A

STATISTICAL DISPLAY

OF THE

FINANCES, NAVIGATION AND COMMERCE

OF THE UNITED KINGDOM OF

Great Britain and Ireland,

Being a Digest of all the Accounts and Papers relating thereto, diffused through more than 600 Volumes of Journals, Reports, and Papers presented to Parliament since 1799, exhibiting the Revenue in all its various branches of

RECEIPT AND EXPENDITURE

In each Year since the commencement of the War in 1793 ;

The Value of the EXPORTS to, and IMPORTS from, each different part of the World in each year since 1693 ;
 The Value of each Article Exported and Imported in each year since 1813 ;
 And the Quantity thereof, in Weight, Measure, or Tale, in each year since 1826 ;

WITH A COMPLETE VIEW OF THE RISE AND ANNUAL PROGRESS OF THE

National Debt, Sinking Fund, and Foreign Loans,

So arranged as to show the effect which the Great Money Operations have had upon the Commercial transactions of the Country, and the relative degree and extent, and advantage or disadvantage, resulting from its intercourse with each different part of the World, affording a Solution to the Problem,

OF THE

BALANCE OF TRADE AND EXCHANGES ;

Containing also a complete view of the Corn Trade, showing the Quantity of Grain and Flour Exported and Imported, and the annual average price thereof, in each year since 1699 ;
 The Quantity of each kind imported from each different part of the World, and the annual average price of all the great articles of
 PRODUCTION and COMMERCE in each Year since 1780,

&c. &c. &c.

Every line a lesson—every page a history.

" Statistics are, to Political and Social Economy, what Comparative Anatomy is to Physiology, or Comparative Jurisprudence to Legislation. It is by them alone that the relative well-being of societies can be determined, the effect of all civil institutions be ascertained, and the working of moral and physical causes among men be observed and distinguished with the necessary degree of accuracy."

STATEMENT No. IV.—showing the actual Receipt of TAXES, after deducting Drawbacks and Repayments within each of the 15 Years, from the Union of the two Exchequers of GREAT BRITAIN and IRELAND, on the 5th January 1817, to the 5th January 1833, and of the Expenditure of the UNITED KINGDOM (exclusive of Sinking Fund) in each of the same Years. * * This Account like the preceding has been compiled from the Finance Accounts presented to Parliament annually, and is exhibited in this form for the purpose of showing the actual State of the Account, independent of Loans and the Operation of the Sinking Fund, for the effects of which Operations, see Statements of Transactions of the East India Company, as balance of a long unsettled account; a in the same year, for proceeds of Sale of Old Naval Stores. The two amounts b in 1823-4, were denominated the Out-land, being amounts received from Austria in compromise of Principal and Interest of Loans of £5,220,000 in 1825-7, see Nos. 6 and 14 in Statement of Loans raised. The amount c in 1826, comprises £109,000 received from the Netherlands, and the remainder are payments on account of Silver Coinage; d in 1821 includes the extra charges of £200,000 on account of the New Street, and £310,814 paid to Messrs. Barings and N. M. Rothschild for discount on Prompt Payment of the amount received from Austria. The amounts e in 1823, 1824 and 1830, and £49,465 of the amount in 1825 are payments to the Bank on account of Unclaimed Dividends retained; the remainder of the amount e in 1825 was appropriated as follows, viz.—£500,000 for purchase of Silver for new coinage for Ireland; £100,000 on account of the New Street; and £40,000 for building of Churches in the Highlands of Scotland; f in 1820 £240,000 on account of War Buoys at Lough; £120,000 towards the New London Bridge; £150,000 for the purchase of the Duke of Athol's Interest in the Revenues of the Isle of Man; and £69,807 for Lottery Prizes; In 1827 £153,044 for Lottery Prizes; £120,000 more towards London Bridge; £200,000 to the Bank of England for discount and management of the funding of £3,000,000 of Exchequer Bills, and the remaining £134,200 with the £132,844 in 1828, further to the Duke of Athol for his Interest in the Revenues of the Isle of Man. The seeming diminution of the Civil List subsequent to 1829 is a transfer of a part of the charges to Miscellaneous Payments. The diminution of charge for Annuities in 1823, line 46, was a consequence of the reduction of 3 $\frac{1}{2}$ Cents. to 4 $\frac{1}{2}$ Cents.; in 1825, of Old 4 $\frac{1}{2}$ Cents. to 3 $\frac{1}{2}$ Cents.; in 1831, of New 4 $\frac{1}{2}$ Cents. to 3 $\frac{1}{2}$ Cents., and conversion into Terminable Annuities, as shown in line 48, see Notes to preceding Statement and to No. II.

The Twenty-seven following Pages

EXHIBIT, IN DETAIL,

THE PROCEEDS AND CHARGES OF COLLECTION

OF EACH OF THE

FIVE GREAT BRANCHES OF REVENUE,

Customs, Excise, Stamps, Land and Assessed Taxes, and Post-Office,

IN THE FOLLOWING ORDER, VIZ.:

Pages 2, 3, show the amount paid, (after deducting the amount repaid for drawbacks and overentries,) on each of 112 enumerated articles charged with CUSTOMS DUTIES, in each of the years 1804—12; and also the total amount repaid for drawbacks and overentries, and amounts paid for Bounties, Charges of Management, and the nett proceeds into the Exchequer; with the Balances in the hands of the Collectors and Receiver-General in each of those years.

Pages 4—11, show the amount of Customs Duties paid (after deducting drawbacks, &c., as before) on each of 240 enumerated articles of Merchandize Imported into Great Britain, in each of the 18 years 1814—1831, with the Rates of Duty affixed to each article; the articles being arranged according to circumstances explained at the head of the several pages, they are numbered from 1 to 240: to which numbers, page 10 contains an Alphabetical Index.

Pages 12, 13, show the Total Amount of Customs Duties received on the 240 enumerated articles, and also of the Duties paid on certain aticles Exported and Shipped Coastways, as well as sundry other Receipts, and exhibits in detail the Amounts Received and Paid on account of Seizures, Fines, &c., also the Drawbacks, Bounties, &c. &c., in each of the before mentioned 18 years.

Pages 14, 15, show the Gross Amount paid on each of 27 articles charged with Excise Duty, in each of the 20 years 1812—1831, and also the Amount Repaid as Drawback on the proportion of each of 7 Articles Exported, Charges of Collection, and other payments out of the Gross Receipt, &c. &c., in each of the before mentioned 20 years.

Pages 26, 27, show perspicuously the articles on which the duties have been repealed, and exhibit the Charges of Collection, and other payments out of the Gross Receipt of the Excise Duties more in detail, and include the year 1832.

Pages 16—21, contain, respectively, a complete view of the Gross Receipts, Charges of Collection, and other payments out of the Duties levied on Stamps, the Post Office, and the Land and Assessed Taxes: the two first in each of the 20 years 1812—1831, and the latter in each year since 1821.

Pages 22, 23, exhibit the Charges of Collection, and other payments out of each Branch of Revenue, in the year 1818, and in each year since 1822; in these pages the lines exhibit the totals of each of the 14 principal Items of Expence, and the columns the totals of each department in each year.

Pages 24,* 25,* exhibit more in detail the Charges of Collection of the Customs Duties, and of the expenses attending the attempt to prevent Smuggling, Quarantine and Warehousing Expenses, and other Payments out of the Gross Receipt in the year 1818, and in each year since 1821.

An ACCOUNT of the *Nett Amount of Customs Duty* paid on each of 154 enumerated articles of Merchandize

•• Previous to the 8th. of June 1819, TEA, paid a Duty of 6 $\frac{1}{2}$ Cent to the Customs, and 90 $\frac{1}{2}$ Cent to the Excise; from that date all Teas not exceeding 2 $\frac{1}{2}$ $\frac{1}{2}$ lb have been charged 96 $\frac{1}{2}$ Cent, and all above 2 $\frac{1}{2}$ $\frac{1}{2}$ lb 100 $\frac{1}{2}$ Cent, wholly to the Excise: the collective Duty on WINE (that is to both Customs and Excise) prior to July 1825 was 7/7 on all Portugal, Spanish, and Sicilian Wines, except Madeira which was 1d. more; 9/5 on Rhenish and Hungarian, and 11/5 on all French. In July 1825 the Duty on French Wine was reduced to 6/ and on all other to 4/ $\frac{1}{2}$ Gallon; but, as, by the act of the 6th. of Geo. IV, cap. xii, a new measure of capacity was established, by which the Wine Gallon was increased to 1. from .83311; the Duty was again altered on French from 6/ to 7 $\frac{1}{2}$ $\frac{1}{2}$ Gallon, and on all other, except Cape, from 4/ to 4 $\frac{1}{2}$ $\frac{1}{2}$ Gallon; Cape remaining at 2 $\frac{1}{2}$ $\frac{1}{2}$ Gallon, to the 6th. of Jan. 1830, and from that date at 3 $\frac{1}{2}$ $\frac{1}{2}$ Gallon. The Duty on RUM taking the alteration of measure into consideration will be seen to have undergone great modification, whilst on Brandy and Geneva, little or no reduction has been experienced.

It was the Act of the 6th. of Geo. IV, cap. cxi, dated 5th. of July 1825, which altered generally the Rates of Customs Duties from the 5th Jan. 1826, but the Duties on Raw and Thrown Silk, were reduced in June 1824, and the amount of Duty returned for that Year on account of Stock on hand having been £ 460,886 18 8, whilst the Gross Receipt amounted to only £ 302,127 9 6 occasions the blank in the line of Silk for that Year. In 1814 the Duty on Cotton Wool Imported in Foreign Ships was 25/6 $\frac{1}{2}$ 100 lbs., and 16/11 $\frac{1}{2}$ 100 lbs. when Imported in British Ships, reduced on the 5th. of July 1815 to 8/7 $\frac{1}{2}$ 100 lbs. when Imported in British Ships: from these rates it has undergone various modifications down to the 5th. January 1826 when it was reduced to 6 $\frac{1}{2}$ Cent on the Value from all Foreign Countries, and Duty free from all British Possessions. The Cotton Piece Goods of India in 1814 were subject to a Duty of about 85 $\frac{1}{2}$ Cent, reduced from the 5th. July 1819 to £ 67 10 $\frac{1}{2}$ Cent, and by the Act of 1825 to 10 $\frac{1}{2}$ Cent; all Silk Manufactured Goods prior to the 5th. July 1825 were prohibited, from which date they have been admitted at rates varying from 25 to 40 $\frac{1}{2}$ Cent.

The Drawbacks on Ashes and Brimstone Reexported in 1825-6 exceeded the Gross Receipt of Duty, and the Duties on Camphor, and Cortex Peruvianus in 1828-9, are included with the unenumerated articles.

Spelter, Talc, or Zinc, as an article of general consumption in England, is of recent introduction, the quantity Imported in the six Years 1814-19, having been only 2 Tons; in 1820, 122 Tons; and in 1828, upwards of 11,500 Tons: It may be regarded as a species of Natural Glass, and its ready fusion with most Metals, especially Platinum, gives it a high appreciation; a large quantity is annually Re-exported to Asia; in 1820, the quantity Re-exported exceeded the quantity Imported.

* * Except on Carpets from Turkey, prior to the 5th. of January 1826, the Duty on Wollen and Cotton Manufactures was equal to a prohibition; and on all Silk Manufactures prior to the 5th. of July 1825 absolutely so; and since that date the low price in Great Britain of all fabrics of Cotton Wool and Linen renders any Duty a prohibition, except for very peculiar and fancy articles. Carpets which previous to 1826 were charged under that head have since 1825 been brought under the head of Woollens.—see Carpets. The Duty on Corn, Grain, &c., in the 7 Years 1816–22, amounted to a Prohibition.

* * These articles have not been specifically enumerated since 1827, except Carpets, which have been specified under the denomination of Woollen Manufactures. The Customs Duties being here arranged in reference, — first, to show the amount of Duty levied on Colonial Produce; — secondly, on those articles which are enumerated in the list of Re-exports, — see Page 60, and lastly, to show the changes that have taken place in the articles enumerated. The following Pages contain an Alphabetical list of the whole of the 218 articles, with reference to their Number in the Classification.

The excess of Drawback noted a in 1814 was principally on Tea; of allowances b in 1816, and c in 1823, on Malt Duty returned; of the amount d in 1825 £881,806 was for return of Duty on Wine; since 1821 the allowances on Malt have run from 2 to £300,000 $\frac{1}{2}$ Annum, and on Soap from 60 to £90,000 $\frac{1}{2}$ Annum,—see Statement Soap and Candles. For the details of Charges of Management, see "General Statement of Charges of Collection of the Revenue of the United Kingdom;" and for Fishery Board, see Fishery. Of the £14,000 Pensions, £9,000 is paid to the Duke of Grafton, who receives also £4,700 out of the Revenue of the Post Office; of the remainder of the £14,000, £3,800 was granted to the Earl of Bath in 1091 since sold to Lord Melbourne and Charles Toone, Esq.; the remaining £2,800 was granted to Henry Nassau, Seigneur D'Auquerque in 1796, now received by Earl Couper by virtue of purchase; Charles Toone's moiety of the Earl of Bath's annuity was purchased by the Government in 1826.

* There was no account Published, of the CHARGES OF COLLECTION in detail prior to 1822; in which Year an alteration generally, in the form of the Public Accounts was adopted, the amounts in a line with Miscellaneous Payments prior to 1821, are the Total amounts for Charges of Collection; the detailed amounts for Charges of Collection under the head of 1821, are the Charges for the Year 1818, as laid before Parliament, in the Session of 1826, (Vide Parliamentary Paper, No. 345, of that Session) for reasons stated at large in the General Statement of Charges of Collection of the Revenue of the United Kingdom. The notation d implies that since 1823, Stationery has been Charged in the General account of Miscellaneous Payments, £ 4,298 of the amount noted b in 1823, was for New Presses and Steam Engines; £ 1,634 of the amount c in 1826, for Stage Coach Plates; and £ 2,510 of the amount d in 1827, for Rewards to Informers paid by the Solicitor: the Rate of $\frac{1}{2}$ Centage to the Country Distributors was considerably reduced in 1822, and it deserves consideration since the improved facility of intercourse with every part of the Kingdom, whether that Item of Expence might not advantageously be wholly dispensed with. The excess of Charges of Collection in 1819, is considerable; but as no detail of the amount has been Published, all that can be done, is to direct attention to the subject; the increased return in Probates also deserves attention. the amounts noted with an * in 1828-9, in the line of returns of Cards, are returns on Marine Insurances.

Centage to Country Distributors ..

Copies of Wills, to do. Legacy Duty ..

Charges of Collection.

The Duty on about 300 Items of Law Stamps, producing in the aggregate about £200,000? Annua was repealed in 1826, which accounts for the diminution in line 1 since 1825; the panic of 1825, and suppression of the small Notes of Country Bankers is a sufficient solution to the diminution of line 4 in 1826; The Lottery was abolished in 1825; the amounts in line 22 since 1826 noted with a † are for Penalties in Law Proceedings and Costs received.

The high price of Bullion appears to have checked the Manufacture of Wrought Plate, in 1812-14; the Duty on Playing Cards was reduced in 1828; and a general revision of the Stamp Duties, more particularly in Ireland was proposed in the Session of 1830.

AN ACCOUNT of the Gross Receipt, Charges of Management, and Nett Proceeds, of the

[Years	1809.	1812.	1813.	1814.	1815.	1816.	1817.	1818.	1819.	1820.
1 Unpaid Letters outwards, Paid Letters inwards, Ship Letters, &c., Charged to the Country Postmasters, by the General Office										
<p>***There was no account published of these six Items, nor of the Charges of Conveyance and Management, in detail, prior to 1822. The receipt of the Inland Department appears to have increased since 1822, but it will be seen on referring to line 9 that the receipt of the Foreign Department has decreased in a corresponding proportion.—see note below relating to Ship Letters</p>										
<p>2 Unpaid Letters inwards, and Paid Letters outwards, at do.</p> <p>3 Bye, and Cross Road Letters</p> <p>4 Letters Charged to the Postmasters in the West Indies, & British</p> <p>5 Passage Money, and Freight of Specie by the Packets [North America</p> <p>6 Miscellaneous Receipts</p>

[Years	1809.	1812.	1813.	1814.	1815.	1816.	1817.	1818.	1819.	1820.

††† The expence of Conveyance since 1818, appears to have considerably increased, without any cause for the increase being apparent; the excess of Charge for Tolls in 1826, deserves notice; the progressive increase of the amount paid to Masters of Ships for Ship Letters (see Note above) is interesting, and fully explains the seeming increase in the Receipt of the Inland, and decrease of the Receipt of the Foreign Departments;—see General Statement of CHARGES of COLLECTION of the REVENUE of the UNITED KINGDOM, for an explanation of the seeming diminution of Charge for Stationery, &c., (line 36.) Up to 1822, line 41 represents the Total amount of Charge for Conveyance, and Management; and the four Years 1814–17, probably include Payments on account of the New Post Office; otherways the amounts for those Years seem disproportionately great: the Total Sum Charged on account of the New Post Office, in the 13 Years 1818–30, is £593,653, (for the Custom House, in the 17 Years 1813–29, £648,718, has been charged;) Of the Pensions (line 42) £5,000, is paid to the Duke of Marlborough; £4,000, to the Heirs of the Duke of Schomberg; and the remaining £4,700, to the Duke of Grafton, who receives also £9,000 $\frac{1}{2}$ annum out of the Revenue of the Excise;—see Statement of Excise. The amounts in line 49, in the Years 1815–20, amounting to £105,081, were for the New Post Office in Dublin, and the amounts in the same line in the Years 1824–9, are “Payments made to the Treasurer of the Ordnance and Barrack Departments in Ireland,” pursuant to Warrants from the Lords of the Treasury; being so much claimed as Postage paid for Letters in Ireland, on the Business or Service of the Ordnance and Barrack Board in each Year, being in 1829 at the Rate of nearly £60 $\frac{1}{2}$ Day. The accounts for the Years 1815–18, do not Balance; and the Year 1821, shews a discrepancy*

Charges of Conveyance.

Charges of Management.

Revenue of the *POST OFFICE*, in the UNITED KINGDOM, in each of the 20 Years 1809 - 29.

STATEMENT of the Gross Receipt and Charges of Collection of the LAND and ASSESSED TAXES in GREAT BRITAIN in each of the 6 Years 1822-1827.

By the Act of 38 Geo. 3 c. 60. the LAND TAX of GREAT BRITAIN which was previously Annual was made perpetual at £2,037,627 & Annua, since which period upto the 5h. of Jan. 1828. £816,365 & Annua of LAND TAX has been Redeemed, by Cancelling £26,246,346 of Three & Cent. Stock, the Annual dividend of which was £787,417; for a more circumstantial elucidation of the nature of this transaction see the subject LAND TAX as referred to in the Index. Below is a Statement of the Gross Receipt of the residue of the LAND TAX in each of the 7 Years 1821-1827. According to the Population Returns made to Parliament in 1821 the Total Number of Houses Inhabited in GREAT BRITAIN in that Year was 2,429,730 out of which 492,186 were charged with Duty under the Assessed Taxes being Assessed at £1,261,354; Farm Houses occupied by Tenants, to the No. of 214,230 being exempt by Statute, and in 1825. 171,759 other Houses assessed at Rentals under £10 & Annua were also exempted. For further details, see Statement of Houses Assessed at Various Rentals pages 19 & 23. The No. of Houses subject to Window Duty in 1821 was 968,008 and the Assessment £2,578,570 and 681,496 Cottages Exempt. In 1823 half of the Duty was repealed and in 1825 634,936 out of the 968,008 Houses assessed in 1821 not having more than 7 Windows were also exempted. The annexed is the Gross Receipt of Duty in each of the Seven Years 1821-1827. £2,578,570

Gross Receipt of Land and Assessed Taxes in Great Britain and

Charges for Collection of same in each of the 6 Years 1822-1827.

CHARGES OF COLLECTION.

Other payments out of the Gross Receipt not constituting Charges of Collection.

STATEMENT of the Gross Receipt and Charges of Collection of the LAND and ASSESSED TAXES in GREAT BRITAIN,—continued from the preceding page

On reference to pages 42-4 ante, it will be seen, that more than one third of the Assessed Taxes are levied within the limits of the Metropolitan Police, and that the pressure, more particularly of the House Tax falls upon a Class the least of all able to bear the exaction, the continuance of which, is as inconsistent with good Policy, as it is oppressive. The continuance of the House Tax, also, since it is proposed to make Suffrage of Election dependant on Money Value, instead of on some Mutual, Moral, or Social obligation, will constitute a continued source of collision and chicane, tending in very many instances to the subversion of all social relation in districts and places involved in the question. The remaining portion of the Land Tax should be collected by the Parishes, and remitted to the Stamp Office, to which department the Items Nos. 9-12 should be transferred. The nuisance of an indiscriminate keeping and herding of Dogs, particularly in Towns, although in many cases, they are docile and affectionate animals, renders them fit objects of regulation; they are however fitter subjects for local, than for State Assessment, and the State Duty on them, as well as on the Items Nos. 1-2, and 4-7, should be immediately repealed, and thereby the insidious, inquisitorial, and oppressive system of direct Taxation, might be put an end to, and the expense of £200,000 \textsterling annum attendant upon its collection, rendered available for some rational and social object.

* * These Items were first formed into a separate Account in 1822, under the head of "Payments out of the Public Income, in its progress to the EXCHEQUER, other than CHARGES OF COLLECTION," the first Item of which in 1818, was included in Charges of Collection.

* * There was no account Published of the CHARGES of COLLECTION in detail prior to 1821; in which Year a Committee of Parliament was appointed to revise the form of the Public accounts; which Committee ordered the Charges of Collection to be stated in detail. In the Session of 1826, the then Chancellor of the Exchequer Mr. F. J. Robinson, (now Viscount Goderich) having stated in his place in Parliament that the Expenses of Collection had been reduced more than £500,000 \pounds Annum, as compared with 1818; (Vide Pages 6-27 of his revised Speech, Published by Hatchards, Piccadilly, or Parliamentary Debates of the 13th March, 1826,) an account of the Expenses for that Year, Viz. 1818, corresponding in detail with the accounts since 1821, was ordered to be presented to the House—see Paper No. 315, Session 1826,—see also the separate accounts of each branch of Revenue, for more ample details of each Item of Charge, in each Year, since 1821, and Paper of Finance Committee, No. 235, Session 1828.

	Stationary charged in Miscellaneous Payments, part of which as stated below & previous to 1821, was included in Charges of Management		£ 80,000	95,000	120,000	109,370	111,640	75,000	82,270	106,850	

Although from the transformation since 1821, of the accounts relating to the Collection of the Revenue, it is somewhat difficult to exhibit a fair comparison of the amount since that period, with the Year 1818, it is clear from this Statement that at the time the Chancellor of the Exchequer in 1826, claimed credit for having effected a reduction exceeding half a million \pounds Annum, that the relative amount of Charge in each of the 3 Years 1821-1826, had not only been greater than in 1818, but greater than at any former period: the seeming diminution as exhibited by the Total amount under the head of Charges of Collection, having arisen from contingent causes, and transferring of several Items to other accounts: since 1826, some diminution appears to have been effected, and it is deserving of consideration whether or not, the Assessed Taxes might not be mainly repealed, transferring such as might be retained to the department of Stamps; and thereby effect a sensible and advantageous diminution, as was done, by the Total Repeal of the Assessed Taxes in Ireland, in 1824; It is also further deserving of consideration whether or not the District Distributors of Stamps might not wholly be dispensed with; since the improved facility of conveyance between all parts of the United Kingdom and the Metropolis, the Dealers and Consumers would in many cases more readily obtain their supply direct from London, than from the District Distributors, and consequently the whole of the \pounds Centage retained by them would augment the resources of the Treasury, and operate more advantageously for the Public benefit.

STATEMENT of the CHARGES OF COLLECTION, and other Payments out of the Revenue of CUSTOMS in GREAT BRITAIN, in the Year 1818, and in each of the Seven Years 1822 - 1828. * * There was no account in detail of the Charges for Collecting the Revenue published prior to 1822, the account for 1818, was ordered to be laid before Parliament in the Session of 1826, for reasons stated in the General Statement relating to the Collection of the Revenue. ☞ The increase of Charge in the Years 1826 - 28, for Repairs of Buildings, arose from the defect in the foundation of the New Custom House in London, on account of the Building of which, in the Seven Years 1813 - 19, £452,164, was Charged. The increase of Superannuations, and of the expense of the Preventive Water Guard, and Warehousing Department deserves attention.

* * The following page exhibits a continuation of the above Account more amplified and complete. The Charge for Collection when separated from the Superannuations and Allowances, and expenses attending the Prevention of Smuggling, and other Payments, is comparatively inconsiderable. The increasing expense attending the Prevention of Smuggling (amounting in 1852 to £384,057, exclusive of £18,503 as compensation to Naval Officers in the Coast Guard Service), deserves in a social and moral rather than in a pecuniary point of view, more than an ordinary share of attention; no such means as have hitherto been adopted, whatever expense they may incur, will ever diminish the practice. If Smuggling is to be suppressed, it must be by those social arrangements with neighbouring States, which an honest and enlightened mind will have no difficulty either in devising or reducing to practice.

STATEMENT of the CHARGES OF COLLECTION, and other Payments out of the Revenue of CUSTOMS in each Year, since 1829.

Years.	1816.	1817.	1819.	1820.	1821.	1818.	1822.	1823.	1824.	1825.	1826.	1827.

a The diminution of Drawback on Leather in 1823, was a consequence of the reduction of duty from 3d. to 1½. d. in that year. b The duty on Wine was reduced on the 5th of July 1825, and charged wholly to the Customs. c £1,381,636 of the amount of Allowances in 1816, was returned to holders of Malt, on the duty being reduced from 4½ to 2½ d. bushel. In 1819 the duty was raised to 3½ d. bushel, and reduced again to 2½ d. in 1822, & since which date from £200,000 to £300,000 per Annum has been allowed on Malt used in distillation. d £284,800 of the Allowances in 1825, was for returns on Wine on the duty being lowered from 7½ to 4½ d. gallon. e £73,946 of the repayments for overentries in 1821 was on Foreign Spirits. f Of the £14,000 Pensions £9,000 are paid to the Duke of Grafton, who receives also £1,500 per Annum out of the Revenue of the Post Office; of the remainder of the £5,000, £3,000 was granted to an Earl of Bath, as far back as 1691, subsequently received by Lord Melbourne and Charles Towne, Esq. by virtue of purchase; the remaining £2,000 was granted to Henry Nassau Seignior D'Auverquerque in 1706, now received by Earl Cowper, by virtue of purchase; Lord Melbourne received £30,000 in 1826 for his moiety of the Earl of Bath's amount, which accounts for the diminution after that year, and the extra charge noted k in the line of Miscellaneous Expenditure. Subsequent to 1823 stationery has been charged under one general head in the Miscellaneous Expenditure, which previously had been distributed over the several departments; the alteration accounts for the diminution noted i in 1824. £17,480 of the amount noted j in 1822, was for purchase of the Old South Sea House. On the transfer of Nos. 6-10 wholly to the Customs in 1825, the Warehousing Department was consolidated therewith, the charge in that line subsequent to 1825, is for Corn Returns previously included with the Warehousing Charges.

Gross Receipt of Revenue of Excise in each of the 12 Years 1816 - 1827.

STATEMENT of the *Gross Receipt, Drawbacks, & other Payments, out of, and Charges for Collecting, the REVENUE of EXCISE,*
in each Year since 1827,—in continuation of the preceding page.

AN ACCOUNT of the Number of *HORSES* and *CARRIAGES*, Charged with Duty, in each of the 5 Years 1810-14; and in each of the 4 Years 1825-28; shewing the Rate of Duty upon each, and the Total amount of Duty, in each of those Years.—*Vide Parliamentary Papers, Nos. 686 and 688, Session 1830.* The Rates of Duty are shewn as they stood in 1811, in which Year an increase of Duty took place: In 1821, the Tax on Horses used wholly in Husbandry was repealed, and in 1823, the Rate as fixed in 1811, was reduced one half. * * * The repeal in 1821, of the Duty on Horses used in Husbandry, and the modification of Duty on other Horses unfortunately precludes a fair comparison being exhibited of the Total Number at the two Periods. The progressive increase of Carriages, whilst all the products of Labor, have progressively decreased in Value, is a subject worthy of reflection

AN ACCOUNT of the Number of HORSES, used for Riding, or Drawing Carriages, Charged with Duty, in each of the 5 Years 1810 - 1814 - 1814 - 1815 - 1816 - 1817 - 1818 - 1819 - 1820 - 1821 - 1822 - 1823 - *. * By Col. No. 14. of the above Statement, it appears, that the aggregate Revenue of the Hospital in the 12 Years 1816-1827, has amounted to £4,894,197. whilst the Total Expenditure as shewn in Col. No. 15 above, and in Col. No. 5. below, during the same period has been only £2,916,326 shewing an excess of Revenue in the 12 Years of £1,977,871, upon this large excess of Revenue, as well as of the Resources of the Hospital generally, it may not be irrelevant to direct attention to the Amount in Col. No. 2. of the Contribution levied upon the Seamen in the Merchants Service, from whose miserable pittance of Wages (when the nature of their Service is considered) 6d. $\frac{1}{2}$ Month is deducted without any benefit present or ulterior accruing to them in return.— Would it not be well to transfer this contribution to the Merchant Seamen's Fund, and to render that Institution more generally efficient and available for the Seamen in the Mercantile Service, the Amounts in this Col. further deserve attention as shewing the Stationary, or rather declining tendency since 1816, of the Mercantile Marine,— whilst the Amounts in Col. No. 11, indicate the movement of a prodigious amount of Specie. Of the Amounts under the Head of Sundries in Col. No. 13. £20,000 in 1822, and £6,465 17 7 in 1827 were Bequests.— The Derwentwater Estates Vide Col. No. 4. were held by the Earls of Derwentwater, and Seized of them, and confiscated in 1746, in retaliation for their Partizanship to the Descendants of the Stuarts; these Estates comprise the most productive Lead Mines known (see No. 317. in the Analysis of the Population, for the No. of Persons occupied therein), in 1825 the Trustees of the Hospital purchased of the Lessees of the Mines, Lead Ore, to the amount of £46,804, which measure, it is stated, was absolutely necessary in the then state of the Lead Market to prevent the Mines being closed, and the adventurers from quitting the district; and the Sum received for Lead was only £29,729.

† The other Items of Revenue will be explained in the following observations upon the Expenditure. The first Item of which Col. No. 1 comprises the Charge for the Maintenance, Clothing, Weekly Allowance, & all other necessities for 2,710 Pensioners, & 162 Nurses, Cooks, Assistants, and Servants, including also Salaries and all other allowances to Military, Civil, & Medical Officers and Clerks, Works, Repairs, and Contingent Expenses, and a Note in the Return from which these accounts have been compiled, further states, that the Account commences on the 1st. October 1815, and ends on the 26th. September 1816, and so for each Year until 1826 which contains the Charge for 15 Months, to the 31st. December 1826, which circumstance explains the recurring excess of Charge for that Year, henceforward the Accounts are to be closed on the 31st. of December in each ensuing Year. The diminished charge for Assessed Taxes and Parochial Rates in 1827, is not easily reconciled, no explanation being offered respecting it.— The Amounts of unclaimed Prize Money in Col. No. 3. are sufficiently explained by the Receipts under the same Head in Col. No. 9, the Receipts under this Head during the War were doubtless very great, as evidenced, by the large Annual Income from Funded Property in 1816 as $\frac{1}{2}$ Col. No. 5 and the Proceeds of Sales of the like Property in the Years 1816-1821 as $\frac{1}{2}$ Col. No. 12. These Sales were made to meet the Payments to the Out Pensioners, see Col. No. 14. below, which Payments since 1821 have been met by Grants out of the Public Revenue see Col. No. 15. in consequence, as a Note states, "of the Funds of the Hospital being so much reduced as to be only sufficient to objects of the Corporation, and refund the Prize Money held in trust for the Captors."— The Amounts under the Head of Sundries Col. No. 4. were invested as follows, Viz. £246,348 in the purchase of Funded Property principally in 1816 & 1822-4. £93,541 chiefly in 1825-7, in Houses contiguous to the Hospital, which promises, a Note states to be greatly conducive to the convenience of the Hospital, its Police, and very shortly to its Income.— £14,618 principally in 1824 in Freehold Property in the Counties of Northumberland and Cumberland.— £36,182 in 1825, in the Tolls of Turnpike Trusts in those Counties.

This Money, a Note states, has been lent at 4 $\frac{1}{2}$ Cent. to the Trustees of the New Road from Newcastle to Westmoreland, running through the Mining Districts and principal Estates of the Hospital. It is estimated, that by this Road £1,200 a Year will be saved to the Hospital & its Tenantry, by the Carriage of Lead, Coals, and Timber, of which nearly 20,000 Tons are annually

conveyed to and from the Mines at Alstone alone, the Derwentwater Estate is subject to a Rent Charge of £1,000 $\frac{1}{2}$ Annum, payable to Lady Newburgh, which is included under the Head of Sundries, and lastly £51,518 included under that Head has been expended principally in 1816 1817, 1818 and 1820, in the Division of *Simonburn Rectory* into Livings for Naval Chaplains *Simonburn*, was one of the large Parishes in Tindal Ward Northumberland extending about twenty miles North of the Roman Wall to the Mountainous district, which divides that County from Scotland, it is intersected by the North Branch of the River Tyne, and in 1831 contained 1,200 Families, composed of 4,397 Persons, it was Assessed to the Property Tax in 1814, at £43,218. By Act of 51 of Geo. 3. cap. 194, it was divided into six Parishes, Viz.— *Bellingham, Falsstone, Gaystead, Thorneyburn, Wark, and Simonburn*, each of these is again subdivided into Townships, amounting in the whole to 20. The Ecclesiastical Benefices in the six Northern Counties are many of them as extensive and Valuable as *Simonburn*, and it might be well to subject them to like Divisions. Prior to 1821 the Hospital School consisted of 200 Boys, in that Year it was united to the Naval Asylum School, and the United Establishment since 1821 has consisted of 200 Upper Boys, 600 Lower Boys, 200 Girls, and 14 Nurses. This Union sufficiently accounts for the increase of Charge since 1820. In 1822 the Establishment received Donations to the amount of £11,660, and in 1824 to the Amount of £54,993, which Sums were invested in the same Years in the Public Funds; exclusive of these Amounts the Expense of the Schools in the 12 Years 1816-1827 has exceeded the Income by £74,564 which is stated to have been paid out of the Funds of the Hospital, but no such Item appears, unless it is included under the general Head in Col. No. 1. above. The diminution of Profits on Provisions bought (Col. No. 8.) a Note states, to be in consequence of a New System of Victualling the Pensioners, by which the temptation to commute their Provisions for Money was greatly lessened and another Note on the same subject states, that the alteration occasioned an additional Expense to the Hospital for Provisions, but that the alteration afforded great additional Comforts to the Men, and security against bartering their Provisions for Spirits. The Receipts for shewing the Hospital in the memorable prosperity Year of 1825, is remarkable.

The progressive increase of Metallic productions exported since 1813, whether viewed in relation to the power of Supply, or the increased comfort and convenience which they are calculated to confer on mankind at large, is a subject for gratulation; while the continuing diminution of Value per ton, is the most serious oppression and privation of the great body of producers. Value is a relative term, and it is therefore by comparison or relation of the Value of one thing to another, that its importance is determined. In 1814-15 £27,477,920 of 3 $\frac{1}{2}$ Cent. Stock was created for every £100 of Stock created, then equal to £34 Official Value of Iron, while at £182 Official Value of Iron, a disproportion in the latter of 33 to 1, and that without any countervailing advantage to the producers of Iron. Yet the just principle of Government consists in maintaining an equilibrium. The common place argument of the Socialists, viz., "Foreign Competition, will not apply here,"—Fide the general Statement of all the various kinds of Iron exported to each Country of the World, by which it will be seen that in France and the United States of North America the importation of Iron and Hardwares are counteracted by Duties varying from once to twice the Value of the Articles.

STATEMENT shewing the Declared Value of ARMS and AMMUNITION, and of MACHINERY and MILL WORK, together with all Iron and Steel, and Hardwares and Cutlery, and of all other Mineral Products, Exported from Great Britain to all parts of the World, except Ireland, in each Year since 1821.

Years.	ARMS and AMMUNITION.			Total Declared Value of		
	Official Value.	Ratio.	Declared Value.	Machinery and Mill Work.	All Iron, Steel, Hardwares, Cutlery, Arms, Ammunition, and all Work.	All other Mineral Products, including Salt and Coals.

The Return of the Comparative Produce of Iron in 1823 and 1839, appears to have been made with the object of making out a case of great increase of Production in the latter Year; had the comparison of 1830 been made with 1828, after allowing for the estimated Produce of North Wales in 1839, the Produce appears to have been but about 50,000 Tons less than in 1828; and since 1839 the Produce is supposed to have been still further greatly reduced, as well as the price, the latter in the proportion of from 75 in 1828, to 49 in 1832. The Railways for which acts have been passed in 1825, and the demand for America for the like purpose will tend again to an increased production, and probably to a temporary improvement in Value.

Bar Iron, Bolt, and Rod Iron, and Castings, EXPORTED to each of 20 different parts of the World, in each of 20 Years 1805 - 1828.

No. 11.

AN ACCOUNT of the Quantity in Tons Weight of **BAR IRON, BOLT & ROD IRON, and CASTINGS**, EXPORTED from GREAT BRITAIN, to each of 20 different parts of the WORLD, in each of 20 Years 1805 - 1828. * There was no specification of the quantity of Bolt and Rod, Exported prior to 1815, it was previously included under the Head of all other Iron, see Col. No. 11 of Statement No. I.

*. These, and the four following Pages, have been compiled in part from Accounts presented to Parliament, in 1819, and 1825.—see Vol. XVI, and XXI of Papers of the Session of those Years respectively; and made complete from M. S. Returns, specially obtained from the Custom House, in 1830. The Details will be found to present some very great disparities, for instance, the 311 Tons of Wrought Iron to the North of EUROPE, in 1815, averaged £119 V Ton: the 129 Tons to Germany, £227 V Ton: while 909 Tons, in 1829, averaged only £14 V Ton.

*. The most striking feature of this part of the Account, is the progressive increase of Bar Iron to Italy. In 1814, the Value averaged £12 12s. 4d. per Ton; In 1829, less than £6 10s. 4d. per Ton; great inequality in the Value of the Wrought Iron, is apparent in this Statement, for instance, 401 Tons to Spain, in 1814, averaged about £45 per Ton; whilst 500 Tons to Italy, in the same Year, is below £22 per Ton.

*. The Duty on English Bar and Bolt Iron, Imported into the United States of North America, is 37 Dollars & Ton, equal to about £8 Sterling; and on Sheet, Hoops, and Rod, 25 Centimes & Ton, equal to about £16 & Ton, being at the Rate of from 110 to 120 & Cent. on the Value in England, in 1830; These enormous duties do not however appear to check the Exportation, because the English producer seems to yield in Profits and Wages, in proportion to the oppression of the Duties.

VALUES.

On examination of this and the seven preceding pages, the increase in the Export of Iron will be seen to be general to each part of the World: when the decline in the Money Value of Cotton and other Wove Fabrics has been adverted to, it has been usual to ascribe that decline to Foreign Competition. The decline in the Value of Iron is equal to that of Wove Fabrics, for which the plea of Foreign Competition cannot be maintained.—see note relating to Duties in the United States, preceding page but one, & note over leaf.

Since 1825 the Commercial intercourse between Great Britain and Ireland, has been put on the footing of a Coasting Trade, and as such no account (except so far as relates to Grain) has been kept; this fact is stated in several other parts of this Work, but it is a truth which cannot be too often repeated that as there is no analogy in the nature of the intercourse between Great Britain and Ireland, and that of from one Port of Great Britain to another, the abundance of the account is a subject for regret. There is no intercourse which deserves to be kept more distinct and complete, than that between Great Britain and Ireland.

QUANTITIES, in TONS WEIGHT.

The first account relating to Iron and Hardware presented to Parliament is contained in three Papers, Nos. 263-5,—Vide Folio 429, Vol. X, Papers of Session 1814-15; the accounts for the Years 1809, 10, 11, & 13, were destroyed by Fire at the Custom House in London, on the 14th, February 1814: a further account was presented in 1821, Paper No. 376 of that Session, and two other accounts in 1825 and 1829, Papers Nos. 191 and 313 respectively; this and the 12 preceding pages have been in part compiled from the above mentioned Papers and made complete from accounts obtained from the Custom House in 1830, expressly for the purpose.

When the depreciation in the Money price of Cotton, and other Wove Fabrics has been adverted to, it has been usual to ascribe their depreciation to Foreign Competition; but the depreciation in the Money Price of Iron, is equal to the depreciation of Wove Fabrics; whilst for the depreciation of Iron, the cause of Foreign Competition cannot be assigned: the only Country in the World, which now makes a sufficient quantity of Iron for its use is Sweden, where it is made at a cost exceeding a half more than what it is made for in England; the depression in the Money price of Iron must therefore be sought for, in other causes than Foreign Competition.!! The strongest test of contrast to which the depreciation of Iron, and other products of labor can be subjected, is Money Property: in 1815 \pounds 53,819,786 Money was borrowed, for which \pounds 3,083,621 of Annuity was granted, equal to 67,621 Tons of Iron at \pounds 45 12 3 $\frac{1}{2}$ Ton, the average price at which Exported in that Year: whilst in 1829 146,316 Tons were required, to pay the same amount of Annuity; a disproportion of more than 2 for 1. Great as is this disproportion, it is nearly doubly so, when viewed in reference to the Money price of the Stock created for that Annuity, which was at the rate of \pounds 32 2 7, or 1.15 Ton of Iron for every \pounds 100 of 3 $\frac{1}{2}$ Cent Stock, whilst in 1829 upwards of \pounds 2,500,000 out of the Taxes was applied to the purchase of Stock, at the rate of \pounds 88 16, or 4.21 Tons of Iron for \pounds 100 of the same denomination of Stock. If however this seeming disparity of Value is the result of a corresponding increase and facility of Production; as far as the question of internal consumption is concerned, it may be regarded as a great public benefit; but, as regards the proportion Exported, a corresponding increase of production of some kind or other in the English list of Imports, ought to be observable; none however appears, nor does it appear that the consumers in other parts of the World have been benefited by the increase of supply, and certainly not in France, or the United States of North America, where it has only served to augment the Revenues of those respective Countries: should therefore the depreciation of Price in England, be the result, either of diminished profits, or diminished reward for labor, instead of increased facility of production; it proves, that British profits and labor, are made subservient to Taxation abroad as well as at home,—a grievance, which Universal Suffrage, and Vote by Ballot will not remedy.

. In the 24 Years 1793—1816, the Expenditure of the Government of Great Britain exceeded the Income derived from Taxes, (as Ψ Col. 10) by upwards of £ 430,000,000; during

* * In the 24 Years 1793—1816, the Expenditure of the Government of Great Britain exceeded the Income derived from Taxes, (as $\frac{1}{2}$ Col. 10) by upwards of £430,000,000; during the same period the Value of the Exports exceeded the Value of the Imports by a corresponding Sum, the Mercantile part of the transaction having been equalized by Bills drawn in different parts of the World on the Government of Great Britain, which Bills, or an amount equivalent thereto were converted into an Annuity account (National Debt) at the rate of about $\frac{1}{2}$ per cent. for £3 of Annuity; this operation has not merely been suspended, but reversed: since the 5th. of January 1817, the Income derived from Taxes, has exceeded the Expenditure by nearly £27,000,000.—see Statement of Revenue No. IV.; in addition to which in 1823—8, £13,036,419 was received by way of Loan from the Bank of England, and upwards of £16,000,000 have been collected in small Sums, and deposited in Savings Banks, all of which, making a Total of about £66,000,000 has been applied to the repurchase, at rates varying from $\frac{1}{2}$ per cent. to 94 3 6, (see Col. 6,) of part of the Annuities created in the preceding 24 Years, at an average rate of 60, while the proceeds, together with nearly, if not quite, a corresponding Sum of individual accumulations, has been vested in Foreign Properties, and thereby created Annuities, Dividends, or Interest to the amount of £6, to £7,000,000 $\frac{1}{2}$ per cent. Annum, which amount discharged out of the Imports, (see Col. 12) diminishing the equivalent for the Exports in Col. 2 to the like amount, and consequently affording a solution to the continued reduction of Value of all the Products of Labor, and Commerce.—see Statement relating to National Debt, and Operation of the Sinking Fund.

AN ACCOUNT shewing the Quantity in lbs. Weight of Cotton Yarn EXPORTED from Great Britain, to each of thirteen parts of the World, in each of the 15 Years 1814-23; the Official & Declared Value of the same to each respective Country; the Highest and Lowest price of Bowed Georgia Cotton Wool, the average rate ¢ lb. at which the Yarn has been Exported, in each of those Years, and also the average rate ¢ lb. to each respective Country in 1828. *Vide Parliamentary Papers, No. 301, 1819, 553 Session 1828, and 314 Session 1829.*

Paper No. 578, laid before Parliament in the Session of 1828, entitled "Papers relative to the Tariffs, published in the United States of North America," contains at page 69, the following observations offered by the Committee of Manufacturers, Merchants, and Agriculturists, assembled at Harrisburgh in 1827, to enquire into the state and condition of the Manufacturing, and other interests of the Republic, on the comparative power of those States with Great Britain in the supply of Cotton Manufactures;— after a comparison of prices in the two Countries, in July 1827 it is stated, "This is a ¢ of 10 ¢ Cent in favor of American Cotton Yarn! With this plain exhibit, it may be certainly expected that we shall Export millions on millions of pounds of Cotton Yarn, and rival the British in that business, as we do in Goods made out of it, as soon as the capacity of our Manufactures shall pass beyond the demand for Cotton Yarn which last at present there is a scarcity, because of the Export, though not much advanced in price. There are very few lots of 100 bales of Goods, now in 'first hands,' for the Home demand is extending, and the Foreign one increasing, faster than more perfect machinery (and more of it) can supply. Butestic competition will soon regulate this. We have water power, or Iron and Coal, ingenious artizans, and industrious people, and the days of British monopoly manufacture of our own raw material are numbered!!

*. There has not been any return of the Official Value to each Country for these two Years, but it will be seen that when the Weight is stated, the Official Value is superfluous.

great as the reduction has been in the price of Cotton Wool since 1814, the reduction in the price of Yarn, according to the above Statement, appears to be in a still greater ratio, that is, after deducting the Value of the raw Material a considerably less portion remains for interest of Capital, wear and Machinery, Profits and Wages; admitting however that the Declared Value as above to be realized, the present [1829] very low rate of the raw Material leaves a large amount for meeting the Items specified, but there seems to be no guarantee against further reduction. The average price to each is interesting, the high price to France deserves attention; a large portion of that shipped to the Netherlands, probably finds its way into France, to Guernsey is doubtless intended for the same destination, by means of Smuggling; whilst a large quantity of the finest quality of Yarn, probably way into that Country, without being entered outwards at the Customs in England; admitting it to be desirable to extend the operation of Cotton in Great Britain; China affords a prospect of vast extension, but unless some guarantee is afforded for ample equivalents being obtained in return Profits and Wages may be adequately sustained, better that the Chinese be left to spin for themselves. The Official Values have been introduced in Statement in compliance with custom, but it will be seen, that when actual quantity is exhibited, the Official Values are unnecessary. the 219,274 lbs. Exported in 1828, as exhibited in Col. No. 13, 66,520 lbs. were to British North America, 37,152 lbs. to South America, and 100,285 lbs. United States of North America, to which States in 1828, upwards of 40,000,000 Yards of Cotton Fabrics were also Exported; and in 1827 upwards of 50 Yards. See Statement of the number of Yards of Cotton exported to each respective Country.

AN ACCOUNT of the Number of Yards of White, or Plain Calicoes; of Printed Calicoes; of White, or Plain Muslins; and of Fustians, Velverets, Velvets, and Jeans, EXPORTED from GREAT BRITAIN, to each of Twenty-two different parts of the World, in each of the Fifteen Years 1814-28, shewing the *Official* rate of Valuation of each description of Goods, and the Total Number of Yards, of each kind, in each Year.

for the four Years 1814-17, see Parliamentary Paper, No. 200, Session 1825; and for the nine Years 1818-26; see No. 553, Session 1828, in the Session of 1829, another Account was
to Parliament, Paper No. 314, but in this Paper, the return is made under two Heads only, instead of under seven Heads, as in the two former; which discrepancy will ac-
count for the seeming great increase of Printed, and White, or Plain Calicoes, in the two latter Years, and for the other articles not being continued beyond 1826. Another discrepancy
is in this Account, viz. The seeming decrease in the Export of Muslins, and the more costly kind of Fabrics, but this discrepancy doubtless arises from the Clerks of the
Customs taking the Official Rate of Valuation, as their guide for the Classification of the several description of Goods. There was no Exportation to the United States of North America
on account of the War then prevailing.

* * The question of Commercial Exchanges has always been considered one of great complication, and difficulty of elucidation; and involved, as it has always been in the question of Barter, and the Balance or equalization of the external Commercial transactions of Nations; those subjects were sufficient enough to render the question of Exchange a complicated one; but, as though they were not sufficient for the purpose, during the War of 1793-1815, it became involved in the transactions of subsidies and Government external Expenditure, to the extent during several of the latter Years of the period, of 15 to 25 millions £ annuum; and further, since the termination of the War, it has become involved with transactions in Loans to Foreign Nations, and Absentee Expenditure, to the extent occasionally of 6 to 14 millions £ annuum, and the Annuities which the investment of £100,000,000 of Capital in Foreign Loans since 1815, has created. Yet, involved and complicated as the question really is, too much importance is frequently attached to it, and its effects expected to arise from varied alterations in the Rates of Exchange, which invariably prove imaginary, or produce results very different to those anticipated. To give however a full and complete elucidation of the principal and effect of Exchanges, on the interest of Nations, it would be necessary to explain the nature and extent, or amount, of the transactions with, and between each separate Country, that come within the range of operations affected by its Courses or Rates; but the limits of this Page will not admit of such explanation; suffice it therefore to say, in reference to the question in the aggregate; that if a Nation Imports more than it Exports, the uniform supposition of uninformed and speculative reasoners on the subject, is, that the account must necessarily be equalized, or Balanced by Bullion: hence, say they, the Currency (when a Metallic and intrinsically valuable one,) is always liable to be deranged, and if an excess of Import was to continue for a series of Years, its effects would be finally to exhaust the Importing Country of the whole of its Circulating Medium: they therefore, instead of admitting the folly of an intrinsically valuable Circulating Medium, as a token of interchange, very unwisely contend for the desirableness of Exporting more than is Imported.—England for more than a Century past, has annually Exported a greater Value than she has Imported; but, instead of exhausting the Countries to which she has given an excess of quantity of their Circulating Medium, those Countries have counteracted the excess, by increased imports on Importation; the consequence of which has been a progressive depreciation in the Value of British Products, of about one half, since the commencement of the Period exhibited above, Viz. 1790.

EMENT shewing the Highest and Lowest Rates of Exchange in LONDON; on HAMBURG, PARIS, and LISBON, and also the Lowest Price $\frac{1}{2}$ Oz. of GOLD and SILVER, in each of the 39 Years 1790-1829. *This Statement is exhibited in connection with the Exports from, and Imports into GREAT BRITAIN, and of the quantity of Grain and Flour, which formed part of the Bank in 1819, and for the 11 Years 1819-29, from Wettenhalls list, which is Published Weekly for the use of the Merchants, in Bullion and Exchanges. ††† For an elucidation of the Pars of Exchange, and the relative Value of Silver to Gold in different, as well as the denomination of Monies in which the quotations are given.—see Statement of PARS of Exchange.*

dition to the complication (as set forth in the Note on the preceding Page) in which the question of Commercial Exchanges is involved; it is further involved in the complication of making GOLD the Standard of Value and exclusive legal tender of Payment, while all other Countries with trifling exceptions adopt SILVER as the Standard of Value, and legal tender of Payment, each Country assigning a different degree of Value to Gold, in relation to Silver:—In England according to the New Coinage, a little more than 14 1/2 Oz. of Silver, are equal to 1 Oz. of Gold; in Paris 15 1/2; and in Madrid 16 1/2. (see Statement of PARS of Exchange, and relative Value of Gold and Silver,) these relations of Value, also, be it observed, to the Coins of the respective Countries; for whenever the Rate or Course of Exchange on any place is such as to render Gold at these relations of Value, a more favorable remittance than Silver, a demand for Gold no sooner ensues, than it commands a premium, increasing in proportion to the demand; consequently so long as Gold maintains a fixed Value, and Silver excluded as a legal tender of Payment; England must necessarily submit to the Rate of Exchange, be it ever so unfavorable, and this disadvantage is exclusively England; because, while in England, Silver is undisposable except in limited amount, (that is comparatively speaking) or at a discount in proportion to the redundancy of supply; Gold, on the other hand, it may not at all times command a premium, is never at a discount; but always circulates with greater facility than Silver, when ever it can be obtained; consequently circumstances render Gold more favorable than Silver as a remittance from England, or whenever it is more favorable for payment in any other part of Europe for Produce purchased on credit, be it Grain, or any other article, the run upon Gold will continue to the disadvantage of England at the option of the Foreign Interest, be it where it may;—to the disadvantage in so far, as the Foreign Interest is empowered to demand Gold at a fixed Value, whilst the circumstances which throw the demand on Gold, are invariably consequent on a rise in the Value of some Product or Products occasioned by a sudden or pressing demand for them, as sometimes happens for Grain. It will prove however, that when Exchanges are to Commercial transactions solely, the demand for Gold will not long continue, except under cases of prohibition, on one side or the other, of receiving Merchandise of any kind; because, the demand for Gold will soon begin to be counteracted by a reduction in the Price of the articles offered in Exchange, and it is only under circumstances of departure from the Value for Bullion, and extensive extraneous money operations becoming involved in the ordinary transactions of Commerce, that any material deviation from the PARS of Exchange occurs. The greatest deviation from the PARS of Exchange according to the above Statement was in 1811; but, it will be seen, that so far from that deviation having been occasioned by a rise in the Value of the Exports, the Value of the Imports by 10 to 12 Millions $\frac{1}{2}$ Annam. The circumstances which produced the great deviation in that Year, were the vast confiscations out of the Exports of the preceding Year, which occasioned Bills of Exchange to the amount of several Millions to be drawn upon England, whilst the general prohibition of Commerce which at that time prevailed over all the north of Europe, precluding any renewal of transactions to absorb the Bills so drawn, demand for Bullion, and Bank Notes being made a legal tender of Payment in England; Bullion, of course, became, like any other article of Production or Merchandise, influenced by the Money Price in proportion to the demand for it, and the result which fell generally under the appellation of an unfavorable Rate of Exchange for England, was on the contrary Rate; because, the Seller of British Products could obtain in Hamburg in 1811, a $\frac{1}{2}$ on England for 23 1/2 instead of 37 1/2 which he gave in 1809, so that in fact what was a loss to the Manufacturer and Merchant.—For further elucidation, see Statements relating to Balance of Trade, and Commercial Equivalents.

AN ACCOUNT of the *Official Value* of Merchandise Exported from, and Imported into GREAT BRITAIN, to and from all parts of Europe, and all such parts of America, the intercourse with which tends to affect the Course of Exchange; shewing the quantity of Grain and Flour which formed part of the Imports, with an estimate of the proportion of Value of the same in each Year, and also the annual average price of Wheat, as well as the Weekly average price of Wheat, Barley, and Oats, in the 1st. Weeks of January, and July, in each Year. * * * The Values of Grain for the 6 Years 1813-18, are as represented in the Appendix to the Second Report of the Secret Committee on the expediency of the Bank resuming Cash Payments, and are stated to be calculated at the average Market Prices in England and Wales.—(Vide Folio 345, Paper 282, Session 1819.) see also Statement relating to Equivalents of Value.

* * * The question of Commercial Exchanges has always been considered one of great complication, and difficulty of elucidation; and involved, as, it has always been in the question of Barter, and the Balance or equalization of the external Commercial transactions of Nations; those subjects were sufficient enough to render the question of Exchange a complicated one; but, as though they were not sufficient for the purpose, during the War of 1793-1815, it became involved in the transactions of subsidies and Government external Expenditure, to the extent during several of the latter Years of the period, of 15 to 25 millions £ annuum; and further, since the termination of the War, it has become involved with transactions in Loans to Foreign Nations, and Absentee Expenditure, to the extent occasionally of 6 to 14 millions £ annuum, and the Annuities which the investment of £ 100,000,000 of Capital in Foreign Loans since 1815, has created. Yet, involved and complicated as the question really is, too much importance is frequently attached to it, and its expected to arise from varied alterations in the Rates of Exchange, which invariably prove imaginary, or produce results very different to those anticipated. To give however a full and complete elucidation of the principal and effect of Exchanges, on the interest of Nations, it would be necessary to explain the nature and extent, or amount, of the transactions with, and between each separate Country, that come within the range of operations affected by its Courses or Rates; but the limits of this Page will not admit of such explanation; suffice it therefore to say, in reference to the question in the aggregate; that if a Nation Imports more than it Exports, the uniform supposition of uninformed and speculative reasoners on the subject, is, that the account must necessarily be equalized, or Balanced by Bullion; hence, say they, the Currency (when a Metallic and intrinsically valuable one,) is always liable to be deranged, and if an excess of Import was to continue for a series of Years, its effects would be finally to exhaust the Importing Country of the whole of its Circulating Medium: they therefore, instead of admitting the folly of an intrinsically valuable Circulating Medium, as a token of interchange, very unwisely contend for the desirableness of Exporting more than is Imported.—England for more than a Century past, has annually Exported a greater Value than she has Imported; but, instead of exhausting the Countries to which she has given an excess of quantity of their Circulating Medium, those Countries have counteracted the excess, by increased imports on Importation; the consequence of which has been a progressive depreciation in the Value of British Products, of about one half, since the commencement of the Period exhibited above, Viz. 1790.

STATEMENT shewing the Highest and Lowest Rates of Exchange in LONDON; on HAMBURG, PARIS, and LISBON, and also the highest and lowest Price of $\frac{1}{2}$ Oz. of GOLD and SILVER, in each of the 39 Years 1790-1829. This Statement is exhibited in connection with the Exports from, and Imports into GREAT BRITAIN, and of the quantity of Grain and Flour, which formed part of the Exports, with the view of shewing how far the Rates of Exchange are liable to be affected by the Importation of Grain. These quotations are taken from the 29th. of January 1790, to the end of 1818, have been taken from the Appendix to the Second Report of the Secret Committee on the Affairs of the Bank in 1819, and for the 11 Years 1819-29, from Wettenhalls list, which is Published Weekly for the use of the Merchants, Dealers in Bullion and Exchanges. †† For an elucidation of the PARS of Exchange, and the relative Value of Silver to Gold in different Countries, as well as the denomination of Monies in which the quotations are given.—see Statement of PARS of Exchange.

In addition to the complication (as set forth in the Note on the preceding Page) in which the question of Commercial Exchanges is involved; it is further involved in the complication of making GOLD the Standard of Value and exclusive legal tender of Payment, while all other Countries with trifling exceptions adopt SILVER as the Standard of Value, and legal tender of Payment, and each Country assigning a different degree of Value to Gold, in relation to Silver:—In England according to the New Coinage, a little more than 14 $\frac{1}{2}$ Oz. of Silver, are equal to 1 Oz. of Gold; in Hamburg 15 Oz.; in Paris 15 $\frac{1}{2}$; and in Madrid 16 Oz., (see Statement of PARS of Exchange, and relative Value of Gold and Silver,) these relations of Value, also, be it observed, merely to the Coins of the respective Countries; for whenever the Rate or Course of Exchange on any place is such as to render Gold at these relations of Value, a more favorable remittance is at the Rates demanded, a demand for Gold no sooner ceases, than it commands a premium, increasing in proportion to the demand; consequently so long as Gold maintains a fixed Value in England, and Silver excluded as a legal tender of Payment; England must necessarily submit to the Rate of Exchange, be it ever so unfavorable, and this disadvantage is exclusively to England; because, while in England, Silver is undisposable except in limited amount, (that is comparatively speaking) or at a discount in proportion to the redundancy of supply; Gold Countries although it may not at all times command a premium, is never at a discount; but always circulates with greater facility than Silver, when ever it can be obtained; consequently in circumstances tender Gold more favorable than Bills as a remittance from England, or whenever it is more favorable for payment in any other part of Europe for Produce purchased on account, be it Grain, or any other article, the run upon Gold will continue to the disadvantage of England at the option of the Foreign Importer, be it where it may;—to the disadvantage of England, in so far, as the Foreign Interest is empowered to demand Gold at a fixed Value, whilst the circumstances which throw the demand on Gold, are invariably consequent on a diminished Value of some Product or Products occasioned by a sudden or pressing demand for them, as sometimes happens for Grain. It will prove however, that when Exchanges are fixed to Commercial transactions solely, the demand for Gold will not long continue, except under cases of prohibition, on one side or the other, of receiving Merchandise of any kind; because, the demand for Gold will soon begin to be counteracted by a reduction in the Price of the articles offered in Exchange, and it is only under circumstances of departure from fixed Value for Bullion, and extensive extraneous money operations becoming involved in the ordinary transactions of Commerce, that any material deviation from the PARS of Exchange will. The greatest deviation from the PARS of Exchange according to the above Statement was in 1811; but, it will be seen, that so far from that deviation having been occasioned by excess of Import; the Value of the Exports had uniformly exceeded the Value of the Imports by 10 to 12 Millions of Annam. The circumstances which produced the great deviation in PARS in that Year, were the vast confiscations out of the Exports of the preceding Year, which occasioned Bills of Exchange to the amount of several Millions to be drawn upon the Bankers in England, whilst the general proscription of Commerce which at that time prevailed over all the north of Europe precluding any renewal of transactions to absorb the Bills so drawn, and a demand for Bullion, and Bank Notes being made a legal tender of Payment in England; Bullion, of course, became, like any other article of Production or Merchandise influences the current Money Price in proportion to the demand for it, and the result which fell generally under the appellation of an unfavorable Rate of Exchange for England, was on the contrary a favorable Rate; because, the Seller of British Products could obtain in Hamburg in 1811, a £ on England for 23 6 instead of 27 8 which he gave in 1809, so that in fact what was a loss to the Buyer, became a gain to the Manufacturer and Merchant.—For further elucidation, see Statements relating to Balance of Trade, and Commercial Equivalents.

AN ACCOUNT of the amount of all the *Promissory Notes & Post Bills*, of the Governor and Company of the *BANK of ENGLAND* in Circulation at the close of Business on Saturday in every Week during the Seventeen Years 1815–31. * * This account is arranged so, as to shew in a striking point of view the increase of issue occasioned by the Payment of the Dividends falling due on the 10th. of Oct. and the 5th. of January, April, and July, in each Year; the intercalary or 365th. day, it will be seen, tends sometimes to bring the increased issue to precede the blank space left to denote the Quarterly period. The * denotes the largest, and the † the lowest amount in Circulation, in each Year. Another Page will shew the annual average amount of Exchequer and Navy Bills in Circulation with the proportion held by the Bank of England and the annual average amount of Notes in Circulation; (distinguishing the proportion below £5) which aggregate amount, appears to have been influenced or regulated by the amount of Exchequer Bills held by the Bank. The Note to the following Page will shew the aggregate amount of the Circulating Medium in each Year since 1813, in juxtaposition with other items bearing upon the question of amount and Circulation. Of the £43,391,149 of Gold Coined between the 1st. of January 1817, and the 31st. of December 1829, rather more than a third is supposed to have been Exported, and absorbed for Manufacturing purposes; the only other point for consideration in looking at these two Pages will be the relative activity and effect in Circulation of Gold, as compared with Paper.

ACCOUNT Continued, of the Official Values of each of 96 enumerated articles of Merchandize, Imported into GREAT BRITAIN, from all parts of the World (except Ireland,) in each of the 15 Years 1814-1828; with the rates of Valuation of each article, and rate of Duty payable thereon, in 1829. * * most of the Articles below are underrated; Sheeps Wool more particularly so, which varies in price from 6d., up to 6/ 1/2 lb., averaging about 2/4. Tobacco varies from 3d., up to 9d., 1/2 lb. Spirits are underrated above one third. Clover Seed varies from 30/ to 60/ 1/2 Cwt. Raisins from 21/ to 84/ 1/2 Cwt: 28/ would be a fairer Valuation for Tallow, than 21/. The Valuation of Madders however shows the greatest inconsistency, the Roots being Valued at nearly five times the price of the Ground Madder, whilst their relative Value is above one half less, Ground Madders vary from 20/ to 70/ 1/2 Cwt., it will be seen from these remarks how irrational it is to persist in drawing hasty conclusions from the bare Statement of Official Values, the following Page exhibits the Official Valuation of the Various kinds of Grain, Meal, and Wines.

Rate of Valuation	Rate of Duty	1814.	1815.	1816.	1817.	1818.	1819.	1820.

AN ACCOUNT of the *Official Value* of each of 49 enumerated articles, of Colonial and Foreign produce RE-EXPORTED from GREAT BRITAIN, to all parts of the World, (except Ireland,) in each of the 15 Years 1814-1828; with the Rates of Valuation assigned to each article, both on Import, and Re-export.

* * The Valuation of many of the articles on Re-export, will be seen very considerably to exceed their present current Value, those more particularly deserving of attention, as well for the increase of Value assigned on Re-export, over and above the Valuation on Import, as for the excess above their present current Value, are Saltpetre, No. 5., Pepper, Sugar, Coffee, Rum, Nos. 12-15., and Spirits No. 39-40., the most preposterous feature of the whole however is East India Cotton Wool, which on Import is Valued at 7d., and on Re-export at 2s. 4½ lb., whilst the present Current Value on an average does not exceed 3½d. ½ lb., on the other hand Indigo, which forms a great item in the Account is undervalued, the price varies from 1/6, up to 10/ 12/ or 13/ ½ lb., a great portion of the finer quality being Re-exported, the average will be nearer 7/ than 6/ ½ lb., East India Piece Goods, which form another great item in the account, are greatly over valued, in proportion to their Valuation on Import, as will be seen by the annexed specification. (see further observations on Official Values in Index.)

Unenumerated Articles				710,267	664,274	1,018,170	707,131	878,552	868,810	946,418
TOTAL Colonial and Foreign Produce Re-exported				£ 19,157,819	15,708,434	13,441,665	10,269,271	10,835,800	9,879,236	10,525,026

These Articles were not specifically enumerated prior to 1821-3. Parliamentary Paper No. 50., Session 1829., exhibits the actual quantities of several articles Exported in 1827 as shown above, but the articles in blank are not specified, another proof of the want of uniformity in the Official Accounts, see the Statement of Customs Duties, for the specification of 112 articles, included under the Head of unenumerated articles of Import, and compare the English with the French form of Account, of Imports and Duties.

All values are in Rupees. The values are based on the report of the Collector of Customs, and are not subject to revision.

{ YEARS				1814.	1815.	1816.	1817.	1818.	1819.	1820.

AN ACCOUNT of the Declared Value of each of 50 enumerated Articles of the Produce and Manufactures of the UNITED KINGDOM, of GREAT BRITAIN and IRELAND, EXPORTED therefrom, to all parts of the WORLD, in each of the 18 Years 1814 - 1831.

* On referring to the details of the Colonial and Foreign Produce Re-exported in the preceding Statement, it will be seen that the excess of Value in the Years 1814 - 16, consisted principally of Coffee and Sugar, accounted for by the great accumulation of the 2, or 3, previous Years, consequent on the obstruction to the distribution which the War of that period occasioned, and the great Export of British Produce & Manufactures in 1815, is accounted for, by the non-exportation to the United States of North America in the Years 1813-14, to which Country the excess in 1815, was principally directed.

* In addition to the quantity of Fish cured dried, as per Column No. 5; 5,786 Cwts. and 6,819 Barrels were cured in Pickle, and of the whole quantity 73,500 Cwt. and 6,294 Barrels were entitled to Bounty; and of that cured dried 14,400 Cwt. was Exported to Ireland chiefly from Shetland, and 6,187 Cwts. to all other parts chiefly from London. Of the Herrings cured as per Column No. 8, 48,495 Barrels were gutted and packed on Board within 24 Hours after being caught, and the remainder cured on Shore; of the whole quantity, 234,827 Barrels were branded for Bounty as per Column No. 9, of which there were assorted, after the Dutch mode and branded accordingly 24,440 Barrels, 21,848 of which were Exported to Ports on the Continent of Europe. Of the quantity Exported, as per Column No. 11, those from Wick were principally to Ireland, the whole quantity Exported thence, having been 105,931; and those from London, Greenock, and Bristol, were Exported chiefly to the West Indies. * The quantity entitled to Bounty at Eyemouth and Leith, considerably exceeds the quantity cured.

AN ACCOUNT of the Number of Barrels of *White Herrings, Cured, Branded for Bounty, and EXPORTED*, in so far as the same were brought under the cognizance of the Scotch Fishery Board, from the 1st. day of June 1809, to the 5th. of April 1810, and in each of the 19 subsequent Years, from the 5th. of April 1810, to the 5th. of April 1829; also an account of the amount charged in the annual Finance Accounts as paid to the Commissioners of the said Board for Salaries and incidental expences of their Office, and for Bounties, Repairs of Boats, Construction of Quays, &c., &c., in each Year, since the Establishment of the Board under the Acts of 48 Geo. III. cap. 110, and 55 Geo. III. cap. 94, and further, AN ACCOUNT of the *Official Value of Foreign Fish Imported and Re-exported*; and of the *Official and Declared Value of all British Fish Exported*, in each of the 21 Years 1809 - 1829.

AN ACCOUNT of the Quantity of each of several kinds of *Fish*, entered at the Coast Office, at the Custom House in London, for Billingsgate Market, in each of the Four Quarters of the Year 1823. — *Vide Parliamentary Paper, No. 271, Session 1824.*

Year 1823, Quarter ending	Number of Vessels	SALMON.		Number of							Bushels of		
		Boxes	Fish	Turbot	Cod	Haddock	Whiting	Herrings	Mackarel	Lobsters	Mullo, Plaice, & Skate.	Sprats	Soles
1st Mar.	907	1,780	—	3,958	88,146	32,160	29	903,210	6,000	198,300	25,839	20,880	4,006
2nd June	1,314	10,357	4,527	48,887	71,429	56,370	73,073	1,080	2,745,200	1,281,306	5,265	—	13,083
3rd July	679	7,121	40,556	33,604	96,646	139,720	11,660	—	228,500	323,500	5,294	3,200	461
4th Dec.	927	532	3,380	916	179,788	244,857	5,040	2,462,127	—	141,500	7,346	37,299	925
Total	3,827	19,790	48,463	87,365	346,009	473,107	89,802	3,366,417	2,979,700	1,944,606	43,744	61,379	18,475

The following page exhibits the rise, progress, and present state, of the Whale and Newfoundland Fisheries, and also the produce of several of the Salmon fisheries of Scotland and Ireland, which together with the above and preceding page exhibits an interesting, although a very imperfect view of the aggregate extent and importance of the Fisheries of the United Kingdom; for instance the above Statement of Supply of *Billingsgate Market* does not include the Red, Smoked Herring, Pickled Salmon, Eels, Oysters, and other Fish brought Coastways; as well as great quantities of various kinds of Fish brought thereto by Land. The high Money price of Provision in 1800 and 1801, appears to have excited a Stimulus for increasing the supply of Fish for the London Market, according to a return presented to Parliament in 1804, (*Vide Folio 59, Vol. VII. of the Papers, Session 1803-4.*) The Number of Fishing Vessels entered at the Coast Office in London in 1799 was only 1407; increased in 1800 to 1627; in 1801 to 2167; in 1802 to 2668; and in 1803 to 3255;—since that time, taking the Statement above as a comparison, the increase does not appear to have been in proportion to the increase of Population; and it is a subject worthy of consideration, both on the part of the local authorities of the City of London, as well as of the Government, how far improved accommodation, and convenience may be made, for the sale of Fish, to encourage an augmented supply.

1801 - 2.

1802 - 3.

The increased supply subsequent to 1800, was excited by a Bounty proposed in 1801, which was claimed between the 1st. of October 1801, and the 1st. of June 1802, and the 1st. of October 1802, and 1st. of June 1803.

On the annexed Quantity, Viz.

On 1,416 Tons of Fresh Cod 2,173
171 do. Slightly Salted 312
649 do. of Skate, Thornback, &c. 1,090
4,677,500 Herrings [Tons 623
186,200 Mackarel 806,995

The above account of Foreign Fish Imported and Re-exported, indicates a great decline since 1811, but it is to be accounted for by the supply going from Newfoundland and Nova Scotia, direct to Spain and Portugal and other parts of the South of Europe on British account,—the annexed is an account of the Import and Re-export in each of the 3 Years 1806 - 8

X

	Imported	Re-exported
1806	76,427	63,257
7	118,352	117,563
8	209,661	307,798

STATEMENT shewing the Gross Receipt of *Duties*, at each of the 107 Custom Houses in the United Kingdom, in the Year 1829; the Total Payments out of the Gross Receipt, for Drawbacks and Charges of Management; and Nett amount remitted to the Receiver General in London, from each Port; shewing also the Number and Tonnage of Vessels, and of Steam Boats Registered at each Port in the same Year;—The 6 principal Ports of ENGLAND arranged in order of their amount of Gross Receipt of Duty, and the remainder in Alphabetical order, with reference to their Number, in the Topographical arrangement, with an estimate of the Number of Inhabitants at each place, in 1830.

*. The annexed Statement shows the proportion of Vessels above 200 Tons in 6 Classes, distinguishing the Number of each Class owned in London separate from all other parts of England, the estimated Number of Inhabitants includes the Population of the adjacent parts of the respective places, e. g. In 1821, Liverpool was represented as containing 118,972 Inhabitants, but Toxteth Park, Everton, &c., which form an integrally a part of Liverpool as Marylebone does of the Metropolis, contained a further Population of 29,000. The Topographical arrangement will show the adjuncts in like manner of all the places; the Column headed Order of Tonnage, following the Total Tonnage, denotes the numerical order of the Ports, according to the Number of Tons of Shipping owned at each Port.

													Total United Kingdom Vessels. T. Tonnage	

Quantities of Soap, Candles, Tallow, Barilla, Oils and Turpentine, charged with Duty; Amount of Duty paid on each and Licences granted to Makers of Soap, Candles, &c. &c. in each of 18 Years 1806 — 1827.

An ACCOUNT of the quantity in lbs. Weight of Soap and Candles charged with Excise Duty in GREAT BRITAIN in each of the 14 Years 1814 — 27; the Official and Declared Value of Soap and Candles Exported; the Amount of Customs Duty on Foreign Soap Imported; the No. of LICENSES granted to Makers of Soap and Candles, and to Dealers in Wax Candles, and of the Quantity of Barilla, Palm and Cocoa Nut Oil, Turpentine, and Whale Oil Imported into Great Britain in each of those Years.—for *Kelp &c.* see Notes referred to in Index.

*. In addition to the extreme disparity between the amount EXPORTED, and the amount IMPORTED, to and from the several Countries exhibited in this Statement; the disparity will prove to have been much greater when considered, in regard to the Real Value; for instance, in 1814, the Money Value of the Quantity Exported, was not less than £25,000,000, while the Imports in the same Year did not much exceed £3,000,000, or £3,500,000 at most; since when the Money Value of the Exports has been progressively lowering, so that in 1828, the Money amount of the Official Value Exported, did not exceed more than about £6,000,000. For the way in which the excess of Value Exported is equalized or Balanced in Commercial account, see the Sections Balance of Trade, and Commercial Equivalents, in Index. The greater portion Exported under the head of Germany is to Hamburg, a considerable part of which, from whence, goes into the Prussian Provinces by the inland rivers and Canals, thereby rendering it difficult to determine the extent of Commercial intercourse between England and Prussia. The increase of Export to Germany without any corresponding increase of Import subsequent to 1792, and the transfer of active operations after the Peace of Amiens in 1802, from Hamburg, to Prussia, Copenhagen and Gottenburg, are all features peculiarly deserving of attention.

Official Value of Merchandise Exported to, and Imported from Portugal, Spain, Gibraltar, Italy, and Turkey.

* The excess of EXPORT to Portugal, & Spain, during the half century from 1721 to 1770, included a large portion of Grain, and during that period the balance was probably equalized by Bullion, as about £40,000,000 of GOLD was coined at the English Mint during those Years.—see *Statement of Gold Coined*. From 1770, down to 1806, the intercourse with the parts of Europe exhibited in this Statement presents no very great disparity; but, since 1806, the quantity EXPORTED has *quintupled*, while the quantity IMPORTED, has increased but about one half; and it is conclusive that no excess of Bullion has been received from this part of Europe since 1806; nor has England in any way benefited by the involution, or indirect intercourse of this with the other parts of Europe; that is, in other words; neither PORTUGAL, SPAIN, GIBRALTAR, ITALY, or TURKEY, have, since 1806, Exported an excess to any other part of Europe or the World, whereby to create equivalents or means, wherewith to liquidate any part of the excess of Value received from England; consequently the equalization of this account must be sought for in some extraneous means. The money transactions of the English Government in the Peninsula, in conjunction with the funding operations at home from 1807 to the close of the war in 1815, suffered to equalize the account during those Years; but since 1815, when the Commercial interest was suddenly and wholly deprived of the British Government Bills as equivalents in amount, the money value of the British Products Exported, has progressively decreased towards an approximation to the limited aggregate money value of the Products Imported.

AN ACCOUNT of the Official Value of Merchandise **EXPORTED** from, and **IMPORTED** into GREAT BRITAIN, to and from America; and Foreign West Indies, annually on an average of Years of Peace and War, from 1698, to 1792; and in each of the 36 Years 1793 - 1828.

* The increase of both Export to, and Import from, the Foreign West Indies after 1795, arose from the several Islands successively falling into the possession of England; and their being given up to their previous Possessors at the Peace of Amiens in 1801 - 2, accounts for the sudden and great reduction in 1803 - 5; but as subsequent to 1805, they again successively fell into the possession of England, the whole of the Products of Surinam, St. Croix, Martinique and Guadeloupe, and a great portion of the Products of Cuba, and St. Domingo, were again added to the Imports from this part of the World, and led to a corresponding increase of Export; but as Surinam, St. Croix, Martinique and Guadeloupe, at the general Peace of 1815, were again restored respectively to Holland, Denmark, & France, whilst the greater portion of the produce of Cuba, was directed into new Channels, and that of St. Domingo, gradually diminished almost to extinction, consequent on the restraint to Labor being removed by the extinction of legal Slavery, which the Revolution in that Island has effected, the Imports under the head of Foreign West Indies since 1815, have been mainly from the Brazils & Cuba, as shewn more particularly in the amplified Statement below. The excess of Export to this part of the World is imputed to the extent of about £2,000,000 per Annum by Bullion, which is not included in the Value of Imports, - see General Balance Sheet of Imports and Exports, under the head of BALANCE OF TRADE.

Amplication of the Column above, headed Foreign W. Indies.

* One of the important features of this Statement, is the increase of EXPORT to AFRICA, during the intervals of Peace, subsequent to 1713; and from 1766 onwards to 1815, the enormous increase of Imports from India, the large amount of Exports, and the limited quantity of Imports, being accounted for by the Products Exported, and imported, the means whereby the Traffic in SLAVES was outlived, and constituted the money chiefly carried to the West Indies, accounts for the progressive increase of the Imports from thence, subsequent to 1760. This is another of those disparities which enter into the question of Balance of Trade, where the excess or diminution of Import or Export, to and from, one part of the World, is equalized by the excess or diminution to and from another part. During the War from 1793 to 1815, Jamaica, & other Islands in the West Indies, became entrepôts of British Products, for different parts of South America, which Commerce subsequent to 1815, was carried on direct to the South American States, and accounts for the diminution of Export to the British West Indies since that date, see following Page.

[illegible][illegible]

STATEMENT of the Quantities, and Declared Values of each of 65 enumerated articles of Merchandise EXPORTED from GREAT BRITAIN, to the EAST INDIES and CHINA, in each of the five Years 1823-1827

* * The above Statements for the Years 1814—22, have been compiled from Papers presented to Parliament in 1823, Vide folio 107 of Vol. XVII of that Session,—for the 5 Years 1823—7, Vide Vol. XXIII of Session 1828,—see folding Sheet preceding page 1, for a more detailed account of the Import and Re-export of East India produce in the four latter Years: and page hereafter for the particulars of both Imports, Re-exports, and Exports, in each Year since 1826, the Totals of which are annexed both in Official and Real Value. Other pages exhibit the average prices of each article Imported in each Year since 1796, the reductions in which when contrasted with the increased value of Money Property, afford a tolerable solution to the embarrassment in which all Commercial transactions have been involved since 1815,—see Note to West India Statement on following page.

Years	Official Value.		Declared Value of preceding Column.	Official Value of Imports.	Real Value of Imports.

Whilest the above Statement exhibits the Total Money Value of the Merchandise Exported from Great Britain to the 18 British Islands and Colonies in the Western Hemisphere, the preceding Statement shows the quantity in Cuts, Gallons, and Bushels of SUGAR, RUM, and COFFEE, Imported from each of the said Islands and Colonies into Great Britain; and successively down to 1831 by which it will be seen that Great Britain draws annually from her West India Possessions a Net surplus in value to the amount of about £ 3,500,000 over and above the Value of all Merchandise Exported, which surplus is absorbed or expended as follows, viz. about £ 1,000,000 for Freight, £ 400,000 for Commission, Brokerage, and Agency, probably about £ 1,000,000 in discharge of Interest on Mortgages, and the remainder in profits to Proprietors of Plantations residing in Gt. Britain.

Page 75, this, and the two following pages, exhibit a comprehensive, yet imperfect view of the nature of the transactions between Great Britain and its Possessions in the West Indies, for independent of the large quantity of Produce, which Great Britain has annually drawn from those Possessions since 1760, large supplies of Bullion the Proceeds of the Transit trade from Jamaica, and other points to the South American Continent have at times also been received, by Great Britain. To a right understanding of the progressive increase of Produce in the West Indies subsequent to 1760, it will be proper for the enquirer to inform himself of the nature of the intercourse between Great Britain and Africa, as exhibited in juxtaposition with that to the West Indies at page 75.—see Note thereto. Subsequent pages exhibit in detail the Quantity and Value of every article Exported to, and Imported from, the West Indies, in each Year since 1826, by which it will be seen that while in 1814, the Sugar Imported alone was equal to £ 12,484,714, the entire produce in 1827, was equal to only £ 2,428,209, and in 1830 to only £ 675,804.—the Customs Duties on which in 1830 exceeded £ 7,150,000. During the period of the progressive reduction in Value of all West Indian Products, and the continued heavy Imports thereon since 1814, upwards of £ 35,000,000 out of the Imports have since that date been applied to the purchase of 3 $\frac{1}{2}$ Cent Stock, at progressively increasing rates, varying from £ 38 13 9 to £ 94 3 6; a boon of £ 15,000,000 to one interest, and a falling off of 4 or 5 times that amount to the other;—such disparities bespeak an utter destitution of purpose in those whose Duty it has been to maintain a due equilibrium in Society.

No. of Col.	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	

AN ACCOUNT of the *Official Value* of sundry articles of British Produce and Manufactures, *EXPORTED* from GREAT BRITAIN, to all parts of the World, in each of the 24 Years 1805–28; with the rate of Valuation assigned to each article, together with the *Declared Value* of each of the same articles, in each of the 15 Years 1814–28; shewing also the ratio of *Declared Value* to every £100 of *Official Value*, in the Years 1814 and 1828; and also on an average of the 15 Years, beginning and ending with those Years. ☞ *The Official rate of Valuation of most of the articles exhibited in this Statement will be seen to be very disproportionate to their Current Value, the first Column particularly so, another distinguishing feature, is, that whilst most articles have become depreciated in Value more than one-half; the Value of the articles in Columns No. 2. to 5., have rather advanced than declined.*

1828	1,099	509	388	358	278	195	168	269	173	100	105	134	
Number of Column	1.	2.	3.	4.	5.	6.	7.	8.	9.	10.	11.	12.	

☞ Independent of the great disparity between the *Official Rate of Valuation*, and *Current Price* of the respective Articles, this analysis of the account of the Exports of British Products develops another important feature, *Viz.* that with the exception of Cottons, Cotton Yarn, Linens, and Iron, there is no increase in the quantity Exported, the increase being exclusively in those articles; it will be seen also, how materially the disparity of Value of the articles in this Statement alters the aggregate result of the depreciation of the Exports since 1814, which is from 133 to 70, whilst if the above articles were excluded, the ratio of the remainder in 1828 would be below 60.

AN ACCOUNT of the Quantity in lbs. Weight of *Hard Soap*; Number of Bushels of *Malt*, and amount of Duty paid thereon; the Number of *Public*, and *Retail Brewers*; and of *Licensed Victuallers*, and the Number of Barrels of *Beer*, Brewed by them, in each of the 60 Collections of Excise, in ENGLAND and WALES, in the Year 1827.

An ACCOUNT of the Quantity reduced into English Quarters, of Wheat and Rye Exported from the Port of DANTZIC with the Annual Average price of the Wheat $\frac{1}{4}$ Quarter in Sterling Money in each of the 65 Years 1700 - 1764 and of the Quantity in Quarters of Wheat, Barley, Malt, Rye, & Oatmeal, Exported from, and of Quarters of Oats Imported into Great Britain, with the price of the best Wheat & Malt $\frac{1}{4}$ Bushel at Lady-day and Michaelmas, and the mean annual price of Wheat $\frac{1}{4}$ Quarter at the Market of Windsor in each of those Years, also of the Number of Pipes of Wine shipped from the Port of Oporto in each of the same Years, and the price of the Quarter Loaf as entered in the Books of the Town Clerks Office Guildhall at the commencement of each Mayoralty on the 9th. of November in each Year since 1734.

For the quantity of Wheat Exported from Dantzic see Parliamentary Paper No. 83, Session 1827, folio 62; for Annual Average price of the same, see same Paper, folio 64, for the quantities Exported from Great Britain and prices of the same see following page. The Number of pipes of Wine Exported from Oporto have been taken from a very interesting tract on the Wine Trade of Great Britain drawn up by James Warre Esq. a Gentleman for more than half a Century most respectably and extensively concerned in the Wine Trade of London, published in 1823. In the Years noted by a * the quantity of Grain Imported into Great Britain exceeded the quantity exported.

Years	Exported from Dantzic		Annual Average price of Wheat & Rye Winchester Quarter.	Exported from Great Britain					Quarters of Oats Imported	Prices of 9 Gallons at Windsor of the best				Annual Average price of Wheat	No. of Pipes of Wine shipped from Oporto	Years	Price of the Quarter Loaf in London at the commencement of each Mayoralty on the ninth of November in each Year.

Price of the Quarter Loaf in London at the commencement of each Mayoralty on the ninth of November in each Year.

1700 1701 1702 1703 1704 1705 1706 1707 1708 1709 1710 1711 1712 1713 1714 1715 1716 1717 1718 1719 1720 1721 1722 1723 1724 1725 1726 1727 1728 1729 1730 1731 1732 1733 1734 1735 1736 1737 1738 1739 1740 1741 1742 1743 1744 1745 1746 1747 1748 1749 1750 175

The ACCOUNT of the preceding Page continued with this difference, Viz.—up to 1764.—ENGLAND appears to have Exported considerably more Grain than she Imported, from which Period the IMPORTS begin considerably to exceed the EXPORTS, and consequently both the Import and Export of Wheat, Barley, and Oats, are exhibited below, instead of only the excess Exported as in the preceding Page. The quantities Imported, also, be it observed, include the Imports from Ireland,—this is important to be borne in mind, inasmuch, as other Statements exhibit the Importation exclusive of Ireland. †† The Elton Bushel continued to contain 9 Gallons down to Michaelmas 1793, after which date the Winchester Standard was adopted; the Prices of Malt are exclusive of Duty.

In the Years 1690 and 1691, the Price of Wheat was very equable, varying only from 30/4, to 31/0. In 1692, there commenced Seven Years succession of very unfavorable Harvests, which appear to have been general over a great part of Europe, so that without any Exportation worth Notice, the Money Price in 1695, rose to 60/1; in 1696, to 63/1; in 1698, to 60/9; down in the following Year to 56/10½; and, in 1700, to 53/6½; from which Period the preceding Statement shews the progress of Exportation, and variation in Money Price, Year by Year, down to 1764, from which Period as will be seen by the Statement below, England suddenly changes her character from an Exporting to an Importing Country.

Years	Exported from Dantzic		Annual Average Price of Wheat per Quarter, exclusive of Duty.	Quarters of Grain and Flour Imported into, and Exported from GREAT BRITAIN.						Prices of 9 Gallons at Windsor of the best				Annual Average Price of Wheat at Windsor of the best London Market, from 1764 to 1830.	No. of Pipes of Wine, shipped from Oporto.	Years	Price of the Quarter Loaf in LONDON, at the Commencement of each Mayoralty on the 9th. of November in each Year.

The annexed Statement endeavours to shew the annual Supply and Consumption of Wheat in Great Britain, in each Year since 1815; it has been compiled from Mr. Jacob's 2nd. Report on Corn, Par. Pa. No. 258, Session 1828, Vide Fo. 35, sup.; In his estimate of Consumption, Mr. Jacob proceeded on the principle of adding 200,000 annually to the Number of Consumers, which augmentation, the return of Population in 1821, fully justified; On the same principle since 1821, 225,000 annually, have been added, and should the same ratio of increase of Population continue, which the Returns since 1800 indicate, and Mr. Jacob's scale of Consumption be accurate, the Year 1841 will require a supply exceeding 18,000,000 of Quarters; and 1851 near 22,000,000, while the internal means of supply, according to this Statement is little more than half that quantity.

What will be the effect of one, two, or three such Harvests as 1800 and 1816? Such a question deserves attention.

Years	Estimate of Annual Crop	Imported within each Year from		Surplus of preceding Year	Total Supply of each Year.	Estimated annual Consumption, including 1,200,000 Qrs. for Seed.	Annual average price of Wheat.	Money Value of Estimated annual Consumpt.

									Rye

*. All these places, Import more Grain than they Export see Nos. 11-14 and 29-35 in the following Statement; Nos. 62-65 also, it will be seen, by Nos. 11-14 of the following Statement receive supplies of Flour from Ireland; Liverpool however Manufactures Flour to a very great extent by from 20 to 30 powerful Wind Mills.

44 The following Statement shows the Total, and the Proportion of each description of Grain and Flour, Shipped Coastways, in each of the 4 Years 1824-1827.

	1824.	1825.	1826.	1827.
Wheat ..	937,190	907,513	768,367	763,004
Barley ..	878,608	873,155	796,250	746,868
Malt ..	376,388	385,285	397,170	371,792
Oats ..	812,117	901,514	737,265	650,346
Pease and Beans	303,524	285,202	195,143	193,351
Rye	19,555	11,330	10,305	23,520
Total Quarters of Grain	3,327,942	3,253,009	2,904,500	2,644,881
Wheat ..	1,587,490	1,585,162	1,389,763	1,355,162
Barley ..	1,055,613	1,055,613	931,712	885,573
Malt ..	10,523	3,792	1,701	1,701
Oats ..	1,994,546	1,883,402	1,116,005	1,065,436
Pease and Beans				
Rye				

45 In reference to the above Statement it is to be observed, that almost every one of the above Ports, both Export, and Import Grain and Flour, and the first of the above Totals represents the balance Exported, after deducting the quantity Imported, whilst the latter total represents the aggregate quantity moved Coastways, and the annexed Statement 44 shows the proportion of each kind of Grain and Flour, which compose those aggregate quantities; where the figures are reversed the quantity Imported exceeds the quantity Exported to the extent which the figures reversed represent; the Export from the three Counties of Norfolk, Suffolk, and Essex, when considered in conjunction with the large supply of Animal food, Potatoes, Wool &c. which they also afford, bespeaks the pauperism of those Counties (see Page) to be an anomaly;—an inequality of distribution, and not a consequence of poverty in its legitimate and aggregate sense.

STATEMENT of the Quantity in Quarters of each kind of *GRAIN, MEAL, and FLOUR*, (the Meal and Flour being converted into Quarters of its respective kind of Grain,) IMPORTED into GREAT BRITAIN from all parts of the World (except Ireland,) in each of the 7 Years 1825 - 1831. * * For the proportion Imported from each respective Country, — see Pages 104-5.

[Years	1825.	1826.	1827.	1828.	1829.	1830.	1831.	1832.	1833.

†† As a considerable portion of the above stated Number of Live Animals are driven for sale, from Liverpool island, as far as Birmingham, Coventry, and Leicester, one of the greatest advantages, which could be conferred on the parties interested in the traffic, would be, to endeavour to get them landed at Runcorn, on the South Bank of the Mersey about 25 miles above Liverpool, by doing which, 24 hours in time, and upwards of 20 Miles of driving would be gained. *The Local Position of Runcorn.* (see Nos. 986–990, of the *Topographical Analysis*) is also favorable for facilitating the intercourse between the interior and South parts of England, and the South, S. E., and E. Coast of Ireland.

The annexed Col. under the head of Cows and Oxen includes all kinds of Live Animals exported from Ireland to all other parts of the World than Great Britain, the Totals of each of which, in the aggregate of the 27 Years were as follows, Viz. 5,095 Cows and Oxen, 9,415 Horses, 2,249 Sheep, and 750 Pigs. This Statement has been compiled from an Account ordered by the House of Commons to be printed on the 21st. March 1828 consisting of 12 folios. Paper No. 180.—A Note at page 12 of which states "That the regulations adopted for the purpose of giving effect to the Law which places the Commercial Intercourse between Great Britain and Ireland on the footing of a Coasting Trade, have deprived the Customs Department in London of the means of keeping any record of the Goods exported duty free from one country to the other since the 5th. of Jan. 1816, except in so far as regards the article of Corn, the Exports to Great Britain for the last two Years 1826–7 as exhibited above, are therefore necessarily confined to that particular commodity. — It has previously been expressed as a desideratum that the Accounts of the Intercourse between Great Britain and Ireland should be kept in a separate Col. and that the Col. containing the Statement on the subject of the Intercourse with Great Britain should be kept in a separate Col. on the contrary, there is no intercourse with Great Britain which requires to be kept in a Col. distinct from that with Ireland—see General Statement of the Value of Exports from Ireland.

Quantity of Grain, EXPORTED from various Ports in EUROPE and AMERICA, in each of the 35 Years 1791 - 1825.

AN ACCOUNT of the Quantity of GRAIN, EXPORTED from various Ports in EUROPE and AMERICA, in each of the 35 Years 1791 - 1825.

The Port of ELBING, is seated on the banks of a small River falling into the Frische Hafl, in Latitude 54.7 North, and 19.22 of East Longitude; the Frische Hafl, is an inlet separated from the Baltic Sea by a narrow strip of Land, or Sand bank extending about 60 miles in a direction East by North from the Delta of the Vistula: DANTZIG, at the mouth of the Western branch of the Vistula being in Latitude 54.21 North, and 18.38 East Longitude; and PILLAU, at the Eastern extremity of the Promontory, or neck, being in 54.34 of North Latitude; a narrow Strait at Pillau leads to the Frische Hafl, at the North East extremity of which is Königsberg in Latitude 54.42 North, and 20.29 of East Longitude; LITUAU, is a Port of the Baltic on the Coast of Courland (the most Western Province of the Russian Empire) in Latitude 56.32 North, and 20.55 of East Longitude; RIGA, in Latitude 56.5 North, and 24.3 of East Longitude, is seated near the entrance of the Dwina River into the spacious Gulf of Riga, formed by the Coasts of Courland and Livonia, of which latter Province Riga is the Capital: LIVONIA, is rich in Flax, Hemp, and Timber, as well as in Grain.

This Statement has been compiled from Folios 17, to 94, of the Parliamentary Paper No. 83, Session 1827. Accounts are kept in Dantzic, in Florins, Groshen, and Pfenningings. 18 Pfenningings = 1 Groshen, and 30 Groshens = 1 Florin; at the commencement of the period here exhibited, the current Florin of Dantzic, exchanged against the Gold Ducat of Holland, at the Rate of 8 Florins & 3 Groshens = 1 Florin; the Ducat being equal to 8s. 4d. of the English Standard Gold Coin; consequently, the Florin of Dantzic was equal to 1s. 2d. English. From 1707 to 1730, the Ducat varied against the current Money of Dantzic, from 7 Florins, 10 Groshen, to 8 Florins, 7 Groshen, after 1730 a debasement of the Dantzic Money commenced, and a progressive depreciation in comparison with the Gold Ducat continued, down to 1773, when the Value of the Ducat was fixed at twelve instead of 8 Florins, therefore, so long, as no depreciation took place in the English Currency, the advanced quotation in the Price of Wheat, in Dantzic was purely nominal, as far as its Export was concerned, for it is seen that when converted into English Money, the Price was less in 1708, when the quotations in Dantzic were from 380 to 500, than it was in 1730, when it was 1730, which the accompanying Statistics afford. Up to 1707 all Grain Exported from Dantzic, was paid for in specie; from that period Bills on Amsterdam became the general mode of Payment, consequently to send the average Price of Wheat from Dantzic, exported to the Port of London, it is necessary to take the course of Exchange between Dantzic and Amsterdam, and then the average Price of Wheat from Dantzic, exported to the Port of London, which is compared of Schillings and Groats, 12 Groats = 1 Schilling, and 20 Schillings = 1 Pound Flemish, and the per of Exchange in Amsterdam on London is 28 Schilling, 6 Groats, Flemish for £1 Sterling against the English Mint Standard in Silver, & 40 Schillings, 3 Groats, in Gold. In 1701 an Exchange was established in Dantzic, being consequent on the depreciation of the £ Sterling in England at that time. For the Sterling Prices of Wheat since 1764, see the next following Statement but one.

STATEMENT shewing as follows, Viz., Column 1, shews the mean price of WHEAT $\frac{1}{4}$ Winchester Quarter, at the Market of Windsor, according to the accounts kept at Eton College, the lands of which are let principally at a Corn Rent: Columns 2 and 3, extracted from Bishop Fleetwood's Chronicon Preciosum are supposed to shew the mean annual price of Wheat and Malt at the same Market; but for a Measure of 9 Gallons to the Bushel, the prices in the first Column being reduced to Winchester Measure: Column 4 shews the annual average price of Grain, (half Rye and half Barley) in Sweden, reduced into English Money $\frac{1}{4}$ Quarter: Column 5 shews the annual average price of Rye at Antwerp: and 6 & 7 the Quantity of Wheat and Rye, Exported from Dantzic, in each of the 56 Years, 1650-1705: and the price of Rye and of Oats in Sep. 1826, in each of the 52 Governments of the Russian Empire.

Years	Annual mean price, of Wheat & Winchester Quarter, at the Market of Windsor.	Annual mean price $\frac{1}{4}$ Quarter of (Vide pp. 125-6 of Chronicon Preciosum Edition 1707.) * * * The Chetwert of Russia is equal to 5,952 English Bushels, or 100 Chetverts = 74 $\frac{1}{2}$ Quarters English. The Silver Rouble of Russia weighs 15 dets. 12 grains, and contains 28.1 grains of pure Silver = to 3s. 2 $\frac{1}{2}$ d. English; but the above quotations are for Paper Roubles, 500 of which, since 1815, have been current against 100 Roubles in Silver; it deserves consideration how far the estimation of the Paper Rouble in the different parts of this widely extended Empire, tend to a variation in price.

AN ACCOUNT of the annual Coinage of MEXICO, in Dollars; and of the average price of Wheat, in each of thirteen, of the principal Corn Markets of EUROPE, in each of the 64 Years 1700-63.—see the several Places under each of their respective heads in the Index, for an explanation of Measures and Monies. Vide Papers No. 27 and 159, Session 1826; 83 of Session 1827; and 258 of Session 1828.

Years	Value of the Coinage of MEXICO, in Dollars.	Eton prices reduced to the Win- chester Quarter.	Dantzic Folie 64 of 83.	Kon- igsberg, 12 of 27.	Dordt, 37 of 27.	Bremen, 81 of 258.	Biscay, 73 of 27.	Bordeaux, 79 of 83.	ROMAN STATES 87 of 83		Rye and Barley mixed. Sweden 10 of 83.	Rye, in Antwerp 67 of 83.	CORRUNNA 67 of 27.		Boulogne sur-Mer. 72 of 83.

AN ACCOUNT of the Quantity of GRAIN, IMPORTED into, and EXPORTED from, various Ports in EUROPE.

WINDAU, is a Port of the Baltic, in the Province of Courland, in 57.20 North Latitude, or about 100 miles North of Memel; Rostock and Wismar, are also Ports of the Baltic, lying between Lubeck and Stralsund, in Latitude about 53.50 North, they belong to the Duchy of Mecklenburg-Schwerin, which contains an aggregate Population of about 400,000; The Town of THORN, seated on the banks of the River Vistula, is in Latitude 53.1 North, and Dantzic seated near the entrance of the River into the Baltic, is in Latitude 54.21 North, leaving about 90 miles of intermediate Country, to add to the supply of Grain into Dantzic, in addition to what passes through THORN. The Port of Elbing, is about 40 miles East of Dantzic, and seated on an inlet of the Frische Haff, into which a branch of the Vistula falls, but from the locality of Elbing the probability is, that the greater portion of the Grain which passes through THORN proceeds to Dantzic, and that that shipped from Elbing is principally the produce of the Province of Marienverder.

Quarters of GRAIN, into, and from, the NETHERLANDS. <i>Vide Folio 31, of Par. Pa. No. 27, Session 1826.</i>					Annual Consumption of GRAIN in BREMEN. <i>Vide Folio 85, Par. Pa. No. 258, Session 1828.</i>			Exportation, and average Price of GRAIN, at the Port of WINDAU. <i>Vide Folio 16, Par. Paper, No. 83, Session 1826.</i>										Average Price of Quarter at LUBECK. <i>in September, 165 of 159.</i>

AN ACCOUNT of the Prices of GRAIN, in various Markets of EUROPE, in each of the 12 Years 1815-26. The Prices in COPENHAGEN, VIENNA, MUNICH, Department of CALVADOS, WARSAW, and HANOVER, are given in Sterling Money $\frac{1}{4}$ Quarter. The Current Guilder of Brabant, is equal to 17d. English, or 14 for £1 Sterling, and the Hectolitre is the same as that of France, Viz. 2.8379 Bushels; consequently in 1817, the maximum of the Price of Wheat in Antwerp, was about 11/0 $\frac{1}{2}$ Bushel, or 88/0 $\frac{1}{2}$ Quarter. The Mina of Genoa, is equal to 3.426 Bushels. The Lira of 20 Soldi, or 240 Denari, is equal to about 8d. English, consequently the maximum of Price for Wheat in Genoa, in 1817, was about 11/9 English $\frac{1}{2}$ Bushel. The Barrel of Sweden, is equal to 4.137 Bushels English. The Swedish Specie Rix Dollar, of 48 Skillings, is equal to 4/7 $\frac{1}{2}$ English, or 4 Rix Dollars 15 Skillings, for £1 Sterling; but, the Currency is in Paper exchanging against Specie in the proportion of about 3 to 1.

* * The unfavorable Harvest of 1816, appears to have produced a greater Change of Prices in Vienna and Munich, than in any other part of Europe, and the difference of Price in Warsaw and Vienna in that Year, is deserving of Notice.

	<i>Lowest and Highest Prices $\frac{1}{4}$ Quarter in the Market of COPENHAGEN.</i>								<i>Average Price at VIENNA. Vide Fo. 137, Pa. No. 159, Session 1826.</i>				<i>Average Price at MUNICH. Vide Fo. 143, Pa. 159, Session 1826.</i>

[illegible]

AN ACCOUNT of the Number of Quarters of *Wheat and Wheat Flour*, and of *Oats and Oatmeal*, IMPORTED into GREAT BRITAIN, from each of 12 different parts of the World, in each of the 30 Years 1800-29. The Flour and Meal being converted into Quarters of their respective kinds of Grain. * * * The bulk of the *Wheat* under the head of all other parts, in the 3 Years 1817-19, was from Italy, as was 15,000 Quarters in 1820, and 150,000 Quarters in that Year from Spain, in addition to 28,308 Quarters from thence, in 1828; there not being any Oats Imported from America, the two first Columns of that division are occupied by the annual average price of *Wheat and Oats*.—*Vide Par. Paper, Vol. XX, Folio 233, Session 1825. The 5 Years 1825-29, continued from MS.*

For continuation of *Wheat*,—see Page 90.

STATEMENT shewing the Quantity in Quarters of *Barley, Beans, Pease, and Rye*, Imported from each of several different parts of the World into GREAT BRITAIN; and the annual average price thereof, in each of the 32 Years 1800—1831.

* From 1809 to 1812 there was an annual average of about 5,000 Quarters of Barley brought in as Prize. Of the quantity from all other parts, in 1818, 63,209 Quarters were from Flanders; in 1827, 27,409 Quarters were from France, and 12,410 from Italy; in 1831, 18,737 Quarters were from France. Of the BEANS from all other parts in 1818, 31,975 Quarters were from Flanders, 3,159 from Italy, and 8,028 from Malta; in each of the Six Years 1826—1831 from Denmark, and in 1819 and 1827 from Countries as V Statement annexed.

The quantity of Hops grown in the 22 Years 1785-1803, averaged 22,538,000 lbs. $\frac{1}{2}$ Annum, the Years 1787, 1793, 1802, and 1805, having been Years of failure; and 1794, & 1801, Years of great abundance, the quantity charged with Duty in 1801, having been 50,657,112 lbs.

In 1802, only 3,707,170 "

In 1803, the quantity was 41,573,237 "

and, in 1805, 6,859,065 "

The annexed is a Statement of the Total Number of Acres planted; lbs. Weight charged with Duty, Gross Receipt of Duty, and Lowest and Highest Price of Hops, in each of the 16 Years 1806-21, being the period from whence the above Statement commences. In addition to the annexed quantity, in the Years 1817-18, there was 5,800,000 lbs. of Foreign Hops Imported at a Duty of 1/6 $\frac{1}{2}$ lb., or £8 8 $\frac{1}{2}$ Cwt., but so far from the Importation being required as a necessary supply, more than a fourth part were Re-exported in 1819-20, merely to recover back the Duty. From these data, as well, as from the account of the quantity of Malt charged with Duty in each Year during the same period, the fact is established of the annual consumption of Hops on an average of Years, not exceeding 23,500,000 lbs. $\frac{1}{2}$ Annum, after allowing for the extra consumption in the use of old Hops in Years of failure; and that 20,000,000 lbs. of Hops of sound and good quality would prove an adequate supply.

Years	No. of Acres planted	lbs. Weight Charged with Duty	Gross Receipt of Duty	Lowest & Highest price $\frac{1}{2}$ Cwt. in the Borough Market.

LICENCES, to Public Brewers, Retailers of Beer, and to Distillers, Rectifiers, and Dealers in Spirits and Wines, and also to Tanners, and Dealers in Tea, Coffee, &c., and Tobacco and Snuff, in each of the 14 Years 1814-1827

STATEMENT of the Number of LICENCES, granted to Brewers, and Retailers of BEER; and also to Distillers, Rectifiers, and Dealers in Spirits, and Wines, and to Tanners, and Dealers in Tea, Coffee, &c., and to Dealers in Tobacco and Snuff, in all Great Britain, in each of the 14 Years 1814-1827.

Vide Parliamentary Paper No. 33, Session 1824, and Papers No. 249-250, laid before the Finance Committee in the Session of 1828. On the preceding Page is exhibited a Statement, of the Quantity of Malt, Beer, Hops, and of Spirits and Wines, charged with Excise Duty in corresponding Years to those exhibited below. A reduction in the rate of Duty on Spirits distilled in Scotland and Ireland took place in 1823, and a further reduction in all the United Kingdom, from the 5th. January 1826. In 1823 also, and again in 1825, great alterations were made in the Scale and Rates of Duty on Licences, for further details of which and effects produced thereby, see the several Articles, Beer, Licences, Spirits and Victuallers in their Alphabetical Order in the Index.

For the Cotton Exported from the United States of America see General Statement of Exports from those States in which the causes of the diminution of Export in 1808, and 1813-14 are explained; the *centime* of America is as near as may be, equal to the *son* of France, and the *half-penny* of England; up to 1814 the above account relating to the Import of Cotton into, and Dock Dues &c. at the Port of Liverpool have been taken from an Historical view of that Port by Mr. Hen. Smithers published by Kaye in 1825, and the continuation has been compiled from the Annual Circulars of different Brokers.

The Accounts of Tonnage and Dock Dues are made up to the 30th. of June in each Year, and are wholly received by the Corporation, and in their progressive increase exhibit a result not less interesting than the extension of the culture of Cotton in America; the increase of the Population of Liverpool is almost as remarkable, as the increase of its Traffic. In 1565 it was a mere fishing town with 138 Huts and 225 Tons of Boats, it emerged from its obscurity at the close of the 17th. Century, when the Population amounted to 5,145, in 1797 to 34,407, in 1801 including 7 contig. Townships (see Nos. 1316 - 1323 of the Topographical arrangement) the Population amounted to 85,393, and in 1821 to 144,687 which at the census in 1831 will probably amount to 165,000, the basis of the influence of Liverpool, arose from its extensive participation in the Slave Trade of Africa, from the 1st. of January 1806 to the 1st May 1807, when that Trade was totally abolished by Great Britain, there cleared from the Port of Liverpool for the Coast of Africa, 185 Large Ships. In 1730 the No. of Vessels cleared out for that trade was 15, progressively increasing up to 1769-74 in which seven Years, the average Number, annually cleared outwards, was about 100, the traffic was materially checked by the War with the American Colonies, so that in 1779 there cleared only 11 Ships, but it recovered again after the close of the War, so that in 1792 the Number cleared out was 132. Since the abandonment of this traffic in Slaves, Liverpool has been, and still continues, more a place of Transit and Agency, than one involved in the risks and consequences of the great transactions of the Empire, and is indebted for its present importance as much (perhaps more) to its peculiar locality and contiguity, to inexhaustible supplies of Salt and Coal, and the Chief Seats of the Earthenware and Cotton Manufacture, as to the genius and spirit of its Inhabitants. The Town is delightfully located on the East bank of the river Mersey, about four miles above its entrance into the Irish Channel, and on an average of the 20 Years 1804-23, there was 68,187 Tons of Rock and 167,050 Tons of White Salt entered the river Mersey annually, from the Springs in Cheshire. In 1708 there was registered at Liverpool 84 Vessels or 5,789 of Tonnage, while the General Statement of the Number and Tonnage of Vessels at each Port of the British Empire, shews that, in 1821, there was 1 189 Vessels or 181,642 of Tonnage, registered at that Port.

Principal Articles of the products of the United States of N. America Exported from thence, in each of the 36 Years 1791-1826

The above Statement is peculiarly interesting in various points of view. The progress of the growth of Cotton Wool is perhaps as extraordinary an exemplification of the power of human industry as the page of History affords. In 1789 it was very greatly debited by the Congressional Assembly of the Union, whether or not the soils of Carolina and Georgia were sufficiently adapted for the growth of Cotton to render it desirable on the part of the Assembly to encourage its culture, it having up to that period only been cultivated for Domestic use, and that to a very limited extent, while in 1820 in addition to an increasing quantity exported since 1826 the quantity grown for Domestic consumption on an average of the last 5 or 7 Years has been about 60,000,000 lbs. ⁴/ Annum.

The next important feature of the account is the great extension of the external Commerce of the United States by the War declared by England against France in February 1793 which occasioned the United States to become progressively the General Carriers for nearly all the Continental Nations of Europe; the sudden transition in 1803 (Vide a) consequent on the peace of Amiens next deserves notice, and still more so, the extraordinary self-denial of the general embargo laid by Congress on the foreign Commerce of the Union on the 22nd. December 1807 (Vide b) raised in April 1809; the climax of experiment however was reserved for the declaration of War against England on the 18th. June 1812 which led to an almost total extinction of all external intercourse in 1813-14 (Vide c.)

* * * The American Accounts are made up to the 30th. September in each Year, another interesting and important fact is deducible from the above Statement; notwithstanding the unbounded extent and extraordinary fertility of the American Soil and assumed industry of its greater Number of Inhabitants; the quantity of Farinaceous and Animal Food Exported from the United States is less, on an average of the last 20 Years, than the quantity Exported from Ireland. — see Statement of Grain &c. Exported from Ireland.

Proportion of Cotton Wool Re-exported in Yarn, and Manufactures; and retained for Home Consumption, 1814 — 1830.

See Index, for reference to further explanation in regard to the proportion retained for Home Consumption.

STATEMENT of the Number of BAGS and BALES of each kind of COTTON WOOL, taken for spinning and Re-exported in each of the 15 Years 1816-1830; and of the quantity of each kind remaining in stock at the Ports of Importation, at the close of each of the 17 Years 1814-1830; and prices of each, at the close of each of the 12 Years 1819-1830. * * These Statements as well as the quantity in lbs. Weight taken for Spinning, have been compiled from the annual reports, of the Liverpool Dealers, of the supply and consumption of Cotton, and which, with the exception of the Year 1823 appear to be drawn up with great exactitude; at the close of that Year in some accounts the stock was represented as 382,230 Bags, and in others only 339,030, in the aggregate however of the 16 Years 1814-1830 they agree pretty well with the Custom House accounts,—the Total quantity retained for Home consumption in the 16 Years according to the Custom House Account having been 2,546 Millions of lbs., and the quantity taken for Spinning in the same period, according to the account of the Liverpool Dealers, amounts to 2,429 Millions of lbs., a difference of 117 Millions of lbs., corresponding, or nearly so to the difference of stock at the close of 1814, and of 1830.

Taken for SPINNING.							RE-EXPORTED.

Prior to the 10th. of September 1821, British Green Wool and Worsted Yarn were prohibited to be Exported except to British Possessions, when by the Act of the 5th. of Geo. IV., cap. 27, British Wool was allowed to be exported to all parts on paying a Duty of 1d. per lb. on all of the Value of 1/4 lb. and upwards, and 3d. per lb. on all under 1/4 lb. in Value; and Yarn on the payment of a Duty of 1d. per lb. The annexed Statement shows the quantity Exported, the Declared Value thereof, both of Wool and Yarn; and the amount of Duty paid on the same in each Year since the passing of the above recited Act, and also the average rate per lb. of the Yarn, which like all other British Productions of which labor forms the chief component has been subject to a continued reduction in price. The Wool Exported in the four Years 1824-7, averaged above 1/4 per lb., and in the four Years 1828-31, a trifle under 1/4 per lb., and thereby paying only the lowest Rate of Duty. Of the Imported Wool, 29 parts out of 50 pay the 1d. per lb. Duty.

Rate of Duty, of Yn.	Value	Wool	Yarn	Wool	Yarn	Rate of Duty, of Yn.
122 3/4	29,000	53,243	76,961	2829	3,655	122 3/4

†† The large amount to the United States of North America in 1815 was occasioned by the nonintercourse with those States in the 2 preceding Years, the abolition of the Slave Trade in the interim of 1799 and 1815, will account for the decrease of Export to the Coast of Africa; the decrease to the British West Indies is occasioned by the diminution of the transit intercourse between Jamaica and South America. — For explanation respecting the Official and Declared Values & Ireland see Note to preceding Statement and Note to Statement No. 4.

STATEMENT (No. 3.) showing the Quantities in Pieces, Yards, lbs. Weight, &c. of each kind of Woollen Manufactured Goods, Wool, and Woollen Yarn EXPORTED to each of 21 different Countries in the Year 1815; and the Total Quantities and Total Declared Values of each kind of Goods Exported to all parts of the World in each of the 13 Years 1815-1827: showing the quantity Exported in the latter Year to each of the 21 different Countries as specified in 1815.

Countries to which EXPORTED in 1815.	PIECES OF					YARDS OF				Dozens of Hose.	Sundries at Value.	Lbs. Wt. of Wool.	Lbs. Wt. of Yarn.	Total Value.

* By the following Statement and No. 12 it will be seen, that the annual growth of Sheep and Lambs Wool in the United Kingdom is about 160,000,000 lbs. the Money price of which, on an average of the first six Years of the above period was about 21d. 4½ pence (see Statement No. 6) or a Total Annual Amount of about £14,000,000 reduced in 1828 to an average of about 9d. 4½ pence or a Total Money Amount of only about £6,000,000 being a reduction of 57 ½ Cent.: in addition to the Wool of Home Growth the Foreign Wool Imported during the last six Years has averaged 25,000,000 lbs. the present Money price of which (in 1828) averages about 21d. 4½ pence or a Total Money Amount of £2,187,000 making the Total Value of the Wool annually consumed at the prices of 1828 to amount to £8,187,000 which being doubled in Value in the Manufacture it gives £16,374,000 as the Total Annual Cost of all Woollen Manufactures; about one third part of which (it will be seen by the above and the preceding Statements) is Exported, for the effects of the vast reduction in the value of Home Grown Wool, both in reference to the Manufacturing and aggregate interests of the Country (see Statement No. 12.)

STATEMENT (No. 5) shewing the estimated Number of SHEEP in each of the 40 Counties of England in 1800 distinguishing the Counties which produced Short Wool from those which produced Long Wool, together with the average weight of the Fleeces and Gross Produce of Wool in each County at each of the two periods 1800 and 1828. — see note to preceding Statement, also pages 424-5 of evidence (Lords Copy) and page of abstract and Review.

27 Counties which in 1800 produced principally SHORT WOOL but which in 1828 had changed partially into Long	Division of SHORT WOOL	1800.				1828.

Declared Value of Woollen Manufactured Goods Exported 1815-27.

Number of Sheep and Produce of Wool in each County of England in 1800 and 1828.

STATEMENT (No. 6) shewing the Prices at which 16 different Persons stated in evidence before the Lords Committee appointed in the Session of 1823 to take into consideration the state of the British Wool Trade, to have bought and sold Wool in each Year since 1758, and also a Statement of the Total Official Value of all Woollen Manufactured Goods EXPORTED from, and of Foreign Sheep and Lambs Wool IMPORTED into GREAT BRITAIN in each of the 36 Years 1792-1827.

* * The Column of Woollen Manufactured Goods exported includes the amount to Ireland up to the Year 1821 when the account of the Commercial intercourse between Great Britain and Ireland was discontinued publishing.— see note to Statements Nos. 1. and 4.

Prices at which Sundry Persons bought and sold Wool in each Year since 1758

The prices below were delivered in by Mr. Thos. Cook of Dewsbury, those relating to Laid and White Highland and Cheviot having been furnished to him by Messrs. Maxwell of Liverpool, the rest he spoke to from his own knowledge. (Vide Page 387 of Evidence.)

Cloths Milled in the West Riding of Yorkshire in each of the 51 Years 1769-1819.

Quantity of Raw Fibrous Material, annually Imported into Great Britain, in each Year since 1789; and Cotton Manufactures, and Yarn Exported.

AN ACCOUNT of the Quantity of Raw Fibrous Material, annually IMPORTED into GREAT BRITAIN in each Year since 1789, and of Cotton Manufactures and Yarn EXPORTED in each Year since 1797. The pages referred to will show the proportion of the respective articles Imported from different parts of the World, and Nos. 73-79, page 154, will show the proportion of each article annually retained for Home Consumption, in each Year since 1806; in addition to the vast quantity of Material here exhibited, the annual home production of Slueeps Wool may be estimated at 10,000,000 lbs.; Flax at about 600,000,000 lbs., of Fibrous Material annually wrought in Great Britain into every species of Fabric which ingenuity can devise; constituting a display of artifice and effort without a parallel in the history of human action. The Importation of raw cotton has been so extensively diminished, that the substitution of the Iron Chain for the Cotton Thread, &c. &c. has become unnecessary; and it is as such to be considered one of the most important improvements of the present age. The aggregate amount annually imported into Great Britain, from all sources, is now estimated at £200,000,000 of annum.—For the pecuniary cost, and moral advantage resulting from the change,—see following page, and page 115, while the uniminished rate of labor has become chargeable with a fixed money obligation of £200,000,000 of annum.—For the geographical display of the Locality, &c., of the several Countries. Since 1825, the accounts include the Importation into Ireland, but the comparison is more inconsiderable to deserve notice.

lbs. of COTTON WOOL.—Vide page 114.										Vide Nos. 62-75, page 138.										lbs. of Sheep and Lambs Wool, as per page 115.										Official Value of Cotton MANUFACTURES and YARN exported: the Yarn is valued at £10 4/112 lbs., and the Manufactures may be estimated at 3 lbs. of Wool for every £100 of Official Value, thereby showing that about two-thirds of the Cotton spun is exported.—see Cols. 11-14 of page 112, for depreciation of value.									
Years	lbs. Weight Imported.	Re-exported to		Leaving for Home Consumption.	Certs. of			Linen Yarn.	as per page 115.	EUROPEAN.			EAST INDIA.		TOTAL.	Official Value of Cotton MANUFACTURES and YARN exported: the Yarn is valued at £10 4/112 lbs., and the Manufactures may be estimated at 3 lbs. of Wool for every £100 of Official Value, thereby showing that about two-thirds of the Cotton spun is exported.—see Cols. 11-14 of page 112, for depreciation of value.										Official Value of Cotton MANUFACTURES and YARN exported: the Yarn is valued at £10 4/112 lbs., and the Manufactures may be estimated at 3 lbs. of Wool for every £100 of Official Value, thereby showing that about two-thirds of the Cotton spun is exported.—see Cols. 11-14 of page 112, for depreciation of value.

STATEMENT showing the actual amount of TAXES raised in the UNITED KINGDOM of GREAT BRITAIN and IRELAND, annually, on an average of the first 5 Years of the War 1793—1797; and in each Year since 1797; distinguishing the proportion raised in Ireland from the amount raised in Great Britain; the Quantity and Value of British Produce and Manufactures EXPORTED in each Year; the annual *mean* prices of *Gold, Wheat, and Manufactures*, and the equivalent of the TAXES in each of those articles, in each Year since 1797, together with a Statement of the amount of the Parochial or Local Assessments, and the proportion thereof expended for the maintenance of the Poor in each Year since 1811, shewing the equivalent of the Parochial Assessments in Quarters of Wheat in each Year, contrasted with the amounts levied annually on an average of the three Years ending Easter 1785, and Easter 1803; also the Population of Great Britain and Ireland respectively, at each of the 5 Decennial periods 1791, 1801, 1811, 1821, and 1831.

The most prominent feature of this Statement, is, the inordinate pressure of Taxation in 1832, as compared with 1798, when measured in manufactured productions as exhibited in Column No. 11; there was no declaration of value of manufactured productions prior to 1798, whereby the comparison can be carried further back; were it possible to exhibit the amount at the present time in comparison with the 5 years 1793-7, the disparity would be seven-fold; that is seven-times the quantity of manufactured products are required to pay the Taxation at the present time as was required during the first 5 Years of the War. When measured in Gold, or in Grain, or in the Current money of the two periods, the increase of Taxation exceeds 140 $\frac{1}{2}$ Cent., while the increase of Population has been less than 60 $\frac{1}{2}$ Cent. Still, looking at all the circumstances of the two periods the increased amount of Taxation at the present time appears to be contributed with as much, if not greater facility than it was during the period 1793-7, and the Country certainly exhibits on all sides increased, and still increasing evidences of power and advancement in all the means of comfort and social enjoyment. When then the ground for those complaints of distress which prevail in the Metropolis, and which resound from the most distant parts of the Empire? This is a question calculated to confound even experienced minds. As long as order in Society can be maintained, the extremes may continue to increase, and for an obvious reason; the continued depression of Value of the productions of one portion of the Community, while the means of expenditure of another part remains fixed, necessarily leads to the enlargement of consumption somewhere. Hence, it is, that prosperity shows itself on one side, while privation and misery increase on the other; it is not therefore, the bare question of the existence of distress which now claims the attention of the British Legislator; but, whether or not, the nature and extent of that distress, is such, as to threaten a dissolution of social order. The extremes which this Statement exhibit are too great, much longer to continue; the pressure of Taxation must either be brought nearer to the level of reward for labor, or some means devised, and reduced to practice, whereby the productive power may more easily sustain the existing amount of fixed money demands.

The unparalleled extent of the external Trade of Great Britain renders it, in itself, an object of uncommon interest. How much more interesting and important, then, must it be, when it is seen to be involved with external money transactions to an equal extent, affecting in their combined relations not only all the productive interests of the Empire, but all the activity of the Commercial World!

Pages 71—5 show the progress of the Exports to, and Imports from, each different part of the world, from 1697 down to 1828, inclusive; the amounts in those pages being what are termed the *Official Values*, assigned in 1694; which rates of Valuation will be found affixed against each respective article Imported and Exported in each of the 18 years, 1814—1831, as exhibited at pages 56—62.

2. Pages 4—6, and others, show the Current Value of all the great articles of Import, some of which will be seen to differ greatly from the *Official Rates of Value*; for instance, Coffee is valued *Officially* at £7 per cwt., while its Current Commercial Value has been only 50s. to 80s. per cwt.; on the other hand the Commercial Value of Indigo has been from 2s. 6d. to 14s. per lb. equal to a mean price of 7s. or 8s. per lb., while it is Rated *officially* at only 2s. 9d.—see line 2, page 56. Although these disproportions nullify all worthiness of the Statements at pages 71—5, in regard to Current Money Value, they are not the less interesting in showing the increase or decrease of operation in the aggregate, and the proportion or disproportion at different periods of the extent of the transactions with each respective Country; for this purpose the *Official Rates of Valuation* may be regarded as a *common denominator*, and, as such, attended with great advantage, as an indicator of *Quantity*; and assuming, as it seems reasonable to do, that the Rates, assigned in 1694, accorded with the Current Value of the time, they are now doubly interesting as showing the change that has since taken place in the value of several articles.

3. On referring to page 162, which is a summary of pages 71—5, it will be seen that, from 1697 down to 1793, the *Official Value* of the Imports and Exports bore an approximation to each other; down to 1760 England uniformly Exported Grain, which, with Woollens, formed the basis of her external traffic; Importing from Hamburg, Haberdashery and other trifles; and from Holland, Sealing-wax, Pill-boxes, Pencils, Marbles, &c. Subsequent to 1760, when the Imports from the East and West Indies began to increase, the products thereof became articles of Export to different parts of Europe; and the great profits they were at that time wont to realise afforded the means of purchasing Foreign Corn, as well as other articles. The price of Corn in Dantzic, from 1750 to 1760, being only about half the then price in England, subsequently to 1764, England became uniformly an Importer of Grain, as she previously had been an Exporter.—See pages 88—9. During the whole of the period from 1697 down to 1793, both as Exporting of Corn, and Importing thereof, the external Commerce of the Country appears in the aggregate to have been attended with advantages both to the individuals directly engaged in it, and to the country at large: the excess of Export appearing to have been equalized by Bullion. See statement of Gold coined.

4. With the commencement of the War in 1793, the external commerce of the Country, as well as all its internal relations, became destined to great and important changes—see *Notes relating to Revenue*. From 1793 down to 1816, the Exports will be seen to have progressively increased both in quantity and value; while the Imports, except from the East and West Indies, and China, remained nearly stationary; and so far from the excess of Export being equalized by Bullion, the amount of Bullion Exported during the same period also very considerably exceeded the amount Imported; yet no diminution in the productive value of the Exports took place, and large profits were continually realised. How then, it will be asked, was the enormous excess of Export equalized or balanced? Subsequent to 1793 the external Commerce of the Country, which previously had been confined to a reciprocal exchange of commodities, became involved with a paper circulating medium, exciting the creation, and aiding the application, of mechanical power to various purposes of production; and all these sustained by the creation, or rather unparalleled extension, of ideal amounts in value, by Funding and issues of Exchequer Bills, and other representations of amount.

5. On referring to the statements showing the progress of the Account called the *National Debt*—National credit is quite as applicable—it will be seen that, in the 24 Years 1793—1816, £618,163,587 was raised by Loans, and the Funding of various Bills; out of which £188,522,340 was applied

to the re-purchase of part of the Stock, created for the Sum Raised; leaving £429,641,247, for which Annuities, chiefly in perpetuity, were created to the Amount of £22,737,371. During the period of this operation, that is in the 24 Years, 1793—1816, the value of the Exports to Europe, Africa, and the Americas, exceeded the value of the Imports from thence by about £330,000,000; the Accounts for 1813 having been destroyed by the fire at the Custom House in London in February, 1814, prevents the amount being more exactly stated; but if, to the excess of Products Exported, be added the excess of Bullion Exported during those years, they will, together, be seen to approximate in Amount to the Sum for which Annuities were created during the same period—the way in which the excess of Value Exported was Equalized, or Balanced in Commercial Account, having been by the *Bills* drawn in different parts of the World by the Agents of the Government on Account of Subsidies, Secret Services, and for Supplies for the Fleets and Armies every where distributed; which Bills, or an Amount equivalent thereto, were Annually converted into Stock, for which Annuities were granted. There has not been any *Official Account* of the Amount of these Bills created Annually through the whole period; but the *Notable Bullion Committee* in 1810, seems to have thought of the subject—about the only rational thought it appears to have entertained. To that Committee an Account was produced of the amount of Bills so drawn during the first Four Years of the War, viz. 1793—96, which was as follows: in 1793, £2,785,252; in 1794, £8,335,591; in 1795, £11,040,236; and in 1796, £10,149,916. At a later period a similar Account has been produced of the Amounts drawn in the Five Years, 1814—1818; in the former year the Amount was £26,405,028—see page 62. And in the Eight Years, 1806—13, the amounts must have annually equalled or exceeded that sum.

6. Such, as described in the preceding section, was the involved relation of the external Commerce of Great Britain from 1793 to 1816, when in the latter year, it became subject, in common with all the productive interests of the country, to a convulsion, more severe in its effects than was ever before experienced; the Exports in that Year exceeded the Imports by £30,906,772, while the Bills, which in 1814 amounted to £26,405,028, in 1816 amounted to only £7,392,357, leaving upwards of £23,000,000 to be equalized by Insolvency or Reduction in Value. 2731 Commissions of Bankruptcy balanced a large portion of the amount; and Profit and Loss the remainder. Unequalled as was the paralysis which all the Commercial and Manufacturing interests of the Country experienced in 1816, and palpable as was the cause—the withdrawal of an average of about £25,000,000 of Bills per Annum, which for the Ten preceding Years had served to equalize the Commercial Account, and thereby sustain the Manufacturing interest, which, in its turn, sustained the combined internal interests of the Country at large: such was the perversion of understanding and disposition at the time, that, instead of looking at the subject in a proper point of view, a notion of a dread of *foreign competition* set in, and so universally prevailed as to preclude any consideration being directed to the devising of suitable means for obtaining a fair equilibrium, or *quid pro quo*, in products for the increased quantity which the mechanical power of Great Britain had enabled it to supply. Instead of any due consideration being applied to the subject, either on the part of the People or the Government, all appeared determined to force down the Money Price of British productions to the level of what the produce, which might be obtained in return, would realise; and so far from checking the extent of the operation, the Exports of British produce in 1817 actually exceeded those of 1816 by nearly £5,000,000 at a reduced value, however, in the proportions of 104 to 116, as compared with 1816, and to 133 as compared to 1814—see page 58. The Colonial and Foreign produce, re-exported in 1817, was upwards of £3,000,000 less than in 1816. The paralysis of this Year would have been as severe as that of 1816 but for unexpected and fortuitous circumstances; in addition to the desolating effects produced by £23,000,000, defalcation in Mercantile Account in 1816, the harvest of that year was one of the most unfavourable that had ever been experienced; so much so that, had it not been for a liberal supply of Grain on hand (see page 90), millions must have perished; but much as this added to the calamity of the year, it proved fortuitous in 1817; the intercourse of the world being totally uninterrupted, the energy of the Shipping and Mercantile interests were directed to all points for supplies of Corn, which augmented the means of payment of the excess of Export about £6,000,000, as compared with the two preceding Years.—see page 52. This, however, would have been greatly insufficient to have prevented a repetition of the disasters of 1816, which were counter-

acted by a measure, that while it warded off the evil for a season, has served to render the embarrassment perpetual.

7. The Government Bills which in 1816 are represented to have amounted to £7,802,357, in 1817 are represented to have amounted to only £3,404,071; so that the diminution of means in Government Bills was equal to two-thirds of the increase in the value of the Foreign Products Imported, leaving again upwards of £20,000,000 to be equalized by some extraneous means. On referring to the Statement of Foreign Loans it will be seen that, since 1815, France has been doing what Great Britain did during the War, viz. that of raising money by granting Annuities to the extent of nearly £200,000,000 sterling; and, in the year 1817 alone, an amount nearly equal to the aggregate excess of Export was transferred from England to France. On referring again to the Statement showing the progress of the National Debt, it will be seen that in 1817 the Government alone applied no less than £14,657,559 to the purchase of 3 per cent. Stock, at an average of £76 16s. 1d. while in 1815 they had created Annuities equal to upwards of £100,000,000 of that Stock, for which they had received on an average only £52. 14s. 3d.; and the Bill transactions, which this operation gave rise to in all its involved relations, served to equalize in Commercial Account the excess of Export in the same way as the Bills of the British Government had done during the war. In addition also to the new transactions in Loans about £20,000,000 of Stock, held by Foreigners, vested when 3 per Cents. were from 57 to 58; tempted as well by selling out at from 75 to 80 as of investing in French and other securities equal to 45 or 50, which enabled them to double their capital; the combined temptation induced them to realise money for their Stock in England; and these transactions still further aided the means of equalizing in Commercial Account the excess of Exports.

8. The stimulus to Commercial activity which these transactions excited led to an extension of operations in 1818, in which year the Importation of Foreign Corn exceeded that of 1817, equal to 4 to £5,000,000 in Amount. A Loan also of £5,000,000, at 72, equal to £3,600,000 money was raised for Prussia in this year; but, as the British Government Bills were still further reduced from £3,404,071 to £2,387,658, and the disposition for French Stock somewhat abated, the Commercial transactions of the year in the aggregate terminated unfavourably; and those of 1819 proved relatively as disastrous as those of 1816. In 1820, however, a new impulse was given to Loans to all the European States, which transactions, as far as they went, served to equalize the excess of Exports; but large as have been the transfers of capital by these means, they have, since the great transactions with France in 1817, been unequal to the excess of Export, and the consequence has been a continued Reduction in the Money Value of all the Products of British Manufacture, in the proportions exhibited Year by Year, at pages 58—59, or of Cottons, as per p. 112.

9. Much as the Foreign Loan transactions have aided those of Commerce during the last Sixteen Years, their illisiveness is now beginning to manifest itself, the total sum so transferred from England since 1816 approximates in Amount to £100,000,000, and has therefore aided the Commercial transactions to that extent, in the same way as the Bills of the British Government did during the War. But the position in which the combined transactions have placed Great Britain, is far more singular and perilous than that in which she was placed at the close of the War in 1815, unexampled as was the paralysis experienced at that time. Whenever the disposition or means to transfer capital from British to Foreign Security ceases, and cease it must, Great Britain will find herself, not merely confined to the consequences of the cessation, but the amounts transferred, having created an interest equal to 6 to £8,000,000 per Annum, the amount, be it more or be it less, will operate *conversely*; instead of aiding the Commercial transactions, so much will be Annually withdrawn from the Value of the Products Imported, leaving the Exporters, not only *minus* the cessation of further investments, but whatever may be withdrawn to discharge the interest on the Amount already invested. The following display shows the way in which all the extraneous external Money transactions are involved with those of the external Commerce in the aggregate, while the Notes to pages 127—136 show the way in which they operate with each Country separately; and the whole will be seen to involve consequences fearful to all honest men, and all the friends of social order, to contemplate.

10. That the Foreign Commercial transactions of Great Britain may be seen in relation to the scale of subsistence and pressure of Taxation, the following statement of the value of the exports in each year, since 1813, con-

tains also the average price of wheat, and the amount of the income derived from Taxes, and of the Public Expenditure in each of the corresponding years. The *maximum* of the money amount of Taxation, it will be seen, was £78,537,928 in 1815, reduced in 1831 to £50,837,550, a ratio of 35 in every £100; this, on a *prima facie* view of the subject, may be regarded as an adequate or approximate compensation for the reduction in the money value of the products of manufacturing industry; but on due examination it will be seen to bear no proportion, whether viewed either in reference to the weight of the amounts in gold, or the facility of payment which the amount of government and other representations of value in circulation in 1815 afforded; if viewed in reference to its weight in gold: the amount in 1815 was as 14,680 oz., to 13,056 in 1832, a difference of only 11 per cent.; while the reduction on the aggregate of manufactured products has been in the proportion of 133 to 55 or 50 per cent., but this, great as is the disparity, by no means represents the extent of the disproportionate pressure now prevailing.

11. The payment of the £78,537,928 in 1815, was facilitated, first, by the £20,128,118 of Government bills drawn from different distant parts of the world; secondly, by an internal circulation of Exchequer and Navy bills, to the extent of £46,719,432, receivable in payment of Customs and Excise; thirdly, by £26,886,000 of amount in Bank notes—upwards of £20,000,000 in Country Bank notes, and more than £100,000,000 of amount in notes or bills of Exchange of individuals, making together, an *active* circulating medium of more than 213 millions sustained by an unlimited *confidence*; the government itself accelerating the circulation, and increasing the confidence by expending in 1814 and 1815 annually about £36,000,000 more than was derived from the Taxes. The expenditure in 1815 having been £116,402,962, exclusive of the Sinking Fund, with a taxation, aided by all the facilities of payment here stated, of only £78,537,928; the £20,128,118 of amount in Bills, drawn from Abroad in 1815, adverted to above and in section 5, or an amount equivalent thereto, having, with large additional amounts, been converted into an annuity account; it enabled the government to put a corresponding sum into active circulation internally. While in 1832 £51,000,000 of Taxes are exacted out of less than £140,000,000 of circulating medium, not merely unsustained by confidence, but obstructed in its activity and effect by the Hydra-heads of distrust and suspicion; and this, not only without any facility of payment being afforded by the Government in an expenditure exceeding the Taxes, but, as stated in section 9, subject to a converse operation which resolves itself into an abstraction to the extent of 7 or 8 millions in amount per annum, as determinately as though an invading army were to land and levy a forced contribution to the like extent: looking simply at the numerical result, the difference in the amount of the circulating medium will be seen to correspond with the difference in the amount of Taxes—35 per cent; but the amount of the circulating medium in 1815 was more than *doubled* in its effect, by the *confidence* with which it was sustained and circulated, while in 1832, the amount is *diminished* in its effect more than one half by the distrust and suspicion with which it is every where obstructed; equal to a difference in pressure of full 5 to 1.

12. Great as is the disparity in the internal means of circulation of the two periods, and palpably ruinous as are the effects of the diminution, and prevailing distrust in 1832—3, to all dependant on their industry for subsistence, inasmuch as the diminution is an *effect*, and not the *cause* of the prevailing embarrassment, it would prove as futile to attempt to remedy the evil by an enlargement of the circulating medium as an abstract principle or means of relief, as it would be to attempt to resuscitate, by the diffusion of blood, an animal exhausted and deranged by a spasmodic or morbid affection.

13. If in animal, physical, or mechanical economy, derangements exist, it does not suffice that things, good in themselves, are applied to remedy the evils of the derangement; the beneficial effect of mechanical economy does not consist in its extent and force, but in the adaptation of all the parts to each other, and the whole to the purpose to which it is applied: so in financial and social economy, the well-being of a community does not depend upon whether its combination of means are rated at one or ten thousand millions; but the harmony of all its varied degrees of rank, its ample means of subsistence, its increasing comfort and happiness, and, above all, their permanence and security depend on proportion, and the application of proper and particular means, to the wants and derangements which a peculiar combination of circumstances may have engendered.

14. The body politic, like the animal body, may experience the extreme of pain and privation from the extreme of opposite causes; a spasmodic, a corrosive or morbid affection, resulting from some special cause, may emaciate and reduce the animal body, otherwise vigorous and powerful, to the lowest state of debility, as effectually as an inadequate supply of food. The two causes in combination, will also produce the same effect; and so with an indulgence in ease and intemperance without commensurate activity; in like manner the body politic may be exposed to the extreme of suffering by the interposition of nature, in a succession of unfavourable harvests; a universal prevalence of virulent disease, or some convulsion like that which inhaled for 20 centuries, the cities of Herculaneum and Pompeii—all these would produce great social derangement; internal dissension or external conflict would produce the same effects; and so will any other cause that obstructs the freedom of circulation and consumption, or that occasions any inordinate disproportion.

15. The subjecting to payment in gold at £3. 17s. 10½d. per oz., 22 millions amount of annuities created by the aid of 500 millions of mere representations of amount on paper; more than a third of which was not exchangeable for gold under £5. 11s. per oz.; and after that, to tax the community for the means to re-purchase at the rate of £94. 3s. 6d. = 24.19 oz. of gold as was done in 1824, part of those annuities for which less than 10 oz. of gold were received in 1815, may be regarded as one of the grossest acts of injustice ever inflicted upon an unsuspecting people, and only equalled as an evidence of perversion in legislation, by the act of refusing to receive corn from those countries which had no other valuable commodity to give in exchange for those commodities which it forced to seek consumption in those countries; unjust, absurd, and reprehensible, as both these acts of legislation were, it does not follow that either the alteration of the fixed value of gold from £3. 17s. 10½d. to £5, or any other higher rate per oz., whereby an enlarged amount of paper might again be put in circulation; or that the uncontrolled or even modified admission of Foreign Corn would remove the existing derangements, nor, in themselves would they; both have operated as aggravations, but neither the one or the other have been the cause of the existing derangements, and therefore, any further interference in legislating upon them, should be left to follow, and not precede those measures which the singularly involved nature of the prevailing embarrassment more imperatively demands.

16. The prevailing embarrassment does not arise from any destitution of means; on the contrary, all the means of power and efficiency—all the means of comfort and of human enjoyment—exist in Great Britain at the present moment, not only in a far higher degree than in any other part of the world, but as far as all experience, all the force of reasoning, and all history, afford us the means of judging correctly, in an infinitely higher degree than ever before existed in any age or country. The prevailing embarrassments consist in inordinate disproportions; an enlarged circulation of Paper money would tend to enhance the money price of most commodities, and in some degree lighten the pressure of Taxation, but it would afford no guarantee for a proportionate increase in the remuneration for labour, more especially not, under the influence of the extraordinary extent of mechanical power now in operation; nor would it in the slightest degree tend to equalize that disproportion which is the main cause of the all-prevailing embarrassment; on the whole, such a measure would rather tend to aggravate than equalize the prevailing disproportions; so with the admission for consumption of Foreign Corn.

17. The price of Wheat, during the last three or four years, has averaged about £3. 4s. per quarter, and the aggregate annual value of the produce of the soil about £160,000,000. The uniform admission of Foreign Corn for consumption at any fixed rate of duty on Import, whether of 5s., 10s., or even 15s. per quarter, would tend to lower the price of Wheat in Great Britain from £3. 4s. to £2. 10s. or probably £2. 5s. per quarter; and, in the vulgar acceptance of the term, it would make Bread cheap; and thereby bring subsistence more upon a level with the present money price of manufactured productions; but it would afford no guarantee against the remuneration for trading and manufacturing profits and labour being reduced in a corresponding degree; and, as it would reduce the aggregate money value of the soil, from £160, to £120,000,000 per annum, and thereby diminish the power of internal consumption of Manufactured and Foreign productions, to the extent of £40,000,000 annually, instead of tending to equalize the prevailing disproportion, while £28,000,000 of Annuities and several millions of other money

obligations remain fixed; such a measure as that of a uniform admission of Foreign Corn for consumption at any rate of Import duty, would still further tend to increase the disproportion: nevertheless, means may be devised for the admission of Corn on reciprocal and advantageous terms; but it must be done by being made one of a combination of measures, and not by any abstract or specific act; and before any legislative measures are resorted to, either in whole or in part, to relieve the existing embarrassment, the real cause of the embarrassment should first be determined, and agreed upon.

18. The great first cause then, of the inordinate disproportions which now prevail, are shown in the accompanying statements, and explained in some degree in section 9; but, before any further observations upon them are advanced, it may be well to explain how far the figures may be regarded as representing realities of amount or otherwise. The first statement of Exports, with the exception of line j, is founded wholly on authentic and precise data, and although lines b, d, m, o, & t, u, are official amounts; measures of quantity, rather than of value; they are so near an approximation to the actual money value, as to render the whole of that statement a fair representation of the extent, progress, and bearing of the Foreign Commerce of the Country in each year of the period which it embraces. In an arithmetical display, in which not only every line may be regarded as a great and instructive lesson to statesmen and legislators, but in which almost every item affords scope for profound meditation, it is not to be expected that in an introductory essay of this nature, something will not be left unexplained: a few observations on some of its prominent features must suffice to warn the inquirer against drawing hasty conclusions on slight examination. The large amounts of Colonial and Foreign produce Re-exported in 1814—15 as compared with subsequent years, is not to be regarded so much, as an actual diminution in the latter years, as of extraordinary extent in the former; from the close of the year 1810 down to the battle of Leipsic in the Autumn of 1813, the Re-exportation of Colonial Produce to the North of Europe had been greatly obstructed, while, in the mean time, increased supplies had been Imported into Great Britain from the French, Danish, and Dutch Islands and Colonies, all of which had fallen into the hands of England: private property having been respected, several millions value of Produce was shipped to England on Foreign Account; the first opening of the Ports of the North of Europe in 1814, was availed of to distribute the produce so accumulated in its several markets; £10,000,000 of line b in 1814—15, may therefore, be regarded as having been both Imported and Re-exported on Foreign account, making the excess of Export to Europe on English account so much less.

19. The large amount Exported to the United States of North America in 1815 next deserves notice, see line 22. The Federal Government declared war against England on the 18th of June, 1812 (see page 111), the period when Napoleon was advancing towards Moscow, and when the whole of Continental Europe indicated prostration to the imperial sway of that distinguished warrior; from June 1812, down to January 1815, when the war terminated, the intercourse between the United States and Great Britain was entirely suspended; but, as will be seen on reference to page 111, the Exports of Flour, Rice, and Provisions, during that period, to other parts of the world, were considerable, and, being at high prices, large amounts of remittances to Great Britain, on United States' account, had been made for Flour, Rice, &c., sold to the English commissariat in the Peninsula, and elsewhere; the funds so accumulated, being all disposed of in 1815 in British Manufactures; this not only explains the excess of Export in that as compared with subsequent years, but also as compared with the relatively insignificant amount of Imports from the United States in the same years; the diminution of Export in 1820, 1826, and 1829, were occasioned by the increase of duties on Exportation, adopted or proposed by the Federal Government in those years; the rule of that, as well as of several of the European and all the South American Governments having been to increase the rates of duty on British Products, in proportion as the blind and fatal career of the British Manufacturer and Government forced down their money price in England. Hence it has resulted, in regard to the United States, that the enormous rates of duty levied on the Products of British labour Imported therein, have enabled the Federal Government, since 1816, to discharge the greater part of a debt of 123,016,375 of dollars, about £27,000,000, which sum, or an amount equivalent thereto, has been appropriated to the erection in that country of Joint Stock Manufacturing establishments, and various great public improvements, in canals, roads, &c.,—

in other words, the wages of labour, and profits of the British Manufacturer, since 1816, have been progressively lowered, not to compete with low rates of wages or superior local advantages in other Countries, the vulgar and false plea invariably opposed to all attempts to stem the fatal stream of depreciation going on in England since that date; or to accommodate themselves to any disproportion of value with other productions at home; but, on the contrary, while the British labourer has remained subject to a disproportionately high scale of prices, for all the main articles of subsistence, and inordinate rates of duty on Tea, Sugar, Soap, Beer, Spirits, Wine, and all articles contributing to his comfort; his Wages have been progressively lowered, to enable other Countries to levy from 50 to 75 per cent, and in some cases 200 per cent. (see note, page 43), upon the products of their labour, and therewith create and cherish the means of effecting what in the mean time, has, all along, feignedly or real, been so foolishly dreaded.

20. While the aggregate amount of the Exports from Great Britain to Europe greatly exceeds the value of the Imports from thence, from Russia, Prussia, and France, the Imports will be seen greatly to exceed the Exports thereto, the notes to pages 127—8, and 131, will explain why and how. From Spain, also, the Imports appear to exceed the Exports thereto, but it will be seen that large amounts of Exports have been made to Gibraltar, from whence nothing is Imported, the greater part of which have served to equalize the account with Spain; Spain, since 1828, having afforded the same facility of Warehousing and Deposit at Cadiz that had prevailed, and which still prevails at Gibraltar; since that date, it will be seen the operation has been mainly transferred from Gibraltar to Cadiz; at page 133, the transactions are blended: the Import from Spain, however, still seems to exceed the Export thereto; it is probable that some of the shipments direct from Great Britain to Cuba, may be for Spanish account, and thereby, equalize the excess of value Imported direct from Spain. It is this kind of international intercourse which constitutes the question of Balance of Trade, so necessary to be accurately understood by all who presume to venture opinions upon the advantage or disadvantage of the intercourse with any particular Country, as well as by the statesman and legislator, before any conclusions can be drawn, or measures for modifications be properly proposed. In the same way as Gibraltar is involved with Spain; so are several of the European States with one another, on British account; and so is the aggregate of Europe with Nos. 22—4, and Nos. 22—4, with different parts of Europe; be the extent of these transactions what they may, they do not affect the aggregate result of Export and Import; it is, nevertheless, desirable that their extent should be accurately ascertained; an object easily enough obtained if officially and authoritatively resolved upon.

21. Pages 58—9, and 62—3, both show the aggregate excess of Export over Import, according to the official rates of valuation; by pages 58—9, the Imports since 1813, will be seen to have increased 50 per cent., the excess of Export, however, will be seen to have kept pace with the increase of Import, that is as far as quantity is concerned; while, according to the statement of the actual money value of the Exports, the aggregate in 1831 is less by £1,805,169, than the aggregate value of the Imports; the official value of the Exports in the same year exceeds that of the Imports by £21,106,178, the difference, therefore, of £19,301,008, may be regarded as the extent of the depreciation from the fixed or official value of the Exports, as compared with the fixed value of the Imports. A most important part of the subject now comes to be explained; although the aggregate value of the Imports in 1831 exceeds the aggregate declared value of the Exports by £1,805,169; it is shown in the within statement, that in 1830, to Europe the Exports, notwithstanding their greatly reduced value, exceeded the Imports from thence by £6,199,361, and to Nos. 17—28, the Exports exceeded the Imports from thence £3,575,813, together £9,765,174, while with Nos. 29—32, the transactions lead to an extremely opposite result; from thence the Imports exceeded the Exports thereto, in the same year by £9,269,590, so that in the aggregate of the transactions of the world at large, the Imports appear equal to the Exports, within about £500,000, but now, it is exceedingly important to understand, that although transactions take place between one European Country and another, and between Europe in the aggregate with Nos. 22—4, in the aggregate and *vice versa*, which transactions involve themselves with those directly to and from those Countries with Great Britain; there is no involution between 29—32, and the rest of the world, in any degree to effect the balance between any of the other parts of the world and Great Britain.

22. Page 75 shows that, from 1784 down to 1809, the Exports to Africa very considerably exceeded the Imports from thence, those Exports were made on West India account, and consisted of supplies for obtaining Slaves to convey to the West Indies; the excess of Import, therefore, now received from thence, is in return for the interest on the Capital expended in the procuring and conveyance of those slaves during the period above stated: in discussing the great and delicate question of abolishing slavery, this view of the subject will be seen to demand the most profound consideration, not merely as regards the question of indemnity for the capital and means expended in procuring and conveying the slaves, but also as regards the consequences likely to follow the abolition of a systematic course of forced and compulsory labour, if it should lead to the necessity of purchasing those products which Great Britain now receives without purchase, as the fruit or proceeds of an outlay of a past period; Great Britain must suffer in proportion to the extent of her purchase, for although it may and will tend to increase the Exports, it must, as a matter of course, diminish the means of internal expenditure somewhere to the same extent as the demand for Export may be increased, and thereby transfer the advantage from internal to external consumers.

23. The subject of the excess of Import from the East Indies and China still demands a more serious consideration than that relating to the West Indies, while from the latter, the excess may be regarded as the produce of slavery, from the former it may be regarded as the fruit of conquest. A considerable portion of the Imports from Calcutta are received on Account of the retiring means of the East India Company's servants; sometimes direct, and sometimes indirect; that is, the retiring servants returning home will sometimes directly vest their means in the products of the country; and at other times they will seek for bills on England; but the result is the same in both cases. Bills can only be had when other parties have shipped an excess of Produce, for which they receive the ready money of the retiring servants in India, who receive a fixed amount, represented in Bills of Exchange, out of the proceeds of that Produce when sold in England; another circumstance which adds to the excess of Import from India, is the produce of the Indigo Plantations, which, like the Sugar Plantations of the West Indies, have been founded on English Capital, aided by a tropical sun, operating on a rich alluvial soil, and labour as cheap and as servile as in the West Indies; it is probable that £1,000,000 value per ann. of the excess is derived from Indigo coming in discharge of Interest, or clear profit, totally unconnected with the Exports; but the most marked feature of the excess of Import is the Tea from China, which forms full one-third of the total Import, or about £3,000,000 per annum, against which about £750,000 only is Exported direct, see page 76: the payment of the Tea in China being made partly in produce shipped for Account of the East India Company from Bombay and Calcutta; from these premises it will be seen that the £9 to 10,000,000 per annum excess of Import from the East Indies and China and the West Indies, is not in any way involved with the transactions of the other parts of the world.

24. The conclusion of the preceding section, in the next place, leads to a most important consideration, viz: the advantage derivable from the excess of Import above stated; according to the notions of one sect of *Doctrinaires*, an excess of Export is necessary to render external traffic advantageous, and if so, the East and West India traffic is fearfully disadvantageous; but, trace its progress and see to what it leads; if we suppose England in want of any European or American Products, which she was destitute of the means of obtaining, the excess of Imports in question might then constitute a favourable exchange; or if, on the other hand, her internal productions were equal to obtain all she required from Europe and America; then, the excess of Import from the East and West Indies might remain for internal consumption, to increase the activity of exchange, and contribute to the comfort of the whole community; in either of these cases the excess of Import must be advantageous; but the fact is, as exhibited in the following statements, that the Produce and Manufactures of Great Britain alone, Exported to Europe and America, are more than equal in value to all the Products Imported from thence; yet, East and West India Produce, equal in value to the value of the excess Imported from thence, is re-exported to Europe and America, not merely in privation to the Population of the United Kingdom of the enjoyment of its consumption—but, to operate in a way to augment the depreciation in value of their own productions.

AN ACCOUNT of the Declared Value of the Produce and Manufactures of the UNITED KINGDOM OF GREAT BRITAIN AND IRELAND, EXPORTED from thence, to each of 32 different parts of the World, in each of the 20 Years 1814-1832; the Countries formed into Three Divisions, showing the Total Official Value of Colonial and Foreign Produce RE-EXPORTED to each Division, and the Total Official Value of Imports therefrom, in each of the aforesaid 20 Years; showing also the Total Official Value of the Produce and Manufactures of the United Kingdom, Exported to each Division; and the ratio of the Declared value to every £100 of the Official; the proportion of CORN included in the Imports; the estimated Commercial Value thereof; amount of Customs Duty paid on the same; and average price of Wheat in each Year; and also a statement of the Amount of Taxes raised in each Year, distinguishing the proportion for Ireland; and the Total Expenditure, distinguishing the proportion applied by the Commissioners for the Reduction of the Public Debt; and the Average rate at which they purchased 3 per cent Stock in each Year.

Of this Statement the left hand Columns of Figures represent the Value of British Produce and Manufactures Exported from the United Kingdom, as exhibited in a paper, published annually,—Vide Par. Paper, No. 537, Session 1832, and also as exhibited on the following Page; while the right hand Columns represent the Value Exported as exhibited in the annual Finance Accounts, in which the Exports from Great Britain and Ireland are exhibited separately. In the annual paper the annexed articles, Nos. 43—63, are not enumerated, while some of the Articles that are enumerated, perplex from the want of uniformity,—for instance, in the annual paper, Haberdashery and Millinery, are included with Apparel, Slops, and Negro Clothing, while in the other account they are entered separately;—again, lines 27—29, in the Annual Finance Accounts, are included with Cottons, Linens, and Woollens respectively, while several articles in both accounts are included with the Unenumerated, which it is desirable should be enumerated specifically in the form exhibited in the two following pages. Butter and Cheese, Beef and Pork, and Linens, it will be seen form the chief articles of Export from Ireland to Foreign Parts.

STATEMENT shewing the *Declared Value* of each of the articles specified in *Weight, Measure, or Tale*, on the preceding page, the produce and Manufactures of the UNITED KINGDOM, *EXPORTED* from thence, to all parts of the World, in each of the 4 Years 1827-1830,—see Note to preceding page. * * Page 121 exhibits the 39 articles of *British Products Exported*, as specified in the *Annual Paper* adverted to on the preceding page, in *juxta position* with the articles specified in the *annual Finance Accounts*, by which the disparity and defectiveness of both are rendered the more apparent. In these two pages a classification has been adopted, as well as an amplification of some of the Articles, and some additional ones enumerated which are suggested as desirable to be specified in future. The 32 following pages, exhibit the *Exports to, and Imports from*, each different part of the World, and are arranged in a way, in conjunction with the display at pages 56-75, to enable just conclusions being arrived at, both with regard to the nature and Value of the intercourse with each Country separately, as well as in the aggregate; by the arrangement adopted in these two pages, special returns relating to Cottons, Woollens, and Iron, moved for almost every Session, are rendered unnecessary; and, as it is, as desirable to avoid prolixity, as it is inadequacy of detail; it is considered, that every article is here enumerated, which the nature of the case requires.

STATEMENT shewing the Quantity and Value of each of 36 articles, the Produce and Manufactures of the UNITED KINGDOM, EXPORTED from thence to RUSSIA, in each of the 4 Years 1827-1830.

*** The Imports into the United Kingdom from Russia, (see Page 150,) as well as from France, will be seen greatly to exceed the Exports thereto. From Russia, the Imports are of the most substantial kind, and exceed somewhat in Value, the Value here assigned to them; the Flax, Hemp, and Tallow, in the 4 Years 1827-30, averaged annually 112,199 Tons, equal in amount to about £3,500,000, the remaining articles will approximate to £1,000,000 in Value: notwithstanding the staple articles of Russia being admitted into England at nominal Rates of Duty; the price tends to advance, while all the staple articles of British Produce and Manufactures are exacted Importation into Russia, by the most oppressive Duties; and all that would constitute reciprocal exchange, are entirely prohibited. Cotton Yarns, will be seen to constitute two thirds of the Value of the British Products Imported into Russia, and although the quantity indicates an increasing demand, the price has gradually decreased from 1827. 9d. 10. in 1827, to 14d. 9. 10. in 1830. The excess of Export from Russia to Great Britain is equalised in part, by Produce shipped from Cuba, Brazil, &c. direct to Russia; another portion is absorbed by the Money Capitalists in discharge of Interest on Loans and Russian Bonds held in England, - see Note to Exports, page 150.

STATEMENT shewing the Quantity and Value of each of 36 articles, the Produce and Manufactures of the UNITED KINGDOM, EXPORTED from thence, to SWEDEN, NORWAY, DENMARK, and PRUSSIA, in each of the 4 Years 1827 - 1830.

* * The Imports from these Countries, as well as from Russia and France, appear to exceed the Exports thereto, but such a conclusion is fallacious, a considerable portion of the Exports to Prussia being made by way of Hamburg to the Havel River, which runs past Berlin and Potsdam to the Elbe at Havelburgh; while the bulk of the Imports from Prussia are derived from the Ports in the Baltic, viz. Memel, Königsburgh, Dantzic, Stettin, Elbing, &c.; a considerable portion of the Imports from Prussia, are absorbed in discharge of the Interest and Sinking Fund on Loans raised for the service of the Prussian Government, since 1818.

STATEMENT of the Quantity and Declared Value of each of 36 articles, the Produce and Manufactures of the UNITED KINGDOM, EXPORTED from thence, to GERMANY, in each of the 4 Years 1827-1831.

* Part of the large excess of Export to Germany is equalized by Prussia,—see Note to preceding page. The Wool, which forms so prominent an article in the Imports from Germany, is Valued Officially at only 6d. per lb., while its Commercial Value will average from 1/6 to 1/9 per lb.; the Imports from hence, may therefore be considered as undervalued in the aggregate from £1,000,000 to £1,500,000,—some Absentee Bills from France and Italy find their absorption in Germany, in further equalization of the excess of Exports.

STATEMENT shewing the Quantity in *Weight, Measure, or Tale*, of the remaining enumerated articles of Merchandize, IMPORTED, into the UNITED KINGDOM, from *Continental Europe*, in each of the 4 Years 1827—30. * * In the account of the Official Value of Imports, published with the Finance Accounts annually, some articles are enumerated which are not enumerated in the annual account of Quantities, and several are enumerated in the latter, not enumerated in the former; again, in the return of Customs Duties, published with the Finance Accounts, about 90 articles are enumerated which are not enumerated in either of the accounts of Imports, while both the accounts of Imports exhibit several specifications of articles, disregarded in the enumeration of articles charged with Customs Duties.

The Annual Account of Quantities Imported, is diffused over 18 pages, and in a way which precludes the possibility of any just conclusion being drawn from it in regard to the value of Merchandize, either from any particular Country, or in the aggregate,—while the preceding, this, and four following pages, with the Summaries which follow, shew the operation in a way to lead to approximate conclusions being drawn, both with regard to the value of the intercourse with each separate part of the World, as well as in the aggregate.

ACCOUNT (CONTINUED), of the Quantities in Weight, Measure, or Tale, of each of 152 Articles of Colonial and Foreign Produce Imported into the United Kingdom, and retained for Home Consumption (after deducting the Quantity Exported subsequently to the payment of Duty), in each Year since 1826.

In addition to the Articles of Foreign Produce enumerated in these two pages as entering into the Consumption of the United Kingdom, seven-eighths of which may be assigned to Great Britain, there is also the articles enumerated at page 139, the whole of which, or very nearly so, are retained for Home Consumption,—the rate of Duty being affixed, the quantities may readily be deduced.

Additional Articles not heretofore included in the Annual Return.

STATEMENT showing the Quantity of each of 35 Articles, the Produce of RUSSIA, IMPORTED into the UNITED KINGDOM, in each Year since 1826; and of each of 32 Articles of Colonial and Foreign Produce RE-EXPORTED from the United Kingdom to Russia in each of those Years. * * This and the Statement at page 127, will show the exact nature and extent of the Exchange of Productions between the United Kingdom and Russia. The Annual Money Value of the Imports, exceeds by about £500,000 the Official Value assigned to them, while the Official Value of the Colonial and Foreign Produce Re-exported, somewhat exceeds their Money Value; whereby the Total Value Imported on an average of the Years 1826—1853, exceeds the Total Value Exported direct from the United Kingdom by about £3,000,000 $\frac{1}{2}$ Annua: £400,000 to £500,000 of the Excess is absorbed in discharge of Interest on British Capital invested in Russian Annuity Stock; a further amount will be absorbed for Cargoes of Produce Shipped direct to Russia from Cuba, Brazil, &c. on British Account. But the favourite policy of Russia is to draw Bullion within its boundary, which the accommodating Policy of England not only enables it to do, to the extent of £1,500,000 or more $\frac{1}{2}$ annua, but at a fixed low Rate of Value, while a combination of interests enhances the price of Tallow in Russia in 1833 50 or 60 $\frac{1}{2}$ cent. above its price in 1827—8.

STATEMENT showing the Quantity in *Weight, Measure, or Tale*, of each of 43 Articles Imported into the UNITED KINGDOM from, and of each of 30 Articles of Colonial and Foreign Produce Re-exported from the United Kingdom to FRANCE, in each Year since 1820. According to this Statement, the Value of the Products Imported from France, very considerably exceed the Value of those Exported thereto. It must be observed, however, that the Silks, lines 1-2, more properly belong to the account of Italy, it being chiefly the Produce of *Piedmont*, and conveyed to England *in transitu* through France; on the other hand, about 20 of the most Valuable of the Articles enumerated at page 139, are the Products of France, and Imported direct from thence so that the Value Imported from, doubtless exceeds the Value Exported to France; see however further, the Note to the following page, and to Germany and Italy.

[Years]		1827.	1828.	1829.	1830.	1831.	1832.	1833.	1834.	1835.	1836.

STATEMENT showing the Total Official Value of the EXPORTS to, and IMPORTS from the UNITED NETHERLANDS, from, and into the UNITED KINGDOM, in each Year since 1826; and also the Quantity in *Weight, Measure, and Tale*, of each of 42 Articles annually Imported from thence, in each of the same Years. * * This Statement is seen to exhibit a result, the converse of that, of the Exchange of Productions between the United Kingdom and France as exhibited on the preceding page; while France exhibits in 1831 an excess of Import from thence of £2,133,885; the Netherlands Account shows an excess of Export thereto of £4,105,127; it is probable that a part of the Exports to the Netherlands find their way into France, particularly of the valuable article of Indigo,—see line 23 of the following page, as well as part of the Cotton Wool, line 53; the transit, however, through the Netherlands into France is insufficient to equalize either of the two accounts; a greater transit through the Netherlands takes place into Germany, and perhaps £1,000,000 Value annually is shipped to the Netherlands expressly for transit in that direction; but a considerable portion of the amount of the excess of Export is accounted for, in the over valuation of the Colonial and Foreign Products, as exhibited on the following page; the Coffee being valued at 13d. $\frac{1}{2}$ lb., and the Pepper at 14d. $\frac{1}{2}$ lb., the Rum at 6/ $\frac{1}{2}$ Gallon, and the Sugar at 50/ $\frac{1}{2}$ Cwt., all of these Articles being rated at more than double their current value; see pages 4. & 56-60; East India Cotton Wool, also, is valued at 2/ $\frac{1}{2}$ lb., not worth more than 5d., but it is probable a small proportion, if any, East India is included in line 53, and other Cotton is valued at only 7d. $\frac{1}{2}$ lb., and Indigo is valued at only 3/10 $\frac{1}{2}$ lb., while line 23 will probably average 5/ $\frac{1}{2}$ lb.: on the other hand some of the Imports are undervalued; Clover Seed is rated at only 10/ $\frac{1}{2}$ Cwt.; Butter and Cheese, 27/6 $\frac{1}{2}$ Cwt.; Flax, 35/ $\frac{1}{2}$ Cwt.; on the whole about £750,000 annually, may be deducted from the excess Exported on an average of the 6 Years 1827-32, still leaving a very considerable amount to be equalized in the general involution of transactions with France, Germany, &c.

STATEMENT showing the Quantity in *Weight, Measure, or Tale*, of each of 56 Articles of Colonial and Foreign Produce Re-exported from the UNITED KINGDOM to the UNITED NETHERLANDS, in each Year since 1826. * * There is no part of the external Commerce of Great Britain that deserves more serious consideration than that of the large Re-exportation of its Colonial Produce; which on full investigation will be seen to resolve itself, first, into a privation of its Consumption internally; and secondly, into an Amount of Contribution on the Products of British Labour, equal to the Value of the Colonial Produce so Re-exported: as, for example, the demand for British Produce and Manufactures on Continental Europe, is equal to the Value of all the Products Imported therefrom, and which, being equal to the Consumption of the United Kingdom, the throwing annually into Continental Consumption, Six to Eight Millions Value of British Colonial Produce, absorbs an equal portion of the Value of the Imports from the Continent, and thereby diminishes the means of Payment of the British Products Exported thereto, to a corresponding extent; this is one of the causes of that progressive, and continuing reduction of Profits and Wages exhibited at pages 112 and 122*.

Quantities of each of 50 Articles Imported into the United Kingdom, from the United States of North America, in each Year since 1826.

STATEMENT exhibiting the Quantity in Weight, Measure, or Tale, of each of 50 Articles IMPORTED into the UNITED KINGDOM from the UNITED STATES OF NORTH AMERICA, in each Year since 1826. * The following Page exhibits the Total Official Value both of Imports and Exports. The Cotton Wool is rated Officially at 7½d. per lb., Tobacco at 2½d. per lb., Wheat Flour 8½d. per cwt., Turpentine 10½d. per cwt. It will be seen on reference to page 114, that the Official Rate of Cotton during the Years 1827-32, has exceeded considerably its Current Rate of Value, and consequently, as that Article constitutes the bulk of the Value of the Imports, the amounts below in those Years exceed by about £1,000,000 per Annum the Actual Value thereof.

Articles Imported.		1827.	1828.	1829.	1830.	1831.	1832.	1833.	1834.	1835.	1836.	1837.

But few of these Articles are the produce of the United States, but ad-
missible into England by the abandonment, in 1825, of the principle of the
English Navigation Laws, which confined the Importation of all Produce
into the United Kingdom to British Ships, or Ships of the country of which
they were the growth.

Colonial and Foreign Produce Re-exported from the United Kingdom to the United States of North America, in each Year since 1826.

STATEMENT showing the Total Official Value of the EXPORTS to, and IMPORTS from GERMANY, from, and into the UNITED KINGDOM, in each Year since 1826; and also the Quantity in *Weight, Measure, or Tale*, of each of 59 Articles annually Imported from thence, in each of the same Years. * * This Statement exhibits a still greater disproportion of Value between the Exports and Imports, than the Account with the Netherlands,—see page 158. See also Note to the two following pages, and to 166.

* * The articles enumerated below are mostly the produce of Germany; since the abandonment of the principle of the Navigation Laws, other articles are indiscriminately Imported, but they are too inconsiderable, and irregular in quantity to affect the general view here intended to be given, and the whole are included in the Total Value.

[Years.]		1827.	1828.	1829.	1830.	1831.	1832.	1833.	1834.

		59 Spruce Beer Barrels							

These articles were not enumerated in the List of Imports prior to 1832. See page 159, for Customs Duties on the same.

STATEMENT showing the Nature, Extent, and Value of the Exchange of Productions between the United Kingdom and Prussia, direct. * * * This Statement exhibits a considerable seeming excess of Value Imported from PRUSSIA, but as stated at page 166, a considerable portion of the exports under the head of Germany, find their consumption in the Prussian Dominions: a Paper presented to Parliament in the Session of 1827, (No. 277), represents about one-seventh part only of the British Products consumed in Prussia as being Imported direct from the United Kingdom, about three-sevenths being by way of Hamburg, and about one-fourth through the Netherlands. In 1823, the Total Value of Products Imported into Prussia was represented in the Paper above referred to, as amounting to \$1,506,911 Rix Dollars, while only 4,785,023 were direct from the United Kingdom; if this representation be correct, the question arises—How are they paid for? The excess of Value Imported as exhibited below, is only about equal to discharge the £425,000 $\frac{1}{4}$ Annua of Interest incurred, and the stipulated Annual Amount of Redemption on the £8,500,000 of Loans raised for Prussia in London in 1818 and 1822. See note to page 166.

STATEMENT showing the Value of the Exports to, and Imports from ITALY, in each Year since 1826. * * * This Statement exhibits a considerable excess of Value Exported, but if the Value of the Silk, lines 1—2, Imported in transitu through France be added to the Imports below, it will go far to equalize the Account with Italy. The most striking feature of the Account below is the vast disproportion between the Official and Declared Value of the British Produce and Manufactures Exported, the Ratio in 1831 being only £51 of Value for £100 of Official; Germany, however, see page 162, exhibits a still greater disproportion; while to the United States of North America in the same Year, the proportion was £73 to the £100; the difference arises from Cotton Yarn and Cotton Manufactures of a low Quality, composing so large a proportion of the Exports to Italy. 8,253,000 lbs. of Yarn, rated Officially at 1/9½ p lb., averaging only 12½.—the Raw Cotton in 1833 selling at 11d.

STATEMENT showing the Quantity in *Weight Measure*, or *Tale*, of each of 60 Articles Imported into the UNITED KINGDOM from Portugal and Spain, the Azores, and the Canaries, and all the Ports within the Straits of Gibraltar, except those of France, Italy, and Russia, in the Black Sea. In 1832, a British Vessel for the first time cleared direct from London for the Port of *Trebizonde* in the Black Sea, in Latitude 39 43 North, and 37 23 of East Longitude, with a cargo for Tauris,—the modern Tabriz, or *Ecbatana* of Sir William Jones, the present Capital of PERSIA, 1 33 South, and 9 14 East of Trebizonde, which promises to lead to an extension of intercourse in that direction; Egypt, also promises to become the centre of a more extended intercourse,—see page 229 for the No. and Tonnage of Shipping, direct thereto, and from.

SPAIN, GIBRALTER, PORTUGAL, &c., for Wine IMPORTED from each, see page 138; and for Sheep's Wool, see page 115; and for Exports, see pages 132-5.

Articles Imported from TURKEY, and the MOREA.

These Articles were not enumerated prior to 1832, see page 139.

STATEMENT showing the Quantity of each of 43 Articles of Colonial and Foreign Produce Re-exported from the United Kingdom to **GERMANY**, in each Year since 1826. See Notes to page 158, for the Official Rates of Valuation of Pepper, Coffee, &c. &c.; and to 159 for the effects which result from the Re-exportation of Colonial Produce. The General Account of Imports and Exports from and to Germany, at page 162, shows a considerable excess of Value Exported thereto, but the Sheep's Wool, (line 22), which forms so important a part of the Imports, is rated officially at only 6d. $\frac{1}{2}$ lb., while its current Commercial Value runs from 9d. to 5s/ and 5s/ $\frac{1}{2}$ lb., averaging, probably, about 1s/ $\frac{1}{2}$ lb.; this will reconcile a considerable portion of the Excess. The Note to the following page also shows that a considerable portion of the Exports under the head of Germany find their consumption in Prussia, whereby a further portion of the excess is doubtless equalized by the excess of Imports from thence; but, after all, the Products received from Germany, involving therewith the Account with Prussia, never equal the Value of the Products given; Germany is the point, more particularly, where the equalization of the Exports and Imports is occasioned—not, as is so fallaciously, and fatally assumed, by the Balance being received in Bullion; but, by forcing down the Value of the British productions,—not, again, to the level of Foreign competition, but to the level of the Value, which the Imports will realize; and which Value is regulated solely by the Power, and Means of Internal Consumption.

STATEMENT showing the Distribution, in Gallons, of *RUM*, Re-exported in each Year since 1826.

[illegible]

STATEMENT showing the Sources from whence the Annual Profits or Income of the BANK OF ENGLAND were derived in each of the 42 Years, ending on the 29th. of February, 1832, according to an Account presented to Parliament on the 10th. of June 1833.

This Account shows, more clearly than any ever before presented to the Public, the extent of the advantage derived by the Bank from its connection with the Government. The Column of Expenses in 1798, includes £200,000 as a Voluntary Contribution in support of the War; in 1800, £342,697 the amount of loss by Aslet, a chief clerk; from 1799 to 1817, £2,143,353 for amounts paid for Property Tax; and from 1790 to 1823, £1,209,896 for loss by Coinage of Gold and Silver; from 1793 to 1831, the average of loss by bad debts on Bills discounted, is stated in No. 60 of the Appendixes to the Report of the Committee on the Charter in the Session of 1832 to have amounted to £31,696 $\frac{1}{2}$ annum, and No. 61 of the same Appendixes, represents the average amount of losses by Forgeries in the 10 Years 1822—1831, to have been £40,204 $\frac{1}{2}$ annum, including £360,214 by Fauntleroy in 1824; the increase of amounts divided among the Proprietors from 1799 to 1807, includes £5,743,780 paid as Bonusses, in addition to the usual rate of 7 $\frac{1}{2}$ cent., which had been paid from 1788 to 1807, raised in that Year to 10 $\frac{1}{2}$ cent., and the amount in 1816 ending the 28th. of February, 1817, includes £3,000,000, the nature of which transaction is explained at page 172. The proportion of Expenses, Col. 8, in the Year ending the 29th. of February, 1852, was £539,400 in parts as follow, Viz. for Salaries and Pensions, £218,003; House Expenses, £39,187; Directors Allowances, £8,000; Rent, £40,000; Expenses arising from the Banking Department at the Eleven Branches, £5,702; and £28,508 attending the Circulation of £2,500,000 of Branch Notes; the Clerks, Porters, Printers, and Engravers, including 82 at the Branches, amounted in 1851 to 940, averaging £225 each, and the Pensioners to 193, averaging £161 each. The Column showing the amount of Commercial Bills discounted, will show approximately the proportion of Column 2 derived from Interest thereon, which No. 15 of the Appendixes to the Report on the Charter in the Session of 1832 represents to have amounted to £139,695; of the remainder, £60,684 for interest on Loans on Mortgages; and £56,941, for interest on private loans.

From 1793 to 1817, there was charged by the Bank £3,711,786, for Discount on Prompt Payment of Loans, and for Commission for Receiving thereof, (see Cols. 28—29 of page 194,) this Amount is probably credited in the 3rd. Col. below, but there is one transaction between the Government and the Bank which in all the Accounts that have as yet been presented to the Public, there seems a disposition to conceal. In 1825, an agreement was entered into for the Bank to advance £13,089,419 by Instalments, through a period of 5 Years, for an Annuity of £385,740 for 45 Years, commencing from the 5th. of April 1823; this transaction, the nature and tendency of which is explained on a subsequent page, is not cognizable in the Account below.

Years ending the 28th. or 29th. of Feby.	ANNUAL INCOME.						APPROPRIATION.					Annual average amount of Commercial Bills Discounted.
	Profit and Loss Rest.	Interest on			Management of Public Debt.	Profit on Bullion, Rent, and Sundry Items.	TOTAL.	Annual Expenses, Forgeries, Losses, &c. &c.	Stamp Duty on Circulation.	Divided among Proprietors. 7 1/2 Cent. and Bonusses.	Value of Bullion passed thro' the Bank on account of Individuals.	
		Loans and Commercial Bills.	Government Securities held by the Bank.	Capital.								
	£	£	£	£	£	£	£	£	£	£	£	
1791	2,701,308	88,480	308,731	356,502	99,026	27,065	3,581,112	85,850	12,000		2,668,300	The amounts in this and the adjoining Column are for the respective Years, 1806, &c., & not ending the 28th. of February in the Bank Accounts. The Appropriation is equalized with the Income by carrying the Balance to Profit and Loss Rest, the above Amount, if not so, forms the Rest at the commencement of the ensuing Year, and is on from Year to Year; this explanation is in the margin of the Report of the 17th. For the proportion of Gold & Silver of the Amounts below, — see p. 172.

An ACCOUNT of the amount of all the *Promissory Notes and Post Bills* of the Governor and Company of the **BANK OF ENGLAND**, in Circulation at the close of business on Saturday in every week in each of the 6 Years 1792—1797, and in each of the 4 Years 1834—1838.*
 * * For the Weekly Circulation in each of the 19 Years 1815—1833, see Pages 54—5; there does not appear to have been any account published of the Weekly Circulation for the 17 Years 1798—1814. In the appendixes to the Report of the Committee on the Bank of England Charter in the Session of 1832, there is an account of the amount of Notes in Circulation in each Quarter of the Years 1799—1814, distinguishing Notes under £5, but it does not seem of sufficient interest to exhibit here, inasmuch as the two following pages exhibit the Circulation with the same distinction on the 28th. of February, and 31st. August in each Year since 1777. The first great impetus to the Circulation of small Notes, appears to have been in the Quarter ending the 30th. June 1804, when the £2 Notes were first put into Circulation, from whence it continued pretty uniform down to the 30th. June 1808, from whence it progressively increased from £4,555,880, to £9,456,520 in September 1814.* The proportion of Bank Post Bills which in April 1793, amounted to £1,016,180, progressively declined down to £450,520, in December 1797; since 1818, they have varied from £2,500,000 to £1,500,000, in August 1832.

[Years	1792.	1793.	1794.	1795.	1796.	1797.	1834.	1835.	1836.	1837.

Produce of the Gold and Silver Mines of Mexico, Chili, and Peru, in each of the 40 Years 1790 — 1829.

STATEMENT showing the Produce of the Gold and Silver Mines of MEXICO, CHILI, and PERU, in each of the 40 Years 1790—1829, according to the returns made by the British Consuls at the respective places, and printed by order of Parliament in the Session of 1832.—Vide Paper No. 338 of 36 Folios, of that Session. * The annual average produce in each of the 5 Years 1825—1829 of each of the 7 Provinces of Mexico was as follows, Viz., Zacatecas 5,768,630; Mexico 2,637,718; Guanajuato 1,531,475; San Luis Potosi 983,806; Durango 823,814; Guadalupe 823,814; Total 10,777,371 Dollars. The following is the Total Produce of the Mexican Mines in the United Mountains, in the ten Years 1820—1829, Viz., 65,350 lbs. of Gold, 412,246 lbs. of Silver, and 6,067½ lbs. of Platinum, equal together to about £500,000 annually; the Gold has progressively increased from 2,151 lbs. to 11,375 lbs. † Annam, and the Platina from 48 lbs. in 1821, to 5,187 lbs. in 1829; the Silver has remained stationary. The bulk of the Silver and one seventh of the Gold belongs to the Priny Puse of the Emperor; four sevenths of the Gold and the greater portion of the Platina to Individuals, and the remainder to the Crown. * For the Coinage of Mexico from 1790 to 1799, see pages 98—9. From 1799 to 1809 the two accounts correspond, but subsequent to that date they exhibit great disparity.—the present is entitled to the highest confidence.

Years.	Coinage in Dollars of all the Legal Mints in the Vicereignty of Mexico.			Proportion City of Mexico.	Total EXPORT.	Stamped at the Mint of St. Jago de Chili.		Brought to the Royal Mint of Potosi.		Exported from Monte Video and Buenos Ayres.	San Pedro Nolasco.	Raised in and Exported from Coquimbo.	Castellanos equal to 100 of Gold Dust, &c. exported from Panama.

See Note to St. Jago de Chili.

The amount in the following Column subsequent to 1807, is stated to be the amount of Silver brought to the Royal Rescate Bank, and not to the Mint of Potosi.

The 4th. following Column shows the quantity in Mares of 7 Dollars each of Silver, brought to the Mint of St. Jago, from the Mines of San Pedro Nolasco.

Number of Acts of Parliament passed in each Session of the United Parliament of Great Britain and Ireland.

STATEMENT shewing the Number of ACTS passed in each Session of the United Parliament of GREAT BRITAIN and IRELAND, distinguishing the Local and Personal, from the General and Public; and the various purposes for which the Local and Private were obtained, in each Session; shewing also the date of commencement and prorogation of each Session; the blank lines shewing the duration of each Parliament.

* * It may be observed with regard to the Acts relating to Public Works, that they do not imply so many undertakings; as many of the Acts are to extend, alter, or amend.

The progressive increase in the value of Property as indicated by the above Statement of increase of Legacy and Probate Duty, while all the Products of Labor have been as progressively diminishing, may be regarded as another evidence of that tendency to inequality and disproportion which threatens the subversion of all social order.—Of the £34,826,300 administered to in 1824, more than 29 parts out of 31 it will be seen by the following Statement were possessed by considerably less than one half of the Number Deceased.

under £1,000	No. of Testat.	Mean Amt. sworn to.	No. In- testate.	Mean Amt. sworn to.	Tot. N. of Admi- nistrators	Total mean Amount Re- quired.

The progressive and extraordinary increase since 1805, of the Legacy and Probate Duty is frequently referred to, as an evidence of the increased Wealth of the Country; yet, while it is not intended to deny, but that the Country has increased in Wealth, in the legitimate sense of the term, to draw that conclusion singly from the above Statement would involve a most egregious fallacy, as will be seen by the following observations which are offered in explanation of the cause of the increase:—a large portion of the Legacy and Probate Duties arise from the descent of the account called the "National Debt;" if therefore the above Statement is to be taken as the Index of an increase of National Wealth, the account called the National Debt, which by the common consent of all mankind is deemed a National burthen, must be Wealth; the term National Debt however, is a palpable solecism, in so far as it is a National Credit to the same extent as it is a Debt; it might with some propriety be called the Government Debt, but even that term would not exactly meet the nature of the account; but for the purpose of the present illustration it shall here be termed the Government Debt. The increase of the Legacy and Probate Duties then, it will be seen have kept pace with the increase of that account, and as that account is purely ideal; a means of drawing from the producer a portion of his production, without giving him any thing in exchange, all therefore that the Government Debt amounts to, is a means of transfer from one party to another. In addition to its large nominal amount, increased complications have given it a fluctuating Money Value; the nominal amount as it stood on the 5th. January 1832, was £7,555,543,885, estimated at about £.85 for every £.100, making the nominal amount equal to an ideal Money Value of £5,422,210,391; while in 1815 the same amount was estimated at the rate of £.57 to £.60, say £.58, equal to only £.438,215,453; the change therefore in the nominal value of this account, alone is sufficient to account for two-thirds of the increase of the Probate and Legacy Duties; and, as the change of Value in that account has tended to give an increased Money Value to Land, while the produce of the Land remaining stationary in quantity, and the annual Income of the Government Debt account, stationary in amount, and all the products of Industry tending to a decline in Value in a degree more than equal to the increase of quantity—the increase therefore in the Money Value of the Government Debt account, and of that portion of the soil subject in its descent to the charge of Probate Duty, will suffice to account for all the increase of Revenue which the above account exhibits; from 1805 to 1815, it was the increase of the account itself; and from 1815 to 1832, the increase in Money Value of the nominal amount.

STATEMENT shewing the Number of Administrators to the Personal Property of Deceased, and the Value of the Property Administered to, within the Province of Canterbury (see Statement of Ecclesiastical Jurisdictions) in the Year 1824, distinguishing the Proportion who died Intestate, from the Proportion leaving Wills, shewing also the Proportion administered to, under each of 44 grades of amount from £20 to £400,000.—Vide Par. Pa., Vol. X, Session 1826.

Scale at 1/2 Act, 55 Geo. III, cap. 184.

*. The extreme fluctuation during the War from 1793 to 1815 in the Money Price of nearly all articles of Subsistence and Merchandize, and the vast depreciation which since the termination of the War all similar articles have experienced, having given rise to much difference of opinion and discussion as to the causes which produced such fluctuations and ulterior depreciation it led in 1823, to the publication by MR. TOOKE (a Gentleman very extensively concerned in the Commerce between England and Russia) of a Work entitled "*Thoughts and Details on the High and Low prices of the thirty Years from 1793 to 1822.*" and in a second Edition of his Work published in 1824, MR. TOOKE appended a copious exhibition of the prices of nearly all the great Staple articles of Subsistence and Merchandize during, the thirty Years above stated, which were collated by Mr. Hinricks (a Gentleman familiar with and well qualified for the task) from the only Publication extant, which contained any general quotation of Prices prior to the Commencement of the War. — *Viz. Princes and the London Price Current.* — see note to the two following Statements.

STATEMENT (No. 8) shewing the Highest, and Lowest prices of *Muscovado Sugar*, of *Hyson and Congou Tea*, of *Ordinary and fine British Plantation Coffee*, and of *Hops*, in each of the 47 Years 1782-1828, and also of the quantity in lbs. Weight, of *Hops* grown in England in each of those Years.—*The Hops are quoted Duty paid, but the Sugar, Tea, and Coffee are exclusive of duty. see Statement of the Rates of Duty.*

As certain inferences will be found in the Abstract and Review of the evidence on the British Wool Trade, to have been drawn from the fluctuation of price in the great Staple articles of subsistence and Merchandize, it is important to know how far any representation of prices is entitled to confidence for accuracy: at pages 499-507 of the Lords printed Copy of the evidence, is a Statement of prices of various articles given in to the Committee by a Mr. E. C. Hohler, who stated, that he had extracted it principally from Princes London Price Current, and that he had the assistance of a Gentleman from the National Debt Office who had gone over the calculations with him, but the whole Statement (except what relates to the proportions of quality of the Foreign Wools Imported which will be adverted to further on) bespeaks such incompetency for the duty on the part of the Compilers as to render those Statements of prices quite unworthy of notice; the note to the preceding Statement adverts to a Work of Mr. Tooke's to which is appended a copious Statement of prices collated by Mr. Henrick's (a Gentleman well qualified for the task) from the same Price Current, which the same note states is the only publication extant which contained any general quotation of prices prior to the commencement of the War, and indeed it is believed to be the only publication of the kind of which any regular file is known to exist prior to 1811, but, except its exclusiveness Princes Price Current has no appreciated character, on the contrary it is supposed to have been conducted in the most slovenly manner; and as such, any information drawn from it requires to be deliberately reflected upon before any inferences therefrom can be deemed justifiable.— see succeeding notes.

Highest and Lowest Prices, of Sugar, Tea, Coffee, and Hops, in each of the forty-eight Years 1782-1828.

STATEMENT (No. 9) shewing the Highest, and Lowest prices, of Irish Salt Provisions, Irish and Dutch Butter, Russia Yellow Candle Tallow, Greenland Whale, and Rape Seed Oils, and Jamaica Rum, in each of the 48 Years 1782 - 1828.

* From 1782 to 1798 all Foreign Tallow was admitted Duty free, in 1798 - 1802 at 1/6 $\frac{1}{2}$ Cwt., in 1803 at 2/0, in 1804 at 2/3, in 1805 at 2/4, in 1806 at 2/6, in 1807 - 12 at 2/8, and in 1813 - 28 at 3/2 $\frac{1}{2}$ Cwt. - Whale Oil was subject to a Duty of from 12/2 to 14/3 $\frac{1}{2}$ Tun from 1782 to 1808, and of 7/ to 8/3 $\frac{1}{2}$ from 1809 to 1824, but the Ships Importing it, were at the same time allowed a Bounty more than equivalent to the Duty, see Statement relating to Fisheries. In 1825 an alteration took place in the Weights and Measures throughout the United Kingdom by which the Spirit Measure was increased from 8-311 to .100000.

Years	Salt Provision Duty free		Butter $\frac{1}{2}$ Cwt.		Russia Yellow Candle Tallow $\frac{1}{2}$ Cwt. Duty paid		Oils $\frac{1}{2}$ Tun of 252 Gallons Duty free		Jamaica Rum per Gallon exclusive of Duty	
	Irish Mess Beef $\frac{1}{2}$ Barrel of 200 lbs.	Irish Mess Pork $\frac{1}{2}$ Barrel of do.	Irish, Duty free	Dutch, Duty paid			Whale	Rape	High Proof and Fine Flavor	Low Proof and Inferior

* * Referring to the Notes, to the two preceding Statements the principle upon which the above, as well, as all the accompanying Statements of Prices are founded, is now about to be explained. - Highest and lowest price simply stated, denotes, as much the price of the best and worst quality of an article, as it does the fluctuation in price, of an article of similar quality; and the object, in these Statements, being not merely to shew, what the prices of the articles exhibited have been; but as far as practicable, to shew the fluctuations, to which they have been subjected, the quotations therefore here given mean the prices of similar qualities, and in the Years in which the highest quotation precedes the lowest, it implies that the article tended to decline during such Year, and in the Years in which the lowest quotation precedes the highest, the contrary, the article tended to a rise. Inferences respecting the cause of these fluctuations in support, or in refutation of those advanced by Mr. Tooke and others on the subject will be found in another place; suffice it to say, that some articles from their peculiarity of nature, and peculiar circumstances, preclude any just inferences of a general nature being applied to them; whilst the extreme variations of quality of other articles renders it impossible to convey in a general exhibition of prices a correct idea of the value of the Bulk of the articles; among the articles subject to peculiar circumstances tending to occasion an extreme fluctuation in price are Hops (see Statement No. 8) and among those subject to extreme variation in quality is Indigo (see Statement No. 16) whilst all the articles in this Statement particularly Tallow and Oils are of a nature to render a single quotation sufficient to convey a fair idea both of their general and particular Value.

Highest and Lowest Prices of Salt Provisions, Irish, and Dutch Butter,

Tallow, Oils, and Rum, in each of the 48 Years 1782 - 1828.

Annual Average Price of sundry articles, as sold at the Public Sales of the East India Company, in each of the 33 Years 1799-1831.

STATEMENT shewing the Annual Average Price of each of Seventeen Articles of East India Produce, as sold (exclusive of Duty) at the Public Sales of the Hon. EAST INDIA COMPANY, in each of the 33 Years 1799-1831. * Price is a relative term: a commodity is high or low in price, in relation to other commodities or things; most of these articles enter largely into the Re-exports from Great Britain to Europe; take Black Pepper as an example of the following illustration: during the War from 1793 to 1815, the Total Exports from, exceeded the Imports into, Great Britain upwards of £500,000,000 the excess being equalized in the Mercantile account by Bills drawn in different parts of the World on the Government of Great Britain; which Bills or an amount equivalent thereto were converted into an Annuity Fund, (National Debt) during this operation a £ of the Annuity so created was equal to 22 lbs. of Pepper; the Annuity remaining fixed while Pepper in common with all the Products of Labor, by a combination of causes not yet publicly explained have been subject to continued depression, so that 74 lbs. of Pepper, instead of 22 lbs. are now required to meet the fixed amount of £ 1 of Annuity.

Average Prices of Supplies for Greenwich Hospital; Ratio of the Value of Labour, &c. &c.; in each of the 33 Years 1799-1831.

STATEMENT shewing the Annual Average Price of the Silk and Cotton Piece Goods of India, and of Nankeen, as sold (exclusive of Duty) at the Public Sales of the Hon. EAST INDIA COMPANY, in each of the 33 Years 1799-1831; and also a Statement of the contract prices of the principal articles of subsistence for the supply of Greenwich and Chelsea Hospitals; the annual average price of Wheat, and ratio of the value of Manufacturing Labor in each of those Years.

* The last Column of this Statement is the one most deserving of attention; it is founded on the Official and Declared Value of British Products Exported, as exhibited at page 48, and when contrasted with the increased value of Money Property, presents a disparity, which none but the most stupid and obtuse can view without fear and trembling for the consequences which it portends. In 1805 £100 of 3 3/4 Cent. Stock was only equal to £31 15 1/2 of Manufactured Products, while in 1832 it commands £139 6 10; or in 1801 the £100 of 5 1/4 Cent. Stock was equal to less than 25 Pieces of Long Cloths, and in 1831 to more than 115 Pieces, being in the proportion of more than 5 to 1.

PIECE GOODS.										NANQUINS.										Contract Prices of the undermentioned articles, for the supply of the Naval Hospital at Greenwich.										Annual Average Price of Wheat.	Ratio of Value for every £100 of Labor.

 exceptions from
 the Duty of 20 1/2
 Cent.
 Turbans
 R-chelle Salts
 Sulphate of Quinine and
 Magnesia
 Chloride, and Corrosive
 Sublimed
 Glauber Salts
 Bicarbonate, Potassate,
 & Chromate of Potas-
 sate of Lead
 Aqua Fortis and Tar-
 taric Acid.

Notes on the Tariff of France
 and for further Details than here exhibited see French Laws of 28th. April 1816, 7th. June
 1820, 27th. July 1822, 17th. May 1826, and 7th. June 1828.

Note * When the Wool of Wethers, Rams, Ewes, or Lambs, whether Merinos, Cross-
 breed, or Common Sheep, is of more than Four Months' Growth, there is to be Collec-
 ted, independent of the Duties specified on Sheep & Lambs, the Duty on Wool, accord-
 ing to its Kind. These Four Months may be reckoned from the Period when Sheep-
 shearing takes place on the Frontiers of France, because with few Exceptions it is the
 same in other Countries.

The Sheep Imported for Slaughter are generally of a Large Size. They have Long
 Wool called in Commerce Skin or Dead Wool, approaching in Quality to the coarse
 Cross-breed. The Weight of these Fleeces, unwashed, at the Period immediately pre-
 ceding the Shearing, is at least from Eight to Ten lbs. When washed on the Sheeps'
 Back they are reduced to rather less than Half the above Weight.

Setting out then from this given Point, the Weight may be calculated from the
 Months that have to elapse before the Shearing, for instance, it would be the Half or
 the three Quarters, when the Wool is only of Six or Nine Months Growth.

These Indications, given as a Point to set out from, cannot prevail over the Reality
 of a Fact declared faithfully and acknowledged by the Officers, for Administration
 does not mean that the Weight of Fleeces should be unjustly augmented.

In this Case the Duty on Wool is only an Addition to that of 4s. 2d. 1/2 Sheep, and
 may from that Time be collected any where, since there are no Offices specially desig-
 nated for the Duty on Sheep.

Note † The Law of the 17th. of May 1826, does not establish the same Distinction for
 Skins covered with their Wool, as for the Fleeces of Living Animals. Thus the Half
 or the Two Thirds of the Duty on Wool must, without Exception, be charged on the
 Skins according as they are fresh or dried, and without regard to the degree of growth
 of the Wool. There are, however, Exceptions. First, for the Skins of the Lambs called
 Astracan, comprised under the Denomination of Furs. Second, for the Skins of
 Lambs from Italy and the Alps, mentioned in the 18th. Note of the General Tariff, see-
 ing that the Wool with which they are covered is too short to be spun, and that the
 Duty to which it would be made subject would increase the Value of the Skin, which
 is only to be used by Glovers. It follows from the Law of the 27th. of July 1822, that
 Skins covered with their Wool can only be admitted by the Ports and Offices designa-
 ted in Art. 20 of the Law of 28th. April 1816.

Note ‡ The Duty of 30 1/2 Cent. on Wool Imported into FRANCE, is collected on the Val-
 ue, at the Frontier, of Wools in Fleeces, of all kinds, including those of Vigonia and
 Lama. The Minimum of Value being fixed as follows Viz.

For unwashed Wools 4 1/2
 Wools washed in cold Water 9 1/2
 Do. in hot do. 13 1/2 1/2 lbs. weight.

Note § By Waste Wool is understood the Flock or Refuse, a Woolly substance very
 short, which is scarcely susceptible of being spun, and is only fit for stuffing Saddles &c.
 or for manufacturing Flock Papers. There are three sorts. Viz. 1st. Entire Flock is that
 which comes from Stripping dressed Skins. It is a damaged Wool, and necessarily short,
 for before the Skins are dressed they are carefully shorn. 2nd. Flock Wool is the waste
 which is produced by beating Wools on a Hurdle, or by combing Stuffs. 3rd. Clippings
 is the waste produced by the Shearing of Cloths, it is extremely short, and can only be
 used in the Manufacture of Paper Hangings, to which this Substance gives the appear-
 ance of Cloth or Velvet, and they are therefore called Flock or Cloth Paper.

The above Values are a forced Minimum, to which the Declarations must be brought
 without being subject to Pre-emption.

This Regulation may expose to Seizure or Searching: if, for instance, a Portion of
 Wool declared as washed in cold water of the Value of less than 13 1/2 Per pound Net is
 found to be washed in Hot water it may be seized for false Declaration or, in case of
 mutual Doubt, may require searching.

In case of a false Declaration of Value, the Custom house Officers or their Agent make
 use of the Right of Pre-emption, that is, of taking the Merchandise themselves at Val-
 uation, as decreed by the Law of 23d. April 1796. Ten Days are allowed for declaring
 the Pre-emption, Law of 17th. May 1826. The Examination of Invoices which the Law
 of 4 Germinal, An. 2, always gives the Right of calling for, is a Means of obtaining an
 Account of the Truth of the Facts.

It is required of Importers that they make as many Declarations as there are kinds of
 Wool; and the joining of Bales of different Values in the same Act of Declaration is ne-
 ver admitted. In all cases the Officers have a Right to detain in Pre-emption those Bales
 which they think falsely declared, without the Objection being made, that the smaller
 Value of those which they detain is compensated by the excess in the Value of other
 Bales comprised in the same Declaration.

The following is a specification
 of articles admitted Duty free.

LUXURIES.

Tea, — If Imported in United States Ships
 direct from beyond the Cape of Good Hope:
 — Cocoa, Cocoa Nuts and Shells, Coffee,
 Almonds, Currants, Figs, Prunes, Raisins of
 all kinds, Dates, Filberts and Nuts of all
 kinds, Grapes, Olives, Lemons, Limes, Pine
 Apples, Arrow Root, Sage, Yarrow, Pepper,
 Pimento, Ginger, Cassia, Cloves, Cinnamon,
 Mace, Nutmegs, Capers, and Capers.

DRUGS.

Alcornoque, Aloes, Aniseed, Assafetida, Ava
 Root, Balsam of Tolu, Peruvian Bark, Bole
 Ammoniac, Burgundy Pitch, Camphor, Can-
 tharides, Canela Alba, Cascarella, Chamomile
 Flowers, Coenula Indica, Columbo Root,
 Coriander Seeds, Commis Seeds, Frankin-
 cense, Hartshorn, Hemlock, Hebanne, Ipe-
 cacuanha, Manna, Musk, Nux Vomica,
 Oils of Almonds, Aniseed, Cloves, Hartshorn,
 and Juniper, — Opium, Orris Root, Rhubarb,
 Sassafras, Senna, and Vanilla Beans.

* All articles not herein specified, either as free, or as liable to a different Duty, and
 which, by the existing Laws pay an ad valorem Duty higher than 12 1/2 cent., pay only 12.

DYES and RAW MATERIAL, for Manufacture.

Amber, Ambergris, Annatto, Argol, Brazil
 Paste, — Bala and Casta of Mastic, Merai,
 Bronze, or Paster, — Cabouché, Castan-
 as, Craik, Coccolut, Coral, Crude Tartar,
 Elephas Teeth, Filtering Stones, Flint,
 Gum, Arabic, Senegal, Gamboge, Shellac,
 and Lac Dye, — Manufactured Hair, Hair
 Pencils, Hair Plates for Lanthorns, Horns
 and Tips of all kinds, Juniper, and all other
 Berries and Nuts used in Dyeing, — Kelp,
 Kermes, Madders and Madder Roots, Mar-
 ble, Mother of Pearl, Platina, Quicksilver,
 Quills, Rattans and Reeds Unmanufactured,
 Rotten Stone, Saffron, Saltpetre, Sponges,
 Strings for Musical Instruments, Tortoise
 Shell, and Turmeric, — Vegetables, such as
 are used principally for Dyeing and in com-
 posing Dyes, Weld, and all articles used
 principally in Dyeing, coming under the
 duty of 12 1/2 Cent., and all other Dyeing
 Drugs and Materials for composing Dyes,
 all other Medicinal Drugs, and all articles
 not enumerated in this act, nor the existing
 laws, and which are now liable to an ad
 valorem Duty of 15 1/2 Centum, except the
 articles specified in the preceding columns,
 and Wood or Paste.

STATEMENT (No. 22.) of the Rates of Duty on WOOL and WOOLLEN MANUFACTURES on Importation into the United States of North America and Russia in 1828—9.

In addition to the exorbitant Rates of Duty which most of the accompanying Tariffs exhibit, they further merit attention for the variation in principle on which they are founded: France, Prussia, and Russia it will be seen, levy the Duty on such articles as they admit, on the Weight, without any reference to Value, whilst in the United States of North America the Duty is levied on an arbitrary Value, and in the Netherlands the Duty has reference alike to Weight, Measure, and Value, on which it is observed by DOCT. KELLY (vide Page 458 of evidence) who converted for their Lordships the Weights, Measures, and Monies of the several Tariffs into English Weights, Measures, and Monies; that it is an operation which must be attended with much uncertainty. It has however (Doctor Kelly observes) been ascertained by good authorities on such experiment, that the Weight of Broad Cloth, seven Quarters wide, varies from 13 to 22 Ounces Avoirdupois per Yard, and hence the Square Yard at a medium may be reckoned at 12 Ounces; on which supposition, the Scale of Duties will render the Custom House Charges in the Netherlands from 4 to 8 per Cent., and with the Syndicat to an average of only about 7 per Cent. ad valorem.

It further deserves to be noticed that it is not on Woollen Manufactures only, that France, Russia, and the United States of North America impose such exorbitant Rates of Duty. France prohibits all Wore fabrics, and Manufactures of Metals, and even on Bar Iron the Duty is twice its Value in England. The United States of North America impose a Duty on an equally arbitrary Valuation on all Cotton and Linen fabrics as well as Woollen; and in Russia nearly all articles both Manufactured and Colonial, are subjected to an exorbitant Rate of Duty, whilst on the part of England duties have been remitted on nearly all articles the produce of these respective Countries without any equivalent either being obtained or even asked for.

AMERICAN TARIFF, 1828, Vide pages 553-4 of evidence

§ 2. And be it further enacted, That from and after the 30th. Day of June 1828, there shall be levied, collected, and paid on the Importation of the Articles herein-after mentioned the following Duties, in lieu of those now imposed by Law

1. On Wool unmanufactured 2½d. Sterling per Pound Avoirdupois, and also in addition thereto Forty per Cent. ad valorem, until the 30th. Day of June 1829, from which Time an additional ad valorem Duty of Five per Cent. shall be imposed annually, until the whole of the said ad valorem Duty shall amount to Fifty per Cent.; and all Wool imported on the Skin shall be estimated as to Weight and Value, and shall pay the same Rate of Duty as other imported Wool.

2. On Manufactures of Wool, or of which Wool shall be a component Part, (except Carpets, Blankets, Worsted Stuff Goods, Bombazines, Hosiery, Mitts, Gloves, Caps, and Bindings,) the actual Value of which, at the Place whence imported, shall not exceed 2s. 3d. Sterling the Square Yard, shall be deemed to have cost 2s. 3d. Sterling the Square Yard and be charged thereon with a Duty of Forty per Cent. ad valorem until the 30th. Day of June 1829, and from that Time a Duty of Forty-five per Cent. ad valorem; provided that on all Manufactures of Wool, except Flannels and Baizes, the actual Value of which, at the Place whence imported, shall not exceed 1s. 6d. Sterling per Square Yard, shall pay 2½d. Sterling per Square Yard.

3. On all Manufactures of Wool, or of which Wool shall be a component Part, (except as aforesaid,) the actual Value of which at the Place whence imported, shall exceed 1s. 3d. Sterling per Square Yard, shall be deemed to have cost 4s. 6d. Sterling the Square Yard, and be charged thereon with a Duty of Forty per Cent. ad valorem until the 30th. Day of June 1829, and from that Time a Duty of Forty-five per Cent. ad valorem.

4. On all Manufactures of Wool, or of which Wool shall be a component Part, (except as aforesaid,) the actual Value of which, at the Place whence imported, shall exceed 4s. 6d. Sterling the Square Yard, and shall not exceed 11s. 3d. Sterling the Square Yard, shall be deemed to have cost 11s. 3d. Sterling the Square Yard, and be charged with a Duty thereon of Forty per Cent. ad valorem, until the 30th. Day of June 1829, and from that Time a Duty of Forty-five per Cent. ad valorem.

5. All Manufactures of Wool, or of which Wool shall be a component Part, (except as aforesaid,) the actual Value of which, at the place whence imported, shall exceed 11s. 3d. Sterling per Square Yard, and shall not exceed 18s. Sterling the Square Yard shall be deemed to have cost, at the place whence imported, 18s. Sterling the Square Yard and a Duty of Forty per Cent. ad valorem shall be levied, collected and paid for such Valuation, until the 30th. Day of June 1829, and from that Time a Duty of Forty-five per Cent. ad valorem.

6. On all Manufactures of Wool, or of which Wool shall be a Component Part (except as aforesaid) the actual Value of which, at the place whence imported, shall exceed 18s. the Square Yard, there shall be levied, collected, and paid a Duty of Forty-five per Cent. ad valorem until the 30th. Day of June 1829, and from that Time a Duty of Fifty per Cent. ad valorem.

7. On Woollen Blankets, Hosiery, Mitts, Gloves, and Bindings, Thirty-five per Cent. ad valorem; and on all Clothes ready made Fifty per Cent. ad valorem.

8. On Brussels, Turkey, and Wilton Carpeting, 3s. 2d. Sterling per Square Yard on all Venetian and Ingrain Carpets or Carpeting, 1s. 9½d. Sterling per Square Yard on all other Kinds of Carpets, or Carpeting, of Wool, Flax, Hemp, and Cotton, or Parts of either, 1s. 5½d. Sterling per Square Yard; on all patent printed or painted Floor Cloths 2s. 3d. Sterling per Square Yard; on Oil Cloth, other than usually denominated Floor Cloth, 1s. 1½d. Sterling per Square Yard on Floor Matting made of Flags or other Materials, 8d. Sterling per Square Yard.

WOOLLEN MANUFACTURES per lb. wt. all free of Duty on Export

The following Sections contain all that is important in addition to what is exhibited on the two preceding pages, in the Act of Congress of the UNITED STATES of NORTH AMERICA, in July 1832, entitled "An Act to alter and amend the several Acts imposing Duties on Imports," the leading features of which may be summed up as follows:—exorbitant rates of Duty on all the great staple articles of British Produce;—Wines, Spirits, and Sugar, at nominal or moderate rates of Duty;—Tea, Coffee, Fruits, Spices, and all Luxuries, Drugs, Dyes, &c. &c., Duty free.

Section IV., of the act provides, "That, from and after the third day of March, 1833, so much of any act of Congress as requires the addition of ten or twenty per centum to the cost or value of any goods, wares, or merchandize, in estimating the Duty thereon, or as imposes any duty on such addition, shall be repealed;" but as a set off to this seeming modification of exaction, Section XVI. provides, "That, from and after the 3rd. of March, 1833, in calculating the rates of Duties, the pound sterling shall be considered and taken as of the value of four dollars and eighty cents," its previous estimated value having been four dollars and forty-four cents, or 4/6 per dollar.

Section VI. provides, "That, the Duties on all Wool, Manufactures of Wool, or of which Wool is a component part, shall be paid in cash without Discount, or, at the option of the Importer be placed in the public stores, under bond, at his risk, subject to the payment of interest at the rate of 6 per Cent. per Annum while so stored. Provided, That the Duty on the articles so stored shall be paid one-half in three, and one-half in six months from the date of importation: Provided also, That if any instalment of Duties be not paid when the same shall have become due, so much of the said merchandize as may be necessary to discharge such instalment shall be sold at Public Auction, and retaining the sum necessary for the payment of such instalment of the Duties, together with the expenses of safe keeping and sale of such goods, the overplus, if any, shall be returned by the collector to the importer or owner, or to his agent or lawful representative: And, provided also, That the importer, owner, or consignee of such goods, may at any time after the deposit shall have been made, withdraw the whole or any part thereof, on paying the Duties on what may be withdrawn, and the customary storage and charges, and of interest.

Section V. provides "That when the amount of Duty on all other Merchandize, imported into the United States, in any Ship or Vessel, on account of one person only, or of several persons jointly interested shall not exceed two hundred dollars, the same shall be paid in cash, without Discount; and if it shall exceed that sum shall at the option of the Importer or Importers, be paid, or secured to be paid, in the manner now required by law, one-half in three, and one-half in six calendar months."

Notes on the Public Accounts of the Netherlands and of France, &c. &c.

1. Since 1822 two Parliamentary Committees, and one or two Commissions, have been appointed to devise forms for the exhibition of the Public Accounts, and since that date several hundred reams of Paper have been used, and several thousands Pounds of expense have been incurred, in exhibiting proposed Forms of Account, not a sheet of which was necessary. In January, 1829, I was asked by a Member of the Cabinet at that time, if I would submit a Form of Account for consideration; I answered, No; but, that if the Government felt any difficulty on the subject, and was really desirous of having the Public Accounts at once reduced to the most perfect order, and should think proper to confide that task to me, that I would pledge myself to its accomplishment; and in the course of one, or two years at most, without violently breaking in on existing arrangements and practices, would reduce the whole of the Treasury Accounts—exhibiting a complete view of the Receipts and Expenditure of each branch of Revenue and of the Public Service, to the most simple, and consequently the most perfect order, of which they were susceptible; and to a degree to admit of no future improvement; perfect, not in regard to form merely, but for explicitness, and means of facilitating just conclusions being arrived at, as well in regard to any subject in the Abstract or in Detail, as in the Aggregate; and in a way at the same time to prevent the possibility of any malversation taking place without immediate detection.

2. I gave at the time such reasons for objecting to submit any Form, and made such remarks in justification of my proposition not being the result of mere ebullition, as appeared quite satisfactory to the individual to whom they were addressed. So much so, that I was asked if I would commit to writing the substance of the observations which I had advanced; to which I assented, and transmitted them accordingly. As the conversation was quite incidental, I regarded the request made to me more a matter of personal favour than of business, and attached so little importance to it at the time, as not even to retain a copy of my written communication, and was therefore not a little surprised, a short time after, at receiving a note from the then Chancellor of the Exchequer, informing me that the communication had been transmitted to him, and expressing, in the usual formal way, "That it should have his best attention;" the subject had been entirely forgotten by me, and it would probably not have recurred to my remembrance, but for the mass of supererogatory Papers, exhibiting Forms, and containing opinions in regard to the mode of keeping Accounts, which have come before me, in course, with other Parliamentary Papers, during the last two Sessions—1830—1, and 1832. Among which are two Reports on the Public Accounts of France, and another on those of the Netherlands.

3. It is difficult to conceive the motive that could have led to the production of these Accounts, inasmuch as it is a fact which must, or which ought at least, to be familiar to every one; pretending to possess any knowledge of European institutions and forms of Government, that there is nothing in common in the several countries, in regard to the nature and mode of collecting and of re-distributing the revenues, to warrant any reference to the mode of keeping Accounts in France or the Netherlands, as a guide for England. Pages 168—176 of Part II. of the accompanying Digest, exhibit a complete view of the nature and extent of the Revenues of each of the eighty-six Departments of France, by which it will be seen that more than one-third of the total Revenue is derived from direct Taxation on Property and personally; and, both in France and the Netherlands, a large portion of the Revenues of the Departments are locally disbursed; while in England, the whole of the Revenues, except the Charges of Collection, pass through the Bank of England; this difference of practice so completely breaks the analogy, as to render a reference to Continental Accounts, with a view to example for England, quite inapplicable; but, were it otherwise, it would be a libel on England, for it to be deemed either necessary or desirable to take lessons in keeping Accounts, from either one or the other.

4. The Report on the Public Accounts of the Netherlands, with the forms which accompany it, [Paper, No. 236, Session 1832,] is diffused over 166 folios, 18 of them folding sheets: the document may be regarded in two points of view; first, as developing the nature and extent of the Revenues and Expenditure of the Netherlands; and, secondly, as showing the way, in some degree, in which the Accounts are kept; the merit or demerit of the latter, may be inferred from the following elucidation of the former; the detailed display of the Expenditure and of the Revenues of each of the 19 Provinces, occupy 54 folios and 8 folding sheets, the whole of which is exhibited in the herewith 6 following pages; with this difference, that the form in which they are exhibited in the Parliamentary Paper precludes all fair comparison being made, and conclusions from being drawn; while in the following pages, not only are the Revenues and Expenditures of each of the 9 Belgic Provinces exhibited distinct from the 10 Dutch Provinces, and the Population of each Province also added, but both in detail and in the aggregate, the nature and extent of the Income and Expenditure of each Province, is exhibited in the most perspicuous and perfect form, of which the data given rendered it susceptible, and, in a way that detects one error of 20,000, and 3 others of 2000 florins each, which will be found noted at pages 186—189; the Expenditures will be seen to be paid partly with funds assigned out of a Decennial Budget, and partly out of funds voted annually, which distinction may be regarded as being somewhat analogous to the Consolidated Fund Account, and the Ways and Means Account of England, both objectionable distinctions; yet the Dutch Accounts are rendered still further complex by a distinction of ordinary and extraordinary, and of first

and second subdivisions; nevertheless, at page 143 of the Report, it is stated, "that the Books are admirably kept, according to commercial usage, and by *double entry*!"—sextuple entry would be more applicable,—on the same page the drawer up of the Report states, that he was not allowed to see the Books of the Chamber of Accounts, but that the President informed him, the Books were kept on the *double entry system*; at page 141 of the same Report, it is stated, that, "According to the Article 5, of the Law of January 12, 1816, relating to the endowment of the *sinking fund*, the King annually nominates a special commission from among the members of the Chamber of Accounts, for the purpose of making up and closing the Account of that fund, in doing which, the strict rules of Book-keeping and Secrecy are to be observed."

5. With all pretenders to a knowledge of Accounts, whether in reference to private or public business, vast importance is attached to the *Double Entry System*—and by the Reporter on the Accounts of the Netherlands, it is *fondled with peculiar zest*: double entry is good where it is applicable. In mercantile establishments of extensive agency, it is as indispensable as it is desirable; but, in all cases it requires great judgment in applying it, and to apply it indiscriminately is ridiculous, in as much as when it is not absolutely necessary, it embarrasses rather than explicates; and in all cases a delusion uniformly prevails in regard to its being a check against malversation,—it is no such thing—all that it does, is, to prove that when the aggregate Debits and Credits of an Account do not correspond, that there is an error on one side or the other, but it affords no guarantee whatever, either against omission or false entry, and consequently no security against fraud, that is, as far as it is capable of being reduced to useful practice: Arithmetic in the range of its powers, does admit of an Account being so kept, as to tell of omissions or false entry, but as the difficulty of so keeping an Account increases with its extent, the necessary acquirements and application, are not likely to be found to carry the principle into general practice; to exemplify it, therefore, would like Mr. Babbage's Mechanical Calculus, be more a matter of scientific pedantry than of practical utility: a blind man may calculate differentials with unerring precision, while the art of stereotyping affords the most economical means of perpetuating them.

6. Instead of prescribed forms and speculative opinions, in regard to modes of keeping and stating Accounts, 50 different subjects in the accompanying digest, in addition to the Accounts of the Netherlands, may be appealed to, as stated in a way to admit of no improvement: take, for the first example, the Account No. 5, of the Appendixes to the Report on the Bank of England Charter, which occupies 13 pages of the Official Document; an Account of surpassing interest, but exhibited in a way to preclude all fair comparisons from being made upon it; while in the accompanying volume the Account is exhibited at pages 170—1 at one point of view, all the items distinct, and in just relation to each other, with the addition of two other Accounts included. The statement of Imports at pages 137—142, may next be noticed for their perspicuity: Since 1828, an Account has been presented to Parliament annually, in which each year's Imports are diffused over 18 pages, but in which none of the Articles here exhibited at page 139 are included; while in the other 5 pages, not only is every article specified, but the country from whence imported; except in some cases, of which grain is one; but pages 104—5, supply this deficiency; these pages are, however, still susceptible of some improvement; the only other Account to which I will refer in this place, is, the general Statement of the Income and Expenditure No. II, of the Folding Sheets at the commencement of this Volume: the Note to that Statement shows the origin and object of its production; it occupies no less than 58 folios of the Appendixes to the Report of the Finance Committee in the Session of 1828. Page 192 of this Volume exhibits a Summary of this Account, divided into three periods, viz., 10 years, ending with 1801; 15 years, ending with 1816; and 10 years, ending with 1826; and the Receipts and Expenditures of each period, it will be seen, appear to balance to a farthing; but, unfortunately for this precision, there are not less than four errors of addition, each and all of which are fatal thereto—one, plus £5; and three minus of £7, £895,000, and £100,000, which are noted with an *. A still more fatal discrepancy than these, however, presents itself; the Amount of Irish Treasury Bills issued, line 28, of the Receipts, will be seen to be represented as having amounted to £31,236,842. 15s. 11½d., while the Amount paid off, or discharged, as per line 52, of the Expenditures, are represented to have amounted to £33,840,094. 0s. 8½d., or £2,603,251. 4s. 3¼d. more than is purported to have been issued.

7. I am not aware that any consideration, in regard to the bare question of keeping or of stating Accounts, however imperfect on one side, or perfect on the other, or however important or not the question may be deemed, would have sufficed to have excited the above observations, had it not been for the results which some of the accompanying Accounts exhibit. Page 90, which shows the dependant contingency for a supply of subsistence, and Page 114, for a supply of material to prevent the cessation of activity of a million of people, are both subjects which demand the most earnest attention of the Statesman and Legislator, as well as of all who have an interest in the maintenance of social order; important, however, as these two subjects may be deemed, they are trifling, when compared with the consequences, unless commensurate measures are speedily adopted to avert them, which must inevitably ensue from the long continued course of transactions, as elucidated in the Notes which follow Page 120.

STATEMENT (A.) shewing the Total Revenue of each of the 19 Provinces of the Netherlands in the Year 1826:

In addition to the large amounts in the adjoining Columns, on account of the Holyhead Road and Harbour, a further sum of £308,000 stands charged in Column 133,—see also line 29 in the Statement of Revenue of the Post Office, page 19; and see further, —Bangor and Chirk, Menai Straits, and Conway Bridge & Ferry, page 197, where £101,394 more is charged on account of improving the same line of road; making together a sum exceeding £800,000 on account of the Road and Harbour.

See Statement of the Receipt of Land and Assessed Taxes, pages 20-21, for further amounts in addition to Column 36, charged on account of Highland Roads and Bridges.

BRITISH MUSEUM, Col. No. 21.—The amount in 1805 includes £20,000 for the Townley Collection of Statues; for the Lansdowne MSS. £4,925 was paid in 1807, not included in the £10,481 of that Year; in 1810, £13,727 for Mr. Greville's collection of Minerals; in 1814 £8,200 to purchase a collection of Antiquities, & £2,000 to print the Codex Alexandrinus; in 1816 £35,000 for the Elgin collection of Athenian Marbles; and in 1818, £13,500 for the Library and Collection of Doctor Charles Burney. The total of Column 35 in 1807, includes £20,567 on account of the trial of Lord Viscount Melville, in addition to £4,000, charged in 1806.

* * Among the Charges for Public Buildings, Col. No. 25, is £17,500 in 1807-9 for the Royal College of Surgeons in Lincoln's Inn Fields. For the cost of the Custom House, and Post Office, which are not included in Col. 25,—see Statement of Post Office Revenue, page 18. Col. No. 22, comprises Payments made to Poor French Refugee Laity and Clergy; Suffering Clergy and Laity of France; Toulon and Corsican Emigrants; St. Domingo Sufferers; Dutch Allowanced Officers, and Dutch Emigrants; in some Years charged separately, and in others collectively; the same absence of method in the Annual Finance Accounts distinguishes the Statements of Miscellaneous Payments through the whole of the 31 Years here exhibited, and that to a degree to have rendered it exceedingly perplexing to reduce them to any thing like order,—and after all, a few trifling Items may possibly have been omitted, but not in any way to affect the general interest and accuracy of the display.

Sundry Items charged under the head of Miscellaneous Expenditure, in each of the 19 Years 1800—1818.

1800.			1809.—Richard Wharton.		
Earl St. Vincent and Sir Charles Grey, for indemnity on account of American Ships captured at Martinique	12,000		Sufferers by Fire at Dominica	49,996

	124	125	126	127	128	129	130	131	132	133	134	135	136

The details of Columns 107, 134, and 160, are specified on the following page: the amounts in Column 156, under the head of Tables of Parishes, are supposed to be on account of the Trigonometrical Survey of Ireland,—see further in reference to the same subject, note on line 49 of Statement of Post Office Revenue. Columns 146, 155, and 159, are each and all of them further indications of mal-administration; another instance in a trifling way is a charge in 1827 of £272 10 for preparing Tables to shew the difference between English and Irish Currency,—the 8 pages herewith 194—201, have cost more labour, required more application and patience, than 100 such Tables would require, in point of interest comparison would be foolish.

The amount paid for Bounty on Slaves, Col. 129, should be looked at in comparison with the amounts in Cols. 48—50, and the question asked,—how far has the social improvement of Africa been extended in consequence of these Expenditures?

The amounts in Col. 132 appear to demand attention, they are stated to be, to make good deficiency of Profits! Half a million of Shopkeepers and Manufacturers are probably entitled to an equal claim for compensation for loss of Profits. See Note to page 195 for remarks on the Expenditure on account of the Holyhead road, Column 133.

The notes at pages 195 and 199 appear to embrace all the explanation required to shew the nature of the Miscellaneous Expenditures, as exhibited in detail at pages 194—200, except the amount for Barracks in the Regents Park, col. 131, page 199, the building of which Barracks is supposed to have originated in an electioneering job, but be that as it may, it is one of the meanest and most disreputable transactions which the Financial History of the last 40 Years exhibits; the proposition for granting the annuity was made to the House of Commons by Nicholas Vansittart, then Chancellor of the Exchequer, now Lord Bexley, on the 8th. of July, 1820, and the Bill for granting the same, passed, on the 18th. of the same month. On referring to the Debates in Parliament of that date, it will be seen that the cost of the Barracks was estimated at £70,000, and assuming that amount as their cost, the money might have been borrowed for £3,150 $\frac{1}{2}$ Annum; and £2,250 $\frac{1}{2}$ Annum the difference between 3,150 and 5,400 the annuity granted, would have redeemed the £70,000 in 19 Years, instead of 31 Years as agreed upon, to pay the £3,400. The annuity was offered for sale by the Contractor for building the barracks, to the Phoenix Insurance Company in 1822 or 1823, and was purchased by the Globe Company, for or about, £80,000, after 2 or 3 half-yearly payments of the annuity had been made,—and instead of £70,000 being the fair cost for building the Barracks, they stand to attest, that nearer half that amount would have sufficed. For another transaction, equally reprehensible in principle and of far greater magnitude by the same Finance Minister,—see page 172.—A Peerage and a Pension of £3,000 $\frac{1}{2}$ Annum followed these Financial Arrangements. The *Dead Weight Annuity* proposition in 1823, is another of those transactions which will leave a stigma on the legislation of the present age, yet, baneful as its operation has been, from its extreme complication, it is doubtful whether ignorance or selfishness influenced its adoption:—a complete elucidation of its nature and effects will be found stated at page 204.

By the above Statement it is seen that the Consumption of *INDIGO*, in the 14 Years 1814-1827, has exceeded the Supply during the same period by upwards of 2,000,000 of lbs. the destruction by Fire of the Custom House in London on the 12th. of February 1814, having destroyed the Accounts for the Year 1813, and many of the Accounts of preceding Years prevents the above Statement from being commenced at an earlier period than 1814. The preceding Statement however shews the progress of Importation and of Re-exportation in each Year since 1785 taking before the Balance for Home Consumption after deducting the quantity Re-exported from the quantity Imported since 1793, it leads for the Years 1794-1827 to the following Result, *Viz.*

	lbs. IMPORTED.		lbs. RE-EXPORTED.		Leaving for H. Consump.	
	Total	An. Acer.	Total	An. Acer.	Total	An. Acer.
In the 12 Years 1794-1805.	42,448,694	3,537,931	23,632,708	1,969,396	18,815,986	1,567,999
" 7 " 1806-1812.	33,675,188	4,810,727	15,564,960	2,223,566	18,110,248	2,587,178
" 14 " 1814-1827.	79,857,684	5,740,120	49,386,803	3,527,629	32,542,595	2,324,471

By which (and assuming that the Supply of 1813 exceeded the Re-export and Consumption to the extent of the excess Re-exported and Consumed in the subsequent 14 Years) it would seem that while the Continental Consumption has increased since 1814, more than one half, the Home Consumption during the same Period has rather decreased than otherwise. In another Page will be found a Statement of the Annual produce of *cochineal* in the Province of *Oaxaca* for a series of Years past, as delivered to the Mexican Senate in 1814, by which it would seem that the produce of this estimable article is decreasing in quantity, being superseded to a considerable extent, by the *Lac Dye* of British India, which came to general notice about the Year 1810. The *Madder* and *Madder Roots* exhibited as Imported in the preceding Statement are almost exclusively for Home Consumption.

* Although the destruction of the Records with the Custom House in London in 1814 occasions a chasm in the Accounts for the Year 1813. The Accounts kept at the East India House in some degree supply the deficiency as far as what relates to *Indigo*, from those Accounts it appears that the Number of Chests of *Indigo* remaining in the Companies Warehouses in London on the 1st. of January 1814, was 24,496 averaging about 280 lbs. Nett Weight each, and on the 1st. of January 1828, only 21,300 Chests. It is important however to know that a part of the Crop which should have formed part of the Supply of 1827, did not arrive till after the 1st. of January 1828, and consequently although the deliveries in the first nine Months of 1828 have exceeded the quantities delivered in any former period, the Stock on Hand on the 10th. October 1828, was upwards of 30,000 Chests. The seeming anomaly of a decrease in the Home Consumption of *Indigo* since 1812, having led to a further investigation of the subject, the following explanation may suffice to account for the anomaly: Prior to 1814 the difference between the Home Consumption Duty, and Duty when Re-exported, was so inconsiderable, as to occasionally induce some of the Shippers to first clear their *Indigo* for Home Consumption for the purpose of sorting and repacking into smaller Packages, this practice was more particularly resorted to during the Commercial proscription of *Napoleon* in 1812-1813, when large quantities of Merchandise were sent into the interior of the Continent by way of *Thessaly* and *Macedonia*. This practice it will be seen as far as it was carried, would occasion the *Indigo* so managed to be entered both for Home Consumption and Re-exportation, and accounts at once both for the quantity Re-exported and consumed exceeding the quantity Imported, and makes the Home Consumption prior to 1814, appear somewhat greater than it really was.

The following STATEMENT shows the proportion in lbs. weight, of *INDIGO*, Re-exported to each different part of the World, in each year since 1826. For *Lac Dye* Imported, in each Year since 1826; see line 32 page 142; Re-exported, line 34 of 154; and for Home Consumption, line 92 of 155. For *Cochineal*, see preceding page.

STATEMENT showing the Quantity (in Wine Gallons of 231 cubic inches), of Spirits Distilled, and Consumed, in each of the three great sections of the United Kingdom, distinguishing the proportion Distilled from Sugar, from the proportion Distilled from Corn; and the rate, and amount of Duty paid on the same, in each of the 34 Years, from the 5th July 1790, to the 5th July 1824, and for the half year ending the 5th January 1825 and also an account of the Quantity in Imperial Gallons, of 277.274 cubic inches charged with Duty, and amount of Duty paid on the same in England and Wales, in Scotland and in Ireland respectively, in each of the 13 Years 1820—1832.

* The Imperial Gallon was established in 1825, Act of Geo. IV. c. 12, and exceeds by one fifth the Old Wine Gallon, being as 1. to 83314, and equal to 10 lbs. of Distilled Water, at a Temperature of 62° of Fahrenheit. The Quantities Distilled from Sugar in Scotland and Ireland are noted with an s. The Quantities subsequent to 1814, in col. No. 6, are excesses above the computation in col. 3. See following Page, for the Quantity of Foreign Spirits Imported and Consumed in the United Kingdom, and for explanation of the Proof Strength of Spirits, and unphilosophical mode at present practised of pretending to determine the Quantities of Liquids and the proportion of Proof Spirit therein contained, at the mean Temperature of 62° as established by law. The quantity of Spirit Distilled in Scotland was not taken account of prior to 1799, the Duty having been previously levied on the Cubical Contents of the Still, as stated in the Column below, the higher rate being the amount levied per Gallon in the South, and the lower rate in the Highlands.

The annexed column shows the rate of Duty per Imperial Gallon on Proof Spirit in England and Wales; and also in Ireland, except that down to 1824, it was only 5/11 in Ireland, instead of 6/1.

THE
Twelve Statements

IN THE SEVEN FOLLOWING PAGES, CONTAIN A COMPLETE

VIEW OF THE RISE, PROGRESS, AND PRESENT STATE

OF THE

BRITISH NATIONAL ANNUITY ACCOUNT,

In the following Order, viz :

- I. SHOWS the Amount and Terms of every Loan raised from 1703 to 1786.
- II. Shows the State of the Account on the 5th January 1793, and the Amount and Terms of every Loan raised from that date down to 1829 inclusive.
- III. Shows the result of the operation denominated the SINKING FUND, during the twenty-three years of the War 1793—1815.
- IV. Shows the Progress made in the Diminution of the Capital in each Year since 1816.
- V. Shows the State of the Account on the 5th of January 1823, and on the 5th of January in each Year since that date.
- VI. Shows the Number of Annuitants admitted in each of Eleven Grades of Ages, under the Acts of 49 and 57 of Geo. III. cap. 142 and 34, and of the Total Number demised, distinguishing Male from Female in each Year since the passing of the first recited Act in 1808.
- VII. Shows the Diminution of Annuities effected up to the 5th of January 1817, and in each Year since that date, by Conversion, Unclaimed, Demise, and Reduction in the Rate of Interest, &c.
- VIII. Shows the Amount of Capital transferred from Great Britain to Ireland, and *vice versa*, and of Capitals and Annuities unclaimed for Ten Years and upwards, afterwards reclaimed in each Year since 1821.
- IX. Shows the Amount of Capital and of Perpetual and Long Annuities cancelled for Conversion into Life Annuities under the Acts of 48 and 57 Geo. III. cap. 142 and 34, with the Amount of Life Annuities created thereon and the Average Rate of 3 per Cent. Stock in each Year since the passing of the first recited Act in 1808.
- X. Shows the Augmentation of Capital and of Annuities by sundry Transfers, Conversions, Amounts unclaimed, afterward reclaimed, &c. in each Year since 1821.
- XI. Shows the Amount of Perpetual and Long Annuities cancelled for Conversion into Annuities for Terms of Years and for Lives per Act of 10 Geo. IV. c. 34.
- XII. Shows the Number of Persons to whom a Half-year's Dividend became due in Ten Classes of Amounts on the 5th of January 1823; 5th January 1828; and 5th January 1829.

. The British National Annuity Account, commonly called the National Debt, had its origin in 1672, when £1,328,526, which had been advanced by the Goldsmiths of that time, on the credit of sums voted by the House of Commons, was retained by the Government: for a few years, Interest was paid on the amount at the rate of 6 per cent. per annum; but was discontinued previous to the Revolution in 1688. In 1702 the amount was again recognized, when £664,263 was agreed to be repaid, and the remainder incorporated at 3 per cent. per annum, with the sums raised subsequently to 1688. During the reign of William III. from the 15th of July, 1689 to the 8th March, 1702, £16,989,350 including the £1,200,000 which formed the basis of the Bank of England in 1694, and £2,000,000 from the East India Company in 1698; both at 8 per cent. was raised for Permanent Annuities at various rates of interest, mostly at 8 per cent.; and £4,184,518 for Annuities for Lives and terms of years. Between 1697 and 1701, £5,120,040 of the amount raised for Permanent Annuities was paid off. The following Page exhibits the Amount and Terms of every Loan raised between 1702 and 1787.

STATEMENT showing the Rise and Progress of the NATIONAL ANNUITY ACCOUNT (commonly, but inappropriately called the NATIONAL DEBT.) * The amounts noted (l) were all raised by Lottery. Nos. 71, 73, 82, &c. noted with an * were the foundation of the Long Annuities terminable in 1860.

No. 11 from the East India Company; and Nos. 14 and 47 from the Bank, without Interest in consideration of Renewal or Prolongation of their respective Charters. Nos. 26-7 from the Bank; 31 from East India Company and 21 from South Sea Company.													

No. 11 from the East India Company; and Nos. 14 and 47 from the Bank, without Interest in consideration of Renewal or Prolongation of their respective Charters. Nos. 36-7 from the Bank; 51 from East India Company and 21 from South Sea Company.

Of the above Capitals there was paid off or otherwise liquidated as follows, viz. between 1713 and 1739 £4,910,734; 1748 and 1756 £4,961,560; 1763 and 1775 £10,231,795, and 1783 to 1792 £10,242,100. These liquidations, with reductions in the rate of Interest which took place at different times between 1715 and 1793, left the Account on the 5th of January in the latter Year as exhibited in the first line of the following page.

Amount Funded, and Stock and Annuities Created, and Rate at which created, in each of the 37 Years 1793--1829.

The annexed Statement exhibits a series of transactions without a parallel in the History of human affairs; but, to develop all the consequences which the *Funding operation* has produced, and which it still involves, it would be necessary to shew the rise, and trace the progress of all the operations of the War from its commencement in February 1793, down to its final termination in 1815; with all its intrigues and collisions, and creation and march of *Logism*, as well as all the activities which in conjunction with the *Funding system* it excited and cherished during the whole of that eventful period; and the converse effects which have resulted therefrom since the latter date: the influence of the combined operation on the external Commerce of the Country is shewn in § of the Notes at page 120 a; and the Notes to STATEMENT II., at the commencement of PART III., will shew how the Public were seduced into a ready acquiescence to the system in its early stages, and deluded in regard to its ulterior effects.

At the present time the existence of the annexed Account is less to be deplored, than the seeming absence of all correct knowledge in regard to its relation with the aggregate of existing interests; if rightly understood the scientific and mechanical means which the operation of *Funding* tended to create and cherish would prove an adequate compensating power; and if, instead of being left uncontrolled to prey on the vitality of the People, and occasion increasing privation and misery, the whole combination was properly directed it would work in unison for the benefit of the whole community: to the abridgement of human toil, and to afford the means of increasing the comfort and enjoyment of all classes; and consequently, from the extensive influence which Great Britain at present exercises in the World, to advance the moral and social, as well as the pecuniary condition of mankind at large.

The difference between the *Nett Money* received, and the Amount funded arose in part from the Charge of the Bank of England for receiving of the Loans and for discount on prompt payments; these together, between the 5th. of January, 1795, and the 5th. of January, 1817, amounted to £3,711,789 as exhibited in detail, Cols. 28-29, page 194; this part of the transaction deserves notice, for the fact that while in the receipt of Income, the money raised by Loans is short credited the sums for discount and receiving; through a period of 25 Years they continued to be Charged on the Debit side of the account. Nos. 6 and 14, were raised for the service of Austria, and the first amount was remitted or drawn for without being passed to account as part either of Receipt or Expenditure; and out of the two transactions Nos. 15-14 £4,648,732 was stopt by the Bank. The Total of bills funded, amount to £36,185,176, as stated in the column of *Nett money* received, and out of the total sum raised £69,250,000 purported to be raised for the service of Ireland, the proportion of annuity on which is £5,358,115, equal, or nearly so, to the whole *Nett Revenue* of that ill-fated Country; on the 3th. Jan'y, 1817, however, the whole amount was consolidated with the account for Great Britain, and Ireland exonerated from all further liability.

£2,500,000 of No. 45 was for account of the East India Company, transferred to account of Great Britain in 1822. No. 55 was part of a collusive transaction between the Government and the Bank of England, for the particulars of which, see page 172. Nos. 57 & 60-2, were mere transfers of amount from the Sinking Fund account. No. 63 was another collusive transaction between the Government and the Bank of England to sustain operations on the Stock Exchange; an expose of the nature of the transaction was laid before the Finance Committee in 1828, when its improvidence was proved to amount to no less than £4,560,000.—see a subsequent page. In 1827, £142,519,290 of the Column of 5 ½ Cents were converted into £149,645,254 of 4 ½ Cents, and in 1830 the whole, or nearly so, were converted into 5 ½ Cents, as were £76,206,882 of the Column of 4 ½ Cents in 1824.

The spoliation committed on the holders of the 4 and 5 ½ Cents by the conversion of their stock into 5 ½ Cents, was one of the grossest acts of injustice ever indicated upon an unsuspecting and credulous People. The rate at which Nos. 45, 55, and 57, were funded, as in Part Cents, averaged no less than £5 15 6 per Cent on the full money received, extending the average rate at which the 4 and 5 Cents were funded; and yet, advantage was taken of no money advanced to improve the position which *dividend* shareholders enjoyed in their properties, but as the latter have been disposed to transfer any portion of the principal to Foreign Securities, and have been rendered in 1825-26, such transactions reflect as much disgrace on the individual, as they do on the moral character of those who executed them.

STATEMENT showing the Amount *Funded*, in each of the 23 Years 1793—1815; the Nett Money received on Account of the same; Amount of Interest and Annuities Created; and Rate at which Created in each Year; their equivalent in 3 $\frac{1}{2}$ per cent. Stock; and the proportion thereof to the Amount expended by the Commissioners of the *Sinking Fund*, in comparison with the Amount Redeemed by them in each Year. *£96,600, allowed on £230,000 for 25 Years.—*Vide Parliamentary Paper, No. 145, Session 1822.*

* * In addition to the bonus exhibited in the last Column of the Statement below of £14,468,294 of 3 $\frac{1}{2}$ per cent. Stock, which the Money Jobbers derived from the *Funding System* by the *Sinking Fund* operation, they derived a further bonus equal to about 3 $\frac{1}{2}$ per cent. on the Amount *Funded*, or £15,000,000 in the aggregate by the payment of the two first half-Yearly Dividends before the instalments on the Loans were all paid up,—subsequent pages will show other partialities bestowed on the Moneyed, at the expense of the Productive Classes.

Years.	Amount Funded in each Year.	Amount of Cash paid in.	Interest and Annuities created.	Equivalent in 3 $\frac{1}{2}$ per cent. Stock.	STOCK created for every £100 of Money.	Amount paid to the Commissioners of Sinking Fund.	Proportion of charge created.	Amount Redeemed.	STOCK Redeemed for every £100 of Money.	Money paid for every £100 of STOCK Redeemed.	Less or + (more) Redeemed than created.

No. IV.

The following STATEMENT shows the progress made in the diminution of the Capital of the NATIONAL ANNUITY ACCOUNT, in each Year since 1816. * * The 4 Amounts noted a, b, c, d, correspond with Nos. 57, and 60-62, on the preceding page; the Purchases of 1817-18, were effected by the proceeds of Exchequer Bills funded in the latter Year,—see No. 55 of the preceding Statement; the other Purchases have been effected by Loans, Surplus Revenue, and diminution of Balances in the Exchequer. Since 1822, £23,587,528 of surplus Revenue equal to 6,087,000 oz. of Gold has been paid for only £27,634,376 of 3 $\frac{1}{2}$ per cent. Stock, while the Loan, No. 52 in 1815, was raised at the Rate of only 2,733,520 oz. of Gold for £27,634,376 of 3 $\frac{1}{2}$ per cent. Stock; hence, while 80,000 holders of 5 $\frac{1}{2}$ per cent. Stock averaging less than £30 $\frac{1}{2}$ annum each, have been deprived of more than one-fourth of their Dividends, a bonus of £13,000,000 has been conferred on a few hundred large holders of 3 $\frac{1}{2}$ per cent. Stock, whose Dividends remain unabated in amount, although £7,000,000 of the Dividends on 3 $\frac{1}{2}$ per cent. Stock were created at an average of £5 13s. 6d. $\frac{1}{2}$ per cent., exceeding the average of the whole of the 4 and 5 $\frac{1}{2}$ cents.—see concluding paragraph of preceding page.

* * The only Loan raised in 1816 was £3,000,000 from the Bank of England, for particulars of which see Note at head of page 172; that with the Surplus of the Loans raised in 1815, supplied the means of applying £13,047,517 in 1816 to the purchase of Stock at an average rate of 62 for 3 $\frac{1}{2}$ per cent. Stock, while in the preceding Year £62,640,000 of 3 $\frac{1}{2}$ per cent. and £3,600,000 of 4 $\frac{1}{2}$ per cent. Stock was created for only £35,689,803, net money received being at the rate of little more than £50 of money received for every £100 of 3 $\frac{1}{2}$ per cent. Stock created.

State of the Public Debt on the 5th. of January in each Year, since the 5th. of January 1823

7	—	—	—	—	—	—	—	—	—	—	—	—	—	—	—	241

The most striking feature of the above Statement, No. VI., is the large number of Young Lives admitted in 1823, and the large number of advanced ages in each of the three last years; the former was doubtless occasioned by the 5 1/2 Cents, paid off in that year, while the latter will lead to an early considerable diminution of the amount in column 22 of the following page. Another Statement (see Index,) will show the annual progress of the Redemption of Land Tax from the passing of the Act in 1799. For the bulk of the amount of Annuitants expired previous to 1817, in column 7 of the Statement No. VII. above, see Nos. 2, 4, 7, and 10 of Loans in I., and No. 6 in II. of this class of Accounts, for £230,000 of the amount expired in 1819. For the amount of Unclaimed Dividends and amounts reclaimed passed to Account, see lines 14 and 38 of No. IV. of the Statements of Revenue and Expenditure, in addition to which, £303,844 was passed to Account of Income in 1816. The total diminution effected in the Perpetual Annuitants by reduction in the rate of Interest, or by conversion into a lower denomination of amount since 1821, as exhibited in column 9 of Statement VII. above, amounts to £2,553,172, in addition to which a further diminution of annual charge has taken place since 1815, by the reduction in the rate of Interest on Exchequer Bills from 3 1/4 to 1 1/4, £100 4/4, amounting in the aggregate to about £1,300,000 4/4 Annuit. Statement IV., of this class of Accounts shows the amount of Capitals extinguished in each year since 1816; and No. X. on the following page shows another Termination of Perpetual Annuity operation under the Act of 10 Geo. IV. c. 54. The diminution in Col. 9, in 1822 was effected by the conversion of £149,449,590 of 5 1/2 Cents, into £156,921,713 of 4 1/2 Cents. The amount in 1824 by the conversion of £76,206,882 of 4 1/2 Cents, into 3 1/2 Cents; and £16,018 of 5 1/2 Cents, of 1797, into £21,538 of 3 1/2 Cents. The amount in 1825, by the conversion of £932,867 of 5 1/2 Cents, of 1797, into £1,270,483 of 3 1/2 Cents. The amounts in 1826-7 result from the adjustment of some accounts in Ireland, and the amount in 1830 by the conversion of £180,329,395 of the amount reduced from 5 1/2 Cents, in 1822, to 3 1/2 Cents. The amount in Col. 8, up to 1817, is the Interest on 5 1/2 Cents, of 1797 and 1802, paid off at par,—see line 33 of the Statements of Revenue and Expenditure, No. II.; the amounts in the same Column in subsequent Years, are the Interest on the amounts dissented to, to be converted, and therefore paid off at par. The amount in 1824 should be £247,830, it being on £6,197,880 of 4 1/2 Cents, paid off at par.

The Total amount set apart for the payment of Life Annuities under the Acts of 48 and 57 of Geo. III, caps. 142 and 34 in the aggregate of the 24 Years 1809—1832, as exhibited in Col. 28 of the above Statement, has been £9,226,128, while the sum which would have been payable during the same period for perpetual and long Annuities cancelled, as exhibited in Col. 23 (for the Life Annuities so created) amounts to £5,033,664; shewing an excess paid for Life Annuities during the 24 Years of £4,192,464, against which there has been extinguished, Capitals as exhibited in Cols. 18—20 to the amount of £12,650,473, and £24,584 of Annuities terminable in 1860: the ultimate result of the operation, as one of profit and loss now depends on the amount to be in future paid to the 7,526 surviving annuitants during the remainder of their lives; the contingency of which, being such as to preclude the possibility of any positive conclusion being at present arrived at, in regard to the ultimate actual result; the probability however, is, that the £12,650,473 of Capital, and £24,584 of Annuities terminable in 1860, will prove to be cancelled for an equal, if not for a less sum, than they could now be purchased for; and therefore, so far as it may be considered desirable to extinguish or diminish the amount of the Capital Stock of the Public Annuities, the above operation may be deemed advantageous to the extent of the difference of time of Payment, and equal to £9,000,000 to £3,000,000 in amount; that is, had the operation been carried on by an individual or by a Company, it would promise in its ultimate result a profit to that extent; but for a Government to make a profit by its own community, is a proposition which in itself involves an absurdity,—if the result of any Government transaction shows a preponderance of advantage on one side, it must necessarily be at the expense of disadvantage on the other, as, in the above operation, which shows that the Life Annuitants receive a less equivalent for their capital, than the holders of Annuities in perpetuity; and so far as Life Annuities have been purchased with money, which in the last 3 Years [1830—2] has been the case to the amount of £670,749, a two-fold injustice has been done to the Life Annuitant,—too little stock has been cancelled for the money given on one side, and too small an amount of Annuity granted on the other. If the illusive distinction of various denominations of Stock exhibited in the Statement No. V. was abolished, and the aggregate amount of £754,100,859 of Capital resolved or consolidated under one general head, and measures adopted, as proposed in my History of the Rise, Progress, and Present State of Banking, for giving to this description of Property an invariable value; a scale, as simple as equitable, might then be resolved upon, for converting Perpetual into Life Annuities, and thereby greatly facilitate, and induce, the extension of one of the most delightfully interesting operations in social economy ever reduced to practice.

Year.	Capitals.	STATEMENT No. X., of Augmentation to the National Annuity Account by Retransfer, Conversion, and Reclaimed, in each of the 5 Years 1822—6. * According to the above Statement, there appears in the 6 Years, from the 5th. January 1823, to the 5th. January 1829, to have been a diminution of no less than 14,380 holders of the Stocks, in Col. No. 1, to 4, 6 and 7; a portion of which holders appear to have changed their Interest from the Perpetual, to the Long Annuitants, which shew an increase in the Six Years of 2,748. (*Vide* Col. No. 8.) It will be seen on closer inspection, that the holders of the Long Annuitants, above £200 $\frac{1}{2}$ Annuum, have also diminished from 438 to 434, the 54 decreased having *retained* out their Interest in small amounts; the bulk of the increase being in the Class below £10 $\frac{1}{2}$ Annuum. The 4 $\frac{1}{2}$ Cents. of 1826, (*see* Col. No. 5.) also shew a tendency to subdivide into small amounts, and the Total increase under that Head in 1829, being 3,513, makes the balance of decrease in the 6 Years, in the Number of holders, to be 8,119, as stated in Col. No. 9, 5,601, of which it will be seen are of the Class below £10 $\frac{1}{2}$ Annuum, a portion of whom have doubtless changed their Interest from Perpetual, to Life Annuitants, the increase of the Government Life Annuitants in the 6 Years having been about 3,000. The 3 $\frac{1}{2}$ Cents. in Col. No. 3, were reduced from 4 $\frac{1}{2}$ Cent. in 1824, when £6,197,013, of the Capital of that Stock was paid off, which will account for the disproportionate share of decrease of holders thereof, and increase of Long Annuitants. Interesting as both the details and results of the above accounts really are, they are still very imperfect, because many Persons hold of more than one denomination of Stock, and some probably hold of all of them, whilst on the other hand, some large amounts will doubtless stand in the Names of one, or a few individuals in trust for numerous bodies of Persons, such for instance as the Forty Millions Value in the Name of the Accountant General of the Court of Chancery, the Trustees of the Equitable and Royal Exchange Insurances, and other similar Establishments; sufficient however is exhibited to shew, *bugbear*, as the *National Debt* so called, always seems even to the intelligent, as well as the superficial, when viewed in the aggregate how very insignificant it seems when viewed in relation to its details, its 229,000 Annuitants, of pittance varying from 50/6, to less than £50 $\frac{1}{2}$ Annuum each, — what would become of many of them if the account was cancelled? The account presented to the Lords in 1828, will be seen to differ in its form from those presented to the Commons, the first exhibits the Number with *Yearly*, and the latter with *Half Yearly* Dividends, there is a discrepancy also in the Lords Paper, in regard to the amount of the Total Sum divided, which in the Return is stated as above, at £73,265,983, while the Dividends on the several Stocks enumerated, amount, as shewn in detail with their respective Capitals to £24,913,495, and further, neither of the Returns exhibit more than a part of the account, as will be seen by the annexed Statement which shews the whole of the Public Debt, Funded and Unfunded, as it stood on the 5th. of January 1829.

Colonies and Shipping.

The four following pages, 218—221, contain a complete view of the Geographical Position, Population, Revenues and Expenditures, Imports into and Exports from, Shipping cleared outwards and entered inwards, Education, Churches, Gaols, Superficies, Live Stock, and Annual Produce, at each of 33 Colonies or Dependencies of Great Britain in 1831.

Page 222 exhibits the Number and Tonnage of Shipping cleared outwards from all the Ports of Great Britain to each of the Countries with which the intercourse is maintained by Foreign as well as by British Shipping, distinguishing the Number and Tonnage of each, in each of the 26 years, 1787—1806, and in each of the 6 years, 1814—1819.

Page 223 exhibits the Number and Tonnage of Shipping entered inwards from each of the same Countries, in each of the same 26 years.

Page 224 shows the Number and Tonnage of Vessels cleared outwards to, and entered inwards from, each of those parts of the World with which the intercourse is maintained exclusively by British Shipping, in each of the before-mentioned 26 years.

Page 225 exhibits at one point of view the Number and Tonnage of Vessels cleared outwards from Great Britain to, and entered inwards from, all parts of the World, distinguishing British from Foreign, in each of the before-mentioned 26 years, 1787—1819.

Page 226 exhibits the Number and Tonnage of Vessels Built, and the Number and Tonnage Owned and Registered, in each part of the British Empire, in each year since 1802.

Page 227 exhibits the Total Number and Tonnage cleared outwards from, and entered inwards into, all the Ports of Great Britain, to and from all parts of the World, in each year since 1813, distinguishing British from Foreign in each year.

Page 228 exhibits the Number of Vessels of all Nations which passed the Sound, distinguishing the proportion of each Nation, in each year since 1813.

Pages 229—232 exhibit the Number and Tonnage of Vessels cleared outwards from all the Ports of Great Britain to each of 42 different parts of the World; and the Number and Tonnage entered inwards from each of the same Countries, distinguishing the proportion of British from Foreign, in each year since 1819; showing, 1st. the Countries with which the intercourse is maintained by Foreign as well as by British Shipping; and, 2nd, the Countries with which the intercourse is maintained exclusively by British Shipping.

Pages 233—235 show the Number and Tonnage of Vessels owned and registered at each Port of Entry, in the British Empire, at different periods, from 1787 to 1833, and the proportion in each of 20 classes of burthen, from not exceeding 20 to 480 tons and upwards.

STATEMENT showing the *Geographical Position* of each of the COLONIES belonging to the BRITISH EMPIRE in 1833, with the date of Settlement*, Capitulation†, or Cession‡ of each; the Population of each in 1829; the Tonnage of Shipping, cleared outwards to, and entered inwards from; and the value of the Exports to, and Imports from each, in the year 1830.

The diminution in the Slave Population of the British West Indies, when compared with the increase in the Slave States of North America is deserving of consideration; in addition to the number of Slaves in the West Indies; there are further 35,504 at the Cape of Good Hope; 20,464 at Ceylon; and 76,774 at the Mauritius, making a Total of 829,665; the Population of Van Diemens Land includes 3,424 Convicts; and that of New South Wales 15,668; both Totals are exclusive of Aborigines.—Vide Par. Pa., No. 260, Session 1831,—for the Imports and Exports, see No. 690, Session 1832: The excess of Export to Canada, Gibraltar, Malta, the Cape of Good Hope, Van Diemens Land, and New South Wales, is equalized in Mercantile account by the Bills drawn by the Agents of the Government at the respective places, and that to the Foreign West Indies becomes involved in the general account with Continental Europe.

* The Shipping entered inwards from New Brunswick appears greatly to have exceeded that cleared outwards, the difference probably arises from New Vessels built in that Province; to Newfoundland the Tonnage cleared outwards, greatly exceeds the Tonnage from; Gibraltar exhibits a still greater disproportion; several of the Vessels cleared for Newfoundland proceed direct from thence with Fish to Spain and Portugal, while several of those which clear outwards for Gibraltar, seek homeward Freights from those Countries, and the general Statement of Shipping cleared outwards and entered inwards to and from all Countries will show that the Tonnage entered inwards from Spain and Portugal exceeds the Tonnage cleared outwards thereto in a similar proportion to the excess outwards to Newfoundland and Gibraltar. In like manner the Tonnage cleared outwards to Van Diemens Land and New South Wales, and to the Foreign West Indies greatly exceeds the Tonnage from thence, most of the Vessels clearing out for the former with Convicts and Settlers proceed to the Mauritius and India for homeward Freight; the Tonnage inwards from which will be seen to exhibit a corresponding excess, many of those cleared outwards for the Foreign West Indies proceed direct to European Continental Ports with their return Cargoes.

Colonial Revenue and Expenditure: Imports into, and Exports from: Population, Marriages, Births, and Deaths, in 1831.

inwards; POPULATION; Marriages, Births, Deaths, Crime, Education, Live Stock, Productions, &c., at each of 33 Colonies or Dependencies of GREAT BRITAIN, and entered

This Statement has been arranged from a set of Papers compiled from Official Returns, and "Presented to both Houses of Parliament by Command of His Majesty" in the Session of 1833: In the Papers so presented the details of each Colony or Dependency form a separate Account on a separate folio, and consequently the details exhibited below are therein diffused in a very ill arranged form over 35 folios. By the perusal of said convenient form in which they are here exhibited, several egregious discrepancies are detected:—first, with regard to the Import into Lower Canada, which is palpably erroneous, and is probably a typographical blunder; by transposing the amounts Great Britain and Foreign States, the Account will not be unreasonable; but as a large quantity of Produce is probably Imported into Canada across the Lakes from the United States it is doubtful whether the amount purporting to have been Imported from Great Britain belongs to the Colonies or Foreign States; the Account of Shipping is equally, if not more discrepant than the Imports, the Ships inwards are entered in both Provinces, whilst those outwards exhibit a contrary; the Upper Province being an interior district, no Ships can either enter or clear except across the Lakes, and if any in that direction they must at present be inconsiderable; the Number of Ships from Foreign States into New Brunswick is at variance with the Number Outwards, a great Number of small Vessels from the United States enter the Bay of Fundy for Gypsum, (Plaster of Paris) so that the Number reported to have entered inwards, is as likely to be correct as the Number outwards. The Female Population of Lower Canada is at variance with the Male, it is probably another typographical blunder, by making it 217,550 the total Number will approximate to that exhibited on the preceding page, which was compiled from other Returns, and will accord with the accredited supposed Number of the Population,—there was no Return from the Upper Province. The Deaths noted with a † are not only at variance with the Births, but with all reasonable probability; such discrepancies are a serious disavowment to Official Character, and are at all times discreditable, while the circumstances under which the Papers from which this Statement has been arranged, have been

produced renders them in a high degree reprehensible and unpardonable; a preponderance of Female Population in several of the Dependencies is noted with an *. Transportation to Van Diemens Land and New South Wales, and Emigration to the North American Provinces will sufficiently account for the excess of Male Population in those Countries, while in the Ionian Isles, and the Cape of Good Hope, the preponderance is not easily reconcilable; assuming the Numbers to be accurate, the disproportions in the different places deserve equally the attention of the Physiologist and Statesman. The excess of Deaths † in Grenada, Tobago, Trinidad, and the Mauritius tend to depopulation. The two following pages show the proportion of White Population, and Free People of Colour, in each Colony or Dependency distinct from the Slaves; the whole Account, however, is at variance with the return made in 1829, as exhibited at page 218; in that Return the White Population of Barbadoes is stated at 14,959; the Free People of Colour at 5,440; and the Slaves at 81,902; together 102,007; while the return of 1831 makes the Total as exhibited below, only 91,887; in the Barbados in 1829, the Whites and Free People of Colour are stated at 4,433, and below at 6,227, being a further indication that the excess of Females in those Islands in 1831 is another typographical blunder. In 1829 the Total Number of Whites in all the West India Islands and Colonies (except Jamaica) was stated at 40,813, the Free People of Colour at 61,038, and the Slaves including Jamaica at 696,918. At the Bahamas, and Bermuda, as well as at Barbadoes, the Whites exceed the Free People of Colour; the Numbers being respectively 4,210 and 3,303 against 2,991 and 738; in Trinidad in 1829, the Free People of Colour were stated at 15,946, and the Whites at only 4,201; in 1829 the Total Population of Sierra Leone was stated at 15,210, of which only 87 were Whites, while the Return of 1831 gives the Total 31,627. The Free People of Colour at the Cape of Good Hope, Ceylon, and the Mauritius in 1829, were stated respectively at 37,852; 906,389; and 15,851.

Cleared OUTWARDS.

Entered INWARDS.

LARY of the three preceding Pages, showing at one point of view the Total No. and Tonnage of Shipping cleared Outwards from, and inwards into, all the Ports of GREAT BRITAIN, to and from all Parts of the World, in each of 26 Years 1787—1819, distinguishing according to those Countries with which the intercourse is maintained exclusively by BRITISH SHIPPING, from those with which it is maintained by other Ships as well as by British.

Official Accounts, relating to Shipping appear to have been very imperfectly kept up to 1825; this and the three preceding pages exhibit the best view that can be given of the shipping of Great Britain and all parts of the World, from 1786 to 1820, but the Vessels both departing and arriving in Ballast appear not to have been included; and the destruction of the Custom House in London, in February 1814, causes a blank for the 7 Years 1807—13; a loss greatly to be regretted, inasmuch as it is remembered, that during that Period, the Port of Portugal, Gibraltar, and a few Ports in the Mediterranean, British Ships were excluded from all the Ports of Europe; the absence of employment however in that difficultly compensated for, by the carrying of Troops, Provisions and Stores for the supply of the Fleets and Armies then distributed over all parts of the World; the then, the present effects produced on the Shipping interest of Great Britain, by the excitement to Ship Building in different parts of Europe and America, which the War of 1793 gave rise to, are more fully shown in succeeding pages.

BRITISH, as \S pages 222-4.FOREIGN, as \S pages 222-3.

TOTAL all parts of the WORLD, (except Ireland.)		All those parts (except Ireland,) with which the intercourse is maintain- ed exclusively by BRITISH SHIPS, as \S preceding page.		All those Parts with which the intercourse is maintained by FOREIGN as well as by BRITISH Shipping.		North of EUROPE from Russia to the Ne- therlands, both inclu- sive.		France, Portugal, Spain, and Italy.		United States of North America.		North of EUROPE from Russia to the Ne- therlands, both inclu- sive.		France Portugal, Spain, and all other Ports except the United States.		United States of North America.

AN ACCOUNT of the Number of SHIPS which passed the *SOUND* and paid dues at *ELSLINORE*, in each Year since 1813, distinguishing the Countries to which they belonged. * It appears on comparison of this with the above Statement, that the Number of Ships passing the Sound are reckoned both on entering into, and passing from the Baltic; inasmuch as the British Ships are nearly double the Number of those which enter inwards into the United Kingdom from all the Ports of the five Northern States of Europe.

The relation of the Transport of Sea-borne Coal to the Shipping Interest of the Kingdom is such, as to render a display of the annual production and consumption of COAL an interesting, if not an indispensable accompaniment to a display of the annual movement of SHIPPING. The annexed Accounts, therefore, deduced from the Report of a Committee of the House of Lords on the Coal Trade in the Session of 1829, exhibit at one point of view the Total movement of Coal and Culm by Sea, in each Year since 1818, and show the proportion into the Port of London distinct from the proportion to all the other Ports of England and Wales, and the Quantity Exported to Ireland as well as to the Colonies and all Foreign parts in each of the same Years, and show the total quantity Shipped from the Rivers TYNE and WEAR, and the supply into the Port of London in each Year since 1799, and the amount of Duties paid on Coals carried Coastways, and Exported, and also on Slates and Stone, and on the Tonnage of Shipping both Inwards, and Outwards, from 1804 to 1831, when the whole, except on Coals Exported, were repealed.

Page 236 will show the proportion Shipped from each Port of Shipment, in each Year since 1818. The Vessels employed in carrying of Coal will repeat their Voyages on an average, eight times within the Year; the Number of Ships entered at the Coal Market in London in 1832 was 7528; this Number divided by eight for repeated Voyages, gives 941 Ships, estimated at an average of 200 Tons each, gives 188,200 Tons of Shipping employed in supplying the Metropolis with Coal, which being equal to about half the Quantity Shipped Coastways, it makes about 375,000 Tons of Shipping requisite for the Conveyance of Seaborne Coal from one Port to another of England and Wales alone,—see page 233 for a further elucidation of the various employment of Shipping.

CONTINENTAL EUROPE.

United States of North AMERICA.

The rate of Duty on Coal imported into the Port of London previous to the 5th of April 1824 was 7/ 4¹/₂ Ton when charged by Weight, and 9/ 4¹/₂ Chaldron when charged by Measure; 6/ 4¹/₂ Chaldron on Cinders, and 5/ 4¹/₂ do. on Culm; into all the other Ports of England, the rate of Duty was 4/ 4¹/₂ Ton, 6/ 4¹/₂ Chaldron on Coals and Cinders, and 15s. 4¹/₂ Chaldron on Culm. On the 5th April 1824, the Duty at the Port of London was reduced to the same rate as into the other Ports of England, and on the 5th. of January 1826, the rate of Duty on Culm was reduced to 6s. 4¹/₂ Chaldron. Into Ports of Wales the Duty was only 9d. 4¹/₂ Ton, or 1/ 4¹/₂ Chaldron; into Scotland,—free; Ireland 1/ 7¹/₂ 4¹/₂ Ton. In January, 1831, the Duties (except for Exportation) were wholly repealed.

The annexed SUMMARY exhibits at one point of view the total movement of Shipping between the UNITED KINGDOM and all parts of the WORLD, distinguishing the proportion of Foreign in each Year since 1819; page 227 will show the proportionate aggregate extent of intercourse between IRELAND and Foreign parts, as well as between Great Britain and Ireland; while the following page shows those Countries, with which the Foreign intercourse is maintained by Ireland, and the proportion of Tonnage to each respective Country, distinguishing British from Foreign. The Wages, Provision, and Wear and Tear of Shipping in employ may be estimated at £5 4/4 Ton 4/4 Annum; but as the Foreign Shipping here exhibited, as having entered inwards, includes many repeated Voyages, the charge for freight probably will not exceed 50s. 4/4 Ton, giving about £1,000,000 4/4 Annum in the aggregate as the amount of Foreign Freights. The vast depreciation in the Value of Shipping consequent on the inadequate remuneration, which since the termination of the War it has been deriving, has given rise to many well-grounded complaints of distress on the part of the Owners and Seamen, and applications to Parliament and the Government for restriction on the introduction of Foreign Ships into the Ports of the United Kingdom, and its dependencies; well founded as the complaints of distress are admitted to be, it does not follow as an indubitable consequence, that any fiscal restraint, or even total exclusion of Foreign Shipping, would operate to the permanent advantage either of the British Shipping interest in particular, or to the interest of the Nation at large.

STATEMENT showing the Number and Tonnage of VESSELS Owned and Registered, at each Port of the British Dominions at each of Seven different periods since 1790; showing the Population of each Port in 1831, with Number of reference to its place in the District arrangement of the 6,000 principal Towns and Parishes of GREAT BRITAIN;—see page 68 for Steam Vessels belonging to each Port in 1827.

* The Account in 1832 (Par. Paper, No. 207,) includes those Ports only which return Members to Parliament; those noted with a †, are newly enfranchised Boroughs under the Act of 3 Will. IV. (1832.) Those with ‡ were totally, and those with § were partially disfranchised under the same Act; the Places not returning Members are printed in *Italics*, all the other each return 2 Members; the Cities, Ecclesiastical Sees, being printed in *Old Roman*.

The above and 15 preceding pages contain the most complete view which the vague nature, and imperfect state of the Official Accounts relating to the Registry and entry of Shipping, admit of being given, of the progress of Shipping, Built, and Registered, in the British Dominions since 1787; and the movement to and from each different part of the World in each Year since that date. In 1788, subsequent to the separation of the Central, now the United States of North America from Great Britain, the Total of Shipping, Owned, and Registered, in the British Dominions as exhibited at page 232, was 1,362,590 Tons, and in the United States of North America, as exhibited at page 201,562 Tons. In 1827, the Tonnage of the United States had increased to 1,620,507; and in the British Dominions to 2,460,500; showing an augmentation in the United States of 1,419,045 against 1,097,910 only during the same period in the British Dominions. It will be seen, however, on reference to the Statement of United States Shipping, that in 1829 the Tonnage is reduced to 1,360,798, which is stated in the American Accounts to have been corrected to that time; it is probable, therefore, that in 1829 a general revision took place, when the Registers of all Ships, lost, broke, or otherwise unaccounted for, were cancelled, as was the case in the United Kingdom in 1827. A great defect in the Accounts of Shipping cleared Outwards, and entered Inwards, consists in the greater amount of Tonnage entered Inwards, than cleared Outwards; this probably arises from Ships departing in Ballast not clearing Outwards, but no such omission ought to be suffered; in some cases the clearances Outwards exceed the entries Inwards,—see Gibraltar and Malta; but this disparity is easily reconciled. To New South Wales and the Foreign West Indies, the same disparity prevails; from the former, the Ships arriving from the United Kingdom with Convicts and Emigrants, proceed to the Mauritius or India to seek homeward freight or Coasting employment, and from the latter, many of the Ships arriving from the United Kingdom proceed direct to Continental Ports with Return Cargoes; but the greatest defect of the Official Accounts consists in the multiplication of Tonnage by the repeated Voyages, this is the more preposterous with the contiguous Countries of the Continent and with Ireland, and in the Coasting, as exhibited at page 229*.

The annexed Statement shows approximatively the proportion of Tonnage annually appropriated to each great branch, or course of employment in 4 Divisions, Viz. 1st., to those Countries with which the intercourse is maintained by Foreign, as well as by British Shipping,—see pages 228-9*; 2nd., to those Countries with which the intercourse is maintained exclusively by British Shipping; see pages 230-2; 3rd., the proportion employed in Colonial Fishery, Coasting, and Foreign Carrying; and 4th., the proportion employed between Great Britain and Ireland, and in the Coal and other Coasting Service. See Note page 226, relating to the decrease of Shipping in England, particularly in the Port of London, and increase in the Colonies.

COPPER Smelted from Foreign Ore.

* The annexed STATEMENT shows, in Tons Weight, the Quantity of Coal, and Salt, annually Exported from Great Britain to each different part of the World, in each Year since 1826. Page 228* will show the proportion of Coal Exported from the Rivers Tyne and Wear; the Ports of Liverpool and Whitehaven, and the Clyde Export the remainder, except about 10,000 Tons annually from London; the Salt is Exported chiefly from the Port of Liverpool. For a general View of the Annual Produce, and Quantity and Value of Iron, Exported to each different part of the World, see Pages 53-57; Pages 81 and 83 show the annual Exportation of Brass and Copper Wares, and of Coals, Salt, and Lead, in each Year since 1804; and Pages 64-5, and 122-3, give a still more general View of the annual Exportation of all Mineral Productions, in each Year since 1815.

The total annual production of Coal in all Great Britain is estimated at about 17,000,000 Tons, including about 3,000,000 Tons consumed in the Smelting of Iron, and other Mineral processes.

The annexed STATEMENT shows the proportion produced in each of the Coal Districts of the Kingdom; of this Quantity about 6,000,000 Tons are Shipped Seawards, including 550,000 Tons to Foreign Countries, and 800,000 to Ireland, in about equal proportions to the latter from Whitehaven, Scotland, and Wales; about 5,000,000 Tons are conveyed by Inland Canals, and Rail-Roads, and the remainder consumed in the Districts of Production, particularly in South Wales, and in Staffordshire, and Salop, in Mining processes. Last this large Consumption of Coal should excite apprehension of an inadequate Supply, it was given in Evidence before the Committee of the House of Lords in the Session of 1829, that the Durham & Northumberland Coal Field, alone, extends under 132 Square miles of unexhausted Strata, of an average thickness of 12 feet; and contains after allowing one-third for loss by Small Coal, interceptions by Dykes, and other interruptions, upwards of 6,000 millions of Tons of Merchantable Coal; the South Wales and Lancashire Basins each probably contain a greater Quantity; so that the Country contains an adequate Supply for at least 1,000 Years.

The present annual Value of the Mineral Productions of the Kingdom, may be estimated at about £11,000,000; in the proportion of £6,000,000 for Coal; £4,000,000 for Iron; £1,500,000 for Copper; and £500,000 for Tin, Lead, &c.

Tons of SALT.

AN ACCOUNT of the Quantity in Weight, and Tale, of HIDES, SKINS, and FURS, annually Imported into the UNITED KINGDOM from each part of the World, in each Year since 1826; the Official Value thereof Imported and Re-exported; and the Amount of Duty paid thereon, in each Year. * * The rate of Duty paid on Hides not exceeding 14 lbs. weight, Imported from the West Coast of Africa since 1825, has been 2/4 $\frac{1}{2}$ Cwt., and on all Hides and Calf & Kip Skins Imported from British Possessions 2/4 $\frac{1}{2}$ Cwt. if Dry, and 1/2 if Salted or Wet; and double those Rates from all Foreign Parts. The Rates of Duty on the other Skins and Furs are affixed to each respectively: the Kid and Lamb Skins are Imported chiefly from France, and Italy; the Fitch chiefly from Germany, and some of both Fitch and Martin from France; the Seal chiefly from Newfoundland; the Nutria from the Rio-de-la-Plata; the remainder of the Furs are Imported wholly from North America; the Statement of Imports from the United States will show the proportion from thence; page 153 will show the proportion Re-exported, and pages 154-5, the proportion annually retained for Home Consumption. A large portion of the Quantity from the Rio-de-la-Plata, line 15, consists of Horse Hides; in 1824 the No. of Horse Hides from thence amounted to 516,000, the whole as well as the Ox and Cow from thence, being exclusively Dry, the Ox and Cow weighing from 25 to 32 lbs. $\frac{1}{2}$ Hide; from all other parts they come chiefly salted. It would be well if in the Total, the proportion of Dry were stated, and the Horse distinct from the Ox and Cow. The General Statement of Leather, and Dressed Skins and Hides, will however furnish additional data in regard to the nature and extent of this important branch of Commerce, which is interesting for the extent of destruction of animal life which it develops, as well as in a Commercial point of view. Fox Skins have occasionally sold as high as £30 $\frac{1}{2}$ Skin, and both Fox and Otter in considerable Numbers at £10 to £15 $\frac{1}{2}$ Skin; the Beavers run from 30/ to 36/ $\frac{1}{2}$ Skin; Great Britain supplies some Fitch and Martin, and Hare and Rabbit in great Numbers, and in the Metropolis alone 120,000 Cats are annually killed for their Skins.

ALPHABETICAL INDEX

To the Digest of 600 Volumes of Journals, Reports, and Papers, Presented to Parliament since 1799.

	Page		Page
Accounts, Public, and of France and the Netherlands, Notes upon.	185	Antuitants, number of, in ten classes, who received dividends at the Bank of England at different periods	216
Do. and Papers, Parliamentary, number of Volumes of, printed in each session since 1800	175	Do. Life, number of, in 12 gradations of ages, admitted under Act of 48 Geo. III. cap. 142, in each year since 1808	214
Acts of Parliament, number passed in each Session since 1800, and particulars of in each	175	Total number of, demised in do. do.	do.
Additional Churches, Expence of Commissioners for building of, ditto col. 61	195	Annuities, amount of, at different periods	210—15
Amount of Exchequer Bills issued on account of, and building of do., col. 62	"	Life, amount of, created and expired	215
Administration, detailed expence of each department of, in England	"	Perpetual, cancelled for life	do.
Do. do. in the Netherlands	189	Ditto, cancelled to redeem land tax, col. 8	24
Advertisements, Duties on, in each year since 1809, see Stamps, line 12	16	Ditto, created for Loans raised	210—11
African Ports, expence of, on the Gold Coast, col. 15	194	See national Debt, or Debt National.	
Africa, Exports to, and Imports from, in each of 118 years, 1698—1815	75	Antigua,—See West Indies	78—80
West Coast of, and Barbary States, 1816—1831	do.	Antimony, crude, cwts., imported in each of 45 years, 1788—1832	33
Imports from, marked †	140	Ditto in each year since 1819	237
Exports to, in each year since 1826	150	Antwerp, prices of grain at	97, 98, and 103
No. and Tonnage of Shipping to, and from, in each of 25 years, 1787—1819	224	Arms and Ammunition, value of, exported	33
Ditto in each year since 1819, No. 27	230	See also line 49	63
For explanation of excess outward, 1787—1800, see note	75	Arrests, on bailable process	
Gallons of Rum, and lbs. of Tobacco, exported to, in each year since 1826	156—7	Arrow Root, lbs. weight imported	
Geographical display of, &c.	218—221	Do. See line 48 of 142, and for amount of duty paid on,	162 of 10
Africans liberated.—See Captured Negroes and Slaves.		Ashes, Pot and Pearl, cwts. imported in each year since 1813	
Ale,—See Beer.		Do. do. cwts. imported in each year since 1826	137 and 140
Alderney,—See British Isles	130	For amount of duty, paid on, in each of the 9 years, 1804—12, line 29	2
Alien Office, Expence of, in each year since 1799	194	Do. do. in each year, since 1813, line 32	4—5
Almanacks, amount of duty on, in each year, since 1816, line 17	16—17	Assessed Taxes, specification of the items of, amount assessed on each, in 1821, and Gross receipt of, in each year, since 1821	20
Almonds, amount of duty paid on, in each year since 1803, lines 27 of 2, and 30 of 4—5		Total of ditto in each year since 1793. See folding sheet No. III.	
Quantities Imported, line 45 of 164, and 21—3 of	165	Asylums, Military and Naval, expence of, col. 19 and 44	194
Retained for Home Consumption, 148 of	155	Ditto in Ireland, col. 75—77	197
America, British, Geographical display of	218—21	Auctions, amount of Property sold by, distinguishing lands, furniture, and merchandize, and amount of duty paid on same, in each year since 1813.	
Exports to and imports from, in each of 132 years	74	For proceeds of duty, on, in each year since 1811, line 16 of 14—15 and 11 of 27*	
Imports from, in each year since 1826	140	Auctioneers, number of, licensed	
Exports to, in ditto ditto	146	Audit Office, annual expence of, col. 42	199
See also line 20 Colonial Produce	124	Auditors of Accounts, col. 121—2	199
And folding sheets (line 21) following	120d	Austria, Loans raised for, &c. Nos. 6 and 14	201
Loads of Timber imported from, in each year since 1785	203	See Note to Stat. IV. of Income and Expenditure.	
No. and Tonnage of shipping to and from, 1789—1819	224	Averages of Wheat, Oats, Barley, Beans, Peas, and Rye	104 and 105
Do. do. in each year since 1819, No. 43	232	of Wheat and Malt in each year since 1649	96
