# MEDICAL LITERARY HISTORY.

(Reprinted from the British and Foreign Medico-Chirurgical Review for October, 1864.)

# ADVERSARIA MEDICO-PHILOLOGICA.

By W. A. GREENHILL, M.D.

WHEN the Writer first began to look at the old medical authors (now many years ago), he at once felt the want of some work to explain the technical terms employed by them. It is unnecessary to criticise particularly each of the existing lexicons, as nothing is easier than to pick out faults in works of this kind, however excellent they may in reality be;1 and therefore he will merely say that he began to make a collection of medical technical terms for himself, with a reference to at least one passage where each was to be found. A vague intention was at one time entertained of rendering this collection of words complete, and then publishing it in the form of a lexicon. This idea has long been abandoned; but as the collection of words is extensive, and the references (for the most part) belong to works or editions that did not exist when the old lexicons were compiled, it has been thought that a selection of some of the words may possibly be worthy of being put on record for the use of future lexicographers. Only let them bear in mind that the following collection of words does not pretend to completeness in any way. It is very far from being a complete collection of Greek medical terms, for all botanical and chemical words have been designedly omitted; neither is the treatment of each word to be considered complete, for no doubt various meanings are passed over, and probably better passages might frequently be quoted. It is simply

H. Stephani 'Dictionarium Medicum.' Paris, 1564. 8vo.

J. Gorræi 'Definitiones Medicæ.' Paris, 1564. Fol. A. Foësii 'Œconomia Hippocratis.' Genev., 1662. Fol.

B. Castelli 'Lexicon Medicum Græco-Latinum.' Genev., 1746. 4to.

J. Hebenstreit, 'Exegesis Nominum Græcorum quæ Morbos definiunt.' Lips., 1751. 4to.

L. A. Kraus, 'Kritisch-etymologisches medicinisches Lexicon.' Götting., 1844. S. Blancardi 'Lexicon Medicum,' edited by C. G. Kühn. Lips., 1832. 8vo, 2 vols.

<sup>1</sup> The following are the works alluded to :-

a contribution (and that a very imperfect one) to Greek medical technology; but even in its present form it will probably not be found entirely useless.

There will be found but few references to Hippocrates, as these are for the most part rendered superfluous by the excellent 'Economia Hippocratica' of Foes. It is not often that former writers have been referred to, both in order to avoid the appearance of captious and unnecessary controversy, and also in order to save space; but it is believed that no important assistance has in any case been received from other writers without due acknowledgment.

άβάπτιστον, or άβάπτιστον τρύπανον, a sort of trepan, with a ring or knob a little above the extremity, in order to prevent its penetrating the cranium too suddenly, and so injuring the brain. Hence the name, διὰ τὸ μὴ βαπτίζεσθαι, says Galen, because it could not be suddenly plunged or immersed into the brain. The same explanation is given by Paulus Ægineta, and also by Albucasis,3 who translates this and numerous other passages from Paulus Ægineta

almost literally.4

αγγειολογία does not signify angiology in the modern sense of the term, but the section of the temporal vessels. There is a chapter on the subject in Aëtius,5 and also in Paulus Ægineta,6 which latter is almost translated by Albucasis.7 The operation is described by Celsus,8 who uses the phrase "venas legere," to select the veins (for section), but not the word ayyeu λογία. Oribasius uses the word,9 and refers to a chapter on the subject, which is no longer extant. It is found also in Leo, 10 where it is joined with ἀρτηριοτομία, and apparently distinguished from it; and in the treatise called 'Introductio,' among Galen's works.11

άγγεῖον, a vessel in the human body, a receptacle, applied to organs of different shapes, as  $\mathring{a}\gamma\gamma\epsilon\hat{\imath}o\nu$   $\phi\lambda\epsilon\beta\hat{\omega}\delta\epsilon$ s, to a renal vein, 12 to a splenic vein;  $\mathring{a}\gamma\gamma\epsilon\hat{\imath}o\nu$   $\chi o\lambda\hat{\eta}s$ , to the gall-bladder;  $\mathring{a}\gamma\gamma\epsilon\hat{\imath}o\nu$   $\kappa \nu\eta\tau\hat{\eta}\rho\iota o\nu$ , to the uterus. 15

άγγεια, in the plural, is probably only applied to vessels of a tubular form, principally to the veins and arteries.

> 1 'De Meth. Med.,' vi. 6, tom. x. p. 447, l. 11. <sup>2</sup> Lib. vi. cap. 90, p. 376, l. 5, ed. Briau.

<sup>3</sup> Lib. iii. cap. ii. p. 534, ed. Channing (p. 283, ed. Leclerc). 4 An amusing story connected with this word is told by Jo. Langius ('Epist. Medic.,' lib. i. p. 29, quoted by C. G. Kühn, 'Opusc. Acad. Med. et Philol.,' vol. ii. p. 262): "Cum plures medicos, quibuscum in convivio convenerat, quæreret, num τρέπανον άβάπτιστον vidissent, hi, ultimæ vocis Græcæ sensum ignorantes, confessi sunt frustra quæri in Germania τρέπανα άβάπτιστα, in qua tantum pueri et campanæ baptizentur. Quibus cum Langius regereret, se Romæ tale instrumentum apud Vigonem, Pontificis Julii chirurgum, vidisse, celeriter respondebat, qui ex illis plurimum sapere sibi videbatur, Romæ ob præsentiam Summi Pontificis omnino facile illa instrumenta baptizari posse."

<sup>5</sup> Tetr. ii., Serm. 3, cap. 93, p. 338, ed. H. Steph. 6 Lib. vi. cap. 5, p. 92, ed. Briau. <sup>7</sup> Lib. ii. cap. 3, p. 62, ed. Leclerc. <sup>8</sup> Lib. vii. cap. 7, § 15.

<sup>12</sup> Galen, 'De Usu Part.,' lib. xiv. cap. 7, tom. iv. p. 169, 1. 14. 13 Id. ibid. iv. 15, tom. iii. p. 317, l. i.

14 Rufus Ephes., p. 39, 1. 9.

15 Galen, 'Defin. Med.' tom. xix. p. 362, l. 12.

άγγεῖα μεσαραϊκά, the mesenteric vessels, in general.

αγγεία σιαλόχοα, the salivary ducts.2

αγγεία σπερματικά, the spermatic vessels, used somewhat indefinitely, and not always in the same sense, to signify all or part of the vessels connected with the secretion of the seminal fluid in the male; applied also sometimes to the female.<sup>3</sup> Sometimes the words are used in the singular number.<sup>4</sup>

αγκιστροειδής, anchor-shaped, is used by Rufus Ephesius as synonymous with αγκυροειδής, and is applied to one of the processes of the scapula, probably

that which is now called the coracoid process.

ἀγκύλη generally means the bent arm, but sometimes the ham.<sup>6</sup> It is also used as synonymous with ἀγκύλωσις,<sup>7</sup> and is explained by Celsus<sup>8</sup> to mean "recenti cicatrice contractus articulus." The word is used by Dioscorides,

Lucius,9 and Galen.10

ἀγκυλοβλέφαρος means a person affected with ankyloblepharon, that is, an adhesion of the eyelids, either to each other or to the eyeball itself. The affection is mentioned by Aëtius, Paulus Ægineta, and the author of the Introductio seu Medicus, attributed to Galen; but neither of these writers calls it by the name ankyloblepharon. Aëtius and Pseudo-Galen call it ankylosis, and it seems doubtful whether the word ἀγκυλοβλέφαρον occurs as a substantive in any ancient author, now that it has been expunged from Celsus, where the best modern editors read ἀγκυλοβλέφαρους. 15

ἀγκυλόγλωσσος is an adjective, and means a person affected with ankyloglosson. τὸ ἀγκυλόγλωσσον πάθος means the affection called ankyloglosson, that is, an adhesion of the tongue to the adjacent parts—tongue-tie. Τhe

affection is mentioned by Celsus, 18 but without any distinct name.

ἀγκύλωσις is used by the author of the 'Introductio seu Medicus' attributed to Galen, 19 to signify what is now called ankyloblepharon. Paulus Ægineta<sup>20</sup> uses the word as synonymous with ἀγκύλη, and nearly in the modern sense of ankylosis, or stiff joint.<sup>21</sup>

 18 Lib. vii. cap. 12, § 4.
 19 Cap. 16, tom. xiv. p. 772, l. 16.
 20 Lib. iv. cap. 55.

These last words are frequently (perhaps generally) written in English, Anchylosis, &c. (with ch), which is manifestly wrong, as the Greek letter is  $\kappa$ , not  $\chi$ . The form Ancylosis, &c., is in strict accordance with the usual English mode of spelling Greek words containing a  $\kappa$ , but is inconvenient on account of pronunciation, the

άγκυροειδήs, anchor-shaped, applied by Dioscorides to the boughs of one of the species of the chamæpitys. ἀγκυροειδής ἀπόφυσις in Galen<sup>2</sup> is synonymous with ἀπόφυσις κορακοειδής, and signifies one of the processes of the scapula, probably that which is still called the coracoid process. Ephesius uses the word in the same sense, as synonymous with ἀγκιστροειδής; and Oribasius transcribes one of the passages of Galen referred to. In another passage Galen seems to make a distinction between the ἀπόφυσις άγκυροειδής and the ἀπόφυσι κορακοειδής.

άγκών, a Hippocratic word6 synonymous with the Attic ωλέκρανον and the Sicilian-Doric κύβιτον.7 It properly signifies the process of the ulna, called the olecranon, but is often used for the whole elbow generally. The word is found in Aretæus,8 Rufus Ephesius,9 Galen,10 Oribasius,11 Apollonius

Citiensis, 12 and Theophilus Protospatharius. 13

 $\dot{a}\theta\dot{\eta}\rho\omega\mu a$  is used in the modern sense of the word—viz., a tumour containing a soft substance like αθήρη, pap or gruel, by Celsus, 4 Galen, 5 and other ancient writers. The word is sometimes written  $\dot{a}\theta\dot{\eta}\rho\omega\mu a$  (which is the only form recognised by Liddell and Scott in their lexicon), but more frequently ἀθέρωμα, at least in the present copies of the Greek medical writers. The spelling of  $\vec{a}\theta \hat{a}\rho\eta$ ,  $\vec{a}\theta \hat{\epsilon}\rho\eta$ ,  $\vec{a}\theta \hat{\eta}\rho\eta$ , seems also doubtful.

aiμοπτυϊκος, a person affected with hæmoptysis, 17 or spitting of blood. The word hamoptysis is probably of modern invention, though the expressions αίματος πτύσις and ή τοῦ αίματος πτύσις are used by Hippocrates and Galen, 19 but not always in the strict modern sense of hæmorrhage from the lungs. In

c before y having generally the soft sound of s. The best mode of escaping the difficulty is by following the example of the French and German writers, and spelling the words with a k (ankylosis, &c.), and this is the mode now adopted by some of the most correct English writers also.

19 'De Locis Affect.' iv. 11, tom. viii. p. 287, l. 7; 'Comment. in Hippocr., 'Epid. I." ' i. 18, tom. xvii. A. p. 61, 1. 5.

one passage! Galen applies the words to hæmorrhage from the mouth, &c., from the stomach, &c., and from the lungs, &c. Kühn refers to Galen<sup>2</sup> as an authority for the word αἰμόπτυσις; but he probably means αἰμοπτυϊκός, which

suits his purpose quite as well as αἰμόπτυσις.3

αίμορραγία, rendered "sanguinis fluor" by Cælius Aurelianus, means hæmorrhage in general from any part of the body.5 When, however, in Hippocrates no organ is specified, and the word is used alone, Galen<sup>6</sup> says that epistaxis is meant. Accordingly, in the passage of Hippocrates referred to by Galen, the word is thus translated by Littré, Daremberg, and Ermerins, but by Adams it is rendered simply hamorrhage.

αίμορροίs is used to signify not only piles, or a flow of blood from the veins of the rectum, but also from those of other parts of the body. 11 According to Galen, 12 it differs from almoppayla in being a less violent and copious flow of blood, and sometimes it is applied to tumours without any bleeding at all.13 When applied to the female organs of generation, 14 Adams thinks that it

comprehends polypus and all other tumours about the uterus. 15

äκανθα is applied sometimes, and perhaps originally and more properly, to the spinous process of a vertebra;16 sometimes to the series of spinous processes, 17 when it is sometimes joined to paxes; 18 sometimes to the whole collection of vertebræ, 19 when it is apparently synonymous with ράχις. 20 The last two senses of the word it is not always easy to distinguish. It is sometimes also applied to the spine of the scapula.21

ακατονόμαστος χόνδρος is the name given by Theophilus<sup>22</sup> to the cricoïd cartilage of the larynx. The name is probably derived from Galen,<sup>23</sup> who sometimes calls the cricoid cartilage simply ὁ δεύτερος.24 Suidas also

calls it aνώνυμος.25

άκμαστικός σύνοχος signifies a species of continued fever, in which the same amount of heat continues throughout the attack.26 It is synonymous with ομότονος, and is distinguished from ἐπακμαστικός and παρακμαστικός.

ἀκμή, when applied to a disease, means the third stage, when it is at its height.1 When applied to the life of man, it means the flower of his age. Hence the pimples that appear in the face about that time were called akuai in popular language.2 The modern scientific name, acne, is generally stated to be a Greek word, ἄκνη, but the only passage where it occurs is (it is believed) in Aëtius, where it is manifestly a mere error of the press for  $d\kappa\mu\dot{\eta}$ : so that it seems probable that this typographical error is the sole origin of the term, which is now too commonly used to be ever altered.3

 $\tilde{a}\kappa\rho\delta\chi\epsilon\iota\rho\sigma\nu$ , or  $\tilde{a}\kappa\rho\alpha$   $\chi\epsilon\iota\rho$ , generally means the hand properly so called, forming part of the whole upper extremity, to which the word  $\chi\epsilon\iota\rho$  is sometimes applied.<sup>6</sup> Sometimes it may especially signify the fingers, and some persons so translate it in the account of the Plague of Athens by Thucydides;7 but in this passage also the sense given above is quite as likely to be the true one, and manus, not digitus, is the word used by Lucretius in his poetical description of the Plague, which is in some places almost translated from

Thucydides.

άκρόπους,9 or ἄκρος πούς,10 after the analogy of the preceding word, mean generally the foot, rather than the toes. In many passages one of these senses may possibly be as good as the other, but there are probably not many in which the context absolutely requires the meaning of toes to be applied to the words, excluding the other signification.

τὰ ἀκροσφαίρια τῶν δακτύλων, the tips of the fingers. 11 The word is not to be found in Liddell and Scott's Greek Lexicon, nor in any of the medical

dictionaries that I have seen.

άκροχορδών, a Hippocratic word, 12 signifying a pediculated or pendulous wart having a narrow base, and thus distinguished from μυρμηκία, which has a broad base.13 The derivation of the word is given by Paulus Ægineta,14 because it is like  $\tilde{a}\kappa\rho\omega$   $\chi\rho\delta\tilde{\eta}s$ , to the end of a cord.

# ADVERSARIA MEDICO-PHILOLOGICA.

## PART II.

ή ἀκρωμία, or τὸ ἀκρώμιον, two forms of a Hippocratic word, which are used synonymously to signify the large process terminating the spine of the scapula, still called the acromion. The author of the treatise 'De Articulis' (probably Hippocrates himself) calls it¹ "the bond of connexion between the clavicle and the scapula," which definition is repeated by Rufus Ephesius.² It is not unlikely that Hippocrates supposed the acromion to be a distinct and separate bone, which constituted a difference between man and other animals.³ Eudemus, who lived somewhat later, certainly thought so;⁴ probably Galen also, who (speaking apparently in his own person) calls it a cartilaginous bone;⁵ elsewhere,⁶ however, he seems to consider it only as a prolongation of the spine of the scapula, in which he is followed by Theophilus.¹ The word is frequently met with in Galen,⁶ especially in the 'De Anat. Admin.;' also in Oribasius,¹ Paulus Ægineta,¹ and Meletius;¹ from which passages it appears that it was sometimes used rather vaguely. Whenever it has any strict and definite sense, it is probably that which is given above.

If the reading ἀκρώμιον ἀρμονίαν in Galen<sup>13</sup> is correct, there would appear to be an adjective, ἀκρώμιος, though no such is recognised by Liddell and Scott.

The meaning of the word has been discussed by Vesalius, 14 Littré, 15 Adams, 16

and others.

ἀλλαντοειδης ὑμήν, or χιτών (never μηνιγξ, as Kraus<sup>17</sup> asserts), a name applied to one of the membranes of the fœtus, still called the *allantoid*. The name is derived from its somewhat resembling an ἀλλ $\hat{a}$ s, or sausage, and is sometimes rendered in Latin farciminalis. It is described by Galen in the

three passages referred to below, who is copied by Aëtius1 and Theophilus.2 In the notes to Theophilus (p. 332), I said that I had not found the word in any writer earlier than Galen; but it is used by Soranus.<sup>8</sup> It is one of the words discussed by Kühn in his 'Censura Medicorum Lexicorum Recentiorum.'4

ἀλώπηξ, α fox, plur. ἀλώπεκες, a curious and very ancient name given to the psoas muscles, the origin of which is unknown. It was found in the 'Cnidian Sentences,' a treatise at least as old as the time of Hippocrates, and also in an author quoted by Rufus Ephesius,5 Athenaus,6 and Julius Pollux,7 by the names Clearchus and Cleitarchus, both of which (one being wrong) no doubt refer to the same person.

άμαρθρίτις, a word used by Cælius Aurelianus, signifying universal gout,

or gout affecting several joints at once. It is omitted in most lexicons.

ἀμαύρωσις ὀμμάτων in the Hippocratic Collection probably means simply dimness of sight; and even where what we should call amaurosis seems to be mentioned, the Greek word ἀμαύρωσις is not used. 10 Afterwards it got a more precise signification, and was explained to mean "a complete impediment of the sight without any manifest cause." This definition is repeated in almost the same words by Paulus Ægineta<sup>12</sup> and Joannes Actuarius, <sup>13</sup> and with some variation by Aëtius,14 and agrees with the explanation given by Galen himself.15

αμνείος 16 χιτών, or ὑμήν, the name of the innermost membrane surrounding the fœtus, first used by Empedodes, 17 and still retained. It is sometimes written auvios, 18 but much more generally auveios in the present text of Soranus, 19 Galen, 20 Oribasius, 21 and Theophilus. 22 It is doubtful whether  $\tau \partial \vec{a} \mu \nu i \sigma \nu$ , the neuter substantive, is ever used in this sense.

άμφημερινός πυρετός, quotidian fever, a name found in the Hippocratic Collection,23 and adopted by all subsequent ancient writers on fevers, most of

whom are enumerated by Adams in his Commentary on Paulus Ægineta. Galen says that in his time some physicians had begun to call those quotidian fevers in which the intermission was incomplete by the names καθημερινός, or μεθημερινός, but he adds that this was not the practice of the ancients, and that he himself preferred the names αμφημερινός συνεχής and αμφημερινός  $\delta \iota a \lambda \epsilon i \pi \omega \nu$ , whenever it was necessary to intimate that the intermission was

partial or complete.

άμφιβληστροειδής χιτών, tunica retiformis, a name that owes its origin to Herophilus, who compared a part of the eye to a casting-net  $(a\mu\phi)\beta\lambda\eta\sigma\tau\rho\sigma\nu$ , "on account of the disposition of the vessels and its form." It is impossible to decide exactly what part of the eye is meant when the word is found in ancient authors, as they had no very distinct ideas themselves of the complicated anatomy of this organ. Accordingly, it sometimes appears to mean the retina, sometimes the hyaloid membrane, sometimes both these delicate parts, which were not very accurately distinguished. Rufus Ephesius says it contains the hyaloïd humour, and is synonymous with αραχνοειδής and ὑαλοειδής, by which names he designates the "third" membrane of the eye. This description plainly refers to the hyaloid membrane. On the other hand, Galen distinctly calls it an expansion of the optic nerve, and therefore as evidently refers to the retina. He also in another passage distinguishes the ἀμφιβληστροειδής from the άραχνοειδής, which two words Rufus Ephesius and Julius Pollux<sup>6</sup> considered to be synonymous. Oribasius<sup>7</sup> transcribes Galen's description. In Leo,<sup>8</sup> Meletius,<sup>9</sup> and Joannes Actuarius,<sup>10</sup> the retina is intended. The meaning of the word is discussed by Kühn, 11 who seems to consider that it never means the retina, which certainly is not correct. Dr. Daremberg mentions the uncertainty that belongs to the anatomical knowledge of the eye exhibited by ancient authors. 12

aνάβασις, when applied to a disease means the second period (sometimes called  $\epsilon \pi i \delta o \sigma i s$ , or  $a \tilde{v} \xi \eta \sigma i s$ ), when it is increasing in severity; the other stages

being the  $a\rho\chi\dot{\eta}$ ,  $a\kappa\mu\dot{\eta}$ , and  $\pi a\rho\alpha\kappa\mu\dot{\eta}$ . 13

άναβατικός σύνοχος is synonymous with ἐπακμαστικός, and signifies a species of continued14 fever in which the amount of heat gradually increases throughout the attack. 15

14 In order to prevent misapprehension, it should be stated that σύνοχος here and above (see ἀκμαστικὸς σύνοχος) is used in the sense given it by Galen, to signify simply a fever in which there is neither intermission (διαλείπων πυρετός) nor remission (συνεχής πυρετός), but perfect continuity; what exact species of fever in the nomenclature of modern nosologists were included under this name it may perhaps be necessary to determine hereafter, when the word σύνοχος is examined, but in the meantime this explanation is sufficient.

15 Galen, 'De Differ. Febr.,' ii. 2, tom. vii. p. 337, 1. 3.

ἀναβροχίζω, to catch in a loop, to perform the operation of ἀναβρο-

χισμός.1

ἀναβροχισμός, an ancient operation for trichiasis, described by Paulus Ægineta,<sup>2</sup> but no longer in use. It is mentioned also by Galen,<sup>3</sup> and has been particularly examined by several modern writers—e.g., Kühn,<sup>4</sup> Littré,<sup>5</sup> and Ermerins.<sup>6</sup>

ανάγειν αἶμα is merely to bring up blood, whether by vomiting or by coughing. The use both of the verb ἀνάγω and of the substantive ἀναγωγή

in the Hippocratic Collection is explained by Foësius.

ἀναγωγὴ αἴματος is sometimes merely the bringing up of blood, whether by vomiting or by coughing; and this etymological meaning of the word was probably strictly observed, as Cælius Aurelianus particularly notes that it signifies "ex inferioribus ad superiora fluorem." It was perhaps in this general sense that Erasistratus used the word in the title of one of his works. Sometimes the word is applied particularly to hæmoptysis, sometimes to hæmatemesis. In Aretæus, αναγωγὴ πτυέλων and ἀναγωγὴ φλεγμάτων signify, of course, expectoration.

aναιθησία, insensibility, want of sensation, as a symptom of disease; used in the plural by Galen, in the same sense. Sometimes it is used as the name

of a disease, 16 opposed to πάρεσις.

avaiσθησιs, which is omitted in most lexicons, is used by Aretæus<sup>17</sup> as sy-

nonymous with αναισθησία.

 $\dot{a}\nu a i\sigma\theta\eta\tau os$ , signifies a person insensible, without sensation, and is opposed in Aretæus<sup>18</sup> to  $\dot{\epsilon}\dot{\nu}a i\sigma\theta\eta\tau os$ . In another passage of the same author, <sup>19</sup>  $\dot{a}\nu a i\sigma\theta\eta\tau os$ 

 $\dot{\eta}$  άφή means, the sense of touch is lost.

The insensibility mentioned in these passages was caused by disease, not by artificial means; and accordingly the word  $\partial u = \partial \eta \tau i \kappa \delta s$  (anæsthetic) is probably nowhere used by any ancient writer. The word is, however, a perfectly legitimate compound and derivative; for as  $\partial u = \partial u = \partial$ 

ἀνὰ σάρκα, or ἀνασάρκα, signifies that species of dropsy which still retains the name anasarca. It was a new term in the time of Galen, who says he had

20 The monstrous word anesthésique, which is to be found in two recent French Medical Dictionaries of repute, if admitted at all, ought certainly to have been accompanied by a protest!

nowhere found it in any author, but that it was used by modern physicians. Probably the earliest extant writer who has employed the name is Aretæus,<sup>2</sup> who was either a contemporary of Galen, or slightly anterior to him. After his time it became one of the recognised names for anasarca—perhaps the most common-and is used by Alexander Trallianus,3 Stephanus Atheniensis,4 Theophilus, Paulus Ægineta, Leo, and Joannes Actuarius. The name was no doubt at first δ ανα σάρκα υδερος, the dropsy throughout the flesh, or ό ἀνὰ σάρκα καλούμενος ὕδερος, 10 the so-called dropsy throughout the flesh; then the ὕδερος was dropped, and ό ἀνὰ σάρκα alone was used. 11 Lastly, the two words, ἀνὰ σάρκα, were united to form one (ἀνασάρκα), 12 which seems to have been considered as a substantive, so that in one place13 (if the reading is correct) we meet with avaoapkas as the accusative plural.

The name is synonymous with λευκοφλεγματία or λευκον φλέγμα,<sup>14</sup> with ύδερος, 15 κατά σάρκα or catasarca, 16 ύπο σάρκα or ύποσάρκα, 17 ύποσαρκίδιος υθέρος, 18 intercus, 19 &c.; but none of these names have been generally

adopted.

 $\dot{a}$ ναστομόω  $\phi \lambda \epsilon \beta \dot{a}^{20}$  or  $\dot{a} \gamma \gamma \epsilon i o \nu$ , is to open the mouth of a vein or vessel, so as to allow the blood to ooze out: it is used also in the passive voice in a similar sense.22 Sometimes it means to anastomose, or unite by anastomosis, in the modern sense of the word,23 and is applied to the communication between the arteries and veins: in this sense the word συναναστομόω is also used.24 Sometimes (in the passive) it appears to mean to be dilated, without suffering

the blood to escape, as in a passage of Galen, where it is opposed to  $\tau \rho \omega \theta \epsilon i \sigma \eta s$ , and answers to ἀνευρυνθείσης in Antyllus.2

αναστόμωσις had three very different-meanings, derived from the three

senses of ἀναστομόω, given above:—

1. One of the species of hæmorrhage recognised by the old writers,3 rendered by Cælius Aurelianus osculatio, and explained by Celsus to apply to hæmorrhage "ore alicujus venæ patefacto." This sense of the word is at least

as old as the time of Erasistratus, who was perhaps the author of it.6

2. Anastomosis, in the modern sense of the word, or the communication between the arteries and veins, as if by the mouths or open ends of the one set of vessels being joined to those of the other.7 This communication was perfectly familiar to Erasistratus, who, however, believed that the arteries contained only air; it is also discussed at some length by Galen, who knew that the arteries contained blood: all which makes it the more surprising that the circulation of the blood should have been so long undiscovered.

3. Simple dilatation, without any escape of blood, in the passage of Paulus Ægineta before referred to,8 synonymous with ανευρυσμός and ανεύρυνσις in

Antyllus.9

άναστομωτικός, calculated to open or dilate the mouths of vessels, applied chiefly to medicines, 10 rendered by Cælius Aurelianus, "medicamina osculantia, provocativa, apertiva." The expression αναστομωτική δύναμις is used by Galen. 12 In the Hippocratic Collection the word ἀναστομωτήριος 13 is used in the same sense as ἀναστομωτικός; but ἀνάστομος, which is inserted in some lexicons, and from which comes the word ἀναστομωτέρων, formerly found in the Hippocratic Collection, 14 is probably no genuine word. It is not recognised by Liddell and Scott, and in his edition of Hippocrates, Littré has ἀστομω- $\tau \epsilon \rho \omega \nu$ , which is no doubt the correct reading.

άνευρυσμός, a dilatation, synonymous with ανεύρυνσις, and, when applied to

an artery, constituting ἀνεύρυσμα, aneurysm.15

ανεύρυσμα, an aneurysm, in the modern sense of the word, is probably not to

1 'De Tumor. præt. Nat.,' c. 11, tom. vii. p. 725, l. 4. This passage is quoted by Oribasius ('Coll. Medic.,' xlv 23, § 1, tome iv. p. 51, ed. Daremberg) and by Paulus Ægineta (vi. 37, p. 180, ed. Briau), and appears to have been misunderstood by Freind, when he says ('Hist. of Physic,' vol. i.) that Fernel was the first person who attributed aneurysm to dilatation. See Briau's Note on Paulus Ægineta, loco cit. See also the explanation of ἀνεύρυσμα on this page.

be found in any author earlier than Rufus,¹ who, however, only mentions the affection incidentally. It occurs several times in Galen's works.² In one place two causes are assigned for the affection—viz., anastomosis and a wound,³ which apparently correspond with those mentioned by Antyllus—viz., dilatation and rupture.⁴ Freind considers that no Greek writer believed an aneurysm ever to proceed from dilatation of the artery; and he refers to the above-mentioned passage of Paulus Ægineta, in which he considers that ἀναστόμωσις necessarily implies that the blood was extravasated.⁵ He may possibly be right with respect to the meaning of Galen and Paulus Ægineta (though upon the whole it seems more probable that he is wrong), but the passage from Antyllus (which, however, was not published till long after his death)⁶ proves that his supposition that no Greek author mentions dilatation as one of the causes of aneurysm was mistaken. Besides Adams's Commentary there is a valuable note by Dr. Daremberg<sup>7</sup> on the meaning of the passage in Paulus Ægineta, which is also quoted by Oribasius.

## ADVERSARIA MEDICO-PHILOLOGICA.

#### PART III.

ἀνθρακώδηs is found in the Hippocratic Collection, applied (together with  $\mu \epsilon \lambda as$ ) to the menses, and explained by Föes to mean "Carbunculosi, hoc est carbonibus similes et nigri aut adusti." In later writers it is used in quite a different sense, and is applied to  $\pi \nu \rho \epsilon \tau \delta s$  by Palladius, to  $\epsilon \lambda \kappa o s$  by Rufus Ephesius and Galen, and to  $\epsilon \xi a \nu \theta \eta \mu a \tau a$  by Herodotus (not, of course, the historian). In all these instances the word is supposed by some persons to refer to the small-pox; and, if the passages are examined, it will be seen that they might very well be supposed to describe this disease, if it were but incontestably proved that it was known to the Greek physicians of the first century after Christ. As, however, this is not the case, it is safer to explain the word simply as "anthrax-like," and refer to ἄνθραξ for further details.

ἀνθράκωσις is defined by Paulus Ægineta<sup>6</sup> to be "a malignant ulcer of the sloughy kind, forming sometimes in the ball of the eye, sometimes in the eyelid, as in the other parts of the body" (Adams' translation), which definition agrees with that given by Pseudo-Galen. Joannes Actuarius uses the word in the same sense, and it is probably never simply synonymous with ἄνθραξ.

ανθραξ, a word at least as old as Hippocrates, which is interesting, because it has been supposed by Willan<sup>9</sup> and others<sup>10</sup> to signify small-pox. The meaning of the word has been fully examined by Willan, by Littré, in his edition of 'Hippocrates,'11 and by myself in one of the notes to Rhazes, 12 where will be found a reference to the principal passages in which it is used by ancient writers. In this place, therefore, it will not be necessary to do more than state the general result of the enquiry. In Hippocrates there is nothing to indicate the precise meaning attached to the word, but by the most recent translators (Littré, Adams, Daremberg, and Ermerins,) it is rendered anthrax, carbuncle, and carbunculus. The word is frequently used by Galen, and there are several definitions and descriptions of the disease in different parts of his works, 13 which would certainly seem to apply much more to the modern carbuncle than to the small-pox. The word is sometimes used in the plural, but it need not then necessarily mean several "anthrakes," which appeared on one and the same person (like the pustules of the small-pox), but may equally well signify a single "anthrax," which broke out on several individuals. The word is used by Alexander Trallianus, 14 Leo, 15 and other medical writers. 16

16 See Index to the 'Medicæ Artis Principes,' art. "Carbunculus."

Upon the whole, it is probable, 1. that in the ancient medical writers there are many passages in which the word must signify an affection resembling carbuncle, or malignant pustule; 2. that there is no passage in which it must necessarily mean small-pox. On the other hand, it is not improbable that the word may have been popularly used in a different or less precise sense; and, at any rate, it is hardly possible that in the short account of the epidemic disease in the fourth century, given by Eusebius, &c., it can have signified carbuncle, while it must be confessed that some of the particulars

there mentioned much more closely resemble small-pox.2

ἀνομοιομερής, consisting of unlike parts,<sup>3</sup> applied to those members of the body which by division become different in kind from what they were before. Aristotle gives, as examples,<sup>4</sup> a hand and a face, which do not by division become two hands or two faces, but something unlike (ἀνόμοιον) to what they were before the division took place. The word is directly opposed to ὁμοιομερής,<sup>5</sup> and is apparently almost (if not quite) synonymous with σύνθετος and ὀργανικός, which words are used in passages where we might, perhaps, have expected to find ἀνομοιομερής.<sup>6</sup> The parts called indiscriminately by these three names are made up of the parts called  $\delta$ μοιομερή,<sup>7</sup> which word will require further explanation.

ανόρεκτος, without appetite, a comparatively modern term in Galen's time, synonymous with the older ἀπόσιτος, and ἄσιτος, applied sometimes to the

stomach.10

ανορεκτέω, to be without appetite.11

ἀνορεξία, complete want of appetite, distinguished by Galen from δυσορεξία, and from μοχθηρὰ ὄρεξις, 12 synonymous with ἄσιτος or ἀπόσιτος, 13 found sometimes in the plural. 14 There is a chapter on the subject in Alexander Trallianus; 15 see also Paulus Ægineta, 16 and Leo. 17

ἀντιάς, more frequently found in the plural ἀντιάδες, meaning the tonsils, 18 so called from their being situated opposite to each other, 19 ἐξ ἐναντίας

<sup>1</sup> Quoted by Willan, p. 5, &c.

<sup>2</sup> It "spread over the whole bodies of the sufferers . . . . but, by particularly affecting the eyes in most cases, it produced blindness in some thousands of men, women, and children."

άλλήλων. It also, and probably more generally, signifies inflammation of the tonsils,1 especially perhaps the subsequent induration.2 Both in its anatomical and its pathological sense it is generally synonymous with παρίσθμια, though sometimes distinguished from this word, as by Galen (locis cit.).

αντιοτομία, excision of the tonsils, a word perhaps found only in Leo,<sup>3</sup> though the operation is described by Celsus,<sup>4</sup> Paulus Ægineta,<sup>5</sup> and other

ancient writers.

αντικάρδιον is explained by Rufus Ephesius to signify the depression in the throat, πρὸς ταις κλεισί, at the clavicles; and is said by him to be synonymous with σφαγή, and with the Homeric λαυκανίη, both of which words signify the throat. Julius Pollux<sup>7</sup> also says the word is synonymous with σφαγή, but explains it to mean the depression ὑπὸ τὸ στέρνον (not ὑπὸ τῷ στέρνω). This is generally translated "sub pectore," under the sternum; but it may perhaps mean at or near the sternum, and then the two definitions may be reconciled. In most dictionaries, the sense given by Julius Pollux is adopted, to the exclusion of the other; and it would certainly appear to be more etymologically correct—viz., over against the καρδία, that is, either the heart or the cardiac extremity of the stomach. On the other hand, Rufus Ephesius is much the higher authority in all anatomical matters. It is doubtful whether the word is to be found in any other Greek medical writer.

άντικνήμιον, a word used by Hippocrates and Aristotle, to signify the shin, or front part of the leg, opposed to γαστροκνημία, the calf of the leg. It is used in much the same sense by Rufus Ephesius<sup>10</sup> and Galen,<sup>11</sup> and by Oribasius<sup>12</sup> and Meletius,<sup>13</sup> who quote from Galen. Julius Pollux,<sup>14</sup> after giving the above explanation, says that some persons gave the name of αντικνήμιον to the back part or calf of the leg, but the word is probably not

used in this sense by any extant Greek medical author.

αντίτραγος, the eminence of the external ear, opposite the tragus, still called

antitragus.15

αντίχειρ, the common name for the thumb in Galen's time, 16 so called probably ὅτι ἀντίκειται τοῖς ἄλλοις, because it is placed opposite to the other fingers; 17 though some said it was because the thumb is equal to, or takes the

place of, the hand.1 The word is found also in Oribasius,2 (who quotes from

Galen,) in Theophilus, and in other authors.

 $dop \tau \dot{\eta}$ , a word found in the Hippocratic Collection, used in different senses. In the 'Prænotiones Coacæ' (a work supposed to be older than the time of Hippocrates) it is used in the plural number to signify the bronchia. In the 'De Corde' (which is later than Hippocrates) it is used in the plural to signify both the aorta and the pulmonary artery. In the 'De Locis in Homine's (a work probably about contemporary with Hippocrates) the reading is doubtful, but the sense required by the passages is the bronchia. This partly agrees with the statement of Erotianus, that, among the commentators on Hippocrates, Baccheius explained the word to mean the arteries in general, while Epicles and Lycus the Neapolitan referred it to the bronchia. Aristotle applied the word to the aorta, and this is the sense in which it has been used ever since his time—at least in the singular number, for in the plural it was applied both to the bronchia and to the arteries, even by Rufus Ephesius. 10 It does not appear that Aristotle was the first writer who applied the word to the aorta (for he himself expressly says ην καλουσί τινες ἀορτήν), and probably when Galen and Rufus Ephesius and Avicenna speak of this application of the word by Aristotle, they merely mean that he was the most eminent writer who had used the word in that sense.13 It was long before the name was adopted by Latin writers, as Cælius Aurelianus, 4 when he has occasion to mention the aorta calls it "arteriarum eam quam Græci ἀορτήν appellant." The aorta was called by various names by the old Greek writers. Praxagoras<sup>15</sup> called it ἀρτηρία παχεία, which name is used also by Aretæus; 16 others called it simply  $\hat{a}\rho\tau\eta\rho\hat{a}$   $\mu\epsilon\gamma\hat{a}\lambda\eta$ , or  $\mu\epsilon\gamma\hat{a}\sigma\tau\eta$ , others  $\hat{o}\rho\theta\dot{\eta}$ , others  $\pi\nu\epsilon\nu\mu\alpha\tau\kappa\dot{\eta}$ . 18

The word  $dop \tau \dot{\eta}$  is manifestly connected with  $dop \tau \dot{\epsilon} \omega$ , to suspend, though not derived from it, both words being more probably derived from  $d\epsilon i\rho\omega$ ; which derivation agrees sufficiently well with the two meanings assigned to the word by the ancient writers, as the lungs might be supposed to be suspended by the

Pseudo-Galen, 'Introd.,' cap. 10, tom. xiv. p. 704, l. 9. "Sonat enim άντίχειρ quasi dicas manus vicem gerens." (H. Steph., 'Dict. Med.' p. 552.)

bronchia, and the heart by the arteries especially by the aorta. Some of the other derivations that have been proposed are too foolish to require notice.

ἀπεσχαρωτικὰ φάρμακα are rightly interpreted by M. Briau¹ to signify "remèdes propres à faire tomber l'eschare;" and Eustathius explains ἀπεσχαροῦσθαι to mean τὸ ἐσχαρὰς ἐξαιρεῖν.² In Oribasius the word ἀπεσχαρόω occurs, and is translated (as the sense requires) by Dr. Daremberg, "medicaments qui produisent des escarres." As, however, it is almost inconceivable that the same medical word should be used in two opposite senses, we may fairly suspect some error in the text. Would not ἐπεσχαρόω be the better reading in Oribasius? This would be a word legitimately compounded, and used in a legitimate sense; but (so far as I know at present) it is not to be found in any Greek writer. On the other hand, ἀπεσχαρόω, in the present text of Oribasius, is used in a sense exactly contrary to that which it bears in (probably) every other passage where it occurs.

τὸ ἀπευθυσμένον, or τὸ ἀπευθυσμένον ἔντερον, (probably never ὁ ἀπευθυσμένος, the name given by the Greek anatomists to the last portion of the large intestine on account of its (comparatively) straight direction; for the same reason the Latin name rectum was used, and is still retained. The word is found in Galen, Rufus Ephesius, Oribasius, (who transcribes Galen,) Theophilus, and other writers; and answers to the name εὐθυέντερον, used by the

anonymous author of the "Introductio Anatomica."8

# ADVERSARIA MEDICO-PHILOLOGICA.

## PART IV.

[The persons who may consult this collection of words are requested to bear in mind that it does not pretend to completeness in any way. It is very far from being a complete collection of Greek medical terms, for all botanical and chemical words have been designedly omitted; neither is the treatment of each word to be considered complete, for no doubt various meanings are passed over, and probably better passages might frequently be quoted. It is simply a contribution (and that a very imperfect one) to Greek medical technology.]

 $\dot{\alpha}\pi o\lambda i\nu\omega\sigma\iota\varsigma$ , the name given by Paulus Ægineta¹ to the operation for fistula in ano by means of a ligature of raw thread, described in the Hippocratic treatise 'De Fistulis.'² The verb  $\dot{\alpha}\pi o\lambda\iota\nu\dot{o}\omega$  is used by Leo³ to signify the application of a ligature to a tumour on the eyelid.

ἀπονευρόω, probably always used in the passive voice, and applied to a muscle, signifying to become tendinous. In one passage we find the expression μῦς ἀπονευρούμενος εἰς τένοντα. From this verb comes the word

ἀπονεύρωσις, which signifies the tendinous extremity of a muscle, whether it be flat or round. It is probably always used in this sense, and though it is of course derived ultimately from νεῦρον, it has nothing to do with the nerves. It seems to have been a term recently introduced in the time of Galen, as in one place, in speaking of tendons (τένοντες), he says, "The more recent authors call them ἀπονευρώσεις μυῶν, because (I suppose) they see the muscles terminating in them." He uses the word frequently, as does also Oribasius, who transcribes him. It is found also in Theophilus.

άποπληκτικός, a word older than Hippocrates (being found in the 'Coacæ Prænotiones'), signifying apoplectic, relating to apoplexy. It

10 'De Corp. Hum. Fabr.,' v. 14, § 1, p. 205, 1. 9, ed. Oxon.

is generally applied to the individual struck by apoplexy; sometimes to the accidents or symptoms of the disease, so that  $\tau a \ a\pi o\pi \lambda \eta \kappa \tau w a^2$  is nearly synonymous with  $a\pi o\pi \lambda \eta \xi ia$ . It is probably not found in any Latin writer earlier than the fourth century after Christ. The application of the word—1, to remedies for apoplexy; 2, to the constitution predisposing to apoplexy; 3, to the state or condition of

apoplexy; and 4, to the jugular veins, is mediæval or modern.

aπόπληκτος, a word also found in the Hippocratic Collection, and signifying a person struck by apoplexy, synonymous nearly with βλητός. It is used in the same sense by Aretæus, and also by Cælius Aurelianus, who uses it as a recognised Latin word. The expression ἀπόπληκτον σκέλος, an apoplectic (or, as we should call it, a paralytic) leg, is quoted from Hippocrates by Aretæus and also by Paulus Ægineta, but it is probably not to be found in any treatise of the present Hippocratic Collection. In one passage of the Aphorisms, where the word occurs, that has been altered by Ermerins into ἀποπληξία, which is certainly a great improvement of the text, but seems to rest on no authority.

 $\dot{a}\pi o\pi \lambda \eta \gamma ia$ , if the reading in Galen is correct, is another form of the

more common word ἀποπληξία.10

<sup>15</sup> Lib. iii. cap. 18, vol. i. p. 397, &c. 16 p. 258, 2nd edition.

The word had not been Latinized when Celsus wrote, but seems to have been so in the time of Cælius Aurelianus, who uses it without observation."

ἀπόπληξις τοῦ σώματος<sup>3</sup> is synonymous with ἀποπληξία τοῦ σώματος. αποσιτικά (τά), a Hippocratic word, explained by Galen to mean things that excite aversion for food, ἀποσιτίαν.

απόσιτος, another Hippocratic word, meaning a person having an

aversion for food, αποσιτίαν.°

αποσιτία, also found in the Hippocratic Collection, and explained by Galen, to mean an aversion for food, as distinguished from ἀσιτία, which means merely a want of appetite.7 The word appears to be used by Galen only in connexion with the writings of the Hippocratic Collection: in one passage, where the present reading is aoutia, we should probably read ἀποσιτία, as in the Aphorism to which it relates.

απόσκημμα, according to Galen, 10 signifies a collection of morbid humours, which has passed from one part of the body to another, in which sense it is used by him several times. 11 It is perhaps nearly synonymous with the French dépôt (the word suggested by Dr. Daremberg in his translation of Galen), and is at the same time distinguished from  $d\pi \dot{\phi} \sigma \tau \eta \mu a$ , abscess. In one passage, it is said by some lexicographers to signify the excrements, but this interpretation is at least doubtful, as the sense given above seems to suit the context tolerably well, and in no other passage has it been supposed to have this latter signification.

ἀπόστημα is (etymologically) an affection in which parts previously in contact are separated (αφίσταται) from each other; is and the derivation of the Latin equivalent abscessus is similar. It is an old word, often met with, but used in a more extended sense than the modern abscess. Paulus Ægineta16 (making use of some earlier writer, who is also transcribed by Oribasius)17 says that an abscess is a corruption and change of the flesh or fleshy parts, such as muscles, veins, and

arteries; that some are contained in a kyst (χιτών), as ἀθέρωμα, στεάτωμα and μελικηρίς, and others are formed without a kyst, which are called by the generic name ἀπόστημα. Celsus uses the word abscessus, adding "quæ ἀποστήματα Graeci nominant." Cælius Aurelianus, however, uses apostema, "quod etiam vomicam dicere poterimus;" though in another passage he says that the Greek synonym for vomica is ἐμπύημα.³

aποσχίς, a word found in the Hippocratic Collection, signifying a small branch applied to a vein. It is generally found in the plural (but not always), and is applied by Galen to arteries and nerves.

ἀποφλεγματίζω, to excite the secretion or discharge of φλέγμα, that is, the saliva, nasal mucus, &c. The word is generally applied to medicines, ἀποφλεγματίζοντα, and includes both gargles and masticatories. Sometimes, however, it is applied to the physician, and signifies, to give an apophlegmatic medicine.

ἀποφλεγματική δύναμις, the power or faculty of secreting or discharging

φλέγμα.

ἀποφλεγματισμός, properly the secretion or discharge of φλέγμα, <sup>10</sup> but more commonly used to signify a medicine calculated to promote this secretion or discharge, whether used in the form of a gargle (or mouthwash) or a masticatory. <sup>11</sup> It is used as a Latin word by Cælius Aurelianus. <sup>12</sup> In a passage of Antyllus quoted by Oribasius, <sup>13</sup> and also in Paulus Ægineta, <sup>14</sup> the word is translated masticatory both by Daremberg and by Adams. It would, however, seem to be by inadvertence that they have thus restricted the meaning; for 1, Dr. Daremberg, in his useful note (p. 812) says himself, "Les apophlegmatismes étoient des masticatoires ou des collutoires," &c.; and 2, Paulus Ægineta directs the medicine which he describes to be used (not as a masticatory, but) as a gargle. <sup>15</sup>

13 'Coll. Med.,' viii. 10, tome ii. p. 183, ed. Daremberg.

15 Will Dr. Daremberg excuse me for suggesting that the passage which he quotes in his note contains the words of *Galen*, not of *Archigenes*, as he supposes? The words quoted by Galen from Archigenes appear to end just one word before the passage quoted by Dr. Daremberg. Galen then goes on to speak in his own person, and he quotes the same passage from Archigenes again at tom. xii. p. 582, ed. Kühn.

ἀπόφυσις, literally an offshoot, was applied generally (as in modern anatomy,) to a bony protuberance; not, however, exclusively, as we meet with it applied to the branches of a nerve, to the cerebral nerves, to a branch of the vena cava, to the male urethra, as being a prolongation of the bladder, and (if the reading in Galen is correct) to the lubia and prepuce. In one passage of Aretæus6 it seems to mean simply prominence, applied to induration of the peritoneum; and in one passage of Soranus' it is translated "origine" by Dr. Daremberg, and "productio" by Rasarius.

απόφυσις is often apparently confounded with ἐπίφυσις; sometimes, no doubt, by the fault of the copyist, sometimes, perhaps, because the writer did not care to preserve the usual distinction between the two words, and sometimes because neither word seemed to be more appropriate than the other. The distinction between the two words is thus stated by Galen "an ἐπίφυσις is the union of one bone with another, an ἀπόφυσις is a part of the whole bone." Sometimes ἀπόφυσις and ἔκφυσις appear to be used indiscriminately to signify a process. 10

The following are the principal combinations in which the word is

used by the old medical writers :-

απόφ. αγκιστροειδής, the hook-shaped offshoot, i.e., probably the coracoid process of the scapula. See αγκιστροειδής.11

απόφ. αγκυροειδής, the anchor-shaped offshoot, probably synonymous

with the preceding term. See αγκυροειδής.

απόφ. ανάντης του δευτέρου σπονδύλου, the ascending offshoot of the second vertebra,12 means probably the odontoid process of the axis. The αποφύσεις ἀνάντεις 3 of the vertebræ in general appear to mean the superior oblique or articulating processes, opposed to the ἀποφύσεις κατάντεις.

ἀποφύσεις ἀραχνυειδεῖς, cobweb-like offshoots, 4 applied to nerves, signify nervous filaments. So also ἀπόφυσις ἀραχνοειδεστάτη. 15

<sup>1</sup> Galen, 'De Anat. Admin.,' iii. 4, tom. ii. p. 368, ll. 7, 11, 13. <sup>2</sup> Galen, 'De Usu Part.,' ix. 9, tom. iii. p. 722, 1. 2, copied by Oribasius, 'Coll.

Med., xxv. 58, § 4, tome iii. p. 483, l. 7.

Theophilus, 'De Corp. Hum. Fabr.,' ii. 13, § 11, p. 83, l. 1, ed. Oxon. 4 Galen, 'De Usu Part.,' xv. 3, tom. iv. p. 222, 1. ult., copied by Theophilus,

v. 24, § 3, p. 220, l. 8.

<sup>5</sup> Loco cit., p. 223, ll. 6, 9. Theophilus, in the corresponding passage, p. 220, l. 14, has έπιφύσεις.

6 'De Caus. et Sign. Morb. Chron.,' i. 13, p. 77, l. 17, ed. Adams.

7 Adams (p. 320, 1. 12) translates it "process." which hardly seems to make sense. 8 'De Morb. Mul.,' cap. 5, p. 13, l. 11, ed. Dietz; transcribed by Oribasius, 'Coll. Med., xxiv. 32, § 5, tome iii. p. 379, 1. 13.

<sup>9</sup> 'De Oss.,' proœm., tom. ii. p. 733, l. 16; transcribed by Oribasius ('Coll. Med.,' xxv. 2, § 7, tome iii. p. 394, 1. 2), Meletius ('De Nat. Hom.,' p. 32, 1. 20, ed.

<sup>10</sup> Hippocrates, 'De Artic.,' § 45, tome iv. p. 190, l. 13; p. 194, l. 10, ed. Littré; Galen, 'De Oss.,' capp. 1, 6, tom. ii. p. 745, l. 14; p. 755, l. 4, copied by Oribasius, 'Coll Med.,' xxv. 3, § 17; 7, § 2, tome iii. p. 398, I. 13; p. 402, I. 11.

In the October No. 1864, where by an oversight it is rendered anchor-shaped.

Galen, 'De Admin. Anat.,' iv. 8, tom. ii. p. 462, 1. 1.

Galen, 'De Oss., 'cap. 8, tom. ii. p. 758, l. 5; copied by Oribasius, 'Coll. Med.,' xxv. 9, § 12, tome iii. p. 407, 1. 7.

14 Galen, 'De Admin. Anat.,' iii. 10, tom. ii. p. 400, 1. ult.

15 Id., ibid., iii. 4, tom. ii. p. 366, 1. 17.

ἀποφύσεις ἄτακτοι, irregular offshoots, applied to a vein, signify its extreme subdivisions.

απόφ. βελονοειδής, the needle-shaped offshoot, i.e. the styloid process of

the temporal bone, called also γραφιοειδής and στυλοειδής.2

ἀπόφ. γραφισειδής, or perhaps γραφεισειδής, sometimes (but less accurately,) written γραφοειδής, the pencil- (or stile-) shaped offshoot, so called because some persons compared it γραφείων πέρασι. It signifies sometimes the styloid process of the temporal bone, sometimes the styloid process of the ulna. When applied to the temporal bone it is synonymous with βελονοειδής, and στυλοειδής; and these processes are sometimes called γραφιοειδεῖς ἐκφύσεις. The styloid process of the ulna is called indifferently ἀπόφ. γραφιοειδής and ἀπόφ. στυλοειδής.

αποφύσεις έγκαρσιαι, the cross offshoots, synonymous with αποφύσεις

πλάγιαι, signify the transverse processes of the vertebræ.

άποφύσεις κατάντεις, the descending offshoots, applied to the vertebræ, signify the inferior oblique or articulating processes, opposed to the

άποφύσεις ανάντεις."

απόφ. κορακοειδής, the crow's-beak-shaped offshoot, one of the processes of the scapula, probably that which is still called the coracoid process. It was also called ἀπόφ. ἀγκυροειδής; though in one passage Galen uses the name as synonymous with ἀκρώμιον, and distinguished from

the ἀπόφ. ἀγκυροειδής. 11

απόφ. μαστοειδής, the udder-shaped offshoot, signifies, 1. One of the processes of the temporal bone, which still retains the name of mastoid. 12 This is sometimes called ἔκφυσις μαστοειδής. 13—2. The words are used by Leo14 in a very different sense, and have been supposed by the editor to signify the frontal sinus; but this (as was pointed out to me by the late Dr. Adams) is no doubt a mistake. Leo says there are seven pairs of cerebral nerves "besides ( $\chi \omega \rho i \varsigma$ ) the so-called mastoid

14 'Consp. Medic.' iii. 1, in Ermerins, 'Anecd. Med. Gr.,' p. 127.

offshoots (μαστοειδων ἀποφύσεων)," and it is inconceivable that he should be referring here to the frontal sinus, even if the word ἀπόφυσις could be applied to such a cavity. The term probably signifies the olfactory nerve, which is not reckoned among the nerves by Galen, who calls it merely an απόφυσις of the brain, and who also enumerates only seven pairs of cerebral nerves.2 Theophilus is probably the earliest extant writer who recognises the olfactory nerves as the first pair of cerebral nerves; but later authors for many centuries call them "processus mammillares," and other similar names.4

ἀπόφ. οδοντοειδής, the tooth-shaped offshoot, i.e., the processus dentatus (or odontoides) of the second cervical vertebra, called sometimes simply οδούς, and by the more modern writers in Galen's time ἀπόφυσις πυρηνοειδής.6 A full description of this bone and its movements is

given by Galen, De Usu Part. xii. 7, tom. iv. p. 23, &c.

αποφύσεις οστοειδείς, the bone-like offshoots, a name applied by the Author of the Introductio (printed among Galen's works), to two parts of (apparently) the occipital bone, "not far apart, through which descend tendons and nerves, τένοντες καὶ νεῦρα:" a description too vague to enable us to determine what parts the writer intends to speak of, even if we give him credit for having himself a distinct idea of the processes which he is describing.

αποφύσεις πλάγιαι, the side offshoots, signify the transverse processes of the different vertebræ. Sometimes they are called ἀποφύσεις

είς τὸ πλάγιον, οτ ἀπὸ τῶν πλαγίων, οτ ἐκ τῶν πλαγίων.

ἀποφύσεις πτερυγωδείς or πτερυγοειδείς, the wing-shaped offshoots, two of the processes of the sphenoid bone;" but the description of this very irregular bone is not sufficiently distinct to enable me to say with certainty whether the words mean the pterygoid processes of modern writers, or (as Dr. Daremberg12 explains them), les grandes ailes, or temporal processes. They are probably the same parts that are called also έκφύσεις πτερυγωδείς.13

ἀπόφ. πυρηνοειδής, (or πυρινοειδής), the fruit-stone-shaped offshoot, a later name for the processus dentatus (or odontoides) of the second cervical vertebra, which by earlier writers was called ἀπόφ. οδοντοειδής,

or simply odous.1

ἀπόφ. σιγμοειδής, the sigma-shaped (or semi-circular) offshoot.<sup>2</sup> is used by Galen as synonymous with ἀπόφ. ἀγκυροειδής, in a passage where it certainly seems to signify the coracoid process of the scapula. In this same passage it is (apparently) distinguished from the ἀπόφ. κορακοειδής, which is elsewhere said to be synonymous with ἀπόφ. ἀγκυροειδής \*; so that, if the reading in Galen is correct (and if he is not using the word in the sense given to it by other anatomists, rather than by himself,) there would seem to be some confusion in one of his descriptions. It may be added that in one passage the ἀπόφ. ἀγκυροειδής is described as being  $\xi \omega \theta \varepsilon \nu$  to the scapula<sup>5</sup>; in another it is said to be  $\xi \sigma \omega \theta \varepsilon \nu^6$ , which latter reading is probably the correct one, as it seems to agree better with the actual form of the scapula.

ἀπόφ. (or ἐπίφ.), σκωληκοειδής, the worm-shaped offshoot (or ongrowth), the name given to a part of the brain, possibly to that which is still called the vermiform process, or appendix. In the present editions of Galen it is sometimes called ἀπόφυσις, sometimes ἐπίφυσις; and as neither of the words is more suitable to the part intended than the other, it is at present scarcely possible to say which is the more correct. Caspar Hoffmann has discussed the point, and decides in favour of ἀπόφυσις; but probably Dr. Daremberg is right in saying that the question must be determined (at least in a great degree) by the aid of Greek MSS.—The appendices vermiformes are sometimes said to be so called from their resemblance to earth-worms; but Galen compares them τῷ κατὰ τὰ ξύλα γεννωμένω, σκώληκι, to the worm that

is engendered in timber.

άπόφ. στυλοειδής, the stile- (or pencil-) shaped offshoot, signifies sometimes the styloid process of the temporal bone, sometimes the styloid process of the ulna. The spelling of the word is somewhat doubtful, as it is not quite certain whether it should be written στηλοειδής, or στιλοειδής, or στυλοειδής, all of which words were probably pronounced more alike by the ancients than by us. Rufus Ephesius11 calls the

<sup>2</sup> It will be remembered that the form of the 'Sigma' intended is not  $\Sigma$ , nor  $\sigma$ ,

nor c, but C.

<sup>11 &#</sup>x27;De Appell. Part. Corp. Hum.' p. 35, l. 13, ed. Clinch.

styloid process of the temporal bone στηλοειδής, deriving the word (if the reading be correct), from στήλη, a post. Galen calls it στυλοειδής, using the word as synonymous with βελονοειδής and γραφιοειδής. one place he says that some persons compare it to the end of a pencil or stilus (γραφείον), and call it by the barbarous (βαρβαρίζοντες) name Dr. Daremberg supposes,3 with great probability, that the solecism which offended Galen was the joining together in one hybrid word the Latin stilus with the Greek είδος; and would write the word στιλοειδής, for which spelling there is some MS. authority, and which is perhaps somewhat confirmed by the Arabic mode of expressing the word-viz., سطولويدس not سطياويدس. But Dr. Daremberg is not correct in supposing that the styloid process of the ulna (which is another meaning of ἀπόφυσις στυλοειδής), is not compared to a stile or pencil, as Galen says it was called indifferently στυλοειδής and γραφιοειδής.

αποφύσεις τριχοειδείς, hair-like offshoots, is an expression applied to the ramifications of the veins, which has been translated and retained

in the word capillary.

ἀποφύσεις χονδρωδεῖς, cartilaginous offshoots, the expression applied

to the cartilages of the false ribs.

άραχνοειδής, like a cobweb, is used in combination with several words. Sometimes it is applied to the veins, and signifies a greater degree of tenuity than τριχοειδής; sometimes to the nerves, when the superlative (ἀραχνοειδέστατος), is also used; sometimes to the pulse, when so small and unsteady that it was fancifully compared to a cobweb gently shaken by the wind; 10 sometimes to the urine, when fatty substances like cobwebs float on the surface."

It is most frequently joined to χιτών, when it probably never signifies the arachnoid membrane of the brain (as in modern anatomical works), but one of the membranes of the eye. This term is as old as Herophilus, <sup>12</sup> and is sometimes used as synonymous with ἀμφιβληστροειδής and ὑαλοειδής, sometimes as meaning something different viz., either the retina or the capsule of the crystalline lens. 13 But the

uncertainty of the nomenclature of the different parts of this delicate organ will frequently be noticed.

άρθριτικός, a Hippocratic word, signifying sometimes a person suf-

fering from ἀρθρῖτις, sometimes diseases like ἀρθρῖτις, arthritic.

άρθρῖτις, also a Hippocratic word, is said by Aretæus to signify a general pain of all the joints, comprehending pain of the feet, ποδάγρα, that of the hip-joint, ἰσχιάς, and that of the hands, χειράγρα; to which species Cælius Aurelianus adds that of the knee, γονάγρα, and (though apparently with less propriety) that of the tendons or nerves, τενοντάγρα. The word occurs frequently, and is probably always

used to signify gout in its most comprehensive sense.6

 $\ddot{a}\rho\theta\rho\sigma\nu$ , sometimes used generally to signify any kind of joint, sometimes more strictly to signify the natural juxtaposition of moveable bones, as distinguished from σύμφυσις or άρμογή, the union of immoveable bones. In this latter sense it comprehended the two great divisions of joints, διάρθρωσις and συνάρθρωσις, the third which is sometimes associated with them—viz., amphiarthrosis, being a modern term first used by Winslow.10 Διάρθρωσις, which signified a joint having extensive movement, was divided into ένάρθρωσις, άρθρωδία, and γίγγλυμος, three words in Galen's time of recent origin; 11 συνάρθρωσις, which signified a joint almost immoveable, comprehended ραφή, γόμφωσις, and ἀρμονία. The writer of the book 'Introductio, seu Medicus,' found among Galen's works,12 uses the words σύμφυσις and συνάρθρωσις differently from Galen, thereby affording another proof of the spuriousness of the treatise. In the Hippocratic Collection the word is sometimes used to signify, not the joint itself, but one of the two bones that form the joint. This is noticed by Erotianus,13 and by Galen,14 who says that the convex

<sup>&</sup>lt;sup>2</sup> 'De Nat. Hom.,' § 14, tome vi. p. 66, l. 7. Galen has ἀρθριτικὰ ἀλγήματα, 'Comment. in Hippocr. "Epid. VI." iv. 3, tom. xvii. B. p. 125, l. ult., and elsewhere.

<sup>5 &#</sup>x27;Morb. Chron.,' v. 2, § 28, p. 557, ed. Amman. In this passage is it more probable that τένων is used to signify a nerve, or nervus to signify a tendon?

<sup>14 &#</sup>x27;De Oss.,' procem., tom. ii. p. 734, l. ult.; 'Comment. in Hippocr. "De Artic.' i. 1, tom. xviii. A. p. 304, l. ult.

surface is intended, whereas sometimes, at least, it is certainly the concave.1

αρθρώδης and αρθρωδῶς, two words of kindred meaning to αρθρωδία,

but of considerably older origin."

αρθρωδία, a recently adopted word in Galen's time, which has retained its place in medical terminology to the present day, signifying a species of διάρθρωσις formed by a slightly convex surface applied to one slightly concave, and distinguished from ένάρθρωσις and γίγγλυμος.

άρμογή, used apparently as synonymous with σύμφυσις, to signify

the union of bones without motion, opposed to  $\ddot{a}\rho\theta\rho\rho\nu$ .

άρμονία, one of the species of συνάρθρωσις, in which the union of the bones takes place by simple apposition of their surfaces.

άρρευμάτιστος, applied to medicines that arrest hæmorrhage and

other morbid discharges, astringent.6

άρτηρία, a word used in two distinct senses, inasmuch as the ancients spoke of two kinds of ἀρτηρίαι —viz., 1, the ἀρτηρίαι λείαι, or arteries; and, 2, the ἀρτηρίαι τραχείαι, or bronchia. If this distinction is borne in mind, much of the apparent confusion caused by the uncertainty of the signification of the word in any particular passage will disappear. The whole subject will, however, always be an obscure and intricate one, and sometimes it will seem doubtful whether the writer himself knew exactly which set of vessels he was writing about; for while the ἀρτηρίαι were supposed to convey air to all parts of the body, it was also perfeetly well known to many anatomists (though the fact was disputed) that blood issued from them when they were wounded. Much curious and interesting information on the subject will be found in Littré's 'Hippocrates,' tome i. p. 201, sq.; Daremberg's 'Comment. de Galien sur le *Timée* de Platon,' p. 43; and the passages indicated in the note to the Oxford edition of Theophilus, 'De Corp. Hum. Fabr.,' p. 296.

With respect to the derivation of the word, as the ἀρτηρίαι were supposed to contain air (and correctly, when the bronchia were signified), it is not perhaps very surprising that some persons should have considered it to be a corruption of ἀεροτηρία, compounded of ἀήρ and τηρείν. This derivation can be traced back to one of the earliest commentators on the Hippocratic Collection—viz., Baccheius; 10 it has been repeated by other ancient writers," and pertinaciously keeps its ground even in

<sup>&</sup>lt;sup>8</sup> Id., *ibid.*, and cap. 4, p. 598, Il. 4, 5. 9 Hence Galen's treatise, entitled 'An in Arteriis Natura Sanguis contineatur,' tom. iv. p. 703, sq. Erotianus, 'Gloss. Hippocr.,' p. 68, ed. Franz.

respectable books of the present day. As, however, the ancients were deficient in philological knowledge, it may safely be said that no competent scholar will be satisfied with this derivation; nor indeed should any one else accept it, unless he is prepared to follow Dionysius of Syracuse, and explain a mystery,  $\mu\nu\sigma\tau\eta\rho\iota\nu\nu$ , to mean (etymologically) a mouse-trap,  $\ddot{\sigma}\iota$   $\tau \dot{\nu}\dot{\nu}s$   $\mu\hat{\nu}s$   $\tau\eta\rho\epsilon\hat{\iota}$ . The derivation given in Liddell and Scott's Greek Lexicon is from  $\ddot{a}\iota\rho\omega$ , to raise or carry, which will suit either of its meanings quite sufficiently well, as the lungs may be supposed to be carried or suspended by the trachea, or the heart by the aorta.

The following are some of the combinations in which ἀρτηρία is found:—

ἀρτηρία καρωτίς,<sup>2</sup> or more commonly in the plural ἀρτηρίαι καρωτίδες, or simply καρωτίδες, the carotid arteries, so called because the compression of them was supposed to produce stupor, κάρος. This opinion, however, was not universally held,<sup>3</sup> and Galen finds fault with the name, though he made use of it because it was generally adopted in his time.<sup>4</sup>

ἀρτηρία μεγάλη, the great artery, or μεγίστη, greatest, or ὀρθη, upright, or παχεῖα, thick, names applied to the aorta; the last is attributed to Praxagoras.

άρτηρία πνευματική, the pneumatic artery (probably used actively, filling, not filled with wind,) does not mean the trachea, (as we

should at first sight be inclined to imagine,) but the aorta.

ἀρτηρία τραχεῖα, <sup>11</sup> aspera arteria, the rough ἀρτηρία, that is, the chief of the rough ἀρτηρίαι, which (as has been explained) were distinguished from the smooth ἀρτηρίαι. The name was applied to the βρόγχος, <sup>12</sup> is constantly used by the ancient writers, <sup>13</sup> and has continued in use (in the form trachea,) to the present day.

ἀρτηρία φλεβώδης, the venous ἀρτηρία, the name given to the pulmonary veins, because, though they have a venous structure, they

convey arterial blood (or, as was formerly supposed, air). The author of the name is not known, but it may have been Herophilus, as he was the author of the corresponding name, φλέψ ἀρτηριώδης. The name is frequently met with, and there is a good note on the subject in Dr. Daremberg's translation of Galen, tome i. p. 407, on 'De Usu Part., vi. 10, tom. iii. p. 445.

άρτηριακός, of or belonging to an άρτηρία, not in the sense of an artery,

but of an air-vessel :-

άρτηριακή κοιλία της καρδίας, called also άρτηριώδης and πνευματική, the left ventricle of the heart, which Diogenes of Apollonia considered to be the seat of the soul.2

άρτηριακή (ἀντίδοτος being understood), a remedy for affections of the trachea and bronchi, a name in frequent use, synonymous with έκ-

λεικτόν.3

άρτηριακόν (πάθος), an affection of the trachea, synonymous with βράγχος, which Cælius Aurelianus renders raucedo, or hoarseness.

άρτηριοτομέω, to open an artery, by a surgical operation.

άρτηριοτομία, the opening of an artery, in surgery, opposed to φλεβοτομία. The operation is mentioned by Aretæus, who, however, does not use the word. There is a chapter on the subject in Aëtius (taken from Severus), Paulus Ægineta, 10 and Joannes Actuarius.11

ἀρτηριώδης, like an ἀρτηρία, probably always in the sense of an air-

vessel.

άρτηριώδης κοιλία της καρδιας,12 called also άρτηριακή and πνευματική, a

name given to the left ventricle of the heart.

άρτηριώδης φλέψ, the arterial vein, the name given by Herophilus to the pulmonary artery, because it conveys venous blood, though it resembles an apthpla in structure. 13 It is in frequent use.

άρυταινοειδής χόνδρος, the arytænoid cartilages of the larynx, which Galen supposed to be but one, instead of two.14 The name was given from their being compared to an ἀρύταινα, probably a pitcher or ewer. 15

Theophilus appears to have taken it for a larger vessel. 'De Corp. Hum. Fabr., iii. 15, § 3, p. 112, l. 2, ed. Oxon., and Note, p. 299. See also the note to Dr. Daremberg's translation of Galen, tome i. pp. 483, 484.

<sup>&</sup>lt;sup>2</sup> Plutarch, (?) 'De Philos. Decr.,' iv. 5; Pseudo-Galen, 'De Philos. Hist.,' tom. xix. p. 315, l. 10. This was also the opinion of the work 'De Corde,' in the Hippocratic Collection, tome ix. p. 88, § 10, ed. Littré.

αρυταινοειδès πέρας, the upper extremity of the arytænoid cartilages.  $\dot{a}\rho\chi\dot{\eta}$ , when applied to a disease, means the first period, when it is only in its commencement; the other stages being the aváβaσις (or

ἐπίδοσις, or αΰξησις), ἀκμή, and παρακμή.2

 $\delta \sigma \theta \mu a$  meant originally shortness of breath from any cause. When it was used to signify a disease, it is explained by Celsus3 as being something greater than δύσπνοια, and less than δρθόπνοια; but this distinction does not seem to be always observed. The principal passages relating to asthma are referred to in Adams's Commentary on Paulus Ægineta, iii. 29, vol. i. p. 477.

ἀσθμαίνω means simply to pant, probably never to be asthmatic.

άσθματικός sometimes means a person simply out of breath, as from running: sometimes a person affected with asthma, asthmatic. The phrase ἀσθματικὰ ὀρθόπνοια occurs in Galen, to signify a complication

of asthma and orthopnœa (?).

ἀσκίτης, or ὕδρωψ (or ὕδερος) ἀσκίτης, the name of one of the three species of dropsy generally recognised among the ancients, the other two being ἀνάσαρκα and τυμπανίας (or τυμπανίτης).8 It was so called because the fluid was contained in the peritonæum, as in a skin or leathern bag, ἀσκός; and the name has been retained to the present day. It differed from tympanites, inasmuch as this was supposed to be formed by a great quantity of air with a small quantity of fluid, whereas in ascites, on the contrary, there is a great collection of fluid with a very small proportion of air.10

άσκληπιός, the name given to certain medicinal compounds: ασκλήπιον, a popular name for piles.12 Both words are connected with

'Ασκληπιός, Æsculapius.

άσφυγμία is found in Cælius Aurelianus (if the reading is correct, for the word is not recognised by Liddell and Scott, and possibly does not occur elsewhere), and is explained to mean "pulsus defectio." 13 ther he considers the word to be merely synonymous with ἀσφυξία, which he also uses,14 and explains by "pulsus parvitas vel amputatio," there is nothing in the context to determine positively.

# ADVERSARIA MEDICO-PHILOLOGICA.

#### PART V.

[Those persons who may consult this collection of words are requested to bear in mind that it does not pretend to completeness in any way. It is very far from being a complete collection of Greek medical terms, for all botanical and chemical words have been designedly omitted; neither is the treatment of each word to be considered complete, for, no doubt, various meanings are passed over, and probably better passages might frequently be quoted. It is simply a contribution (and that a very imperfect one) to Greek medical technology.]

ἄσφυκτος, a person whose pulse is so weak, that it cannot be felt in any part of his body, though, if it had ceased entirely, he would

no longer be alive.2

ἀσφυξία does not signify asphyxia, in the modern sense of the term, but simply, as the word imports, pulselessness. It is used by Aretæus,<sup>3</sup> and other authors, and is explained by Galen to apply only to those cases in which no pulsation is felt in any part of the body; though he adds, that, strictly speaking, this could not occur to any person during life.<sup>4</sup> He distinguishes ἀσφυξία from σφυγμὸς ἐκλείπων,<sup>5</sup> or failing pulse, as being a more complete pulselessness.

ἀσώδης, subject to nausea (ἄση), applied to a patient or a disposition (διάθεσις), or accompanied by nausea, applied to ὀδύνη,

πυρετός, έμετος, αγρυπνία, and other similar words.7

äτακτοs, irregular, or disorderly (in Latin, inordinatus), when applied to the pulse, is opposed to τεταγμένοs, regular, or orderly, and distinguished from ἀνωμαλοs, irregular, or uneven (in Latin, inaequalis), inasmuch as a pulse that is ἄτακτοs is always ἀνωμαλοs, but a pulse that is ἀνωμαλοs is not necessarily ἄτακτοs also. For instance, when any number of strong pulsations are regularly succeeded by a feeble one, or when the pulse is regularly intermittent, its equality (ἰσότηs) is lost, and it becomes ἀνωμαλοs; but, inasmuch

<sup>5</sup> 'De Caus. Puls.,' ii, 3, tom. ix, p. 66, l. 13.

7 See Foës, 'Œcon. Hippocr.,' under ἄσαι.

<sup>&</sup>lt;sup>1</sup> Galen, 'De Differ. Puls.,' iv, 3, tom. viii, p. 720, l. 13.

<sup>4 &#</sup>x27;De Præsag. ex Puls.,' i, 3, tom. ix, p. 227, l. 14; p. 228, l. 4.

<sup>&</sup>lt;sup>6</sup> Galen, 'De Compos. Medic. sec. Loc.,' viii, 1, tom. xiii, p. 122, l. 5.

as a certain order  $(\tau \acute{a}\xi \iota s)$  is preserved, it is still considered  $\tau \epsilon \tau a \gamma \mu \acute{\epsilon} \tau o s$ . When, however, the pulse has no order in its irregularity, it is then called  $\ddot{a}\tau a \kappa \tau o s$ , disorderly.

ἄτακτος πύρετος is a fever that is irregular in its course, and fol-

lows no certain type.2

ατάκτως, the adverb, is also applied to fevers, sometimes opposed to εὐτάκτως, sometimes to τεταγμένως, and in Hippocrates joined with πεπλανημένως.

aragía, the substantive, is applied in the same sense to the

pulse.7

ἄτλας, the name applied by Julius Pollux<sup>8</sup> to the *last* of the cervical vertebræ, ὡς ἀχθοφορῶν, as bearing the burden of the head and neck. Possibly, he is the only ancient writer who uses the word with reference to the vertebræ. In modern works it is applied to the *first* cervical vertebra, which is called by Julius Pollux<sup>9</sup> ἐπιστροφεύς, and by Galen<sup>10</sup> and others simply ὁ πρῶτος σπόνδυλος.

ατονία, a word as old as Hippocrates, who uses it to signify relaxation, or want of tone in the system generally, as if nearly synonymous with μαλακίη. Demetrius of Apamea, in the third century B.C., applied it, perhaps, especially to the coats of the veins, and reckoned ατονία (rendered by Cælius Aurelianus defectio vel debilitas corporum), among the four causes of hæmorrhage without a wound. It was one of the words used improperly (according to Galen) by the Methodici, who apparently spoke of it as if it were an actual disease, instead of merely an inability in any part fitly to perform its proper functions (κατὰ τὴν ἐνέργειαν ἀρρωστία). 13

In this latter passage Wigan reads ἀτάξιοι, as if from ἀτάξιος, and this word appears in Maittaire's 'Index Graecus,' but with an asterisk to signify that it is not elsewhere to be met with. The correct reading is, however, ἀταξιη, which has been adopted by Ermerins and Adams.

8 'Onom.,' ii, 4, §§ 132, 178.

άτονος, wanting in tone, relaxed,1, the opposite to which is ἔντονος,2 or euroros.8

arpaχηλοs, without a neck, as applied to a fish; with a short neck,

as applied to a man; 4 or synonymous with κακοτράχηλος.5

ἄτρητος, imperforate, applied to a part of the body, as the anus,6 the meatus auditorius,7 the uterus;8 sometimes applied to the person affected.9 It is also found joined to  $\pi \alpha' \theta os$ , 10 and signifies the affection itself, imperforation, or atresia, which latter word is not found in the Greek writers.

ατροφέω, to be subject to ατροφία.11

ατροφία, want of nutrition, atrophy, is reckoned by Celsus, 12 as one of the species of tabes, the other two being καχεξία and φθίσις. describes it as a condition "in which the body is not nourished, and in which (as some particles are constantly being lost, while no others supply their place,) extreme emaciation comes on, and eventually proves mortal." Cælius Aurelianus<sup>13</sup> also has a chapter on the subject of ἀτροφία, or "nutrimenti cessatio;" but the word is not always used in any such definite sense, and α'τροφία was sometimes considered as a symptom only, not as a disease. 14 It was applied either to the whole of the body, or to any particular part, 15 as the hair, 16 or eye, 17 or leg. 18

ἄτροφος, affected with ἀτροφία; 19 also, containing little nourish-

ment.20

äτυπος, applied to a fever that has no regular form or type. 21 In Aulus Gellius (if the reading is correct) it is joined with balbus,

and appears to mean a person who stammers, or speaks inarti-

culately.1

αυξησις, increase, when applied to a disease, means the second period (sometimes called ανάβασις, or ἐπίδοσις), in which it is increasing in severity; the other stages being the  $d\rho\chi\dot{\eta}$ ,  $d\kappa\mu\dot{\eta}$ , and When applied to an animal or a plant, it signifies growth, which is defined to be its increase in length, breadth, and depth:3 this was considered to be the second of the three principal operations of nature, the other two being γένεσις, generation, and θρέψις, nutrition.4

αὐξητική δύναμις, the power or faculty by which nature brings

about avenous, growth.5

αὐστηρός, of a harsh, rough taste.6

αὐστηρίζω, to be of a harsh, rough taste; omitted in Liddell and Scott's Lexicon.

αὐστηρότης, harshness, roughness of taste.8

aυτόπυρος, a word used by Celsus,9 reckoned as comparatively modern in Galen's time, and equivalent to the more ancient term, συγκομιστός. 10 It means wheaten flour with the bran in it, and also,

the bread made from it, which last is also called αὐτοπυρίτης. 11

aυχήν, the neck, 12 synonymous with τράχηλος; 13 sometimes signifying especially the back part only. 14 Probably, in medical writings, it most frequently signifies a neck in a secondary or metaphorical sense, and is joined to some other word: as ὁ τῆς κύστεως αὐχήν, the neck of the bladder, 15 which is sometimes called τράχηλος, 16 ο της ύστέρας αὐχήν, the neck of the uterus, generally synonymous with

36, § 4, p. 260, l. 3.

τράχηλος, sometimes distinguished from it. When ἀνχήν relates to the bones, it is explained by Galen to mean an apophysis terminating in a larger and spherical extremity called the head, κεφαλή, and is distinguished from an apophysis which terminates in a point and which is called κορώνη. ὁ κατὰ τὸν ἀστράγαλον αὐχήν, means probably what is still called the neck of the astragalus. ὁ αὐχήν τῆς κάτω γέννος, means the neck of the lower jaw-bone supporting the condyle. ὁ αὐχὴν τοῦ μηροῦ, the neck of the femur. ὁ ἀὐχὴν τῆς ὡμοπλάτης, or τῶν ὡμοπλάτων, the neck of the scapula. In a passage of Nicander αὐχήν signifies the æsophagus.

aυχμηρὸς σφυγμός, a dry pulse, is opposed to ὑγρὸς σφυγμός, a moist pulse. Perhaps the terms are only to be found in one passage, where the text is corrupt, and where neither word is defined in terms quite intelligible to a modern reader:—a hard pulse probably

gives some idea of what was intended.

ἄφθα, a word sometimes found in the singular form, <sup>10</sup> but much more frequently in the plural (ἄφθαι). It was generally applied to ulcers of the mouth, in the modern sense of the word aphthae, or thrush, but also sometimes to similar ulcers in other parts of the body, as may be gathered from the use of the kindred words ἀφθάω and ἀφθώδηs. It was very long before the word was Latinized, as not only Celsus, in the first century, speaks of "ulcera oris quae ἄφθαs Graeci nominant," but even as late as the fourth or fifth century Marcellus Empiricus writes in the same way. <sup>12</sup> The word is of frequent occurrence. <sup>13</sup>

åφθάω, to be affected with ἄφθαι, a word probably always used with reference to the part affected, not to the patient. It relates to various parts of the body, as the trachea, the testicles, the left and the

<sup>12</sup> 'De Medicam.,' c. 11, p. 292 A, ed. H. Steph.

<sup>13</sup> See Adams's Commentary on Paulus Ægineta, i, 10, vol. i, p. 15.

<sup>14</sup> In Hippocrates, 'De Morb. Mul.,' i, 34, Littré makes the *patient* the nominative to the verb (tome viii, p. 82, l. 9), but Ermerins has a different reading (vol. ii, p. 566, l. 3).

15 Hippocrates, 'De Morb.,' ii, 50, tome vii, p. 76, l. 8, ed. Littré.

16 Galen, 'De Comp. Medic. sec. Loc.,' ix, 8, tom. xiii, p. 317, l. 14; which

female organs of generation; 1 probably also to the mouth, though I

have not found such a passage.

àφθώδηs, a word found in the 'Coacae Praenotiones,' and therefore older than Hippocrates; probably never applied to a person, but to a part of the body, or to a disease, &c. Sometimes it means like aphthae, as ἀφθωδες έλκος; sometimes complicated with aphthae, as αφθωδες ρεύμα;3 sometimes affected with aphthae, as αφθωδες στόμα.4

άφωνέω, to be ἄφωνος, whether quite speechless, or only unintel-

ligible.5

άφωνία, loss of voice, meant sometimes nothing more than an excessive amount of hoarseness (βράγχος), due to the same causes,6 and synonymous with φωνης ἀποκοπή, or ἀποκεκομμένη φωνή. Sometimes it was used to signify a total loss of voice depending on injury to the recurrent nerves,8 or other causes, when it was synonymous with φωνης ἀπώλεια.9 Sometimes in the Hippocratic Collection it is used, though only indicating a symptom, to imply the disease on which this symptom depends, e. q., apoplexy, &c., as is explained by Galen in several passages.10 There is a chapter in Leo,  $\pi \epsilon \rho i \dot{a} \phi \omega \nu i as$ , in which it is treated only as the result of disease or of surgical injury.11

ἄφωνος, without voice, applied sometimes to a fish, or plant, or a person suffering from absolute loss of voice (στέρησις φωνης), sometimes in a less extensive meaning to a person with some affection of the voice (κάκωσις φωνης). 12 In this latter sense it is synonymous with ἀποκεκομμένος την φωνήν. 13 In two passages Hippocrates uses the two words ανανδος and αφωνος in conjunction, 4 where αφωνος is considered by Galen to be a stronger word than avavous, the latter signifying unable to articulate, the former unable to utter a sound. This explanation has been adopted by Foës 16 and Littré, and sanc-

passage is found also in Oribasius, 'Ad. Eunap.,' iv, 103, p. 668, ed. H. Steph., and in 'Paulus Ægineta,' iii, 54, p. 51, l. 3, ed. Ald.

16 See his 'Œcon. Hippocr.,' in avavôía.

tioned by Liddell and Scott; but Ermerins, in his edition of Hippocrates (vol. i, p. 226), objects to it as too refined, and considers that the second word, ἄφωνος, is simply a gloss of the first, ἄνανδος, and ought therefore to be omitted from the text in both places. There seems, however, to be no authority whatever for this omission, which is not absolutely required by the sense; and the error (if it be one) must be of very ancient date, as the present text can be traced up to the time of Sabinus, who was an older commentator than Galen, and lived in the first century after Christ.

äχηλος, a word not to be found in the Greek lexicons, is used by Galen,<sup>2</sup> as synonymous with μονώνυχος,<sup>3</sup> and applied to a class of quadrupeds without horns, and walking on single hoofs (ὁπλαῖς μονοφυέσιν), corresponding with Cuvier's family of the Solipeda. It is also synonymous with μονόχηλος, ἀσχιδής, and signifies having

solid hoofs.

åχλύs is used sometimes in a general sense, and signifies merely dimness of sight, from whatever cause it may arise; sometimes it is the result of superficial ulceration. The word is found applied to the uterus in the common editions of Hippocrates, but the text is undoubtedly corrupt, and has been altered by Ermerins accordingly. In Aretæus the word is used metaphorically and poetically, and with an evident allusion to Homer, 'II.,' v, 127.

άχλνόω, to cause dimness of sight.8

äχλυώδηs is applied in the Hippocratic Collection to a person affected with dimness of sight, or to the eye itself, on and to a wind, to a fever, producing dimness of sight, without in either case indicating or implying the precise cause of the affection. In Aretæus Adams renders ἀχλυώδηs ὁ ἄνθρωπος by "the patient becomes dark-

<sup>1</sup> See Galen, ibid., p. 759.

<sup>3</sup> *Ibid.*, vi, 3, p. 545, l. 10; p. 548, l. 8.

<sup>4</sup> Erotianus, 'Expos. Voc. Hippocr.' This appears to be the meaning of the word in Paulus Ægineta, i, 31, p. 4B, l. ult., ed. Ald., copied from Oribasius, 'Synops.,' v, 27, p. 80, ed. H. Steph. The same expression, "dimness of sight," which is used by Adams in this place as the translation of  $\dot{\alpha}\chi\lambda\dot{\nu}\varsigma$  (vol. i, p. 40), is used by him in two other passages as the rendering of  $\dot{\alpha}\mu\beta\lambda\nu\omega\pi\dot{\iota}\alpha$ , iii, 22, vol. i, pp. 419, 421.

<sup>5</sup> Aëtius, vii, 27, p. 127, l. 48, ed. Ald.; Pseudo-Galen, 'Introd.,' c. 16, tom. xiv, p. 774, l. 3; Leo, 'Consp. Medic.,' iii, 27, in Ermerins, 'Anecd. Med. Gr.,'

p. 143.

9 'Coac. Praenot.,' § 36, tome v, p. 594, ed. Littré.

10 Ibid., § 221; 'Prorrhet.,' i, § 46, tome v, pp. 632, 522. So too in Galen, 'Comment. in Hippocr. "Prorrhet I," 'ii, 45, tom. xvi, p. 609, l. 16; p. 610, ll. 1, 8; and in Aretæus, 'Caus. Chron.,' ii, 13, p. 127, l. 21, ed. Adams.

11 'Aphor.,' iii, 5, tome iv. p. 488.

12 'Prorrhet.,' i, § 74, tome v, p. 528. In this passage Ermerins (vol. i, p. 16) has without authority or necessity altered the text, though the same words are found in Galen, loco cit., p. 663.

<sup>13</sup> 'De Cur. Acut.,' ii, 4, p. 187, l. 8; p. 436, l. ult.

coloured," but there seems to be no reason why the word should not bear the usual meaning in this passage. The Latin caligare, by which it is rendered in the Latin versions, will bear either sense.

äχολος, without bile, probably almost always applied to the fæces; sometimes not producing bile, as ἄχολον γάλα, applied to

ass's milk.2

ἄχροια signifies want of colour, or a bad colour, opposed to ἐξέρνθρος χρώς,<sup>3</sup> or ἔνχροια;<sup>4</sup> but sometimes bears either or both senses indiscriminately.<sup>5</sup> In a difficult passage of Aretæus occurs the phrase προσώπου ἐρύθημα ξὺν ἀχροίη, which is literally translated by Adams,<sup>6</sup> "redness of countenance, along with paleness;" but these words are as puzzling as the Greek text. Ermerins changes the word into ἐνχροίη (p. 47, l. 9), and renders the passage, "vultus ruber et bene coloratus" (p. 307, l. 16); but there is no authority for the alteration, and "redness of countenance with a good (i. e. a red) colour" looks like tautology. Perhaps the word may signify irregularity or inequality of colour, or, perhaps, occasional or partial paleness is to be understood; but neither of these explanations is perfectly satisfactory.<sup>7</sup>

άχροιέω, or άχροέω, to become άχροιος or άχροος.8

äχροιοs, or äχροοs, äχρουs, colourless, limpid, applied to semen; colourless, pale, ill-coloured, applied to the complexion, 10 nearly

synonymous with λείφαιμος, but a stronger word.11

ἄχωρ, 12 sometimes called a ἔλκος, as if applied to a single pustule, 13 sometimes a πάθος, as signifying a collection of pustules. 14 It differs from κηρίον, favus, (which it closely resembles,) chiefly as consisting of smaller pustules; both words being connected with porrigo, 15 and signifying an affection of the scalp. The origin of the word is quite uncertain; the derivation from  $\alpha$  and  $\chi \omega \rho \alpha$  ("quod

As probably in Aretæus, 'De Caus. Chron.,' i, 8, p. 67, l. 12.

6 'De Caus. Acut.,' ii, 8, p. 39, l. 24; p. 281, l. 2.

7 See Petit's Commentary on the place, p. 435, ed. Kühn.

8 Hippocrates, 'De Fract.,' § 25, tome iii, p. 498, l. penult., ed. Littré.

<sup>9</sup> Aretæus, 'De Caus. Chron.,' ii, 5, p. 103, l. antep., ed. Adams.

<sup>10</sup> Hippocrates, 'Prorrhet.,' i, 71, tome v, p. 528, l. 5, ed. Littré; Aretæus, 'De Caus. Chron.,' i, 6, p. 62, l. 9.

11 Galen, 'Comment. in Hippocr. "De Vict. Acut.," 'iv, 97, tom. xv, p. 904,

ll. 4, 15, 17.

12 This, according to Liddell and Scott, is the old and genuine form of the word, though, probably, in all the existing editions of the Greek medical authors

it is written ἀχώρ.

13 Galen, 'De Tumor. praeter Nat.,' c. 15, tom. vii, p. 728, l. 8. Hence, perhaps, the use of the word in the plural, ἄχωρες, Alexander Trallianus, i, 9,

pp. 14, 15, ed. Basil.

14 Id., 'De Comp. Med. sec. Loc.,' i, 8, tom. xii, p. 463, l. penult.

15 See Bateman's 'Cutaneous Diseases,' "Porrigo," and "Definitions." Both words are found in the Hippocratic Collection, and both are translated "favus" by Littré. 'De Affect.,' § 35, tome vi, p. 246; "Prorrhet.,' ii, 11; 'De Alim.,' § 20, tom. ix, pp. 32, 104.

non amplum locum occupet"), is attributed to Galen, but no reference is given, and it is difficult to imagine that Galen should ever have proposed anything so absurd. The author of the spurious treatise 'De Remediis Parabilibus' derives the word from  $i\chi\omega\rho$ , on account of the *ichorous* discharge from the pustules; but this etymology is not much more probable than the former, and others

that have been proposed are not more satisfactory.

äψιs, literally a touching. The expression äψιs φρενῶν occurs twice in the Hippocratic Collection,<sup>3</sup> and is explained by Galen,<sup>4</sup> to signify  $\pi a \rho a \phi \rho o \sigma \dot{\nu} \nu \eta$ , delirium. The similar phrase äπτεσθαι φρενῶν is also found.<sup>5</sup> Aretæus, who is fond of Hippocratic words and phrases, uses the expression twice. In one passage,<sup>6</sup> manifestly in the sense of delirium; and possibly in the other also,<sup>7</sup> though in this latter the word  $\phi \rho \epsilon \nu \tilde{\omega} \nu$  is generally taken to signify the diaphragm.

άψυχέω occurs in the Hippocratic Collection,<sup>8</sup> and is explained by Erotianus<sup>9</sup> and Galen<sup>10</sup> to signify λειποθυμέω, to swoon:—it

probably never means to be a \( \psi \nu \chi \sigma \), in the sense of lifeless.

 $\mathring{a}\psi\nu\chi \mathring{i}a$  occurs in the Hippocratic Collection, <sup>11</sup> and is explained by Galen to signify  $\lambda\epsilon\iota\pi\iota\theta\nu\mu\iota\dot{\alpha}$ , <sup>12</sup> or  $\lambda\epsilon\iota\pi\iota\theta\nu\chi\dot{\iota}a$ , <sup>13</sup> swooning. Sometimes it means merely faintness, <sup>14</sup> sometimes loss of spirits, <sup>15</sup> but probably never lifelessness. The word is sometimes found in the plural. <sup>16</sup> The word  $\mathring{a}\psi\nu\xi\dot{\iota}\eta\nu$  is found in Kühn's Aretæus, <sup>17</sup> but no such word is recognised by Liddell and Scott, and Ermerins and Adams are no doubt right in reading  $\mathring{a}\psi\nu\chi\dot{\iota}\eta\nu$ . <sup>18</sup> The word apopsychia is found in some medical dictionaries, but it is of doubtful authority, and rests only on one passage of Galen, <sup>19</sup> where the reading is un-

# ADVERSARIA MEDICO-PHILOLOGICA.

#### PART VI.

[In resuming these "Adversaria" I would again request those persons who may consult this collection of words to bear in mind that it does not pretend to completeness in any way. It is very far from being a complete collection of Greek medical terms, for not only have all botanical and chemical words been designedly omitted, but also those belonging especially to the Hippocratic Collection, which are sufficiently explained in the excellent 'Œconomia Hippocratica' of Foës; neither is the treatment of each word to be considered complete, for doubtless various meanings are passed over, and probably better passages might frequently have been quoted. It is simply a contribution (and that a very imperfect one,) to Greek medical technology.]

βαδιστικός, fitted for walking. Galen calls the leg βαδιστικον σργανον, and says that it is especially suited to man as being

βαδιστικόν ζωον.

βαλανεῖον, like balneum in Latin, is used in three senses, and signifies—either, 1, a place for bathing;<sup>2</sup> or, 2, a bath in general;<sup>3</sup> or, 3, especially a hot bath, viz. either the laconicum and caldarium together,<sup>4</sup> or perhaps the laconicum alone.<sup>5</sup> See Dr. Daremberg's note to Oribasius, tome ii, pp. 881, 882, from which this article is abridged.

βάλανος, an acorn (Lat. glans). Hence (omitting its botanical meanings,<sup>6</sup>) applied, from similarity of shape, to the extremity of the penis. Aristotle mentions it as the ordinary name in his time,<sup>7</sup> and it continued to be the most usual, if not the only, name used by the Greeks<sup>8</sup> down to the middle of the sixteenth century.<sup>9</sup> Meletius, a

Anat.,' cap. 28.

9 Hypatus (i. e. Georgius Sanguinatius), 'De Corp. Part.,' p. 154, ed. Bernard.

<sup>8</sup> See Rufus Ephesius, 'De Corp. Hum. Part. Appell.,' p. 31, 1. 14, ed. Clinch; Aretæus, 'De Cur. Morb. Acut.,' i, 1, p. 140, l. 1, ed. Adams; Galen, 'De Meth. Med.,' v, 15, tom. x, p. 381, ll. 10, 14; Pseudo-Galen, 'Introd.,' c. 10, tom. xiv, p. 706, l. 4; c. 19, p. 787, l. 8; Paulus Ægineta, vi, 53, pp. 236, 238, ed. Briau.

writer of the seventh or eighth century, says¹ that it means the penis; but this is probably a mistake. The Latin synonym, glans, was early employed in the same sense, and continues in use to the present day.²—In the Hippocratic Collection  $\beta\acute{a}\lambda aros$  is used both for a suppository and a pessary;³ in later Greek writers probably only in the former sense.⁴ Hence  $\beta a\lambda ariz\omega$ ,⁵ to administer a suppository (or a pessary?), and  $\beta a\lambda ariz\omega$ , used by Cælius Aurelianus⁶ to signify 'pessulus,' a pessary (or perhaps a suppository). The diminutive forms  $\beta a\lambda arizor$  and  $\beta a\lambda arizo$ 8 are also found.

βαλάιτων, the scrotum, a popular word, distinguished from the scientific term ὅσχευς. Compare bursa in Latin, bourse in French,

and purse in English.

βαλαιτοειδής (or, more correctly, βαλαιτισειδής) χιτων signifies the tunica vaginalis, being synonymous with έρυτρός, which was another

name for έρυτροειδής (or έλυτροειδής) χιτών.10

 $\beta \alpha \lambda \mu \delta s$ , a comparatively modern term, signifying the lung, or the chest  $(\sigma \tau \tilde{\eta} \theta \sigma s)$  in general. Dr. Daremberg conjectures that the word may be a corruption of the Latin pulmo.

βαρυηκοέω, to be hard of hearing. 13 βαρυηκοία, hardness of hearing. 14

βαρυήκουs, hard of hearing, deaf; 15 also deafening, applied to the

south wind (voros).16

βασιλικός, royal, an epithet "applied to parts and medicines from their importance or presumed excellence." (Mayne.) Perhaps Euclpides (a celebrated oculist in the time of Celsus<sup>17</sup>) was the first who did this when he gave the name to a collyrium. It was also given to the ointment called τετραφάρμακον, and to other compounds besides. The "Basilicon Ointment" of modern pharmaceutical works differs from the ancient compound.

The case of the vena basilica is very singular, as the earliest writers (so far as is at present known) in whose works the name is found are not the Greek, but the Arabic; and it is made still more puzzling by the fact that the Greek translator, (who is supposed to have lived in the eleventh century,) when he meets with the word in the Arabic, does not use the corresponding Greek word  $\beta a \sigma i \lambda i \epsilon \dot{\eta}$ , but calls the vein in question  $\dot{\eta} \mu \dot{\epsilon} \sigma \eta \phi \lambda \dot{\epsilon} \psi$ . The only Greek work in which I have found the word is the Pseudo-Synesius, De Febribus, which is, in fact, a translation from the Arabic work of Abú Jaafar Ahmed, by an unknown writer. Perhaps the earliest Latin writer in whose works the word is found is Constantinus Afer, who lived in the eleventh century, and translated this same Arabic treatise into Latin under the title 'Viaticum.'5

βελονοειδής, needle-shaped, applied (perhaps exclusively) to the styloid process of the temporal bone, which is generally called ἀπόφυσις, but sometimes ἔκφυσις.

βιασμός, a popular name for τεινεσμός, or inflammation of the

rectum.8

βλαρία, a popular name for άση, or nausea.9

βλεφαρικόs, relating to the eyelids, applied to collyria.10

βλεφαρίs means sometimes an eyelid, 11 but more commonly (in the plural) the eyelashes. 12

βλέφαρον, an eyelid. The diseases of the eyelids are enumerated

by Galen. 13

βλεφαρόζυστον, an instrument for removing callosities from the inner surface of the eyelid. 14

βλεφαροτόμον, a scalpel for the eyelids. 15

βοθρίον, a little pit, is used to signify—1, the alveolus, or socket of a tooth, or, more precisely, the cavity in which the tooth is inserted, the walls of the cavity being called  $\phi a \tau \nu i o \nu$ ; <sup>16</sup>—2, an ulceration of the

cornea, distinguished from κοιλωμα as being deeper and narrower.<sup>1</sup> In this latter sense it is found in the Hippocratic Collection,<sup>2</sup> and

explained by Erotianus.<sup>3</sup>

βόμβωs, a word in the Hippocratic Collection to express a buzzing sound in the ears, tinnitus aurium; <sup>4</sup> also, in later writers, a rumbling in the intestines, <sup>5</sup> differing slightly from βορβορυγμόs as arising more entirely from flatus.

βομβώδηs, humming, buzzing.6

βυρβορυγμός, the noise caused by flatus in the intestines with a small amount of fluid, in which sense the word is used in the Hippocratic Collection. Leo apparently says that Galen uses the words ἐλκύδριον and κλύδων in the same sense. The former word I have never found in this sense, but κλύδων is used to signify fluctuation in 'De Sympt. Caus.,' iii, 2, tom. vii, p. 215, ll. 8, 10, 13, which may therefore,

perhaps, be one of the passages referred to by Leo.

The most interesting circumstance connected with the word is its relation to the oriental, or glandular, or true Plague, which till recently was supposed to have been unknown in Europe before the time of Justinian (the sixth century), and to have been first described by Procopius, the historian. In 1831 Cardinal Mai published a

fragment of Rufus Ephesius, which was first prominently brought into notice in 1840 by M. Littré, and which proves conclusively that the buboes occurring in the groins and armpits in the course of a pestilential fever were known at least as early as the first century after Christ. This being the case, it has been supposed with some probability that in some passages in the Hippocratic Collection  $\beta_0\dot{\nu}\beta_{\omega\nu}$  signifies the bubo of the true Plague, and Adams even considered that the pestilence which prevailed [in Athens] during the Peloponnesian war partook of the nature of the glandular plague, though there is no mention of buboes in the account given by Thucydides. This, however, though quite possible, can hardly be considered probable, as it is inconceivable that so important a symptom should (if it had really been present) have been entirely overlooked by so accurate a writer as Thucydides, even though he was not himself a physician.

Bουβωνοκήλη, inguinal hernia, is thus distinguished by Paulus Ægineta<sup>6</sup> from ἐντεροκήλη:—"These diseases differ in situation only; for, when the intestine remains in the groin, it is called βουβωνοκήλη, and when it falls down into the scrotum, it is named ἐντεροκήλη." Perhaps Celsus is the earliest extant writer who uses the word,<sup>7</sup>

which is found also in Galen<sup>8</sup> and Leo.<sup>9</sup>

βουβωνοκηλικός, relating to inguinal hernia.10

βούλιμος, a voracious appetite. Perhaps Erasistratus is the earliest medical author who is known to have used the word, 11 which is frequently met with in the Greek writers, 12 and is one of the medical words adopted by the Arabians, and used in the ordinary sense. 13 Leo explains the word to mean an entire want of appetite, 14 but I have not noticed it used in this sense elsewhere.

The verb βουλιμιάω, to have a voracious appetite, was also used by

Erasistratus, 15 and is found in Galen, 16 and elsewhere.

The adjective, having a voracious appetite, is found in the form βουλιμιώδη in Kühn's edition of Galen; 17 Liddell and Scott in their

Lexicon only mention the form βουλιμώδηs, but as there is the substantive βουλιμία, as well as βούλιμος, probably both forms of the adjective are admissible.

βούπεινα, a word used by Erasistratus to signify a voracious

appetite.1

βράγχος sometimes signified simple hoarseness, distinguished from άφωνία, or complete loss of voice, by being less in degree, not different in kind.2 Sometimes it was used to signify the affection from which the hoarseness proceeded, and which is thus distinguished by Paulus Ægineta<sup>3</sup> from κόρυζα and κατάρρους:—"All these complaints have this in common, that they are occasioned by the defluxion of a redundant humour from the head to the parts below. When, therefore, it seats in the nostrils, the complaint is called κόρυζα; when in the pharynx and roof of the mouth, simply κατάρροος; but when it attacks the larynx and arteria trachea, so as to occasion a roughness of the membrane which lines them, the voice becomes hoarse (βραγχώδης), and the complaint is called βράγχος and ἀρτηριακὸν [πάθος]." 4 Sometimes it seems to mean either the cause or the effect, or perhaps both, as in the description of the Plague of Athens by Thucydides, 5 where something more than mere hoarseness is probably intended, though this also may be included.

 $\beta\rho\alpha\gamma\chi\omega\delta\eta$ s sometimes, in the Hippocratic Collection, means hoarse, as the voice;<sup>7</sup> sometimes, subject to  $\beta\rho\alpha'\gamma\chi\sigma$ s (probably in both senses of the word);<sup>8</sup> sometimes, apt to produce  $\beta\rho\alpha'\gamma\chi\sigma$ s, applied to water.<sup>9</sup> The word was still in use in the time of Leo.<sup>10</sup> The adverb

βραγχώδωs is found in Galen.11

βραδυπεπτέω, to have slowness of digestion.12

βραδυπεψία, slowness of digestion, 13 as distinguished from ἀπεψία

and δυσπεψία.

 $\beta \rho \alpha \chi i \omega \nu$ , a word found in the Homeric poems, signifying sometimes the arm in the common sense of the word, viz. the whole of the upper extremity; sometimes, only the upper part as far as the elbow,

but including both the bone and the muscles. In the Hippocratic Collection it signifies sometimes the bone itself, os humeri;2 sometimes, the muscles also, from the shoulder to the elbow;3 and it is used in the same senses indiscriminately by later writers.4

Some persons have considered that  $\beta \rho \alpha \chi i \omega r$  signified the forearm, as brachium undoubtedly was so used by the Latin writers;6 and, apparently, the authority of Galen has been quoted in support of this opinion. I have not had an opportunity of learning what passages in Galen's works are supposed to bear this meaning, and therefore cannot examine them; but in all the passages that I have seen in Galen and the other Greek anatomists, the word is certainly used in the sense given above, and the instances are far too numerous to be quoted.

The derivation of the word from Brax's, short, and kiw, a column

(quasi βαχυκίων), scarcely deserves refutation.

βραχυμογήs, the word adopted in one passage in the Hippocratic Collection<sup>8</sup> by Littré<sup>9</sup> and Ermerins, 10 where Kühn<sup>11</sup> and most former editors had βραγχώδεες. It is translated by Ermerins "brevi tempore laborabant," by Littré and Daremberg12 "ils s'essoufflaient promptement;" by Liddell and Scott the word is explained "suffering but a short time." It is not quite clear which of these is the right meaning in the passage referred to.

βραχυπνοέω, to be subject to shortness of breath. 13

βραχύπνοια, shortness of breath. 14

βραχύπνους, or βραχύπνους, a word used in the Hippocratic Collection to signify shortness of breath, that is (as explained by Galen<sup>15</sup>), short inspirations at long intervals. 16 This restricted sense, however, is probably not always observed, and the word may be considered to signify both short and hurried inspirations. 17

βραχυπότης, a word found in the Hippocratic Collection,1 translated parvibibulus by Cælius Aurelianus,2 and explained by Galen3 (who uses the form βραχυπότος) to mean one who drinks seldom, and little at a time, though he also says the word is applied to those who

drink more freely.4

βρέγμα, the upper part of the head, between the μέτωπον, or forehead, and the κορυφή, or crown of the head,5 rendered by Cælius Aurelianus medium capitis, and medium testæ,6 and answering probably to the Latin sinciput. The word occurs in the Homeric poems7 and in the Hippocratic Collection,8 and also in the later anatomists.9 In the plural it signifies more precisely the parietal bones, 10 which are sometimes called "the bones of the βρέγμα," and sometimes (apparently in a more general way) the bones of the κορυφή. 12 The expression, "the bone (sing.) of the βρέγμα was fractured"<sup>13</sup> does not, of course, imply that the writer considered the  $\beta \rho \dot{\epsilon} \gamma \mu a$  to consist of only one bone, but rather signifies one of the parietal bones.—Etymologically, the word is probably connected in some way with  $\beta \rho \epsilon \chi \omega$ , to wet, either because it was supposed that cold and moisture continued longer in this part of the brain on account of the softer and more spongy character of this bone, 14 or because this is the part of the head to which a fomentation  $(\epsilon \pi \iota \beta \rho o \chi \dot{\eta})$ is applied. 15—This part of the head was also called ἀπαλόν, but this was probably a mistake, arising from the  $\beta \rho \epsilon \gamma \mu \alpha$  being said to be åπαλόν, soft. The form βρογχμός, or βροχμός, is also found in a late writer.16

βρογχίη is found in one place in the Hippocratic Collection,17

where it is impossible to say in what sense the word was used by the writer, who probably had no definite idea of his own meaning. Triller thinks it means the vena cava, others simply a cartilaginous tube, and Ermerins<sup>2</sup> has adopted the conjectural reading, βρυχίη.

βρόγχιον, a diminutive of βρόγχος, is more commonly found in the plural, βρόγχια, and generally means the cartilaginous rings of the trachea; sometimes, the ramifications of the trachea, or modern bronchia, which were called also σήραγγες and ἀορταί. This latter meaning is probably what is intended by Cælius Aurelianus, who speaks of the "pulmonis partes quæ arteriæ (i. e. to the trachea) sunt adhærentes, quas appellant bronchia," and says that they were supposed by Asclepiades to be the seat of peripneumonia.6 In one place in the Hippocratic Collection it is supposed by Foës to signify the ethmoid bone, but the writer probably had no very distinct idea of his own meaning.—The word occurs in the singular number in Galen, meaning a cartilaginous ring of one of the smaller bronchial tubes, which is sometimes spit up in ulceration of the lungs; and the same expression occurs in Aretæus, 10 (where the text has been corrected by the later editors,) and in Leo, where βρόγχον should probably be changed into βρόγχιον. 11

βρογχοκήλη does not appear to have been used by the ancient physicians to signify especially the enlargement of the thyroid gland which the moderns call bronchocele, or goître, but was applied generally to any voluminous tumour of the throat, whether the con-

tents were solid or fluid, and even including aneurysm. 12

βρογχοκηλικό's, affected with βρογχοκήλη.  $^{13}$ 

βρόγχος, when used in a strictly anatomical sense, probably always meant the trachea.14 Sometimes, however, it signified more vaguely the throat, as in the expression βρόγχος έξέχει, 'the throat protrudes,'15 and the compound term έξεχέβρογχος, having the throat prominent.

# ADVERSARIA MEDICO-PHILOLOGICA.

#### PART VII.

[Those persons who may consult this collection of medical words are again reminded that it does not pretend to completeness in any way. Not only have all botanical and chemical words been designedly omitted, but also those belonging especially to the Hippocratic Collection, which are sufficiently explained in the excellent 'Œconomia Hippocratica' of Foës. And again, in the treatment of each word some meanings will, no doubt, be found occasionally to have been passed over; so that the Writer wishes the collection to be considered simply as a contribution (however imperfect) to Greek medical technology.]

γάγγαμον, generally said to mean the omentum. I have not yet found the word in any ancient medical author, and the explanation given by Julius Pollux<sup>2</sup> only states that it is the part in the neighbourhood of the umbilicus, so called as being a plexus of

nerves, like a net.

γάγγλιον is, perhaps, first found in Celsus,<sup>3</sup> and is generally used in the modern surgical sense of the word ganglion, to signify an encysted tumour occurring on a tendon or aponeurosis.<sup>4</sup> Sometimes it is applied to a similar tumour on the head,<sup>5</sup> but probably never to an anatomical ganglion, or natural knot-like enlargement in the course of a nerve, though Galen distinctly describes these bodies,<sup>6</sup> and compares them to "the so-called ganglion." The definition of the word (first given by Galen,<sup>7</sup> and repeated by following writers) is νεύρου συστροφή, which is unusually obscure, inasmuch as both the words are probably used in an indefinite sense: νεῦρον means either a nerve or a tendon,<sup>8</sup> and συστροφή may either signify a twisting or knot, or a tumour or gathering.<sup>9</sup>

<sup>2</sup> 'Onomast.,' ii, 4, § 169.

<sup>5</sup> Paul. Ægin., vi, 39.

<sup>7</sup> Defin. Med., tom. xix, p. 441, l. 6.
<sup>8</sup> Accordingly, in Paul. Ægin., vi, 39, M. Briau translates it nerve, Adams tendon, which latter is probably correct. There is the same ambiguity in the Arabic. Albucasis, in translating this chapter of Paulus Ægineta, does not use the word ganglion, or any other single word, but a periphrasis; and the word

'asab, is rendered nervus by Channing (ii, 50, p. 255), tendon by M. Leclerc ('La Chirurgie d'Abulc.,' p. 131).

<sup>6</sup> τῷ καλουμένω γαγγλίω, 'De Usu Part.,' xvi, 5, tom. iv, p. 291, 1. 5.

γαγγλιώδηs, of the nature of a ganglion, in the sense of an encysted

tumour, is found in the Hippocratic Collection.1

γάγγραινα, incipient mortification or gangrene, being midway in intensity between severe inflammation and complete mortification or sphacelus, 2 σφάκελος. The word is found in the Hippocratic Collection,3 but is not always used in the precise sense given above.4 It is one of the Greek medical words adopted by the Arabians with-قىغانغرانا ,out any change

γαγγραινικός, gangrenous.6

γαγγραινόυμαι, to become gangrenous.7

γαγγραινώδης, gangrenous.8

γαγγραίνωμα, gangrene, properly (perhaps) a part become gangrenous.9

γαγγραίνωσις, gangrene, properly the becoming gangrenous.10 γαλακτουργέω, to make or secrete milk, as a woman. 11

γαμμοειδήs, shaped like a Γ, applied by Paulus Ægineta 12 to a

cauterizing iron.

γαργαρεών is used, apparently, by Aristotle 13 to signify the trachea, but in other ancient authors it means the uvula in its natural state. The word σταφυλή was properly applied to the part only when it was inflamed and swollen; 14 but this was not the case with the corresponding Latin term uva, which is used by Celsus 15 as the common name for the uvula; and in one of the spurious works of

<sup>13</sup> 'Hist. Anim.,' i, 11, p. 14, l. 20, ed. Bekker.

<sup>14</sup> See Foës, 'Œcon. Hipp.,' who refers to the principal passages in which the word occurs. To these may be added Galen, 'De Usu Part.,' xi, 11, t. iii, p. 888, l. 3 &c., quoted by Oribasius, 'Coll. Med.,' xxiv, 10, t. iii, p. 319, ed. Daremb.; Meletius, 'De Hom. Fabr.,' c. 10, p. 83, l. 20, ed. Cramer; Joannes Actuarius, 'De Diagn. Morb.,' ii, 18, p. 453, ed. Ideler; Leo, 'Consp. Med.,' iv, 8, p. 154, ed. Ermerins.

<sup>15 &#</sup>x27;De Med.,' vi, 14; vii, 12, § 3.

the Hippocratic Collection γαργαρεών signifies the morbid condition of the uvula, while σταφυλή means the healthy condition.1 The word was by some derived from γαργαλίζω,2 from the tickling sensation caused by the uvula to the trachea; by others from γαργαρίζω,<sup>3</sup> from the noise made in gargling. It was supposed to play a very important part in the production and modulation of the voice, for which reason it was compared to the plectrum of the lyre.4 The excision of the uvula was practised in early times, and is mentioned in the Hippocratic Collection. The other words relating to the uvula, whether in its natural or morbid condition, imas, κιονίς, κίων, σταφυλή, will be explained (it is hoped) in their proper places.

γαστήρ, a word as old as the Homeric poems, and used in them in the same senses as in later writers.6 Like the English belly, it signifies sometimes (1) the whole abdomen<sup>7</sup>; sometimes (2) one of its principal cavities, as (a) the stomach, or (b) the uterus; some-

times (3) the intestinal canal. 10

γαστροκνήμη, the calf of the leg, 11 is recognised by Liddell and Scott in their Greek Lexicon, but is, perhaps, only a corrupted form of

the following word.

γαστροκνημία, the calf of the leg, 12 compounded of γαστήρ, in the sense of a swelling or protuberance, and  $\kappa\nu\eta\mu\eta$ , the leg; opposed to άντικνήμιον, the shin.

γαστροκνήμιον, the calf of the leg, another form of the preceding

word.13

<sup>12</sup> Galen, 'De Anat. Admin.,' ii, 7, t. ii, p. 316, l. 5; p. 317, l. 4; Aristotle, 'De Part. Anim.,' iv, 10, p. 113, l. 26, ed. Bekker.

13 Meletius, 'De Hom. Fabr.,' c. 30, p. 128, l. 16, in Cramer's 'Anecd. Gr., vol. iii; Julius Pollux, 'Onomast.,' ii, 4, § 190.

γαστρορραφία, gastrorrhaphy (compounded of γαστήρ, the abdomen, and ραφή, a suture), is first found in Scribonius Largus, who uses it as a foreign word,1 in the first century after Christ. The operation had, however, been previously fully described by Celsus.2 In Galen's time the word seems to have been scarcely recognised, as he speaks of "the so-called gastrorrhaphy," την καλουμένην γαστρορραφίαν.8

γενειάω, to grow a beard.4

γένειον, a word found in the Homeric poems, 5 where it sometimes signifies the beard, but more commonly the chin, which is the sense it (probably) always bears in the medical writers.6

γεννάω, to beget, used generally of the father; hence, to give rise to, as a muscle or tendon; sometimes to bring forth, as the mother.

γέννησις, the act of procreation,10 distinguished from κύησις, concep-

tion, and τόκος, childbirth.11

γεννητικόs, fit for procreation; 12 generally, relating to generation, generative, as γεννητική δύναμις, 13 the faculty of generation, γεννητική πράξις,14 the act of generation, γεννητικά μόρια 15 or όργανα,16 the parts or organs of generation. Sometimes the word is found with a genitive, as τῶν ἀρρένων or τῶν θήλεων γενιητικά, productive of male or female children. 17

yérvs, the jaw in general; it being indicated which jaw is meant, either by the sense of the context, or by prefixing ανω or κατω. Thus, in Galen, 18 the lower jaw is first called ή κάτω γένυς, but when

1 "Quod a Græcis dicitur γαστρορραφία." ('De Compos. Medic.,' cap. 76, p. 228, ed. H. Steph., in 'Med. Art. Princ.')

2 'De Medic.,' vii, 16.

<sup>4</sup> Aristotle, 'De Gener. Anim.,' ii, 7, p. 72, l. 13, ed. Bekker; Meletius, 'De

Hom. Fabr.,' c. 8, p. 77, l. 6.

<sup>5</sup> See M. Daremberg, 'La Médecine dans Homère,' p. 13.

6 Rufus Eph., 'De Appell. Part.,' p. 26, l. 22, ed. Clinch; Pseudo-Galen, 'Introd.,' c. 10; t. xiv, p. 703, l. 7. In Aristotle, 'Hist. Anim.,' i, 12, p. 14, l. pen., the word cannot signify the upper jaw (see Liddell and Scott's 'Gr. Lex.'); but the meaning of the passage seems to be, that "of the jaws the more prominent part  $(\tau \delta \pi \rho \delta \sigma \theta \iota \sigma \nu)$  is called  $\gamma \epsilon \nu \epsilon \iota \sigma \nu$ , and the less prominent part  $(\tau \delta \delta \pi \iota \sigma \theta \iota \sigma \nu)$ is called yevec." This passage is extracted by the anonymous author of the 'Introd. Anat.,' c. 56, p. 124, ed. Bernard.

mentioned again immediately afterwards it is simply called hyérus. And thus, too, in Aretæus, when it is said that during an attack of epilepsy or tetanus the jaw (γένυς) rests or is fixed upon the breast, it is plain that the upper jaw is not intended. Except in cases like these it is not perhaps quite certain that ή γένυς alone ever means the lower jaw.<sup>2</sup> In Hippocrates <sup>3</sup> the sense sufficiently shows that the chin or lower jaw is intended, without considering (with Galen4) that the writer intended to use the word as otherwise than synonymous with γνάθος; and in Homer, 'Od.,' xi, 320 (quoted by Liddell and Scott), there seems no reason why yévus (that is yévuas) should not mean both juws, and  $\lambda \dot{\alpha} \chi \nu \eta$ , the moustache, as well as the beard. In an obscure passage of Aristotle, yévus is distinguished from γένειον, and said (apparently) to signify the posterior part of the iaw, yévelor being the anterior part, but I have not noticed this meaning of the words elsewhere. Among the ancients it was disputed whether the lower jaw consisted of one bone or two, Galen himself pronouncing, without sufficient explanation, in favour of the latter opinion.6

γιγγλύματα in Galen was long ago corrected by Foës,8 and there-

fore Kühn ought to have read γεγιγγλύμωνται in his edition.

γιγγλυμοειδής or γιγγλυμώδης, 10 and γιγγλυμοειδῶς, 11 words of kindred meaning to γίγγλυμος, but applied to human anatomy at a much earlier date.

γίγγλυμος, a hinge; 12 hence used by writers, called 'recent' in Galen's time, to signify the third species of  $\delta\iota$ άρθρωσις, or moveable articulation (distinguished from  $\dot{\epsilon}\nu$ άρθρωσις and  $\dot{\alpha}\rho$ θρωδία), in which the bones that are placed in contact mutually penetrate each other, and of which the vertebræ and the elbow-joint are given as examples. 13

γιγγλυμόομαι, to have a hinge-joint.14

γίγγλυσμος is not recognised by Liddell and Scott, and is probably a mistake for γίγγλυμος. 15

γλαυκός, when applied to the urine, signifies a shade of colour be-

tween γαλακτώδηs, milky, and χάροποs, of the colour of the onyx: it is compared by Theophilus 1 and Joannes Actuarius 2 to transparent When applied to the eye in medical writers it probably always includes the idea of colour. M. Sichel published a 'Mémoire sur le Glaucome' 3 (referred to by M. Littré and M. Daremberg in the notes to their translations of the 'Aphorisms' of Hippocrates) 4 in which he showed that γλαυκός did not mean green or greenish (as stated by some modern lexicographers), but "une teinte bleuâtre claire, tirant sur le bleu ou le gris." 5 It would seem, however, as if the word must have meant something more than merely a colour, as Aristotle 6 mentions γλαυκότης as a πάθημα, and ἀσθένεια, a blemish (?) and weakness. See also the following words:

γλαυκόομαι, to become γλαυκός, meaning probably to suffer from γλαύκωμα, which is certainly the signification of the compound form ἀπογλαυκόσμαι. Tt is found twice in the Hippocratic Collection,

and is in each place rendered by M. Littré devenir glauque.8

γλαύκωμα, according to M. Sichel's 'Mémoire,' mentioned above,9 signified, in the ancient and mediæval writers, what is now called lenticular cataract, and was not used in the modern sense of the term glaucoma (viz., a greenish opacity of the vitreous humour) before the time of Peter Brisseau. 10 The word is found in Aristotle, 11 but without any indication of its exact meaning. Rufus says<sup>12</sup> that the ancients considered γλαύκωμα and ὑπόχυμα (cataract?) as the same disease, but that in his time a distinction was made between them, and that γλαύκωμα was the more serious disease of the two, and altogether incurable.

γλαύκωσις, blindness from γλαύκωμα, is found in Hippocrates, 13 and is rendered by Littré cataracte, by Daremberg glaucose, and by Adams cataract (glaucoma). The word is explained in Galen 4 and

other ancient writers. 15

# ADVERSARIA MEDICO-PHILOLOGICA.

### PART VIII.

γλήνη was first applied to the eye, but in a somewhat indefinite sense, signifying the pupil, and also the image appearing in the pupil; it is found twice in the Homeric poems, meaning, perhaps, merely the eyeball or central part of the eye. Probably from the general idea of a cavity, the word was afterwards specially applied to the cavity of a ball-and-socket joint, as, for example, the glenoid cavity of the scapula, which receives the head of the humerus. It was distinguished from  $\kappa \sigma \tau \dot{\nu} \lambda \eta$ , as being more shallow, but was not constantly used in this restricted sense in Galen's time. When, however,  $\kappa \sigma \tau \dot{\nu} \lambda \eta$  and  $\gamma \lambda \dot{\eta} \nu \eta$  were thus distinguished from each other, they would correspond respectively to  $\kappa \epsilon \phi a \lambda \dot{\eta}^5$  and  $\kappa \dot{\sigma} \nu \delta \nu \lambda \sigma s$ , the more or less prominent articular process, and to  $\dot{\epsilon} \nu \dot{a} \rho \theta \rho \omega \sigma s$  and  $\dot{a} \rho \theta \rho \omega \delta \dot{\iota} a$ , the deeper or shallower species of ball-and-socket joint.

γληνοειδής, like a γλήνη, glenoid, applied to a shallow articular cavity. It is found in the Hippocratic Collection, used in this sense, and opposed to κοτυλοειδής, It is joined to κοιλότης by Galen, and applied to the wrist, and also to the vertebræ. The apparently contradictory expression γληνοειδεῖς ἀποφύσεις, glenoid processes, used by Galen, is only an elliptical way of mentioning the glenoid [sur-

faces, or cavities, of the processes [of the spinal vertebræ].

γλουτός, 11 also in the plural γλουτοί, the buttock, 12 called also

πυγαί. It was afterwards applied to the process of the femur called the great trochanter. In Meletius a derivation of the word is given which seems to be corrupt, but which at the moment I am unable to correct. In the middle ages the form γλουτόν was in use, and in the present text of Galen γλουτά is found in one passage, where, however, we should probably read γλούτια. The diminutive form γλούτιον (probably found only in the plural, γλούτια) was applied in Galen's time to two of the corpora quadrigemina, which still bear the name of nates.

γλῶσσα, or γλῶττα, the tongue; sometimes meaning the mouthpiece of a pipe, αὐλός; and thence applied to the larynx, and used as

synonymous with γλωττίς.9

γλωσσοκάτοχος, or perhaps rather γλωσσοκάτοχον, a tongue spatula. The invention of the instrument is attributed sometimes to Paulus Ægineta, but perhaps without sufficient reason, as he gives no description of it, 10 and speaks of it as "the tongue spatula," as if familiar to his readers. In the Arabic translation by Albucasis, the Greek name is neither retained nor translated, but there is a short description of the instrument, with two figures. 11

γλωσσόκομον (sometimes also called γλωσσοκομεῖον), <sup>12</sup> a curious word, meaning originally a case to hold (κομέω) the mouth-pieces (γλῶσσα) of wind instruments; then applied to a box or case in general; <sup>13</sup> and in surgery specially signifying an instrument invented by Nymphodorus, probably in the third century B.C., and much used in cases of fracture or dislocation of the lower extremity. <sup>14</sup> It was furnished

with pullies, from which circumstance Galen referred to it in illustration of the course and functions of the inferior laryngeal or recurrent nerves.1 An illustrative plate of the instrument may be found in Daremberg's 'Œuvres de Galien,' t. i, p. 501, and in his edition of

Oribasius, t. iv, pp. 692, 694.

γλωττίs, in medical writers, signified the principal organ of the voice;2 but was not always used in a precise and definite sense, nor did each writer give it exactly the same signification. The origin of the term, as used in anatomical writings, has been disputed, but can be determined with tolerable certainty. The full name is γλῶσσα or γλωττίς λάουγγως, and would almost seem to have been given by Galen himself;3 the part was so called because, in the production of the human voice, it answered the same purpose as the mouth-piece or tongue of the ancient pipe (αὐλός).4 Galen certainly did not mean by this term merely the rima glottidis, or merely the ventricles of the larynx, as he speaks of it, not as a cavity, but as a body (σωμα);5 he probably intended all the walls of the ventricles of the larynx, together with the cavity itself. In later writers 6 the word was sometimes confounded with the epiglottis, insomuch that Vesalius thought it necessary? to explain more than once that the two words have different significations, attributing the cause of the error partly to Celsus,8 who applied the term exigua lingua (or lingula) to the epiglottis. M. Béclard says that γλωττίς also signified the uvula (luette), but he does not give any reference.9

γνάθος is explained by Galen to signify cheek, viz. the part beneath the μηλον, or cheek-bone, 10 and in this sense he frequently (perhaps generally) uses the word himself.11 Rufus Ephesius gives the same explanation, and says that the word was synonymous with σιαγόνες and maperai. 12 Hippocrates 13 uses it in the sense of jaw, and speaks

of ή κάτω γνάθος and ή ἄνω γνάθος, the upper and the lower jaw.

γομφίος, more commonly found in the plural γομφίοι, 14 the molar

teeth, so called because they are fixed in their sockets like a nail (γομφος) in wood. They were also called μύλαι, and μυλῖται, and ἀλήθοντες, the grinders, whence the Latin molares, and the modern molar; they are called by Celsus maxillares. The last of the molar teeth on each side were called κραντῆρες, or σωφρονιστῆρες (answering to the modern dentes sapientiæ), and by Pliny genuini. The other teeth were called τομεῖς οr τομικοί, incisores, and κυνόδοντες, canini. (See these words.)

From γομφίος comes γομφιάζω, to have the toothache, whence the words γομφίασις to and γομφιασμός, toothache. With respect to the passage in Dioscorides, it should be noticed that it was proposed by Caspar Hoffmann to read άγομφίασις or άγόμφωσις, in the sense of looseness of the teeth. The emendation is unnecessary, and it is also entirely unsupported by external testimony. Kühn appears to approve of it, to but Sprengel has not adopted it in his edition; and it may be added that it was not found in the copy used by Ebn Baithar in the thirteenth century. The two words agomphiasis and agomphosis are found in some modern medical lexicons, but it is doubtful whether they rest on any better authority than this conjecture.

γόμφοs is found in later writers <sup>15</sup> in the sense of the molar teeth. Bernard thinks the word corrupt, Ermerins accepts it as genuine.

γόμφωσις, one of the three species of συνάρθρωσις <sup>16</sup> (the other two being σύμφυσις or άρμονία and ραφή), in which the articulation takes place (as in the case of the teeth) by one bone being fixed in another, like a nail or peg (γόμφος) in its hole. The separation of bones thus united was called διακίνημα. <sup>17</sup>

writers 1 draw a somewhat obscure and subtil distinction between γοιή and σπέρμα. Both words are used by Hippocrates, and apparently indiscriminately, and both are rendered by the same Arabic word 2 ωία miná. Probably, however, γονή was the more usual word in the oldest times, and σπέρμα in the later, as in the Hippocratic Collection there is a treatise entitled Περί Γονήs, and among Galen's works one Περί Σπέρματος.3 The phrase ἀπόκρισις γονης, the secretion (or emission) of semen, is found in the Hippocratic Collection,4 and in Aretæus 5 (who imitated the language of Hippocrates), and ἀπόκρισις σπερματος in Galen.6 In connexion with this signification the word is applied in one passage in the Hippocratic Collection to an ovoid body expelled from the vagina six days after sexual intercourse, which the writer supposed to be an embryo in its earliest stage of development, but which, as the ovum would not have descended into the uterus in so short a time, was no doubt only the decidua uteri. In the Hippocratic Collection the word sometimes signifies the uterus or the generative 8 organs in general. Sometimes the plural form, yovai, is used in the same sense.9 The expression έκ γοι η, 10 may either mean from the womb (as in the similar phrase, έκ κοιλίας 11 μητρός) or from birth.

γόνιμος signifies, (1), fecund, prolific, as γόνιμον σπέρμα, fruitful semen, opposed to άγονον σπέρμα, unfruitful semen; 12 γονίμη ήλικίη, 13 the age of fecundity;—also (2), generally, generative, relating to generation (synonymous with γεννητικός), as γόνιμα μέρεα,14 the parts of generation; γάνιμοι φλέβες, 15 the genital canals (probably all those composing the spermatic cord); -also (3), viable, able to live (synonymous with βιώσιμος), as γόνιμον εμβρυον, 16 a viable fætus; γόνιμον παιδίου, 17 a viable infant; -also (4), odd, uneven (synonymous with

περιττός), because (as Erotianus 1 explains it) the uneven days are generally critical and productive of some good to the patient; thus γοιίμη ημέρα, an uneven day?

yorosidis, resembling the seminal fluid, is found in the Hippocratic Collection,3 and also in Aretæus applied to the urine4 in men, and to

a whitish uterine discharge in women.5

γοι όρροια, a word probably not found in any extant author older than Aretæus 6 and Soranus.7 Celsus,8 when he speaks of "nimia profusio seminis," would probably have used the word γονόρροια if it had been in use in his time. It signifies in the ancient writers what its etymology would lead us to expect, viz., an emission of semen, or (in modern technical language) spermatorrhæa,9 a word invented in quite recent times, because gonorrhaa had so entirely lost its original meaning. It was applied, however, in a wide sense to women as well as men; 10 and as the word semen was not always used in the strict meaning of modern pathologists, gonorrhæa would often signify what would now be called blennorrhagia. The references to the principal passages relating to gonorrhæa are given by Adams in the Commentary to his Paulus Ægineta (iii, 54, 55, vol. i, pp. 592, 594).

yóros is used in the Hippocratic Collection as synonymous with γονή, 11 to signify the seminal fluid, not only of the male, but also (as was supposed) of the female.12 Galen draws a distinction between γόνος and σπέρμα, which is not often observed; he says that the seminal fluid was called σπέρμα while still in the spermatic vessels, and γόνος after it was emitted.13 In one passage of the Hippocratic Collection yours appears to mean (if the reading be correct) either the glans penis, or the penis itself, or the male genital organs; 14 but Ermerins considers the passage to be corrupt, and proposes to read

Tovos for yovos. 15

yovv, genu in Latin, the knee, or region of the knee, a word found in the Homeric Poems. 16 In one passage of the Hippocratic Collection it was supposed to be used in the sense of offspring;

but Littré and Ermerins read youor, which is doubtless the true

reading.1

γονυάγρα, mentioned by Cœlius Aurelianus (and probably by him only) as a species of ἀρθρῖτις, and signifying a gouty (or rheumatic) affection of the knee, as ποδάγρα had reference to the feet, and χειράγρα to the hands. The word is written γονάγρα in Amman's edition,<sup>2</sup> and this form has been inserted in medical dictionaries; but there is probably no authority for it, and the more correct form is certainly γονατάγρα, or γονιάγρα,<sup>3</sup> or γονυάγρα, which last may be preferred from its similarity to the kindred word γονυαλγής.

γονυαλγήs, suffering pain in the knee.4

γραῖα, a wrinkled old woman; also the scum on boiled milk; hence applied to the folds of skin round the umbilicus. (Compare Anus.)

γραφισειδήs, or γραφοειδήs, like to a stilus or pencil. The word is written γραφοειδήs in the printed editions of Galen,<sup>6</sup> and this is the only form that appears in Liddell and Scott's Lexicon. But γραφισειδήs (or perhaps γραφεισειδήs) is more correct, because the word signifies similitude γραφείων (or γραφίων) πέρασι,<sup>7</sup> 'to the point of a stilus, or pencil;' and this is the form of the word found in Oribasius.<sup>8</sup>

γραφισειδής ἀπόφυσις is the styloid process of the temporal bone, or of the ulna; <sup>9</sup> γραφισειδής ἔκφυσις <sup>10</sup> is the styloid process of the temporal bone; γραφισειδές ὀστοῦν <sup>11</sup> is the temporal bone, so called on account of the styloid process. (See the nearly synonymous words

βελονοειδής, στυλοειδής.)

γρύπωσις, incurvation in general, but especially of the nails, rendered by Cœlius Aurelianus <sup>12</sup> unguium uncatio. The verb γρυποῦσθαι is found both in the Hippocratic Collection <sup>13</sup> and in Galen <sup>14</sup> in the same sense as applied to the nails, and as indicating a frequent symptom in consumptive patients.

Morb. Chron., v, 2, p. 557.

yuraikeios, female, relating to women.

τα γυναικεία, the female organs of generation; 1 also the menses; 2

also the lochia; 3 also female diseases.4

γυναικεῖων aiδοῖον, the female genital organs, sespecially the vagina. γυναικεία γωνόρροια, female spermatorrhæa, a name applied by Aretæus to a whitish uterine discharge.

γυκαικεῖος κόλπος, the vagina.8 γυναικεῖα παθῆ, female diseases.9

γυναικεῖος ῥοῦς, leucorrhœa, as distinguished from the menses; 10 but used also in a much wider sense to signify any morbid uterine discharge. 11

γυναικείοι τόποι, the female genital organs,12 called also γυναικείο

χώροι.13

γυναικικός, womanish, in the sense of weakly; 14 but also simply as

resembling a woman, applied to the male mamma. 15

γυναικόμαστος, used probably as an adjective by Paulus Ægineta, 16 having breasts like women, relating to men only; the neuter, γυναικόμαστον (or, in the Doric form of the word, γυναικόμασθον), signifies, according to Galen, 17 an unnatural development of the mamma, an affection not confined to men. Perhaps the word is not used by any other Greek author. 18

### ADVERSARIA MEDICO-PHILOLOGICA.

#### PART IX.

δαίμων, in later Greek meant an evil spirit, a devil; hence used as a popular name for epilepsy.\(^1\) Σεληνιασμός was used in the same sense,\(^2\) whence it is probable that both δαιμονίζομαι and σεληνιάζομαι sometimes signified merely to be afflicted with epilepsy. The two words were not, however, always used synonymously, and in one place

they are distinguished from each other.3

δακτύλιος, 4 or δακτύλιον, 5 the anus, so called, either because it can be enlarged by inserting the finger,  $(δάκτυλος,)^6$  or (as is more probable) simply from its resemblance to a ring (δακτύλιος). Albucasis, 7 in his Arabic translation of Paulus Ægineta, 8 renders the word by simply mak'adat. Probably the earliest writer who uses the word in this sense is Dioscorides. 9

δάκτυλος, the name for the fingers (including the thumb) and the toes (like the Latin digitus), the sense of each passage where the word occurs sufficiently indicating whether the fingers or the toes are intended. The derivations of the word proposed by Meletius<sup>10</sup> may be mentioned in a note, 11 but do not require refutation. The names of the different fingers were as follows: 12

The thumb, ἀντίχειρ, μέγας, The fore-finger, λιχανός, The middle finger, μέσος, The ring finger, παράμεσος, The little finger, μικρός.

11 Quasi δράκτυλος, from δράττεσθαι, to grasp; or δέκτυλος, as receiving (δεκτικός) things given; or δείκτυλος, because of their use in pointing out (δεῖξις) objects.

<sup>12</sup> Rufus Ephes., 'De Part. Hom.,' pp. 29, 30, 50, ed. Clinch; Pseudo-Galen, 'Introd.,' c. 10, tom. xiv, p. 704, l. 9 seq.; Pollux, 'Onomast.,' ii, 4, § 145;

Meletius, loco cit.

 $\delta\acute{a}\rho\sigma$ is, a word first used by Herophilus to express the separation of parts united simply by cellular tissue, which can be effected by tearing with the fingers, without the use of the scalpel.\(^1\) In this sense the word is always used by Galen.\(^2\) Perhaps it is not to be found in any other ancient author, but it is used and explained by Vesalius.\(^3\) As the word is derived from  $\delta\acute{\epsilon}\rho\omega$ , to flay, no doubt its etymological meaning would be "the removing the skin;" but it was probably never really used in this sense, still less in that of "an excoriation."

 $\delta a \rho \tau \delta s$ , properly an adjective, derived from  $\delta \epsilon \rho \omega$ , and signifying flayed; but used as a substantive, and probably applied (as now) to the dartos, or second covering of the testicle.<sup>4</sup> It is sometimes found in the plural,<sup>5</sup> and is applied by Galen to the capsule of the ovary.<sup>6</sup> Adams explains the word to signify the cremaster muscle;<sup>7</sup> but the meaning given above is the more probable.

δειρή, the neck, a word as old as Homer, and found in the Hippo-

cratic Collection, but not in common use as a medical term. 10

δελτοειδήs, shaped like a  $\triangle$ , triangular, applied to the muscle still called deltoid. The name was not universally adopted in Galen's time,  $^{12}$  and he himself sometimes calls the muscle  $\dot{o}$   $\tau \ddot{\eta}s$   $\dot{\epsilon}\pi\omega\mu i\delta\sigma s$   $\mu \ddot{v}s$ ,  $^{13}$  or  $\dot{o}$   $\tau \dot{\eta}\nu$   $\dot{\epsilon}\pi\omega\mu i\delta\sigma$  κατειληφώs  $\mu \ddot{v}s$ ,  $^{14}$  or  $\dot{o}$  κατὰ  $\tau \dot{\eta}\nu$   $\dot{\epsilon}\pi\omega\mu i\delta\sigma$   $\mu \ddot{v}s$ ;  $^{15}$  and this perhaps led Vesalius  $^{16}$  to say that the muscle itself was sometimes called  $\dot{\epsilon}\pi\omega\mu is$ .

<sup>16 &#</sup>x27;De Hum. Corp. Fabr.,' lib. ii, cap. 23, tom. i, pt. 2, p. 171, ed. 1552.

δελφύs, an old name for the uterus, found in the Hippocratic Collection. Hence is probably derived ἀδελφός, a brother, as coming from the same womb; though some have derived δελφύs from

άδελφόs, as making all that it produces to be brethren.3

δέρμα, the common name for the skin, rendered in Latin by cutis,4 and in Arabic by Jild.5 It was used both for men and for beasts, either living or dead. It differs from xows (which also signifies the skin, but is much less frequently found in medical writers), inasmuch as χρώs, in the Hippocratic Collection,6 includes the fleshy parts of the body in general. The use of the two words in Homer is given at length by Dr. Daremberg,7 but is not of special interest. The term δέρμα σαρκώδες, skin resembling flesh, is applied to the sphincter ani; and δέρμα μυῶδες, skin resembling muscle, to the skin of the forehead,9 and also of the lips.10

δερματικός, of or like skin. The term δερματικός υμήν, a membrane resembling skin, is applied by Aristotle both to the dura mater, 11 and

also to the wings of insects.12

δερματώδης, like skin.13 The term δερματώδεις επιφύσεις, ongrowths resembling skin, is applied to the auricles of the heart; 14 δερματώδες κάλυμμα, is a covering resembling skin, to the operculum of the young frog; δερματώδης μῦς, a muscle resembling skin, to the sphincter ani,16 and also to the lips.17 The name δερματώδης μῆνιγξ, the membrane resembling skin, is given by Galen as one of the names of the dura

mater, 18 and is rendered by Honain in Arabic by غشاء المجلدي qishau-l-jildi.

δευτέριον<sup>1</sup> and δεύτερον<sup>2</sup> (or, in the plural, δεύτερα<sup>3</sup>), one of the names given to the after-birth, on account of its coming away after the birth of the child; for which reason it was also called υστερα,<sup>4</sup> and in Latin secundæ.<sup>5</sup> The Arabic name και mashimat, has no such

etymological meaning.

διαβήτης, a siphon; hence the disease diabetes, because "the fluid does not remain in the body, but uses the man's body as [a siphon] whereby to leave it." The disease received various other names, all more or less referring to its most prominent symptoms, as far as they had been observed by the old physicians; e.g. from the excessive thirst of the patient it was called diparos, and from the great flow of urine ύδερος (or ύδρωψ) είς άμίδα, urinal dropsy, and διάρροια els οὖρα, urine diarrhæa.9 The word was adopted by the Arabic physicians, and written ديابيطس díábítis.10 The disease was probably rare in old times, for it is not noticed at all in the Hippocratic Collection, and Galen says that he had only met with two cases in his own practice. 11 It is not therefore remarkable that its special peculiarity, viz. the saccharine quality of the urine, should have escaped detection (at least in Europe) until the time of Willis, who says that in the seventeenth century, when there was much drinking of undiluted wine (vinum meracius), cases of diabetes were of very frequent occurrence.12 He then goes on to mention (as if he were the first, or almost the first, to make the observation), 13 that the urine of diabetic patients had a wonderfully sweet taste, as if imbued with honey or sugar. This fact has never since been lost sight of; and it was no doubt in consequence of its having been first prominently brought before the public by Willis that this species of

<sup>&</sup>lt;sup>1</sup> Paulus Ægineta, vi, 75, p. 308, l. 2, ed. Briau; Dietz, 'Schol. in Hippocr. et Gal.,' tom. ii, p. 463, note, l. 2.

<sup>13</sup> His words are, "Quod autem plerique authores potum aut parum aut nihil immutatum reddi asserunt, a vero longissime distat; quoniam urina in omnibus (quos unquam me novisse contigit, et credo ita in universis habere), tum a potu ingesto, tum a quovis humore in corpore nostro gigni solito, plurimum differens, quasi melle aut saccharo imbuta, mire dulcescebat."

diabetes was at first called "diabetes Anglicus." Probably, however, it is not generally known that among the Hindus, several hundred years before Willis's time, it had been distinctly mentioned (and not at all as if there were anything new in the statement), that the urine occasionally assumed a saccharine character, and the serious nature of the disease in which this occurs had also been pointed out. The words of Susruta (who cannot have lived later than the ninth or tenth century of our era, and who probably lived in the fifth or sixth1) are as follows:- "Mellita urina laborantem quem medicus indicat, ille etiam incurabilis dictus est. . . . Omnes urinales affectiones tempore incurabiles fiunt; ad mellitum urinæ statum perveniunt, et tunc insanabiles fiunt."2 This passage is, of course, very fragmentary and incomplete, but it is worthy of being brought forward (almost for the first time), and perhaps of being noticed in all future historical accounts of the disease.

διάβρωσις, erosion, one of the species of hæmorrhage recognised by the old writers, occurring when the coats of a vessel were eaten through. The word ἀνάβρωσις was used synonymously, and also, according to some editions of Aretæus, βρῶσις. The verb διαβιβρώσκω, used in the same sense, is found several times in Galen.6 The two other species of hæmorrhage mentioned by Celsus<sup>7</sup> are ρηξις and ἀναστόμωσις, but this classification was not universally

adopted. [See ἀναστόμωσις, διαπήδησις in this Glossary.]

διαγινώσκω, simply to distinguish one thing from another,8 but especially (in medicine) to understand the symptoms by which one disease is distinguished from another, that is, to form a diagnosis.9

διάγνωσις, the distinguishing one thing from another, especially diseases by means of their characteristic symptoms, diagnosis. 10 In

See the 'Imperial Dict. of Universal Biography,' art. Susruta.

<sup>2</sup> Taken from Hessler's translation, tom. i, p. 184. His note on the passage is as follows (Fasc. ii, p. 39):—" Mellitus urinæ status (mad'hu—méhatva) hoc loco nihil aliud esse videtur, nisi urinæ dulcedo, quam in diabete mellito animadvertimus; ad quem statum morbosum omnes affectiones urinarias suo tempore pervenire Susrutas sua auctoritate affirmat." (See 'Susrutas, Ayurvédas, id est Medicinæ Systema,' &c. Erlang. 1844, &c.) See also Wise's 'Hist. of Medicine,' vol. ii, pp. 328, 330.

9 Erasistratus, in Galen, 'De Locis Affect.,' i, 1, tom. viii, p. 14, l. 16; Alexander Trallianus lays down the maxim, ὁ ἄριστα διαγνούς, ἄριστα θεραπεύει, "he that is best in diagnosis, is best in therapeusis" (viii, 9, p. 454, 1.3, ed. Basil.)

10 Galen, 'De Anat. Admin.,' i, 2, tom. ii, p. 225, l. 5; 'Comment. in Hippocr.

Galen's time it would seem that σημείωσις was used as synonymous

with διάγιωσις. (See διαγνωστικός.)

διαγνωστικός, relating to diagnosis, able to distinguish. Διαγνωστική θεωρία, a knowledge of diagnosis. Διαγνωστικά σημεῖα, signs indicating a person's present state of health, as distinguished from ἀναμνηστικά, those relating to the past, and προγνωστικά, those relating to the future. Τὸ διαγνωστικόν μέρος τῆς τέχνης, that branch of medicine which relates to diagnosis, which Galen says was called by the more recent writers τὸ σημειωτικὸν μέρος. Ἡ Διαγνωστική, "The Diagnostics," was the common title given by later writers to Galen's treatise Περὶ Πεπονθότων Τόπων, De Locis Affectis.

διάζωμα, a name applied to the diaphragm, perhaps peculiar to

Aristotle, who also calls it ὑπόζωμα.8

διάθεσις, a state or condition of the body, diathesis; not a predisposition to this or that particular disease, as the term διάθεσις ὑγιεινή, <sup>9</sup> a healthy diathesis, is found, as well as διάθεσις νοσώδης, <sup>10</sup> a morbid diathesis. It is used as equivalent to σχέσις in the sense of a temporary condition, and opposed to έξις, which is a permanent condition, and is said to be διάθεσις μόνιμος, a permanent diathesis. <sup>11</sup> Galen appears to derive the word from διακεῖσθαι, to be in a certain state or condition; <sup>12</sup> but (if we understand the passage aright) this is quite a mistake, as it evidently comes from διαπίθεσθαι, to be disposed or arranged. In Aretæus it is applied to disease, διάθεσις τῆς νούσου, <sup>13</sup> and sometimes seems to signify the disease itself. <sup>14</sup>

δίατσσω, a word used in the Hippocratic Collection for shivering or pain darting or shooting through the body. 15 It was the name

Prognost., i, 5, tom. xviii B, p. 24, l. 2; and frequently. The title of the chief work of Joannes Actuarius is  $\Pi$ ερὶ  $\Delta$ ιαγνώσεως  $\Pi$ αθῶν, "On the Diagnosis of Diseases."

given by Archigenes to one of the recognised species of pain, which commences in the part primarily affected, and from thence, as from a root, spreads quickly to the neighbouring parts.<sup>1</sup> It is called in Latin, emicans, persultans, pertundens; Adams renders it darting.<sup>2</sup>

δίαιτα, a mode of living, regimen, used sometimes in its widest sense to signify all that relates to the preservation of health; sometimes in the more restricted sense of eating and drinking (diet); sometimes as synonymous with διαιτητική, dietetics. It answers to

the Arabic تدس tadbir.5

διαίτημα, a word used in the plural number to signify articles of food,6 and also in a larger sense all things relating to

regimen.7

διαιτητικός, relating to regimen. Ἡ διαιτητική τέχνη,8 or ἡ διαιτητική,9 one of the three divisions of medical science generally recognised by the ancients, the two others being φαρμακευτική and χειρουργική. This division was not, however, always observed. 10

διακινέω, to move slightly; 11 hence διακίνημα 12 and διακίνησις, 13 applied especially to bones connected in such a manner as to admit of only a slight degree of motion.

διακοπή, a cutting through, was used sometimes to signify a deepseated wound; 14 sometimes as synonymous with  $\epsilon \gamma \kappa \sigma \pi \dot{\eta}$  and  $\epsilon \delta \rho a$ , 15 in

the sense of a cut through the outer plate of the skull produced by a sharp instrument; sometimes as synonymous with  $\hat{\rho}\hat{\eta}\xi_{is}$ , one of the species of hæmorrhage arising from the rupture of a vessel.1

διάλειμμα, an interval of time,2 generally; or between the attacks of a disease; or specially synonymous with ἀπυρεξία, the interval between the paroxysms of fever.4 It was sometimes used to signify the whole period of decline in fever, whether terminating in apyrexia or not.5

 $\delta_{ia}\lambda_{\epsilon i\pi\omega}$ , to leave off, or intermit; applied sometimes to the pulse, when one pulsation was from time to time either much weaker than the rest, or wholly wanting; sometimes to fevers, either when there was complete apyrexia, as in intermittent fevers, or when there was a less decided intermission in the case of continued fevers. 7 Intermittent fevers (called sometimes περιοδικοί)8 were generally divided into three kinds, πυρετός άμφημερινός, τριταΐος, τεταρταῖοs, febris quotidiana, tertiana, quartana;9 to which were sometimes added πεμπταΐος, έβδομαΐος, έναταΐος, 10 quintana, septimana, nonana, but these were so rarely observed that Galen had never met with any cases of the last two, and no well-marked cases of the quintana.

διαλεκτικός, fitted for holding articulate converse; as διαλεκτικόν ζωον, a conversing animal, applied to man; διαλεκτικον οργανον, the organ of conversation, applied to the tongue. 12 The verb διαλέγομαι is used in the sense of holding articulate converse in the Hippocratic Col-

lection. 13

 $\delta_{i\alpha\pi\dot{\eta}}\delta_{\eta\sigma is}$ , literally a leaping through, applied to the transulation of blood through the coats of vessels. It probably corresponds with

"expressio sive sudatio" in Cælius Aurelianus; 1 and if so, it was a term invented by Bacchius in the third century B.C., or at least first used by him to signify a fourth species of hæmorrhage.2 Galen3 does not recognise it as a distinct species of hæmorrhage, but as being nearly synonymous with ἀναστόμωσις when applied to the smaller vessels, or to the exudation of bloody serum.4 The word occurs in the Hippocratic Collection in one passage as given in the old editions, but both Littré and Ermerins read διαπίδυσις.5

διαπνευστικός, calculated to dissipate or expel by exhalation (διαπνοή),

especially vapours or flatus.6

διαπνέω, literally to blow through, or to breathe through, when used transitively signifies to disperse or dissipate by exhalation (διαπνοή);7 when intransitively, to promote exhalation,8 or to be dissipated by exhalation.9 In the passive voice it signifies to exhale, as plants, opposed to ἀναπνεῖν,10 to breathe, as animals; to be subject to διαπνοή,

to perspire; 11 to be expelled or dissipated by perspiration. 12

διαπνοή, literally a breathing through; a word that is found in the Hippocratic Collection, <sup>13</sup> and is explained by Galen <sup>14</sup> to signify the drawing the external air through the skin into the arteries, as distinguished from ἀναπνοή, which was the drawing the air through the mouth into the lungs. Hence it was rendered in Latin by difflatio, 15 or perspiratio, 16 which latter word is still in constant use, though it is no longer connected with the theory expressed by its etymology. The epithet ἄδηλος, imperceptible, 17 or ἄδηλος αἰσθήσει, imperceptible

1 'Morb. Chron.,' ii, 10, p. 390, l. 21; p. 391, l. 2, ed. Amman. <sup>2</sup> The other three were ἀναστόμωσις, διάβρωσις, and ῥῆξις.

by sense, is sometimes added, and the words then signify the exhalation going on at the surface of the body,2 viz. insensible perspiration, as distinguished from iδρώs, sweat (or sensible perspiration), and from  $\dot{\rho}\dot{\nu}\pi os$ , sordes. The word occurs several times in Aretæus, and in different senses: as, the expulsion of flatus, both upwards and downwards; cutaneous perspiration; the organs or channels for the passage of fluids or vapours;7 the expulsion or dissipation of vapours or humours.8 Both διαπνοή and ἀναπνοή are used with reference to the perfume of odoriferous plants, the former word to express its entrance into the system through the cutaneous surface of the body, the latter its entrance by the mouth and nostrils; and both words signify the passing in, and the passing out, indiscriminately (both  $\epsilon i\sigma\pi\nu o\eta$  and  $\dot{\epsilon}\kappa\pi\nu o\eta^{10}$ ).

<sup>1</sup> Id., 'Comment. in Hippocr. Epid. VI,' iv, 21, tom. xvii B, p. 193, l. 14, where it is stated that some of the later physicians used the phrase λόγω θεωρητή, perceptible by reason, instead of αίσθήσει άδηλος, imperceptible by sense.

 $^2$  διὰ τῶν ἀδήλων αἰσθήσει πόρων, through the pores that are imperceptible by sense. Galen, 'Comment. in Hippocr. De Alim.,' ii, 4, tom. xv, p. 240, l. 13.

The whole subject is discussed and illustrated at great length by Kaau, in his 'Perspiratio dicta Hippocrati per universum corpus anatomice illustrata,' Lugd. Bat, 1738.

## ADVERSARIA MEDICO-PHILOLOGICA.

#### PART X.

διαπνέω, to suppurate, synonymous with πυοποιουμαι.2

διαπύημα, the result of suppuration, an abscess, or purulent collection, and in this general sense synonymous with ἐμπύημα.

διαπύησις, the process of suppuration, synonymous with έκπύησις

and πυοποίησις.7

διαπυΐσκω, properly to cause to suppurate, but perhaps more commonly to suppurate; synonymous with ἐκπυΐσκω. The passive διαπνίσκομαι is joined by Hippocrates with έμπνίσκομαι, and signifies to suppurate so as to penetrate (a bone).

διάπνος, suppurating, as an ulcer, 11 or the liver. 12

διαρθρόσμαι, to be articulated, generally (probably almost always) by διάρθρωσις. Etymologically 13 it would seem to mean to divide by διάρθωσις, but it is almost always used to signify to unite by διάρθρωσις. It was used as synonymous with ἀπαρθρόομαι, 14 and is distinguished by Galen from συναρθρόσμαι: e. g. the sternum συναρθροῦται to the ribs, and διαρθροῦται to the clavicle; and the ribs συναρθροῦνται to the sternum, and διαρθροῦνται to the vertebræ; 15 though in another passage Galen applies the word διαρθρόσμαι to the union of the ribs with the sternum<sup>16</sup>, and says that sometimes in other parts of the body also one might doubt whether to use the word διαρθρόσμαι or συναρθρόομαι.

διάρθρωσις, a movable articulation, synonymous with ἀπάρθρωσις, <sup>1</sup> and distinguished from συνάρθρωσις, an articulation with little or no motion.<sup>2</sup> Sometimes, when the motion is but slight, as in the case of the union of the ribs with the sternum, the words διάρθρωσις and συνάρθρωσις were used indiscriminately.<sup>3</sup> Three species of διάρθρωσις were recognised in Galen's time, viz. ἐνάρθρωσις, ἀρθρωδία, and γίγγλυμος, three words of comparatively recent origin.<sup>4</sup> (See "Αρθρον in this Glossary.)

διάρροια, diarrhæa, purging, in the same wide sense given to the word in the present day. It occurs in Hippocrates (who uses the phrase κοιλίης ρύσις in the same sense), and is rendered by Celsus alvus cita, or alvi dejectio, or simply dejectio, and in Arabic by Honain once by dharab, and elsewhere by diarrab, ichtiláf. The word does not seem to have been adopted by any of the early Latin writers. Cicero uses it, but in Greek characters; calius Aurelianus writes in Latin characters, but calls it a Greek word, which he renders by defluxio. The names διάρροια εἰς οὐρα (for οὐράνην) and διάρροια εἰς ἀμίδα, for a flux into the urinal, were applied to diabetes, the former name having originated with some one whom Galen calls παλαιός τις ἀνήρ, one of the ancients. The phrase διάρροια σπέρματος, a flux of semen, is used by Moschion a synonymous with γονόρροια applied to women, in the sense (probably) of leucorrhæa.

διαρροίζομαι, to suffer from diarrhæa. 18
διάστασις, separation, especially of immovable bones united by

suture  $(\dot{\rho}\alpha\phi\dot{\eta})$  or symphysis  $(\sigma\dot{\nu}\mu\phi\nu\sigma\iota_s)$ ; also space, dimension, in length, breadth, and depth. It was used by some of the oldest medical writers, in their definition of the pulse, as opposed to  $\sigma\nu\sigma\tau\circ\lambda\dot{\eta}$ , and synonymous with  $\delta\iota\alpha\sigma\tau\circ\lambda\dot{\eta}$ , dilatation. In the cognate sense of distension it is applied to the veins by Aretæus, and also (in the common editions) to the head; but in the latter case Ermerins, in the 'Addenda et Corrigenda' to his edition (p. 445), says, "Edere debueram  $\delta\iota\alpha\tau\dot{\alpha}\sigma\iota\varepsilon$ s, quod jam alii Latine expresserunt."

διαστέλλω, to dilate artificially,<sup>6</sup> as by an instrument; to expand naturally, applied (perhaps) especially to the thorax;<sup>7</sup> but most frequently found in the passive, διαστέλλομαι, to be expanded or dilated, as opposed to συστέλλομαι, to be contracted. It was applied, not only to the heart,<sup>8</sup> and arteries,<sup>9</sup> but also to the thorax,<sup>10</sup> and lungs,<sup>11</sup> the brain,<sup>12</sup> the stomach and abdomen,<sup>13</sup> and the

uterus.14

διάστημα (plural διαστήματα), in Hippocrates, is translated by Littré diastases, <sup>15</sup> by Adams diastases of bones, <sup>16</sup> and more fully by Ermerins "ubi ossa, quæ naturaliter mutuo se contingunt, aliquo intervallo distant." This last translation (or paraphrase) agrees with Galen's explanation, viz. a separation of two bones which naturally touch each other without diarthrosis. <sup>18</sup>

διαστολεύs, a dilator.19

διαστολή, dilatation, diastole, the opposite movement to  $\sigma \nu \sigma \tau \sigma \lambda \dot{\eta}$ , contraction, systole. It was applied especially to the heart, 20 and

the arteries1 in connection with the pulse, but also to the brain and

its membranes,2 and the thorax.3

διάστρεμμα (plural διαστρέμματα), in Hippocrates, is rendered by Littré<sup>4</sup> petits déplacements des articulations, by Adams<sup>5</sup> distrainings, and more fully by Ermerins,<sup>6</sup> "ubi ossa prope articulum . . . distorquentur." This paraphrase agrees with the explanation of Galen,<sup>7</sup> who, in distinguishing στρέμμα from διάστρεμμα, says that the former affects only the ligamentous parts, while the latter affects the joint, and causes a slight displacement of the bones.

 $\delta \iota \alpha \sigma \phi \alpha \gamma \dot{\eta}$  does not seem to have been applied by Herophilus as a name to the umbilical fissure of the liver.<sup>8</sup> He only says that this part is compared,  $\delta \iota \alpha \sigma \phi \alpha \gamma \dot{\iota}$   $\tau \iota \nu \iota$ , "to a sort of cleft in a rock," on

account of the umbilical vein which passes through it.9

διάσφυξιε, a pulsation (not necessarily a violent one), joined to ἀρτηρία by Aretæus, 10 and to φλεβέε, in the sense of arteries, by a writer in the Hippocratic Collection. 11 The phrase διασφύξιες ἐγκεφάλου in Aretæus 12 will mean pulsations felt in the brain.

διάτασιs, extension, in the case of a fractured or dislocated limb. 13 The word occurs not unfrequently in the general sense of tension or expansion, and is sometimes confounded with διάθεσιs and διάστασις. 14

διατμίζομαι (passive), to have exhalation take place, applied to the

body.15

διάτρησιs (plural διατρήσειs), perforations, apertures, applied to the holes in the cribriform plate of the ethmoid bone, 16 called also

κατατρήσεις. 17 Διάτρησις έν τῷ δακτυλίω, fistula in ano. 18

διατριταῖος (a word not found in Liddell and Scott's 'Lexicon,' and perhaps not in any Greek writer) occurs in the translation of Soranus by Cælius Aurelianus, who uses the phrase "diatritæum

tempus," as synonymous (apparently) with διάτριτος, signifying the

space of three days.1

διάτριτος,<sup>2</sup> and διατρίτη,<sup>3</sup> a three days' fast, ordered by Thessalus and the Methodici at the commencement of a simple fever,4 but without sufficient discrimination. Cælius Aurelianus (who belonged to the sect of the Methodici) mentions "abstinentia usque ad tertium diem, quem Græci diatriton vocaverunt." But he sometimes uses the word simply as the space of three days, or the third day, and also (apparently) for every third (or alternate) day.8

διαφθείρω, and διαφθείρομαι τα έμβρνα, or τα παιδία, to miscarry, a phrase used especially (perhaps exclusively) in the Hippocratic

Collection.

διαφθορά, corruption, decomposition, as (probably) of food in the stomach, 11 or of the humours of the body. 12 In the Hippocratic Collection it signifies abortion, 13 being synonymous with ἀποφθορά, and the more Attic word αμβλωσις.14

διαφορέω, to disperse, discuss, not necessarily by perspiration;15 passive, διαφορούμαι, to be dispersed, generally (perhaps) by perspira-

tion.16

διαφόρησις, perspiration, in the modern sense of the word, and to be distinguished from διαπιοή, which, though more nearly corresponding to the word perspiration etymologically, is very different in signification. 17 The expression άδηλος διαφόρησις, insensible perspiration, occurs in Cælius Aurelianus, who renders it "disjectio occulta." 18 διαφορητικόs, calculated to disperse or discuss, 19 especially by per-

spiration, diaphoretic. The word is found in Roman characters in Cælius Aurelianus.

διάφραγμα, a barrier or partition, applied to the cartilago septi of the nose,<sup>3</sup> and to the velum palati.<sup>4</sup> It was, however, chiefly used to signify the midriff or diaphragm, which was called also φρένες,<sup>5</sup> διάζωμα<sup>6</sup> and ὑπόζωμα,<sup>7</sup> by the Latin writers septum transversum,<sup>8</sup> præcordia,<sup>9</sup> discretorium,<sup>10</sup> discrimen thoracis ac ventris,<sup>11</sup> or simply discrimen,<sup>12</sup>

and by the Arabic writers  $-\lambda aj\acute{a}b$ . Galen says 14 that this last use of the word was derived from Plato, who considered 15 that the midriff ( $\phi p\acute{e}\nu \epsilon s$ ) was a barrier ( $\delta\iota a\acute{\phi}pa\gamma\mu a$ ) intended to divide that part of the soul in which resided courage, spirit, anger, and the like ( $\tau o\acute{o}$   $\theta \nu \mu o \epsilon \iota \delta \acute{e}s$ ), and which was situated in the heart, from that part which was the seat of the desires and affections ( $\tau o\acute{e}\pi\iota \theta \nu \mu \eta \tau \iota \kappa \acute{o}\nu$ ), and which was situated about the liver. After Plato's time the word  $\delta\iota a\acute{\phi}pa\gamma\mu a$  was commonly used in this technical sense, and superseded to a great extent the ordinary term  $\phi p\acute{e}\nu \epsilon s$ . Galen also states that both Aristotle and Plato considered the diaphragm to be merely a partition between the upper and lower viscera, and were not aware of its important use in the mechanism of respiration. 16

διάφυσις, a growing or growth between, a partition separating two bodies; also, the space between two or more partitions, an interstice. The word occurs in both senses in the Hippocratic Collection. In one passage<sup>2</sup> the sense both of the text, and also of Galen's Commentary,3 has been understood in several ways. Hippocrates says that at the superior extremity of the tibia there is an epiphysis, and that this epiphysis has a diaphysis; by which (says Galen) is meant the ligamento-cartilaginous eminence situated in the middle [of the epiphysis], separating the condyles [of the femur] which rest upon the tibia. Without discussing the different interpretations that have been put upon Galen's words, it will be sufficient to say, with M. Littré, that he probably alludes to the spinous process of the tibia, and that this opinion is confirmed by the fact that he expresses himself in very similar language in another passage,4 where there is no doubt as to his meaning. In four other passages where the word occurs in the Hippocratic Collection it may be taken to signify an interstice, though in the last of these Dr. Daremberg renders it by "cloison," a partition.6 Galen applies the word to the areolæ, or interstices between the fibres composing cellular tissue; and also (apparently) to the tendinous intersections (inscriptiones tendineæ) which cross certain muscles, especially the rectus abdominis.8

διάχριστον, probably a *liniment*, not a gargle, as it was of the consistence of honey, 10 and not exclusively (perhaps not even especially) used for the tongue, palate, fauces, &c. 11

δια χυλων, the name given to a well-known plaster, invented by

Menecrates in the first century after Christ. His directions for preparing the plaster were put into Greek iambic verse by Damocrates, and the poem has been preserved by Galen. It was called  $\delta\iota\dot{a} \chi\nu\lambda\tilde{\omega}\nu$ , with juices, because certain vegetable substances (fenugreek, linseed and marsh-mallow) were originally used in its composition.

διάχυσις, is used by Aretæus<sup>3</sup> to signify relaxation of mind, and is rendered by Cœlius Aurelianus "animi laxatio," or "animi laxa-

mentum."5

διαχυτικόs, is used by Dioscorides, probably in the sense of discutient.

διαχωρέω, to pass through, generally as excrement, applied to the fæces, but sometimes to the urine; sometimes also to other matters, as blood, or food. Sometimes the word seems to be taken transitively, to evacuate; and we also meet with the passive form, to be evacuated. It is also used as a neuter verb, to be relaxed, and is given in the Greek translation of Rhazes On the Smallpox as equivalent to with the greek translation.

διαχώρημα, excrement, especially applied to the fæces<sup>14</sup> (and so synonymous with ὑποχώρημα), 15 but probably also used in reference to the urine (see διαχωρέω). Honain, in his Arabic translation of

the 'Aphorisms,' renders the word by biráz.16

διαχώρησιs, according to Galen, <sup>17</sup> differs from ὑποχώρησιs, inasmuch as the latter word is applied solely to excretion from the bowels, whereas διαχώρησιs, though generally applied to the fæces, is also sometimes used in reference to other evacuations, as διαχώρησιs ἄιματος, <sup>18</sup> evacuation of blood by the bowels. <sup>19</sup> Sometimes the word signifies strictly the process of excreting or evacuating, viz.

19 In 'Coac. Prænot.,' § 387 (393), the old reading was οὖρων διαχώρησιν, but Littré (tome v, p. 668), Ermerins (tom. i, p. 86), and Daremberg (p. 280), read οὖρον, though Ermerins leaves the Latin translation ('urinarum eductionem') uncorrected.

excretion, or evacuation; sometimes the matter evacuated, viz. the excrement, especially the fæces. It is rendered by Honain فروج biráz, and خروج churúj.

διαχωρητικός, calculated to promote evacuation (especially from the bowels), laxative. Hippocrates uses the comparative

διαχωρητικώτερος.

διδυμαία, didymæa, the name given by Andreas (probably in the third century B.C.) to a medicinal preparation, the composition of which is preserved by Asclepiades.<sup>6</sup> It is in vain to attempt to explain the meaning of the name; it can only be stated that it is certainly not derived from the following word, but may probably be connected with Didyma or Didymi in Miletus, whence comes the adjective

Διδυμαΐος, Didymæan.

 $\delta i \delta \nu \mu o s$ , properly an adjective, double; but in medical writers generally used substantively as a technical term. In very early times  $\delta i \delta \nu \mu o s$ , or more commonly  $\delta i \delta \nu \mu a$ , signified twins; the former word was applied to the testicles by Herophilus as early as the fourth or third century B.C., and the name seems to have been generally adopted, and used indiscriminately with  $\delta \rho \chi s$ , where  $\delta i \delta \nu \mu a$  is a secontal transfer of the singular number, and was considered a more polite word than the other. The word was also applied to the ovary in the female, the part analogous to the testicle in the male. The diminutive form, found probably only in the

<sup>4</sup> Aretæus, 'Cur. Acut.,' i, 2; ii, 5, p. 202, l. 8; p. 273, l. ult., ed Kühn.

<sup>&</sup>lt;sup>9</sup> 'Herod., 'Hist.,' vi, 52, § 2; Hippocr., 'Aphor.,' v, 38, tome iv, p. 544, ed. Littré.

<sup>12</sup> The note to Theophilus, 'De Corp. Hum. Fabr.,' v, 37, § 4, p. 264, l. 13, ed. Oxon., requires some modification. The passage in which Galen used the word in the singular is referred to ('De Usu Part.,' xiv, 11, tom. iv, p. 193, l. 6), and it is stated that "alibi fere semper in plurali occurrit." When I wrote this I had not noticed that in Paulus Ægineta the word is found at least six times in the singular (viz. iii, 54, p. 50 B, l. 34, ed. Ald.; vi, 61, 68, p. 258, l. 4; p. 260, ll. 1, 4, 8; p. 288, l. antep., ed. Briau), so that it is probably less uncommon than I then supposed.

<sup>&</sup>lt;sup>14</sup> Galen, 'De Usu Part.,' xiv, 11, tom. iv, p, 193, l. 6; Theophilus, 'De Corp. Hum. Fabr.,' v, 37, § 4, p. 264, l. 13, ed. Oxon.

plural, διδύμια, is applied almost always to two of the corpora quadragemina in the brain, which still bear the name of testes.2 Albucasis, in his translation of the sixth book of Paulus Ægineta, renders δίδυμος by بنضة baidat, and δίδυμοι by انثياري unthayán (dual), and ببضتان baidatán (dual).3 خصا baidatán (dual).3

διδυμοτοκέω, to bear twins.4 διδυμοτοκία, a bearing of twins.5 διδυμοτόκος, bearing twins.6

Paulus Ægineta uses the word with strict propriety when speaking of the

## ADVERSARIA MEDICO-PHILOLOGICA.

#### PART XII.

διεξοδεύω, to have an outlet or passage.1

διεξοδικός, belonging or relating to an outlet or passage. Aristotle uses τὸ διεξοδικόν as a substantive to signify, not only the anus,2 but the neighbouring parts generally, including the nates and the socket of the hip-joint.

διέξοδος, an outlet or passage in general, applied to the fæces,3 to a

tendon,4 and also (theoretically) to air and phlegm.5

δίίδρος is explained by Galen in his Glossary of Hippocratic words 6 to mean moist, transuding (διϊδροῦσα), but it is not found in any part of the Hippocratic Collection.

διίδρόω (in the passive voice) is applied by Galen<sup>8</sup> to blood oozing through the pores in the coats of an artery or vein by transudation; it probably never means to perspire, as stated by Liddell and Scott.

δικέφαλος, two-headed, applied to an animal (a monster).9—Mūs ο λεγόμενος δικέφαλος, the biceps flexor cubiti muscle. The name was probably unknown to Galen, who does not use it where he might have been expected to do so.11

δικόνδυλος is applied to the fingers by Aristotle12 (as μονοκόνδυλος

<sup>&</sup>lt;sup>1</sup> Hippocratic Collection, 'Epid.,' ii, 3, § 8, tome v, p. 110, l. ult., ed. Littré; perhaps also in the parallel passage, 'Epid.,' vi, 2, § 7, tome v, p. 282, l. 3, where it is adopted by Ermerins ('Hippocr. Opera,' tom. i, p. 267, l. 6). To the authorities in favour of this reading mentioned by Littré it may be added that the passage is thus quoted by Galen, 'Comment. in Hippocr. Epid. II,' iii, 17, tom. xvii A, p. 422, l. penult.

is to the thumb), and signifies having two knuckles, κόνδυλος being

used somewhat loosely, and not in its strict anatomical sense.

disposs, or disposs, is explained by Galen to mean dispass, twoheaded, or δισχιδήs, cloven. It is applied by him to a muscle,2 or a tendon. On the connection between δίκραιος, δίκραιος, δίκραιρος, and dispuss, see note in Franz's edition of Erotianus, 'Lex. Hippocr.,' p. 120.

δίκροτος, reverberating, generally used in the ancient medical writers in reference to the pulse, and probably first thus applied by Archigenes.4 The word dicrotic is still found in medical dictionaries, though no longer in common use, and signifies the condition of pulse in which a smaller pulsation suddenly succeeds a larger one, having been compared to a hammer, which, when forcibly struck against the anvil, rebounds, and strikes it again.5

δικτυσειδήs, net-like; δικτυσειδές πλέγμα, the name given (apparently) by Herophilus<sup>6</sup> to what is commonly called the plexus choroides, situated in the lateral ventricles of the brain; this latter name

was also in use in ancient times.8

δīvos, dizziness, is found in the Hippocratic Collection,9 and explained by Galen<sup>10</sup> to apply to a person whose head appears to be running round; when also the eyes were dim, the word σκοτόδοιος was used.

διογκοῦσθαι, to swell, as barley by boiling; to be distended, as the

stomach by food.12

διόγκωσις, swelling, tumefaction, a term used (perhaps only, or especially) by the Methodici, 13 stated to be (in the ancient phraseology) a fusion and distension (χύσις καὶ διάτασις) of bodies, and to be the opposite to σύμπτωσις, depression (affaissement, Daremberg).

διορρόω, to turn into serum; 14 in the passive., διορρούσθαι, to become

<sup>14</sup> Hippocrates, 'De Morb.,' i, 30. This is the reading adopted by Littré (tome vi, p. 200, l. 14) and Ermerins (tom. ii, p. 177, l. 19); the older editions have διούρησε (tom. ii, p. 209, l. 10, ed. Kühn).

serum, applied to the blood,1 or to become whey, applied to milk,2 answering to serescere in Pliny.3

διόρρωσιs, the turning into serum.4

διόσκουροι (Castor and Pollux), probably a popular name applied to παρωτίδες, 5 not in the sense of the parotid glands, but an inflammation or abscess of those glands. How old the name is, cannot be decided; but it is unsafe to say (with Kraus, 'Krit. Etym. Medic. Lex.') that it was in use before the time of Galen, as the work in which the word occurs is not one of Galen's genuine writings.

Διοσπολίτης,6 or Διοσπολιτικός,7 (sometimes written incorrectly διασπολητικός or διοσπολητικός,)8 belonging to one of the towns called Diospolis, the name applied to a carminative electuary, which was sometimes called in Latin diacyminum,9 in Arabic

kumúní, 10 from cummin, one of its ingredients.

διουρέω, to pass urine, <sup>11</sup> and in the passive to be passed in urine; <sup>12</sup> also (in the passive) to promote the secretion of urine. <sup>13</sup> The word was in the older editions of Hippocrates also applied to the secretion of semen, <sup>14</sup> but in these passages both Littré <sup>15</sup> and Ermerins <sup>16</sup> read διορρούω.

διούρησιε was formerly found in the Hippocratic treatise 'De Morbis,' 17 but Littré 18 and Ermerins 19 read διόρρωσιε, and it is doubtful whether the word is found elsewhere in the old Greek authors, although the word "diuresis" is used by more modern writers in the sense of an abundant flow of urine.

διουρητικός, diuretic, a word found in the Hippocratic Collection,20

and of which the Latin form diureticus was probably introduced

into general use in the first or second century after Christ.1

διπλασιασμός, doubling or crossing of the arms.2 Dietz says 'Diplasiasmus fit manibus in dorso decussatis," but it is not certain that the word might not also be applied to crossing the arms in front.4 When διπλασιασμός is said in modern works to be applied to the recurrence of the exacerbation of a disease, it is probable that the word is confounded with αναδίπλωσις or ἐπαναδίπλωσις, which words also are rendered duplicatio or reduplicatio in Latin.

διπλόη, a fold, or doubling, of a garment, and (in anatomy) of a membrane, applied to the brain,5 or the intestines,6 or the uterus.7 In an analogous sense it may have signified the double plates of the bones of the skull, but especially the cancellated substance between them. In this last sense the word is found in the Hippocratic Col-

lection, and the name has continued in use ever since.

διπλόος, διπλοῦς, double, was applied to certain forms of intermittent fever, when two paroxysms occurred within a given time, instead of one, as διπλοῦς άμφημερινός, τριταίος, τεταρταίος, in the same sense as the names double quotidian, tertian, quartan, are still used in the present day.10

δικλόω, in the passive διπλούμαι, to become double, διπλούς, applied

to intermittent fevers.11

διπύρηνος, having two nobs: διπύρηνον, used as a substantive, a probe with two nobs: 12 written (in the plural) in Arabic ديبورينا diburiná; 13 but the word does not seem to have been adopted by the Arabians, and is not used by Albucasis in his translation (?) of Paulus Ægineta in two places where we should expect to find it.14

<sup>2</sup> Galen, 'De Dissect. Muscul.,' c. 21 (19), tom. xviii, B, p. 974, l. 3.

3 Note in his edition of Galen, 'De Dissect. Muscul.,' p. 45.

δισκοειδήs, like a quoit, applied to the seed of the Thlaspi bursa, or shepherd's purse: ὑγρὸν δισκοειδές was one of the names given to the crystalline lens.

διστιχία, a double line, as διστιχία τριχῶν, a double row of eyelashes; 3 sometimes the affection of the tarsus in which this occurs is called διστιχία (without the addition of  $\tau \rho_1 \chi \tilde{\omega} \nu$ ), 4 sometimes διστιχίασις. 5

δισχιδήs, split in two, cloven-footed, applied to animals like the sheep or goat, as distinguished from ἀσχιδήs and πολυσχιδήs; <sup>6</sup> applied also to a tendon, <sup>7</sup> an artery, <sup>8</sup> or a vein <sup>9</sup>.

διτριχιάω, to have a double row of hair, applied to the tarsus when

affected with διστιχία.10

διχαστήρ, a divider, probably found only in the plural διχαστήρες, a name given by some later Greek writers to the incisor teeth, because they divide (διχάζουσι) the food.

 $\delta(\chi\eta\lambda os, having cloven hoofs, opposed to <math>\ddot{a}\chi\eta\lambda os, having solid hoofs.$ <sup>12</sup>  $\delta(\psi as ds, one of the names given to diabetes, on account of the$ 

thirst attending it.13-

διψώδης, thirsty, 14 also exciting thirst, 15 as applied to wine, &c.

διωσμός, pushing through, applied to extraction of a foreign body from a wound by pushing it forward, rather than by drawing it back (ἐφελκυσμός). In Aretæus διωσμός χειρῶν is rendered by Crassus "manuum agilitas;" by Petit, "manuum dispulsio;" by Freind, "manuum circumquaque protrusio;" and by Adams, "strong exercise of the hands," which perhaps expresses the general sense with tolerable correctness.

διωστήρ, the name of the instrument used for διωσμός, the propulsion of a foreign body through a wound. One end, called the male part, ἄρρην, was solid; the other end, called the female part, θήλεια,

was hollow. The Arabic name used in the translation of Paulus Ægineta by Albucasis is and there are drawings of the instrument in Channing's edition, and in Leclerc's French transla-

tion (figs. 135, 136).

δοθιήν, a word not used in a very strictly defined sense, translated by Littré bouton² (or pimple), by Adams furunculus³ (or boil); probably both meanings were included. Two kinds of δοθιήν were described,⁴ of which the deeper-seated variety differed from φῦμα (tubercle?) only in hardness.⁵ Galen mentions this as one of the names of diseases which are derived neither from the part affected, nor from the cause of the malady.⁶ This is one of the words examined by Kühn in his 'Censura Lexicorum Medicorum recentiorum.' The principal passages where it is mentioned by Galen may be found in Kühn's Index under 'Furunculus.'

δυθιηνικόν, the name of a medicine mentioned by Paulus Ægineta<sup>8</sup> as useful for boils or pimples, the composition of which is not

given.

δυθίων, probably a later form of the preceding word, which is not recognised by Liddell and Scott in their Lexicon, but which is found

in Leo,9 and perhaps also in Palladius.10

δορκαδίζω, to bound like an antelope. The word δορκαδίζων was applied by Herophilus<sup>11</sup> to the pulse when the dilatation of the artery is interrupted, and then hurriedly completed; and the idea was derived from the antelope, which in jumping was said to take first a short spring, then to seem to make a sudden stop, and then to take a much larger and swifter bound. The similitude was adopted by the Arabic writers, who used the word acaptizate, larger and the words caprizans, dorcadissans, gazellans, are found in the Latin translators. A full account of the complicated doctrine of the pulse and its different varieties may be found in Paulus Ægineta. and Adams's Commentary. The description given by Galen (which is copied more or less exactly by the other ancient writers) may be seen by consulting Kühn's Index, art. 'Caprizans pulsus.'

δόσις, a gift, a portion, a dose of medicine; also the giving or

exhibition of a medicine.2

δρακόντιον, the species of worm called 'Filaria Medinensis,' or 'Guinea-worm,' of which the earliest notice is probably that by Agatharchides³ in the second century B.C. It was mentioned by Soranus and Leonidas,⁴ and also by Galen, who says that he had never himself seen one.⁵ It is described by the Arabic writers under the name عن 'irku-l-medini', 'vena Medinensis,'6 so called from the city of Medina, because it was more commonly found in those parts of Arabia. There was in early times (as might be expected) considerable difference of opinion as to the nature of the substance found in the swelling, some persons considering it to be a sort of worm, and others that it was corrupted animal matter. For further information (especially the antiquarian part of the subject) see the treatises by G. H. Welschius, and Justus Weihe, and Adams's Commentary on Paulus Ægineta, vol. ii, p. 151.

## ADVERSARIA MEDICO-PHILOLOGICA.

#### PART XIII.

δρακοντίδεs is said by Rufus Ephesius¹ to be a name given by Hippocrates to the veins taking their origin directly from the heart; but the word has not been found in any part of the Hippocratic Collection as it at present exists. The word is explained in nearly the same sense by Psellus.²

δραστικός, active, efficacious, applied to medicines in general, and

not especially (as in modern times) to purgatives.3

δρεπανοειδές οργανον, the falciform instrument, the name of a sort of

knife used for fistula in ano.4

δρῶπαξ, a pitch-plaster, seems to have been considered a comparatively modern term in the time of Galen,<sup>5</sup> in the second century after Christ, though it had been used by writers in the previous century.<sup>6</sup> The more ancient word was  $\pi i \tau \tau \omega \sigma i s$  or  $\pi i \tau \tau \sigma \kappa \sigma \pi i \eta$ . It was used as a slight counter-irritant, and as a depilatory, and for the singular purpose of causing a slight degree of swelling, and thus creating an appearance of plumpness in parts of the body that were in reality thin or wasted. Thus, Dioscorides speaks of  $\dot{\delta} \tau \bar{\omega} \nu \sigma \omega \mu \alpha \tau \epsilon \mu \pi \dot{\delta} \rho \omega \nu \delta \rho \bar{\omega} \pi \alpha \xi$ , "the dropax of the slave-dealers," which expression is not explained by Sprengel, but is illustrated by a passage, where Galen describes the whole process. There is a good note on the word (which has been used in this article) in Dr. Daremberg's Oribasius, tome ii, p. 884. See also Adams's Commentary on Paulus Ægineta, vol. iii, p. 587.

<sup>&#</sup>x27; 'De Appell. Part. Corp. Hum.,' p. 42, l. 2, ed. Clinch.

Leo, 'Consp. Medic.,' v, 19, in Ermerins, 'Anecd. Med. Gr.,' p. 183, l. 1.
 Galen speaks of what "the present Greeks (οἱ νῦν Ἑλλῆνες) call δρῶπαξ"
 ('De San. Tu.,' vi, 8, tom. vi, p. 416, l, 8).

<sup>&</sup>lt;sup>6</sup> Archigenes, in Aëtius, i, 3, 180, p. 159, ed. H. Steph.; and in Leo, 'Consp. Medic.,' ii, 15, in Ermerins, 'Anecd. Med. Gr.,' p. 121; Dioscorides, 'Eupor.,' i, 240; ii, 35, vol. ii, p. 221, l. ult.; p. 249, l. 7; Martial, 'Epigr.,' iii, 74, l; x, 65, 8.

<sup>7 &#</sup>x27;Meth. Med.,' xiv, 16, tom. x, p. 998.

δρωπακίζω (Lat., dropaco), to apply a pitch-plaster, sometimes as a depilatory, sometimes as a counter-irritant<sup>2</sup>.

δροπάκινος, of the nature of a pitch-plaster.3

δρωπακισμός, the application of a pitch-plaster,4 as a counterirritant.5

δρωπακιστόs, of the nature of a pitch-plaster,6 used as a counterirritant for the purpose of producing plumpness. (See  $\Delta \rho \tilde{\omega} \pi a \xi$ .) δυναμερόν, a medical formulary, or collection of medical receipts.8

δύναμις, faculty (Lat., facultas), the power of performing any function or action (ἐνέργειαν),9 in which sense the word ψυχή was sometimes used as synonymous with it.10 The ancient physiologists for the most part considered that there were three faculties concerned in the production and management of an animal, zwov, viz. (1) the natural, φυσική (called also ἐπιθυμητική, or θρεπτική), connected with the liver and veins, and necessary for the proper nourishment of the body; (2) the vital, ζωτική (called also θυμοειδήs), connected with the heart and arteries, and necessary for the maintenance of heat in the body; and (3) the animal, ψυχική (called also λογική), connected with the brain and nerves, and necessary for the supply of sensation and motion. 11 The natural faculties, φυσικαί δυνάμεις. common to all parts of the body, but especially observable in the stomach, were considered to be four, viz. (1) the attractive, ἐλκτική; (2) the retentive, καθεκτική; (3) the assimilative, ἀλλοιωτική; and (4) the expulsive, ἀποκριτική. 12 These points are mentioned in various parts of Galen's works, 13 and especially in his treatise 'De Naturalibus Facultatibus; and the different uses of the word faculty adopted by modern physiologists may be found in Castell's and other lexicons. The phrases αίματοποιητική δύναμις, 14 πεπτική δύναμις, and σφυγμική

As in Lucian, 'Demon.,' § 50.
 Leo, 'Consp. Medic.,' ii, 15, in Ermerins, 'Anecd. Med. Gr., p. 121.

3 Alexander Trallianus, viii, 5, p. 420, l. 25, ed. Basil. The text has δρωπάκιον,

but this is probably a typographical mistake for δρωπάκινον.

<sup>5</sup> Not in *Dioscorides* as a depilatory. (See Liddell and Scott.)

δύναμις, are also found, applied (respectively) to the veins, the stomach, and the heart; and probably other similar terms are applied to the different functions of other parts of the body.

δύναμιε is used not unfrequently for a drug or a medicinal compound,2

and in at least one place for a collection of medicinal formulæ.3

δυσαισθησία, all kinds of impaired or depraved sensation, especially, perhaps, diminished sensation, as distinguished from ἀναισθησία, insensibility; used also in the plural, but not applied exclusively (or perhaps especially) to the sense of touch.

δυσαίσθητος, having one or more of the senses dulled or impaired.8

δυσαισθητέω, to be δυσαίσθητος,9 probably applicable to any of the senses; in the passage referred to it is the sense of hearing that is impaired.

δυσάκεστος (or δυσήκεστος), hard to be healed, applied to bed-sores;

synonymous with δυσίατος.10

δυσαλθήs, hard to be cured (adj.), applied both to ailments and also to persons.12

δυσαλθωs, hard to be cured 13 (adv.).

δυσαλλοίωτος, hard to be changed, opposed to εὐαλλοίωτος; 14 applied to articles of food, 15 or to a diathesis, 16 &c.

δυσανάγωγος, hard to be brought up, as viscid sputa. 17

δυσανάδοτος, hard to be distributed, as of the chylified and sanguified food throughout the body: not hard to be digested, as if synonymous with δύσπεπτος, from which word it is distinguished by Athenaus, 18 and to which it bears the same relation as ἀνάδοσις to πέψις.

δυσανάκλητος, hard to be recalled, viz. to health (compare ἀνάκλησις, εὐανάκλητος). In Dioscorides, δυσανακλήτως ἔχειν means to be hard to be recalled to their senses, not to their health.

δυσανασκεύαστος, hard to be restored, viz. to health.2

δυσανάσφαλτος, one that recovers his health with difficulty, opposed toεὐανάσφαλτος.3

δυσάνιος. See δυσήνιος.

δυσαποκατάστατος, hard to be restored, as a fracture or dislocation. δυσαπόκριτος, hardly able to give an answer to a question, as a person affected with lethargy. 5

δυσαρεστέω, to be indisposed, distinguished by Aëtius<sup>6</sup> from πυρέττω, to have a fever, inasmuch as a person who is δυσαρεστῶν is still able

to go about his usual work.

δυσαρέστησις, indisposition, malaise, rendered by Cælius Aurelianus "corporis displicentia."

δυσδιαφορησία, a difficulty of dispersing or dissipating, not neces-

sarily relating to perspiration.8

δυσδιαφόρητος, hard to be dissipated or discussed, not necessarily relating to perspiration. 10

δυσδιέγερτος καταφορά, applied to the deep sleep of lethargy.11 (See

the next word.)

δυσέγερτος, hardly able to be roused, as a person affected with lethargy; 12 δυσέγερτος ΰπνος, applied to the deep sleep of coma; 13 τὸ δυσέγερτον, used as a substantive, the quality of being hard to rouse. 14

δυσεκθέρμαντος (adj.),  $^{15}$  δυσεκθερμάντως  $^{16}$  (adv.), hard to be warmed. δυσεκπύητος, hard to be brought to suppuration, as a tumour.  $^{17}$
