . . . gr. v.

Misce. F. pulv. mane sumendin the mesenteric obstruction of children.

Or, as a morning draught, thus:

F. haustus, in effervescentia cum succi limonis cochl. ampl. omni mane, sumendus.

SUBBORAS SODE, L. E. Sodæ Boras, D.—Borax.

Diuretic and emmenagogue. Dose 3ss.—Bij. Used externally in the form of solution, thus:

in thrush.

MEL SUBBORATIS SODE, L. E. D .- Honey of Borax.

(Subboratis sodæ triti partem j., Mellis despum. partes viij.)

Employed as a detergent in aphthæ and ulcers of the mouth; used also in ptyalism.

PHOSPHAS SODE, E. D .- Phosphate of Soda.

Purgative. Dose \(\frac{7}{3} \)j.\(-\frac{7}{3} \)x. in broth. It is less nauseous than the other saline cathartics.

MURIAS SODÆ, L. E. D.—Muriate of Soda.

Useful as a tonic in some cases of dyspepsia; and in large doses it is said to check vomiting of blood. Also anthelmintic, being useful in correcting that disordered state of the bowels which favours the propagation of worms. Dose gr. x.—3ss. Exhibited thus:

Fiat pulvis, et detur drachma dimidia pro dosi, tempore matutino.

It is a common ingredient in stimulating clysters, in the quantity of \(\frac{7}{2} \ss.\)—j. Used externally as a fomentation to bruises; sea-water, of which the muriate of soda is the principal ingredient, forms a gently stimulating bath.

Officinal Preparation.

Pulvis salinus compositus, E. D.—Compound Saline Powder.

(Muriatis sodæ purioris, Sulphatis magnes., ana, partes iv., Sulphatis potassæ, partes iij.)

A useful laxative in costive habits, when taken to the extent of a tea-spoonful in eight ounces of water every morning before breakfast. Applied externally, in the form of a saturated solution, to scrofulous tumours.

SULPHAS SODE, L. E. D .- Sulphate of Soda.

Purgative in a dose of \(\frac{7}{2} \ss._j.; \) diuretic and aperient in smaller doses, largely diluted. Lemon juice or cream of tartar disguises its nauseous taste.

SOLANI DULCAMARÆ CAULES, E. D. Dulcamaræ caules, L. — Twigs of Bittersweet or Woody Nightshade.

(Solanum Dulcamara. Solaneæ. Indigenous. 1)

Narcotic, diuretic and sudorific. An overdose produces nausea, vomiting, and convulsions. Dulcamara contains an active principle, *Solanine*, which is narcotic.

Dose Dj.__3j. of the powder; gr. v.__x. of an extract.

Officinal Preparation.

DECOCTUM DULCAMARÆ, L. D.—Decoction of Bittersweet.

(Dulcamaræ caulis concisi \(\frac{7}{3} \) j., Aquæ 0jss.)

Used as a diet drink in chronic eruptions, rheumatism, scrofula, and jaundice. Dose Zij.—iij. thrice a-day, gradually increased.

SPARTII SCOPARII SUMMITATES, E. Cacumina, D. Spartii cacumina, L.—The tops of Broom.

(Spartium scoparium. Leguminosæ. Indigenous. h)

Diuretic. Given in decoction, thus:

Decoque ad Zviij. et cola.

The following formulæ are useful methods of administering this decoction in dropsical complaints:

R Decoct. spart. scopar. summ. . 3j.
Spiritus ætheris nitrosi . gtt.x.
Sumatur alternis horis.

Spermaceti is principally employed in the formation of emollient ointments.

Officinal Preparation.

CERATUM SIMPLEX, E. Ceratum cetacei, L. Unguentum cetacei, D.—Simple Cerate.

(Olei oleæ Europææ, partes vj., Ceræ albæ, partes iij., Spermaceti, partem j. &c.)

Emollient and cooling.

SPIGELIÆ MARILANDICÆ RADIX, E. D. Spigeliæ radix, L.—Indian Pink root.

(Spigelia Marilandica. Gentianeæ. North America. 4)

Used to expel lumbrici from children; also given in the insidious remitting fever of infants. Its exhibition should be preceded by an emetic, and its action assisted by purgatives. Dose gr. xv.—3j. of the root in powder, morning and evening; given also in the form of infusion, thus:

R	Spigeliæ rad. concis.		Zss.
	Sennæ foliorum .		Ğij.
	Aurant. corticis concis.		-
	Santonici sem. contus.		

SPIRITUS. For the different spirits, vide ALCOHOL, and the different substances which form the bases of the distilled spirits.

SPONGIA OFFICINALIS, L. E. D .- Sponge.

(Spongia officinalis. Cr. Zoophyta. ORD. Spongia. Mediterranean and Red Sea.)

Used externally as a compress to stop hæmorrhages; or, dipped in melted wax, and pressed together until the wax hardens, as a tent to dilate sinuses, by its expansion when the wax melts by the heat of the body.

Spongia usta, L. Pulvis spongiæ ustæ, D.—Burnt Sponge.

Contains *iodine*, and is given in goitre, scrofula, &c.

Dose 3j.—3iij. made into an electuary or troches, such as these:

R Spongiæ ustæ				 Zj.
Sacchar. pur.				Ziij.
Extr. glycyrrh.	glab.			Ziij.
Pulv. amyli				Zij.
Mucilag. acaciæ		gum	ım.	q. s.

STALAGMITIS CAMBOGIA. Vide GAMBOGIA.

STANNUM ._ Tin.

STANNI LIMATURA—PULVIS, L. E. D. — Tin Filings and Powder.

Anthelmintic. Employed against tænia, in a dose of $\bar{3}$ ss.— $\bar{3}$ j. in treacle, on an empty stomach, for three mornings, after which a cathartic is to be administered. May also be given, combined thus, in the form of bolus:

R	Pulv. stanni . Extract. artem.	absint	h.	٠	٠	₹j∙
	Pulv. jalap. āā					3j.
	Syrup. taraxaci					q. s.

STAPHISAGRIÆ SEMINA. Vide DELPHINII STA-PHISAGRIÆ SEMINA.

STRAMONII HERBA. Vide DATURÆ STRAMONII HERBA.

STRYCHNOS NUX VOMICA, D.—Ratsbane or Poison Nut.

(Strychnos nux vomica. Strychneæ. India. 4)

Nux vomica is so horny that it cannot be reduced to powder except by rasping, or by being stove-dried. It is poisonous to most animals when taken in large doses, producing tetanic symptoms.

Used in paralytic affections. Dose of the powder

gr. iij.—xvj. in the form of pill.

Officinal Preparations.

Extractum nucis vomica, D.—Extract of Nux Vomica.
(Spirituous tincture inspissated.)

Dose gr. 4—jss. made into pills, thus:

R. Extract. nucis vomicæ

Saponis dur. q. s.

F. massa in pilulas xxx. dividenda. Dosis j.—xij. in die.

Tinctura nucis vomica, D.—Tincture of Nux Vomica. (Fruct. strychnos nucis vomica rasi Zij., Spir. rectif. Zviij.)

Dose gtt. v.—gtt. xx.

Nux vomica contains two active principles, Strychnia and Brucea, which were discovered by Pelletier and Caventou. Strychnia may be prepared thus:

Boil rasped nux vomica three times in water, adding at last a very little muriatic acid; evaporate the decoc-

tion to the consistence of syrup; add fresh quick-lime 3j. to each 3v. of the nux vomica; strain through cloth; wash the sediment with alcohol of sp. gr. .923 to dissolve the brucea; dry the remaining precipitate; add alcohol of sp. gr. .847 to dissolve the strychnia; boil and evaporate about four-fifths; the strychnia crystallizes as the alcohol cools, and may be rendered purer by dissolving again in alcohol, evaporation and crystallization; the brucea, being more soluble in spirit, remains in solution.

Strychnia crystallizes in very much elongated octohedrons, or in grains. It is one of the most violent of the vegetable poisons. An eighth, or even a sixteenth, of a grain are sufficient to cause accidents; *Brucea*, or the alcoholic extract of nux vomica, should be used in its stead. For *Brucea*, see *False Angustura bark*, p. 80.

The dose of strychnia is gr. $\frac{1}{12}$ —gr. $\frac{1}{8}$ made into a pill, thus:

It may be given in the form of mixture thus:

R. Strychniæ puræ
Sacch. purif.
Acid. acet.
Ag. distillat.
Strychniæ puræ
Gr. j.
Zij.
gtt. ij.

Strychnia is also made into a tincture thus:

STYRACIS BENZOINI BALSAMUM, E. Benzoinum, L. Styrax benzoin—resina, D.—Benzoin.

(Styrax benzoin. Ebenaceæ. Sumatra. h)

Odoriferous, fragrant, and balsamic. Used principally for obtaining benzoic acid.

Officinal Preparations.

ACIDUM BENZOICUM, L. E. D.-Benzoic Acid-

Dose gr. x .-- 3ss.

TINCTURA BENZOINI COMPOSITA, L. E. D.—Compound Tincture of Benzoin.

(Balsam. styracis benzoini triti Ziij., Balsami myroxyli peruif. Zij., Extract. aloes hepat. trit. Zss., Alcohol. fort. lbij.)

Expectorant and antispasmodic. Dose 3ss. — 3ij. rubbed up with yolk of egg. Applied externally to wounds.

STYRACIS OFFICINALIS BALSAMUM, E. Resina, D.—Balsam of Storax.

(Styrax officinale. Ebenaceæ. Syria. 6)

The balsam of storax has an agreeable odour, and aromatic taste. It is stimulant and expectorant. Dose gr. x.—Djss.

Officinal Preparation.

PILULÆ E STYRACE, D. Vide OPIUM.

SUCCINUM, L. E. D.—Amber.

Amber is found chiefly on the shores of the Baltic, either under the sea or in the alluvial coast. Supposed to be of vegetable origin.

Officinal Preparations.

OLEUM SUCCINI, L. E. D .- Oil of Amber *.

(Distilled from amber with a gentle heat, and purified by re-distillation.)

Stimulant and antispasmodic. Dose gtt. x.—xij. rubbed up with mucilage. Used externally as a rubefacient in the form of liniment, thus:

^{*} The empyreumatic oil obtained as a bye product in the manufacture of coal gas, is identical with, and much cheaper than, oil of amber.

R. Ol. succini Tinct. opii Misce. in tic douloureux, and in rheumatic pains.
ACIDUM SUCCINICUM, E. D.—Succinic Acid. Never used in medicine.
SULPHUR SUBLIMATUM, L. E. D. — Sublimed Sulphur.
SULPHUR SUBLIMATUM LOTUM, L. E. D.— Washed Sublimed Sulphur.
SULPHUR PRÆCIPITATUM, L.—Precipitated Sulphur.
Sulphur is stimulant, laxative, and diaphoretic. Used both internally and externally in cutaneous diseases, and particularly itch. May be given in the form of bolus, thus:
R. Sulphur. sublim gr. viij. Sapon. dur gr. iv.
Syrup. artem. absinth q. s.
F. bolus; mane nocteque sumendus.
As a laxative, it is exhibited in rheumatism, gout,
rickets, asthma, chronic catarrhs, and in particular, com-
bined with supertartrate of potass, in hæmorrhoidal affec-
tions. Dose 3ss.—3ij. night and morning.
May be given combined as in the following formulæ:
R. Sulphuris
Magnesiæ gr. xv.
Tere simul cum mucilagine gummi acac. arab. et adde
Emuls. amygdal
Syrupi croci
Fiat haustus.
R. Sulphuris loti
Sulphat. potassæ gr. x.
Sulphat. potassæ gr. x. Pulv. rhei gr. v.
Pulv. nucis moschatæ . gr. ij.
Fiat pulvis.

Officinal Preparations.

OLEUM SULPHURATUM, L. E .- Sulphurated Oil.

(Ol. ol. Europ. partes viij., Sulphuris sublimati, partem j.)

Formerly recommended in coughs, consumptions, and other disorders of the lungs, in the dose of gtt.x.—xl.; but now seldom given internally. Externally, it is applied to foul ulcers.

Unguentum sulphuris, L. E. D.—Sulphur Ointment.

(Adipis suilli, partes iv., Sulphuris sublimati, partem j.)

Antipsoric. A pound of ointment serves for four unctions. The patient is to be rubbed every night; a fourth part of the body at each time.

The following is a formula for a more agreeable oint-

ment:

Potass. subcarb.					Ziv.
Aq. rosæ .					3.j.
Hydrarg. sulphur	ret.	rubr.		*	3j.
					3ss.
					дхі.
s:					
Sulphur. sublim.					Zij.
Sulphatis zinci		•		•	ξij.
	Aq. rosæ Hydrarg. sulphus Ol. lavand. Sulphur. sublim. Adipis suilli āā Iisce. s:	Aq. rosæ Hydrarg. sulphuret. Ol. lavand. Sulphur. sublim. lot. Adipis suilli āā lisce. s: Sulphur. sublim. Sulphur. sublim. Sulphur. sublim.	Aq. rosæ Hydrarg. sulphuret. rubr. Ol. lavand. Sulphur. sublim. lot. Adipis suilli āā Lisce. S: Sulphur. sublim. Sulphur. sublim. Sulphur. sublim.	Aq. rosæ Hydrarg. sulphuret. rubr. Ol. lavand. Sulphur. sublim. lot. Adipis suilli āā Lisce. S: Sulphur. sublim. Sulphur. sublim. Sulphur. sublim.	Hydrarg. sulphuret. rubr Ol. lavand

Ol. lauri q. s. ut fiat unguentum.

Or this:

Solve saponem ex aquæ q. s. dein adde gradatim sulphur.

Unguentum sulphuris compositum, L.—Compound Sulphur Ointment.

(Sulphuris sublimat. fbss., Veratri rad. cont. \(\frac{7}{2}\)ij., Potassæ nitrat. \(\frac{7}{2}\)j., Sapon. mollis fbss., Adipis præp. fbjss.)

More efficacious than the simple ointment.

TABACI FOLIA. Vide NICOTIANÆ TABACI FOLIA.

TAMARINDI INDICÆ FRUCTUS—FRUCTUS

conditus, E. Leguminis pulpa, D. Tamarindi

pulpa, L.—The Pulp or preserved Fruit of the Tama
rind.

(Tamarindus Indica. Leguminosæ. East and West Indies. 1)

Acidulous, cooling, and laxative. Dose Ziij.—Zj. or more. Tamarinds increase the action of the sweet purgatives, as cassia and manna, and weakens that of the resinous cathartics.

Tamarind whey, made by boiling Zij. of the fruit with Ibij. of milk, and straining, is an excellent diluent in fevers.

TANACETI VULGARIS FLORES — FOLIA, E. Folia, D.—Flowers and Leaves of Common Tansy.

(Tanacetum vulgare. Corymbiferæ. Indigenous. 4)
Tonic, vermifuge, and emmenagogue. Used, though
seldom, to prevent the return of gout; and in hysteria,
from suppression of the menses. Dose 3j. or more, in
the form of infusion. The seeds, which are powerfully
anthelmintic, are used in the same manner as, and sometimes substituted for, the semen santonici.

- TARAXACI RADIX. Vide LEONTODI TARAXACI RADIX.
- TEREBINTHINA CANADENSIS. Vide PINI BAL-SAMEÆ RESINA.
- TEREBINTHINA CHIA, L. Pistacia terebinthinus

 —Resina liquida, D.—Cyprus Turpentine.

(Pistacia terebinthinus. Terebinthaceæ. Chios. Cyprus. h)

Cyprus turpentine is stimulant, diuretic, and purgative. Dose 9j.—3j. in bolus or emulsion, with mucilage or yolk of egg.

9

T I G 253

TEREBINTHINÆ OLEUM. Vide PINI OLEUM VOLATILE.

TEREBINTHINA VENETA. Vide PINI LARICIS RESINA LIQUIDA.

TEREBINTHINA VULGARIS. Vide PINI SYL-VESTRIS RESINA LIQUIDA.

TESTÆ, L.—Oyster Shells.

(Ostrea edulis. Mollusca. Acephala.)

Oyster shells are principally composed of carbonate of lime, with a little animal matter. When cleaned and reduced to an impalpable powder (testæ præparatæ), they are administered, as an antacid and absorbent, in the acidities of children, and during dentition. Dose gr. x.—

Zij. They may be given as combined in the following anodyne and carminative mixture for infants:

R. Testarum præparatarum
Syrupi papaveris
Spiritus ammon. fætid.
Ol. anethi
Ol. fæniculi dulc. āā
Aq. distillatæ
Sij.
Spiritus ammon. fætid.
Sji.
Sji.

Ft. mistura, cujus sumat coch. parv. j. 4tis horis.

TIGLII OLEUM, L. CROTON TIGLIUM,—Oleum ex Seminibus expressum, D.—Croton Oil.

(Croton Tiglium. Euphorbiacea. Moluccas. b)

Powerfully cathartic, a drop or two being a sufficient dose. It may be exhibited made into a pill with crumb of bread, or combined with castor oil, or made into this draught:

R. Olei tiglii . . . gtt.j.—ij. Syrup. simpl.

Mucilag. acac. arab. āā . ʒij. Infus. anthem. nob. . ʒij.

Tere simul oleum et mucilaginem, dein adde, sy-rupum, et paulatim, infusum.

After swallowing a little milk, take the draught very

quickly, and wash it down with the same diluent.

From the smallness of its dose, croton oil can be given in circumstances in which other effectual medicines cannot be swallowed; in some cases, indeed, it is sufficient

merely to touch the tongue with it.

A solution of the oil in alcohol may be prepared, in the proportion of eight drops of the oil to an ounce of alcohol, digested for some time, and then filtered. This allows the dose to be readily apportioned, according to the circumstances of the case under treatment.

TOLUIFERÆ BALSAMI BALSAMUM, E. RESINA, D. BALSAMUM TOLUTANUM, L. — Tolu Balsam.

(Toluifera balsamum. Terebinthaceæ. America. h)

Stimulant and expectorant. Agrees in every respect with the balsam of Peru. Dose gtt. x.—3ss. triturated with mucilage.

Officinal Preparations.

TINCTURA TOLUIFERÆ BALSAMI, E. D.—Tincture of Tolu.

(Balsam. toluif. balsam. Zjss., Alcohol. fort. 16j.)

Dose 3ss.—3j.

May be given combined thus:

Misce et adde gradatim

Aq. distillatæ . . . Zivss.
Tinct. opii camphorat. . . Ziij.
Syrup. toluif. balsam. . . Ziij.

Misce. Ft. mistura, cujus capiat coch. ampl. ij. ter in die.

in chronic catarrhal disorders, attended by difficult expectoration, when no inflammatory symptoms are present.

SYRUPUS TOLUIFERÆ BALSAMI, L. E. D .- Syrup of Tolu. (Syrup. simpl. fbij., Tinct. toluif. balsam. Zj.)

Used to impart its agreeable flavour to draughts, mixtures, and emulsions. Dose 3j.—3iv.

TORMENTILLÆ ERECTÆ RADIX, E. TOR-MENTILLÆ RADIN, L. TORMENTILLA OFFICINA-LIS_Radix, D._Tormentil Root.

(Tormentilla erecta. Rosaceæ. Indigenous. 4)

Astringent. Dose of the substance in powder Di.—Dij., or of this decoction:

Dose Zij. in colliquative diarrhœa.

This decoction may be prescribed according to the subjoined formulæ:

Decoct. tormentillæ : . 3vss. Pulv. cret. comp. cum opio . 3ij. Tinct. rhataniæ . . . 3ss.

M. Ft. mistura, cujus sumantur coch. ampl. iij. bis terve in die, urgente diarrhœa.

Misce et adde gradatim

Decoct. tormentillæ
Tinct. rhatan.
Tinct. opii

gtt.

. gtt. xv. Misce. Ft. mistura. Capiat cochlear. ij.—iij., bis terve de die.

Or:

in leucorrhœa and chronic diarrhœa.

TOXICODENDRI FOLIA. Vide RHOIS TOXICODEN-DRI FOLIA.

TRAGACANTHA. Vide ASTRAGALUS TRAGACANTHA.

TRITICUM HYBERNUM—SEMINUM FARINA, D.—Wheat Flour.

(Triticum hybernum. Gramineæ. ())

Wheat flour is ordered by the Dublin Pharmacopæia for the preparation of the Cataplasma fermenti cerevisiæ, page 97.

TUSSILAGINIS FARFARÆ FLORES—FOLIA, E. D. Tussilago, L.—Coltsfoot.

(Tussilago farfara. Corymbiferæ. Indigenous. 4)

An infusion of the dried leaves is much used as an expectorant in coughs, phthisis, and other disorders of the breast and lungs; and a strong decoction is said to be of considerable service in scrofulous cases. Commonly directed to be taken in milk. Dose 3ss.—3j.

VALERIANÆ OFFICINALIS RADIX, E. D. VA-LERIANÆ RADIX, L.—Valerian Root.

(Valeriana officinalis. Valerianeæ. Europe. 4)

Tonic, antispasmodic, and emmenagogue. Dose, in powder 9j.—3j., three or four times a-day. Mace conceals its unpleasant taste.

It may be combined thus:

R Valerianæ rad. concis.

Aquæ ferventis
Digere per horam, et liquorem frigefactum cola;
Colaturæ adde

Spir. ammoniæ aron	nat.			Zij.
Tinct. serpentariæ				Zss.
Sumatur pars sexta bis	s qu	otidie.		
hysteria, hemicrania, and in	n sc	me spec	eies	s of epilepsy.
R Pulv. valerian. rad.				Ðj.
moschi .				gr. xiv.
camphoræ				gr. vj.
F. pulvis, cujus sumat	gr.	viij.—x	ij.,	bis terve die.
F. pulvis, cujus sumat	gr.	V11J.—X	IJ.,	bis terve die.

Tinct. valerian. ammoniat.

Ft. haustus, ter quotidie sumendus.

in hysterical affections, epilepsy, &c.

in

The virtues of valerian chiefly reside in a volatile oil.

Officinal Preparations.

INFUSUM VALERIANE, D .- Infusion of Valerian.

(Rad. valerianæ sylvest. in crass. pulv. trit. Zij., Aq. ferv. Zvij., &c.)

This infusion combined with spirit. lavand. comp. and syrup. aurant. ana Zss., is given with advantage in hysterical epilepsy and other nervous affections, when the stomach cannot bear the powder. By omitting the syrup and triturating ol. valerianæ volat. gtt. xij. with sacch. purif. Ziij., adding to it the infusion, with spir. ammon. fætid. Ziij., a mixture is formed, which effectually relieves the uncomfortable sensation of borborygmus, so troublesome in many cases of hysteria.

TINCTURA VALERIANÆ, L. D.—Tincture of Valerian.

(Valerianæ rad. Ziv., Spir. ten. 0ij.)

Dose 3ss .- 3ij.

TINCTURA VALERIANÆ AMMONIATA, L. E. D.—Ammoniated Tincture of Valerian.

(Rad. valerianæ off. contus. Ziv., Alcohol. ammoniat. lbijss.)
Dose Zss.—Zij.

VERATRI ALBI RADIX, E. D. VERATRI RADIX, L.—White Hellebore Root.

(Veratrum album. Colchicacea. North of Europe. h)

White hellebore contains the same alkaline principle

(Veratria) as colchicum.

It is a drastic emetic, and purgative in the dose of gr. ss.—iij. Used as an errhine, and in the composition of itch ointments.

Officinal Preparations.

UNGUENTUM VERATRI, L. D.—Ointment of White Hellebore.

(Veratri rad. contrit. Zij., Adipis præparatæ Zviij., Limonis olei gtt. xx.)

Used in itch and other cutaneous diseases.

Decoctum veratri, L. D.—Decoction of White Hellebore. (Veratri rad. cont. Zj., Aquæ 0ij., Spirit. rect. Zij., &c.)
Only used externally in cutaneous affections.

TINCTURA VERATRI ALBI, E.—Tincture of White Hellebore.

(Rad. veratri albi contus. Ziv., Alcohol. dilut. Zxvj., &c.)

A very unmanageable remedy. Dose gtt. v.—x. very gradually increased.

VINUM VERATRI, L.—Wine of White Hellebore.

(Rad. veratri cont. Zviij., Spir. ten. 0j., Aq. distillat. 0jss.)

Dose 3ss.—3ij.

VERBASCUM THAPSUS - Folia, D. Leaves of Great Mullein.

(Verbascum thapsus. Solaneæ. Indigenous.)
Anodyne and emollient. Chiefly used in fomentations.

Ovor. duor. vitellos
Sacch. purif. gtt. iv.

Misce. Dosis Zjss. ter quaterve vel sæpius quotidie.

for supporting the declining powers of the system, when nothing else in the form of medicine can be taken.

Hock, Vinum Rhenanum, is said to be the best wine for

dyspeptics.

Officinal Preparations.

VINA MEDICATA, E. D .- Medicated Wines.

VIOLÆ ODORATÆ FLORES, E. D.—Flowers of the Sweet Smelling Violet.

(Viola odorata. Violaceæ. Indigenous. 4)

The recent flowers are slightly laxative. All the parts of the plant contain *emetine*, which accounts for the well-known emetic properties of the roots.

Officinal Preparation.

SYRUPUS VIOLE ODORATE, E. D .- Syrup of Violets.

(Flor. recent. violæ odoratæ, partes ij., Aquæ bullientis partes viij., Sacch. purif. partes xv.)

Given to infants as a gentle laxative. Dose 3j.—3ij. Used also to give a blue colour to mixtures.

VITIS VINIFERÆ FRUCTUS. FRUCTUS SICCA-TUS, E. D. UVÆ PASSÆ, L.—Raisins.

(Vitis vinifera. Sarmentaceæ. Temperate situations.

Saccharine, mucilaginous, and laxative, but less cooling than fresh grapes.

ULMI CAMPESTRIS CORTEX. CORTEX INTERIOR, E. D. ULMI CORTEX, L.—The Inner Bark of Elm.

(Ulmus campestris. Amentacea. Europe. h)

Recommended as an alterative in lepra ichthyosis, and as a diuretic in dropsies. A peculiar substance called *ulmine* exudes from the bark of the elm.

Officinal preparation.

DECOCTUM ULMI CAMPESTRIE, L. E. D .- Decoction of Elm Bark.

(Cort. recent. ulmi campestris contus. Ziv., Aquæ lbv., &c.)
Dose Ziv.—Zviij. twice or thrice a-day.

UVÆ PASSÆ. Vide VITIS VINIFERÆ FRUCTUS.

UVÆ URSI FOLIA. Vide ARBUTI UVÆ URSI FOLIA.

WINTERÆ AROMATICÆ CORTEX, E. DRYMIS AROMATICA, Cortex, D.—Winter's Bark.

(Wintera aromatica. Magnoliaceæ. Magellan. 17)

Winter's bark is sharp tasted and aromatic. Carminative and tonic, it is added to stomachic infusions in dyspepsia and scurvy. Dose in powder gr. x.— $\exists j$.

ZINCUM, L. E. D.—Zinc.

OXIDUM ZINCI, L. E. D.—Oxide of Zinc.

Has been much celebrated in the cure of epilepsy and several spasmodic affections. Dose gr. j.—vij.—viij. twice a-day.

Has been given thus:

R Oxid. zinci

Ext. hyosciam. nig.

— hellebor. nig. āā

Pulv. glycyrrh. rad.

F. S. A. pilulæ lxxij. Dosis pilul. ½.—j. quotidie.

in tic douloureux of the face.

Externally, used in the form of ointment.

Officinal Preparation.

Unguentum oxidi zinci, L. E. D .- Ointment of the Oxide of Zinc.

(Liniment. simpl. partes vj., Oxid. zinci præp. partem j.)

Applied to deep chaps, excoriated nipples, to the eye in ophthalmia, and to acrid, scabby eruptions.

OXIDUM ZINCI IMPURUM PRÆPARATUM, E.—Prepared Impure Oxide of Zinc.

This, which is commonly called *tutty*, is a useful application to the intertrigo of infants, being dusted dry on the part, through muslin.

Officinal Preparation.

UNGUENTUM OXYDI ZINCI IMPURI, E.—Ointment of Impure Oxide of Zinc.

(Liniment. simpl. partes v., Oxid. zinci impuri præp. partem j.)

An exsiccant ointment.

ZINCI CARBONAS IMPURUS PRÆPARATUS, E. D. Calamina, L.—Prepared Impure Carbonate of Zinc.

This, which is commonly called *calamine*, is sprinkled dry upon intertrigo, excoriations, and ichorous ulcers.

Officinal Preparation.

CERATUM (CALAMINÆ, L. D.) CARBONATIS ZINCI IM-PURI, E.—Cerate of Impure Carbonate of Zinc.

(Cerati simpl. partes v., Carbonat. zinci impur. præp. partem j.)

In common use under the name of Turner's Cerate, in cutaneous ulcerations and excoriations.

SULPHAS ZINCI, L. E. D .- Sulphate of Zinc.

Emetic in doses of gr. x .- 3ss., exhibited thus:

Ut fiat bolus, ex pauxillo infus. anthemidis hauriendus. Post quamlibet vomitionem superbibantur cyathi aliquot infusi ejusdem tepidi. Tonic in doses of gr. j .- ij. twice or thrice a-day.

Combined with camphor or myrrh, thus:

R Sulphatis zinci Conserv. rosæ .

Ut fiant pilulæ xx. e quibus sumantur binæ bis quotidie.

it is administered with the best effects in spasmodic coughs.

Given in the form of troche thus:

R. Zinci sulphatis

gacanthæ fiat massa in trochiscos formanda.

Each lozenge should contain gr. 1. of zinc.

In affections of the chest, attended with inordinate secretion.

Used externally as a styptic, and in injections and collyria.

Officinal Preparations.

SOLUTIO SULPHATIS ZINCI, E.—Solution of Sulphate of Zinc.

(Sulphat. zinci gr. xvj., Aquæ Zviij., Acid. sulph. dilut. gtt. xvj.

Used for injecting into the urethra in gonorrhœa, or applying to the eyes in chronic ophthalmia. A few drops of laudanum may be sometimes advantageously added.

SOLUTIO ACETATIS ZINCI, E.—Solution of the Acetate of Zinc.

(Prepared by decomposing the sulphate of zinc by the acetate of lead.)

Much esteemed as an astringent collyrium and injection.

TINCTURA ACETATIS ZINCI, D .- Tincture of Acetate of Zinc.

This is stronger and more stimulant than the preceding.

ZINGIBERIS RADIX. Vide AMOMI ZINGIBERIS RADIX.

Aloe spicata.

— vulgaris. Scilla maritima.

COLCHICACEÆ_Narcotic.

Colchicum autumnale.

Veratrum album.

PALMÆ—Oily, Amylaceous.

Cocos butyracea.

JUNCEÆ_Fragrant.

Acorus Calamus.

GRAMINEÆ—Amylaceous, Saccharine.

Avena sativa.

Hordeum distichon.

Saccharum officinarum.

Triticum hybernum.

Secale cornutum (not officinal, though introduced).

FILICES.

Aspidium (Polypodium) Filix mas-

ACOTYLEDONES.

LICHENES—Amylaceous, Colouring.

Lichen (Cetraria) Islandicus. Roccella tinctoria.

FUNGI.

Boletus igniarius.

ALGE.

Fucus vesiculosus.

PART THIRD.

OF POISONS AND THEIR ANTIDOTES.

Few diseases demand such prompt assistance as cases of poisoning, and there are few the treatment of which requires such precise knowledge. Hence the necessity of the study of the different remedies which experience has shewn to possess the power of counteracting the ef-

fects of poisonous substances.

The researches of several modern chemists, and particularly those of Orfila, have proved the inertness of many substances which were formerly considered as antidotes, or counterpoisons. This name should, indeed, be given only to those substances which have the property of neutralizing the effect of poisons, whether solid or liquid, or of combining with them, decomposing them, and giving origin to new and inert products.

In every case of poisoning there are two stages. In the first, the poison has just been swallowed, and has as yet only acted locally. In the second, it has been absorbed, has acted on the nervous system, or has produced by its local effects a general affection. Counterpoisons are only of use in the first stage. In the second, it is the general disease which becomes the subject of treatment.

Where a poisonous substance has, either through accident or design, been introduced into the alimentary canal, three important objects are, if possible, to be attained:

Io, The immediate ejectment of the poison from the body by vomiting, or by the application of the stomach pump; and by purging.

20, The decomposition of any remaining portion, and the adoption of measures best calculated to obviate its

action on the system.

30, To anticipate the occurrence of the consecutive phenomena, and to combat them by appropriate treatment, thus;—Where the exhaustion of nervous energy is to be feared, as after poisoning by *Prussic acid*, ammonia and other diffusible stimulants, together with external warmth, will furnish the best resources. Inflammation must, of course, be opposed by bleeding and the antiphlogistic system; and in cases where the brain is stupefied, the symptoms must be combated by vegetable acids, affusion of cold water upon the head, &c.; and should it be in a state of preternatural excitement, recourse must be had to sedatives. In short, no general rule can be laid down for the treatment of consecutive poisoning; the practitioner must be guided entirely by circumstances.

I. IRRITANT POISONS

Include all those whose sole or predominating symptoms are those of irritation or inflammation.

MINERAL.

ACIDS.—Sulphuric, Nitric, Muriatic, Oxalic, or any other concentrated Acid.

Antidotes and Treatment.—Administer chalk or magnesia, suspended in water, without delay, or, in the absence of both of these, the plaster of the apartment should be beaten down and made into a thin paste with water. A solution of soap is also useful,—one pound of soap being dissolved in four pounds of water.

While the antidote is being prepared, the acid should be diluted by the free use of any mild fluid, milk or oleaginous matters being preferred, except in the case of oxalic acid, the powers of which are increased by dilution; lime and magnesia are its only antidotes.

The carbonates of the alkalies should not be used as

antidotes if the alkaline earths can be obtained.

ALKALIES.—Potassa, Soda, Ammonia, and their carbonates; also Lime.

Antidotes and Treatment.—Give weak acids, such as vinegar, or a fixed oil, in large quantities.

NITRATE OF POTASS, or Nitre.

Treatment.—Milk or mucilaginous drinks, and sugared water in abundance.

Treatment in general similar to what is recommended under the head of arsenic.

SULPHURET OF POTASS, or Liver of Sulphur.

Antidotes and Treatment.—Diluents, and the subsequent administration of frequent doses of chloride of soda or lime, then the antiphlogistic treatment.

ANTIMONY .- The Tartrate and other preparations of

Antidotes and Treatment.—Make the patient swallow large draughts of warm water, and tickle the fauces to induce vomiting. Administer without loss of time a decoction of nutgalls or bark, particularly yellow bark, or this in powder, or its tincture, until the decoction can be got ready. A strong infusion of tea may also be of use.

ARSENIC.—The compounds of, as the Protoxide of Berzelius, or Fly Powder. Arsenious acid, or White Arsenic. The Arsenite of Copper, or Mineral Green. The Arsenite of Potass, as contained in Fowler's solution. The Arsenate of Potass. The various sulphurets, such as Realgar, Orpiment, and King's Yellow.

Antidotes and Treatment.-Lime-water, a solution of

soap, the sulphuret of potass, magnesia, charcoal, have all been recommended as antidotes, but little dependence can be placed on them. Much, however, may be done by general medical treatment. If vomiting should be delayed, as often happens, for half an hour or more, we should immediately administer an emetic of the sulphate of zinc, with the view of withdrawing the powder in mass, before it is diffused over the stomach; and, for the same purpose, milk, or a strong farinaceous decoction, should be drunk both before and after vomiting has begun, as they are the best substances for enveloping the powder, and so procuring its discharge. The patient should never be allowed to exhaust his strength in retching without a little milk or other fluid in his stomach.

The poison being thus removed from the stomach, inflammation of the alimentary canal must be guarded against, and the system supported under that extraordinary depression which it undergoes in the generality of cases.

Bloodletting ought not to be practised till the poison is nearly all discharged from the stomach, because it promotes absorption, by causing emptiness of the bloodvessels.

BARYTA .- Muriate and other preparations of

Antidotes and Treatment.—Alkaline or earthy sulphates, such as the sulphate of soda or the sulphate of magnesia, immediately convert muriate of baryta into the insoluble sulphate, which is quite inert. In the absence of the above salts, water acidulated with sulphuric acid, may be given.

BISMUTH.—Subnitrate of

Antidotes and Treatment.—Milk and mucilaginous drinks.

COPPER.—Sulphate, Subacetate, or Verdigris, and other preparations of.

Antidotes and Treatment. - Albumen, in the form of

white of eggs, diffused in water Sugar, in the form of syrup, is exceedingly useful both before and after the poison has been removed from the stomach. Vinegar, on account of its solvent power over the insoluble compounds formed by the salts of copper with animal and vegetable matters, ought never to be employed.

LEAD.—The Acetate of, or Sugar of Lead. Subacetate of, or Goulard's Extract. Semivitrified Protoxide of, or Litharge. Red Oxide of, or Red Lead. Carbonate of, or White Lead.

Antidotes and Treatment.—Sulphates of soda, potass, or magnesia, the phosphate of soda, the alkaline bicarbonates. If the patient does not vomit, it will be proper to give an emetic of the sulphate of zinc. Cathartics and emollient glysters ought also to be exhibited.

MERCURY.—Corrosive Sublimate, and other preparations of.

Antidotes and Treatment .- White of eggs beat up with water converts corrosive sublimate into a protochloride of mercury or calomel. The white of one egg is required to render four grains of the poison innocuous. The gluten of wheat also, which is best given in the form of emulsion, with soft soap. This is made by mixing, partly in a mortar and partly with the hand, five or six parts of fresh gluten, with fifty parts of a solution of soft soap. In order to have a supply always at hand, this emulsion, after standing, and being frequently stirred, for twenty-four hours, is to be evaporated to dryness in shallow vessels, and reduced to powder, which, when required, may be converted into an emulsion in a few minutes. In the absence of gluten, wheat-flour diffused through water may be used. When none of the preceding substances are at hand, milk may be had recourse to. Iron-filings are also said to be a good antidote. Meconic acid also.

PHOSPHORUS.

Antidotes and Treatment.—Mucilaginous drinks, and magnesia suspended in water, to neutralize the phosphorous and phosphoric acids which are formed.

SILVER.—Nitrate of

Antidotes and Treatment.—A solution of common salt.

Any signs of irritation left to be subdued by opium.

TIN .- Muriate and other salts of

Antidotes and Treatment.—Milk, decoction of nutgalls, solution of bicarbonate of soda.

ZINC .- Sulphate and other Salts of.

Antidotes and Treatment.—Milk, bicarbonate of soda in solution.

VEGETABLE ACRIDS.

Bryony Root (Bryoniæ dioicæ radix). Colocynth (Fructus cucumeris colocynthidis). Euphorbium or Spurge (Euphorbiæ succus proprius, fructus et gummi-resina). Elaterium (Momordicæ Elaterii fructus et fecula.) Gamboge (Stalagmitidis Cambogioidis gummi-resina.) Savine (Juniperi sabinæ folia). Sow bread (Cyclamen Europæum), &c.

Treatment.—Excite vomiting, and promote the evacuation of the deleterious substance by large draughts of demulcent fluids. Combat inflammation by bloodletting and the antiphlogistic treatment.

ANIMAL ACRIDS.

Cantharides (Cantharis vesicatoria.)

Treatment.—When called early enough, the practitioner, if vomiting has not already begun, may give emetics; and it vomiting has begun, it is to be encouraged by

draughts of tepid water. Mild and mucilaginous drinks. Oleaginous and demulcent injections into the bladder, to relieve the strangury. Leeches and bloodletting. The warm bath, and local fomentations. Camphor and opium, especially in the form of glyster or suppository.

Poisonous Fish.—Conger Eel (Muræna major). Rock Fish (Perca venenata). Yellow-billed Sprat (Clupea thryssa). Sea Lobster (Cancer astacus). Land Crab (Cancer ruricolus). Mussel (Mytilus edulis), &c.

Treatment.—Evacuate the stomach by a powerful emetic, such as the sulphate of zinc. Purge with castor oil. But if the spontaneous vomiting and purging be very great, it may sometimes be necessary to check it by anodynes, which are also proper when spasms supervene. Dilute freely with acidulous liquids, giving, at short intervals, from twenty to forty drops of ether, in half an ounce of syrup; or a weak alkaline solution.

POISONED WOUNDS.

Bite of a Dog. Bite of poisonous Serpents, as the Viper (Coluber berus, Vipera berus), the Rattlesnake (Crotulus horridus), Cobra capello (Coluber naia), &c. Wound received during dissection.

Sting of the Scorpion, Tarantula, Bee, Wasp, &c.

Treatment.—The principal object of the practitioner is to prevent the poison from entering the blood, in such

a quantity at a time as to produce noxious effects.

This may be effected by applying a moderately tight ligature above the wound, and then the immediate excision of the wounded part, or the destruction of it by the actual or potential cautery, according to the virulence of the poison. The application of cupping-glasses prevents the absorption of the poison, by suspending for a time the absorbing power of the vessels of the part.

Warm diluent drinks, and small doses of ammonia to cause perspiration. The person should be well covered in bed, and a little warm wine given occasionally. If gan-

grene be threatened, wine may be given more freely, and bark also. Arsenic, the principal ingredient in the Tanjore pill, has been strongly recommended. Excision is seldom if ever necessary for the bite of the viper of this

country.

As to the treatment of the stings of poisonous insects, ammoniated oil may be rubbed on the part affected, and a piece of rag moistened in the same, or in salt water, may be kept upon it until the pain is removed. A few drops of ammonia may be given frequently in a little water, and a glass or two of wine may be taken.

The sting, or a thorn, may in general be removed, before great swelling has come on, by making strong pres-

sure over it with the barrel of a small key.

II. NARCOTIC POISONS

Produce stupor, delirium, and other affections of the brain and nervous system.

Opium (Opium). Henbane (Hyoscyami nigri folia et semina). Strong-scented Lettuce (Lactucæ virosæ herba). Bittersweet (Solanum Dulcamara), &c.

Antidotes and Treatment.—The first object is to remove the poison from the stomach; for this purpose, an emetic such as is recommended at p. 190, or one consisting of 7ss.—Dij. of sulphate of zinc dissolved in \(\frac{7}{2}ij.\) of water, should be given, and repeated after a short interval, if the first dose fail. In order to insure the action of an emetic, it is of great importance to keep the patient roused as much as possible. The sulphate of copper may also be given as an emetic, in the dose of gr. v.—x. dissolved in \(\frac{7}{2}ij.\) of water; it is not, however, so certain as the sulphate of zinc, and tartar emetic is still less so. If the emetics do not act, or if the case is urgent, the stomach-pump ought to be had recourse to; in using it, care must be taken not to injure the stomach by too forcible suction.

The injection of tartar emetic into the rectum has proved successful, where other means had failed. Fifteen

grains in half a gallon of water excited free vomiting, and

ten grains more renewed it.

The injection of tartar emetic into the veins is almost certain of producing vomiting. A grain is the dose. While injecting it, the operator must take care to prevent the introduction of air into the vein.

The patient should be kept constantly roused by being dragged up and down between two men for three, or six, or twelve hours. The affusion of cold water on the head and breast will be found useful in rousing the patient, and by this means to insure the operation of emetics.

According to Orfila, the decoction of galls may with propriety be used as an imperfect antidote, till the poison

can be evacuated from the stomach.

After the poison has been completely removed, the vegetable acids and infusion of coffee may be freely given.

As to venæsection it has often proved of great use in promoting the operation of emetics.

HYDROCYANIC ACID, and the Essential Oils and Distilled Waters of the Bitter Almond, the Cherry Laurel, the Peach-blossom, the Cluster-Cherry, and the Mountain Ash.

Treatment.—The inhalation of the vapour of ammonia, with the caution not to use it too strong, lest it should cause inflammation of the air passages, mouth, or alimentary canal. The strong aqua ammoniæ should be diluted with twelve parts of water.

The inhalation of chlorine also has been found to act as an antidote to the effects of prussic acid. For the mode of preparing chlorine for the purposes of inhalation,

vide page 99.

The cold affusion has been found beneficial, but inferior in power to chlorine. It may be used in combination with the inhalation of ammonia or chlorine.

CARBONIC ACID GAS.

Treatment.—Pure air, the cold affusion and moderate blood-letting.

III. NARCOTICO-ACRID POISONS

Sometimes cause irritation, sometimes narcotism, sometimes both together.

Camphor (Camphora). Cocculus Indicus (Menispermi cocculi fructus). Deadly Nightshade (Atropa Belladonna). Fool's Parsley (Ethusa cynapium). Foxglove (Digitalis purpureæ folia). Hellebore (black) (Hellebori nigri radix). Hellebore (white) (Veratri albi radix). Hemlock (Conii maculati folia et radix). Meadow Saffron (Colchici autumnalis semina et bulbus). Monk's-hood (Aconiti napelli folia et flores). Nux vomica (Strychnos nux vomica). Thorn-Apple (Datura stramonium). Tobacco (Nicotianæ Tabaci folia). Poisonous Mushrooms (Agaricus muscarius. A. virosus).

Treatment.—The stomach should in all cases be immediately evacuated by emetics or the stomach-pump, and the bowels moved by doses of sulphate of soda and magnesia. The subsequent treatment, which is to be regulated by circumstances, may be inferred from what has already been said with regard to the vegetable acrids and narcotic poisons. There are no antidotes.

OF MINERAL WATERS.

By Mineral Waters are understood those which are impregnated with mineral substances, in sufficient quantity to impart to them more or less energetic medicinal properties.

These substances are sometimes sulphur, sometimes acids, sometimes iron, and sometimes neutral salts va-

riously combined.

Chemistry, by disclosing to us the exact composition of mineral waters, has enabled us to compose them artificially,—the different kinds of natural mineral waters being now perfectly imitated.

Natural mineral waters are sometimes cold, sometimes tepid, and sometimes warm; in this last case they are

called Thermal waters.

According to the nature of the substances which they hold in solution, mineral waters have been divided into four classes, viz.—1. Sulphureous; 2. Acidulous; 3. Chalybeate; 4. Saline.

SULPHUREOUS MINERAL WATERS.

These derive their character from sulphuretted hydrogen, either uncombined, or united with lime or an alkali, which they contain in greater or less quantity.

They have all a feetid and disagreeable odour, like that

of rotten eggs. They blacken silver and lead.

The most celebrated sulphureous waters are those of— Enghein, a village situated four leagues to the north of Paris, in the department of Seine-et-Oise. Temperature—cold.

Aix-la-Chapelle, in the district of Aix-la-Chapelle, Lower Rhine. It is situated eight leagues from Spa and twelve from Cologne. The temperature of the waters is 143° F.

Harrowgate, in Yorkshire. The waters are cold. Moffat, in Dumfriesshire. Cold.

Sulphureous mineral waters are principally useful in cutaneous diseases, chronic affections of the viscera of the abdomen, amenorrhœa, &c. Externally, they are employed to promote the cicatrization of old ulcers.

Their dose is two or three glasses or more daily.

ACIDULOUS MINERAL WATERS.

These owe their properties chiefly to carbonic acid gas; besides which, they contain in solution salts, such as the muriate and carbonate of soda, the carbonate of magnesia, of lime, iron, &c. Their taste is acid, and they sparkle on being poured out. They are tonic and diuretic, and in large doses produce a transient exhilaration. They are in general agreeable to drink. One or two pints may be taken daily.

The most celebrated are those of_

Pyrmont, in Westphalia, four leagues from Hamelin. It is situated in a valley, surrounded by mountains covered with wood. The waters are cold.

Seltzer, a village situated on the Lohn, in the duchy of Nassau, about ten miles from Frankfort on the Maine.

Water cold.

Spa, a town in the ancient department of Ourthe, six

miles from Liege. Water cold.

Carlsbad. These celebrated baths of the Emperor Charles are situated in Bohemia, in a narrow and deep valley, not far distant from the place where that valley opens into that of the Eger. Temperature 165°.

Scarborough, a town in Yorkshire. Water cold.

CHALYBEATE MINERAL WATERS,

Contain iron, in the form of *sulphate*, *carbonate*, or *muriate*. They have a styptic and inky taste, and strike a black colour with oak bark or other vegetable astringents. These waters are tonic, and are used in cases of general or partial debility, scrofula, amenorrhæa, &c. Their dose is one or two pints daily.

The principal are those of—

Hartfell, near Moffat, in Scotland. Cold.

Tunbridge Wells, a village in the county of Kent. Waters cold.

Cheltenham, in Gloucestershire. Cold.

Bath, in Gloucestershire. Temperature 116°.

SALINE MINERAL WATERS.

These are mostly purgative, and are advantageously employed in those hypochondriacal and visceral diseases which require continued and moderate relaxation of the bowels. The salts contained in these waters are chiefly the sulphate and muriate of magnesia, the carbonates of soda, lime, &c.

The most esteemed are those of-

Seidlitz, a village in Bohemia, in the circle of Saartz. Cold.

Cheltenham, in Gloucestershire. Cold. Epsom, in Surry. Cold.

Leamington, in Gloucestershire. Cold.

Plombieres, a town situated in the department of Vosges, in the midst of mountains. Cold.

Some springs, as those of Bath in Gloucestershire, and Matlock and Buxton in Derbyshire, owe their virtues rather to temperature than to any other cause; and others, as Malvern in Worcestershire, to the diluent power of the water.

ON THE MODE OF SUBJECTING THE BODY, OR A PART OF IT, TO THE INFLUENCE OF ELECTRICITY OR GALVANISM.

ELECTRICITY.

Electricity may be generated either from the common

cylindrical or from the plate machine.

The electrical influence may be imparted from the positive or from the negative conductor of the cylindrical machine. When from the positive, the electricity is supposed to pass from the conductor through the body to the earth; when from the negative, it is supposed to pass from the earth through the body into the conductor. When it is wished to subject any particular part of the body to the influence of electricity, that part is to be included in what is termed the electrical circle; for example, if it be the forefinger and thumb, the person places his forefinger either on the positive or negative conductor, while a piece of chain connects the thumb with the earth,—the cylinder being made to revolve, the electricity will flow from the machine through the finger and thumb to the earth, or vice versa. In the same manner

it may be applied to any other part of the body; as from the finger to the elbow, to the shoulder, to the chest, through the whole extent of the latter from the finger of one hand to that of the other; from the finger to the toe of the same side, or of the other side, or from any one point of the body to another. The electricity always following the shortest possible line from the point of entrance to that of exit.

When electricity of a higher intensity is required, the Leyden jar, in which the electricity is accumulated, is used. The portion of the body through which it is intended to pass the electricity is to be included in the circle of the electrical jar, thus; if the thumb be placed on the outer coating of the jar, and the finger be brought into contact with the ball or connexion with the interior coating, the electricity will pass through that portion of the hand only which is included in the circle.

If the electricity is to be passed through a greater portion of the body, as from the finger to the elbow, the person must place his elbow on the outer coating of the jar, and then touch the ball with his finger; the electricity will thus pass through the space included between

the elbow and finger.

If the electricity is required to be passed through any greater portion of the body, from the finger to the shoulder for example, one end of a chain is to be applied to the shoulder, and the outer coating of the Leyden jar connected with the other end; the person must then, as in the former cases, complete the communication between the two surfaces of the jar, by touching the ball with his finger. In order to transmit the electricity from one side of the chest to the other, a chain, in communication with the outside of the jar, is to be applied to one side, whilst the ball of the phial is made to touch the opposite side. The electricity may be also made to pass from the foot to the finger, by placing the foot in contact with the outside of the jar, and touching the ball with the finger.

In short, electricity may be made to pass from any one part of the body to another, by bringing the one part first into contact with the outside of the jar, and then the other with the ball, so as to complete the electrical circle.

The whole body may be subjected to the electrical influence, by placing the patient upon an insulated stool, and connecting him with the prime conductor of the electrical machine while in action; by this means the electricity is accumulated in the body, as in the Leyden jar. By making a communication between the earth and any point of the body of the patient, the electricity flows from that point to the earth, and the patient receives the electrical shock.

GALVANISM.

For the production of Galvanism, either the pile of Volta or the trough of Cruickshank may be employed.

When the pile is used, cloths moistened with acid and water are to be placed between each pair of plates, in the usual order of zinc, copper, cloth,—zinc, copper, cloth, and so on, increasing the number of plates until the pile be of sufficient intensity. A wire is then to be connected with the zinc or positive end, and another with the copper or negative end, of the pile, which is now ready for action.

When the trough is to be used, the cells between the plates are to be filled to within nearly a quarter of an inch from the top, with the usual mixture of acid and water, which may be employed stronger or weaker ac-

cording to circumstances.

While being filled, the troughs ought to be inclined sideways, in order that the upper edges of the plates may be wetted as little as possible. Wires are now to be inserted into the two end cells, or into any of the intermediate cells, if the whole power of the trough be not required. In this state it is ready for use.

If the galvanic influence is to be passed through the arms and chest, all that is necessary to do, is either to touch directly, with the wet hands, the wires connected with the ends of the trough, or by immersing both hands into separate vessels of water, into which the ends of the wires have been previously placed. If it be wished

merely to pass it through the forefinger and thumb of the same hand, the forefinger is to be dipped into one of the vessels of water, and the thumb into the other; the galvanic circle being thus completed, the influence will

pass through.

In a similar manner, the galvanic influence may be passed between the finger or elbow, or between the finger and shoulder, by having one of the wires connected with the elbow or shoulder, and the other with the finger, either by direct contact with the wire, or through the medium of a vessel of water, into which the wire is placed. In the same manner it may be transmitted through any other part of the body.

Galvanism may be passed through any of the more delicate organs, as the brain, eye, or ear, without the shock; thus, if from one ear, through the brain, to the

other:

Bring a wire, connected by one extremity with the negative end of the battery, and having attached to the other some moistened cotton, which is to be inserted into one ear. A double wire, terminated with cotton also. is to be placed into the other ear. If one of the extremities of the double wire be now inserted into the second cell from the negative end, the electricity of one pair of plates will circulate from one ear, through the brain, to the other. In order to increase the intensity, the other extremity of the double wire is to be placed into the third cell from the negative end of the trough, whilst the extremity of the wire in the second cell is to be carefully kept in its place; this is now to be moved forward into the fourth cell, while that in the third cell is to be retained in its place; and so on, moving the double wires alternately until a sufficient intensity is obtained. In order to withdraw the galvanic influence without producing a shock, the double wires are to be moved in the same alternate manner in the opposite direction.
