LETTER OF THE REGISTRAR-GENERAL TO THE RIGHT HONOURABLE
SIR GEORGE GREY, BART., M.P., *Her Majesty's Principal Secretary of State for
the Home Department.*

Letter to the Registrar General, by William Farr, Esq.

PART I.

	Page
REPORT TO THE REGISTRAR-GENERAL on the MORTALITY OF CHOLERA.	
Importance of having a complete Abstract of the Facts connected with the Cholera	
Epidemic from the Register Books of Deaths	ii
Method of making the Abstracts, and Explanation of the Tabular Results	ii-iii
ENGLAND devastated by PLAGUES from the earliest times:—Plagues of the 6th and 7th Cen- turies; Black Death of 14th; Sweating Sickness of 16th; Plagues of 17th Century	iii
Practical Effect of the Diffusion of the true Doctrines of Public Health	iv
Examples showing that the Health of various parts of the Kingdom is not equally Bad	iv
MORTALITY at DIFFERENT AGES	iv
The Health of the People is Worst in Large Town Districts	iv
Deaths at Different Ages, contrasted in Districts where the Mortality is Low and where it is High	v
Names of some Healthy and Unhealthy Districts	vi-vii
England the Healthiest Country in the World	vii
 Cholera more Fatal in Asia than in Europe	 vii
COURSE and PROGRESS of CHOLERA—Dates of its reaching different Places	vii-viii
Survey of the prevalence of Cholera and Diarrhœa in England since the Registration Act came into Operation	viii-xi
PROGRESS of CHOLERA in LONDON in 1848	xi
Extracts from the Registrars' Weekly Returns; Distinction between <i>Summer Cholera</i> and <i>Asiatic Cholera</i> ; time when the former merged into the latter	xii-xvi
Table showing the Comparative DURATION of Fatal Attacks of Diarrhœa, SUMMER CHOLERA, and ASIATIC CHOLERA	xvii
Cholera in the South-Eastern and South-Midland Divisions in 1848	xvii-xviii
Great Mortality from CHOLERA in the CHESHAM Sub-District of Amersham in 1848, and Abstract of the Fatal Cases	xvii-xviii
Cholera in the Eastern, South-Western, West-Midland, North-Midland, North-Western, York, Northern and Welsh Division—Names of the Districts in which it was most Fatal in 1848	xviii-xx

	Page
CHOLERA in ENGLAND, 1849—Remarks on its Progress—its prevalence in Public Institutions, and Dates of its Appearance in particular Districts	xx-xxiii
LONDON CHOLERA FIELD, 1849—LONDON the Centre of a Great System of Attack: the Extent of the London Cholera Field shown	xxiii
CHOLERA broke out as the TEMPERATURE advanced in London; its Progress traced—Extracts from the Weekly Reports—Proportion of Deaths from Cholera and Diarrhœa to 10000 Persons Living	xxiii-xxviii
While Cholera prevailed in London, all the region around suffered—Names of Districts which were Attacked, and Proportion of Deaths to 10000 Inhabitants	xxviii-xxx
PORTSMOUTH CHOLERA FIELD.—Names of Districts which Suffered, and Rate of Mortality	xxx
PLYMOUTH CHOLERA FIELD.—Names of Districts which Suffered, and Rate of Mortality—Places on the Coast severely Visited	xxx-xxx i
BRISTOL CHOLERA FIELD.—Names of Districts which Suffered, and Rate of Mortality	xxxi
MERTHYR TYDFIL CHOLERA FIELD.—Names of Districts which Suffered—Progress of the Epidemic and Rate of Mortality	xxxii-xxxiii
WOLVERHAMPTON CHOLERA FIELD.—Names of Districts which Suffered, and Rate of Mortality	xxxiii
LIVERPOOL CHOLERA FIELD.—Names of Districts which Suffered; Progress of the Epidemic in Large Town Districts of Lancashire, and Rate of Mortality	xxxiii-xxxvi
HULL CHOLERA FIELD.—Names of Districts which Suffered; Progress of the Epidemic, and Rate of Mortality	xxxvi-xxxviii
TYNEMOUTH CHOLERA FIELD.—Names of Districts which Suffered; Progress of the Epidemic, and Rate of Mortality	xxxviii-xxxix
<hr/>	
INFLUENCE of SEX on the Mortality from CHOLERA.—Proportion Dying among Males and Females in England from Cholera and from all Causes: when the Mortality from Cholera attained a High Rate, the Deaths of Females exceeded those of Males. Table showing the Number of Fatal Cases of Cholera in London among Males and Females at different Ages, in each of 15 Weeks in 1849	xxxix-lxi
MORTALITY from CHOLERA and DIARRHŒA at DIFFERENT AGES.—Comparison of the Deaths among Males and Females at Different Periods of Life: after the Age of 25 the chances of dying increase with age. Table showing the Mortality per Cent. among Males and Females from Cholera and Diarrhœa in 1849, and from all Causes, 1838-44, at Different Ages, in England	xli-xlii
DURATION of FATAL CASES of CHOLERA.—Explanation of the Chances of Dying within a given Period from the Time of Attack. Table supplying a ready Means of Calculating the future Duration of Fatal Attacks at any Stage of the Disease	xliii-xliv
CHOLERA EPIDEMICS of 1832 and 1849 COMPARED.—Tables showing the Population and the Deaths from Cholera in different Districts, during the two Epidemics	xliv-xlvi
INFLUENCE of the SEASONS in 1831-2 and in 1848-9.—Remarks on the Prevalence of the Epidemic in Different MONTHS, and Tables showing the Mortality, during each Month, in England, London, Paris, and Liverpool	xlvi-xlvii
METEOROLOGICAL INFLUENCES.—Explanation of Diagrams illustrating the Progress of Cholera, and the Meteorological Phenomena, on each Day of 1849—Remarks on the Circular Diagrams, showing the Mortality and Temperature in each Week of 11 Years, 1840-50	xlvi-xlviii
PLAGUE and CHOLERA YEARS in LONDON.—Remarks on the DIAGRAMS showing the Mortality in London during the Great Plague Years	xlviii-xlix
FATAL DAYS of the WEEK.—Table showing the Number of Deaths on each Day of the Week in all England, in London, and in the other parts of England	xlix
LOCALITY.—Remarkable Variation in the Mortality of different Localities, illustrated by several Tables, showing Population, Deaths, and Area, in Districts and Groups of Districts on the Coast and Inland; in the Seaports, in large Inland Towns, and in the Coal Districts	xlix-lvii
CHOLERA THREE TIMES MORE FATAL on the COAST than in the INTERIOR of the COUNTRY	li-lii
Names of LARGE INLAND TOWNS in which CHOLERA was ONLY SLIGHTLY FATAL in 1849	liv

	Page
Great Mortality in Merthyr Tydfil: Filthy State of the Town described	lv-lvi
DATES of the Epidemic ATTACKING certain Districts	lvi
CAUSES of the MORTALITY in LONDON	lvii
(1.) THE THAMES and the WATER SUPPLY.—Mortality in Districts supplied by each Water Company—Number of Gallons raised by evaporation from the Thames .	lviii-lxi
(2.) ELEVATION.—Elevation of the Soil has a more constant relation with the Mortality from Cholera than any known element: Mortality from Cholera is in the Inverse Ratio of Elevation—Remarks—Tables and Diagram illustrating the Comparative Mortality of Districts at different Elevations	lxi-lxv
(3.) DENSITY.—Density a less Important Element than Elevation—Remarks and Tables illustrating the Influence of Density of Population on the Mortality from Cholera.	lxvi
(4.) WEALTH and POVERTY.—Remarks and Tables illustrating the Influence of Wealth and Poverty on the Mortality from Cholera	lxvi-lxviii
MORTALITY in LONDON from ORDINARY CAUSES	lxviii
CONDITIONS in which CHOLERA is MOST FATAL.—Comparative Influence of Density, Wealth, and Elevation of the Soil	lxix-lxxi
NUMBER of PERSONS ATTACKED by CHOLERA in ENGLAND	lxxi
CAUSE of CHOLERA is some Chemical Modification of Organic Matter	lxxii

CONCLUSION—PRACTICAL SUGGESTIONS :—	
(1.) Safety is enjoyed by removal from Infected Places to the high Salubrious Districts	xcix
(2.) Strangers should avoid visiting Towns in an Epidemic	xcix
(3.) When the Population is removed, it should be to High and Dry Ground, where Good Water can be procured	xcix
(4.) HIGH PLACES away from Marshes are also generally SAFE ASYLUMS from Plague, Yellow Fever, Remittent Fever, and Ague	xcix
(5.) Armies Suffer more on the March than in Station—Danger of Encamping on Low Grounds by Rivers	xcix
(6.) Travellers in Unexplored Countries should not Rest on Low Swampy Spots	c
(7.) INTERCOMMUNICATION.—Quarantine of little avail	c
(8.) Food	ci
(9.) Water	ci
(10.) Removal of Refuse	cii
(11.) Air	cii
(12.) Earth.—Importance of GOOD SITES for DWELLINGS.	cii-ciii
(13.) Colonies.—Importance of the Selection of GOOD SITES for NEW TOWNS	ciii
(14.) Climate.—The necessity of Sanatory Measures in India	ciii
(15.) The MEDICAL PROFESSION.—The Office of Medicine is to raise Men to a HIGH STANDARD of HEALTH; and to <i>Prevent</i> as well as to <i>Cure</i> Sickness	ciii-civ

TABLES :—

ANNUAL MORTALITY per Cent. from ALL CAUSES in the SEVEN YEARS, 1838-44, in each of the Statistical Districts of England, arranged in the order of the Mortality of Females	cvi-cxi
ANNUAL MORTALITY per Cent. from ALL CAUSES at different Ages (1838-44), in each Statistical District of England, arranged in the order of the Mortality of Females, in each of the 11 Divisions of England	cxii-cxxv
ANNUAL MORTALITY per Cent. from ALL CAUSES at different Ages (1838-44), in 21 Healthy Statistical Districts of England	cxxvi
ANNUAL MORTALITY per Cent. from ALL CAUSES at different Ages (1838-44), in 33 Unhealthy Statistical Districts of England	cxxvii
MORTALITY per Cent. from CHOLERA among Males and Females, at different AGES, in each of the 11 DIVISIONS of ENGLAND in 1849	cxxviii
Mortality per Cent. from DIARRHŒA among MALES and FEMALES, at DIFFERENT AGES, in each of the 11 DIVISIONS of ENGLAND in 1849	cxxix
Mortality from CHOLERA and DIARRHŒA in some of the Most Fatal Districts in 1849	cxxx
Deaths from CHOLERA in ENGLAND and in LONDON on EACH DAY of each Week of the Year 1849	cxxxix
Mortality from CHOLERA and DIARRHŒA in each Division, County, and District of England, 1849	cxxxii-cxxxix
Districts in which there were NO DEATHS from Cholera in 1849	cxl-cxli
Area, Population, and Deaths from Cholera and Diarrhœa, in 1849, and from All Causes in the 10 Years 1841-50, in 47 Seaport-Town Districts	cxlii
Area, Population, and Deaths from Cholera and Diarrhœa in 1849, and from All Causes in the 10 Years 1841-50, in 41 Inland Town Districts	cxliii
DEATHS from CHOLERA and DIARRHŒA on EACH DAY of the MOST FATAL MONTHS of 1849 in the following Groups of Districts :—	
(1.) Portsea Island and Alverstoke. (2.) Salisbury	cxliv
(3.) Plymouth, East Stonehouse, and Stoke Damerel. (4.) Bristol, Clifton, and Bedminster	cxlv
(5.) Wolverhampton and Dudley. (6.) Liverpool and West Derby	cxlvi
(7.) Manchester, Chorlton, and Salford. (8.) Leeds and Hunslet	cxlvii
(9.) Hull and Sculcoates. (10.) Tynemouth, South Shields, Newcastle-upon-Tyne, and Sunderland	cxlviii
(11.) Merthyr Tydfil, Cardiff, and Neath.	cxlix

„ Notes on Cholera, giving a brief Sketch of remarkable Facts connected with the Epidemic; also showing the Population, 1841, and the Number of Deaths from Cholera and Diarrhœa in 1849, in each of the 2189 Sub-Districts of England	166-300

TO THE RIGHT HON. SIR GEORGE GREY, BART., M.P.

Her Majesty's Principal Secretary of State for the Home Department.

General Register Office, 10th February, 1852.

SIR,

I HAVE the honour to submit to you the following Report on the Mortality of Cholera in England.

I was requested in 1850 by the General Board of Health to make out a "Return of all Cases of Cholera that had occurred in England and Wales, distinguishing Sex and Age."

After well considering the subject, I thought it desirable, not only for the use of the General Board of Health, but for circulation throughout the country, that a complete history of the late epidemic should be drawn up from the facts recorded in the register-books of deaths, distinguishing not only sex and age, but also the profession, the date of death, the place of death, and the duration of illness of all persons who died of *Cholera* or *Diarrhœa* in the years 1848 and 1849; giving not only the bare facts but exhibiting in Tables the various combinations of age, profession, locality, &c.

This duty has been confided by me to Mr. W. FARR, the Examiner and Compiler of Abstracts in this department. The Tables have been framed under his direction with the greatest care and accuracy, and are illustrated by various ingenious Diagrams; and the following Report has been written by him after much research and great attention given to the subject.

I have the honour to be, Sir,

Your faithful Servant,

GEORGE GRAHAM,
Registrar-General.

TO THE REGISTRAR-GENERAL.

SIR,

IN the Report which I have the honour to submit to you, I have endeavoured to carry out the investigation which you deemed desirable; and to show the effects of all the circumstances recorded in the Registers on the fatality of the greatest epidemic that has for many years infested England.

IN conformity with the plan sketched in your letter the abstracts were carefully made under the superintendence of Mr. J. T. HAMMACK; the tabling was superintended by Mr. J. THORNTON; the calculations by Mr. W. CLODE. The diagrams on Plates 2, 3, were drawn by Mr. C. A. COCKE; the other diagrams by Mr. J. R. SOWRAY. The notes and observations in the London Weekly Tables were greatly extended during the progress of the epidemic; and were, except in the interval from August 11th to September 22nd, under the charge of Mr. J. ANGUS. All these duties were discharged with great care and ability.

THE Census of March 31, 1851, was published after the first calculations of the mortality of the epidemic were made; and advantage was taken of the new Population Returns to determine, accurately, the mortality of the districts of London and of the country, in which the disease had been most fatal. When the numbers and ages of persons living in the different professions and occupations are ascertained from the Census Returns, the influence of occupation on health, on this and on other diseases, can be determined.

I have the honour to be, Sir,

Your obedient Servant,

WILLIAM FARR.

*Statistical Branch,
General Register Office,
February 7, 1852.*

Is the Report which I have the honor to submit to you I have endeavored to carry out the instructions which your Lordship has given to me, the effect of all the communications received in the Registrar-General's Office, the greatest epidemic that has for many years infected England.

In conformity with the plan sketched in your letter the statistics were carefully made under the supervision of Mr. J. T. Harrison, the tables were superintended by Mr. J. Thomson; the calculations by Mr. W. Crook. The diagrams on Plates 2, 3, 4, were drawn by Mr. C. A. Green; the other diagrams by Mr. J. B. Storer. The notes and observations in the London Weekly

PART I.—MORTALITY OF CHOLERA.

The Census of March 31, 1851, was published after the first estimation of the mortality of the epidemic was made, and advantage was taken of the new Population Returns to determine, accurately, the mortality of the epidemic of London and of the country, in which the disease had been most fatal. When the numbers and ages of persons living in the different parishes and counties were ascertained from the Census Returns, the influence of occupation on health, to this and on other diseases, can be determined.

I have the honor to be, Sir,

Your obedient servant,

WILLIAM FAIR.

REPORT

ON THE

MORTALITY OF CHOLERA IN ENGLAND,

1848-49.

IF a Foreign Army had landed on the coast of England, seized all the seaports, sent detachments over the surrounding districts, ravaged the population through summer, after harvest destroyed more than a thousand lives a day for several days in succession, and, in the year it held possession of the country, slain fifty-three thousand two hundred and ninety-three men, women, and children—the task of registering the Dead would be inexpressibly painful; and the pain is not greatly diminished by the circumstance that in the calamity to be described the minister of destruction was a Pestilence that spread over the face of the island, and found in so many cities quick poisonous matters ready at hand to destroy the inhabitants.

In following cholera through its fatal way, however, the inquirer meets with some grounds of consolation. He sees places on every side which the epidemic passed over, leaving the inhabitants in the serene enjoyment of health and complete immunity. And the hope is perhaps not fallacious, that an examination of the results of the second may be the means of mitigating, if not preventing a third invasion; for whatever may be the immediate cause of cholera, it will appear evident that in England it is only seriously fatal under certain known physical conditions, which admit to a great extent of remedy.

It is not necessary to describe here the nature of the disease. The task devolves on others of analysing the changes which the frame suffers under cholera; of investigating the effects of medicine; of relating the steps which were taken to relieve the population attacked in various places; of discussing in detail the various theories which have been produced to explain the phenomena; and finally of portraying in this epidemic the moral effects, which, as historians have not failed to perceive, possess the highest interest in the great catastrophes of mortality.*

Under the Act for the Registration of Births, Deaths, and Marriages, the name, sex, age, and occupation of every person who dies in England—as well as the time, place, and cause of death—are registered. The whole of this system of observation and record was in operation when cholera broke out. The quarterly abstract of deaths for the whole kingdom, and the London tables which are published weekly—presented notices of its rise, progress, and decline in particular districts. When the epidemic was over, it appeared desirable to give a complete abstract of the facts. Accordingly a list of every case of death from cholera and diarrhoea, in 1849, was transcribed from the

* See the Report of the Board of Health; and the appended Reports of Dr. Sutherland and Mr. Grainger, whose active and arduous labours in the epidemic deserve the highest praise. The College of Physicians has, it is understood, appointed a learned committee to report on the subject. The chemistry of the disease is ably discussed by Dr. R. D. Thomson, *Trans. of Royal Medical and Chirurgical Society*, vol. xxxiii. The disease is well described by Dr. Budd, in the *Cyclopædia of Practical Medicine*, and sketched in the *Lectures of Dr. Watson*, with his accustomed felicity and accuracy.

Registration volumes which for that year contained 440853 deaths. The roll of deaths was in the following form:—

No.	District.	Sub-district.	Population.	
			1831	1841
458;2	Nantwich.	Nantwich.	8560	9431

Date of Death.	Place.	Sex.	Age.	Profession.	Cause of Death.
1849.					
July 10	Wych House Bank, Nantwich	M.	6	Salt-boiler's Son . . .	Cholera, 13 hours.
„ 9	Welch Row „	F.	5	Confectioner's Daughter	Cholera, 6 hours.
„ 10	Vauxhall „	M.	72	Labourer . . .	Cholera, 28 hours.
„ 8	Wood Street „	F.	48	Basketmaker's Wife .	Cholera, brought on for want of the common necessaries of life.—Inquest.
„ 10	Wood Street „	M.	67	Shoemaker . . .	Cholera.—Inquest.

The whole forms a large mass of manuscript, which contains the particulars of 72180 deaths. Upon inquiry it was found that the *list of persons who died* of the two diseases would fill a thick octavo volume of about 2500 pages. Three courses were open; (1) to publish those facts simply; (2) to publish the tabular abstracts in detail; or (3) to publish the abstracts and the salient facts relating to each locality in a condensed form. The publication of the cases in detail would have been attended with several advantages; it would have enabled the medical men of the country to study the particular facts in their respective districts, surrounded by the circumstances which affect and modify the mortality; and the publication of an extended tabular summary of the daily deaths in each of the 2189 sub-districts of the country would also have possessed interest. As the work on either plan would, however, have been exceedingly voluminous, the third course was adopted: in the meantime the manuscript list of the 72180 cases, and the extended tabular abstracts, are preserved among the records of the General Register Office, and will always be accessible to the local inquirer, as well as to the general student of this great and extraordinary epidemic.

The first of the following series of tables shows that 1057 males and 877 females died from cholera during the year 1848, and that of those numbers 612 males and 493 females, died in the three months of October, November, and December. The numbers in each county and division are shown separately (pp. 1—2). The weekly deaths from cholera in each division, and the ages at death in the last three months, are added (pp. 3—4).

The second series of tables shows of the 53293 deaths from cholera, and 18887 from diarrhoea during the year 1849, how many occurred in each of the 11 divisions, 44 counties (or groups of counties), and 623 districts of England (pp. 5—19). The districts are here arranged in the same topographical order as is adhered to in all the Reports of this Office. Each district stands in its place, although no death from cholera was registered within its limits; the population of 1841 is set forth in a distinct column, and shows the lowest numbers that could have been exposed to the attacks of the disease. In the towns, and in the manufacturing and mining districts, the population was, of course, much greater in 1849 than in 1841.

The third is a remarkable series of tables. It shows the number of deaths from cholera and from diarrhoea on each day of the year 1849, in all England, in 11 divisions, and in 44 registration counties (pp. 20—107). Thus the march of the epidemic through every county can be followed day by day.

In the returns that have previously been made of the mortality of cholera in this and in other countries, only the deaths from that disease in parts known to be severely infected have been inserted, and it is evident that under such a system—based on imperfect registration—many deaths must have escaped observation. But the causes of nearly all the deaths in England are registered, and all the deaths of 1848 and 1849 are

recorded in the volumes from which the present return is derived ; so that the reader can now trace the progress in place and time of the great epidemic through 17 millions of people, settled over a wide extent of country, in all the various circumstances of life. And the difference in the time of invasion, as well as the absence or the inconsiderable mortality of the epidemic in places lying by the side of districts overwhelmed by its effects—is undoubtedly one of the circumstances which most deserve attention in the study of cholera.

The fourth series of tables shows how many males and females died at *various ages* of cholera and diarrhœa in the divisions and counties of England. Taking 100 years as the limit, the lifetime is divided into twenty equal quinquennial periods ; and the tables show that the deaths were distributed unequally over the whole of these periods. The deaths in each of the first five years of life are separately given ; as in that short interval of age a remarkable change takes place in the form and fatality of the disease. (Tables pp. 108—119.)

A swift and precipitate course ending in dissolution, is a characteristic of all plagues, and fixes attention in cholera. The duration of 39468 fatal cases of cholera, and of 7896 fatal cases of diarrhœa, is shown in the fifth series of Tables. The duration in hours and days is exhibited at the quinquennial ages that have been already named. Tables are given for all England, for England exclusive of London, and for each division of the country (pp. 120—165). The 623 districts of England are divided into 2189 sub-districts. The population (1841), the deaths from cholera, and the deaths from diarrhœa in each sub-district, are given in the notes (pp. 166—300) which close the volume. The London Registrars returned every case of death from cholera or diarrhœa weekly, and, in the height of the epidemic, daily, accompanied by any information which either the informants, or their own observation, supplied, respecting the state of the streets or houses in which the deaths occurred. This information was necessarily collected in haste ; but was found to be substantially correct, and had an excellent effect at the time, in directing the immediate attention of the authorities to some of the most crying evils that induced and aggravated the disease. A digest of these Registrars' local reports is embodied in the notes, which contain many curious and suggestive facts ; and the gentlemen who abstracted the cases were requested to compile from the transcripts short notices of the first and last deaths, distinguishing the dates of such deaths ; as well as the professions of the persons who died, and the localities which suffered most in every sub-district. The local inquirer is requested not to accept any opinions expressed in the notes, or the summaries of the facts themselves, as ultimate results ; but to consider them only as indications of the direction in which investigation may be advantageously employed. Upon the number of deaths returned, and the tabular results, full reliance may be placed ; as they have been derived directly from returns, and have been duly checked.

It may increase the usefulness of this Report to give, from the registration returns, a brief, connected summary of the progress of the epidemic, and to describe its effects on the health and population of England. But it will be convenient to notice, first, what the health of the country has been, and what it was immediately before this great disturbing cause appeared.

HEALTH OF ENGLAND.

Although no regular Registers of Deaths were kept before the Reformation, the chronicles show clearly enough that England has been periodically devastated by famines and plagues from the earliest times. A large proportion of the population of the island has been more than once swept away by these visitations. The great plagues of the sixth and seventh centuries—which destroyed, according to some estimates, half the inhabitants of the Eastern empire—extended to Britain. Besides the Black Death in the fourteenth century, the sweating sickness of the sixteenth century, and the plagues of the seventeenth century, terminating in the plague of 1665 described in detail by the historians—a long catalogue of famines and epidemics may be given, which, though briefly and imperfectly noticed in the chronicles, were perhaps not much less fatal.

After the Revolution the great plagues ceased ; but the mortality was kept up by

typhus, small-pox, influenza, and other zymotic diseases. The writings of Mead, Pringle, Lind, Blane, Jackson, Price, and Priestley,—the sanatory improvements in the navy, the army, and the prisons,—as well as the discovery of vaccination by Jenner,—all conduced to the diffusion of the sound doctrines of public health, and had a practical effect, which, with the improved condition of the poorer classes, led to a greatly reduced mortality in the present century. Since 1816 the returns indicate a retrograde movement. The mortality has apparently increased. Influenza has been several times epidemic, and the Asiatic cholera reached England, and cut off several thousands of the inhabitants in 1832. It reappeared and prevailed again, as we have seen, with no mitigated violence, in 1849.

The health of all parts of the kingdom is not equally bad. Some districts are infested by epidemics constantly recurring; the people are immersed in an atmosphere that weakens their powers, troubles their functions, and shortens their lives. Other localities are so favourably circumstanced that great numbers attain old age in the enjoyment of all their faculties, and suffer rarely from epidemics. The variations in the mortality are seen in the Tables (pp. cvi-cxxvii), which have been extracted and arranged from the Ninth Annual Report. The rate of mortality is calculated on 2,436,648 deaths in the 7 years, 1838-44; and on the population taken at the Census of 1841, in the middle of the period. On tracing over 324 sub-divisions of the country, the force of death in males and females of different ages, the most remarkable differences are discovered. Here of 1000 young children under 5 years of age *forty* die, there a *hundred and twenty* die annually; here, of 1000 men of mature age (35-45) *nine* die, there *nineteen* die yearly; of 1000 men of 45-55 years of age *twelve* die in one district, *thirty* in another; at the more advanced ages of the next decennium (55-65) *twenty-four* die annually in one, *fifty* in another district: of 1000 females of all ages without distinction, 14 die annually in three districts, 15 die in eighteen districts, 17 (or less) in forty-eight districts. And in strong contrast, 23 in 1000 females die in twenty districts, 26 in 1000 in three districts, 27 in seven districts, 31 in two districts.

The mortality at all ages, without distinction, differs much less than the mortality of children, and less even than the mortality of men and women of the age of 35 and upwards in the several parts of the country. The population from the age of 15 to 35 is unsettled; at that age the emigration of servants and artizans from the country to the towns takes place; and as consumption, the disease then most fatal, is slow in its course, its victims in many cases retreat from the towns to their parents' homes in the villages to die. And the death is registered where it happens, not where the fatal disease begun, so that, on comparison, it is told twice in favour of the towns; once in being withdrawn from the town register, and a second time in being added to the country register, to which it does not properly belong.

Independently of external causes, and by the force of a natural law, the mortality varies at different periods of life: so that the rate of dying in two mixed populations may differ according to the varying proportions of children, young persons, or old people. The series of tables (pp. cxii-cxxvii) shows the rate of mortality at six periods of life, under five years, at 10-15, 35-45, 45-55, 55-65, and 65-75. It is shown in the extreme cases, that when the general mortality is either high or low, the mortality at nearly all these ages is high or low; and a collation of the whole leaves little doubt on the question of the relative insalubrity of the various parts of the country.

Upon looking generally at the health of the population, it will be found that people suffer most in the great town districts. Liverpool and Manchester are the places of highest mortality, then follow some of the districts of London, Merthyr Tydfil, Bristol, South Shields, Macclesfield, Hull, several districts of Lancashire, Sheffield, Nottingham, Leicester, Stoke-upon-Trent, Wolstanton and Burslem, Leeds, Newcastle-on-Tyne, Birmingham, Coventry, Wolverhampton, Newcastle-under-Lyme, Derby, Salisbury, Northampton, Bradford, Gateshead, Shrewsbury, Walsall, Norwich, Colchester, Sunderland, Exeter, Worcester, Bedford, Dudley, Bath, Ipswich, Carlisle, Lancaster, Cambridge, Aylesbury, Maidstone, Canterbury, Wycombe, Gloucester, Wakefield, and Reading.

The mortality is not increased equally at every age in these districts. And it varies

considerably in the two sexes; the returns for childhood, manhood, and old age, males and females, conspire in proving the prevalence of general causes of insalubrity operating with different degrees of intensity, but with much greater force than in other parts of the country.

It is probable that under any circumstances a certain number of children born will never reach maturity; that in a numerous population there will every year be deaths at all ages, from internal or external causes. In the present state of mankind it is impossible to say how small the inevitable loss by death is, as in every place, and among all classes of people, certain known sources of insalubrity exist, which unquestionably account for a part of the prevalent mortality. The annual mortality of males and females of all ages in England is at the rate of 22 in 1000; in Glendale, Bellingham, and Haltwhistle, three districts of Northumberland, the mortality in the same seven years was 14 in 1000. Not to take an extreme case, a group of 21 statistical districts has been formed, and a table of the mean mortality has been deduced from the whole; which, as it represents the lowest rates of mortality hitherto observed, over a period of seven years in a considerable population, may for the present be called the mortality of man from natural causes. The excess of mortality over this standard may be unhesitatingly referred to artificial, unnecessary causes, in such tables as the following, showing the waste of life and health in 40 town and city districts. An equal population (100000) is taken at six ages; and it will be observed that the insalubrity tells with most effect against childhood: the mortality under 5 years of age is raised 124 per cent.; in manhood it is raised 77, 83, 70 per cent. at three ages, and in puberty and old age 45 per cent. Out of a given number of men, at different ages, the deaths by unnatural causes increase every year; for the table shows that to 100000 living in each period, the deaths are 700 by unnatural causes at the age of 35-45; and 1060 at 45-55; 1682 at 55-65. The rate of mortality is raised in a less ratio, but to a much greater extent in old than in middle age, for the natural mortality in old age is high. The absolute number of deaths is greatest in infancy, as the number of old persons living is small compared with the number of children living in every population; so that whether the ratio of increase on the natural rate of mortality, the actual increase in the rate of mortality, or the number of deaths be regarded, children are the most cruelly treated by the destroyer. Yet of every 17 men who die in towns, 7 die by unnatural causes; and of 1000 living at the age of 40, seven die; at the age of 50, eleven die; at the age of 60, seventeen die; at the age of 70, twenty-six die every year from causes evidently external and unnatural. Women escape with the least loss; yet five in every fifteen annual deaths would not happen in healthy places.

ANNUAL Rate of Mortality per CENT. [or per 100000] in Healthy and Unhealthy Districts, also the Excess of Mortality due to Unhealthiness.

Age.	MALES.			FEMALES.		
	Districts in which the Mortality is					
	Low.	High.	Excess.	Low.	High.	Excess.
0—5	4·323	9·678	5·355	3·660	8·405	4·745
10—15	·393	·572	·179	·460	·603	·143
35—45	·913	1·613	·700	·992	1·411	·419
45—55	1·276	2·336	1·060	1·172	1·895	·723
55—65	2·396	4·078	1·682	2·131	3·323	1·192
65—75	5·657	8·224	2·567	4·799	6·964	2·165

The table may be read thus without reference to decimal points. To 100000 boys living, 4323 die in comparatively healthy places, and 9678 in unhealthy places, the excess of deaths chargeable on the latter is 5355.

It often happens that unhealthy and healthy villages, streets, parishes, and towns are in immediate juxtaposition; and constitute parts of the same district. The effect of

this admixture on the results is, that the unhealthy districts are *less unhealthy*, and experience a lower rate of mortality than they would if all the healthy parts were eliminated. Upon the other hand, the healthy districts are made to appear less healthy than they would if they consisted only of healthy places, inhabited by people in good circumstances, under a proper course of diet, discipline, and exercise. The difference in the mortality of the two classes of districts is therefore understated.

The healthiest districts of the country can readily be picked out of the tables. But some may be named, as it is of importance that they should be generally known; not only for the sake of those who wish to resort to healthy localities, but that the precise condition of the parishes and populations that live in the best health may be studied.

Among the healthiest Registration Districts in the country are Glendale, Bellingham, Haltwhistle, Morpeth, Rothbury, Alnwick, Belford in Northumberland; Brampton and Longtown in Cumberland; Bideford, Holsworthy, South Molton, Torrington, Crediton, and Barnstaple, in North Devon; Anglesea, Tregaron, Lampeter, Newcastle-in-Emlyn, Dolgelly, Corwen, Bala, Festiniog, Aberystwith, in Wales; Hendon and Barnet in Middlesex; Godstone, Reigate, and Dorking, in Surrey; the Isle of Thanet (including Margate and Ramsgate*) and Eassey (including Deal) in Kent; the Isle of Wight; Blything, Mutford, Wangford, in Suffolk; Havant, Catherington, Fareham, Droxford, South Stoneham, New Forest, Lymington, Christchurch, Ringwood, Fording-bridge, and Romsey, in Hampshire; Steyning, Thakeham, and Worthing, in Sussex.

If the degrees of mortality are represented by shades on a map, or shadows on the face of the country, Berwick-on-Tweed is slightly shaded, nearly all Northumberland is white from the Cheviot Hills and Flodden to Otterburn and Hexham away over the forests, wastes, and fells, to Longtown, Brampton and the hilly regions, round the lakes of Cumberland and Westmorland, to Ulverstone, north of Morecambe Bay. A dark shade rests on Carlisle, and extends, growing lighter, over Cockermouth and Whitehaven. From Newcastle down the Tyne on both sides, the shades are thick and dark, and over Durham along the west the lessening shadow reaches Barnard Castle. The shadow over Yorkshire is light, the hilly north region is scarcely stained, and generally the great basin of the Humber, with the Ouse and Trent, is clear, but darkening shadows extend along the Ouse, the Aire, and the Don, becoming black over Sheffield, Leeds, and Hull the great port of the Humber. Derby, Leicester, and Nottingham, form a black triangle, sending a prolongation of shadow towards Sheffield and Stoke-on-Trent, but surrounded on the other side by light spreading over Buxton, the Peak of Derbyshire, much of Leicestershire, Nottinghamshire, and Lincolnshire. Lancashire is covered with a mass of darkness, that the light points along the coast can scarcely pierce. The blackness extends to Macclesfield, Stockport, Newcastle-under-Lyme, Wolstanton and Burslem. Shadows extend in a line through Shrewsbury, Wolverhampton, Dudley, Birmingham, and Coventry, with light on both sides, and the shade descends to Tewkesbury, darkening over the Severn and Gloucester. A shadow of some density stretches out in a south-westerly direction from Ely, Wisbeach, and Kings Lynn, over Cambridge, Bedford, and Northampton, to Buckingham. Norfolk, with the exception of Norwich, is made light by the contrast with this region and another on the borders of Norfolk and Suffolk, extending from Colchester, Ipswich, and Yarmouth, to Saffron Walden. Essex and Hertford are light; Middlesex white, out of London, which is darkly shaded. Kent has over it a light shade, which turns dark over Chatham, Canterbury, Maidstone, and Dover. There is a general whiteness over Surrey, Sussex, Hampshire with the Isle of Wight, and parts of Berkshire, from the Thames to the sea; Reading, Brighton, Portsmouth, and Southampton, are the dark spots in this field. The misty shadow is quite visible over Dorset, and grows cloudy over Wiltshire, of which Salisbury is the black centre; but the mist clears away in North Wilts, and disappears in whiteness over the Cotswold Hills, Westbury, and Wheatenhurst in Gloucestershire, divided by the Severn. Tewkesbury, Newent, Cheltenham, and Gloucester, make the northern borders of Gloucestershire dark, and the shadow from Wiltshire descends on the southern border from

* Some of these districts suffered from Cholera, as will be subsequently shown.

Devizes down the Avon, thickening over Bath, Clifton, Bedminster, and turning into a black mass over Bristol. Somersetshire is shaded on the side next Wilts and along the Avon, but is lighter towards the sea channel, and the whiteness is diffused over Exmoor, Dartmoor, and the whole of North Devon. Dark shadows rest on Exeter, and extend, growing much lighter, up the Vale of the Exe, to Tiverton. Plymouth, Devonport, and Stoke Damerel are enshrouded in black mist; but the expanse of this great county is white, and so is Cornwall as far as Falmouth, but the parts to the south-west, studded with mines, are shaded to the Land's End. A tract of whiteness, sixty miles in breadth, stretches from Devon, Somerset, and Cornwall, over the Bristol Channel, and covers the western half of Wales, from the sea-shore to the mountains, as far as Anglesea, Conway, and St. Asaph. Newport is dusk, Merthyr Tydfil is a black mass, and the shades spread over Glamorganshire and Brecknockshire, the field of the Welsh coal and iron works.

The light parts of the country in the map represent a population in health and vigour, rarely attacked by zymotic diseases, living in considerable numbers to an advanced age; the dark parts are real "valleys of the shadow of death," where the population is sickly, feeble, short-lived,—where thousands of the infants are convulsed, the children's brains inflamed, tuberculous, distended with water,—where small-pox, measles, and scarlatina, instead of being light eruptions, destroy the structure of the skin, putrefy the throat, inflame the lungs,—where the natural process of teething is often fatal to the child, childbearing to the mother,—where typhus, pneumonia, bronchitis, asthma, and consumption, destroy thousands of lives, bereaving families, and leaving multitudes of widows and orphans, following in the train of untimely death. England, according to the latest observations, is the healthiest country in the world,* yet it is not easy to calculate in ordinary times her losses by diseases, from which parts of the country are free, and which the progress of social improvement and medical science may remove. How can the sufferings of a large part of a nation be estimated? How can the effects of disorderly morbid states on the passions and conduct of the people be weighed? How can the value of time wasted, of great plans perishing unmaturing, of works cut short by death, of men taken from the service of their country and mankind before their time, be measured? If the loss is indefinite, its magnitude is unquestionable. We have now to describe its increase by the invasion of a foreign plague, which displayed a similar, but not the same partiality, in the selection of its victims, as the ordinary endemics of the country.

CHOLERA.

Cholera is more fatal in Asia than in Europe; and several partial epidemics are described in the annals of India before the rise of that great epidemic of 1817, which encircled the world, and destroyed men wherever it found them in the circumstances that lend it power. The slow diffusion of that epidemic and its ravages through 1832 and 1833 in England have been frequently described. Since 1817 India has experienced several partial epidemics. In 1845 cholera was epidemic in Cabul, which from 1839 to 1842 had been the seat of war, and the scene of great triumphs and great disasters. Bombay was attacked in the spring of 1846, and a part of the army of Scinde at Kurrachee was assailed by the disease in its most fatal forms. From Afghanistan, the Punjab, and Sinde, the epidemic extended over Persia and Syria in 1846, reached Astrakhan at the mouth of the Volga on the Caspian Sea in June 1847, Moscow in September 1847, Petersburg and Berlin in June 1848, Hamburgh in September 1848, Edinburgh at the beginning of October 1848.† The epidemic

* The following Table is from the 6th Annual Report, p. xxxix. where the data will be found for these and other estimates.

England	22	deaths annually to	1000 living.
France	24	„ „	1000 „
Prussia	27	„ „	1000 „
Austria	30	„ „	1000 „
Russia	36	„ „	1000 „

travelled at the same rate as the epidemic in 1830-1; the dates of the attacks of which are given by Dr. Kennedy.*

The first epidemic starting from Bengal in August 1817, reached Bombay on August 10th, 1818, and Astrakhan on September 18th, 1823, and there it died away. In Persia, several local epidemics appeared at intervals in the 7 years, 1823-30. The great epidemic that traversed Europe is said to have sprung up in June 1830 on the low western shores of the Caspian Sea. The velocity of the two epidemics only differed in Asia: it was the same in Europe.

It is worthy of remark, that in the hot season of 1846, when the cholera epidemic acquired great force about the Indus, summer cholera and diarrhœa prevailed with great violence in England.

CHOLERA IN ENGLAND.

The deaths from cholera in England were 331 in 1838; 394 in 1839; 702 in 1840; 443 in 1841; and 1620 in 1842. The deaths from diarrhœa in the 5 years (1838-42) were 2482, 2562, 3469, 3240, and 5241. I shall trace the progress of these diseases from 1842 by the help of the Quarterly Returns. The slight increase of mortality in the quarter ending September 30, 1842, was referred to diarrhœa and cholera, which "was more prevalent than usual in the season, though in a mild form." According to the Registrars (Reg. Gen. Quar. Rep. 1842, 3rd Qu.), "bowel complaint" prevailed at Brighton, Plymouth, Dudley, Wolverhampton including Bilston, Birmingham, Liverpool, Manchester, several Lancashire districts, Leeds and Sunderland. English cholera was fatal to 3 aged men at Northampton; 1 person at Ipswich. It prevailed at Deritend and Bordesley near Birmingham, Basford, Macclesfield, Liverpool (where 1 death was registered "Asiatic cholera" of 4 or 5 hours' duration), West Derby, Blackburn (where "29 persons died of cholera"), Bury and Bolton (where an "epidemic of diarrhœa or English cholera prevailed among all classes"), Chorlton, Manchester, Salford, Dukinfield sub-district of Ashton and Oldham, Bradford. In London (1842) 704 deaths were referred to diarrhœa, 118 to cholera. Wages were reduced, and there was considerable manufacturing distress in this year. The men "turned out" in many districts.

1843. In the summer quarter (July, August, September), "bowel complaints" were noticed in Exeter, Wolverhampton, Lincoln, Nottingham; "an extensive mild fever prevailed" in Macclesfield, "together with English cholera, but not of a fatal character." Diarrhœa was prevalent in Liverpool and West Derby; 40 of the 95 deaths in Chorlton-upon-Medlock were "from diarrhœa, cholera, or other diseases of the bowels." The symptoms, the Registrar states, were, in many cases—"diarrhœa, vomiting, and colic; often with coldness of the skin, and sometimes of the breath; blueness of the skin and sunken eyes; the dejections sometimes colourless, with white flakes, but generally bilious and feculent." Cholera was fatal to 43 persons in the Hulme sub-district. English cholera prevailed so far as to constitute an epidemic in Manchester; 1 case terminated fatally in 24 hours. Ashton, Oldham, and Halifax were attacked by diarrhœa and "English cholera." In the year 1843, 834 deaths were referred to diarrhœa, 85 to cholera, in London.

1844. In the summer quarter, 47 cases of cholera were registered in London, 414 of diarrhœa. A case of English cholera was registered at Kingston in Portsea Island. Diarrhœa was prevalent and fatal in Bedford, Clifton, Stroud, Dudley, Wolverhampton, Coventry, Macclesfield, Chorlton, Manchester, and Huddersfield. In the quarter ending December, 5 cases of cholera were registered in London; 3 at Sedgley in the Dudley district, where "bowel complaint" continued prevalent. In the year 705 deaths were referred to diarrhœa, 65 to cholera, in London.

* See the valuable and lucid *History of Contagious Cholera*, by J. Kennedy, 3rd edit. 1832. Map, p. 198. Report of Board of Health. Map.

Astrakhan	July 20, 1830	June 1847
Moscow	Sept. 1830	Sept. 18, 1847.
Petersburgh	June 26, 1831	June 1848.
Berlin	Aug. 31, 1831	June 1848.
Hamburgh	Oct. 1831	Sept. 1848.
Sunderland	Oct. 24, 1831	Oct. 4, 1848.
Edinburgh	Jan. 22, 1832	Oct. 1, 1848.

1845. Only 26 deaths from cholera were registered in London during the summer quarter: 2 deaths from cholera occurred in St. George's, Clifton; 1 in Sedgley, Dudley. In the autumn quarter of the year 2 deaths from cholera happened in Sheffield North. Cholera and diarrhoea were rare, and attracted little attention. In this year 841 deaths were referred to diarrhoea, and 43 to cholera, in London.

1846. The winter quarter (January, February, March) was exceedingly mild, the mortality low. In the remarks attached to the June quarter, it is stated that there was an evident tendency in the mortality to decline through the 7 spring quarters 1839-45; but that in the spring of 1846, this tendency was counteracted, and the deaths exceeded the average. The deaths in London, at the close of June, from diarrhoea, dysentery, and common cholera, rose to 40 weekly. The progress of the epidemic abroad, and the bad sanitary condition of London and many towns, justified the warning in the remarks of this quarter,—not to wait until cholera reached the country, but to look before, and to remove the nuisances which give the disease breath, life, and being. The air was 2° above the average temperature, and the horizontal movement was less than it was in spring, 1844, in the proportion of 655 to 948 miles weekly. In the summer quarter (July, August, September) of 1846, an extensive epidemic prevailed. The 5 weeks from July 11 to August 15 were the most fatal in London. Young children were the principal sufferers: it had the usual symptoms of cholera infantum. "The disease also proved fatal to many old people; and some adults died of attacks which could not in their symptoms be distinguished from Asiatic cholera. It was, however, quite evident from the first that the epidemic had not the characters of that malady which broke out here in the winter of 1832, but was closely allied to the cholera described by Sydenham, which he says lasted a month and—"*eam anni partem, quæ æstatem fugientem atque autumnum imminens complectitur (unice ac eadem prorsus fide, qua veris primordia hirundines, aut insequentis tempestatis fervorem cuculus), amare consuevit.*"*

While the deaths in London were little more than 14 per cent. above the return of 1845, the deaths rose from 25,166 to 38,826—or about 52 per cent. after a correction for increase of population—in the towns and other districts of the kingdom, included in the return. In some of the densely-peopled towns the mortality was doubled. The deaths in the corresponding summer quarters of the past and present year were, in Maidstone, 124 and 239; Brighton, 219 and 364; Portsea Island, 239 and 433; Winchester, 89 and 141; Oxford, 89 and 194; Northampton, 182 and 220; Bedford, 182 and 255; Ipswich, 119 and 240; Norwich, 308 and 454; Plymouth, 191 and 279; Clifton, 323 and 436; Worcester, 106 and 173; Dudley, 457 and 745; Walsall, 157 and 288; Wolverhampton, 438 and 687; Wolstanton and Burslem, 164 and 315; Coventry, 188 and 300; Nottingham, 285 and 467; Lincoln, 154 and 246. No such mortality has been witnessed in Birmingham for many years; the deaths in 1845 were 694, in 1846 they amounted to 1623. In Liverpool and the adjacent district of West Derby, the deaths in the summer quarters of 1845 and 1846 were 2596 and 4090; in Manchester, and the contiguous districts of Salford and Chorlton, 2408 persons died in 1845, and 4297 in 1846. Stockport, Macclesfield, Chester, Blackburn, Preston, Bury, Bolton, Wigan, Prescott, Ashton, and other districts of Cheshire and Lancashire, suffered to an equal or a greater extent. The districts of Yorkshire did not escape; 1039 persons died in Sheffield, where only 446 died in the summer quarter of 1845, and the mortality in any preceding summer since 1838 had never exceeded 647. Huddersfield, Leeds, Hull, and York suffered severely. In Sunderland, Gateshead, Tyne-mouth, and Newcastle-on-Tyne, 1170 deaths were recorded in the summer quarter of 1845, and 2313 in the corresponding quarter of 1846. The epidemic was apparently as fatal in the inland towns as in the ports.

Upon the other hand, the mortality of the quarter was below the average in Pontypool and Newtown; but slightly above the average in the other districts of Wales; and generally the country and southern districts suffered comparatively little.†

* Sydenham Opera. Obs. Med. Anni 1669. He also describes the severer epidemic of 1676, "*Insuetæ tempestatis calore evectus.*"

† Reg. General's Report on the State of the Public Health in the quarter ending September 30, 1846.

The diarrhœa was in some districts of a dysenteric character, but generally choleraic, and often terminated in English cholera. At Nottingham a case was returned as Asiatic cholera, terminating in 12 hours. In London 1549 deaths in the quarter were referred to diarrhœa, 75 to dysentery, and 197 to cholera. In the last quarter of the year diarrhœa, dysentery, cholera, influenza, and typhus were unusually common in London, and in many other town districts. The iron, coal, pottery, cotton, and woollen districts, and generally the counties north of Staffordshire, were severely visited. Scarlatina was fatal in the northern districts. In the year 2152 deaths were referred to diarrhœa, 228 to cholera, in London.

1847. The temperature of the winter quarter was below the average; inflammation of the lungs and typhus prevailed. Diarrhœa and fever raged among the poor starving Irish, who flew from the famine caused by the potato failure to England. From the same cause provisions were dear; there was much distress in many parts of the country. In the spring quarter (April, May, June), the mortality, in the words of the Quarterly Report, "increased; common cholera was fatal; scurvy prevailed more or less over the country from the want of vegetable food, the potato having failed; all food became scarce and dear; typhus broke out, is still epidemic, and shows no sign of decline." In the summer quarter (July, August, September), the mortality slightly decreased in the country; in London there was no sign of improvement. Small-pox, measles, scarlatina, diarrhœa, dysentery (slightly), typhus, and erysipelas prevailed: 111 persons died of typhus in one week; epidemics of typhus and influenza set in, and made the mortality in the *last quarter* of the year higher than in any quarter of any year since the registration commenced. The mortality in London was raised by influenza from 1086 in the week ending November 20, to 1677 in the week ending November 27; 2454 in the first, 2416 in the second week of December: the epidemic and the mortality then gradually declined. The deaths, directly or indirectly caused by influenza, were not less than 5000 in six weeks. In the year diarrhœa was fatal to 1976, cholera to 117 persons, in London: 307 deaths were referred to dysentery.

1848. The influenza epidemic extended into the winter quarter of 1848 (January, February, March), and the mortality was greatly above the average. Typhus, scarlatina, hooping-cough, and small-pox were epidemic in many parts. The mortality of Birmingham, Sheffield, Manchester, and Liverpool remained exceedingly high. In the next three months "a very remarkable improvement in the state of the public health" was observed; the mortality was but slightly above the average of the season. Influenza was no longer epidemic in London. Typhus, which was fatal to 1279 persons in the last quarter of 1847, declined from that time, and in the June quarter of 1848 was only fatal to 882 persons. "There is as yet no trace of the epidemic of cholera, which is ravaging Russia from Moscow to St. Petersburg, and is ascending the Danube."* The mortality in the summer quarter (three months, July, August, September) was below the average. "The improvement in the public health is considerable, in all the divisions of the kingdom, except London."* The principal seats of the carpet, iron, pottery, silk, and cotton trades are particularly cited; and the improvement is ascribed to the comparative cheapness of provisions, and the infrequency of fever consequent upon the diminution of Irish immigration. Diarrhœa was, however, prevalent in Brighton, Ipswich, and Yarmouth, in Dudley, Walsall, Coventry, Birmingham, and Leeds. Dysentery was rather more fatal than usual; it caused 65 deaths in Penzance, and was also fatal to many persons in Marazion, the neighbouring sub-district. The mortality of the autumn quarter (October, November, December) was "below the average;" yet cases of "Asiatic" or "epidemic" cholera occurred in October, and in the remaining months of the year.

1934 deaths were referred to cholera; 829 in the first nine months, and 1105 in the last three months of the year 1848. The former were generally considered cases of common "English" cholera; many of the latter were universally held to be "Asiatic" cholera. The two forms are often not distinguished in the returns. The cases, sepa-

* Registrar-General's Quarterly Reports, 1848.

rately considered, run so insensibly into each other, that the attempt at distinction would have been fruitless. They differ perhaps, in fact, no more than distinct and confluent small-pox, simple and malignant scarlatina, simple and phlegmonous erysipelas, which are properly held to be varieties of the same maladies.

Without entering into any disquisition in pathology, it is also necessary to notice here the connexion of diarrhœa and sporadic cholera with Asiatic cholera. Diarrhœa, in the sense of "*defectio frequens*," frequently accompanies teething in children; it is the result of a whole class of medicines, and of irritating, indigestible food. Many poisons induce it. It is one of the most constant symptoms of typhus, and runs insensibly into dysentery. The last stage of consumption is marked by colliquative diarrhœa. Like pain and "fever," it is a symptom of many diseases. "It is often brought on by that power which is exerted in every part of the body of freeing itself from anything painful and oppressive" (Heberden's Commentaries). The ulceration of the intestines in typhoid fever, in consumption, and in dysentery, are its common causes; in many cases no structural change can be detected in the mucous membrane; and many of the purgative medicines are first absorbed and taken into the blood before their specific action is induced.

In abstracting the cases of 1849, for the series of tables in this volume, all cases returned as "cholera," whether English or Asiatic, choleric, "bowel complaint," and diarrhœa simply, or as a complication of other diseases, were transcribed. All the cases in which the term "cholera" or "choleraic diarrhœa" occurred, were referred to cholera; about 300 cases, in which diarrhœa was evidently a symptom of consumption, or some other disease, were struck out; the residue of the cases was classed under diarrhœa.

Excluding the symptomatic affection, such as is observed in fever, consumption, and enteritis, there is evidently an idiopathic disease, which may properly be called diarrhœa, and is as constantly observed in English towns when the temperature rises above 60° as bronchitis and catarrh when the temperature falls below 32°.

Again, wherever dysentery is epidemic, a great number of cases occur which exhibit all the intermediate symptoms between simple purging without fever and the characteristic fever, pain, and bloody mucous discharges of dysentery. The dysentery often begins as simple diarrhœa. In such circumstances the diarrhœa is really a constituent part of epidemic dysentery, modified by the condition, place, and age of the patients. In like manner, the diarrhœa which is generally prevalent at the same time as cholera, often painless, with rice-water evacuations,* vomitings, and slight spasms, is to be held, in its various shades, a constituent part of the cholera epidemic. Many of the cases of diarrhœa in 1849, it may be held, however, were of a simple character, and of the same nature as the diarrhœas of other years.

We shall now give a more particular account of the progress of cholera in 1848, and of the first appearance of the new epidemic form.

CHOLERA IN LONDON, 1848.

LONDON.—In London deaths were referred to cholera in every month of 1848: 3 were registered in the weeks of January, 3 in February, 2 in March, 4 in April, 3 in May, 8 in June; the increase taking place in the third week of June, when the mean daily temperature rose and remained above 60°. The disease was epidemic, and the deaths registered in July were 66, in August 64, in September 31. The deaths from cholera registered in each week of these three months were, 3, 7, 9, 21, 26, 21, 19, 17, 7, 7, 7, 6, 7, 4. This epidemic subsided in September; it presented little that was extraordinary in its course, or in the number of cases. The deaths registered from cholera in the first week of October were 13, and in the twelve subsequent weeks of the quarter, 30, 45, 34, 65, 62, 54, 34, 20, 21, 29, 31, and 30. The temperature was

* Dr. R. D. Thomson has shown that this fluid is not the serum of the blood, but has the same chemical qualities as the effusions into serous membranes. The light flakes are the epithelial scales of the intestine.—*On Cholera*, Trans. Royal Med. Chir. Soc., London, vol. xxxiii.

declining; yet the mortality increased rapidly in October, and 65 persons died from cholera in the first week of November. The cases were severe and rapidly fatal. It was evidently the epidemic cholera—the Asiatic cholera. To every one accustomed to observe popular disease the difference in the two forms was striking. Some extracts from the weekly table will show their different characters. The following is from the notes to the week when the common summer epidemic of cholera was at its height:—

Cases of Cholera REGISTERED in the Week ending July 29th.

In Belgrave (sub-district) F. 54, "Asiatic cholera (58 hours' duration)."

Mr. Jorden, the Registrar, states that "this was a distinct case of Asiatic cholera (?), occurring in his own practice, of which he had seen much both at home and in the East. The patient was said to have suffered from a severe attack, when it prevailed before, some 16 years ago. She was of delicate health, and suffered from *psoriasis inveterata*. She was attacked suddenly in bed at 4 o'clock in the morning, having the day before dined on half-boiled cabbage and some sort of dumpling."

In St. John the Evangelist, Westminster, a boy, aged 4 months, "cholera infantum (4 days' duration)."

In the same sub-district, a boy, 3 months, "cholera infantum (4 days)." No breast-milk after the first six weeks.

In Gray's Inn-lane (sub-district), a boy aged 11 months, "diarrhoea—cholera (4 days)."

In Somers Town, a boy aged 4 months, "cholera (2 days' duration), typhus (1 day)."

In Camden Town, M. 62 years, "dysentery (11 days), cholera (3 days)."

In West sub-district of Islington, a boy, 7 weeks, "cholera (5 days)."

In East sub-district of Islington, a woman aged 29 years, "cholera (4 days), collapse on the 4th day." She was the wife of a shoemaker, and lived in one of the dirty confined courts out of the High-street.

In St. Anne, Westminster, a boy aged 16 months, "cholera infantum (7 or 8 days)."

In Saffron Hill, a boy aged 22 days, "cholera infantum (6 days), convulsions (4 days)."

In sub-district of Goswell-street, M. 77, "diarrhoea (6 days), which assumed symptoms of cholera, exhaustion (3 days)."

In North sub-district of West London, a boy aged 6 months, "cholera (24 hours)."

In Haggerstone West, a carpenter, 76 years, "natural death, sudden, from English Cholera." (inquest).

In Bethnal Green (Town), at No. 12 Carlisle-street, son of a brewer's servant, aged 7 weeks "cholera (2 days)."

In St. Mary, St. George-in-the-East, M. 59 years, "English cholera (6 days)."

In Limehouse, F. 40 years, "cholera (3 days), collapse (25 hours)."

In Ratcliffe, M. 51 years, "cholera maligna (30 hours)."

In Lambeth Church sub-district (2nd part), at 137 Regent-street, F. 16 years, "English cholera (2 days), exhaustion."

In Camberwell, at 4, South-street, daughter of a letter-carrier, aged 2 years, "English cholera (6 days)."

In Holywell and Moorfields, Shoreditch, a boy aged 19 months, "English cholera (4 days)."

In same sub-district, M. 24 years, "spasmodic cholera (4 days)."

In East sub-district of Greenwich, M. 61 years, "cholera."

In same sub-district, M. 71 years, "cholera (4 days)."

In same sub-district, M. 60 years, "asthma (20 years), cholera (4 days)."

In same sub-district, a girl, 1 year, "cholera."

In Battersea, a boy, 1 year, "cholera (4 days)."

In all the cases of cholera, except one returned by the coroner, the cause of death was certified by the medical attendant.

Cases approaching the Asiatic form occurred early in the year. In the week ending May 6th, a woman of 75 died of cholera in Rotherhithe, after 5 days' illness; another, aged 43, died of cholera in Oxford Terrace, after 2 days' illness. In the following week ending May 13th, a woman aged 40 died in Aldgate, Whitechapel. A note stated that "the case presented the appearance of Asiatic cholera, viz., purging constant, no bile in stool, cholera voice, suppression of urine; died in four days, in a state of collapse." In the week ending June 3, a boy aged 12 years, died of cholera in Rotherhithe, after 48 hours' illness. A man aged 51, died of Asiatic cholera, according to the return of the week ending June 17th, in the Hanover Square sub-district, after 36 hours' illness. In the week ending July 8th, a man aged 68, was returned as having died of Asiatic cholera in Greenwich East. Again, on September 12th, a pilot, aged 55, died of Asiatic cholera (36 hours' duration), at 8, Frederick Street, Greenwich West; and was registered in the week ending September 16th. On September 22nd, a mariner, aged 52, died after 11½ hours' illness of "Asiatic cholera," at 8, New Lane, St. John, Horsleydown, in the district of St. Olave. These were probably two real cases of the new epidemic form; still the contrast of the October returns with that of the last week of September is striking.

Cases of Cholera returned in the Week ending Sept. 30th.—(All are certified by Medical Attendant.)

In Belgrave (sub-district), St. George, Hanover-square, F. 74 years, "English cholera (18 days' duration)."

In South sub-district, St. Giles-in-the-Fields, F. 4 years, "English cholera (10 hours' duration)."

In Amwell-street, Clerkenwell, F. 40 years, "bronchitis (23 years' duration), English cholera (1 week)."

In Mile End Old Town (Upper), a girl, 8 months, "cholera infantum."

The great change now takes place.

Fatal Cases of Cholera REGISTERED in the Week ending Saturday, October the 7th.—(All are certified by the Medical Attendants.)

In Old-street (sub-district), St. Luke, at 39, Rahere-street, died on September 29, wife of a gentleman, 59 years, "disease of the bowels, simulating Asiatic cholera (38 hours' duration)."

In south sub-district, West London, F. 27 years, at 3, Harp-court, St. Bride's, on October 2, a porter's wife, "cholera (13 hours' duration)."

In St. Bartholomew's Hospital, West London, M. about 40 years, a porter, on October 4, "Asiatic cholera."

In Town (sub-district), Bethnal-green, at 4, Cheshire-street, on September 28, a weaver, F. 21 years, "enlargement of the heart (12 months' duration), cholera spasmodic (12 hours)."

In Spitalfields, Whitechapel, M. 23 years, mariner, at 21, Princes-street, on October 5, "cholera (12 hours' duration)."

In Whitechapel North, a girl, 4 years, a labourer's daughter, at 14, Thames-street, on October 2, "English sporadic cholera (7 days' duration)."

In St. Paul (sub-district), St. George-in-the-East, M. 38 years, a coal-whipper, at 5, Lower Chapman-street, on October 3, "cholera (2 days' duration)."

In Mile-end Old-town Lower, Stepney, M. 47 years, a coal-meter, at 6, Globe-terrace, on October 6, "cholera (36 hours' duration)."

Mr. Castleden, the Registrar, states—"Mr. Todd, the surgeon in this case, certifies, that the above was a case of *Asiatic cholera*; and the informant states, that her father (the deceased) got up on Thursday morning, about 4 o'clock, with a bowel complaint, for which he took some gin and ginger, and then went to his work, on board ship, which he was compelled to leave about mid-day. He returned home in a cab, and died yesterday morning at 4 o'clock. The medical gentleman was in close attendance to the very last."

In Lambeth Church, 2nd part (sub-district), at 2, Orsett-street, on September 30, daughter of a chair-maker, 11 months, "cholera (3 days' duration): convulsions (1 hour)."

Mr. W. H. Wheatley, the Registrar, states, "that at one end of the street mentioned above, in the centre of the road, is an open drain, which is very offensive at times—drainage to houses very bad. Scarlatina has been very prevalent there."

In Rotherhite, at 2, Lower Queen-street, on October 2, a boy, 11 years, son of a carpenter, "cholera (9 hours' duration)."

In same sub-district, at 11, Silver-street, on October 1, F. 38 years, wife of a mariner, "cholera (19 hours' duration)."

In same sub-district, at 17, Hanover-street, on October 4, a girl, 2 years, "cholera (2 days' duration)."

In Greenwich West, sub-district, at 9, Skinner-street-row, on October 1, F. 37 years, widow of a blacksmith, "cholera (4 days' duration)."

Fatal Cases of Cholera REGISTERED in the Week ending Saturday, October the 14th.—(Five are cases in which Inquests were held: of the remainder, all are certified by Medical Attendant except two.)

In London Hospital, Whitechapel Church (sub-district), on October 8, Henrick Vandershaaff, a cattle drover, aged 65 years, "diarrhoea (7 days' duration); Asiatic cholera (36 hours' duration)."

In Aldgate, a boy, 1 year, a labourer's son, at 6, Cow-yard, Rosemary-lane, on October 10, "Asiatic cholera (24 hours' duration)."

In St. John (sub-district), St. George-in-the-East, M. 28 years, a labourer, at 5, Green-bank, on October 10, "Asiatic cholera (11 hours' duration)."

In the Leather-Market (sub-district), St. Mary Magdalen, Bermondsey, at 1, Friendly-place, on October 8, M. 40 years, a labourer, "Asiatic cholera."

In Kennington, 1st part (sub-district), Lambeth, M. 39 years, a labourer, at 18, Kennington-place, on October 9, "Asiatic cholera (4 days' duration); collapse (16 hours)."

In Woolwich Arsenal (sub-district Greenwich), on October 3, M. about 60 years, a convict, "cholera (8 hours' duration)." *Inquest.*

In same sub-district, on October 7, M. 48 years, a convict, "Asiatic cholera (11 hours' duration)." *Inquest.*

In same sub-district, on October 7, M. 31 years, a convict, "Asiatic cholera (4 hours' duration)." *Inquest.*

In same sub-district, on October 8, M. 42 years, a convict, "Asiatic cholera (13 hours' duration)." *Inquest.*

In same sub-district, on October 10, M. 55 years, a convict, "Asiatic cholera (8 hours' duration)." *Inquest.*

Mr. Richard Rixon, the Registrar, states, that "The above five deaths occurred on board the "Unité" Hospital Ship, in the River Thames, off the Royal Arsenal. There have been *no* cases in the Arsenal, or in any part of the town, to his knowledge, and he has made every inquiry."

In St. Olave and St. Thomas (sub-district), at 11, Magdalen-court, Tooley-street, on October 12, F. 49 years (kept a fruit stall in Bermondsey-street), "*Asiatic cholera, (18 hours' duration).*"

In Chelsea South (sub-district), at White Hart-court, on October 7th, M. 14 years, a mason's son, "*cholera morbus (16 hours' duration).*"

In same sub-district, at White Hart-court, on October 7, M. 40 years, a stonemason, "*cholera morbus (30 hours' duration).*"

In same sub-district, at the Royal Hospital, on October 10, M. 68 years, a soldier, *p. m.*, "*cholera morbus (12 hours' duration).*"

In same sub-district, at 5, White Lion-street, on October 13, M. 46 years, a pensioner, "*cholera Anglica (1 week's duration); delirium tremens, cirrhosis.*"

In same sub-district, at White Hart-court, on October 8, F. 13 years, daughter of a baker (deceased) *p. m.*, "*cholera morbus (37 hours' duration).*"

In the Green (sub-district), Bethnal-green, at 3, Chester-street, on October 8, a boy, 11 weeks, a weaver's son, "*English cholera (1 month's duration).*"

In Spitalfields (sub-district), at 17, Wilson's-place, on October 9, F. 32 years, wife of a joiner, "*malignant cholera (29 hours' duration).*"

In St. John (sub-district), St. Olave, at 3, Cross-street, on October 4, M. 77 years, a cooper, "*cholera (65½ hours' duration).*"

In same sub-district, at 13, Sard's-rents, on October 14, M. 30 years, a carpenter, "*cholera maligna (32 hours' duration).*"

In the same house, on October 6, F. 2 years, daughter of a carpenter, "*diarrhœa, convulsions.*"

Mr. Bensted, the Registrar of St. John, Horsleydown, states, "These two cases were those of a father and daughter, who lived at No. 13, Sard's-rents, Church-street, St. John's, Southwark; the latter died of 'diarrhœa, followed by convulsions;' the former of 'malignant cholera,' was attacked at 12 o'clock on Friday, October 14th, and died at 4 *p. m.* on Saturday. From inquiries I have made, it appears that he was a very sober and industrious man; that he and his wife were cleanly in their habits, but that one or other of the family has been constantly ill since they lived in their present residence. There are, I believe, upwards of 20 houses within 4 or 5 feet of a filthy open sewer, and this fact has been constantly represented to me (as Registrar) by the inhabitants of those houses. The illness which is caused by so great a nuisance can hardly be wondered at, for in some places I do not think it is above 3 feet from their doors. The deceased has left two children, one not out of danger, and the other very ill. These circumstances have been the more impressed on my attention by a visit from the medical gentlemen (Messrs. Phillips and Button) who attended the cases, and state, as their opinion, that this open sewer was the principal cause of the illness."

In St. James, Bermondsey, at 1, Matilda-place, on October 12, F. 7 years, a labourer's daughter, "*cholera (13 hours' duration).*" No medical attendant.

In Lambeth Church, 1st part (sub-district), at 26, Lower Fore-street, on October 1, M. 22 years, a labourer, "*cholera (9 hours' duration).*" Not certified.

In same sub-district, and in the same house, on October 12, M. 25 years, a labourer, "*cholera (2 days' duration); consecutive fever (6 days).*"

In Rotherhithe, M. 29 years, carpenter of the brig "Malta," died on board, in the River Thames, on October 7, "*English cholera (24 hours' duration).*"

In same sub-district, at 15, Spread Eagle-court, on October 12, a boy, 6 years, a labourer's son, "*cholera (24 hours' duration).*"

In St. Paul, Deptford, Greenwich, at 23 Griffin-street, on October 10, F. 31 years, a labourer's wife, "*cholera (4 days' duration).*"

In "Dreadnought," Hospital Ship, Greenwich West sub-district, on October 9, M. 21 years, an apprentice, "*cholera.*"

In same ship, on October 9, M. 23 years, an apprentice, "*cholera.*"

In same ship, on October 6, M. 16 years, an apprentice, *p. m.*, "*recovery from small-pox, diarrhœa 27 days' duration; sudden vomiting, purging, and collapse about 24 hours.*"

In Clapham (sub-district), at Prescott-place, on October 10, M. 44 years, a bricklayer, "*malignant cholera 9 hours' duration.*"

Fatal Cases of Cholera REGISTERED in the Week ending Saturday the 21st of October.

Ten are cases in which Inquests were held: the remainder are all reported to be certified by Medical Attendants, except one.

11 Woolwich Arsenal (sub-district Greenwich), on Oct. 13, M. 50 years, a convict, "*Asiatic cholera (2½ hours' duration).*" *Inquest.*

In same sub-district, on Oct. 14, M. 58 years, a convict, "*Asiatic cholera (52 hours' duration).*" *Inquest.*

In same sub-district, on Oct. 16, M. 67 years, a convict, "*Asiatic cholera (19 hours' duration).*" *Inquest.*

In same sub-district, on Oct. 16, M. 62 years, a convict, "*Asiatic cholera (100 hours' duration).*" *Inquest.*

In same sub-district, on Oct. 17, M. 26 years, a convict, "Asiatic cholera (6 hours' duration)."

Inquest.

In same sub-district, on Oct. 18, M. 25 years, a convict, "Asiatic cholera (4 days' duration)."

Inquest.

In same sub-district, on Oct. 19, M. 23 years, a convict, "Asiatic cholera (4 days' duration)."

Inquest.

Mr. Rixon, the Registrar of the sub-district, Woolwich Arsenal, makes the following statement:—
"The seven deaths from Asiatic cholera, registered by me last week, occurred in the "Unité" hospital ship, among convicts from the "Justitia" hulk, lying off the Royal Arsenal wharf. The surgeon attributes the disease to the unhealthy state of the atmosphere and to the locality, a common sewer being in the immediate vicinity. The captain of the ship ascribes it to the rotten condition of the hulk, and to the heat generated during the night by so many men being closely packed together, a ward having from ten to twenty-four men sleeping in it, according to its size. The last two cases were of athletic young men, and lasted four days. The former patient was pulseless from the first, and comatose during four hours previous to death—the latter was sensible to the last. They were carefully attended to, visited every hour night and day; and were treated with mercury, mustard poultices, stimulants, and all the usual remedies. The whole of the convicts were removed yesterday (the 20th instant) from the "Justitia," and put on board the "Hebe" and "Sulphur" receiving vessels, opposite the Royal Dockyard, which arrangement, I find, has created some alarm in the yard. This morning (Saturday) a rigger was taken home from the Dockyard very ill, and afterwards a shipwright, and both cases are pronounced by the surgeons as decided cholera. Otherwise, the town remains free. Scarlatina is still very prevalent."

In Chelsea, North East (sub-district), M. 15 years, "epidemic cholera (3 days' duration)."

In same sub-district, a boy, 6 years, "epidemic cholera (9 hours' duration)."

Mr. Smith, the Registrar of the north-east sub-district of Chelsea, states that "the two boys belonged to the same family. The elder was employed on board a lighter at Isleworth, and had eaten heartily of mussels on the day before the attack. Finding himself ill, he returned home under heavy rain, which wetted him to the skin. His parents, who are in poor circumstances, procured medical aid, but were not able to provide the comforts necessary for his case; and to the want of these, the surgeon thinks, is principally owing the fatal termination." The younger was constantly in the room during his brother's illness, but was not seized till after his death. His illness is attributed by the medical attendant not merely to contagion, but to miasma generated in a badly ventilated and comfortless apartment, and increased by the presence of a sick person."

In Islington East (sub-district), son of a paper-stainer, 3 years, "cholera epidemica (18 hours' duration)."

Mr. Butterfield, the Registrar of the East sub-district of Islington, states that "the boy who resided at 115, Lower Queen-street, New North Road, was taken ill at half-past 6, A.M., with rigors, bilious vomiting, and purging with rice-coloured evacuations, and all the symptoms of true cholera. Medical advice was not obtained till half-past twelve, when it did not avail. The patient died at half-past one, A.M., on Saturday, after an illness of 18 hours. Miasma issuing from an open, offensive drain in the back yard, seemed to be the primary cause." Dr. Bossy, who attended the above, has another decided case in an adult, which has not been fatal."

In Christchurch (sub-district), Marylebone, seaman, 22 years, "malignant cholera (2 days' duration), secondary fever (3 days)."

Mr. Obré, the Registrar, states that the deceased was a seaman who had arrived from Sunderland, in the brig "Marsden," on the 10th: had febrile symptoms, with diarrhœa, till the 13th, when he removed to Lisson Grove. These symptoms continued till the 15th, when the choleraic poison showed itself, and he died on the 17th. Dr. Miller adds, that "the patient was brought home on Friday evening in a state of collapse, and died of 'Asiatic cholera,' in the stage of secondary fever."

In Whitechapel North (sub-district), seaman, 43 years, "Asiatic cholera (3 days' duration)."

Mr. Chapman, the Registrar, states that "this sailor was brought from a lodging-house, 118, Rosemary-lane, to the Whitechapel Workhouse, on the 16th October, and died on the 18th. It appears he had not been many days from on board ship."

In Ratcliff (sub-district), Stepney, on board a collier in the River Thames, M. 19 years, "diarrhœa (4 days' duration), Asiatic cholera (9 hours)."

Mr. Wells, the Registrar of Ratcliff, mentions that "besides the above case, he had three others (one English, two Asiatic), on which inquests had been held; but they were not yet registered, as he had not obtained the coroner's signature. The four cases occurred on board colliers in the Thames."

In St. Paul's, Deptford (sub-district), Greenwich, M. 66 years, "cholera Asiatica (17 hours' duration)."

Mr. Marchant, the Registrar of St. Paul's, Deptford, states that "this person resided in a very healthy, airy situation, and was of steady habits; by trade a carpenter, but only working at his trade occasionally, having other resources. He ate a hearty dinner of boiled mutton, spinach, and potatoes, on the day previous to that on which he died."

In Islington East (sub-district), a labourer, 15 years, "diarrhœa (5 days' duration), spasmodic cholera."

In same sub-district, a boy, 6 years, son of a pauper stonebreaker, "natural, with symptoms of spasmodic cholera (11 hours' duration), ill fed and poorly clothed." *Inquest.*

Mr. Butterfield, the Registrar, states that "these two were brothers, and died in Ward's Place, a close confined, badly ventilated place, off the Lower Road."

- In Goswell-street, Clerkenwell, F. 24 years, "Asiatic cholera (36 hours' duration)."
- In Cripplegate sub-district, M. 45 years, "Asiatic cholera (4 days' duration)."
- In South-east sub-district, City of London, M. 27, "cholera Asiatica (12 hours' duration)."
- In Aldgate sub-district, M. 50 years, "died by the visitation of God from Asiatic cholera (20 hours' duration)." *Inquest.*
- In St. Saviour (sub-district), a boy, 7 years, "Asiatic cholera (15½ hours' duration)."
- In St. James, Bermondsey, at 17, Marygold-street, on Oct. 14, Thos. Daws, aged 20 months, "Asiatic cholera (20 hours' duration)." He was attended by the wife of John Elliott.
- In same sub-district, at 17, Marygold-street, on Oct. 17, John Elliott, aged 26 years, a nail-caster, "Asiatic cholera (60 hours' duration)."
- In Camberwell, a spinster, 21 years, "spasmodic cholera (7 hours' duration)."
- In same sub-district, a spinster, 25 years, "spasmodic cholera (11 hours' duration)."
- In same sub-district, widow of an Italian warehouseman, 42 years, "spasmodic cholera (13 hours' duration)."
- In same sub-district, a widow, 45 years, "spasmodic cholera (40 hours' duration)."
- The above 4 cases occurred in Peckham House Lunatic Asylum.
- In Chelsea South (sub-district), at White Hart-court, on Oct. 13, F. 46 years, soldier's widow, "cholera morbus (24 hours' duration)."
- In same sub-district, and at the same house, on Oct. 16, a girl, 10 years, "cholera morbus (9 days' duration), fever consecutive (7 days). Daughter of the above.
- In Islington West (sub-district), a labourer, 40 years, a pauper in Islington Workhouse, "cholera Anglica (1 month's duration), dysentery (7 days)."
- In St. Paul (sub-district), St. George-in-the-East, a girl, 10 years, "natural death by the visitation of God, viz., cholera (18 hours' duration)." *Inquest.*
- In Limehouse (sub-district), Stepney, M. 25 years, "cholera biliosa, cerebral congestion."
- In St. Saviour (sub-district), F. 15 years, "anæmia (4 months' duration), diarrhœa (2½ days), spasms and cramp (24 hours)."
- In Christchurch (sub-district), St. Saviour, son of a weaver, 5 years, "destitution, cholera (12 hours' duration)."
- In same sub-district, wife of a weaver, 36 years, "destitution, cholera (6 days' duration)."
- In same sub-district, daughter of a weaver, 3½ years, "destitution, cholera (96 hours' duration)."
- In same sub-district, daughter of a weaver, 1½ years, "destitution, cholera (34 hours' duration)."
- The above 4 cases occurred in Christchurch Workhouse; all members of one family.
- In same sub-district, 59, John-street, daughter of a tinman, 8 years, "cholera (12 hours' duration)."
- In the Leather Market sub-district, Bermondsey, at 27, Page's-walk, on Oct. 17, M. 51 years, a cooper, "cholera spasmodica (13½ hours' duration)."
- In same sub-district, and at the same house, on Oct. 15, F. 53 years, a cooper's wife, "spasmodic cholera (46 hours' duration)."
- In Kent-road (sub-district), St. George, Southwark, son of a harness-maker, 21 months, at 5, Williams-place, "cholera morbus (6 hours' duration)."
- In Lambeth Church, 2nd part (sub-district), a waiter, at 61, Devonshire-street, aged 41 years, "cholera, accompanied with spasms, cramp, and hiccup (attended 12 hours); disease existed 5 days."
- In Battersea (sub-district), daughter of a carman at Nine Elms, aged 1 year and 8 months, "cholera (9 hours' duration)."
- In Greenwich West (sub-district), in "Dreadnought" hospital ship, M. 39 years, "bronchitis (4 weeks' duration), cholera."
- In St. Paul, Deptford (sub-district), Greenwich, at Florence-road, on Oct. 16, M. 66, a carpenter, "Asiatic cholera (17 hours' duration)."
- In St. George (sub-district), Camberwell, at 4, Thomas-street, Wyndham-road, wife of a fish-vender, 58 years, "spasmodic cholera (15 hours' duration)."

The term "English" cholera is objectionable, as it implies that the disease is peculiar to England; whereas it prevails, in nearly the same form, all over the world, and is described by Celsus and the ancient writers, as well as by Sydenham. For the sake of distinction, as it is so much under the control of temperature and season, it may be called "Summer Cholera." About half the fatal cases of Asiatic cholera terminate within 24 hours of the appearance of its characteristic symptoms: it will be shown hereafter that the average duration of 19232 fatal cases in males was 2·05 days, and of 20236 cases in females 2·10 days.

The average duration of 4045 fatal cases of diarrhœa in males was 16·04 days, of 3851 females 16·69 days. The summer cholera has an intermediate duration of about five days. The difference is seen in the subjoined table of cases taken indiscriminately from the Returns of 1848: more than half the cases of Asiatic cholera terminated in less than a day; half the cases of summer cholera did not terminate in three days; and half the cases of diarrhœa lasted more than six days. This is a new and important element in the diagnosis.

DURATION of FATAL CASES of Diarrhœa, Summer Cholera, and Asiatic Cholera, in London, 1848.

	Total Deaths.	Under one Day.	Number of Cases terminating in the several Days.

CHOLERA IN THE COUNTRY, 1848.

2. **SOUTH EASTERN DIVISION.**—Deaths from cholera occurred in every month of 1848, except February; namely, 3 in January, 4 in March, and 2, 2, 5, 11, 15, 14, 18, 12, 22, in the subsequent nine months, making a total of 108 fatal attacks. Guildford and Kingston in Surrey, each furnished 2 deaths. In Kent 4 deaths took place at Bromley; 2 at Dartford; in Gravesend 7; North Aylesford 3; Hoo 2; Medway (including Chatham) 13; Sevenoaks 3; Sheppey 4; and Eastry 2. In Sussex, there were in Uckfield 2 deaths; Cuckfield 5; and Brighton 3. In Hampshire, in the great naval station of Portsea Island and the adjoining district of Alverstoke there were 6 and 10 deaths respectively; in the Isle of Wight 4; Stockbridge 2; Basingstoke 3; and Andover 2. In Berkshire, there were in Newbury 2 deaths; Wantage 2, Wallingford 2; Reading 3; and Windsor 2.

3. **SOUTH MIDLAND DIVISION.**—Cholera which was fatal in each month of the year 1848 was most prevalent after July, and destroyed 150 lives by the end of December. In January 1 death occurred; in February 2; and 1, 2, 5, 5, 8, 17, 12, 22, 31, and 44 respectively, in the subsequent months. In Middlesex 4 fatal cases took place at Staines; at Uxbridge 10; Brentford 13; Hendon 8; and Edmonton 8. In Hertfordshire, Bishops Stortford furnished 3 deaths; Royston 3; Hertford 2; Watford 4; Hemel Hempstead 5; and Berkhamstead 3. In Buckinghamshire a remarkable mortality took place in the Amersham district, where cholera was fatal to 46 persons (population 18212 in 1841), 43 of whom died in the Chesham sub-district (which contained a population of 5811 in 1841): excepting 2 children who were attacked early in September, all the deaths occurred subsequent to November 10th: in many instances the attacks were of short duration.

The following is an abstract of the deaths from cholera in the Chesham sub-district:—

F. 2 years and 9 months, hawker's daughter, named Hearn, "cholera, (8 days' duration)," Chesham, September 14.

F. 10 months, labourer's daughter, "cholera (8 days' duration)," Chesham, September 16.

F. 62 years, miller's widow, "cholera, (2 days' duration)," Waterside, Chesham, November 11.

M. 10 months, labourer's son, "cholera (1 day's duration)," Waterside, Chesham, November 13.

M. 1 year and 10 months, labourer's son, "cholera (2 days' duration)," Waterside, Chesham, November 14.

M. 1 year and 7 months, Hawker's son, named Aris, "cholera (2 days' duration)," Waterside, Chesham, November 14.

F. 49 years, labourer's wife, "cholera (28 hours' duration)," Chesham, November 15.

F. 3 years and 11 months, hawker's daughter, named Aris, "cholera," Waterside, Chesham, November 16.

F. 29 years, brush-handle maker's wife, "cholera (60 hours' duration)," Waterside, Chesham, November 16.

F. 55 years, labourer's wife, "cholera (12 hours' duration)," Waterside, Chesham, November 16.

M. 8 years, "cholera (38 hours' duration)," Waterside, Chesham, November 18.

M. 13, baker's (deceased) son, "cholera (36 hours' duration)," Waterside, Chesham, November 18.

F. 46 years, labourer's wife, "cholera (19 hours' duration)," Waterside, Chesham, November 18.

- M. 51 years, labourer, "cholera (28 hours' duration)," Waterside, Chesham, November 19.
 F. 49 years, gamekeeper's widow, "cholera (26 hours' duration)," Waterside, Chesham, November 20.
 F. 20 years, single woman, "cholera (32 hours' duration)," Waterside, Chesham, November 21.
 F. 28 years, single woman, "cholera (15 hours' duration)," Waterside, Chesham, November 21.
 M. 69 years, labourer, "cholera (4 days' duration); relapse (8 days)," Waterside, Chesham, December 2.
 F. 55 years, bricklayer's widow, "cholera (20 hours' duration)," Waterside, Chesham, December 3.
 M. 43 years, labourer, "cholera (3 days' duration)," Waterside, Chesham, December 3.
 F. 60 years, labourer's wife, "cholera (2 days' duration); fever (4 days)," Waterside, Chesham, December 4.
 F. 36 years, miller's wife, "cholera (22 hours' duration)," Waterside, Chesham, December 4.
 M. 8 years, labourer's son, "cholera; fever (9 days' duration)," Waterside, Chesham, December 5.
 F. 42 years, labourer's widow, "cholera (2 days' duration)," Waterside, Chesham, December 6.
 M. 19 years, labourer's (deceased) son, "cholera (10 days' duration)," Waterside, Chesham, Dec. 8.
 F. 1 year and 7 months, labourer's daughter, "cholera (4 days' duration)," Waterside, Chesham, December 11.
 M. 1 year and 10 months, butcher's son, "cholera (6 hours' duration)," Chesham, December 11.
 M. 4 years, butcher's son, "cholera (11 hours' duration)," Chesham, December 13.
 M. 4 years, shovel-maker's son, "cholera (4 days' duration)," Waterside, Chesham, December 14.
 F. 2 years, labourer's daughter, "cholera (108 hours' duration)," Chesham, December 15.
 F. 76 years, widow, "cholera (46 hours' duration)," Waterside, Chesham, December 16.
 M. 10 years, tailor's son, "cholera (17 hours' duration)," Chesham, December 17.
 F. 8 years, sawyer's daughter, "cholera (7½ hours' duration)," Chesham, December 17.
 M. 11 years, paper-maker's son, "cholera, relapse (8 days' duration)," Waterside, Chesham, December 19.
 M. 6 years, labourer's son, "cholera, fever (5 days' duration)," Chesham, December 19.
 F. 74 years, gardener's widow, "cholera (3 days' duration)," Chesham, December 20.
 M. 12 years, shovel-maker's son, "cholera (18 hours' duration)," Chesham, December 21.
 M. 65 years, paper-maker, "cholera (22 hours' duration)," Waterside, Chesham, December 21.
 F. 52 years, hawker's wife, named Moore, "cholera (8 hours' duration)," Chesham, Dec. 25.
 F. 70 years, labourer's wife, "cholera (42 hours' duration)," Chesham, December 25.
 F. 56 years, labourer's wife, "cholera (11 hours' duration)," Chesham, December 28.
 F. 39 years, single woman, "cholera (24 hours' duration)," Latimer, Chesham, December 29.
 M. 38 years, sawyer, "cholera (11 hours' duration)," Chesham, December 30.

In Eton there were 2 deaths; in Aylesbury 8; and Newport Pagnell 2. In Oxford 2 fatal cases are recorded. In Northamptonshire there were 2 deaths in Towcester; Northampton 2; Wellingborough 6; Oundle 2; Peterborough 3: In Huntingdon 3 deaths took place. In Bedfordshire 2 deaths occurred in Bedford; 5 in Biggleswade; 2 in Ampthill; and 2 in Leighton Buzzard. In Cambridgeshire, Chesterton furnished 2 deaths; Cambridge 6; Newmarket 8; Ely 6; North Witchford 3; and Wisbeach 18; of which 15 took place in the Upwell sub-district, where the epidemic commenced on November 25th, and prevailed throughout December amongst labourers: 13 of the 15 deaths were of males, most of them in the prime of life, and in no instance is the duration of the attack stated to have exceeded 30 hours.

4. **EASTERN DIVISION.**—Cholera was fatal to 65 persons in 1848, and deaths occurred during every month of the year, viz., 3 in January, and 1, 1, 3, 4, 2, 3, 5, 9, 14, 6, 14, respectively in the subsequent months. In Essex 6 of the deaths occurred in West Ham; 2 in Romford; 2 in Orset; 4 in Chelmsford; 2 in Tendring; and 2 in Saffron Walden. In Suffolk 2 deaths took place in Thingoe; 2 in Samford; 3 in Woodbridge; 2 in Blything; and 5 in Mutford. In Norfolk 2 deaths happened in Tunstead; 2 in Aylsham; 4 in Norwich; 3 in Mitford; 4 in Kings Lynn; 4 in Downham; 2 in Depwade; and 2 in Docking.

5. **SOUTH WESTERN DIVISION.**—There were 68 deaths from cholera in 1848; and February was the only month during which no fatal case was recorded: 1 death took place in January; 1 in March, and 1, 2, 2, 7, 6, 20, 11, 9, 8, in the subsequent months. 2 deaths occurred at Pewsey, in Wiltshire. In Devonshire it was most fatal at Plymouth, where 15 persons died of the disease, 3 of them being female convicts on board the "Cadet," on Nov. 23rd, 26th, and Dec. 7th respectively: 3 fatal cases happened at East Stonehouse, adjoining Plymouth, and 1 in Stoke Damerel; St. Thomas furnished 2 cases; Exeter 3; Kingsbridge 2; Plympton St. Mary 2; Tavistock 2; and Bideford 2. In Cornwall cholera was fatal to 12 persons in Penzance, chiefly in miners' and mariners' families, and during the autumn; at Redruth 5 deaths occurred. In Somersetshire 3 deaths took place in Wells and 2 in Bath.

6. **WEST MIDLAND DIVISION.**—The number of deaths from cholera was 101 in

1848, distributed over every month; there were 5 fatal cases in January, and 1, 1, 6, 4, 4, 6, 26, 16, 11, 11, 10, in the succeeding months. In Gloucestershire 4 deaths happened at Bristol; 2 in Clifton; 2 in Stow-on-the-Wold, and 2 in Cheltenham. 3 cases occurred at Clun, in Shropshire. In Staffordshire it was fatal to 2 persons at Stone; at Stoke-upon-Trent to 4; Cheadle 3; Uttoxeter 4; Penkridge 2; West Bromwich 3, and Dudley 6. In Worcestershire 4 deaths happened in Stourbridge and 3 in Kings Norton. In Warwickshire, Birmingham furnished 10, and Aston 8 fatal cases (the number of deaths which occurred at these places in 1849 was—in Birmingham 29, and Aston 6). In Foleshill there were 2 deaths; Rugby 3; Warwick 6, Alcester 2; and Shipston-on-Stour 4.

7. NORTH MIDLAND DIVISION.—Cholera was fatal in 85 cases during 1848, there being in January 4 deaths, and 3, 1, 3, 2, 3, 15, 10, 4, 11, 16, 13, in the subsequent 11 months. In Leicestershire 4 deaths happened in Lutterworth; 3 in Blaby; 3 in Loughborough; and 5 in Leicester. In Lincolnshire there were in Bourn 3 deaths; in Boston 2; Horncastle 3; Spilsby 5; Caistor 10: of which 5 took place at Great Grimsby on the coast, and 5 at Market Rasen in the interior; in Glandford Brig 3; and in Gainsborough, on the River Trent 13. In Nottinghamshire 2 deaths took place in East Retford; 3 in Basford, and 3 in Newark. In Derbyshire 5 fatal cases occurred in Derby; 2 in Ashborne, and 2 in Bakewell.

8. NORTH WESTERN DIVISION.—Cholera was prevalent in this division in 1848, it having been fatal in 227 cases, chiefly in the latter half of the year. The number of deaths in each month was, in January 3; and in each of the succeeding months, 2, 7, 7, 10, 7, 52, 41, 31, 35, 12, 20, respectively. In Cheshire it was fatal to 7 persons in Stockport; 10 in Macclesfield; 2 in Altrincham; 4 in Northwich on the River Weaver; 8 in Wirrall, situated on the coast, and including the town of Birkenhead; and 5 in Great Boughton, including Chester on the River Dee. In Lancashire the districts on the coast in which cholera was chiefly fatal were, Liverpool 33 deaths; West Derby 16; Ormskirk 2; Ulverston 2; and Preston on the Ribble 2. Also, in Prescott 2; Wigan 4; Leigh 5; Bolton 10; Bury 9; Chorlton 22; Salford 7; Manchester 21; Ashton 18; Oldham 8; Rochdale 6; Haslingden 4; Burnley 2; Blackburn 12, and Chorley 3.

9. YORK DIVISION.—Cholera, which was prevalent in the early part of the year 1848, increased perceptibly after June, and by the end of the year caused the deaths of 207 persons. There were in January 5 fatal cases, and 2, 8, 6, 6, 4, 24, 25, 33, 49, 24, 21, in the following 11 months. Of the districts bordering on the coast there were in Hull 20 deaths; Sculcoates 8; Scarborough 4; Skirlaugh 3; and Patrington 2. York furnished 14 cases; Selby 6, of which 4 were quickly fatal, viz., in 12 hours, 12 hours, 16 hours, and 24 hours respectively; Settle 2; Pateley Bridge 3; Otley 6; Keighley 4; Todmorden 6; Saddleworth 7; Huddersfield 7; Halifax 8; Bradford 28; Hunslet 12; Leeds 6; Dewsbury 15; Wakefield 5; Pontefract 7; Ecclesfield 4; Wortley 2; Sheffield 3; Doncaster 3; Driffield 6; Maldon 4; and Whitby 2.

10. NORTHERN DIVISION.—With the exception of March and May cholera prevailed during each month of the year 1848, and was fatal to 163 persons, viz., in January 4; February 1; April 2; June 5; and 7, 12, 10, 17, 36, 69, in the subsequent 6 months. Cholera appeared at Sunderland in an epidemic form on October 4th, and was fatal to a mariner aged 56 on board the ship "Valiant," after an attack of 9 hours' duration; he is represented as having been drunk on the previous day. On October 12th the next death took place; it was followed by two others on October 14th; from this time its prevalence increased, and it was chiefly fatal among coal-miners and mariners: the duration of most of the attacks was short, and varied from 6 hours to 3 days. The last death was that of a coal-miner's son, aged 1 year, on December 26th, at the colliery Monkwearmouth, where 20 fatal cases occurred out of the 37 deaths from cholera registered in the Sunderland district.

In South Shields there were 7 deaths; in Stockton 8; Darlington 2; Teesdale 2; Durham 5; and Gateshead 3.

In Northumberland cholera was most fatal in the districts on the coast; it destroyed 32 lives at Tynemouth, commencing on October 3rd in a keelman's daughter, aged 1,

at Skipsey's Quale, North Shields; 3 other cases were fatal in October. In November its prevalence increased, and it became very fatal among keelmen at Quay Cowpen, and mariners and others at Blyth; instances are recorded of 2 persons in the same family dying. The epidemic continued fatal up to the end of the year; 3 deaths occurred on December 30th, two of which were in the children of a keelman at Quay Cowpen, after attacks of 14 hours' and 22 hours' duration. In Newcastle-upon-Tyne cholera was fatal to 12 persons, chiefly in the latter part of the year. In Berwick-upon-Tweed the epidemic was first fatal on December 7th, in a labourer's widow, aged 79, at Hutts Norham. It continued prevalent throughout December, mostly among fishermen, labourers, and quarrymen: 3 deaths occurred at the workhouse, Berwick; 6 at Donaldson's Lodge, Cornhill; and 4 at Hutts Norham: the total deaths in the district were 19. Morpeth furnished 9 deaths; Castle Ward 3. In Cumberland cholera was chiefly confined to the following districts, viz.:—Brampton 2 deaths; Longtown 3; Carlisle 4; Cockermouth 5; and Whitehaven 5.

11. *WELSH DIVISION.*—Cholera was not fatal until April 1848, when one death took place, and 5, 4, 4, 5, 4, 6, 4, 8, in the subsequent 8 months, making 41 deaths during the year. In South Wales, on the coast, there were in Cardiff 7 deaths; Swansea 2; and Haverfordwest 2. Also in Merthyr Tydfil 3; and Abergavenny 2. In North Wales, Holywell had 5 deaths; Newtown 2; Wrexham 2; Carnarvon 4; and Anglesey 3.

The deaths from cholera in England were 41 in the week ending October 7; and 78, 99, 88, 112, in the 4 weeks following; the numbers varying little in the subsequent weeks, were 91, 89, 82, 71, 84, 97, 85, 88. The total number during the year was 1934. Such was the course of the epidemic cholera in England to the close of the year 1848.

CHOLERA IN ENGLAND, 1849.

1849. The tables, pp. 20–107, and the notes, pp. 166–300, show the progress of cholera through the year 1849. The state of the public health was described in the quarterly and weekly returns; and it is now possible, from all these sources, comprising facts recorded and observations written at the time, to trace the effects of the epidemic, and the extent of its ravages through the year.

The deaths in England from cholera were, in January, 658; in February, 371; in March, 302: yet, it was remarked, in the quarterly return, "although epidemic cholera has been in England since October, 1848, and has prevailed more or less up to the present time in parts of the country, the general mortality has been and is considerably below the average. This is encouraging, and should stimulate all sanatory improvements, for summer is the season in which the epidemic is most to be dreaded.* The deaths from cholera in London were 292 in January, 180 in February, 40 in March.

It will be recollected that in October 1848, the epidemic attacked the convicts crowded in the decaying "Justitia" hulk, lying off the Royal Arsenal wharf, Woolwich, in the immediate vicinity of a common sewer; subsequently it was fatal to convicts in Millbank Prison and to lunatics in the Peckham House Asylum; the registrars stated that many of the houses in which patients were attacked were crowded, and in dirty undrained sites. In the last week of December the epidemic broke out in Mr. Drouet's Infant Poor Establishment, Surrey Hall, Tooting, where 48 of the 61 deaths registered from cholera in the first week of January occurred. In the week following 69 deaths from cholera were registered at the same establishment. It is stated in a note to the Weekly Return (January 20th 1849), that "the total deaths which have occurred in the institution, or amongst children who have been removed from it since the appearance of the epidemic, amount to 182, of which 155 were returned as caused by cholera." The children at ages from 4 to 14, were paupers farmed out, and the building was overcrowded. In the week following 13 persons died of the epidemic cholera in the Holborn Union workhouse, where a few more cases occurred in the subsequent week. Some of the children of this Union were in Drouet's Establishment. Several of the children belonging to Pancras were removed and died in the workhouse, Camden Town. Mr.

* Quarterly Return, No. 1, pp. 4, 5, 1849.

Holl, after stating that "three children who died in the workhouse had been brought from Tooting while under the influence of the disease," adds:—"The woman, aged 64, died in the infirmary of the workhouse quite unconnected with that part of the house which the children occupied, and not allowed to have any communication with it." *

Mr. Steib, the registrar of Hackney, registered two deaths from cholera in the same week. "The former was a decided case of Asiatic cholera in a servant who belonged to the Islington poor-house, and had been brought to Hackney to nurse the sick children. The second was in a girl belonging to the Islington poor-house, who had been brought to Hackney from Drouet's Asylum, Tooting." In the week ending February 3rd, 9 out of 10 cases registered in Kensington town occurred in Jennings' Buildings. In the week ending February 24th, the deaths of the matron, the temporary matron, seven servants, and a girl aged 11, were registered at the Female Refuge for the Destitute, in St. Leonards, Shoreditch; and, in the same week, 16 deaths from cholera were registered in Warburton's Lunatic Asylum. A great number, then, of the deaths from cholera in the early stage of the epidemic occurred in institutions of various kinds. The workhouse of Edmonton and the gaol of Hertford were attacked in January. Two parishes in Norfolk were attacked early in the year. A labourer's wife, aged 48, died of the disease on January 5th, at West Rudham, where four more persons died, and 12 in East Rudham, before February 14th. Eleven of the 17 deaths were in labourers' families. The parishes are inland, and contained 1494 inhabitants in 1841. No other deaths from cholera occurred there. At Wakefield, in Yorkshire, there was a partial outbreak; 19 deaths from cholera happened between the 9th and 24th of January, 16 of them in the House of Correction. In *August* the epidemic recurred in this house, and 86 deaths from cholera, 36 from diarrhoea, took place in the year.

The epidemic, which began at Selby in the latter part of 1848, prevailed until February 5th, and was fatal to some persons at Goole. In the Union workhouse of Howden, cholera was fatal to 10 persons between January 5th and February 11th. The epidemic was fatal at Gateshead in January and February; at Sunderland in March and April. The epidemic continued to prevail in Berwick-upon-Tweed; at Shorehouses, Spittal, a fisherman, his wife, and three children died of the disease between January 6th and 12th.

In *April* the epidemic very much subsided, and only 107 deaths were referred to cholera in England. There were no deaths from the disease upon the 8th, 14th, and 26th; the only days which enjoyed this exemption in the year. There were in the month only 9 deaths from cholera in London, and the mortality was chiefly in the north-western and northern divisions of England. In *May* the deaths from cholera were 327; the fatal period of the epidemic set in at Liverpool, and went on through *June*, when the deaths were 2046 in all England. South Wales was now suffering, and at the end of June the deaths from cholera rapidly increased in London. Some alarm was felt, but, practically, little progress was made in the sanitary defences of the country. This was adverted to in the Quarterly Return as well as the mortality which the epidemic might cause:—

"The epidemic cholera, which reached England in October, 1848, and is now causing many deaths in London, Liverpool, and other places, will, it is true, increase the general mortality in the months of July, August, and September as it did before; but the ravages of cholera, of typhus, and of the insidious influenza, which threaten the country, may be greatly mitigated if the same talent and energy are applied to the improvement of the public health, as have been applied to other great undertakings in which England has engaged.

"Registration did not exist in 1832; but it appears from the returns then made to the Board of Health, that in London 994 persons died of cholera in the first part of the epidemic, extending from February 14 to May 15, 1832; 4266 in the second part, extending from June 15 to October 31; and 15 in November and December. Allowing for defective returns in 1832, it is not probable that the fatality of cholera will be greater in 1849 than it was then; or that the danger will amount to more than

* Notes to Weekly Table, January 20th, 1849.

this, that for a few weeks an inhabitant of London will incur the same chance of dying in one week as he usually incurs in two or three weeks."—*Report for Quarter ending June 30th, 1849.*

The epidemic broke out at Gloucester in May; two cases were fatal on May 8th, in the sub-district of St. Nicholas. The disease spread, and continued through the following months; the last death occurred on November 11th. In the Union workhouse at Keynsham, which lies between Bristol and Bath, an agricultural labourer died on May 5th of a diarrhœa, said to be of 4 weeks' duration; on the same day a labourer, aged 32, died of cholera after 12 hours' illness. Between May 6th and May 12th, 9 more paupers died in the Union workhouse. On May 11th a solicitor in Keynsham died: the disease then attacked the other inhabitants of the place, and was fatal to 56 persons in May and June, 13 of whom died in the Union workhouse. Clifton and Bristol were attacked in June, the first case occurring at Bristol on June 1st. Cardiff, on the other side of the Bristol Channel, was attacked in May, and Merthyr Tydfil very fatally in June, a few cases only having happened in two sub-districts in May. The deaths from cholera in Liverpool were 18 in March, 19 in April, 96 in May, and 424 in June; in West Derby 6 in May, 92 in June. In Sunderland the deaths which had been 133 in March were 12 in April, 0 in May, 1 in June. Durham experienced the highest mortality in June; the deaths from cholera were 3 in March, 2 in April, 15 in May, 75 in June, 31 in July, 8 in August.

In the summer, the epidemic advanced rapidly; and in all England cholera was fatal to 7570 persons in July, 15872 in August, and 20379 in September; or dividing the quarter into weeks, the deaths in the 13 weeks from the 27th to the 39th inclusive, were 822, 1535, 2202, 2164, 2565, 2959, 4092, 3921, 4691, 7148, 5444, 3458, and 2724. The mortality was highest in the 36th week of the year, when cholera alone destroyed 7148 lives. On Wednesday, September 5th, it was fatal to 1120, on Thursday, September 6th, to 1121 persons. On these two days the epidemic was at its highest point. The deaths on August 31st were 570; the increase in September was remarkable: the deaths on Saturday, September 1st, were 739, and on the 9 days following 866, 888, 969, 1120, 1121, 1000, 992, 1058, 891. The fatality of the disease sensibly decreased on September 11th; on that and the 9 following days the deaths were 792, 793, 876, 731, 717, 644, 615, 604, 554, and 471, gradually subsiding to 380 on the last day of the month. The epidemic was at its maximum on August 11th in Wales, on September 4th in London, on September 5th–6th in the WEST-MIDLAND, the NORTH-WESTERN, and YORK DIVISIONS, on September 14th–15th in the NORTHERN DIVISION.

The decline of the epidemic was more rapid than its increase; while it was fatal to 20379 persons in September, 4654 died of it in October, 844 in November, and 163 in December. The mortality in October was chiefly in the SOUTH-WESTERN, WEST-MIDLAND, NORTH-WESTERN, YORK and NORTHERN DIVISIONS; in London, the SOUTH-EASTERN, the EASTERN, the NORTH-MIDLAND and WELSH DIVISIONS, the mortality was much less considerable: while 54 deaths from cholera occurred in England on the last day of October, 11 occurred on the last day of November; and on the last day of December 2 persons died, *one* in Shropshire, and *one* in Durham.

Diarrhœa was more fatal than cholera in the months of January, February, March, April, and May; in June the mortality from cholera was twice as great as the mortality from diarrhœa; in July, August, and September the mortality from diarrhœa and cholera increased; but the mortality from cholera became fourfold that from diarrhœa; in October it was only twice as great; in November the deaths from diarrhœa exceeded in number the deaths from cholera, and in December the deaths from diarrhœa were 592, from cholera 163. The annexed table (p. xxiii) exhibits the deaths in each month from the two forms of disease.

Many of the cases of diarrhœa were such ordinary cases as every year occur; but diarrhœa is one of the earliest and most common symptoms of cholera, and many cases differed only from cholera in the absence of "spasms," or of some of the striking rather than the essential symptoms. 12045 of the 18887 deaths referred to diarrhœa were in children under 5 years of age; and the symptoms of cholera as well as of other diseases at that early age undergo considerable modification.

DEATHS from CHOLERA and DIARRHŒA in England, in each Month of the Year 1849.

THE LONDON CHOLERA FIELD, 1849.

The distribution of the epidemic over the country may now be shown. London was the centre of a great system of attack which extended to Hertford and Hitchin, West Ham, Romford and Rochford on the north side of the Thames; to Dartford and Gravesend, Margate and Ramsgate, Dover, Croydon and Brighton, in Kent and Sussex.

The disease, like a smouldering fire, broke out as the temperature advanced in London. The return for the week ending May 12th "indicated a continued tendency in the public health to improve. The deaths from all causes were 905, or 58 less than the average; the deaths in the week following were 1033; the wind was S.W., rain fell to the extent of .67 inches, and the mean temperature of the air was 54°.9, which is 2°.6 above the mean temperature of the week. In all London, only *one* little girl, aged 5 years, died of cholera in 6 hours."*

In the week ending May 26th, the deaths in London were only 897. "The deaths are fewer than in the corresponding week of any former year since 1846." Three women, however, died of cholera; one in St. John, Westminster; one a milliner in a large house of business (246 Regent-street); and one, a tailor's wife, at the German Hospital, Dalston. Two children died of choleraic diarrhœa. The temperature was 56°.9, or 1°.9 above the average; the fall of rain was 1.37 inches.

In the week ending June 2nd, 895 deaths were registered; 9 from cholera. The mean temperature of the air was now 60°.3, of the Thames water 63°.5. The fall of rain was 1.6 inches; the wind sluggish N. and S.W. Negative electricity was exhibited during heavy rain on Monday; positive on Friday and Saturday. The deaths from all causes were 971; and 22 were by cholera in the week ending June 9th. The mean temperature of the air was 59°.7; the temperature of the Thames was 65°.7.

The deaths in the week ending June 16th were 912, which is less than the average number; while the deaths in the tubercular class, diseases of the nervous system, and diseases of the respiratory organs declined, zymotic diseases increased; and cholera was fatal to 42 persons. The temperature of the air was low, 53°.5; of the Thames 62°. The deaths in the next week were 985, only 22 above the corrected average; 49 were from cholera. The temperature of the air was 59°.2; of the Thames 62°.

In the week ending June 30th, 1217 deaths were registered; 124 by cholera. The cholera was by far the most prevalent on the south side of the Thames. The temperature of the air in the beginning of the week was much above the average; the temperature of the Thames was 66°.6 during the week.

The deaths in the week ending July 7th were only 1070; but cholera increased, and the deaths which it caused were 152. The mean temperature of the air was 62°.7; on Saturday the thermometer reached 82° in the shade, 103°.5 in the sun.

In the second *week* of July, the mortality first rose sensibly above the average; the deaths were 1369; and the increase was referrible to cholera, which was the cause of 339 deaths; 102 deaths of children under 15 years of age, 192 adults of 15 and

* The number of *deaths* cited in the weekly tables of London invariably refer to the deaths *registered* in the *week*. The deaths are *registered* at a certain interval after their occurrence; consequently the deaths registered in a week are not all deaths that occur in the week. The deaths *occurring* on every day are given in the subsequent tables.

under 60, and 45 of aged persons. The northern districts suffered least, the southern most. The air was stagnant, and the wind in the N.N.E.; the sky was cloudless, and no rain fell. The mean temperature of the air was $66^{\circ}\cdot 8$; of the Thames $68^{\circ}\cdot 7$.

The mortality increased, and the deaths from all causes were 1741 in the *third* week of July; 678 of the deaths were by cholera, 131 by diarrhœa. The high north districts still enjoyed comparative immunity (7 deaths from cholera); the hottest attack was directed to the south side of the Thames, where 443 of the deaths occurred. Poplar, in the east, suffered severely; 37 deaths from cholera were returned. The mean temperature of the week fell to $60^{\circ}\cdot 5$; the winds were stirring, the sky was overcast, lightning flashes were seen on the 19th and 20th; the thunder was followed by showers and heavy rain.

July 22nd to July 28. "Again the return indicates an increase on the excessive mortality of the previous week. The deaths from all causes rose to 1931; a number which is almost double the weekly average, and exceeds that of the previous week by nearly 200. Influenza in 1847 raised the mortality more rapidly; the deaths from all causes, in the first 4 weeks of that epidemic, were 1086, 1677, 2454, and 2416; while, in the 4 first weeks of the cholera epidemic, the deaths from all causes have been 1070, 1369, 1741, and 1931. The deaths from cholera are 783, from diarrhœa 224. The districts on the south side of the river still form the field on which the disease is most active. There is a slight decrease in the eastern districts." In the whole of the western and northern districts the deaths are only 68. Cholera is, for the first time, more fatal to females than to males; the deaths having been 383 males, 401 females. The mean temperature is $58^{\circ}\cdot 9$; the fall of rain in the week is $2^{\circ}\cdot 15$ inches. The wind is S.W., and moves at a rate of about 100 miles a-day. On the afternoon of the 26th a violent thunder-storm occurred, the flashes of lightning were vivid and in quick succession, followed by loud thunder at intervals of 15 to 20 seconds generally. Rain was falling heavily during the storm.

July 29 to August 4th. The deaths registered from all causes are 1967, from cholera 926. Diarrhœa has decreased; it is the cause of 179 deaths. "Other epidemics are under the average, except whooping-cough, which a little exceeds it." The epidemic is still chiefly on the south side of the Thames, where 621 of the 926 deaths occurred. The temperature of the air ($59^{\circ}\cdot 5$) still remains below the average.

The mortality from all causes increased little; and, in the week following, the mortality from cholera declined. The people generally were ready to believe that the epidemic was giving way; and the efforts which had been commenced without much vigour, and with little confidence in their efficacy by the local authorities, were suspended. Looking at the course of the epidemic in 1832, at the preceding low and now high temperature, at the field of operations which had hitherto been very much confined to the south side of the river, and were now extended to the north, it was evident that the danger was increasing, and that more active exertions were required. The registrars were requested to extend their returns; and the weekly tables were accompanied by such observations as, in the emergency, appeared likely to be useful and to save life.

The following extracts from the Weekly Tables exhibit the progress and effects of the epidemic at its height:—

August 5th-11th.—The deaths in London during the week ending Saturday, August 11th, are 1909. The mortality is somewhat less than it was in the previous week. The deaths from all causes in the last six weeks were 1070, 1369, 1741, 1931, 1967, and 1909; of which 393, 630, 1002, 1173, 1308, and 1185, were by diseases of the zymotic class. Small-pox, scarlatina, and whooping-cough are comparatively quiescent; typhus is more fatal than it was. The excess of 901 deaths over the average is due to diarrhœa and cholera, which were fatal to 173 and 823 persons. The deaths from cholera during the last six weeks were 152, 339, 678, 783, 926, and 823. The decrease is gratifying; but it is right to observe that the improvement is chiefly confined to West London, Poplar, St. George Southwark, Newington, Camberwell, and Lambeth. The deaths from cholera in the two last weeks were 29 and 48 in Wandsworth; 9 and 21 in Pancras; 4 and 14 in Islington; 3 and 10 in London City; 16 and 35 in Bethnal Green; 15 and 35 in St. Giles. The deaths from all causes on the north side of the Thames (1118) were 89 more than the deaths (1029) of the previous week. The parishes which have not yet been visited must be on their guard. Those in which the epidemic has partially subsided should redouble their precautions. The epidemic of 1832 broke out in three successive eruptions; the first commencing in February, was at its maximum in

April and subsided; the second rose rapidly from June to July, and sunk again down to the second week of August; its course was very much like that pursued by the present epidemic. The deaths returned by the parish clerks in the three weeks from July 17 to August 7, in 1832, were 968, 793, 661; which, allowing for the defects in their returns and for increase of population, are equivalent to 2323, 1903, 1586, or 5812 deaths in 1849, when the deaths registered in the corresponding weeks were 1931, 1967, 1909, or 5807 in the three weeks July 21st to August 11th. A third eruption in 1832 broke out at the end of August, and extended to the first weeks of September; a fourth in 1833.

It is satisfactory to find that the deaths of 819 out of the 823 persons who died last week of cholera are certified. They were seen by qualified medical attendants. But it is to be feared that the advice was not obtained in time. The accounts of the sudden stoppage of the epidemic by prompt medical treatment and the house-to-house visitation are perhaps over-coloured. But a mortality as high now as in 1832 should not take place: it may be prevented by improvements in the treatment—by arresting the premonitory symptoms—by still earlier attention to the general health. Medical men are called when the people are dying; but it is then too late. If the families of the middle and higher classes were seen at intervals during the epidemic by their medical attendants, and a corps of medical officers employed by the Guardians to visit the poor at short intervals, the present epidemic might very probably be cut short, and a third eruption be averted. The precise locality in which almost every victim of cholera lived is given in the present return under each district; would it not be practicable for the authorities to have all these and the neighbouring localities inspected? If this were done, and proper precautions taken, the tragedy of Albion-terrace, Wandsworth-road, where 17 persons died in two weeks in ten houses, could scarcely recur. The particulars of the 17 deaths will be found in the notes under Wandsworth and Clapham. Another case appears this week in the note under Hampstead. In the house, No. 6, Albion-terrace, Wandsworth, 5 deaths had been registered—a Wesleyan minister's wife, aged 59; his mother, 80; a widow, 49; and two old servants. This is all we learn from the Clapham Registrar. The Registrar of Hampstead adds, that, during the week, an aged man came with a friend to Hampstead for change of air,—breakfasted, dined, went to London to transact business at the Bank of England, and after his return seemed "pretty well." At six o'clock the next morning he felt ill, and had medical advice, but died in eight hours. This old minister was apparently the last of his family, for he had seen his mother, wife, and servants die before him in Albion-terrace, and could not fly from the poison which he carried in his breast. Such desolation could scarcely happen without great negligence on the part of the people themselves and on the part of the authorities.

August 12th-18th.—It is one of the characters of epidemic diseases, that in some years their fatality is inconsiderable, in other years excessive. Since 1832 and 1833, cases of cholera have appeared in the Tables,—but the deaths in the second week of August during the past five years have fluctuated from 1 to 23. In the week ending Saturday, August 18th, the deaths in London were 2230; of which 1230 were by cholera, 188 by diarrhoea. The deaths from all causes in the last seven weeks were 1070, 1369, 1741, 1931, 1967, 1909, and 2230; the deaths from cholera, 152, 339, 678, 783, 926, 823, and 1230. The deaths from cholera exceed those in the previous week by 407; but in that week the mortality declined. The population is about 2,206,000; so that nearly 1 in 1000 of the inhabitants now die weekly. The deaths from all diseases, except cholera, are 1000, which is the average number of the season; and 539 were at ages under 15, 256 at the ages 15-60, 205 at the age of 60 and upwards. Of the 1230 persons who died from cholera, 318 were under the age of 15, 721 were 15-60, and 191 were 60 and upwards: it carries off an excessive proportion of people in the prime of life. 597 males and 633 females died of the disease last week; at an earlier period of the epidemic, the deaths of males exceeded those of females. Of 6194 persons who have died of cholera in London since September 1848, 3524 have died on the south side of the Thames. It has now crossed the River. The mortality last week increased in the districts of St. George Southwark, Newington, and Lambeth: it broke out with extraordinary violence in Greenwich; and on the north side of the Thames—in Stepney, Shoreditch, and Bethnal Green—55, 98, and 125 deaths were registered. The deaths from cholera in the last two weeks were 35 and 125 in Bethnal Green, 21 and 98 in Shoreditch, 24 and 55 in Stepney, 42 and 76 in the districts of the East, West, and City of London, comprehending the jurisdiction of the City properly so called, 7 and 24 in Marylebone, 17 and 34 in Westminster district, 5 and 20 in Chelsea.

This excessive mortality must be viewed with great regret. Looking to the authentic reports of the effects of general sanitary measures, and of efficient medical relief placed within the reach, or carried to the homes of the people, it is quite evident that the measures now in operation are unequal to the emergency. The classes which have the greatest claim for public succour are not idle, habitual paupers, but the hard-working artizan: yet it is stated that in some parishes the arrangements are such that medical relief is not procurable directly from the district medical officers, who are, to the utmost extent of their powers, discharging their painful duties with praiseworthy diligence and humanity. In a disease which so often attacks in the night, and is fatal in twenty-four hours, the poor have to procure orders before they can be treated. Unless some change be made in these simple administrative arrangements, the mortality from cholera may be higher than it has yet been in London.

To render all the assistance which the registration system can afford for the discovery and removal of the causes of cholera, the Registrars were last week requested to state in each case—"whether the house or street in which the death occurred was close, ill cleansed, over-crowded, or otherwise unfavourable to health." The results will be found in the Notes [to the Weekly Table], which show, besides, the sex, age, profession, duration of disease, date and place of death—in every fatal case of cholera and of diarrhoea registered during the week.

August 19th-25th.—In the week ending Saturday, August 25th, the deaths registered in London were

2456; of which 1272 were by cholera, 240 by diarrhœa. The deaths from all causes in each of the last eight weeks were 1070, 1369, 1741, 1931, 1967, 1909, 2230, 2456; the deaths from cholera 152, 339, 678, 783, 926, 823, 1229, and 1272. Although the number of deaths last week is greater than any number yet recorded, it is gratifying to learn that active measures are now in actual operation, or commencing in every district, to combat the great epidemic which has already destroyed 7466 lives in London.

The energy with which parts of our institutions work makes the defects of the rest more evident. On August 9th last, a man was murdered in Bermondsey, and before his death, reported by the coroner, will appear in these returns, one—and it is probable both the persons charged with the murder will be in custody. Steam-ships, the electric telegraph, the heads of the police, and professional agents, specially chosen, were all employed to arrest the destroyers of this life; the columns of the newspapers were filled with the details of the death. On the same day a stock-broker died at No. 12, Albion-terrace, Wandsworth-road; a widow lady, and an old domestic servant at No. 6; in the five preceding days, in the same terrace, the daughter of a grocer, a child of 5 years of age, had died at No. 1; the widow of a coach-proprietor, and a commercial clerk, at No. 2; a gentleman's widow at No. 3; a surgeon's daughter at No. 4; a spinster of 41 at No. 5; the wife of a dissenting minister, his mother, a widow lady, and a servant at No. 6; a young woman of 21 at No. 10; a gentleman at No. 12, where the stock-broker died; a commercial clerk and a young woman of 19 at No. 13, where a young woman also died on July 28th; a gentleman's wife at No. 14, who had seen her daughter die there the day before. The 19 persons died of cholera, many of the inhabitants of the Terrace were dispersed; and the deaths of several have been registered elsewhere. "It appears," says the Registrar, Mr. Frost, "that at No. 13, where the first death occurred, and where 2 deaths were afterwards registered, the refuse of the house had been allowed to accumulate in one of the vaults (which is a very large one) for about two years, and when removed last week, the stench was almost intolerable, there being about two feet of wet soil, covered with maggots. The drains also had burst, overflowed into the tank, and impregnated the water with which the houses were supplied. On the back ground, in the distance, was an open ditch, into which nearly the whole of the soil of Clapham runs." As turpentine to flames, so is the exhalation of such cellars, tanks, and sewers, to cholera; it broke out—it diffused itself rapidly—it attacked many; and 19 inhabitants—after some hours of suffering, sickness, and spasms—expired.

The effects of decomposing refuse and water on health were well known—these fatal subsidies to cholera had been heard of every day; yet no steps had been taken for their removal from Albion-terrace in July—no medical police had interfered to disturb the contents of Mr. Biddle's cellar—and now the 19 masters, servants, parents, children rest in their graves, it appears to be taken for granted that blame attaches to nobody—to nothing—not to the householders themselves—to the Guardians of the district—to the institutions of the country! Such mean inanimate instruments of death can be invested with no dramatic interest; but fixing our eyes on the victims, it is well worth considering whether substantially it is not as much a part of the sound policy of the country that lives like those in Albion-terrace should be saved, as that the murderers of the man in Bermondsey should be hanged.

The revelations of the state of their districts in the Registrars' notes of this and last week prove that it will be no easy task—not to stay the plague of cholera for it will subside—but to remove the evils which make cholera and all epidemics fatal. The vast task of the physical amelioration of the population demands the energies of the best men in Her Majesty's dominions. When, in the country from which Asiatic cholera came, our armies seemed for a moment worsted, and the empire threatened, the great captain of the age is reported to have addressed to another the memorable words, "If you do not go I must." That enemy was distant. We have one now very near, in our streets, of which cholera, a servile minister, has destroyed already 7466 lives in London, and thousands more in the rest of the kingdom. Who will go out against this enemy? Is it too powerful or too feeble for the arm of the greatest? Will no glory crown its conquest? Is the country insensible to its magnitude? Will not all the national strength and resources be put forth to improve the hygienic condition of the people, and to rid England of the causes of the fatality of epidemics? This may yet be done by the Government, if aided by the force of facts, and of enlightened public opinion.

August 26th to September 1st.—The deaths registered in London in the week ending September 1st were 2796; of which 1663 were by cholera, 234 by diarrhœa. The mortality exceeds that of any previous week. The greatest number ever registered before in any week since 1840, was 2454 deaths, in the week ending December 4, 1847, when the last epidemic of influenza prevailed. In the cholera epidemic of 1832, the parish clerks, in the old Bills of Mortality, returned 1021 burials for the week ending August 28th; which, allowing for the defects in their returns, and for increase of population, are equivalent to 2450 deaths at the present time. The burials after that week in 1832 declined.

The mortality is nearly three times the average of the season, and is sensibly felt all over the metropolis; but the inhabitants of the north and west districts, and people in the distance, can yet scarcely form a notion of the suffering on the south side the Thames, and, since the middle of August, in the east districts. "The 12th, 13th, and 14th of August," says one of the Registrars of Bethnal Green, "will long be remembered in this neighbourhood, the outbreak of this fatal disease being without any adequate preparation; surgeons were wanted in many places at once: the hurried passing and repassing of messengers, and the wailing of relatives filled the streets with confusion and woe, and impressed on all a deep sense of an awful calamity."

Cholera has already destroyed, in this epidemic, *nine thousand one hundred and twenty-nine* lives in London.

As it is one of the purposes of the Registration Act to ascertain the "causes of death," and of the Weekly Tables, not to gratify idle curiosity, but to point these out to the public, the Registrars have been requested to give all the information they can respecting the state of every part of their districts. This

many of them have taken considerable pains to do, and their notes will, it is hoped, be found serviceable to the guardians and medical inspectors, now and at future times. For it is important to bear in mind that cholera only brings into a strong light the localities, which elaborate calculations in the Annual Reports prove are at all times fatal to the health and life of the inhabitants.

After the perils of this terrible week we seem to see land; but as many thousands of lives may be lost in an epidemic by negligence, so, many thousands may be saved by skill, vigilance, and energy—by more ample supplies of water—by the rapid removal of nuisances from the houses and streets—by the prompt administration of medical appliances and other comforts, by the active co-operation of the medical profession, of the Boards of Guardians, of employers, of every householder, of every individual, with the Board of Health and health officers.

On the day the above remarks were written, Tuesday, September 4th, the mortality in London was highest; 336 persons died of cholera during the day, 314 died on Wednesday, 297 on Thursday, 284 on Friday, and 311 on Saturday. As the decline of the epidemic was slow, and the registration takes place 3 or 4 days after death, the return for the week ending September 8th was heavier than the return on the week preceding. The mortality was now 3 times as high as the average; many people had lost friends or acquaintances that they had lately seen alive: and the uninterrupted increase inspired feelings of terror in some minds—a general uneasiness in all. Under these circumstances it was deemed right to advert to the epidemic's decline, which its previous course, the law which governs its progress, its actual operations, and the season of the year—all rendered probable, and next to certain.

The natural tendency of the public mind is to make no timely provision against distant dangers, and to exaggerate dangers present; apathy had now given way to excitement, which the announcement of the next week was unfortunately calculated to increase.

September 2nd to September 8th.—The Bills of Mortality were commenced in the reign of Queen Elizabeth; and ever since the year 1603, have been published by authority in London. In this respect the English metropolis stands alone; no Weekly Tables of the causes of death of every inhabitant are published in the capital of any other European state. Various motives for the measure have been assigned; but the fact of continuous publication, from a period anterior to the appearance of newspapers and gazettes, is remarkable and characteristic. It may be fairly referred to the natural inclination of the English people, when they are in trouble, to know the truth; and to see in figures the precise extent of their losses; although at times the sight might well make the courage of the bravest quail. On the Continent "precautions have been used" in publishing the mortality of cholera in 1849; and the deaths from all causes have not yet been made known. The parish clerks of London in the seventeenth century, when the plague was at its height, counted the deaths and recorded their supposed causes; and the citizen, when the death-cart traversed the streets, anxiously studied the bill, surrounded by its gloomy symbolical border, announcing 8297 deaths in a week out of a population of 600,000. In the hands of Price, Heberden, Willis, Bateman, and other statistes, these records have disclosed the laws of mortality, and the causes of the insalubrity of the present cities.

One of their immediate advantages, however, is the evidence which they furnish that the most fatal and threatening plagues go through, with some perturbations, certain prescribed orbits; and after raging for a given number of weeks, disappear. Plague, influenza, and cholera have been vanquished before; and to despair now would be as unreasonable as it was in the beginning of the year to deny that the cholera epidemic was impending. Those officers who are struggling with the triumphant enemy under every disadvantage will yet be victors; for if they have art, they have also nature on their side.

The mortality in the week ending Saturday, September 8th, declined in the west and east districts of London, and increased slightly in the north and central districts, so that the deaths registered (1741) on the north side the Thames were 19 less than in the previous week. It was otherwise on the south side the river, where the deaths registered in the week were 1442! The total deaths registered in London were 3183: of males, 1460; females, 1723. The deaths of females exceeded the deaths of males by 263; the reverse of the usual proportions. The deaths from cholera were 2026; the numbers decreased in the districts of Shoreditch, Bethnal Green, Whitechapel, Stepney, Westminster; increased in Bermondsey, St. George Southwark, Newington, Lambeth, Wandsworth, Camberwell, and Rotherhithe. The epidemic, which had been partially subdued, broke out again with terrible violence in Lambeth, where 279 persons died of cholera in the week.

Mr. Daws, one of the Registrars of Lambeth, who has made careful inquiries on the subject, says: "*At least half the cases I have registered were allowed to proceed unchecked, until the most alarming and dangerous symptoms had manifested themselves*; but lately more circumspection seems to have been used. Nevertheless, the cases are still numerous, in which persons seem (from the painless nature of the attack) to be unconscious how highly necessary it is that immediate attention should be paid to it." People are so much accustomed to associate danger exclusively with pain, that the most fatal symptom unaccompanied by pain is neglected. They must, however, be taught to look upon painless diarrhoea with the anxiety that people in the plague looked upon the swellings, called tokens—which were also painless—but with less fear; for the premonitory symptom now seems to be sent not so much to announce death as to give timely warning, and to call attention to that stage of the malady in which medicine can heal.

As medical skill is of most avail at the beginning and end of a fever, as the effect of the engines is most conspicuous at the outbreak and end of a conflagration, and as most energy is demanded when the wreck nears the shore, so it is in an epidemic; which, if it has not been checked at first, may yet be cut short, and combated with effect, as it declines. None of the measures of relief in any district should therefore be discontinued, but be prosecuted with redoubled vigour, until it has been completely subdued; and the districts which have not yet suffered greatly should immediately complete their preparations. For the time is short; the evils of delay irreparable.

September 9th to the 15th.—A daily return of the fatal cases of cholera and diarrhœa was now made to the Registrar-General. The particulars of all the deaths from these causes on Monday, September 10th, were printed on Tuesday, September 11th, and thus facilitated the house-to-house visitation, which had been set on foot by the Board of Health, and was efficiently carried out in several districts. The mean temperature, which in the two previous weeks had been $64^{\circ}0$ and $64^{\circ}1$ fell to $56^{\circ}5$. The wind, which had been north, blew from the south-west. Electricity was as it had been for the two previous weeks, positive and stirring; frequent flashes of lightning were seen during Monday, Tuesday, and Wednesday evenings. The sky was often overcast, and showers fell.

The deaths in the week fell to 2865; of which 1682 were by cholera, 280 by diarrhœa. From this date the epidemic rapidly declined: the deaths from all causes in the 8 weeks following were 1981, 1616, 1290, 1075, 1028, 902, 837, and 893; the deaths from cholera in the same weeks were 839, 434, 288, 110, 41, 25, 11, and 6. The remarks in the table of this last week are:—

In the week ending Saturday, November 10th, the deaths registered in the metropolitan districts were 893; a number which shows an excess of 56 on the return of the previous week, but a reduction of 269 on the corrected average of five autumns. If the present return be compared with that made in the same week of each of the years 1840-8, it will be found that, with but one exception (in 1841, when the deaths were 841), the mortality ranged formerly from 910 to 1165, and therefore was considerably higher than in last week, though the population in those years was less. The increase of 56 now observed on the week ending November 3, partly arises from pneumonia and bronchitis, the deaths from which become more numerous as the winter advances, having been 104 in the previous week, 127 in the last. The total number of deaths from cholera in the week was only 6 (5 less than in the previous week); in the same week of 1848 there were 62. The steady decline of diarrhœa and dysentery is shown by the numbers of the last five weeks, which were respectively 105, 63, 51, 40, and 29. A boy died of diarrhœa in Peterborough-row, Fulham, whose father had been carried off by cholera in September; a boy of the same disease at Brudenell-place, New North road, from an unwholesome condition of the house; and a girl at Maidstone-place, in the house in which a death from cholera, reported in the former week, occurred, and in a locality then described as "low and ill-drained." Of the 6 deaths from cholera, one occurred at Water-lane, Homerton; one at Weatherhead-gardens (Hackney-road), a place low, undrained, and drenched by waste water; one in Christchurch, St. Saviour; one at Drummond-road, St. James, Bermondsey; one in Walworth; and one in Lambeth. A death from apoplexy, on which an inquest was held, occurred in Huntingdon-street, Hoxton. The deceased was a female of 65, who for the last four years had lived in an underground cellar, which is only 11 feet in length, 8 feet 6 inches in width, 5 feet 9 inches in height, and sunk 5 feet 7 inches below the surface of the street. A small window scarce gives light or ventilation, and "the walls" (says the Registrar) "are so damp that you might brush the water from them."

The mean daily reading of the barometer was above 30 inches on the last three days of the week. The mean of the week was $29^{\circ}732$. The temperature on the last three days was considerably higher than the average of the same days in 7 years. The mean of the week was $50^{\circ}2$, which is higher than the average by $4^{\circ}1$.

In the three last months of the year 1848, 478 persons died of cholera; which in the year 1849 destroyed 14137 lives in London. In the year 1849 not less than 3899 deaths were referred to diarrhœa. The deaths from the two causes were 18036. One in 161 of the inhabitants was cut off by the epidemic in its severest form. Of every 10000 persons living 62 were killed by cholera, 17 by diarrhœa.*

While London was suffering, all the region round was assailed; all the country in the basin of the Thames, Suffolk, Norfolk, the south midland counties, and Sussex, were involved in the attack. Some districts suffered severely, others escaped entirely, or, taking the population into account, only lost an inconsiderable number of lives. The scale on which the mortality is measured is 10000 living, and the deaths in London by cholera out of this number were, as we have seen, 72; in all England, 33. The

* See Table, p. cxxx, where the mortality of districts in which cholera was most fatal is given, derived from the population enumerated March 31, 1851. The mortality of these districts is frequently alluded to.

population of 1841 is the basis of the calculations; and where the range of mortality is so great as it is in this case, the variation in the rates of increase of population will not materially affect the results. In the metropolitan districts of Surrey the mortality from cholera ranged from Rotherhithe 253 (in 10000 inhabitants is understood throughout) to Wandsworth 122: out of London, the districts of Epsom, Guildford, Farnham, Dorking, Reigate, and Godstone lost only 4 to 6 (in 10000); Hambleton and Farnborough lost none; Croydon 34; Richmond 35, Kingston 13, and Chertsey 24, the three latter districts lying on the south bank of the Thames. In Middlesex, on the north side of the Thames, Brentford lost 50, Staines 31; Uxbridge 21, Hendon 9, Barnet 20, Edmonton 24. In Hertfordshire, the districts of Hertford and Hitchin suffered severely; 57 in 10000 were destroyed. Hertford is on the River Lea and near the source of the New River; Hitchin is further north, and is interspersed with hills; 24 deaths from cholera took place in the Hitchin Union workhouse. The first case at Hertford was in the Union workhouse; many of the deaths took place in the county gaol, at Butcherley Green and at Old Cross. In the Watford district 25, Hemel Hempstead 18 (in 10000) died of cholera. In Bishop Stortford, Royston, Hatfield, St. Alban, and Berkhamstead the mortality was inconsiderable, ranging from 2 to 7 in 10000. The mortality was equally low in the districts of Buckinghamshire, except Eton, where 20, and Wycombe, where 31 in 10000 died (chiefly at Great Marlow and High Wycombe). The latter districts are on the Thames. Windsor lost 28, and, ascending the Thames, Abingdon 18, Headington 22, Oxford 22, Witney 14. At Wokingham, Bradfield, Wallingford, Woodstock, Faringdon, and Cirencester in Gloucestershire, near the source of the Thames, the mortality was inconsiderable, not exceeding 2 in 10000. The counties of Northampton and Huntingdon escaped with few deaths; at Northampton 17, Hardingstone 28, Peterborough 19 in 10000 died. Hardingstone adjoins Northampton; the first case occurred in a boatman; 20 of 24 deaths from cholera in this district took place at Piddington. In Bedford 12, in Biggleswade 14 in 10000 died; the rest of Bedfordshire lost less than 2 in 10000. In Essex, descending on the north side of the Thames, West Ham lost 50, Romford 67, Orsett 28, Rochford 66, Maldon, round the Blackwater River on the east coast, 15, Tendring 27 in 10000. Tendring includes Harwich, where nearly all the cases occurred, chiefly in the families of mariners, fishermen, and dredgers. The population of Harwich was 3829 in 1841, of whom 69 died of cholera; 25 in the week ending September 8. The rest of the county of Essex—except Epping, where 13 in 10000 died—suffered inconsiderably. The same may be said of the whole of the counties of Suffolk and Norfolk. Some districts of Suffolk had no deaths; others had 1 or 2 in 10000; Ipswich lost only 7 in 10000 by cholera, but suffered severely from diarrhoea; Wangford 7, Mutford 16 in 10000. The deaths in the latter district were chiefly at Lowestoft, which is included in the port of Yarmouth. In Yarmouth itself 36, Norwich 6, Mitford 7 in 10000 died. Two parishes in Docketing have already been referred to, p. xxi. Buxton, a parish in the Aylesham district, suffered from a similar circumscribed attack. Norwich and Kings Lynn and Yarmouth suffered a good deal from diarrhoea. In five districts of Norfolk no deaths were referred to cholera, in all the rest except those already named the mortality was inconsiderable. In Cambridgeshire, North Witchford lost 58, Whittlesey 17, Wisbeach 44 in 10000: like Peterborough they are marshy and unhealthy districts, lying about the embouchure of the Ouse and the Nene. The rest of the districts of Cambridgeshire suffered little. Gamlingay in Caxton was the seat of one of the circumscribed attacks, fatal to 12 persons. In Kent, the districts on the south bank of the Thames, and the coast down to the North Foreland, suffered from the epidemic; the deaths in 10000 were, in Dartford 46, North Aylesford (containing Northfleet) 50, Hoo 25, Medway (including Rochester and Chatham) 34, Milton 59, Sheppey (including Sheerness) 50, Faversham 10, Blean 17, Thanet (including Margate and Ramsgate) 65. Of the districts on the coast from the Isle of Thanet to Dungeness, Dover alone was attacked with any severity. The attacks were often circumscribed: thus of 117 deaths in Dartford, 35 occurred in the parish of Crayford, 17 deaths in the Union workhouse Dartford, and 20 at Waterside. At Dartford a labourer, his wife, and four children were cut off by the pestilence. At Gravesend 196 deaths from cholera were registered; 26 of persons who died on board vessels lying off Gravesend, 34 in the workhouse, 9 in

Passengers'-court, and 8 in Kempthorne-street. "The whole of the surface and underground drainage falls into rudely-constructed cesspools." Of 73 deaths from cholera in North Aylesford 32 were at Northfleet. All the districts in the interior of Kent escaped with few or no deaths. But in Loose, a sub-district of Maidstone, 43 deaths occurred in the parish of East Farleigh, chiefly among the Irish hop-pickers. The remaining deaths in Maidstone amounted to 55. The decrease of the mortality on the high grounds of the county is shown by the districts traversed by the River Medway; ascending that river, in Sheppey the mortality in 10000 was 50, Milton 59, Medway 34, Malling 11, Maidstone (including the hop-pickers at Loose) 30, Tunbridge 8, Seven-oaks 2.

In Sussex only three districts lost more than 10 in 10000 of the inhabitants; namely, Hastings, where 34, Brighton, where 41, and Steyning, where 17 died of cholera to every 10000 inhabitants enumerated at the previous census. In Cuckfield there was a circumscribed attack.

83; 3 *Cuckfield*; *Hurstperpoint*. Pop. 5711. Cho. 14. Diarr. 5.—The whole of the deaths from cholera took place at Pyecombe (one of 7 parishes forming the sub-district), where the epidemic broke out with great malignancy in June. Its first victims were three children of labourers, on the 20th, and a fourth on the 22nd. Four cases terminated fatally on August 1st, and 2 on the following day; a shepherd died on the 6th, and his widow on the 10th. The recorded duration of attack was in some instances remarkably short—4, 5, and 6 hours—7 hours being the average.

On this wide field, extending over the counties of Middlesex, Surrey, Kent, Sussex, Berks, Hertford, Buckingham, Oxford, Northampton, Huntingdon, Bedford, Cambridge, Essex, Suffolk, and Norfolk, the epidemic committed great ravages: and 18502 lives were destroyed by cholera alone. But its successes were only partial; of 2415159 persons and more living, 16285 lost their lives in 36 London and 18 country districts, having an area of 1144 square miles; while only 2217 persons died in a population of 2843183 on 13370 square miles. The poison, or whatever it was, pervaded the whole field; for in almost every district it caused one or more deaths, either in the aggravated form or in the masked shape of diarrhœa.

PORTSMOUTH CHOLERA FIELD.

Portsmouth, Southampton, and Salisbury, formed the basis of a less extensive attack; but to 10000 living enumerated in 1841,* Portsea Island lost 107, Alverstoke (Gosport) 93, Southampton 88, the adjoining district of South Stoneham 27, Romsey 14, the Isle of Wight 36 (where nearly all of the deaths occurred in the low ports on the north slope of the island, in Cowes, Newport, and Ryde), Winchester 18, Salisbury 174, the two adjoining districts of Alderbury 19, Wilton 12, Devizes 30. In all the other districts of Hampshire and Wiltshire the mortality was inconsiderable, although nearly all were visited in one form or other: 1251 deaths occurred in Portsea Island, Alverstoke, Southampton, the Isle of Wight, and Salisbury, to 145711 living in 1841, on an area of 163 square miles; while on the rest of the two counties only 309 died of cholera to a population enumerated in 1841 at 449109 on an area of 2584 square miles: so circumscribed was the fatal working of the malady.

PLYMOUTH CHOLERA FIELD.

Plymouth is the centre of a cholera field which extends along the southern coast of England from Purbeck Bay, in Dorsetshire, to the Land's End. No deaths from cholera were registered in Shaftesbury, Sturminster, Blandford, Wimborne, or Beaminster districts, in the interior of Dorsetshire; one death was registered in Sherborne, and one in Wareham, on the coast. In Dorchester, separated from the sea by the Black Down, 16 deaths occurred, 10 at Fordington, 2 at Holloway-row, 1 at Bohmston Stinsford, 2 at Piddletown, 1 at Stafford; 11 deaths were recorded at Bridport on the coast; and at the ports of Poole and Weymouth the mortality was 26 and 32 in 10000. Proceeding along the sea-side districts of Devon, certain small detached places on the coast were visited severely: thus at Torquay there were 72 deaths, Brixham 75 deaths; 11 at South Brent, 13 at Modbury; in Exeter the deaths were 44, the mortality 14 in 10000. At Plymouth, East Sonehouse, Stoke

* A Table of the Mortality in many of these districts, calculated from the population enumerated in 1851, is given at page cxxx.

Damerel, and the surrounding districts of Plympton St. Mary, Tavistock, St. Germans, and Liskeard, round the harbour—the Tamar and the Tavy—2381 cases of cholera were fatal.* The mortality in the 4 districts lying against the sea was excessive, and approached 2 per cent. of the population. Whole families were swept away. Many emigrant ships sail from Plymouth, and others touch there. The epidemic was diffused among the unhappy emigrants, and many perished. The "American Eagle," on board of which 6 deaths from cholera occurred, attracted attention at an early period, and was visited by officers of the Board of Health. The healthy districts of North Devon had few or no deaths. Barnstaple and Ilfracombe were exceptions; these two ports had several deaths, which made the mortality from cholera in the Barnstaple district 14 in 10000. This belongs properly to the Bristol Channel field. The action of the epidemic was prolonged down the south coast of Cornwall, and fell with intense violence on certain spots. At Mevagissey, in St. Austell, 126 deaths from cholera were recorded out of a population in 1841 of 2310. The mortality of St. Austell was 43, Truro 19, Falmouth 34, Redruth 28, the Scilly Islands 15 in 10000. The districts of Stratton, Camelford, Launceston, Bodmin, St. Columb, Helston, and Penzance escaped: the mortality in these large and populous districts was quite inconsiderable.

BRISTOL CHOLERA FIELD.

The country on both sides of the Bristol Channel was attacked by the epidemic. Bristol was one of the centres of attack; Merthyr Tydfil, in Glamorganshire, the other. Bristol is surrounded on the north side by the Clifton district, which extends to the Channel; and is separated to the south from Bedminster, in Somersetshire, by the river Avon. The mortality in the Bristol district was 90, the Clifton district 75, the Bedminster district 74 in 10000. Ascending the Severn, the mortality in the Thornbury district was 5, in Dursley 35, Wheatenhurst 21, Gloucester 44, Tewkesbury 39. Here it may be convenient to trace the epidemic up the Severn, out of the bounds of the Bristol field, through Worcestershire, Shropshire, and Montgomeryshire. The mortality in Upton-on-Severn was 8, Worcester 16, Martley 8, Droitwich 13, Kidderminster 4, Bridgenorth 47, Madeley 23, Shrewsbury 54, Atcham 8, Montgomery 18, Newtown, extending up to the sources of the Severn, 3. Nearly all the deaths in the Dursley district occurred at Wotton-under-Edge and Kingswood, among labourers, weavers, and their families. Of the 13 deaths from cholera in Upton-on-Severn, 8 were in the Union workhouse. The Bridgnorth district consists of three sub-districts: in the Bridgnorth sub-district, with 6199 inhabitants, 70 deaths occurred, in Worfield 5, in Chetton none. Of 15 deaths in the Atcham district, 13 occurred in the Union House at the Cross Houses; 34 of the 37 deaths in the Montgomery district were in Pool. None of the other districts of Gloucestershire, Worcestershire, Shropshire, or Montgomeryshire, were assailed with any sensible effect by the epidemic, if we except Stourbridge, which is involved—as well perhaps as Madeley, Bridgenorth, and Shrewsbury—in the Wolverhampton field. No deaths were returned in the districts of Tetbury, Northleach, Stow-on-the-Wold, Winchcomb, in Gloucestershire; in any district of Herefordshire, except Leominster, where 1 death from cholera was recorded; in Ludlow or Clun, in Shropshire; in Evesham, Tenbury, or Pershore, in Worcestershire. All these districts escaped. The deaths from diarrhœa in Hereford were 21; in the other districts few or none. In Northleach, having 10661 inhabitants, in 1841, no death either from diarrhœa or cholera was registered.

In Somersetshire, proceeding from Bedminster, the mortality was 35 in 10000 in Keynsham, 13 in Bath, 39 in Clutton, 13 in Wells, 23 in Shepton Mallet, 74 in Bridgewater on the Parrot, and 18 in Taunton on the Tone, which flows into the Parrot. In Langport, higher up the Parrot, no death from cholera was registered; and generally the interior districts, as well as Williton and Wellington on the Channel coast, leading to the healthy districts of Exmoor Forest, were left unscathed.

Crossing the Bristol Channel, we arrive in Glamorganshire on—

* See an exceedingly interesting and instructive account of the epidemic in a sub-district of Plympton St. Mary, by A. C. Maclaren; "McCulloch and Maclaren on Cholera," 1850.

[THE MERTHYR TYDFIL CHOLERA FIELD.]

In the Cardiff district, embracing the feet of the great coal and iron district, the mortality was 90 in 10000; Merthyr Tydfil, further in the interior, 234; in Bridgend, lower down the Channel, the mortality was 41, Neath 169, Swansea 68. Round Carmarthen Bay, in Carmarthenshire, the mortality in Llanelli was 22, in Carmarthen 38 in 10000; in the interior, Llandilofawr 23, and Llandovery 10 in 10000. Ascending the Usk, Newport lost 75, Pontypool 28, Abergavenny 86, Crickhowel 54, Brecknock, round the sources of the Taf and the Usk, 4 in 10000 inhabitants. The districts on the lower section of the Wye, which enters the Severn above the Channel, suffered little more than Herefordshire and Radnorshire; the deaths in the Chepstow district were 1, Monmouth 9 in 10000. A few deaths from cholera were registered in Pembrokeshire. No deaths from cholera, few from diarrhoea, were registered in Cardigan, Newcastle-on-Emlyn, Aberayron, Aberystwith or Tregaron, in Cardiganshire; Presteigne or Rhayader, in Radnorshire; Machynlleth, in Montgomeryshire; Llanrwst, in Denbighshire; Bala or Dolgelly in Merionethshire; Conway, in Carnarvonshire. Except the districts named, Holywell and Flint, on the Dee, Amlwch and Holyhead, in Anglesea, were the only districts in Wales where cholera produced any number of deaths.

In *Cardiff* 2 male infants died of cholera on January 3rd and February 11th, after attacks lasting 12 days and 3 days respectively: epidemic cholera did not appear until May 13th, when it was fatal to a navigator, aged 19, at 39 Bridge-street, after an attack of 24 hours' duration, preceded by diarrhoea for 3 days. Towards the end of May a considerable increase of mortality took place, and the epidemic was at its height on June 7, when 14 persons died, and during the month it was fatal to 135 persons. The Registrar of the Cardiff sub-district, in his return for the quarter ending June, 1849, in alluding to the increase of the number of deaths, says:—"This mortality may in some degree be ascribed to inadequate drainage, partly to the letting out of a canal which passes through the town, thereby exposing the mud and matter at the bottom to the action of the sun, but still more to the very crowded state of the streets and houses in the poorer localities, to which the disease (cholera) has thus far chiefly confined itself." In July the number of deaths fell to 69, but rose again to 91 during August; in September 55 persons died; in October 3; and the epidemic finally disappeared after being fatal to a labourer's widow, aged 83, at Great Frederick-street, on November 19, and to a carpenter's son, aged 5 months, at Homfray-street, on December 7th. During the year 1849 cholera destroyed 396 lives (206 males; 190 females), being at the rate of 90 deaths to every 10000 persons living. Diarrhoea was fatal to 75 persons (43 males; 32 females), being at the rate of 17 to every 10000 persons living.

Merthyr Tydfil, with the exception of Hull, suffered more severely from cholera than any district in the kingdom. Its first appearance was on May 21st, when a labourer's son, aged 4, died after an attack of 14 hours' duration, at Heolygillor, and by the end of the month it was fatal to 16 persons. In June a rapid spread of the epidemic took place; on June 7th and 9th the daily deaths amounted to 22, and 349 persons died during the month. In July the number of fatal attacks was 539, and as many as 32 persons died on July 26. In August the epidemic was at its height; the daily mortality reached 36 on August 2nd; as many as 30 died on August 15th; during the month it was fatal to 548 persons. In September the deaths fell to 190, and further declined to 37 in October. In November 3 persons died; the last fatal case being that of a miner's widow, aged 73, at Fynnon Tydfil, on November 21st. The following places suffered severely from cholera:—Pont-y-Pridd, Llanwonno; Pedwranfach; Caedraw; George Town; Market-field; Pont-y-Storehouse; Penydarran; Cae Pant Twyll; Quarry-row; Cefn Coed, Cymmer; Fynnon Tydfil; New South Wales, Dowlais; High-street and Well-street, Dowlais; Hirwain, Penderyn. Cholera was fatal to 1682 persons (884 males; 798 females), being at the rate of 234 deaths to every 10000 persons living; diarrhoea was not fatal to more than 97 persons (53 males; 44 females), being at the rate of 14 deaths to every 10000 persons living.

In *Neath* 2 persons died of cholera in February 1849; but it was not until May

21st that the epidemic began to be fatal, when it appeared among the labouring population at Aberdylais, Blaen Louddan. Throughout June the epidemic prevailed, and 80 persons died during the month. After the first week of July a rapid increase of mortality occurred; on July 17th as many as 18 persons died, and on several days it was fatal to 16 persons daily; during the month 296 deaths took place. The mortality continued high during the first three weeks of August, and the deaths in the month amounted to 260; the deaths declined to 84 in September, and to 10 in October. The last fatal attack took place on November 10th, when a labourer, aged 47, died after an illness of 13 hours, at Lowlase, Llansamlet Higher.

During the year 1849 cholera was fatal in Neath to 738 persons (353 males; 385 females), being at the rate of 169 deaths to every 10000 persons living. Diarrhœa destroyed 61 lives (28 males; 33 females), being at the rate of 14 deaths to every 10000 persons living.

A table is given in another part of the Report showing the progress of the epidemic during each day of its prevalence in the districts of Cardiff, Merthyr Tydfil, and Neath.

THE WOLVERHAMPTON CHOLERA FIELD.

At the southern extremity of Staffordshire, on a space 12 miles square, 3275 persons died of cholera and of diarrhœa. The mortality from cholera was in the district of Wolverhampton 137, Walsall 54, West Bromwich 48, Dudley 48, Stourbridge extending into Worcestershire, 65 in 10000. It is the Midland coal-field. The Potteries to the north, comprising Wolstanton, Stoke-upon-Trent, and Newcastle-under-Lyme, where the mortality was considerable, and Nantwich in Cheshire, Shrewsbury, and Bridgenorth to the west, Coventry to the east, may be considered out-lying districts, connected more or less with this field, which is in direct communication with Liverpool and Manchester. The field is near the centre of England; and it is worthy of remark, that the outbreak of the great epidemic may be set down so late as July for Wolverhampton, August for the other central districts. The districts immediately surrounding those infected escaped unscathed: thus the mortality in 10000 was only 5 in Penkridge, 2 in Lichfield, 2 in Tamworth, 2 in Burton-on-Trent, 1 in Cheadle, 1 in Leek, 4 in Stone, 1 in Stafford. In Uttoxeter, with 14932 inhabitants, no death from cholera, and only 1 from diarrhœa occurred. Warwickshire, with the exception of Coventry and Foleshill in its vicinity, suffered as little as the exempted districts of Staffordshire; the mortality from diarrhœa in Birmingham and Aston was however considerable. In Atherstone and Solihull there was no death from cholera; in Meriden 1, Nuneaton 2, Rugby 1, Stratford-on-Avon 2, Alcester 1, Shipton-on-Stour 1, Southam 1. Rutlandshire and Leicestershire enjoyed an extraordinary immunity: in Melton Mowbray there was no death from cholera, only 8 from diarrhœa; in Leicester 2 from cholera, 75 from diarrhœa. Six of the districts of Lincolnshire scarcely suffered at all; the deaths ranged only from 1 to 3 in 10000. Gainsborough, on the Trent, flowing into the Humber, was visited heavily; the deaths from cholera were 246, diarrhœa 63; the mortality from cholera was 91 in 10000. Caistor lies south of the Humber over against Hull, and the mortality was 11; in Glandford Brigg 9 in 10000. In Lincoln the mortality was only 2 from cholera, 12 from diarrhœa in 10000. Nottinghamshire escaped with few deaths; the mortality from cholera was in East Retford 10, Newark 10, Bingham 9, Basford 7, Radford 3, Nottingham 3 in 10000. In Nottingham the mortality was 18, in Radford 17 in 10000 from diarrhœa. In the district of Southwell, including part of Sherwood Forest, no death from cholera occurred among the 25014 inhabitants. Derbyshire suffered still less than Nottinghamshire; the mortality in the district of Derby was 5 in 10000 from cholera, 11 from diarrhœa. In the rest of the county the mortality was inconsiderable.

THE LIVERPOOL CHOLERA FIELD.

The epidemic fixed itself firmly in Liverpool as early as March, and around this centre infested several of the districts of Cheshire and Lancashire; the mortality diminishing in the distance. Thus the mortality in 10000 was 167 in Liverpool, 82 in West Derby, 40 in Prescott, 22 in Ormskirk, 75 in Wigan, 19 in Warrington,

4 only in Leigh, 13 in Bolton, 7 in Bury, 7 in Worsley. Here the epidemic assumes a somewhat more severe form; the mortality was at the rate of 40 in 10000 in Manchester, 28 in Salford, 30 in Chorlton. The mortality was 27 in 10000 in Lancaster: in the remaining districts the mortality was inconsiderable. Crossing the Mersey, the mortality in 10000 was 44 in Wirral, including Birkenhead; 19 in Great Boughton, including Chester, on the Dee; 36 in Runcorn, on the south bank of the Mersey; 16 in Northwich, on the Weaver, flowing into the Mersey. In Stockport only 8, Macclesfield 6, Congleton $\frac{1}{10}$ in 10000 died of cholera.

It will be right to give here a more particular account of the ravages of the epidemic in the populations of Liverpool and Manchester.

Liverpool suffered two visitations of epidemic cholera; the first was comparatively slight, prevailing from the end of July to the close of 1848, and was fatal during that year to 33 persons, of whom 12 were males and 21 females, mostly children of labourers and artisans. In 1849 no fatal attack is recorded until January 9, when a widow, aged 76, died at No. 1 Court, Upper Pownall-street, of cholera and consecutive fever, 7 days' duration. On January 15th, a sawyer's wife, aged 44, died at 32, Eldon-street; the death of her husband followed, on January 21st, after an attack of 19 hours' duration. The next two cases occurred at 14, Hornby-street, on January 29th and 30th, of a sawyer's wife, aged 42, and an unmarried female aged 21. Diarrhœa was fatal to 29 persons during January. In February 7 deaths took place from cholera, occurring at intervals of a few days. Diarrhœa, which became more prevalent towards the latter part of the month, destroyed 36 lives. In March the deaths from cholera increased to 18, chiefly occurring in the courts of Arley, Oriel, and Chisenhall-streets, and also in the workhouse in the Mount Pleasant sub-district. The first death in the cholera hospital, Queen Anne-street, was on March 1st, when a labourer's wife, aged 30, died, after an attack lasting four days; and another labourer's wife, aged 30, died in a van near the cholera hospital on March 25th. Diarrhœa remained nearly stationary during this and the two following months. In April there were 19 deaths from cholera, 5 of them occurring in the cholera hospital, Queen Anne-street, and 3 in the workhouse. In May the mortality from cholera increased to 96, and the epidemic had now completely established itself, increasing daily in each of the sub-districts. In June 424 fatal attacks are recorded, and the daily number varied from 5 on June 6th, to 25 on June 29th. In July 1085 were added to the deaths previously recorded. On one day, July 18th, the number of fatal cases was 59, the average during the month being 35 daily. In August the epidemic greatly increased, and the daily mortality reached 84 on August 13th, this being its maximum. Its decline now became perceptible, although it was not regularly progressive. Thus the deaths declined to 31 on August 30th, and afterwards increased for a few days, until, on September 5, no fewer than 66 deaths took place. From this point its decline became more steady, the deaths, which amounted to 1575 in August, were reduced to 874 in September, and further declined to 62 in October, 58 of which took place prior to October 12, when the epidemic, which had been so fearfully prevalent among the labouring, maritime, and trading classes, might be regarded as at an end, 2 deaths only taking place in November and 6 in December. Cholera hospitals were established in Vauxhall-road, in the Dale-street sub-district, in Ansdell-street, in the St. Thomas sub-district, and in Queen Anne-street in Islington sub-district. Many deaths took place in these hospitals, and also in the workhouse in the Mount Pleasant sub-district. A book-binder, his wife, and son died at 3 Dukinfield-street, on August 15th, a female relative, aged 2, having previously died in the same house on August 13th. Many instances occurred of more than one member of the same family dying. During the year 1849 cholera was fatal to 4173 persons (1895 males, 2278 females), being at the rate of 167 deaths to every 10000 persons estimated as living in 1849. The deaths from diarrhœa amounted to 981 (459 males, 522 females), or 39 deaths to every 10000 persons living.*

* A Report on the Health of the Town of Liverpool during the years 1847-50, by the Health Officer, W. H. Duncan, M.D., has appeared since this paragraph was written: it contains an interesting account of the epidemic.

In *West Derby* (surrounding *Liverpool*) no case of epidemic cholera appeared prior to March 29th, when an anchorsmith's son, aged 5, died at 3, Abstinence-street, after an attack of 21 hours' duration. The next 2 cases followed on April 7th, at Henderson-street, where a mariner's wife aged 24, and a spinster aged 26, died after attacks lasting 17 hours and 15 hours; both are said to have been in a state of collapse when first seen by the medical attendant, as was a cordwainer's wife aged 30, who next died, on April 11th, at 14 cellar, Henderson-street, after an attack of 28 hours' duration. Eight other deaths occurred at intervals up to the end of May. Early in June the epidemic began to spread, and the daily deaths amounted to 11 on June 21st, and the mortality during the month was 92. No considerable increase in the number of deaths took place until the middle of July, when they became more frequent, and amounted to 245 during the month; they increased to 409 during August. In the early part of September cholera continued to increase, and attained its maximum severity on September 5th, when it was fatal to 27 persons. It declined slowly during the following 10 days, and afterwards more rapidly, until, on October 9th, only 1 death occurred; another followed on October 22nd, and on October 29th the last fatal case of cholera is recorded in the death of a mariner, aged 49, in the cholera hospital. In another part of the Report a table will be found showing the deaths in *Liverpool* and *West Derby* combined, on each day of the four months during which the epidemic was most prevalent.

During the year 1849, 1135 persons (488 males, 647 females) died from cholera, which was at the rate of 82 deaths to every 10000 of the population. Diarrhœa was fatal to 279 persons (141 males, 138 females), being 20 to every 10000 persons living. In the sub-district of *Toxteth Park*, which comprises less than half the population of the whole district, 912 deaths (383 males, 529 females) from cholera and diarrhœa were registered. The cholera hospital was in this sub-district.

Manchester, *Chorlton*, and *Salford* form a group of districts lying contiguous; and a table is given elsewhere, showing the deaths from cholera and diarrhœa in the three districts combined, on each day of the four months during which the epidemic was most fatal: it will be seen that the mortality was very high throughout September, and the first few days of October: on several occasions the deaths exceeded 40 daily; and on September 14th, 45 fatal cases occurred.

It is worthy of note that in the whole of England the deaths from cholera were nearly three times as numerous as those from diarrhœa; while in this group of districts the mortality from these diseases was nearly equal, viz., from cholera 1395; diarrhœa, 1331; and while cholera destroyed 594 males, and 801 females, diarrhœa was fatal to 701 males, and 630 females.

In *Manchester** no fatal case of epidemic cholera occurred until June 11th, 1849, when a packer, aged 20, died of an attack of diarrhœa 20 hours, and cholera 21 hours, at Bird-in-hand, Redfern-street; the next four cases took place on June 25th, 26th, 28th, 29th; of which three were at the workhouse, Canal-street, and one at No. 7, Nield-street; the attacks being of short duration. Not more than 6 deaths happened during the first three weeks of July; after this an increase was observed, and the deaths during the month amounted to 23; diarrhœa became very prevalent, and was fatal to 149 persons. No further increase in the mortality occurred in the early part of August; towards the end of the month, however, the epidemic began to spread. The deaths amounted to 93 during August, and diarrhœa was also very fatal, causing 208 deaths. The deaths from cholera were further augmented by 622 during September, when they averaged 20 daily, and on September 11 amounted to 34. The mortality continued very high until after October 4th, and no fewer than 27 fatal cases happened on October 2nd; after this its decline became more marked, and the deaths throughout October did not exceed 147: to this number only seven were added during November, the last being on November 23rd, when a cordwainer's daughter, aged 7, died at 3 Back Hatters'-lane, after an attack of 16 hours' duration: no other fatal case is recorded afterwards during the year.

* For a valuable and elaborate account of the progress of cholera, see "History of Cholera in Manchester," by J. Leigh, Esq., M.R.C.S., one of the Registrars, and Ner Gardiner, Esq., Superintendent-Registrar of Manchester.

Cholera destroyed 878 lives (374 males; 504 females) in 1849, being at the rate of about 40 deaths to every 10000 persons living. Diarrhœa was fatal to 765 persons (404 males; 361 females), or 35 deaths to every 10000 persons living. Cholera did not visit Manchester until full three months after it had prevailed in Liverpool; it was also much less fatal. For while in Liverpool there was one death to every 60 persons living; in Manchester there were 252 persons living to every fatal case of cholera.

In *Salford*, as in Manchester and Chorlton, the cholera epidemic did not appear until June, 1849. At 5 Paradise-row, on June 24, a colour-mixer, aged 57, died of cholera five days' duration, and typhus gravior two days; on June 27, a porter's daughter, aged 5, died at Cleminson-street, of cholera after an attack of 12 hours' duration. In July seven fatal attacks occurred at intervals, and the deaths from diarrhœa, which were 6 in June, increased to 26 in July. After August 12th, both cholera and diarrhœa became more prevalent, and the deaths during the month were respectively 50 and 91. Throughout September cholera continued at its height: the number of deaths on September 1st was 6; on September 13th they increased to 9, which was the highest number in any one day; on the last three days of the month the deaths were 7, 6, and 8 respectively: the mortality during the month was, cholera 148 deaths; diarrhœa 62. After the first week in October the epidemic subsided more rapidly, and the last death took place on October 19th, at Back Oak-street, when a shoemaker's wife, aged 33, died of cholera of 3 days' duration, effusion on brain 1 day. The deaths during October were of cholera 30; diarrhœa 31. In November diarrhœa was fatal to 9 persons, and in December to 6. The fatal attacks of cholera in most cases were of short duration, and in a great number of instances ranged from 6 to 12 hours. During 1849 cholera destroyed 237 lives (98 males; 139 females); and diarrhœa was fatal to 261 persons (141 males; 120 females).

In *Chorlton*, cholera was very prevalent in July, 1848, among young children in the Hulme sub-district, though it was apparently only the ordinary summer cholera; but on December 1st, a female servant, aged 24, died at 2 Knibbs-place, Victoria Park, of cholera, attended with purging, vomiting, cramps, and collapse, 24 hours' duration.

In 1849 no fatal case of cholera is recorded until June 1st, when a female, aged 27, died at 57 Park-street, of cholera and apoplexy, 36 hours' duration; on June 4, a female factory-hand, aged 28, died at Timothy-street, Eccles, after an attack lasting 12 hours. 2 other deaths occurred during June; and towards the latter part of July the epidemic began to spread, and was fatal to 15 persons during the month; diarrhœa was still more prevalent, and caused 57 deaths in July. In August cholera caused 67 deaths, and diarrhœa 70. During September the epidemic was at its height: the greatest number of persons dying of cholera in one day was 13 on September 18th, and during the month it was fatal to 163 persons. After the first week in October a perceptible decrease took place, and no death occurred after October 25th, excepting that of a weaver, aged 65, at the Union workhouse, Hulme, on December 25th, of debility consequent on cholera. Many instances are recorded of more than one death happening in the same family; and at No. 3, Islington-place, 4 adult persons died. At the Union workhouse numerous deaths, both from cholera and diarrhœa, took place. The deaths from diarrhœa exceeded those from cholera, viz., cholera 280 (122 males; 158 females); diarrhœa 305 (156 males; 149 females).

THE HULL CHOLERA FIELD.

In Yorkshire cholera destroyed 6346 lives, and 1955 deaths were ascribed to diarrhœa. This great county extends over the basin of the Ouse, which constitutes, by its junction with the Trent, the Humber, on the north side of which lies the port of Hull, the gate of the commerce of Leeds and the woollen districts. The mortality in the district of Hull was 241; Sculcoates, round Hull, 152; Beverley, north of Sculcoates, 11 in 10000. In the four coast districts, Patrington, Skirlaugh, Driffield, and Bridlington comprising Holderness, and lying higher than Hull, the mortality was only 5, 4, 1, and 6 in 10000. Up the Ouse, Howden lost 41, Selby 73, York 36; Pocklington, west of York, 24 in 10000. Hull is intimately connected with the district of Leeds by the railway passing through Selby, by the roads and the River Ouse. The mortality in the district of Leeds

was 145, and only inferior to that of Hull and Sculcoates. In Hunslet, adjoining Leeds, the mortality was also great, 102. Dewsbury, Wakefield, Pontefract, and Ecclesfield, south of Leeds, suffered less. In Goole the mortality was 59, Thorne 46, Doncaster 24, Rotherham 10, Sheffield 13, Ecclesall-Bierlow 11, Wortley 2 in 10000. These districts are south of the Ouse, and are chiefly on the Don. The districts on the Nidd, the Ure, the Swale, and the Derwent, the other tributaries of the Ouse and Humber, exhibit few or no deaths. The mortality in Huddersfield was 5,* Todmorden 4, Saddleworth and Pateley Bridge 3, Halifax, Keighley, Otley, Ripon, Skipton, 2 in 10000. Cholera produced no deaths in Sedburgh or Settle on the high grounds. In the North Riding the mortality was, 6 in Thirsk, 5 in Whitby, 4 in Scarborough, 3, 2, or 1 in eight districts; none in Helmsley, Leyburn or Reeth. In October, as the great epidemic was declining, a sudden outbreak occurred in the district of Knaresborough, where the mortality was 19 in 10000.

The ravages of the epidemic in Hull, Sculcoates, Leeds, and Hunslet must be more particularly described.

Hull, in proportion to its population, suffered more from cholera than any district in the kingdom. The epidemic appeared here in the autumn of 1848, and was fatal to 4 persons in September, to 13 in October, and to one in each of the following two months. A fatal case was recorded in a mariner, aged 36, at Anne-street, Myton, on March 9th, 1849, after an attack of 4 days' duration.* A month intervened before any other case took place. On April 9th a labourer's widow, aged 62, died at 2, Joseph's-place, Anne-street, after an attack lasting 2 days. Four weeks elapsed before any other death occurred, when a fisherman's son, aged 6, was attacked on May 7th, at 19 Mill-street, and died after an illness of 12 hours. In June 2 deaths took place. In July cholera broke out in Little Passage-street, and was fatal to 3 females on July 7th, 8th, 9th, after attacks of short duration. In the course of the month 36 fatal attacks are recorded. No material spread of the epidemic was observed until August 13, from which date it began to increase, and the mortality during the month amounted to 254. In the first two weeks of September cholera was at its height, destroying 69 lives on September 6th; it was fatal during the month to 843 persons. After the first week in October but few deaths occurred, and only 40 fatal cases happened throughout the month, the last being on October 30th, when a farmer's wife, aged 70, died at 22, Sewer-lane. In many instances two or more deaths took place in the same family; and during the latest prevalence of the epidemic it was fatal to a lath-render's wife, daughter and son, on October 6th, at Spring-street, Myton, after attacks of 24 hours, 12 hours, and 5 hours respectively.

Among the places severely visited by cholera were Middle-street, Mill-street, Adelaide-street, Vagrant Office Humber-bank, English-street, High-street, Myton-gate, Humber-street, the neighbourhoods of Blackfriar-gate and Whitefriar-gate, Cleveland-street Groves, Chaffers-alley. Cholera was fatal, in 1849, to 1178 persons (571 males; 607 females), being at the rate of 241 deaths to every 10000 persons living. Diarrhœa destroyed 194 lives (91 males; 103 females), being 40 deaths to every 10000 inhabitants.

In *Sculcoates*, adjoining Hull, a female servant, aged 39, is stated to have died of cholera, on February 1st, 1849, at Popple-street, Drypool, after an attack lasting 12 days. On April 19th, a sailmaker, of intemperate habits, died of cholera and diarrhœa at Bethel-place, Caroline-street, Hull. No other death is recorded until July 23rd and 24th, when, in addition to a mariner, aged 33, at Kingston-place, it was fatal to a factory overlooker, aged 41, his wife, aged 39, and his daughter, aged 13, at 6 Cottonmill-street: by the end of the month 9 deaths occurred. In August 151 fatal cases took place, and the epidemic was at its height on September 6th (same day as in Hull), when it destroyed 28 lives. During the following week the mortality continued high: on two occasions the deaths amounted to 27 daily. Its decline became more perceptible towards the end of the month, in the course of which 464 fatal cases took place. In the first five days of October the deaths were uniformly 4 daily. The last death

* The Report of Dr. John Taylor, on the Epidemic Cholera in Huddersfield, is a model which the local inquirer should consult.

occurred on October 19, at New Village, Cottingham, in a carpenter, aged 28, after an attack of 18 hours' duration.

A table is given in another part of this Report, in which the progress of cholera and diarrhœa, in Hull and Sculcoates combined, is shown on each day of the four months during which the epidemic prevailed. In Sculcoates 656 persons (297 males; 359 females) died of cholera, being at the rate of 152 deaths to every 10000 of the population. Diarrhœa was fatal to 144 persons (74 males; 70 females), being 33 deaths to every 10000 persons living.

In *Leeds*, and also in the adjoining district of *Hunslet*, epidemic cholera first appeared about the middle of June, was at its height during the first two weeks in September, and finally disappeared in the last week of November. From the contiguity of the two districts, and from the simultaneous appearance and departure of the epidemic, they may be spoken of in conjunction; and a table is given elsewhere exhibiting the progress of cholera and diarrhœa each day during the months when it was most fatal.

The first two fatal cases of cholera took place in Leeds on June 14th, in a cap-manufacturer, aged 39, at 16 Market-street, after an attack of 12 hours' duration; and in a stuff-weaver's son, aged 9, at 32 Brass-street, cholera 6 days, and typhus 3 days. His brother, aged 7, next died, on June 15, of cholera 5 days, typhus 2 days. Two other deaths in Leeds and 3 in Hunslet took place during the month. In July only 4 deaths occurred at intervals up to the 17th; the mortality then began to increase, and the fatal cases amounted to 23 during the month. On August 10th a still further spread of the epidemic commenced. On August 30th as many as 32 deaths happened, and in the course of the month it was fatal to 426 persons.

The mortality was at its height during the first two weeks of September, and on two occasions the daily deaths reached 89, viz., on September 7th and 9th; it then declined slowly for a few days, but afterwards more rapidly, and after destroying 1543 lives during September, the number fell to 309 in October: the epidemic entirely ceased in November, during which month it was not fatal to more than 14 persons. The last death in Leeds was that of a hairdresser, aged 36, at Swinegate, on November 27, after an attack of 2 days' duration. In Hunslet the last 2 deaths took place on November 29th, when cholera was fatal to a butcher's daughter, aged 15, at Stocks-hill, after an attack of 16 hours, and to a joiner, aged 42, at Stanningley-road, Wortley.

The following places in Leeds may be mentioned as having suffered much from cholera:—Grantham-street (No. 1 in this street was used as an hospital for cholera patients), Cavalier-street, Accommodation-road, Marsh-lane, Richmond-street and road, Wellington-yard, York-street, Acorn-street, Byron-street, High-street, Bateson-street, where 3 persons died on August 28th, at No. 7, and Stainburn-square. In Hunslet the epidemic severely visited Upper and Lower Wortley, Seacroft, Halton, Rothwell, Mint Holbeck; Moor-street, Silver-street, where 3 female children died at No. 13, in the first week of September; Water-street, Thwaite-gate, Carr-place, Low-road, and Pitfield-street. The number of deaths in Leeds was:—Cholera, 1439 (649 males; 790 females); diarrhœa, 267 (124 males; 143 females). In Hunslet; cholera, 884 (433 males; 451 females); diarrhœa, 120 (58 males; 62 females). To every 10000 persons living in Leeds there were from cholera 145 deaths; and from diarrhœa 27 deaths. In Hunslet the proportion was—from cholera 102 deaths, and from diarrhœa 14 deaths, to every 10000 of the population.

THE TYNEMOUTH CHOLERA FIELD.

On both sides of the Tyne, and up the Tees, the epidemic entered Durham and Northumberland, devastating the ports and the coal districts. Ascending the north banks of the Tyne, the mortality was 129 in Tynemouth (including North Shields); 41 in Newcastle-upon-Tyne; 12 in Castle Ward, the surrounding district. On the south side of the Tyne the mortality in South Shields was 69; in Gateshead, against Newcastle, 66 in 10000. Higher up the Tyne, and round the sources of its chief tributaries, the mortality was in Hexham 5; in Haltwhistle 3; in Bellingham none. Morpeth, Alnwick, and Berwick on the coast suffered to some extent; in Belford the mortality was only 5; Glendale 8 in 10000: there was no death either from cholera or diarrhœa

in Rothbury, extending to the forests and moors around the sources of the Coquet. Teesdale presents one of those sharp contrasts which we have so often seen. In Barnard Castle, with a population of 8591, the epidemic killed a carpet-weaver, aged 23, on August 17th; 137 more persons before November 7th. Two or three members of the same family were in many instances seized and destroyed. The 4954 inhabitants of Staindrop, and the 6028 dwellers in Middleton entirely escaped, although the three sub-districts are in the same district.

It is necessary to give a more particular account of the course of the epidemic in Tynemouth and Newcastle-upon-Tyne.

Tynemouth suffered in 1848 from epidemic cholera, which commenced on October 10th, and destroyed 28 lives by the close of the year, in addition to a few from summer cholera, which took place at intervals during an earlier period. In January, 1849, cholera subsided after causing 5 deaths. Three deaths took place in Pumpwell-lane, on March 22nd, 25th, and 27th. In April, 2 deaths occurred. No other case is recorded until July 1st, when the epidemic again appeared, and was fatal to a mariner's wife, aged 53, at Dawson's Quay, after an attack lasting 13 hours. During July 11 deaths occurred. In August the epidemic greatly increased; the deaths during the month amounted to 167, and further increased to 429 during September. The daily mortality reached 26 on September 12th and 15th; but on September 19th, 20th, and 21st the number of deaths averaged only 6 daily; but afterwards increased to 22 on October 2nd; when the subsidence of the epidemic became more steady, and the deaths during the month fell to 180; during November only 18 deaths took place, cholera ceasing to be fatal after November 26th. Cholera was fatal during the year 1849 to 815 persons (384 males; 431 females), being at the rate of 129 deaths to every 10000 persons living. Diarrhœa was fatal to 89 persons (46 males; 43 females), being at the rate of 14 deaths to every 10000 persons living. A table is given in another part of the Report, showing the progress of the epidemic during each day of its prevalence in Tynemouth, and the adjoining districts of South Shields, Newcastle-upon-Tyne, and Sunderland.

In *Newcastle-upon-Tyne* cholera was prevalent in the latter part of 1848; 7 fatal cases occurred subsequent to October 16th. During the first 9 days of January, 1849, there were 12 deaths; in the succeeding 11 days only 3 fatal attacks are recorded; a sudden increase then took place, and from January 21st to 31st, the number of deaths was 26. During February 22 deaths occurred; 30 in March, and 11 in April. In May the only death was that of a weaver's wife, aged 46, at Gardner's-building, on May 15th, after an attack of 14 hours' duration. The epidemic, for a time, discontinued its ravages, and during the whole of June no fatal case is recorded; on July 4th, however, a joiner's daughter, aged 6, died, at Dent's-hole, after an attack lasting 3 days; this was followed on July 30th, by the death of a miller's son, aged 18 months, of measles 6 days, and cholera 3 days' duration. During August 28 deaths occurred, and in September the epidemic was at its height, and the deaths during the month amounted to 127, the greatest number occurring on September 5th, when 14 persons died. In October the deaths fell to 30; and in November to 3, the last being on November 16th, at Stepney-square. During the year 1849 cholera was fatal to 295 persons (147 males; 148 females), the mortality was at the rate of 41 deaths to every 10000 persons living. Diarrhœa was fatal to 117 persons (61 males; 56 females), being at the rate of 16 deaths to every 10000 persons living.

INFLUENCE OF SEX ON THE MORTALITY FROM CHOLERA.

The deaths from cholera among males were 26,108, females 27,185; it consequently destroyed 1077 more females than males. The proportions were reversed in diarrhœa, which was fatal to 9637 males, and to 9250 females. The population of England and Wales returned at the Census without revision was on March 31, 1851, males 8,762,588; females 9,160,180. And correcting for increase of population, the mortality from cholera at all ages in 1849 was—

Males 30·2 to 10000 living, or 1 in 331.

Females 30·0 to 10000 living, or 1 in 333.

The mortality is thus a shade less among females than it is among males; but the difference is much less than it is from all other fatal diseases in ordinary years; when the total deaths among males is invariably greater than the deaths among females. Thus in the year 1848 the deaths of males from all causes amounted to 202,949, of females to 196,851. And in the seven years 1838-44 the annual rate of mortality among males was 2'270, females 2'104 per cent.

In the Middlesex districts of London 3388 males, and 3512 females, died of cholera; in the Surrey districts the discrepancy was much greater, for 2814 males and 3509 females died of the disease. In many districts of the kingdom the mortality was much more fatal to males than to females. In some districts the disease was most fatal to females. Thus the deaths in Dartford (Kent) were males 68, females 49; and the deaths of males exceeded the deaths of females in other districts on the river and coasts of that county. In Portsea and Alverstoke 343 males and 351 females died of cholera; in Yarmouth 53 males and 34 females; Norwich 11 males and 27 females; Salisbury 88 males, and 77 females; Plymouth, Plympton St. Mary, East Stonehouse, and Stoke Damerel, 907 males and 966 females; Bedminster, Bristol, and Clifton, 695 males and 740 females. In Gloucester, as well as in Wheatenhurst, Stroud, and Tewkesbury, the number of males that died exceeded the females in the proportion of 133 to 96. The same or a greater discrepancy occurred at Madeley and Shrewsbury, where 106 males and 71 females died. Upon the other hand, 94 males and 147 females died of cholera at Newcastle-under-Lyme. In Stoke-upon-Trent, Wolverhampton, West Bromwich, and Dudley, the deaths of males considerably exceeded the deaths of females in number. In Boston, Lincolnshire, 25 males and 10 females died of cholera; in Caistor 24 males and 5 females; in Gainsborough 110 males and 136 females. In Liverpool, Manchester, and the adjacent districts, the deaths of females exceeded the deaths of males in number. 1895 males and 2278 females died from cholera in Liverpool. The mortality was at the rate of 154 to 10000 in males, and 180 to 10000 in females; about one-fifth greater therefore in the female than in the male sex. In Knaresborough 33 males and 20 females; Huddersfield 33 males and 19 females died of cholera; in Leeds and Hunslet, on the other hand, 1082 males and 1241 females died of the epidemic. In Wakefield 145 males, 96 females; Rotherham 20 males, 10 females; Thorne 42 males and 28 females; Pocklington, Howden, and Beverley, near Hull, 76 males, 39 females; in Hull and Sculcoates 868 males, 966 females—the deaths of the latter being 98 in excess. In Tynemouth and South Shields, Sunderland and Chester-le-Street, the deaths of females were in excess; in Newcastle-upon-Tyne nearly equal. In Cockermouth and Whitehaven the deaths of males were 152, females 209. In the Welsh districts—Abergavenny, Pontypool, Cardiff, and Merthyr Tydfil—the deaths of males were in excess.

It is worthy of remark, that at the beginning of the epidemic the deaths of males exceeded the deaths of females very considerably; the numbers in the months of October, November, and December, 1848, were, males 612, females 493; or in the proportion of 100 to 80. In the prior nine months of that year before the great epidemic had set in, the deaths of males in England ascribed to cholera were 445, of females 384; numbers in the proportion of 100 and 86.

As a general rule, when the mortality from cholera attained a very high rate, the number of deaths among females exceeded the deaths among males.

In London a remarkable change was observed in the proportion of the sexes affected in the course of the epidemic. In four weeks of October 1848 the deaths of 80 males and of 42 females by cholera were registered; in the thirteen last weeks of the year the deaths of 258 males and 210 females were registered; and there was an excess of males at all ages, but particularly in the ten years of age 15-25. In the quarter ending March 1849, the deaths of males amounted to 250, of females to 266: at the age of 25 and upwards the excess of deaths among females was considerable. In June, at the commencement of the *great outbreak*, the males again furnished the most numerous victims. At the close of July the females died in greater numbers than males, and continued to do so to the end. In the week that the mortality was highest the deaths of 895 males and of 1131 females were returned. In the September quarter the deaths of males

under the age of 25 exceeded the deaths of females; but after that age the proportions were reversed. The annexed table, as well as a similar table at page clxxiv, is well worthy of careful study. (a).

MORTALITY AT DIFFERENT AGES.

Cholera was fatal to persons of all ages: it carried off 3866 boys under 5 years of age; 3837 men of 25 and under 35; and 2 old men of the age of 95 and upwards. Dividing the lifetime into 3 stages, the disease carried off 7673 boys and 7045 girls under 15 years of age; 14861 men and 15767 women of 15 and under 60 years of age; 3546 men and 4355 women of the age of 60 and upwards. The deaths were thus most numerous in the middle and most active period of life. The proportions of deaths at the several ages are different in diarrhœa; the deaths of children and of old people being much more numerous than the deaths of persons in the middle period of life. Thus the deaths of 6794 boys and 6058 girls under 15, of 1235 men and 1398 women of the ages 15-60, of 1607 men and 1791 women of the age of 60 and upwards, were referred to diarrhœa. It appears to be exceedingly probable that the cases of diarrhœa in 1849, barring a certain deduction, are cases of cholera, with the striking but not essential symptoms suppressed. And it is worthy of observation that this suppression of morbid action occurs at the ages when the organization is most feeble, either because the system is not fully developed, or because it is worn out. Treating the mortality from diarrhœa as complementary to the mortality from cholera, the annexed table shows that under 5 years of age boys died in the proportion of 88, and girls in the proportion of 78, to 10000 living; the rate of mortality then rapidly declines to the ages of 10-15 and 15-25; in the next decennial period 25-35, the mortality is of 31 males and 32 females to 10000 living of each sex. At the period 35-45, the mortality to the same numbers living is 41 males and 44 females. Thus at the child-bearing age the mortality is rather greater among women than among men. From the age of 45 through the subsequent decennial periods of life, the mortality to 10000 men living increases in the ratios 54, 70, 92, 114, 135, which is the *maximum* at the ages 85-95. The mortality of females increases in somewhat different ratios. (See Table page xlii.)

The table is obtained by dividing the deaths from cholera and diarrhoea respectively by the numbers living at the corresponding ages in 1841; and further dividing the whole of the results by 1·11169,* as a correction for the probable increase of population in the 8 years 1841-9. This is an approximation to the exact result.

It may be fairly inferred from the table that men of the age of 25-35 are in a cholera epidemic twice as likely to die as men 10 years younger (15-25); and that from this period the danger increases with age. The table does not express the liability to an attack of cholera; nor the attack having supervened, does it express the chances of recovering or of dying. The attacks of disease are not registered; consequently, there are no means of throwing light on this question, which falls particularly within the scope of medical inquiry.

If persons are equally liable to attack at all ages, or if the same *proportions* of the living are attacked, the table shows the relative mortality of those attacked at different ages. If more than an equal proportion of the living are attacked in the early, and less than the due proportion are attacked at the later ages, the mortality of the table does not represent the mortality of attacks; but overstates the mortality of attacks at the earlier ages.

The mortality from all causes at the same ages, in the 7 years 1838-44, is inserted in the table (b). Upon comparing this mortality with the mortality from cholera, it will be seen that the epidemic did not prove fatal to life at different ages in the same degree as other diseases. If we divide the numbers in column 3 by the numbers in column 4, the ratio of the two rates of mortality is obtained: it varies at different ages. Thus under 5 years of age in males the mortality from cholera is equal to 12 per cent. of the mortality from all ordinary causes; and the greatest relative effect is attained at the age of 35-45, when the mortality from cholera is equal to 33 per cent. of the mortality from all ordinary causes. At the advanced ages, when the absolute mortality from cholera is highest, its relative effect is least; for the mortality from other diseases increases much faster than the mortality from that malady. This is shown in the columns 9, 10.

* The derivation of the value r in $r^8 = 1·11169$ is given in the Ninth Annual Report of the Registrar General, 8vo, p. 168.

(b) ANNUAL RATE of MORTALITY, at 12 different Ages, from Cholera and Diarrhoea in England, in the Year 1849, compared with the Mortality from all Causes in the Years 1838-44.

DURATION OF CASES OF CHOLERA.

All diseases have natural stages in which they develop their phenomena, and either obstruct and destroy life, or give way before its regular healthy processes. The sick may therefore be classed together, and traced, like the living in a life table, through all the stages of the malady, until it is extinct, either by the death or recovery of the patient. Upon this basis a form of sickness table has been constructed, which shows the probability of death or recovery at every period of disease. The half of such a table for cholera has been framed from the returns of death, which in 39468 instances state the duration of the cases in hours and days. If we assume that 100000 persons are attacked by cholera, that 60532 recover, and that 39468 die at the several periods of the disease indicated in the table, some of the properties of the complete tables become immediately apparent. Thus the probability that a person attacked will die in less than 24 hours is expressed by the fraction $\frac{20684}{100000} = .20684$; the chances are, therefore, nearly 4 to 1 that he will not die in 24 hours. The chance that he will die in 3 days is expressed by $\frac{39468 - 8282}{100000} = .31186$; and the chance that he will not die before but after 3 days is .08282. The chance that, having survived the dangers of the first 3 days, he will yet die of cholera, are $\frac{8282}{100000 - 31186} = \frac{8282}{68814}$. It is 60532 to 8282, or more than 7 to 1, that the patient will recover if he does not die in 3 days after the first attack.

The table (c) p. xlv. supplies a ready means of calculating the future duration of fatal cases of cholera at any stage of the disease. Thus it is found that the mean duration of the fatal disease in females is 2.102 days, in males 2.060 days; or 50.44 hours in females, and 49.44 hours in males. The woman attacked lives on an average an hour longer than the man. The duration of life, after well-marked symptoms of a fatal attack of cholera have set in, appears to diminish as age advances. Dividing the cases into three groups, the following results are obtained:—

DURATION OF FATAL CASES OF CHOLERA at various Ages.

	Mean Duration	
	Days.	Hours.
Persons of the age of 15-35	2.121	= 50.904
Persons of the age of 35-55	1.954	= 46.896
Persons of the age of 55 and upwards	1.973	= 47.352

The stated duration differs more than 4 hours, and is in excess in the first 20 years of adult age.

Fatal diarrhœa is a disease of much longer duration; and it agrees with cholera in being of somewhat longer duration in females than in males; in both sexes, at the age 15-35, than at ages further advanced.

DURATION OF FATAL CASES OF DIARRHŒA at various Ages.

	Days.
Males, all ages	16.044
Females, all ages	16.692
Males and Females, age 15-35	18.668
Males and Females, age 35 and upwards	17.544

The fatal cases of cholera were preceded frequently, if not invariably, by a stage of diarrhœa, which attracted little or no attention. That stage is, it is believed, not included in the cholera duration, which was reckoned, by the medical attendants who made the returns, from the manifestation of the first characteristic symptoms of the epidemic.

Mean duration of fatal attacks of Cholera in males = 2.060 days.			Mean duration of fatal attacks of Cholera in females = 2.102 days.		Mean duration of fatal attacks of Cholera in males and females = 2.081 days.	

NOTE.—The table is read thus:—Of 19232 fatal cases of cholera in males, 315 terminated in 6 hours, leaving 18917 alive; 3030 died in the next 6 hours, leaving 15887 alive at the end of the 12th hour; 4965 died in 12 and less than 18 hours, leaving 10922, or rather more than half the number of those who die, alive at the end of 18 hours. If a man is to die of epidemic cholera, it is probable that he will die in the first day (24 hours), as out of 19232 males who die, 10187 die within, and 9045 survive that period.

THE CHOLERA EPIDEMIC OF 1831-2 AND THE EPIDEMIC OF 1848-9 COMPARED.

The Board of Health in 1831-2 collected much information respecting the epidemic which it was their office to combat. A table was prepared showing the names of places

attacked, the date of the first case, the date of the last case, the number of days' duration, the total deaths, the total recoveries, the proportion of deaths to cases, the population, the proportion of population attacked, and the proportion of deaths in population; and all the places were numbered on one of Arrowsmith's large maps. The table and map are now in the library of Her Majesty the Queen. At the instance of Sir James Clark copies have been made of these valuable documents, and are deposited in the General Register Office. According to the returns the deaths from cholera in "London and its vicinity," between February 14th and December 18th, 1832, were 5275; the deaths in "the country" were 26101; the total deaths in Great Britain, 31376. The deaths in Ireland up to March 1st, 1833, were 21171; making the deaths in the United Kingdom 52547. The deaths of the year 1832 in England and Wales amounted to less than half the number which were registered in 1849. But the returns which the Board of Health in 1832 procured were voluntary, partial, and evidently defective. The population of the places in Great Britain which made returns was 5223657; so it would appear that a majority of the places in the country altogether escaped attack or notice.

Notwithstanding the defects of the returns of 1832, they furnish us with the means of satisfactorily showing that the epidemic generally followed the same track in 1848-9 as it did in 1831-2, but that it was much more fatal in some places, and less fatal in others at the two periods. Thus, in the following districts the mortality from cholera was greater in the year 1849 than in the year 1832 (*d*). The places for 1832 are towns or cities, and do not often include all the same parishes as the districts of 1849; but as the populations at the two nearest censuses are given, the rates of mortality during the two epidemics can be fairly compared.

In the following places the mortality was much less in 1849 than in 1832; and there can be no doubt about this result (*e*).

(*d*) DISTRICTS in which the MORTALITY from CHOLERA was greater in the Year 1849 than in the Year 1832.

INFLUENCE OF THE SEASONS IN 1831-2 AND 1848-9.

The two epidemics of cholera in England continued fifteen months; they began in October, spread gradually, increased, and then as spring advanced partially subsided. The first eruption in 1848-9 extended over *seven* months; it attained its greatest intensity on the *fourth month*. The mortality in this eruption was not considerable. If the total deaths in the 15 months be represented by 1000, the deaths in the 7 months from October, 1848, to April, 1849, are expressed by 47; the deaths in the 7 months of 1849, from May to November, by 950; the deaths in December by 3; or the deaths in the first 7 months were less than 5 per cent. of the total deaths, and two-thirds of the total deaths happened in August and September. The returns of 1831-2 were made to the Board of Health, and were necessarily imperfect, but their general indications are probably correct; and the distribution of 30924 deaths over 14 months, given by Sir David Barry, represents with sufficient accuracy the distribution of all the deaths from cholera over the 14 months, from November, 1831, to December, 1832. If the total deaths in this epidemic be represented by 1000, the deaths in the first eruption, from November, 1831, to May, 1832, are expressed by 174, and the deaths in the second eruption, extending from May, 1832, to December, by 826; or the deaths in the first eruption were about 17 per cent. of the total deaths, and the deaths in August and September were somewhat less than half (46 per cent. of) the total deaths. The first epidemic descended to the lowest point in May, 1832, and rose to the highest pitch in August, when it caused 29 per cent. of the total deaths. The second epidemic descended to the lowest point in April, 1849, and was most fatal in September, when it caused 37 per cent. of the total deaths. It is worthy of remark, that the cholera in both epidemics entered England after the wheat harvest was over, at the close of the hot season, and that it was most fatal in and after the wheat harvest of the year following.

The annexed Table (*g*), p. xlvii, shows the distribution of the deaths in the two epidemics over the several months; and Table (*h*) is added for a comparison of the distribution of the deaths in London and Paris over the monthly periods of the epidemic. In both cities each epidemic had a double eruption. The epidemic began earlier in London than in Paris, yet the maximum mortality was attained two months sooner in Paris than in London. The population of Paris is more dense than the population of London; and the mortality in both the epidemics was about three times as great in Paris as it was in London. In 1849 the mortality was greater in Paris than in Liverpool.

METEOROLOGICAL INFLUENCES.

Diagrams.

Two diagrams, illustrative of the progress of cholera, and of the meteorological phenomena on every day of the year 1849, are appended to the Report. The second Plate shows the temperature, the fall of rain, the direction of the wind, and the height of the barometer on every day at Greenwich. The meteorological phenomena admit therefore of strict comparison only with the line of cholera in London, Plate III.; but the general character of the weather all over the country is indicated by this series of observations. Thus, the weather was cold in the first half of January; and the line

fluctuates, but does not rise in January, February, March, April, while the cholera line falls; the lines of temperature and of cholera rise in May, June, and July; in August the

NOTE.—The returns for Paris are from the "Rapport sur les Epidémies Cholériques de 1832 et de 1849, dans les Etablissements dépendant de l'Administration Générale de l'Assistance Publique de la Ville de Paris. Par M. Blondel, 1850." The garrison and the hospital population and deaths are included.

temperature remained high, then cholera rose much higher; in September the temperature begins to descend, and the cholera line shoots up its highest points, attaining the greatest elevation when the curve of temperature is descending. The form of the cholera curve for all England is very remarkable: the successive terraces and pinnacles of the Plate resemble sections of the primitive mountain formations, surmounted by spires and *aiguilles* of granite; or recall the lines of a strange Gothic architecture.

The circular diagrams are of a new form, which may serve very well to illustrate periodic phenomena. From the observations of 79 years (1771–1849), Mr. Glaisher had represented the mean temperature of each *day* of the year by a curve laid down in the usual way on a straight line; and it appeared natural to join the two ends of the line by substituting the radii of a circle for the ordinates, and the angular divisions of the circle for the abscissas. By this arrangement a diagram of a compact form is obtained. It is a modification of the simple dial arrangement in general use. The circle struck round the radii representing the averages—with the different colouring of the radii extending beyond and falling short of the circle—makes the diagram represent the facts in a striking manner to the eye.

The diagrams of Plate IV. are described at the foot of the sheet.* A separate diagram for London is given for each of the 11 years from 1840 to 1850. The last diagram represents the average result of the 10 years 1840–9; and a new element in the centre—the average length of the day in each week. The radiating power of the sun depends (1) on the time it is above the horizon, and (2) on its angular elevation. As both these elements attain their maximum in the summer solstice, the greatest heating power of the sun is then exerted, but its effect on the atmosphere goes on accumulating, and the temperature of the air is highest later in the year. The red crescent representing heat on the diagram is deflected 3 weeks to the right; and the blue crescent representing cold is deflected to the same extent. As the greatest effect on the air appears some weeks after the sun has exerted its utmost power, so the diseases which excessive heat favours appear some time after the temperature of the air has been highest. Thus the temperature rises above the average at the 17th week, and falls below the average at the 42nd week; the mortality from summer diseases rises above the average at the 30th, and falls below the average at the 40th week. In the years 1844, 1846, 1847, 1848, and 1849, it will be seen that the summer mortality exceeds the average when the temperature is for some time above 60°; and in every year the mortality exceeds the average when the temperature descends below 40° Fahrenheit.

London has two healthy and two unhealthy seasons; the first healthy season extends from the 14th to the 29th week, through April, May, June, and the greater part of July; the second healthy season extends from the 40th to the 47th week, through October and November. The first unhealthy season extends over December, January, and February; the second over August and September.

PLAGUE AND CHOLERA YEARS.

The fifth Plate, in a series of eight circular diagrams, presents a view of the mortality of London in the seasons and weeks of ordinary and plague years.

The first two diagrams deserve particular attention; the radii of the *inner circles* represent the relative average weekly mortality of the years 1840–9 and 1640–6. How much London in the nineteenth is less fatal to its inhabitants than London in the seventeenth century, is evident from these lines; and the improvement is still more striking, when the mortality of cholera—great as it was—is compared with the mortality of the five plagues in the 73 years, 1593–1665.

The years 1640–6 have been selected to represent the ordinary city mortality of the 17th century, because the *weekly* returns are still extant, and are comparatively free from plague. The second diagram represents the average weekly mortality of these years; and it will be observed that there is a great excess of mortality in August, September, October, and part of November. It was the unhealthy season. April, May, and June

* The first circular diagrams representing the mortality and temperature in London during each week, and the diagrams of the plagues in London, were constructed in February 1850. The diagrams showing the daily mortality from cholera in England and in the 11 Divisions were constructed in September 1850.

were the healthiest months, but the mortality was then little lower than in winter. The mortality in winter was higher than it is in the present day; but the mortality from the diseases of summer was raised so much higher in proportion than the mortality from winter diseases, that it made the winter look comparatively healthy.

The circles are divided by two diameters into four quarters; and it will be observed that all the plagues are projected on the same side, four of five in the same quadrant of the circle. The harvest months were the death months of the year. It was the same in the 14th, 15th, and 16th centuries, when the black death and the sweating sickness were rife.

As a population grows healthier, the annual mortality fluctuates less and less from year to year: the fluctuation in the mortality of the seasons also diminishes. The eccentric figure which circumscribes the radii representing the relative force of mortality in the 52 parts of the earth's orbit, gradually tends to become a circle, or a figure of the ellipsoid type. In its first stage it has some resemblance to the cometary orbit; in its second to the regular orbits of planets.

It may be stated as a general result of many observations in Europe, that whenever the mortality of the 6 months after the summer solstice is much greater than the mortality of the first 6 months of the year, the absolute mortality of the place is high.

FATAL DAYS OF THE WEEK.

On Saturday, Monday, Tuesday, and Wednesday, the deaths from cholera were above, and on Thursday, Friday, and Sunday below the average. In the whole country Tuesday was the most, Friday the least—fatal day of the week. The disparity in the deaths was greatest in London, where 2194 persons died on Mondays, 2136 on Tuesdays, and only 1927 on Thursdays, and 1824 on Fridays. The distribution of the deaths over the days of the week is shown below, in the table (i).

In reading the table it must be recollected that the days given are the days on which deaths occurred, and that half the deaths happen in the twenty-four hours after the attack.

The weekly wages are generally paid on the Saturdays; and the Mondays in London and other cities are days on which a certain proportion of the population indulge in intoxicating drinks. The Fridays are days of comparative abstinence.

LOCALITY.

Many instances have been given of the partial ravages of cholera. The influence of locality, however, is so great, that it requires further illustration. By collecting the districts together in which the mortality was high, we find this striking result: that

(i)

Other parts of Eng-land and Wales . }	- 95	+ 96	+49	+86	-251	+108	+5	

NOTE.—The minus sign (−) denotes below; the plus sign (+) above the average.

46592 of the 53293 deaths from cholera in the year 1849 occurred in 134 of 623 districts; or in less than a seventh part of the area of England and Wales, among four parts in ten of the population. Only 6701 deaths took place out of 10 millions of people on 49228 square miles of territory.

The area of England and Wales is equal to 57067 square miles, and may be represented by a square of 239 miles to the side; now the districts comparatively free being represented by a square of 222 miles to the side in the centre, the band $8\frac{1}{2}$ miles broad round this inner square represents the extent of area on which 46592 of the deaths happened. The facts are shown in the Table (*k*).

Again, in 85 districts of England and Wales no death from cholera was registered in 1849; not a single death from either cholera or diarrhoea was registered in 12 of those districts; namely, Christchurch and Alresford, in Hampshire; Northleach, in Gloucestershire; Ledbury, in Herefordshire; Sedbergh, in Yorkshire; Bellingham and Rothbury, in Northumberland; Bootle, in Cumberland; Newcastle-in-Emlyn, Aberayron, Tregaron, in Cardiganshire; and Dolgelly, in Merionethshire. No death from cholera took place in 8 out of 37 districts of Hampshire and Berkshire; while only 3 in 38 districts of Kent and Surrey (exclusive of the part in London) were exempt: there was one or more deaths in every district of Sussex, Middlesex, Hertfordshire, Huntingdonshire, Bedfordshire, Cambridgeshire, Rutlandshire, Lincolnshire, Derbyshire, Cheshire, Lancashire, East Riding of Yorkshire, Durham, Monmouthshire, and Cornwall. One district escaped in the 7 districts of Buckinghamshire; 7 in 21 of Oxfordshire and Northamptonshire; 2 of 17 in Essex; 9 in 39 of Suffolk and Norfolk; 5 in 54 of Wiltshire, Devonshire, and Somersetshire; 5 in 11 of Dorsetshire; 5 in 6 of Herefordshire; 7 in 28 of Gloucestershire and Worcestershire; 4 in 29 of Shropshire and Warwickshire; 1 in 16 of Staffordshire; 1 in 9 of Nottinghamshire; 4 in 11 of Leicestershire; 2 in 28 of the West Riding of Yorkshire; 7 in 36 districts of Northumberland, Cumberland, and the North Riding of Yorkshire; 2 in 3 of Westmorland; and 12 in 43 of the districts of Wales.

The only town of any magnitude in the 85 districts is Hereford. The other districts are made up of villages or small towns.

The 85 districts are given in the Table, pp. cxi-cxli. The population, the deaths from diarrhoea, and the deaths from all causes in the 10 years 1841-50, are annexed (*l*).

It is worthy of remark that the population in the 12 districts which were unvisited by cholera or diarrhoea was nearly stationary; it amounted to 120792 in 1841, and 121367 in 1850. There must have been emigration, and little immigration. The annual mortality in the 10 years 1841-50 was also exceedingly low; it did not

(*k*) AREA, POPULATION, and MORTALITY FROM CHOLERA in different Districts of ENGLAND.

ENGLAND AND WALES . . .	57067	17,922,768	53293	308	30

Names of the 134 Districts:—All the London Districts, and Edmonton, Hitchin, Brentford, Dartford, West Ham, Romford, Rochford, Gravesend, Medway, Thanet, Brighton, Headington, Oxford, Wycombe, Yarmouth, North Witchford, Whittlesey, Wisbeach, Portsea, Alverstoke, Southampton, Isle of Wight, Salisbury, Totnes, Plympton St. Mary, Plymouth, East Stonehouse, Stoke Damerel, Tavistock, St. Germans, Liskeard, St. Austell, Truro, Falmouth, Redruth, Great Broughton, Wirrall, Liverpool, West Derby, Prescott, Wigan, Bolton, Chorlton, Salford, Manchester, Bradford, Hunslet, Leeds, Dewsbury, Wakefield, Pontefract, Wortley, Ecclesfield, Sheffield, Selby, York, Sculcoates, Hull, Stockton, Teesdale, Durham, Chester-le-Street, Sunderland, South Shields, Gateshead, Newcastle-upon-Tyne, Tynemouth, Alnwick, Carlisle, Cocker-mouth, Whitehaven, Bridgewater, Bedminster, Bristol, Clifton, Gloucester, Shrewsbury, Newcastle-under-Lyme, Wolstanton, Stoke-upon-Trent, Nantwich, Wolverhampton, Walsall, West Bromwich, Dudley, Stourbridge, Bridgnorth, Coventry, Newport, Pontypool, Abergavenny, Crickhowell, Cardiff, Merthyr Tydfil, Bridgend, Neath, Swansea, Carmarthen.

approach in any district to 2 per cent., and was 1·750 per cent. on an average. In the 73 districts which escaped cholera, but lost some lives by diarrhoea, the population increased only 3 per cent. in 10 years; and the annual mortality was on an average 1·905 per cent.

In the county of Hereford only *one* death from cholera was registered in 1849. A labourer's son, aged 9, died of cholera at Bargates, Leominster, on September 30. This county lies high; the population is scattered over the country, and engaged in agriculture: it is out of the line of railways. The common drink of the people is cider.

A straw-bonnet maker, aged 27, died of cholera in Kirkby Stephen on July 26th, 1849. It was the only death from cholera in Westmorland.

The 85 districts which escaped the epidemic cholera in 1849, lay in general high, round the sources of rivers, and were thinly peopled. Cardigan, Aberystwith, Aberayon, Machynlleth, Dolgelly, Conway, in Wales; Bootle, in Cumberland; Lymington and Christchurch, in Hampshire; Blofield, Walsingham, and Freebridge Lynn, in Norfolk; and Plomesgate in Suffolk, though thinly peopled, are on the coast, or on the navigable parts of rivers, which 208 districts adjoin. Thus 13 in 208, or 6 per cent. of the districts on the coast escaped, while 72 in 415, or 17 per cent. of the inland districts, enjoyed immunity (*m*).

* For the names of Districts see table pp. cxl - cxli.

† Excluding London (36 Districts) from the East Coast Districts the Mortality will be 41 to 10000 persons living.

The cholera was three times more fatal on the coast than in the interior of the country. This is shown clearly in Table (m). 36241 of the deaths from cholera occurred in the districts lying against the low navigable rivers and the seas; 17052 in the interior of this circle; and as the population of the coast districts was nearly $7\frac{1}{2}$ millions, and that of the part of the country within this circuit, $10\frac{1}{2}$ millions, the mortality in the coast districts was at the rate of 50, in the inland districts at the rate of 17 in 10000.

The character of the coast varies; and by a further analysis it is found that the fatality of cholera on the coast was greatest in the chief seaport districts. Thus 26773, or more than half the deaths in the country from cholera, happened in the districts of or about London, Liverpool, Hull, Bristol, Plymouth, Portsmouth, Southampton, and Tynemouth.

London, having the mixed character of a seaport town and an inland city, may for the present, be set aside: we have then three groups of coast districts (n).

The mortality in the great ports was at the rate of 125 in 10000 inhabitants; in the 125 coast districts with small ports, often inaccessible to ships, the mortality in 10000 was only 15; which is one-eighth part of the mortality in the great, one-third part of the mortality (47) in the secondary ports.

Cholera reigned wherever it found a dense population on the low alluvial soils of rivers, round the estuaries of the Thames, the Humber, the Mersey, the Severn, the Tamar, and their tributary waters.

Certain cities and towns lie on the same rivers at different elevations, and are intimately connected; the one is the port and entrepôt, the other the manufacturing seat and centre of the surrounding country. Liverpool, Manchester, and other districts are thus related. It will be found that cholera prevailed at both extremities of the connecting line; but that it was almost invariably most fatal in the port or district lying lowest down the river (o).

Two large groups of districts have been thrown together. 1st. The 47 districts on the river and sea margins, which comprise the principal ports except London; and 41 of the large town districts in the interior of the country, seated also on rivers, but nearer their sources, and at higher elevations. The inland districts are more densely peopled than the maritime districts; and the mortality, in ordinary times high in both regions,

Flegg, Yarmouth, Blofield, Norwich, Mutford, Blything, Plomesgate, Woodbridge, Ipswich, Samford, Tendring, Lexden, Maldon, Rochford, Billericay, Orsett, Romford, West Ham, THIRTY-SIX London Districts, Dartford, Gravesend, North Aylesford, Hoo, Medway, Milton, Sheppey, Faversham, Blean.

Names of FORTY-SEVEN Districts on the SOUTH COAST:—Thanet, Eassey, Dover, Elham, Romney Marsh, Rye, Hastings, Battle, Eastbourne, Lewes, Brighton, Steyning, Worthing, Westhampnett, Westbourne, Havant, Portsea Island, Alverstoke, Fareham, South Stoneham, Southampton, New Forest, Isle of Wight, Lymington, Christchurch, Poole, Wareham, Weymouth, Bridport, Axminster, Honiton, Exeter, St. Thomas, Newton Abbott, Totnes, Kingsbridge, Plympton St. Mary, Plymouth, East Stonehouse, Stoke Damerel, St. Germans, Liskeard, St. Austell, Truro, Falmouth, Helston, Penzance.

Names of SIXTY-ONE Districts on the WEST COAST:—Redruth, St. Columb, Bodmin, Camelford, Stratton, Bideford, Barnstaple, Williton, Bridgwater, Axbridge, Bedminster, Bristol, Clifton, Thornbury, Dursley, Wheatenhurst, Gloucester, Westbury-on-Severn, Chepstow, Newport, Cardiff, Bridgend, Neath, Swansea, Llanelly, Carmarthen, Narberth, Pembroke, Haverfordwest, Cardigan, Aberayon, Aberyswith, Machynlleth, Dolgelly, Festiniog, Pwllheli, Carnarvon, Anglesey, Bangor, Conway, St. Asaph, Holywell, Great Boughton, Wirral, Runcorn, Liverpool, West Derby, Prescott, Warrington, Ormskirk, Preston, Fylde, Garstang, Lancaster, Ulverstone, Bootle, Whitehaven, Cockermouth, Wigton, Carlisle, Longtown. The above include some districts situated on navigable parts of chief rivers.

* The 17 districts comprise (1) Liverpool, West Derby; (2) Hull, Sculcoates; (3) Bristol, Clifton, Bedminster; (4) Plymouth, Plympton St. Mary, East Stonehouse, Stoke Damerel, St. Germans; (5) Southampton; (6) Portsea Island, Alverstoke; (7) Tynemouth, South Shields.

† The 30 districts are all those given in Table page cxlii, except the above 17 districts.

is highest in the inland towns; yet *the cholera* in the low sea-side districts destroyed 85 in 10000 of the inhabitants, while in the inland towns it was fatal to 38 in 10000 of the inhabitants. The fatality was as $2\frac{1}{2}$ to 1. The metropolis, with its mixed population, experienced an intermediate mortality; 62 in 10000 of the inhabitants died of cholera. The mortality from cholera in the rest of the kingdom, on smaller streams and higher ground, was at the rate of only 12 in every 10000 of the 11 millions of people. It is worthy of observation, that while diarrhoea was fatal to 7 in 10000 of the people in those districts, it was fatal to 17 or 18 in 10000 of the people inhabiting each group of the town districts (*p, q*).

From the want of data, we cannot give the exact elevation of the districts; but we have here the facts that while the mortality from cholera was much higher in the three groups of dense town districts, rapidly increasing by the influx of immigrants, than in the rest of the country, the other elements—(1), of depression, (2), of alluvial soil,

or (3), of whatever else characterises our seaport towns, are of primary importance. In some of the large inland towns the cholera was scarcely at all fatal; the deaths it caused in 1849 in Cambridge were only 5, Colchester 4, Cheltenham 6, Hereford 0, Stafford 3, Birmingham and Aston 35, Leicester 2, Lincoln 7, Nottingham 18, Derby 18. It destroyed 202 lives in Coventry, 116 in Shrewsbury, 174 in York, and 165 in Salisbury; but of the 8193 deaths from cholera in the Table (r), 3438 took place in Leeds, Hunslet, Manchester, and Salford, which are great towns intimately connected by railways, canals, and roads, with Liverpool and Hull; and 3047 in Wolverhampton and Merthyr Tydfil. Subtracting the 6485 deaths from cholera in these 6 districts, 1708 deaths remain, which represent the deaths from cholera in 35 of the largest inland town districts of the kingdom (r).

The low-lying towns on the coast were all attacked by cholera. Scarborough, Kings Lynn, and Deal in the Eastry District, on the coast, enjoyed as much immunity as the inland towns; they were the only considerable towns on the coast that escaped.

Cardiff is the port of the Merthyr Tydfil district. Situated in the interior, the centre of the great Glamorganshire iron works is about 20 miles from Cardiff, with which the Cardiff Canal, the Taf River, and the roads connect it. Cardiff and Merthyr Tydfil are

therefore connected with each other in the same way as the towns previously mentioned (p. liii., Table o); but in this respect they differ, that the mortality is greater in the high district than in the low port town (s).

The mortality, great in both places, was considerably greater in Merthyr Tydfil than in Cardiff.* The epidemic, however, began first at Cardiff. The canal at Cardiff was emptied, and the mud lay exposed to the sun in the spring. On May 13th a navigator died of Asiatic cholera at Cardiff; the first death in Lower Merthyr Tydfil was on May 21st; the first death in Upper Merthyr Tydfil on May 26th. The epidemic broke out a few days earlier, and subsided sooner in the port than in the inland mining district. The canal mud lay exposed, and the houses were crowded and dirty in the poor streets of Cardiff, but the insalubrious condition of Merthyr Tydfil exceeds that of the old settled town.

The place is thus described in the Quarterly Report :†—"The most populous parts of Merthyr-Tydfil are well situated on sloping ground, a very small portion being on a level. Merthyr church is 500 feet above the docks at Cardiff, Pen-y-Dran higher, and Dowlais about 400 feet above Merthyr." "Hence," says Sir H. T. De la Beche, "*the situation of Merthyr is open, airy, and well exposed.*" Such is *the natural situation*. The evidence collected by the Health of Towns' Commissioners shows by what process the advantages of situation have been sacrificed by the men and the iron-masters.—"From the poorer class of the inhabitants, who constitute the mass of the population, throwing all slops and refuse into the nearest open gutter before their houses, from the impeded courses of such channels, and the scarcity of privies, some parts of the town are *complete networks of filth emitting noxious exhalations.*" "During the rapid increase of this town, no attention seems to have been paid to its drainage!" "There are no regulations for draining the town; the surface water is retained; there are stagnant pools and ditches contiguous to the dwellings." There are "no dust-bins," "no scavengers," "the liquid refuse is allowed to remain on the surface," or "thrown into the water-courses," which are "cleansed by the rain only." "The main streets—not the courts and alleys—are occasionally cleansed by the Turnpike Trust Commissioners;" some of the "town refuse" is carried to "waste parts of the town, and the beds of the rivers Taf and Morlais; after a long drought the stench is almost intolerable in many places."‡ The houses of small but respectable tradespeople are unprovided with privies. The interior of many of the houses is cleanly and well kept; the Dowlais Company undertake to carry away the ashes of the inhabitants of Dowlais at the rate of 1d. per week for each house. The houses are chiefly supplied

with water by pumps and wells; the supply is scanty, and as most of the wells are fed by surface waters, it may be doubted if they can be free from a mixture with impurities derived from the house refuse soaking into the ground in all directions. The most wretched part of Dowlais is "the cellars," a collection of small houses in a depression between a line of road, a cinder heap, and the river Taf. "An open, stinking, and nearly stagnant gutter, into which the house refuse is as usual flung, moves slowly before the doors."

While there were no deaths from cholera in the small towns of Christchurch and Ringwood on the lower part of the Avon in Hampshire, the epidemic was excessively fatal higher up the river, in Salisbury, which is connected with Southampton and Portsmouth by a line of railway. Salisbury is always an unhealthy place; it is on a low damp valley, in the midst of water meadows; the courts and alleys where the lower classes reside, are in a filthy state, and derive no benefit from the general system of cleansing carried on in the main streets. There is a mill-dam; "and any attempt," says Captain Denison, "to improve the general drainage would be impracticable; it would interfere with too many interests."* The population of the town has slightly decreased in the 10 years 1841-51.

Newcastle-under-Lyme is another instance of mortality from cholera on high land. This district suffered severely. Out of a population of about 20000, there were 241 deaths from cholera. The town, on some of the highest ground in the interior of England, is about 400 feet above the level of the sea, and not far from the sources of the Trent; it is in a basin, and the Lyme, dammed by a mill, is an open sewer running through the town and sending up from its polluted, black, muddy bed exhalations which poison the inhabitants. The mayor was one of the victims.

Bilston, in the Wolverhampton District, also in the interior of the country, suffered severely from the epidemic. The place and the people have often been described: nothing can be worse than the circumstances in which they live or die.

Epidemic cholera was raging in Hamburg when the first cases were noticed in the ports of London, Hull, Sunderland, on the east coast of England, opposite, and in constant commercial relation with that continental port. The epidemic appeared in an unequivocal form at the commencement of October, 1848; yet it made little progress until the spring of 1849, when it gradually spread from the coast and river mouths to the interior of the country. Noticing only the great eruption, it appeared at Liverpool, on the Mersey, March 10th; Manchester, in the interior, June 25th; and Wigan, July 9th. As it went from Cardiff to Merthyr Tydfil, so ascending the Usk, it broke out at Newport, on May 29th; Abergavenny, on June 3rd; Crickhowell, on July 21st. On the Lower Avon it was at Clifton on May 24th; Bristol, June 1st; Bedminster, July 8th. Gloucester, on the Severn, was attacked on May 4th; Shrewsbury, higher up the river, on July 25th. The great Wolverhampton cholera field, in the interior of the country, was attacked late; Wolverhampton, on July 17th; Stourbridge, August 10th; Walsall, August 25th; West Bromwich, August 31st. On the south coast the chief epidemic broke out at Plymouth, on June 5th; Stoke Damerel, July 4th; Tavistock, higher up the country, July 24th. Southampton was attacked on June 30th; the low Portsea Island, July 2nd; Alverstoke, July 6th; Salisbury, July 10th. The epidemic in the London field began to be fatal in London itself about May 25th; in Brighton, June 13th; Gravesend, June 29th; Brentford, June 29th; Rochford, July 5th; Thanet, including Ramsgate and Margate, July 14th. Up the river Lea, Hertford was attacked August 21st; Hitchin, further north, August 27th. The first cases on the Humber, and its tributaries, occurred at Hull in 1848; but the outbreak of the great epidemic occurred first at Leeds, on June 14th; Hull, July 7th; Sculcoates, July 23rd; Gainsborough, August 4th; Howden, August 2nd; Selby, August 13th; Goole, August 6th; Thorne, August 19th. On the river Tees the epidemic began at Stockton, July 7th; at Teesdale, higher up the country, on August 17th.

* Reg. Gen. Quarterly Report, No. 3, 1849, and Appendix, p. 241, to 2nd Report of Health of Towns Commissioners.

The epidemic appeared, it will be recollected, at the port of Sunderland, on the Wear, October 4th, 1848. The epidemic of 1849 broke out at Durham, higher up the river, on May 12th; at Sunderland there was one outbreak on March 4th, and a second on June 28th. The seaport was first invaded; and in the *great outbreak*, the inland town, on the Wear, was neither the first nor the greatest sufferer. The low ports of the Tyne were the first attacked on that river; the epidemic appeared at South Shields on June 2nd; Tynemouth, July 1st; higher up the river, at Newcastle-upon-Tyne, on July 30th; Gateshead, August 11th. The shaded map, showing the rivers and the dates of attack, may be advantageously studied.

The cholera epidemic then first appeared in the ports of England, and gradually extended into the interior of the country.

Cholera attacked the greater part of the districts on the coal-fields of England, and was most fatal in the denser masses of the mining population. Mining operations have, in all times, and in all places, been fatal to man: chiefly in consequence of the negligent habits of the people, and the absence of the health regulations which exist in towns possessing a municipal organization. The ground on the coal formation may have lent the epidemic fatality. The annexed Table shows the population and the deaths from cholera, and from all causes, in the principal districts on the coal-fields of the country. The mortality from cholera was 46 in 10000, from diarrhoea 13, in these districts; which, it will be noticed, increase at the rate of 1·8 per cent. annually, and every year lose 23 in 10000 of their inhabitants by death of one kind or other (t).

The epidemic was not generally fatal on the primary geological formations—on the granite, the Silurian, or the Devonian systems; while Herefordshire, however, on the old red sandstone, escaped, Cornwall and the south of Devon, on the same formation suffered severely. Plymouth, and the districts around the Sound, into which the Tamar flows, was one of the principal cholera fields; but it is a port, and the mouth of a river which rises partially in the millstone grit, forming a part of the carboniferous system.

A few scattered cases occurred in the marshy districts of Lincolnshire; but the mortality was inconsiderable, and below the average. The marsh districts in the interior of Cambridgeshire also escaped, down to the Ely district; North Witchford, Whittlesey and Wisbeach suffered. So did some of the marsh districts of Essex and Kent on the estuary of the Thames. In the Romney Marsh district only one death from cholera occurred.

THE CAUSES OF THE MORTALITY IN LONDON.

Much information is accessible respecting the districts of London, and during the progress of the epidemic, opportunities were afforded of observing the effects of the

varying conditions of place and population on the mortality. The first cases of the epidemic appeared in the heart of the port; and it was noticed at an early period that the mortality was much higher on the south side than on the north side of the Thames. The south side of the river is low and badly drained; and it was deemed desirable to ascertain if possible the state of the sewers and drainage in every district, in order to determine the effects of emanations from the soil.

The principal elements which are likely to influence the mortality of an epidemic, and which we have the means of investigating, are the water supply, the drainage and elevation of soil, the density of population, and the poverty of the inhabitants. London consists of 36 registration districts—which are here made 38—as for the purpose of this inquiry we separate the low Belgrave sub-district from the rest of St. George Hanover Square, and detach Paddington from the Kensington district. The population of each of the 38 districts was returned in 1841 and 1851, and the rate of increase among females furnished a means of estimating the population in 1849. The deaths from cholera in 1849 divided by the population gave the rate of mortality for each district, as shown in the column headed *c* in the tables. The elevation and area of each district have been estimated by Major Dawson, R.E., from the maps furnished to the Sewers' Commission by the recent Ordnance Survey. The area of districts adjacent to the Thames includes the river. The relative density, expressed by persons to an acre, is obtained by dividing the population of 1849 by the number of acres in each district. The number of persons to an inhabited house is for the year 1841, and has not since greatly varied. The relative wealth or poverty of the districts of the metropolis bears a certain relation to the annual value of the houses; which was obtained from the parliamentary return of the value of houses as assessed under the Income Tax for the year 1842-3. The division of this value in pounds by the number of inhabited houses, and by the population of 1841, gives the average annual value of houses, and the annual value of house and shop room, sufficiently near for the present purpose. The poor rate in the £ is added for 1842-3. The mortality of each district from all causes in the 7 years 1838-44 is also given.

After these calculations had been made, the 38 districts were arranged in five different orders;—1st, in the order of their mortality from cholera; 2nd, in the order of the elevation of the soil above the Trinity high-water mark; 3rd, in the order of their density; 4th, in the order of their wealth deduced from the value of the houses; and, 5th, in the order of their mortality from all causes in the ordinary years 1838-44. The sources of the water supply are also indicated in the tables.

In the various combinations of the results, each district, whatever may be its extent, is considered to represent a certain state of things, and is therefore treated as of the same average extent; which is equivalent to dealing with an equal amount of the average population of the 38 districts.

The Sewers' Commission had an underground survey in progress, but it was incomplete. The Ordnance Survey supplied the elevation of the different parts, and in the absence of more precise information, it was thought that the elevation would at least furnish a good general notion of the natural drainage of the London districts.

THE THAMES AND THE WATER SUPPLY.

But before proceeding further in this branch of the inquiry, the effect of the river Thames and of the water supply on the health of London must be noticed. The Thames collects the waters of 6160 square miles of country, extending from the Cotswold Hills in Gloucestershire to the eastern coast; and the great body of this water flows and reflows through London in tides; which carry the matter below London Bridge, a mile and a half above Battersea Bridge twice a day, and ascend as high as Teddington. The contents of the greater part of the drains, sinks, and water-closets of this vast city and of the 2,360,000 people on its sides, are discharged through the sewers into its waters; which, scarcely sullied by the primitive inhabitants, have now lost all their clearness and purity. The dark, turbid, dirty waters from half-stagnant sewers are agitated by the tides, but are not purified until they reach the sea.

The Thames presents a large evaporating surface which must be taken into account, and it gives off vapours day and night in quantities which the phenomena of a "London fog" reveal. The still air then condenses the matter which at other times enters the atmosphere invisibly, and escapes observation. The mean lowest night temperature of the Thames from May 27th to September 15th, 1849, was 64° ; the mean lowest night temperature of the air was 52° ; so that the wide simmering waters were breathing incessantly into the vast sleeping city tainted vapours, which the temperature of the air at night would not sustain.

It is a fact well worthy of attention, that after the temperature of the Thames has risen above 60° , diarrhoea, summer cholera, and dysentery become prevalent, and disappear as the temperature subsides. The cholera reached London in the new epidemic form about October, 1848; it prevailed through the winter, and destroyed 94 lives in the second week of January, when the temperature of the Thames was 37° ; it declined rapidly through April and May; the night temperature of the Thames then rose to 62° in the week ending June 2nd; with some fluctuations it went up to 68° in July, and remained above 60° until the middle of September (week ending September 15th). The deaths from cholera registered during each of the 16 weeks were 9, 22, 42, 49, 124, 152, 339, 678, 783, 926, 823, 1230, 1272, 1663, 2026, 1682. The mean night temperature of the Thames fell to 56° ; the deaths from cholera to 839 in the week September 16-22; the temperature gradually fell to 38° on the last week of November, when there was only one death from cholera registered.

The mortality from cholera increases generally in descending the river on the south side; in Wandsworth it was at the rate of 100 in 10000 inhabitants, in Lambeth 120, St. Saviour 153, St. Olave 181, Bermondsey 161, Rotherhithe 205, where the water was perhaps most impure, Greenwich 75, where it had lost some of its impurities.

On the north side, commencing at the highest part of the river, the mortality from cholera was, in Kensington 33, Chelsea 46, Belgravia 28, Westminster 68, St. Martin-in-the-Fields 37, Strand 35, West London (on the old Fleet Ditch) 96, London city 38, East London 45, Whitechapel 64, St. George in the East 42, Stepney 47, Poplar 71. The mortality from cholera in the three sub-districts of Stepney, adjoining the Thames, was twice as great as in the two districts away from the river. The result is here undisturbed by elevation. No good analysis has been made of the Thames water at different points of its course; but the matter in suspension is perhaps greatest between London Bridge and Limehouse Reach, against Rotherhithe.

The seven districts of London in which the mortality is highest from ordinary causes, are the West London District (between Smithfield and the Thames), St. Saviour, Whitechapel, St. George-in-the-East, Chelsea, St. Olave, and Rotherhithe. They all adjoin the Thames.

Mr. Glaisher, of the Royal Observatory, Greenwich, was requested to make an estimate of the amount of vapour raised by evaporation from the Thames in London, and favoured the Registrar-General with the subjoined statement:—

"For some years past I have made daily experiments upon the amount of water evaporated from a surface of water, and the amount exceeded 30 inches annually.

"A depth of water of fully 30 inches must evaporate from the surface of the Thames annually; indeed the quantity must be larger than this from the circumstance of its relative high night temperature. Take it, however, at 30 inches, and we shall have—

$2\frac{1}{2} \times 9 \times 4840 = 108900$ cubic feet evaporated in a year from an area of water of one acre.

$\frac{108900}{0\cdot1605} = 678505$ gallons of water evaporated in one year from an acre of water.

$108900 \times 2245 = 244,480,500$ cubic feet of water evaporated from a surface of 2245 acres of water in one year.

$\frac{244480500}{0\cdot1605} = 1,523,242,991$ gallons of water evaporated in one year from a surface of water of

2245 acres in extent, or more than 1523 millions of gallons. The salt water affects the water at Woolwich: it is usually what is termed brackish there. Lieut. Sanders states that at Greenwich, at high-water spring tides, the water is frequently brackish.

"The dirt and filth in solution must be very large. The 'Dreadnought' experiments are made under my direction chiefly, and I can assure you that to read the instruments is a serious affair, owing to the filth of the waters; on first pulling them up they are covered with a slimy adhesive mud; they first have to be wiped, and if the wind is blowing strongly, this muddy water is blown about and over the observer.

A new trunk is now being made, with a perforated copper-bottom turning downwards upon hinges, so as to get rid of the enormous deposit."

Upon Mr. Glaisher's estimate, 678505 gallons evaporate from an acre of water in a year, which is at the rate of 1857·6 gallons daily. The bed of the Thames in London is estimated approximately at 2245 acres; consequently 4,170,000 gallons are raised from the Thames on an average daily through the year. The quantity evaporated at low water is, perhaps, much less than this; on the other hand, the evaporation in summer is more active than in winter; and the proportion of decomposing organic matter in the water, and on the banks exposed to evaporation, is greater at low than at high water. Hence, it is probable that in summer 4 million gallons, or about 18000 tons of water, are raised from the polluted Thames daily and discharged into the atmosphere which is breathed by the inhabitants of London. It remains to determine how much of the organic matter in the water is raised with the vapour at different temperatures.

London derives its supply of water for washing, cleansing, cooking, and drinking, to a small extent from wells; 18 districts have supplies from the river Amwell, and from the Lea, a tidal tributary of the Thames; two districts from the Ravensbourne; and 18 districts from the Thames, at five points of its course. The water is generally pumped by steam-power into water-butts or reservoirs in the houses, at intervals of one, two, or three days. As the water is of very different degrees of impurity, it will now be right to state the fatality of cholera in the several water districts of London, arranged under the companies by which the water is furnished.

Grand Junction Company.—The waters of the Thames at Kew chiefly supply the sub-districts of Paddington, Hanover-square, and May Fair, and the greater part of the district of St. James Westminster. The mortality from cholera was at the rate of 8 in 10000 inhabitants.

West Middlesex Company.—The waters of the Thames at Hammersmith supply Marylebone and a small part of Hampstead. The mortality from cholera was at the rate of 17 in 10000 inhabitants in Marylebone. In Hampstead the mortality was 8 in 10000.

Chelsea Water Company.—The waters of the Thames at Battersea, much below Battersea Bridge and below the Chelsea Hospital, supply the Belgrave sub-district of St. George Hanover-square, and the districts of Chelsea and Westminster. The mortality from cholera was at the mean rate of 47 in 10000 inhabitants; in the Belgrave sub-district the deaths from cholera were 28, in Chelsea 46, in Westminster 68 in 10000 inhabitants.

Southwark Water Company.—The waters of the Thames at Battersea—still lower down the river—supply the districts of Wandsworth, St. Olave, and Bermondsey. The mortality from cholera was at the rate of 147 in 10000. In Wandsworth the mortality was 100, in St. Olave 181, in Bermondsey 161, in 10000.

Lambeth Water Company and Southwark Water Company.—The waters of the Thames between Waterloo Bridge and the Hungerford Suspension Bridge, supply parts of the districts of Lambeth, St. Saviour, St. George Southwark, Newington, and Camberwell; the other parts of these districts being supplied from Battersea by the Southwark Company. The mortality from cholera was at the rate of 136 in 10000. In the district of Lambeth the mortality was 120, St. Saviour 153, St. George Southwark 164, Newington 144, Camberwell 97, in 10000.

Southwark and East Kent Water Companies.—Rotherhithe is supplied with water partly by the Thames at Battersea and by the Ravensbourne—and partly from ditches and wells, into some of which the drains and cesspools soak. The mortality from cholera was at the rate of 205 in 10000 inhabitants.

East London Water Company.—The Lea supplies the districts of Poplar, Stepney, Bethnal Green, St. George-in-the-East, and Whitechapel with water. The mortality from cholera was at the rate of 63 in 10000 inhabitants; and 71, 47, 90, 42 and 64 in each of the 5 districts.

New River Water Company.—The Amwell and the Lea supply Islington, St. Luke, Clerkenwell, London City, West London, East London, Holborn, St. Giles, the Strand, St. Martin-in-the-Fields. The mean mortality from cholera was at the rate of 41 in

10000 inhabitants; the mortality was least in Clerkenwell (19), near the head reservoir; greatest (96) in West London, on the edge of the Thames.

Kent Water Company.—The waters of the Ravensbourne supply Greenwich, where the mortality from cholera was 75 in 10000 inhabitants; and parts of Lewisham, where the cholera was at the rate of 30 in 10000 inhabitants.

Two or more companies supply some districts. The district of St. James Westminster is supplied by the Kew and the New River waters: the mortality from cholera was 16 in 10000 inhabitants; Kensington is supplied by the West Middlesex, the Chelsea and the Grand Junction Companies; the mortality from cholera was 33 in 10000. St. Pancras is supplied by the New River, Hampstead, and the West Middlesex Companies; the mortality from cholera was 22 in 10000. Shoreditch and Hackney are supplied by the New River and the East London Companies; the mortality in the two districts from cholera was 76 and 25 in 10000.

Arranging the groups of districts in the order of mortality, it appears that the mortality from cholera was lowest in districts which have their water chiefly from the Thames so high in its course as Hammersmith and Kew. Upon the other hand, the mortality was greatest in the districts which derive their water from the Thames so low down as Battersea and the Hungerford Bridge. The districts of the New River occupy an intermediate station.

In the 6 districts which are supplied with water taken from the Thames at Kew and Hammersmith, 15 in 10000 inhabitants died from cholera; and the mortality ranged from 8 to 33.

In the 20 districts which are supplied with water from the Amwell, the Lea, and the Ravensbourne, 48 in 10000 inhabitants died of cholera; and the mortality ranged from 19 to 96.

In the 12 districts which are supplied with water taken from the Thames between Battersea and the Waterloo Bridge, 123 in 10000 inhabitants died of cholera; and the mortality ranged from 28 to 205.

In the second group of districts cholera was three times as fatal; in the third, eight times as fatal, as it was in the first: 1, 3 and 8, express the relative virulence of the epidemic in the three conditions. The density of the population was greatest in the central group, and nearly the same in the first and third group (*u*).

LONDON.—ELEVATION.

The elevation of the soil in London has a more constant relation with the mortality from cholera than any other known element. The mortality from cholera is in the inverse ratio of the elevation. The mortality of the 19 highest districts was at the rate of 33 in 10000, and of the 19 lowest districts 100 in 10000. The elevation in the two groups was as 71 to 10 feet above the high-water mark of the Thames, or as 7¹/₂ to 1; while the mortality was as 1 to 3, or in the inverse ratio. In the two groups of the 6 districts, supplied with the waters of the Thames at Kew and Hammersmith, the

(*u*)

LONDON. GROUP OF DISTRICTS.	Deaths from Cholera to 10000 Persons Living.	Density of Population (Persons to an Acre).	Elevation in Feet above High Water Mark, (Trinity).	Annual Value of Houses (Year ending April 5th, 1843).
6 Districts supplied with Water taken from the THAMES above BATTERSEA }	15	72	105	£. 82
20 Districts supplied with Water from the NEW RIVER, the LEA, and the RAVENSBOURNE }	48	137	42	44
12 Districts supplied with Water taken from the THAMES, between BATTER- SEA and WATERLOO BRIDGES . . }	123	73	5	31

mean elevation was 35 and 175 feet, the mortality from cholera 19 and 11 in 10000. In the two groups of 12 districts, supplied with the Thames water between the Battersea and Waterloo Bridges, the mean elevations were $\frac{1}{8}$ foot and 10 feet; the mortality 168 and 77 in 10000. In the two groups of 20 districts, supplied with the waters of the New River and the Lea, the mean elevation was 24 and 59 $\frac{1}{2}$ feet; the mortality from cholera was 59 and 37. While the effects of the water and of the wealth of the districts are apparent, they do not, in this analysis, conceal the effects of elevation.

Cholera was excessively fatal in all the four districts which lie on a level with, or below the Trinity high-water mark; it destroyed 144, 161, 164, and 205, in 10000 inhabitants. In the five districts which lie 2 to 4 feet higher, on an average, the mortality from cholera was at the rate of 68, 97, 120, 153, and 181 in 10000. Westminster experienced the lowest mortality (68) in the 9 low districts, and it is supplied with water by the Chelsea Company; while all the other districts are supplied by the Lambeth and Southwark Companies. In 10 districts, of an elevation of 50 feet and upwards, the mortality from cholera was at the rate only of 8, 8, 17, 19, 22, 22, 25, 35, 35, and 53. The mortality from cholera was not higher than 35, except in the district of St. Giles, which is an exceptional case: its elevation being 68 feet above the Thames, and the mortality from cholera at the rate of 53 in 10000. It is a mixed district, and contains in near proximity the British Museum, Bedford Square, Russell Square, and Great Russell Street, where no death from cholera occurred; and Church Lane,—a low, damp, dirty lane, generally covered with decaying vegetables, and filled with a wretched population, where *thirty deaths* from cholera happened, in addition to its quota of 109 patients who from all parts of the district, were sent to, and died from cholera in, the Union workhouse.*

Notwithstanding the disturbance produced by the operation of other causes, the mortality from cholera in London bore a certain constant relation to the elevation of the soil, as is evident when the districts are arranged by groups in the order of their altitude. We place the districts together which are not on an average 20 feet above the Thames, and find that on this bottom of the London basin the mortality was at the average rate of 102 in 10000: in the second group, at 20 and under 40 feet of elevation, or on the second terrace, the mortality from cholera was at the rate of 65 in 10000; in the third group, or on the third terrace, 40 to 60 feet high, the mortality from cholera was at the rate of 34 in 10000; in the fourth group, 60 to 80 feet high, the mortality from cholera was at the rate of 27 in 10000; in the fifth group, 80 to 100 feet high, the mortality was at the rate of 22 in 10000; in a district 100 feet high, the mortality was 17 in 10000; in Hampstead, about 350 feet high, the mortality was 8, or deducting a stranger infected at Wandsworth, but who died there, 7 in 10000.

By ascending from the bottom to the third terrace, the mortality is reduced from 102 to 34; by ascending to the sixth terrace it is reduced to 17 (x). It will be observed, that the number representing the mortality on the third terrace is one-third of the number 102, representing the mortality on the first, and that the mortality on the sixth terrace is one-sixth part of the mortality on the first. And a series approximating nearly to the

* See Report on Church Lane and its vicinage in the Journal (Vol. xi., p. 4, 1848) of the Statistical Society of London. See also in the same volume a valuable paper on St. Giles's district, by Horace Mann, Esq., Barrister-at-Law.

100—120	6	17	$\frac{102}{6} = 17$
340—360	18	7	$\frac{102}{18} = 6$

numbers representing the mortality from cholera, is obtained by dividing 102 successively by 2, 3, 4, 5, 6.

A comparison of the numbers of this series with the actual mortality experienced in each district, will serve to indicate roughly as much of the effect as is due to elevation; and the deviations from the scale are generally explained by the other elements of the problem.

The mortality from cholera on the ground under 20 feet high being represented by 1, the relative mortality in each successive terrace is represented by $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}, \frac{1}{5}, \frac{1}{6}$: or the mortality on each successive elevation is $\frac{1}{2}, \frac{2}{3}, \frac{3}{4}, \frac{4}{5}, \frac{5}{6}$, &c. of the mortality on the terrace immediately below it.

The elevation of the five terraces may be represented by 10, 30, 50, 70, 90 feet. The elevations of the two higher districts are 100, and 350 feet. It will be observed that the mortality at 100 feet is 17, at 50 feet 34 in 10,000; consequently *at half the elevation the mortality is doubled*. The half of 50 feet is 25 feet; and the double of the mortality, 34, is 68. Now observation gives 65 in 10000 as the mortality at 30 feet of elevation. As the processes of dividing the elevation, and of multiplying the mortality by 2, may be carried on *ad infinitum*, it is evident that the mortality is not strictly in the inverse ratio of the heights of the soil; otherwise at the elevations 12.5, 6.25, 3.125 feet, the mortality would be 136, 272, 544.

Let e be any elevation within the observed limits 0 and 350, and c be the average rate of mortality from cholera at that elevation; also let e' be any *higher* elevation, and c' the mortality at that higher elevation. Then if the mortality from cholera is inversely as the elevation, we shall have the proportion

$$e : e' :: c' : c = \frac{e'}{e} \cdot c'.$$

By adding a constant element, a , the velocity at which the mortality increases, particularly at the lower elevations, can be retarded to any extent. The equation then assumes the form (1) $\frac{e' + a}{e + a} \cdot c' = c$. The value of a can be most readily obtained by taking $e' = 90$, where the mortality was 22; and $e = 0$, where in three districts on a level with the Thames at high water the mortality was 177 in 10000 on an average.

From Eq. 1 the value of a in general terms is found to be $a = \frac{e' c' - e c}{c - c'}$.

Inserting the above numbers, we have

$$a = \frac{90 \times 22 - 0 \times 177}{177 - 22} = \frac{1980}{155} = 12.8$$

As the series is not perfectly uniform, different values of a are obtained from the formula; and 13 is an intermediate value of a , which has been employed in the construction of the annexed Table, by making e successively 0, 5, 10, 15, . . . 110, 150, 200, 250, 300, 350, in the equation—

$$c = \frac{90 + 13}{e + 13} \cdot 22 = \frac{103 \times 22}{e + 13} = \frac{2266}{e + 13}$$

Upon comparing the numbers of this series with the mean mortality observed in the districts at eight different elevations, it will be observed that the only considerable discrepancy is at the mean elevation (20—40) assumed to be 30 feet. The excess of mortality is in Wandsworth, West London, and Bethnal Green.

The houses necessarily raise the people of London above the ground; and if their *habitat*, day and night, is on an average 13 feet above the ground level, it is evident that the mortality *within the limits observed, is in the inverse ratio of the elevations at which the people live*. The causes of the discrepancies in particular districts are partly explained by differences in the wealth of the people and other causes which may now be noticed (y) (z).

* The difference between the number of persons to an acre in the mean of 38 districts, and in all London, as separately calculated, arises in consequence of several districts of large area being thrown into the divisor in the latter case, while the effect of taking the mean of 38 districts is to render the population of each district of equal amount.

DIAGRAM

representing the mortality from cholera in
different elevations,

London to 10000 of the population, at sixteen
from 0 to 350 feet.

The figures in the centre express the number of deaths from cholera to 10000 inhabitants living at the elevations expressed in feet on the sides of the diagram.

The length of the *black horizontal lines* shows the *calculated* relative fatality of cholera in districts at relative elevations indicated by the height from the base of the diagram. The *dotted lines* indicate the mean mortality *observed* in the elevations given. Thus:—in districts at 90 feet above the Thames, the average mortality from cholera was 22 in 10000 inhabitants.

The relation discovered between the elevation of the soil, and the mortality from cholera, is so important that it was thought right after the above calculations were made to submit the principle to another test, by comparing the elevation and the mor-

tality from cholera of *each sub-district*. The population of the sub-districts in 1851 having been enumerated, it became possible to construct the Tables in subsequent pages (pp. clxvi-ix); which, although it makes the mortality on the lowest level less, and is de-ranked by the deaths in hospitals and workhouses, entirely confirms the announced law.

LONDON.—DENSITY.

Density of population within the limits of the London districts is a less important element than elevation of soil. For in the table (1) where the districts are arranged in the order of the mortality from cholera, the density is least on the average in the 19 districts where the mortality from cholera is greatest. The wealth of the 19 districts, represented by the rental of the houses, and the elevation of the soil, here completely mask the effects of density; the mortality in the wealthiest and densest districts is less than it should be by the elevation scale (a).

The districts in the same table (1) are thrown into three groups, distinguishing the sources of water supply; and there the density is invariably greatest in the groups of highest mortality from cholera.

Again, in table 3, where the districts are arranged in the order of density, the 19 densest districts had 178 inhabitants to an acre, and the mortality from cholera was at the rate of 71 in 10000 inhabitants; while in the 19 least dense districts, where the inhabitants were only 34 to an acre, the mortality was 61 in 10000 inhabitants. A five-fold increase of density (from 34 to 178) was accompanied by an increase of one-sixth in the mortality; which may however be caused by the difference in the elevation and wealth of the two groups of districts. In the New River districts and the districts supplied with the waters of the Thames below Battersea the mortality from cholera is greatest in the densest districts; but those districts are also the lowest and the poorest. In all the 6 districts supplied by the water of the Thames, from Kew and Hammersmith, the mortality from cholera is low; but the mortality is lowest in the three densest districts which happen to be only half as wealthy as the rest. The following table seems to indicate that the mortality from cholera increases to the density of 150 persons to an acre, and then decreases to 250—284 to an acre. But it will be seen that the elevation and wealth interfere with the results, the two latter groups being much above the average in both respects. The great drains and ditches are also generally left open until the density of the population becomes considerable; and this ought to be taken into account; but we have not yet the means of showing the area of uncovered drains left in the different parts of London (b) p. lxvii.

LONDON.—WEALTH AND POVERTY.

Wealth appears to influence the mortality of cholera. Under the income tax a return was made of the annual value of houses which serve indirectly to indicate the wealth of the inhabitants. Shops and some public buildings, returned under this head, disturb the results; but the division of the value of the houses of a district by their number, or by the number of inhabitants, shows the relative wealth of the districts better than any of the other indirect tests at our disposal. Wealth represents food, lodging, clothing, cleanliness, medical advice in sickness to a certain extent, as large masses of people supply themselves with these necessities in proportion to their means.

(a)

Elevation, in Feet.	Mortality from Cholera.		Density, or Number of Persons to an Acre.	Average Annual Value of Houses.
	By Observ- ation.	By Elevation Scale.		
15	106	81	96	£. 30
65	26	29	117	62

If the 19 wealthiest districts are compared with the 19 poorest districts, the mortality from cholera is found to be inversely as the wealth, measured by the value of house-room (c).

The value of house-room is as 8·140 to 3·831 in the two groups, while the cholera was in the inverse ratio of 43 to 90. In the three groups arranged to show the effect of water supply, it will also be found that the poorest population suffered most from cholera as well as from ordinary causes; but that the influence of wealth on cholera was greatest in the districts which experienced the fewest deaths in ordinary years, and were supplied with Thames water from Kew and Hammersmith.

Elevation however interferes considerably with these results. If the 10 districts not differing greatly in elevation, but all lying on an average under 10 feet, are arranged in the order of wealth, this singular result is obtained—that the five poorest districts experienced the least average loss from cholera. The mortality from cholera in 10000 was 151 in the 5 richest, and 122 in the 5 poorest districts.

At the higher elevation of 10 to 50 feet there are 18 districts. The average value of houses in the 9 wealthiest, and the 9 poorest districts was 10·282*l.* and 3·737*l.*; the mortality from cholera was 47 and 53 in 10000. The rent of house-room was as 3 to 1, and the mortality differed only one-eighth part. The mortality from ordinary causes differed to nearly the same extent; it was at the rate of 223 and 256 in 10000.

Ten districts are at elevations of 50 feet and upwards; the average value of house-room was 7·199*l.* in the 5 richest, and 4·907*l.* in the 5 poorest districts. The mortality from cholera in the same districts was 21 and 28 in 10000; greatest therefore in the poorest districts. The general mortality was at the rate of 227 and 226 in 10000.

Under these circumstances I find it impossible at present to establish any definite relation between the various degrees of wealth and of the mortality of cholera, further than that in districts of some elevation wealth does exert a certain influence on the mortality both of cholera and of ordinary causes.

(b) DISTRICTS OF LONDON classed in the order of their Density of Population.

6	200 — 250	51	6.585	42	261
2	250 — 284	46	6.099	40	251

(c)

	Average Value		Annual Mortality		Elevation, in Feet.
	Of Houses.	Of House and Shop room to each Person.	From Cholera, 1849.	From all Causes, 1838-44.	
	£.	£.			
19 Wealthiest Districts	66	8·140	43	226	61
19 Poorest Districts .	26	3·831	90	254	20

In the annexed Table the districts of different degrees of wealth are classed in order; and it will be seen that the differences of mortality may be in a great measure accounted for by the column of elevation (*d*).

LONDON.—MORTALITY FROM ORDINARY CAUSES.

The ordinary mortality of the districts of London has been deduced from the returns of 1838-44 and the Census of 1841. There is a certain relation between the degrees of mortality from ordinary causes and the mortality from cholera. The mean mortality of 19 districts in which the mortality is the highest from ordinary causes, was at the rate of 268 in 10000; the mean mortality of the other 19 districts was 212 in 10000. The mortality from cholera was at the rate of 84 and 48 in the same two groups of districts; there was a density of 155 and 57 persons to an acre; and the elevation was in the inverse order of 26 and 55 feet. When the districts supplied with the same water are placed together in three groups, the general mortality, the mortality from cholera, and the density of population, are in similar direct ratios; the elevation is in the inverse ratio. There is a very constant relation between the mortality from ordinary causes and the density of population. This has been shown before, and is illustrated in the annexed Table. The value of houses also increases generally with the density; but it is only within certain limits; for the densest are here the poorest districts (*e*).

CONDITIONS IN WHICH CHOLERA IS MOST FATAL.

It has been shown in the general analysis of the returns from the whole kingdom, that cholera has not only been most fatal in the low, and least fatal in the high parts of the country, but that the fatality has diminished proportionably as the dwellings of the population have been raised above the sea level. The epidemic began and was most fatal in the ports on the coast; and in ascending the rivers step by step, we saw it grow less and less fatal. It became probable that a certain relation existed between elevation and the power of cholera to destroy life. The more exact information which we possess respecting the London districts establishes this connexion beyond doubt. The relation may not be expressed by the same figures in other places, or in London at other times, but it will always be the general rule that the *mortality of cholera is inversely as the elevation of the people assailed above the sea level.*

Mere density of population had not the same direct effect of increasing the mortality in this disease as in others; for in many inland towns, and in high, dense parts of London, the mortality was slight or inconsiderable. Neither does the mortality from cholera vary in the London districts in any ratio of the density. Still density and numbers of people are not to be lost sight of; for the cholera was not fatal to many inhabitants of thinly peopled, though low and marshy parts; while in such localities it was very fatal in nearly all towns. The law is, that the mortality in *towns of some extent and density* is inversely as the elevation.

The wealth of different places differs in amount and distribution. The differences in wealth and poverty probably have an effect on the mortality. But abstracting the indirect effect through the selection of sites and the supply of water, the great differences in the wealth of the London districts do not enable us to detect a very marked or constant influence of this element on the mortality from cholera. In the country at large there is no reason to believe that the wealth of the inhabitants increases as we ascend the high grounds which the cholera left unscathed. The reverse is probably the fact.

Elevation of the land involves several conditions which have an important effect on life and health. As we ascend, the pressure of the atmosphere diminishes, the temperature decreases, the fall of water increases, the vegetation varies, and successive families of plants and animals appear in different zones of elevation. The waters roll along the surface of the rocks, or filter through them and the porous strata of the earth to burst out below—the sources of rivers, or of tributaries which carry disintegrated rocks, with the remains and excretions of vegetables, animals, or men, in every stage of decomposition. The deposits in stagnant places, and at the estuaries, show the kind and quantity of mixed matter which the laden rivers carry down and deposit on the low margins of the sea at the tidal confluences of the fresh and salt waters.

If we take a series of towns on a river it is evident that the refuse matter of the first town will pass through the second; of the first and second through the third; of the first, second, and third through the fourth; and so on to the lowest town, which will be traversed by all the unevaporated and unwasted organic matter that has found its way into the waters on their way to the ocean. As the transformation of decaying organic matter into inorganic and innoxious elements is constantly going on, it will be in many cases completely decomposed in its course. What has been said of the refuse of towns will apply to the leaves of the forests, and to vegetable remains of all kinds.

As the rivers descend, the fall of their beds often grows less, and the water creeps sluggishly along, or oozes and meanders through the alluvial soil. The drainage of the towns is difficult on the low ground, and the impurities lie on the surface, or filter into the earth. The wells and all the waters are infected. Where the houses are built on hill sides and elevations, as in London, the sewage of each successive terrace flows through the terrace below it, and the stream widens, the ground becomes more charged, every successive step of the descent, until it is completely saturated in the parts lying below the high-water mark.

The river, the canals, the docks, and the soil of a port may be viewed as a large basin full of an almost infinite variety of organic matters, undergoing infusion and distillation

at varying temperatures; and as the aqueous vapour which is given off ascends, it will be impregnated with a quantity of the products of the chemical action going on below, variable in amount, but necessarily greatest in the lowest and foulest parts. The emanations, mixing with the superincumbent atmosphere, ascend like smoke; but at the same time become less and less dense by dilution and by the gradual destructive decomposition. A glass vessel, perforated by small holes, filled with pure water, and dipped into a coloured solution, might give a good idea of the atmosphere of such a town; the coloured solution flowing down the sides would grow thicker by every accession of colouring matter, as it descended, and at the same time colour the water above with a tint deepening in intensity. Or if the river basins of the country were quite smooth and even, the sides descending rapidly at first and then slowly, the fall over the whole face of the country of rain flowing in thicker and thicker sheets as it descended, would present a good image of the phenomena; but perhaps not so vivid as the vapour which, when the rain ceased, would arise from the wet and saturated soil in every degree of density, from the thickest fog round the marshy bottom to the thinnest mist upon the hills.

From an eminence on summer evenings, when the sun has set, exhalations are often seen rising at the bottoms of valleys, over rivers, wet meadows, or low streets; the thickness of the fog diminishing and disappearing in upper air. The evaporation is most abundant in the day; but so long as the temperature of the air is high, it sustains the vapour in an invisible body, which is, according to common observation, less noxious while penetrated by sunlight and heat, than when the watery vapour has lost its elasticity, and floats about surcharged with organic compounds in the chill and darkness of night.

The amount of organic matter, then, in the atmosphere we breathe, and in the waters, will differ at different elevations, and the law which regulates its distribution, will bear some resemblance to the law regulating the mortality from cholera at the various elevations. It has been seen how rapidly in London the mortality from cholera diminishes a few feet above the low ground on a level with the Thames, while several feet of elevation in higher regions produces no sensible effect. The same thing holds in drainage. The ground on a level with the outlet cannot be drained at all, while a few feet of elevation make drainage practicable, efficient, and easy. And the law holds that while a few feet of elevation are so important near the outlet, they are of little or of no importance on the higher lands of the country. The diagram at page lxxv represents roughly the facilities of drainage, as well as the mortality from cholera at the several elevations.*

It is established by observation that cholera is most fatal in the low towns, and in the low parts of London; where, from various causes, the greatest quantity of organic matter is in a state of chemical action; and it may be admitted that cholera, varying in intensity with the quantity, is the result of some *change* in the *chemical action* of this matter; leaving it open for further inquiry to determine whether, in England, that change is spontaneous, or the result of the introduction of a zymotic matter from beyond the seas; whether the poison enters the human frame in air or water, through the skin, the mucous membranes, or the air-cells of the lungs.

If the facts are so, it follows, that cholera will not only be fatal on low ground, but on high ground, if, from any concurrence of circumstances, the conditions exist there which are so constantly found in alluvial soils, lying on a level with or below the tidal waters. Now these conditions did exist in nearly every place severely visited by cholera on ground much above the sea level; in Salisbury, Merthyr Tydvil, Bilston, Newcastle-under-Lyme, and Church-street St. Giles, London.

The atmospheric pressure and the temperature diminish with the elevation; and it is easy to conceive that either may exercise considerable influence when the elevation is considerable. The rarity of the atmosphere, or the perpetual snow on the Himalaya and the Alps, may be alleged as the causes why the epidemic never

* See Table relative au Mouvement de l'eau dans les Canaux et Rivières: in *Leçons de Mécanique Pratique*, par A. Morin, 2^e Partie Hydraulique, p. 71.

crossed their passes. But the barometric column is depressed little more than 1-10th of an inch for an elevation of 100 feet; the atmospheric pressure therefore is not 1-300th part less at that elevation in London than it is at the water level. The difference in mean temperature, produced according to the ordinary computation by that elevation, does not exceed 4-10ths of a degree of Fahrenheit's thermometer.* Both these changes of temperature and pressure affect the organization, and they may be greater in summer than in other seasons; but when it is found that great and sudden changes of heat and pressure are borne with impunity, and moreover, that cholera has prevailed at different latitudes in different seasons, it does not appear probable that here these physical changes had much effect on the fatality of the disease. Besides this, it has been shown that an elevation of 10 feet above the water level diminishes the mortality from cholera very considerably; while a difference of *ten* feet at the higher elevation of a hundred feet, has little effect on the mortality of that disease. The variations of *temperature* and of *pressure* follow laws entirely different, and are too slight at elevations differing only ten feet to be the direct cause of the great difference in the mortality of cholera.

Certain diseases arise when men are crowded together in close dirty gaols, camps, or hospitals; when they inhale morbid exhalations, or are placed in contact with others labouring under such zymotic diseases as small-pox; and when they reside in marshy countries. The explanation of the diffusion of cholera by an organic matter is therefore consonant with what is known of the etiology of other diseases.

It has been shown already that when the cholera invades a place, it generally advances slowly at first; then that great numbers are attacked: and at the same time that many have all the symptoms of Asiatic cholera, others have cholera of a milder type: a class still more numerous have choleraic diarrhœa; and great numbers have disorder of the bowels, sickness, indigestion, and slight cramps. The stated proportion of deaths from cholera, out of a given number of cases, varies not only with the malignity of the form and with the medical treatment, but with the definition of the disease: some taking as cholera only cases in collapse, others including the mildest forms: the lighter forms of diarrhœa are seldom noticed in medical registers, and rarely come under medical observation.

Cholera has rarely been fatal in England to more than 1 in 2 attacked; and it may be laid down, that for 1 death, not more than 3 persons were attacked in the severer way.† The deaths from cholera in the last 3 months of 1848, and in the year 1849, were 54398; the deaths from the disease in 1849 were 53293; which may be taken to represent the deaths in the two years from the Asiatic type, leaving 1105 as from the common variety. About 160000 persons then may have been attacked by cholera in England. The population was about 17,541,000 in the middle of 1849; so that 17,381,000 of the population escaped attack. The deaths from diarrhœa in 1849 were 18887; 3887 may be set down as the result of common diarrhœa, leaving 15000; and if there are 100 cases to 1 death, the cases induced by the epidemic must have been 1,500,000. Less than 1 in 10 of the population were attacked by cholera or diarrhœa. By the table, p. cxxx, it will be seen that in all England 30 died of cholera, 11 of diarrhœa to 10000 living; of whom, by the previous estimate, 90 must have sustained an attack of cholera, and 1100 an attack of diarrhœa. In London, upon the same basis, it may be estimated that 1886 in 10000 inhabitants had an attack either of diarrhœa or cholera. In Hull, the district in which the mortality was highest, 241 died of cholera, 40 of diarrhœa, in 10000 inhabitants; of whom 4723 must have been attacked either by cholera or diarrhœa. If an exact return of every shade of the disease could be procured, it is probable that it would be found over a great part of the country in one form or other—differing not in nature but in intensity; never in any place attacking all the

* $f = \frac{e}{251.5 + .005 e}$, where e is the elevation in feet, and f the change of temperature in degrees of Fahrenheit.

† The cases of cholera reported to the Central Board of Health in England, 1851-2, were 82528, the deaths 31376; the mortality was consequently at the rate of 38 deaths to 100 cases.

inhabitants, and, as we have seen, leaving few districts without one or more deaths to mark its presence.

Under any circumstances it is certain that in this, as in other zymotic diseases, great multitudes of the people who in one way or other take an average dose of the poison resist its influence: and it may be admitted that the numbers attacked bear some proportion to the quantity of the specific matter in the air, water, or earth of the place where they dwell. This specific matter is known only by its effects; but it has been shown that the deaths from cholera vary in some proportion to the quantity of organic matter in the state so commonly observed in the low parts of low towns. Our generalization then goes to this extent, that the cause of cholera is some chemical modification of organic matter; and here is the great practical fact—that *although elevation of habitation, with purity of air and purity of water, does not shut out the cause of cholera, it reduces its effects to insignificance.*

ORIGIN OF THE CHOLERA EPIDEMIC IN THE DELTA OF THE GANGES.

Cholera has prevailed in many parts of the civilized world, and has probably not spared unexplored regions of whose barbarous inhabitants little or nothing is known. It appears to have followed everywhere the same general laws; affecting most fatally the low seaports and the cities near the mouths of rivers, and sparing the inhabitants of high grounds around the river sources. The physical circumstances of the country in which cholera first assumed the epidemic form throw great light on the causes of its mortality in other places. India was at the time covered by an intelligent band of army medical officers. They were called upon for returns which were made the basis of official reports, in Bengal by Jameson, a man who like Pringle, Lind, Jackson, Blane, and Martin, had the genius of medical topography; by Scott in Madras, who drew up a judicious and able report on the ravages of the disease in that presidency; by Steuard and Phillips in Bombay. Annesley, Kennedy, and Orton have described and analyzed the disease; Martin has written a medical topography of the country; so that the information respecting the origin is more complete in respect to this than to any other great epidemic.

The Indian epidemic began in the Delta of the Ganges. Mr. Orton thus sums up the evidence of the Reports:—"The epidemic had not one but various local sources in the level and alluvial, the marshy and jungly tract of country which forms the Delta of the Ganges, and extends from thence to the Burrampooter. For here we find it as early as June, and the beginning of July, 1817, noticed as prevailing to a serious extent in Nuddea, a province which is stated to be notorious for the disease in its endemic form, and in Dacca."* "Jessore, the place in which the disorder first put on a very malignant form, is," says Jameson, "a crowded, dirty, ill-ventilated town, surrounded by a thick jungle, and in the rains by an immense quantity of stagnant water."* * In Sylhet the influence of situation was perhaps more remarkable than in any other quarter.* * It appeared that the villages in which it raged most extensively were considered by the natives as comparatively unhealthy and obnoxious to fevers of the intermittent type; being exposed to the effluvia arising from marshes and extensive lakes, in which the Zila abounds, particularly towards the south-west division, where the greatest number of victims fell. The Sepoy lines, on the contrary, being placed from sixty to a hundred feet above the general level of the country, had scarcely any cases excepting such as occurred in persons on guard at the different outposts.

"In Calcutta, again, the disease was, from first to last, most prevalent in the lower parts of the town and suburbs, as the Bura Bazar, Simeleia, Dyahutta, and Suwah Bazar; and in the suburbs, the villages of Khidderpore, Bhuwanipore, Manicktolla, Kurrya, Entally, Chitpore, and Sealdah.

"These dependencies are everywhere intersected by pools, broad ditches, and channels, which, being imperfectly drained, are in the rainy season always full of stagnant water and rank weeds.

* Orton on the Epidemic Cholera, 2nd edition. p. 329.

"From this plentiful source of corruption, foul air is constantly given forth; and as all ventilation is obstructed by large groves of trees and vegetation of every description, it is there concentrated until it becomes entirely unfit for the purposes of respiration.

"The miserable condition of the generality of the inhabitants of these villages is hardly to be imagined. Each hamlet is made up of many mud or straw huts, generally from six to twelve feet square, placed so close to each other as to leave scarcely room to pass between. In every one of these wretched hovels a whole family, sometimes consisting of six or eight persons, resides; and not unfrequently cows, pigs, and other domestic animals add to the filth and foul atmosphere in which they abound. The singularity is not that persons so situated should be more than others subject to the influence of a prevailing epidemic, but that they should ever be free from maladies of this description.

"The higher classes of natives, and Europeans generally, inhabiting the better raised and more airy parts of the town, suffered proportionably less than the lower ranks."* Such was the condition of a large part of the dense population in the birthplace of cholera. The returns of the mortality among the natives are very imperfect; but they show that while many thousands perished in Calcutta and the districts on the Ganges as far as Allahabad, the casualties higher up the river were "comparatively fewer: in Agra the deaths did not exceed 10 daily, although the town contained 30000 people. Not 500 in all died in Muttra; and about a like number died in the immense city of Delhi."†

Mr. Jameson and Mr. Scott give other examples of towns and camps on low grounds suffering severely, and of elevated spots escaping with little loss; they also cite, exceptionally, instances of camps and cities on high ground suffering attacks of great severity, or of high places escaping for a time and being assailed in after years. The early Indian returns of mortality were imperfect and often incorrect: the relative elevation is rarely stated; it is impossible therefore to determine how far the law deduced from the English returns regulates the Indian observations. The general result is summed up by Mr. Jameson in words as precise as the observations justified:—"There is abundant proof that in *high, dry, and generally salubrious spots, it was both less frequent in its appearance and less general and fatal in its attacks than in those that were low and manifestly unwholesome.*"‡

THEORIES AND ANALOGIES.

A cholera, which, in all its leading symptoms, is the same as the epidemic disease, has existed from time immemorial in Europe and Asia. Cases are related in the earliest medical writings, and occur sporadically every year in England. The disease in the epidemic is a variety, well characterised by the duration of the fatal cases. We call the one variety Summer cholera, the other Asiatic cholera, merely to give them distinctive names. With the facts before us will any theory account for the phenomena? What is the cause of Summer cholera? What is the cause of the Asiatic cholera? Why does cholera in one year destroy only a few lives and occur sporadically, in other years spread successively over the whole world, and destroy a million or more of the inhabitants in a short space of time? In what way is the malady propagated?

This pestilence like others has been ascribed to great phenomena in the heavens and the earth, which shake the minds of men, and have sometimes happened at the same epochs, or a few years before or after the ravages. Comets, eclipses, meteors, earthquakes, "violent commotions in the earth's organism,"§ besides exciting strong allied emotions, have some points of analogy with pestilence in their going and coming. A

§ Hecker on Epidemics, translated by B. G. Babington, M.D. (pp. 11-21.)

comet as it approaches the earth's orbit, flames through the firmament, recedes, and disappears, serves to illustrate as well as a diagram, the rise and decline of an epidemic; but no theorist has ever proved that there is any constant connexion between comets and plagues, much less that there is any coincidence in the succession of their phenomena.

The theory of volcanic agency has been ingeniously advocated by a recent writer who has closely studied cholera and other epidemics.* He discovers five points in which the phenomena of volcanoes and of pestilences agree, and thus summarily lays them down as laws:—1. The effects of volcanic and pestilential action are felt along particular lines of the earth's surface. 2. There is regularity in their progress both chronologically and geographically. 3. The effects of subterranean agency are less on secondary than on tertiary strata, while they are seldom witnessed on primary formations. 4. They are always much greater and more perceptible near the sea, and other collections of waters, as lakes, rivers, [springs?]. 5. And, finally, the phenomena of volcanic eruptions and pestilence have, in common, a limited duration, periodical returns, and total cessation in the particular locality after certain definite periods. The theory assumes that the pestilence is caused by "poisonous elements generated in subterraneous reservoirs, and diffused in the surrounding atmosphere."† The work of Mr. Parkin must be consulted for the discussion of all the facts which support the theory. The gases and ashes which escape from volcanoes have been analyzed, but the "poisonous element" has not been identified or detected in places suffering from cholera. Cholera is apparently not more fatal in the immediate neighbourhood of volcanoes than it is elsewhere, and its successive outbreaks in the districts of England have not, in 1832 or 1849, been preceded, accompanied, or followed by any earthquake or visible volcanic phenomena.

Tempests, thunder-storms, showers of rain, the formation of clouds, evaporation, and combustion, present many analogies with the pestilential outbreak. The gentle wind quickens into a violent tornado, traverses lines of country, prostrates everything in its course, and then quietly dies away like cholera, to reappear again at intervals and in other places. The cloud, no bigger than a man's hand, lies quietly on the sky, spreads, covers the heavens; a few drops of rain fall, the lightning flashes, the thunders roll, the waters descend in sheets on the earth; then the tempest subsides and the atmosphere is more tranquil than it was before, just as the phenomena succeed each other in an epidemic. In combustion the fire smoulders for a time, until the whole mass is heated; then chemical action is accelerated; the flame bursts out, intense heat is evolved, and the fire subsides when the combustible material is consumed. Blights and the sudden development of infusorial and cryptogamic life present so many analogies with epidemics in their effects on the vegetable kingdom, their diffusion, and their course, that they have been by some regarded as the causes of pestilence.‡ The growth of grasses also presents a parallel. The cholera in England kept pace in its development with the wheat plant, which took root in October, germinated in the winter, flowered in June, filled in July and August, was cut down by the reaper before the first week in September when cholera was most rife, and would have been dead ripe in October and November when cholera ceased. Many striking processes of the inorganic as well as of the organic kingdom, present series of developments which have analogies with, but are not causes of pestilential phenomena. The theorist, however speculative

* "On the Influence of Volcanic Action in the production of Epidemic Diseases," by John Parkin, Fellow of the Royal Academy of Madrid, &c. &c., 1845. Mr. Parkin's life presents a rare example of courage and zeal. "Having," he says, "followed the epidemic cholera for some years, and having paid frequent and oft-repeated visits to districts in which malaria abounds, it has generally happened, after I have been residing for any time in other and more healthy localities, that I was, on my arrival in an infected district, attacked with the prevailing complaint, no matter whether it was epidemic or endemic; that is to say, the cholera, fever, or dysentery," p. 22. Mr. Parkin was in London in 1849, and went to Jamaica on the outbreak of the epidemic there. He is a sanguine advocate of the treatment by carbonic acid gas.

† Pages 39-60, 185.

‡ The hypothesis of insect life as a cause of disease is stated with much ingenuity by Dr. Holland in his Medical Notes.

he is, may, by tracing these analogies, often open the way to a happy generalization, which admits of practical applications, and is the explanation of the facts.

Heat has a great influence on the intensity of the epidemic cholera, which began on the verge of the torrid zone, and in the temperate zone has been unquestionably most fatal in the hot season of the year: there is, however, no constant relation between a high temperature and this variety of cholera: it does not prevail so frequently in other hot climates as it does in the East Indies, and it has in some places raged with the greatest violence in winter, where, however, as in St. Petersburg, the dwellings are always heated artificially. As each place at different latitudes has its harvest season so it appears to have its pestilential season.

The hypothesis that Electricity is the cause of cholera has been advanced by recent writers of ability. Mr. Orton has summed up all the facts and arguments in its favour.* He suggests rather than asserts that a "deficiency of electricity," or a negative, instead of the more common positive electricity of the atmosphere, is the "primary remote cause" of the epidemic. Mr. Orton, with the candour that marks his writings, adds, that if the condition in question "is absent in a single instance of a general attack, the theory must fall to the ground." Many examples of thunderstorms, and of great electrical disturbances, have been noted in the epidemic years. Similar disturbances happen in other years, and neither Mr. Orton nor any other writer has succeeded in showing, from observations with the electrometer, that there is any invariable relation between the progress of electrical phenomena and epidemic outbreaks of cholera. No importance can be attached to the stories of the inaction of the electrical machines of certain philosophers, any more than to the isolated observation of Dr. Prout's barometer in 1832.

Schönbein, the Professor of Chemistry at Bâle, has given a new turn to the electrical theory. His experiments and the investigations of De la Rive, Marignac, Berzelius, Erdmann, and Marchand, prove that pure or atmospheric oxygen, on being exposed to the action of electrical sparks, is transformed into an odoriferous matter, which he calls *ozone*; declared by them to be nothing but an allotropic modification of oxygen. The results of his recent researches incline him to adopt their view, although he had previously considered it to be a peroxide of hydrogen. Be this as it may, ozone is found to be one of the most powerful oxidizing agents yet known. It transforms, in the cold, silver into the peroxide of that metal; instantly decomposes sulphuretted or phosphoretted hydrogen, and acts upon almost all organic substances. He found that one dose of ozone would disinfect or destroy the smell of 3,240,000 volumes of atmospheric air saturated with the miasms of putrid flesh. Ozone, in variable quantities, is incessantly formed by electrical discharges continually going on in the atmosphere, and Schönbein's observations show that its quantity varies in different places, and at the same place at different times. The miasmatic matters thrown into the atmosphere by the infinite number of plants and animals hourly dying in the earth, water, and air, are, he is disposed to believe, decomposed by ozone, which is simultaneously destroyed.

Ozone, like chlorine, irritates the lungs, and produced in Schönbein "a painful affection of the chest, a sort of asthma, with a violent cough," which forced him for a time to discontinue his investigations. On comparing his ozonometric observations with the lists of the catarrhal patients of several physicians of Bâle, they were struck by the coincidence between the unusual number of catarrhs and his "blue days," or days in which ozone existed in excess in the atmosphere. Schönbein does not think the question of causation decided, but strongly recommends ozonometric observations.† Instead of adopting this suggestion, and in the absence of observation, it was argued by some, when cholera was epidemic in 1849, that an excess of ozone was the cause of influenza, and that a deficiency of ozone was the cause of cholera!

* Orton on the Epidemic Cholera of India, chap. ix. See, for another hypothesis, Mr. Orton's chapter viii., on Sol-lunar influence.

† "On some Secondary Physiological Effects produced by Atmospheric Electricity," by C. F. Schönbein. Paper communicated to the Royal Medical and Chirurgical Society of London, by M. Faraday, D.C.L.; Transactions, vol. xxxiv. or second series, vol. xvi., 1851, pp. 205-32.

That ozone exists in the atmosphere and destroys some miasms is probable; but the hypothesis itself assumes that a cholera matter exists independently of ozone, by which it is supposed to be destroyed.

Schönbein, by experiments on the Jura Mountains, ascertained that at 12-1800 feet above the level of Bâle, his ozonometers exhibited higher degrees than they did at the same time in Bâle; whence he infers that the higher contain less miasmatic matter than the lower regions of the atmosphere.

Jameson, in the last page of the Supplement to his admirable "Report on Cholera in Bengal," after noticing that some of the natives placed "great faith in *boiled water* as a preventive," and that one of the principal native gentlemen of Calcutta ascribed the "singular healthiness of his numerous household to his having taken the simple precaution of allowing no water to be drank by them until it had been previously boiled," adds: "*Bad water no doubt sometimes immediately induces the disorder*; but we must not suppose it is the sole cause of it."* This is borne out by some observations in the Indian Reports; where, however, the sources of the water supply are too seldom referred to, although a popular belief prevails in many countries of India that it is the water which produces ague and remittent fever.† Dr. Barnes, who had medical charge of the district of Jessore in Bengal from 1810 to 1822, but who was absent in part of the years 1816 and 1817 when the disease assumed the epidemic character, stated in 1831, that he had there been intimately acquainted with the disease as an endemic. He had considered it from the first as a disease peculiar to that country and previously unknown, which had superseded the periodical remittent fever formerly so prevalent. If the annual storms of violent thunder, lightning, wind, and rain commenced early in March, and recurred at short intervals until the rainy season began, the hot season (April, May, June) was, he says, comparatively healthy, and conversely: if the rains broke up at the end of August, and the waters sank rapidly during September, the cholera commenced its attack at the beginning of October, carrying death and desolation among the inhabitants until the middle of December, when the disease in a short time became apparently extinct. Instead of the usual rainy and dry season, scarcely a week of 1816, in Jessore, was without rain; the sun was constantly obscured; the atmosphere close, heavy, moist; the thermometer from March to November, ranging between 70° and 95°. The crowded ill-ventilated native huts are on mounds surrounded with pits, which are the receptacles of stagnant water, and of every kind of filth. Dr. Barnes asserts unhesitatingly that in these circumstances the Asiatic epidemic was generated from the *exhalations* arising from the decomposition of *animal and vegetable matter* and the *use of water in which this process was continually going on*. "These," he emphatically declares, "*were the sole cause of this disease*."‡

"In the autumn of 1849, Dr. Brittain and Dr. Swayne, of Bristol, considered that they had discovered the cause of cholera in a *minute fungus*; and Dr. W. Budd, of the same city, met with the supposed fungus in various specimens of water used as drink, in places where the cholera was very prevalent."§ Upon further investigation the supposed fungi were, by experienced microscopists, pronounced to be other matters; and after the able Report of the Committee of the London College of Physicians, the hypothesis was generally abandoned.

Dr. Snow, in a paper dated Aug. 29, 1849, advanced a theory of the pathology of cholera; and it is in many respects the most important theory that has yet been propounded. Dr. Snow, after endeavouring in a subsequent paper to show that the disease is propagated by human intercourse, and that it is a local affection of the alimentary canal, thus states his doctrine:—

"The induction from these data is that the disease must be caused by something

‡ Letter addressed to Dr. Roupell, Dr. Babington, H. Field, Esq., and J. Ridout, Esq., members of the London Board of Health, dated Nov. 12, 1831, published in M'Culloch and Maclaren on Cholera, pp. 26-35, 1850.

§ Dr. Snow on Cholera, paper read at the Epidemiological Society, 1851.

which passes from the mucous membrane of the alimentary canal of one patient to that of the other, which it can only do by being swallowed; and as the disease grows in a community by what it feeds upon, attacking a few people in a town first, and then becoming more prevalent, it is clear that the cholera poison must multiply itself by a kind of growth, changing surrounding materials to its own nature like any other morbid poison; this increase is the cause of the *materies morbi* of cholera taking place in the alimentary canal.

"The instances in which minute quantities of the ejections and dejections of cholera patients must be swallowed are sufficiently numerous to account for the spread of the disease; and on examination it is found to spread most where the facilities for this mode of communication are greatest. Nothing has been found to favour the extension of cholera more than want of personal cleanliness, whether arising from habit or scarcity of water, although the circumstance hitherto remained unexplained. The bed-linen nearly always becomes wetted by the cholera evacuations, and as these are devoid of the usual colour and odour, the hands of persons waiting on the patient become soiled, and unless these persons are scrupulously cleanly in their habits, and wash their hands upon taking food, they must accidentally swallow some of the excretion, and leave some on the food they handle or prepare, which has to be eaten by the rest of the family, who, amongst the working classes, often have to take their meals in the sick room. Hence the thousands of instances in which, amongst this class of the population, a case of cholera in one member of the family is followed by other cases: whilst medical men and others who merely visit the patients, generally escape.

"With only the means of communication which we have been considering, the cholera would be constrained to confine itself chiefly to poor and crowded dwellings, and would be continually liable to die out accidentally in a place, for want of the opportunity to reach fresh victims; but there is often a way open for it to extend itself more widely, and that is by the mixture of the cholera evacuations with the water used for drinking and culinary purposes, either by permeating the ground and getting into wells, or by running along channels and sewers into the rivers."*

Dr. Lloyd, on August 30, 1849, at a meeting of the South London Medical Society, adduced instances of the great mortality from cholera, of people living in Silver-street and Charlotte-place, Rotherhithe, who got their water from a well and a ditch into which the privies discharged their contents. The disease was much more fatal in the parts of Rotherhithe where ditch-water was used, than it was in places which had their supply from the water-works. Dr. Snow has collected examples in the South London districts, where the water being derived from deep wells, few cases of cholera occurred; and other instances of a great fatality among people living in houses, such as those in Wandsworth-road, where the contents of the water-closets found their way into the water. He shows, from a communication by Dr. Shapter, that in 1832 Exeter was supplied with water taken from the streams of the Exe, into which the sewers emptied themselves; and that subsequently water-works were established on the river, two miles above the town, and more than two miles above the tidal range. In three months of 1832 cholera destroyed 347 lives in Exeter; in 1849 it was only fatal to 44 persons, many of them strangers, who died within three days of their arrival. An opposite instance is afforded by Hull, which in 1832 was scantily supplied with water from springs at Anlaby, three miles distant. About seven years since water-works were established on the river Hull, two miles and three-quarters above its confluence with the Humber, and afford the town a plentiful supply. But half the sewage of the town is delivered into the waters of the river Hull, half into the Humber; the tide flows up the river many miles past the water-works, and carries with it the contaminated liquids of the sewers. In 1832 the cholera was confined almost exclusively to the poor, and the deaths amounted to about 300; in 1849 the deaths were 1178, and occurred among all classes of persons.† Negative and positive instances in other towns are cited by Dr.

* "On the Pathology and Mode of Communication of Cholera," by John Snow, M.D. (Paper reprinted from the London Medical Gazette, pp. 2, 3).

† Dr. Snow, pp. 7, 8. The numbers of deaths in 1849 are from the present returns.

Snow; and in their Reports to the Board of Health by Dr. Sutherland and Mr. Grainger.

Dr. Snow's theory of the propagation of Asiatic cholera in London is very simple. The cholera matter was brought to London by patients from Hamburg; it was multiplied in the intestines of infected people until the disease spread in this way all over the metropolis. It necessarily implies that the rice-water discharges of the cholera patients may, under the present system of water supply, be distributed unchanged to nearly every house in London, where water is used for drink, ablution, and washing. Dr. Snow is unfortunately able to show that this excremental distribution—almost too revolting and disgusting to write or read—is possible to a very considerable extent.* The sewers of London run into the Thames and the Lea, from which a part of the water supply is derived. The water, which the inhabitants of London have but the repulsive alternative to discuss in words or to use in fact, is however baled from the ditches only by the wretched inhabitants of such parts as Jacob's Island. It is in one case before distribution pumped up to a distant reservoir at Brixton; in other cases it is taken higher up the rivers, largely diluted, or beyond the reach of any but casual contamination; filtration is employed; chemical action, as the chemists on behalf of their wealthy clients tell us, is incessantly going on, and converting impurities into simple elements; so that it is only in some places, or in rare circumstances, that the organic waste can reach and injure the people. Still, in this mitigated form, the risk is too tremendous to be incurred by two millions and a half of the people, who require and can obtain an abundance of sweet water.

The supply of Paris is from various sources, but four-fifths of the water is from the Canal de l'Ourque, which, by the decision of Napoleon, was also appropriated to navigation. The water for some years, and in 1832 when the first epidemic was so fatal, was drawn from the dirty basin in which the boats and barges of the canals rested; but is now drawn from the canal before it enters the basin. The water in the Regent's Canal round London, and in the Cumberland Basin, Regent's Park, present a pretty faithful image of the waters of the Canal de l'Ourque, which flow from the fountains, and supply the wants of the Parisians. The water in the Cumberland Basin is described by Dr. Milroy as "in a most offensive state, and, indeed, no better than that of a stagnant putrid ditch;" and a great deal of choleraic disease prevailed among the men who were employed in the barges, and most of the families living in the houses on the wharves were more or less affected.† The mortality of cholera in Paris was excessive, and in 1832 varied from 80 of 10000 inhabitants in the elegant Chaussée d'Antin and in Montmartre on the heights, to 530 and 520 in the low Quartiers of the Hôtel de Ville and the Cité.‡ The experience of Paris, then, as well as of many of our own towns, lends some countenance to Dr. Snow's theory.

The general argument in favour of the propagation of cholera by infection has been forcibly stated by Dr. Bryson, who brings facts from the experience of the navy to show that the existing virus may take effect at the distance of one or two miles, if not further; and, in contact with inanimate substances, may be conveyed to the distance of many hundred miles, provided the transit be accomplished within the space of about ten days.§ Dr. Bryson admits that the question of quarantine is surrounded with practical difficulties, as instances of cholera occurred in several ships of the Mediterranean squadron *before they had any communication with the shore* where the disease was prevailing. Indeed, on the hypothesis of infection, which assumes that "an *atmosphere* charged with the specific virus emanating from a population labouring under cholera and choleraic diarrhoea may prove effective at the distance of several miles from an infected locality;" or on the hypothesis of diffusion by water up the tidal streams, it is difficult to understand how the ordinary quarantine can at all exclude the epidemic.

§ On the Infectious Origin and Propagation of Cholera, by A. Bryson, M.D., Surgeon R.N., 1851, pp. 39, 46, 47.

Nothing but the absolute cessation of all intercourse between this island and the rest of the world could be effectual.

Instances are cited by writers on contagion of medical officers in attendance on cholera patients, suffering or escaping attacks of the disease; but they are seldom conclusive. In London, for example, one hospital physician and one hospital surgeon died of the disease: the mortality was consequently higher in this class than it was in the rest of the inhabitants of London. The two medical officers resided on the north side of the Thames; but the two hospitals, Guy's and St. Thomas's, are in two of the lowest and most fatal districts on the south side of the river, and cholera patients were not apparently admitted at Guy's hospital, although they were treated at St. Thomas's. The disease was not fatal on the higher ground, north of the Thames, to any of the medical officers of the hospitals where cholera patients were freely admitted. Whether any of them suffered from premonitory symptoms is unknown; yet this is an element to be taken into account; for it may be assumed that in medical men the disease is more frequently checked in the early stage, when it is amenable to treatment, than it is in the rest of the community.

The fact that the first cases of the epidemic appear in the *sea-ports* is not in itself a decisive proof of the importation of the disease; for if it is ever indigenous, as it was on the Delta of the Ganges, it will almost certainly break out in such low places and circumstances as are found in the neighbourhood of nearly all sea-ports.

The hypothesis of spontaneous development in England has been advanced, and may be supported by arguments of some weight. Thus there can be no doubt that the epidemic cholera is closely allied in all its essential symptoms to sporadic cholera, and the conversion of the one variety into the other in England is not *a priori* impossible. The march of cholera and diarrhœa since 1838 presents the appearance of a progressive development. The deaths from cholera in England were 331 in 1838, 702 in 1840, and 1620 in 1842; from diarrhœa 2482 in 1838, 3469 in 1840, and 5241 in 1842. These diseases became much more serious in 1846, and raised the general mortality. In London the deaths in 1839, 1840, 1842, 1846, 1848, 1849, were 36, 60, 118, 228, 652, 14137 from cholera; 376, 452, 704, 2152, 1913, 3899 from diarrhœa. The seasons of the year, and the circumstances of the people presented great variations in the twelve years, but on the whole they favoured epidemic development. The price of wheat rose rapidly from 39s. a quarter in 1835, to 71s. in 1839, and then declined to 57s. in 1842. The potato crop failed partially in 1845, in 1846 the failure was general, and the country in 1847 besides commercial distress, suffered some of the consequences of famine. The potato is antiscorbutic, and could not be replaced by other food of a different quality. Scurvy prevailed in many parts of the kingdom; influenza broke out as an epidemic at the close of 1847; the cholera eruption followed at an interval of a year. The spontaneous eruption of cholera has its analogue in the other zymotic diseases: thus small-pox, scarlatina, and typhus are five or ten times as fatal at some times as they are at others in districts of London.

An isolated, local epidemic of cholera which broke out in the Coventry workhouse, appears to show that the spontaneous evolution of epidemic cholera is possible in England. The following account has been drawn up exclusively from the Registration Returns, which did not in 1838 contain any statement of the duration of the fatal diseases. The season of the year, however, as well as the fatality of the disease, prove that the cholera had not the common character.

The House of Industry at Coventry suffered in the beginning of 1838 a sudden and severe outbreak of cholera, when 55 of the inmates, 27 males and 28 females, perished by the epidemic. The first death occurred on the 7th of January, and on that and the four following days, seven cases were fatal; from the 12th to the 16th inclusive, 4 persons died; between the 17th and 21st, 15; between the 22nd and 26th, 20; between the 27th and 31st, 7; and on the first three days of February, 2. 18 of the fatal cases occurred under 40 years of age, and 8 between that and 60; but the greatest mortality was between 60 and 80 years, when 20 patients sunk under the epidemic; the remaining 9 died at upwards of 80 years. Fortunately the disease was confined to the house, and did not extend its visit to the town.

While the facts prove that the population was undergoing a morbid change, which may have issued in a great epidemic, it seems more consonant with the whole history of the disease to admit that while the materials were smouldering in England the flame which threw the mass into combustion was of Asiatic origin.

It is not necessary to discuss the zymotic theory here, but I give in a note the substance of a paper on the subject which appeared in the Appendix to the Registrar-General's Fourth Report. As there restricted, it only expresses certain facts in the history of diseases, and of cholera among the rest, which are shown to be analogous to other facts with which chemistry is conversant.

It may, I think, be admitted that the disease Asiatic cholera is induced in man by a certain specific matter, and as it has been proposed to call the matter varioline which causes small-pox, so *cholerine* may designate the zymotic principle of cholera. A variety of that matter was produced in India in certain unfavourable circumstances; it had the property of propagating and multiplying itself in air, or water, or food, and of destroying men, by producing in successive attacks the series of phenomena which constitute Asiatic cholera.

That *cholerine* is an organic matter, cannot, I think, be doubted by those who have studied the whole of its phenomena and the general laws of zymotic disease. The great questions remain—Is *cholerine* produced in the human organization alone and propagated by excreted matter? Is it produced and propagated in dead animal or vegetable matter or mixed infusions of excreta and other matter out of the body? Is it propagated through water? through air? through contact? or through all these channels?

Observations sufficiently exact to decide these questions definitively have yet to be made, and discussed on the principles of probability. The decisive facts cannot be investigated by experiments in which human life may be exposed to risk. They must be carefully looked for and noted by good observers. Conflicting theories serve, among other purposes, to direct the attention of observers to important points which they may otherwise neglect.

While fully admitting the importance of theories, I have endeavoured to present, from the Returns, a view of the facts, without reference to any theory; and to show, independently of the theories, that the conditions in which cholera is or is not fatal, may be determined, and yield important practical deductions.

NOTE.—The *zymotic* hypothesis, which is strictly applicable to all the known phenomena of cholera, is thus stated in the Appendix to the Fourth Annual Report, 8vo, of the Registrar-General, pp. 199—205.

"Miasm, properly so called, causes disease without being itself reproduced. * * * Carbonic acid and sulphuretted hydrogen, which are frequently evolved from the earth in cellars, mines, wells, sewers, and other places, are amongst the most pernicious miasms," (*Liebig*). Miasms produce diseases like ague, without being propagated by contagion; and the poisons—carbonic acid, sulphuretted hydrogen, and other gases, which are given off by organic matter in putrefaction, afford an illustration of their action. The miasm which excites intermittent fever may be designated *pyretine*; and if it were not probable that modifications of the marsh miasm induce, in certain circumstances, remittent and yellow fever, specific names should be found for their principles. Rheumatic fever is apparently caused by a miasm.* Its changes of seat can scarcely be accounted for on the hypothesis that it is a local inflammation of the fibrous tissue.

Certain matters which have not yet been analyzed produce small-pox, glanders, hydrophobia, syphilis, measles, scarlatina, and other diseases; and as it was before proposed to give names to the well-defined diseases produced by poisons, so, for the purposes of reasoning, it will be equally useful to name these specific matters or transformations of matter by which diseases are propagated either by inoculation and contact (contagion), or by inhalation (infection). The following list exhibits the popular and scientific names of diseases in juxtaposition with the proposed names of their exciters; and it may be assumed hypothetically, that in the blood corresponding bodies exist which are destroyed, and by the transformation of which the exciters are generated or reproduced. The names in the second column terminate in *a*, except a few in *s*. *Lyssa* (from *λυσσα*, rabies), the old Greek term, has been restored by Mason Good; I propose, for the sake of uniformity, to call puerperal fever *metria*; mumps, *parotia*, reserving *parotitis* for simple inflammation of the parotids; croup, *tracheia*; and the disease from puncture in dissection, *necusia* (*νεκυσ*, the dead body).

* The exciting cause of intermittent fevers, rheumatism, and [rheumatic] neuralgia, is generally admitted (?) to be *malaria*; and if viewed abstractedly, and with reference to their specific nature, it is probable that *malaria* is the only exciting cause of these diseases.—*Prout on Stomach and Urinary Diseases*, p. 80.

Diseases.	Zymotic Principles.
Small-pox	variola.
Cow-pox	vaccinia.
Glanders	equinia.
Hydrophobia	lyssa.
Syphilis	syphilis.
Infection in dissecting	necusis.
Erysipelas	erysipelas.
Puerperal fever	metria.
Measles	rubeola.
Scarlet fever	scarlatina.
Hooping cough	pertussis.
Dysentery	dysentery.
Diarrhœa	diarrhœa.
Cholera	cholera.
Influenza	influenza.
Typhus	typhus.
Plague	pestis.

The existence of gangrenine, ergotine, ophthalmine, tetanine, miliarine, diphtherine, parotine, aplithine, tracheine, may also be admitted. It is maintained by some pathologists, that the same specific poison produces several of these diseases—erysipelas, necusis, and metria, for instance—but while the diseases are described as distinct, it will be most convenient to consider their excitors as distinct, although they may be convertible into each other, and be as nearly related as varioline and vaccinine.

The chemical composition of these principles is at present unknown; but as salts are distinguished from each other by their relations to other bodies, and, though they may have the same appearance in solution, are found to differ by the compounds which they form with other bodies in solution, so the existence is demonstrated by the effect, of the matter here called "*lyssine*," on animals, although it cannot be detected by the rough analysis of artificial chemistry. The smallest quantity imaginable of *lyssine* inserted under the skin of a dog produces hydrophobia; and the bites of the infected dog will throw other dogs, and even human beings, into a state similar to that of the dog from which the charge of *lyssine* originally came. Varioline in the same manner produces small-pox, if the patient has not previously undergone its influence or the influence of vaccinine—a modification of varioline. The diseases of this class have been frequently spoken of as fermentations; and Liebig has now opened the way to the explanation of their nature by a reference to the phenomena attending the transformations of organic compounds, excited by the action of other compounds simultaneously undergoing analogous transformations. Thus yeast, which is gluten in a state of transformation, added to wort, which contains gluten and sugar, converts the gluten of the wort into yeast, and at the same time the sugar into alcohol and carbonic acid, the two transformations going on together, and the latter ceasing when the former ends. The yeast reproduces yeast, if gluten, from which it was originally derived, be present: and if the temperature and circumstances be favourable, fermentation may be spontaneous.*

It must be admitted, with respect to all the forms of these diseases, that the body, in the cycle of external circumstances through which it passes, may run into them spontaneously (in this they differ from the class of diseases referred to external causes), for it is impossible to trace them invariably to infectious sources; it is not *à priori* more improbable that they, than other diseases, should arise spontaneously, and it is impossible to account for their existence in the world upon any other principle than that of spontaneous origin. Still the property of communicating their action, and affecting analogous transformations in other bodies, is as important as it is characteristic in these diseases, which it is proposed therefore to call in this sense zymotic.† A single word, such as *Zymotics*, is required to replace in composition the long periphrasis "epidemic, endemic, and contagious diseases;" with a new name and a definition of the kind of pathological process, which the name is intended to indicate, persons who have not made themselves acquainted with the researches of modern chemistry can scarcely fall into the gross error of considering this peculiar kind of diseased action and vinous fermentation absolutely identical; or of considering that others entertain that opinion. Liebig draws a distinction between fermentation and putrefaction: the reasons are more urgent for distinguishing the pathological transformations from fermentation or putrefaction, while it is admitted that they are of a chemical nature, and analogous to fermentation; by which they are moreover to a certain extent explained, although so little is known of the series of chemical changes and products in any single zymotic malady, or of the chemical reactions of the living forces and organs. Small-pox is by hypothesis the transformation of varioline, and certain unknown concomitant chemical changes in the blood and skin; manifesting the important symptoms which fall under direct observation.

Some of the morbid principles are fixed; others are volatile; but the greater part of them are fixed and volatile in different circumstances. Necusine, pestine, syphiline, lyssine, equinine, and vaccinine, are

* See Liebig's luminous exposition of the doctrines of fermentation, in his *Chemistry of Agriculture, Physiology, and Pathology*. Two vols.

† From ζυμωω, I ferment: zymosis—fermentation, and zyma—ferment, may also be employed in English, not in the sense which they have in Greek, but as general designations of the morbid processes and their excitors. *Zymosis*, and the verb from which it is derived, occur in Hippocrates. See a good note and quotation from Galen, by Fossius, in the *Œconomia Hippocratis*, appended to the Geneva edition (1662) of the works of Hippocrates. *Coction* appears to have been used by the father of medicine with the same qualification as ebullition and fermentation by Sydenham. See his *Treatise on Ancient Medicine*, vol. i. *Œuvres Complètes d'Hippocrate*, par E. Littré, 1839.

the most frequently fixed; they give rise, when placed on the skin, particularly where the epidermis is removed, to their peculiar diseases; but contagion is not invariably the result of their contact; indeed, in several of them it is the exception rather than the rule. Either there is no matter in the organization susceptible of transformation, or the specific transformation is overpowered by the vital energies; for in every case, if the morbid principle (zymine) tends to impart its movement to the organization, the organization, animated by the natural forces, has a tendency to continue its own processes, and to impart its conservative movements to all the organic matters which are brought within its sphere.

Varioline is converted in the cow (as Mr. Seeley has shown) into vaccinine, and cow-pox affords an interesting illustration of the modifications which diseases undergo, and which may be imparted to them, by changes in their excitors. Vaccinine taken from the cow effects the transformation of the *materies morbi* in man almost as completely as varioline; but it reproduces vaccinine; and in the process is never fatal, never produces the variolous fever, and its vapour is never infectious like that of varioline. The mild form of small-pox which appears in persons modified by previous vaccination, or which follows small-pox inoculation, is an equally good example of the changes induced in diseases by the actual constitution of the individual, and the mode of infection.

Syphilis, erysipelas, necrosis, metria, rubeola, scarlatina, and the other zymotic diseases, also put on different forms; which may be referred to the state of the exciter, the mode of its application, the matter on which the exciter acts, or the vitality of the patient. A modification of cholera, or of enterine, probably produces diarrhoea. Louis considers dothienteria (his *fièvre typhoïde*) a different disease from the typhus of this country, and points out the ulcerations, particularly of the glands of Peyer, with the correlative phenomena, and the rose-spots disappearing under pressure, as establishing its distinct character.* The differences in certain cases are unquestionable, and may be expressed by dothienteria and typhus: but the two forms of the disease occur in this country; the characters are frequently mixed; and they are not greater than are observed in scarlatina simplex, and scarlatina maligna, with black incrustations, and gangrenous inflammation of the throat—in the erythema and phlegmonous erysipelas of Mr. Lawrence, or in the varieties of other diseases.

The blood which pervades the whole system is the primary seat of zymotic diseases; but this does not diminish the importance of the local phenomena with which they commence, proceed, or terminate; for they affect (as poisons do) particular organs more extensively and frequently than others, give rise to specific pathological formations or secretions, and derive their character from the lesions and affected organs.

The heat disengaged in these diseases suggested the term fever, derived from *ferveo*, as fermentum is from *fervimentum*.

Some zymotic diseases recur, others happen only once in life, or if they happen twice, it is the exception: this has been explained on the hypothesis that some but not all kinds of matter (zymin) are reproduced in the organization after they have been destroyed by transformation (zymosis) in attacks of disease.

The tendency of zymotic diseases to increase and decline in activity, is one of their most remarkable properties; and the suddenness of their outbreaks, with the great mortality of which they were the cause, excited at an early period the attention and solicitude of mankind. This tendency is indicated by the terms epidemic and endemic; the latter serving to designate diseases which are excited by miasmata, and prevail in proportion to the quantity of miasm developed; the former, epidemic, denoting the diseases transmitted from man to man, independently of locality, or only dependent on locality, temperature, and moisture, as adventitious circumstances. For statistical purposes, the epidemic, endemic, and contagious diseases, have been classed under one head, as they may all be excited by organic matter in a state of pathological transformation. Ague is not contagious, and is apt to recur; it therefore apparently approaches the class of toxical diseases; but I feel inclined rather to consider it a zymotic disease, in which, to use the language of Liebig, the exciter is destroyed as soon as it is reproduced; and this view is confirmed by the analogies of remittent fever, or yellow fever, so intimately allied in some respects with ague, in others with plague, and apparently contagious (though this is disputed) in certain circumstances. Scurvy is a transformation induced by the want or inadequate supply of vegetable food. It formerly decimated the English navy, and is now met with in certain prisons. Scabies and porrigo (both contagious diseases) are ascribed to an insect (*acarus scabiei*) and a low form of independent organization. The mode in which zymotic diseases are propagated has offered the ground of an interesting comparison between their diffusion, blight of vegetables, and the generation of animalcules.

Sydenham referred, in the following passage, to zymotic diseases, which were so rife in London, formerly, as to divert attention from pure inflammations; and, as they approach nearer than other diseases to the definition of species in natural history, justify the comparison which he has instituted:—

“If the humours are retained in the body beyond the due time, either (1) because nature cannot digest and afterwards expel them, or (2) from their having contracted a morbid taint from a particular constitution of the air, or (3) lastly, from their being infected with some poison: by these, I say, and the like causes, these humours are worked up into a substantial form or species, that discovers itself by particular symptoms, agreeable to its peculiar essence; and these symptoms, notwithstanding they may, for want of attention, seem to arise either from the nature of the part in which the humour is lodged, or from the humour itself before it assumed this species, are in reality disorders that proceed from the essence of the species newly raised to this pitch [zymine]; so that every specific disease arises from some specific exaltation, or peculiar quality of some humour [zymin] contained in a living body. Under this kind may be comprehended most diseases which have a certain form or appearance; nature in fact observing

* Louis.—*Fièvre typhoïde*. Vol. ii. p. 311.

the same uniform method in producing and bringing diseases to a height or crisis as she does in the production or growth of plants or animals; for, as every plant or animal is possessed of peculiar properties, so is it likewise in every exaltation of any humour, after its being come to a species or disease. We have a clear proof of this every day, in those kinds of excrescences that grow on trees and shrubs (occasioned by the ill quality of the nutritious juice, or other causes), in the form of moss, mistletoe, mushrooms, and the like; all which are manifestly different essences or species from the tree or shrub that bears them."—*Sydenham's Works, trans. by G. Wallis.*

Sydenham's methods of treatment were adopted by him, and recommended as the results of experimental investigation. However their use might have been suggested, their efficacy was determined by their apparent influence on the recovery of patients; but, in his exposition of therapeutic principles, he keeps constantly in view his theory of "commotion" (*commotio*); "a general term which he chooses in order to prevent all fruitless dispute about words that might arise from the use of 'fermentation,' or 'ebullition' (*fermentatio vel ebullitio*), which, though they may seem harsh and metaphorical to some, are capable of a commodious interpretation." Thus, in speaking of "continued fever," he says, "with regard to this disease, I judge that the genuine indications are to keep the commotion of the blood [*zymosis*] within such bounds as suit the design of nature, so as to prevent its rising too high on one side, whence dangerous symptoms might follow; or sinking too low on the other, whereby either the exclusion of the morbid matter might be hindered, or the endeavour of the blood affecting a new state be frustrated.

The early medical observers have directed attention to the analogies zymotic diseases have with combustion, fermentation, putrefaction, and poisoning. These analogies have been, to a certain extent, confirmed by the researches of modern chemistry; and Liebig has been led by the study of organic transformations, —fermentation, putrefaction, decay,—to develop a theory invented by the greatest practical physicians to explain the phenomena of zymotic diseases.

Liebig observes, "that physicians had referred formerly to fermentation merely by way of illustration;" from which it is evident that he had not had time to consult the English medical classics on this head, or he would have discovered not, indeed, an anticipation of his own generalizations, but a theory very similar to his own,—the basis of their pathology,—founded upon enlarged views, and well calculated to prepare the way for his researches and the researches of other chemists.

Morton, in his *Pyretologia*, calls the principles which it has been proposed in a previous page to designate generally *zymine*, "*fermentum venenatum*;" and the following definition is printed in italics in the introduction, and applied in the subsequent chapters of his work to the explanation of all the "*morbi universales acuti*"—

* * * "fomitent febriferum (the '*fermentum venenatum*' of a previous sentence) asseramus esse—Deleterium quid in spirituum systemate delitescens, quod fermenti ad instar eos adoriens atque aestro primum exagitans, deinde humoribus secundo quasi momento, varias mutationes atque qualitates morbosas nobis sensibiles impertit." This, he adds, is his general hypothesis—"nostram generalem hypothesin."

Here we have (1) the "deleterium quid" communicating its action like a ferment to (2) the latent assumed constituents (*spirituum systema**), and by a secondary impulse, as it were, producing perceptible transformations (*mutationes*) in the blood, tissue, and secretions. The sentence also recalls a principle in physics, which Liebig has quoted in the words of Laplace and Berthollet, and to which he appears to think all chemical transformations may be referred:—"A molecule, set in motion by any power, can impart its own motion to another molecule with which it may be in contact."

The three great cotemporaries, Sydenham, Morton, and Willis, lived in London when plague and epidemic diseases prevailed, and much as they differed or were mistaken, on some points, all announced more or less clearly the zymotic hypothesis. They were not, it must be borne in mind, mere chemiatric theorists; they had studied diseased action as assiduously and with as much sagacity as modern chemists have studied fermentation; Willis was a great anatomist; Sydenham and Morton have left original pathological delineations which have never been surpassed, and laid down plans of treatment which are still followed.

* Morton adopted the hypothesis of animal spirits from Fernel, and though it enabled him to explain many phenomena happily, he did not fail to fall into absurdities, (for so we must now call them,) by employing it to explain everything; still such passages as the following admit of a scientific construction, and are another proof that the exploded theories of ingenious men always contain traces of important truths.

Spiritus animales esse το ἐνεργητικόν seu primum principium activum, et quasi fermentum universale totius corporis à quo sanguis et humores variè agitantur, et immutantur, non dubito. T. 2, p. 7, 8.

Willis employed the chemical theory and the few chemical facts known in the seventeenth century with still greater rashness in his treatises *de fermentatione* and *de febribus*; yet he has many felicitous anticipations of modern deductions, and Liebig will admit that in the following passages the Oxford professor referred to fermentation for something more than an illustration. He is speaking of small-pox, measles, (and scarlatina.) *Convenit enim homini omni, soli, et semel variolis aut morbillis affici.* (p. 165.) * * * ista diathesis, seu naturalis prædispositio, quæ genus humanum ad hunc morbum inclinât, videtur esse labes quædam seu impuritas sanguinis, inter prima fœtus rudimenta in utero concepta.

Licet autem venenata hujus morbi semina ut plurimum semel, et unicâ ægritudine solent diffundi; quandoque tamen accedit, ut parte miasmatis adhuc relictâ, bis, aut ter ægri in hunc affectum inciderint. * * * *Causa evidens, quæ hæc semina fermentativa commovet, et sæpius in actum deducit, triplex assignatur, scilicet, contagium aliunde susceptum, dispositio aëris, ac immodicus sanguinis, et humorum perturbatio.* Contagio hunc morbum in alios serpere, lateque grassari, quotidianâ experientiâ manifestum est: scilicet a corpore infecto continuo decedunt effluvia quæ ab aëre corporibus suscepta statim, instar veneni cum sanguine fermentescunt, et semina ejusdem affectus latentia, ipsisque homogenea suscitant, et in hujus morbi ideam disponunt: nec solùm contacto, sed ad distans miasma communicatur. * * * peculiaris aëris dispositio: hinc sæpius popularis evadit ac per totas regiones, urbes, vicusque passim desævit, p. 166.

He adds that the "*immodica sanguinis, et humorum perturbatio*" may arise from immoderate exercise or excesses,—*Opera Medica et Physica, 1676.*

THE PESTILENCES OF THE PRESENT DAY ARE MOST FATAL IN LOW PLACES.

The influence of elevation, if not as obvious in other zymotic diseases as it is in cholera, is equally important, for they are all governed by similar laws.

AGUE AND REMITTENT FEVER.

The marsh fever of the intermittent, remittent, and continued form, exists in parts of England, and of almost every kingdom of the world. Instead of investigating its mild forms in the Essex marshes, or the intense varieties of the tropics, it will be more convenient to study it in Italy, where it has from an early period attracted the attention of qualified observers.

The fever of the Mediterranean appears to be a milder form of the remittent of the tropics. Its type is well seen in the Tuscan Maremme, which have been recently described by A. Salvagnoli Marchetti, in two Reports published by the Grand Duke of Tuscany.* The fevers are simple intermittents in spring: as the season advances gastric complications supervene, and they then become bilious remittent, continued gastric, typhoid, dysenteric. In the Maremme, from January to June, the diseases peculiar to temperate climates are observed; during the other months of the year, in proportion as the temperature rises, the fevers put on a severer form, turn gradually from intermittents into remittents, remittents into continuants, and then assume the graver aspect of tropical disease.†

The Tuscan Maremme lies along the Mediterranean: commencing at San Vicenzio, it extends to the river Chiarone on the borders of the Papal States. It is chiefly in the province of Grosseto, and comprises a considerable territory of mountain, hill, and beautiful plain. A map accompanies the Reports, and shows, by a yellow colour, the parts in which malaria prevails; by a red colour the parts where the malaria is less pernicious. The yellow colour stretches from 10 to 16 miles into the interior, over the low plains traversed by the waters, and the red colour runs higher up the rivers Cornio, Ombrone, and Albegna. The high land round the river sources, even where it approaches the coast—is white, healthy, untouched—except in a few exceptional cases. The insalubrity is at its maximum in the plains, slight among the hills, inappreciable in the mountains. To cite the words of the Report: *Massima è la malsania nelle pianure, mediocre nelle colline, affatto insensibile sui monti; quindi questi abitabile senza alcun rischio, le colline con qualche pericolo, le pianure con grave e continuo.* Ten towns and castles are mentioned that are abandoned by the greater part of the inhabitants every summer. Some are far from the sea, some far from the marshes. Montepescali is 760 feet above the level of the sea, Capalbio is still higher, and Sovana is as high as 1012 feet. The malaria is felt in some cases as high as 1400 or 2000 feet; it never arrives at Montorsajo, 2500 feet (1217 braccia) above the sea. A remarkable instance is given of the sanification of Massa by Ximenes, who drained the high plain by a subterranean canal; of the reappearance of malaria when the canal was stopped up, and its disappearance a second time when the water was drawn off by effectual drainage‡. Dr. Marchetti notices that the blood of the inhabitants of the Maremme is changed: all the physicians, he says, who have attentively examined it, are struck by the character it presents, which is so constant and striking that by the blood alone you can distinguish the patient living habitually on a malarious soil from a person residing in a healthy country.§ A chemical analysis by Professor Cozzi shows a deficiency of fibrine, albumen, fatty matter, and phosphates, and an appreciable quantity of cholesterine. Nutrition is feeble, digestion bad, the liver disordered, the spleen swollen, respiration weak; the heart is flaccid and beats feebly. The countenance is of a palish sallow tint, as in a chlorotic girl, or yellow as in jaundice. The muscular movements are languid, bodily exercise fatiguing. Sensibility is diminished. Strangers in the malaria speedily feel its effects; they undergo a great

* Statistica Medica delle Maremme Toscane, 1840-1-2-3-4. Firenze, 1844.

† Primo Biennio, p. 47.

‡ 2 Biennio, p. 33-35.

§ 1 Bien., p. 65-7.

change, and soon acquire the constitution of the inhabitants of the Maremme.* Nearly all the inhabitants of the neighbouring mountains, who descend to gather in and to thrash the harvest, are attacked on the fields and floors, or shortly after their return home. Their food is poor, the wine and water bad. They work hard in the sun, and sleep often in the open air, or crowded, men and women together, in open cottages (*Capannoni*).† The agriculture of the Maremme is in the rudest state, the dwellings are miserable, and there is no industrial manufacture.‡ Such is the effect of the low lands of Italy on the population not only of the Tuscan Maremme, but of the Pontine Marshes, and all the other depressed parts of the Mediterranean coast. The land of the coast of the Adriatic is traversed by rapid rivers, and it is comparatively salubrious, except at Ravenna, where the Apennines retreat from the sea.

The temperature of the province of Grosseto, lying between $42^{\circ} 22'$ and $43^{\circ} 6'$ of north latitude, necessarily varies at different elevations. At Grosseto it is at sunrise and midday two degrees higher in spring, and one degree lower in summer than at Florence, by Reaumur's thermometer.

The hygrometer at Grosseto shows an excess of 20 degrees of moisture over that at Florence, and in the evening it is from 25 to 30 degrees moister than in the morning. The permanent population of the province of Grosseto was 53175 in 1814, and 76179 in 1843. The number of births in the interval was 84075, of deaths 72954, exclusive of those in hospitals, which the Reporter thinks may be fairly omitted. The settled population in 1841 was 73966, of whom about 12260 lived in the plain, 61906 in the hills and mountains. The adventitious population in the spring amounted to 19261 persons; 15982 males, 3279 females, from various parts of Italy. 8972 persons; 7539 males and 1433 females, came down from the hills in the harvest season. Of 35619 patients treated by the medical officers June 1, 1840-41, not less than 13682 had intermittent, 269 pernicious, 2520 continued gastric or catarrhal fevers; of the latter many, of the former none died.§

YELLOW FEVER.

Yellow fever is also generated in and almost confined to lands of low elevation. The Delta of the Mississippi in the Gulf of Mexico is its great centre.

"Près de la Vera Cruz," writes Humboldt, "la ferme de l'Encero, que j'ai trouvée élevée de 928 mètres au-dessus du niveau de l'océan, est la limite supérieure du vomit. Nous avons déjà observé plus haut, que c'est jusque là seulement que descendent les chênes Mexicains, qui ne peuvent plus végéter dans une chaleur propre à développer le germe de la fièvre jaune." ||

Vera Cruz lies on the coast, against the island of San Juan de Ulloa. It is an arid plain without running water, where the impetuous north winds, blowing from October to May, have raised sandbanks, which are every year moved about and changed in form. They are from eight to twelve metres high, and by reflecting the solar rays, in the summer months, increase the suffocating heat of the atmosphere. "Between the city and Aroyon Gavilan are found, in the midst of the banks, marshy grounds covered with mangroves and other brambles. The stagnant waters of Boxio de la Tembladera, and the small lagoons of Hormiga, of Rancho de la Hortaliza and of Arjona, produce intermittent fevers among the indigenous inhabitants. They also play probably an important part among the dreadful causes of the black vomit." Humboldt adds, "Soft water is found by digging a metre deep in the sandy soil of Vera Cruz; but it is infiltrated from the marshes and lagoons between the sandbanks. It is rain water which has been in contact with the roots of vegetables; is of a bad quality, and only serves for washing. The lower classes of people resort to the waters of a ditch (*Zana*) which comes from the *Meganos*, and is a little better than the well water, or than the river of Tenoya. The better classes drink water collected in bad cisterns. The pure and salubrious waters of the cisterns of San Juan de Ulloa are only given to the military.

|| *Essai politique sur le Royaume de la Nouvelle Espagne*, tome 2, p. 771. Humboldt.

The merchants have country houses in Xalapa at an elevation of 1320 metres above the ocean; where they enjoy the fresh air, fine views, and clear sky; while the mosquitoes, the heat, and the yellow fever plague the people below.* The wind blows north, and a fog hangs over Xalapa in winter; the sun and stars are covered for two or three weeks together. But this does not bring the fever.

Baron Humboldt thus sums up his views and his observations:—*Les phénomènes de la vie sont modifiés par un grand nombre de causes, dont les plus puissantes échappent à nos sens. Nous voyons naître des maladies partout où des substances organisées, imprégnées d'un certain degré d'humidité, et échauffées par le soleil sont en contact avec l'air atmosphérique.*†

The yellow fever does not extend its ravages in the epidemic form beyond the 46th degree of north latitude. New Orleans, Charlestown, Baltimore, Philadelphia, New York, Boston, and the low cities and ports on the coast of America, have all been visited by this pestilence; but its violence diminishes in the northern latitudes, and everywhere fades away in the high inland cities. In the Mediterranean it has several times assailed Spain; appearing first and committing its greatest ravages in Cadiz, Seville, Malaga, Carthage, Barcelona, and the other ports; radiating into the interior with diminished violence, and proving but rarely fatal on such high places as Gibraltar. In Catalonia, as in the West Indies, it enters with extreme difficulty elevated, airy localities; in the words of M. Pariset and his colleagues, passionate contagionists:—*“Elle aime les bords de la mer et des fleuves; et, chose étrange, elle attaque indifféremment les populations qui occupent les lieux sains, comme celles qui résident sur un sol insalubre.”* It attacks low places reputed healthy, and in that respect resembles cholera; but the documents of the French physicians throw no light on its relative mortality in high and low localities.‡

The West Indies and the West Coast of Africa in the tropics, are decimated by a deadly remittent fever which is closely allied to yellow fever. Lind, in the last century, after a comprehensive survey of the facts, observed that “not only continents, but most large islands in every quarter of the world, have ridges of high mountains, where the air proves healthy to European constitutions; even in the smaller islands, such a retreat can generally be found.” He showed that Antigua, “especially English Harbour, is remarkable for its unhealthfulness, as our ships of war frequently experience in the loss of their men by the yellow fever and flux, when they refit in that harbour; but that an absolute safety from these diseases is to be found in the high mountains of that island, especially in that called Monks Hill.”§ The same thing is observed in Dominica. He strongly urges the Europeans in Jamaica to reside in temperate and pleasant situations on the sides of the mountains, where the ground is cleared from wood, and has no stagnating water upon or near its surface; where the soil is rich and fertile, favourable to the cultivation of European plants, and to the health of European animals.

Notwithstanding Lind's representations, “the principal West India towns, and the garrisons for the troops, are situated on the leeward shores of the country, at the bottom of the deepest bays that can be found, as a protection to their trade against the winds from the sea. The soil must consequently be alluvial, and is often marshy. * * * Their elevation is little above the level of the sea. * * * The settlements of the planters, in like manner, are formed, not on the elevated mountain ridge, from which the periodical rains have washed away the soil, but in the alluvial ground beneath. * * * Ague is not a common production in the hot low land, on or near the level of the sea, where alone the yellow fever is found.”|| These low towns, and plantations, which were the resort of yellow fever, have since been ravaged by cholera; the intensity of the disease has shown how constantly, and in what variable circumstances the law of elevation operates. Mr. Parkin, who was on the spot, states

that the epidemic also ascended the hills; but he has not the means of giving the mortality at different elevations.

How the low alluvial shores of the West Coast of Africa, and of the rivers near the coast, are infested by the fever is well known. The fatality of the Niger expeditions, and the mortality in ships and forts on the Coast of Africa are also well known, and have been well described by Boyle, McWilliam, Tulloch, and Balfour, in the valuable army and navy returns, and in other official reports. Lind states that Portuguese bishops lived in health, and to the ordinary term of life, in the island of St. Antonio. He mentions among places that might be easily rendered healthy, "the high hills of Sierra Leone, upon whose summits the air is clear and serene, while thick mists and noisome vapours overspread the lower grounds; yet even" he adds, "at this place the English inhabit a low valley merely for the benefit of a spring of water, the carriage of which, to any part of that hill, might be easily performed by slaves." The salubrious parts of Africa must be sought on the high grounds of the interior; ships now only regain health by sailing out to sea.*

PLAGUE.

Like cholera, yellow fever, and remittent fever, the glandular plague is now generated and prevails in Lower Egypt on alluvial ground; and it has a limited range of elevation. It is endemic in the Delta of the Nile, and periodically decimates the population of Cairo and Alexandria. It ascends the Nile, but never, says the Reporter of the French Commission, passes the first cataract. It is unknown in Arabia, Nubia, Sennaar, Abyssinia,—the former hot countries, the latter temperate, mountainous, inclining, free from marshes. Arabia, traversed by pilgrims from every part of the Mahomedan world, escaped unscathed in the great plagues of 1825 and 1835, which ravaged a chief part of Lower Egypt; and Arabia has, from time immemorial, been plagueless. The statement of the Commission is substantially true; but it would be more correct to state that the plague grows gradually less fatal up the Nile, and that it is less frequent and destructive in Upper than in Lower Egypt, in the high lands and in the desert than on the low lands on the shores of the Mediterranean. The plague of 1835 penetrated Said, Upper Egypt, and in the city of Siout destroyed more than 13000 people.†

The plague is most fatal in the parts of Lower Egypt near the Nile and the great canals. Almost all the villages on the banks of the Nile, on the road to Fayoum, were attacked in the epidemic of 1841; travellers and merchandize arrived there every day from the infected parts, and two of the travellers were attacked in Fayoum, but the population of the province escaped. Fayoum offers a striking contrast to Damietta, where the plague is most destructive. Fayoum, says Dr. Rossi, is raised above the level of the sea, and surrounded by the Desert of Libya; hot but dry; without marshes: the cemeteries are at a distance from the habitations of the people; the water, without being delicious, may be drunk without inconvenience, on account of the nitre which it holds in solution. Damietta, at the mouth of the Nile, touches the sea; it is surrounded by fresh and salt water marshes; the air is hot and humid; the cemeteries are in the heart of the city; the fresh is mixed with salt water, or soiled by excrementitious products, and animal and vegetable matters in putrefaction. While Suez, a low port surrounded by stagnant water, was attacked in 1835, Cosseir, built on rocks, and surrounded by arid mountains, escaped, although it obtained its provision from Keneh, where the plague broke out nearly as soon as at Cairo. Désgenettes and Clot Bey agree that while Cairo itself is ravaged by plague, the citadel on high ground is invariably spared. Cairo, containing now about 200,000 inhabitants, is in a sandy plain at the foot of a mountain, "which, by keeping off the winds that would refresh the air, makes the heat very stifling. Through the midst of it passes the

Le Dr. Prus, Accompagné de Pièces et Documens, et suivi de la Discussion dans le sein de l'Académie, 1846, pp. 77, 91, 92, 401, 507, 556. See Aubert Roche, De la Peste, p. 101, cited p. 881.

Great Canal," into which the sewers are discharged over carrion, excreta, and mud. At the yearly overflow of the Nile, its waters filling this canal are distributed over the city, and drunk by the wretched inhabitants. Under the hot sun evaporation goes on; the bed of the canal is exposed; the water, stinking and black, sends up mephitic exhalations, which produce headache and sickness.* The water of Lower Egypt is generally bad. Alexandria lies lower than Cairo; with the lakes near, and the infectious shores of its two ports, the stagnant waters in the cisterns and the streets, its numerous villages of small huts constructed of earth without any opening but the door raised scarcely three feet from the ground, and sheltering every night numberless families of sailors and dockyard labourers: it is the home of the plague.† All over the Delta the poor Egyptian constructs his house, or rather den, of mud; it is low, dark, damp, and filthy. The full grave of the family is often under the floor. The clothing and food of the fellah is of the lowest description; he is subject to the most debasing oppression.

Constantinople is another centre of the plague, and the circumstances in which it springs up are not very different. The most fatal quarters lie along the port, or in the dirty wretched villages on the European shore of the Bosphorus. The plagues of 1831 and 1834 first appeared in San Dimitri, a village separated from the Pera by a small stream, polluted by the impurities of the places on its margin. A village on Mount Alem Dag, 500 metres above the level of the sea, always enjoys immunity, while the plague is raging below; to this place of refuge the inhabitants of the capital resort. The plague reaches a village lower down the Alem Dag.‡

The plague still ravages periodically the population in the lower part of the basin of the Danube. The river falls from an elevation of 1000 metres to 240 metres at Vienna, to 140 at Buda, while at Orsova in Wallachia, it is only 21 metres; at Brahiloff, 3·19 metres above the Black Sea. Consequently, both the banks of the Danube, from Belgrade to the sea, are marshy. The Turkish towns have a beautiful appearance as they are reflected from the waters, but like the eleven ports of Wallachia, they are within squalid, dirty, and insalubrious. The houses in Widin are nearly buried in the earth. Galatz, in Moldavia, on the delta of the Danube, is noted for its unhealthiness. The plague is less virulent here than it is in Egypt, in Constantinople, or even in Erzeroum.

Syria has four regions: the first, a warm, moist valley, lying along the coast; the second, hilly and rough, colder and healthier; the third, dry and hot, facing the east; the fourth, the depressed valley of the Jordan.§ The plague is endemic, says Larrey, on the coast of Syria. It committed, in the epidemic which he observed, great ravages in Gaza, Jaffa, St. Jean-d'Acre, and did not spare the Arabs of the Desert in the vicinity of the sea. It was scarcely felt in the villages of the mountains of Nabious and Canaan, but reigned in low marshy spots and places on the coast. The epidemic usually breaks out first in Antioch, Tripoli, Beyrout, Tyre, and Jaffa, whence it spreads to Jerusalem, Nazareth, and other higher towns or villages in the interior, with a diminishing mortality.|| The plague appears also on the Euphrates and the Tigris. In 1831 it broke out in Bagdad with terrible violence, destroyed half of the population, and left whole streets dispeopled. Bouchir and Bassora, above the Delta, on the Persian Gulf, suffered severely. Erzeroum, near the source of the Euphrates, high among the mountains of Armenia, is held by Dr. Prus to be one of the endemic sources of the oriental plague.¶ The documents show that there plague is periodically epidemic.

The capital of Armenia is on that high land from which the fathers of the Semitic race of men descended, and has a population estimated at 50000, surrounded by populous villages. It lies between the two northern streams of the Euphrates, which unite three leagues below the city; the country is marshy, and is flooded when the

|| Page 928.

¶ Page 30.

snows melt on the mountains. In summer the temperature is as high as 70° and 80° . In winter the temperature is below, and rarely rises above the freezing point; then the families of men and domestic animals sleep promiscuously in the low, small, damp huts of earth, round fires of dried cow-dung. "On ne saurait s'imaginer," says the celebrated Tournefort; "quel horrible parfum répand ce détestable combustible dans les maisons qui ne sont que des terriers."* The inhabitants of Erzeroum and the villages around are generally poor, and live a good deal on salt provisions; milk and olives are their resource in great extremities. Blood, excreta, and dead animals lie about the humid streets of Erzeroum—near the region which, by some critics, is believed to have been the site of Paradise—just as in London they lie in Church-street, St. Giles. The last plague broke out in the villages round Erzeroum in 1840, and destroyed 36000 of the people in 1841. It is said, however, not to occur oftener than once in twenty or twenty-five years. And the Armenians in good circumstances, when the plague breaks out, encamp on the hills; whence they send for what they want to the city, without contracting the disease. The plague occurs every ten years at Trebisonde; more rarely and less fatally in Gymuchané, Kurdistan, Tauris, and Casbin; is unknown at Ispahan, and never makes its appearance at Teheran: how it ravages Aleppo and Bagdad is well known. It does not cross the line drawn from the Caspian Sea to the Persian Gulf: that barrier separates it from the region of cholera which is subject to less restriction in its career. The Persians fly for safety to the mountains from plague, as the natives of India fly from cholera.†

Venice and Marseilles are, after Constantinople, the cities that have last and most severely suffered from plague. The lazaretto was first established in Venice (1403), and is still maintained with much rigour in Marseilles. Venice is low on the lagoons; and is traversed by canals, which have all the offensive qualities of open sewers. Marseilles lies near a great marsh and is surrounded by hills. Of the port M. Dubois (d'Amiens) gave a graphical account, the accuracy of which was not disputed in the discussions on quarantine. The old city lies low; the new city is spacious, clean, airy, but surrounds the infected port. "Seven or eight hundred vessels and steamers lay ranged along the quays, floating in the black, fetid waters. I took a boat to visit, in the company of a young physician of the place, the islands of Pomègue, Ratonneau, and Château-d'If. The purity and perfect translucency of the waters of the Mediterranean are well known; but once we were on the water we had literally to hold our noses at every stroke of the oar, so offensive were the exhalations. On regarding the streets adjoining, I could imagine the frightful ravages of the plague on the same day (August 25th), 125 years before. The port was a vast ditch into which the bodies of the victims and of the dogs that devoured them were cast; it was a city of Lower Egypt; and as in the East they are content at the close of an epidemic to whitewash the dwellings of the dead so it was in Marseilles. They never thought of disinfecting the port which has ever since remained in much the same state."‡ Marseilles is perhaps in a worse condition than Liverpool; it did not suffer so soon from cholera as Paris, but the epidemic reached Marseilles in 1834, and devastated the city in 1834 and 1835.

It will be recollected that the Black Death of the fourteenth century first broke out in Southampton, and was, like the plagues of the seventeenth century, excessively fatal in London. This large undrained city and frequented port, inundated with impurities, in the sixteenth and seventeenth centuries was infested by plague; and it now becomes a matter of interest to know whether in those visitations the influence of elevation of soil on the mortality was felt. The mortality of each parish was separately returned in 1665, and on comparing the burials in this great year of plague with the burials returned in 1662-3, it will be seen that the epidemic generally

prevailed more in the low than in the high districts; but that the variation was much less than in cholera.

SALUBRITY OF HIGH PLACES.

The human race is now destroyed periodically by five pestilences: cholera, remittent fever, yellow fever, glandular plague, and influenza. The origin or chief seat of the first is in the Delta of the Ganges; of the second, the African and other tropical coasts; of the third, the low west coast round the Gulf of Mexico or the Delta of the Mississippi, and the West India Islands; of the fourth, the Delta of the Nile and the low sea-side cities of the Mediterranean: of the generating field of influenza nothing certain is known, but from the course of its epidemics one might be disposed to look for it in Russia, perhaps among the fishing tribes of the Arctic Ocean, or in the vast marshes of Siberia traversed by the Oby, the Yenisei, and the Lena; where the Russian returns show that the mortality is higher than it is in many cities of Western Europe. But as no system of medical observation—such as is in India—exists in Siberia, the source of influenza must long remain enveloped in obscurity. Its fatality at different elevations has also yet to be investigated.

The four great pestilential diseases—cholera, yellow fever, remittent fever, and plague—have this property in common; that they begin and are most fatal on low ground; that their fatality diminishes in ascending the rivers, and is inconsiderable around the river sources, except under such peculiar circumstances as are met with at Erzeroum, where the features of a marshy sea-side city are seen at the foot of the mountain chain of Ararat. Safety is found in flight to the hills and to the desert, or in the removal of ships from infected ports to the open sea. Large masses

of men—armies, pilgrims, or sailors in foul ships—often carry the epidemic with them to unhealthy places.

The people living on land of a certain elevation above the plains are not only safe from the attacks of cholera, remittent fever, yellow fever, and plague, but they are in a remarkable degree exempt from other maladies. Their functions are healthy, and their faculties are energetically developed. They present the finest types of the human race. This is evident not only in Cashmere, Georgia, and Circassia, but in all the hill tribes of India. The miserable natives of the Sunderbunds are below them in all the characteristic attributes of man. The Arabs and Abyssinians too, on the elevated lands of the desert, and on the sides of the mountains from which the Nile descends, present a striking superiority over the people of Lower Egypt; their fiery life, love of liberty, and warlike genius, place them immeasurably above the Fellahs. And it is not the air of the sea that deteriorates the race, for the sea as it restores health also sustains a seafaring people: and islanders generally, whether in the Pacific, the Mediterranean, or the Atlantic, are above the standard type of the people on low rivers, and on the low coasts of continents. In Venice and Holland the sea appears for a long time to have counteracted the degrading influences of low alluvial lands on fine original races.

The people bred on marshy coasts and low river margins, where pestilence is generated, live sordidly, without liberty, without poetry, without virtue, without science. They neither invent nor practise the arts; they possess neither hospitals, nor castles, nor habitations fit to dwell in; neither farms, freeholds, nor workshops. They are conquered and oppressed by successive tribes of the stronger races, and appear to be incapable of any form of society except that in which they are slaves. Strangers no sooner set foot or attempt to settle on the soil than the endemic terror attacks them as if to bid them begone; and if they remain, their institutions, palaces, and monuments, fall into ruins, as the generations degenerate.

The sanatory influence of the hills in the tropics is well marked, and is now turned to practical account. On the Neelgherry range, on high grounds, at Simla, and on hills below the Himalaya, invalids that fever, dysentery, and cholera have shattered but not killed, recover strength and inhale new life.* It is the same in the West Indies, in Mexico, in the Mediterranean, in Asia Minor, in Italy, and in Africa. In the last Niger expedition, amidst many excellent arrangements, two errors appear to have been committed: the first, the attempt to effect any settlement of Europeans at all near the river; and the second, the selection of Mount Stirling, 200 feet high, at the confluence of the Niger and the Tchadda in lieu of Mount Patteh, which rises behind Mount Stirling to the height of 1160 feet above the level of the river, forming on the summit an extensive flat plain on which there are several villages.† “The Albert”—after the fatal fever broke out on the river, and the officers, engineers, and white sailors were sick or dead—was gallantly steamed down the waters by McWilliam the senior medical officer, and Dr. Sanger. “The Albert” afterwards sailed to the Island of Ascension. The healing effect of the hills was strikingly experienced. “On my arrival I was subject,” says Dr. McWilliam, “to severe attacks of ague, following the remittent fever of the Niger; and it tormented me for nearly six weeks, while I remained on board the ship in the roads. I then went up to the mountain quarters, and after one fit of ague, was rid of every symptom of the disease as long as I continued on the island.”‡ It restored others who like him had been reduced to the brink of death on the Delta of the Niger. “How many,” he adds, “naval medical officers on the African station have seen their sick daily wasting and pining, and all their endeavours to relieve them unavailing so long as the vessel remained on the coast? And what a salutary change have they witnessed as the result of even a short residence at Ascension? The south-east trade wind blows perpetually over this island, and the freshness of the atmosphere is singularly exhilarating to an invalid from the coast.” The temperature of the lower districts is about 81°, while the

‡ Pp. 200-201.

heat on the Green Mountain, with its peak 2870 feet above the level of the sea, is 72° on the flat land near the ridge on which the quarters are situated.

The ancients were well aware of the salubrity of islands and of the high lands; on which the chief temples of Æsculapius (Ἀσκληπεία) were erected. The temples of Cos and Delos were on islands. The temple of Ias was on the summit of Mount Ilium near the Gulf of Laconia; at a short distance flowed the pure and salutary waters of the Smenus. The temple of Megalopolis in Arcadia, was on the eastern brow of the mountain in a sacred grove; for the temples were sometimes sheltered from malaria by trees, and sometimes surrounded by gardens and consecrated ground on which no buildings could be erected. The temple of Cyllene, in Elis, was near the sea; but it was on Cape Hyrminius. Epidaurus, also on the sea-coast, was surrounded by wood-crowned hills. The temples of Hygeia at Ægium, of Æsculapius at Corona near the Gulf of Messena, and at Pergamus, were near springs of pure water, or the sources of streams. The Greek temples of health were away from the cities, isolated, near pure waters, on sweet, elevated places.* Hippocrates has sketched, with the hand of a master, the effects of high and low land, of good and bad water, on the diseases, energies, character, and intellect of men.†

The site of ancient Rome, on hills of nearly the same elevation as the high parts of London, was as happily chosen to secure the health as the defence of the Roman people. The *Campagna* extends from the Tiber southward along the coast for sixty miles, and inland as far as the first slopes of the Apennines. In the vicinity of the coast the land is low and swampy, but the remainder of the country—the great nursery of the Roman people—is a vast expanse of table land seldom less than a hundred feet above the level of the sea, and for the most part perfectly dry. In the midst of the plain the isolated mass of the Alban hills “divides the Campagna Proper from the deadly level of the Pontine marshes.” About 18 miles from the mouth of the Tiber, the stream sweeps round an alluvial meadow containing upwards of 300 English acres. This is the Campus Martius from which a steep bank rises abruptly and then slopes gradually into the table land, which forms the general surface of the country beyond. The projecting bluffs of the bank, separated from each other and from the main ridge by deep hollows, stand as small isolated hills with steep rocky escarpments, and are the Capitoline, Palatine, and Aventine hills; the Cœlian lies south-east of the Palatine. Another ridge throws out the Esquiline, Viminal, and Quirinal. The Janiculum and the Vatican noted for its insalubrity, are on the right bank of the Tiber. The Insula Tiberina is in the centre of the river, against the base of the Capitoline. The Tiber at Rome is 33 feet above the sea level; the summits of the hills range from 117 feet to 154 feet above the ordinary level of the Tiber. The Saburra, in the hollow between the Esquiline and the Quirinal, was one of the most busy and thickly-peopled quarters of the city, but the public buildings and the habitations of the Roman people in the most glorious period of their history, were on the seven hills. The site of the city, as well as the great Aqueducts and Cloaca Maxima, evince an exquisite perception of the conditions on which warlike tribes might retain martial vigour in an Eternal City. *Non sine causa Dii, hominesque hunc Urbi condendæ locum elegerunt, saluberrimos colles, flumen opportunum, quo ex mediterraneis locis fruges devehantur, quo maritimi commeatus accipiantur: mare vicinum ad commoditates, nec expositum nimia propinquitate ad pericula classium externarum: regionum Italiæ medium ad incrementum Urbis natum unicè locum.*‡ Posted upon the hills, they, in the infancy of the state, subjugated the earth beneath by vast subterranean drains; and gradually brought distant springs underground and in aqueducts to supply the citizens with pure water.

‡ Oration of F. Camillus, in which he dissuades the people from abandoning the city after it was burnt by the Gauls.—Livy, Dec. I., lib. v., cap. 30.—Vitruvius thus closes an eulogium of the site of the city:—“Ita Divina Mens civitatem populi Romani egregiâ, temperatâque regione collocavit, uti orbis terrarum imperio potiretur.”

The chief Roman encampments of which traces remain in England; were on the Malvern Hills, the Cotswold Hills, and other high spots, which even, when the country was undrained, must have been healthy. Roman London was on a hill; the Westminster of the monks in a swamp, as Peterborough and other monasteries were, probably for protection from the Northmen and Marauders. Many monasteries and priories were on fine sites.

The military posts most easily defended in ancient times against an enemy are the best defences against epidemics; and with the regularity of a general law, the first cities, castles, and temples were on high places.

The modern Romans, remarkably enough, inhabit the low alluvial ground (*Campus Martius*), which the Tiber embraces as the Thames does Southwark, and the low ground on the opposite banks of the river. The Quirinal and a part of the Capitoline are still covered with habitations; the Palatine, the Esquiline, the Coelian, and the Aventine are deserted; the bells of conventual buildings alone disturb the silence reigning in the waste among the crumbling ruins and vineyards.* Lancisi has traced the history of the great city through all its vicissitudes, until it was deserted by the Roman pontiffs, and its population had dwindled down to thirty-three thousand; but he leaves it uncertain when the people descended from the hills.† Leo X., who filled the city with strangers, suffered his new colonists to build on the *Campus Martius*, and the other low grounds were occupied although the houses were infested by the inundations of the Tiber. *Tiberinis alluvionibus incolas humilium Urbis regionum sæpe diuturnis, sæpe etiam sævioribus ægritudinibus laborasse, luculentius ipsa plebis clades, et luctus testatur, quàm ut ab auctoritate, vel ratione testimonia repetamus,*‡ says Lancisi, writing in 1710. Cholera, in four months—July, August, September, and October, 1837—destroyed 5419 of these fallen people, who did not exceed 156,000 in number.§

As the power of the Egyptians descended from the Thebaid to Memphis, from Memphis to Sais, they gradually degenerated; notwithstanding the elevation of their towns above the high waters of the Nile, their hygienic laws, and the hydrographical and other great sanitary arrangements which made the country renowned justly or unjustly for its salubrity in the days of Herodotus. The poison of the Delta, in every time of weakness and successful invasion, gradually gained the ascendancy; and as the cities declined, the canals and the embalmments of the dead were neglected,—the plague gained ground. The people, subjugated by Persians, Greeks, Romans, Turks, Mamelukes, became what they have been for centuries, and what they are in the present day. Every race that settled in the Delta degenerated, and was only sustained by immigration. So likewise the populations on the sites of all the city-states of antiquity on the coast of Syria, Asia Minor, Africa, Italy, seated like the people of Rome on low ground, under the ruin-clad hills of their ancestors, within reach of fever and plague—are enervated and debased apparently beyond redemption. The history of the nations on the Mediterranean, on the plains of the Euphrates and Tigris, the deltas of the Indus and the Ganges, and the rivers of China, exhibits this great fact—the gradual descent of races from the high lands, their establishment on the coasts in cities sustained and refreshed for a season by immigration from the interior; their degradation in successive generations under the influence of the unhealthy earth, and their final ruin, effacement, or subjugation by new races of conquerors. The

causes that destroy individual men lay cities waste which in their nature are immortal, and silently undermine eternal empires.

Giace l'alta Cartago : appena i segni
Dell' alte sue ruine il lido serba :
Muoiono le città, muoiono i regni ;
Copre i fasti e le pompe arena ed erba.*

It is unlikely that mankind should be left *exclusively* to the guidance either of calculation or experience in matters of so much importance as the character, vigour, health, and existence of race. The species of the vegetable kingdom, from the moss to the cedar of Lebanon ; the rush, grass, oat, heath ; the willow, oak, beech, hazel, birch ; the sugar-cane, palm, date, olive, vine, barley, find by some affinity congenial fields of growth in the tropics, the temperate and the frigid zones, on the low marshy coast, meadows, fields, uplands, sub-alpine, or alpine regions of the earth ; and the tribes of the animal kingdom, on a similar principle or by a sort of instinct, find homes in the great deep, on the plains, by springs on the hill sides, or in upper air ; the infusoria, reptiles, aquatic fowls, the beasts of the forest and field, the birds of the moor, and the eagle, have their haunts, and choose or change their habitation not by any effort of reason, but by an inborn infallible instinct : and man has also an instinctive sense which draws him to the healthy places of the earth, and makes the lands in which his race dies and is degraded repulsive. In dank marshes surrounded by stagnant waters, and in hollow places of the earth covered with reptiles, we feel oppressed ; on the plain, where the breezes sweep over the herbage, the mind as well as the body is at ease ; and as we ascend the uplands of England, pass large flourishing trees by fresh waters, or mounting still higher see the living springs burst from the earth, the hills covered with heather, the woods, fields, and plains stretched out in endless undulations below, the chest expands in the elastic air, and the soul seems to drink in deeper draughts of Life. On the high lands men feel the loftiest emotions. Every tradition places their origin there. The first nations worshipped there. High on the Indian Caucasus, on Olympus, and on other lofty mountains, the Indians and Greeks imagined the abodes of their highest gods ; while they peopled the low underground regions, the graveland of mortality, with infernal deities. These myths have a deep signification. Man feels his immortality in the hills.

The feverous depressed spirits of the sick on the tropical shores revive at the sight of the hills. The Niger expedition was attacked by the African fever some days after the vessels had passed through the Delta, and the patients from the commencement fell into a state of great depression, which their impending fate justified : " Yet," says the medical historian, " on approaching the confluence of the Niger and the Tchadda, where the hills around them rose precipitous, and the high table land was seen stretching from north-east to south-west, the effect of the high land on the energies of the sick was extraordinary. This moral stimulant seemed to exert a most salutary influence upon men who had not for days raised their heads from the pillow ; many now began to look up and call to mind hills in their own country, which they fancied bore a resemblance to those around them."†

The effect of high and low land is as real, but not so obvious, in England as it is in the tropics. The Saxons and the Northmen came to these islands in ships, and their descendants retain an inextinguishable passion for the sea. In summer and in seasons of sickness English families fly to the sea-side ; in the winter they resort to warm, sheltered spots in the south of England or on the western coast. The boatmen, fishermen, and seamen are generally a hardy, adventurous race. The coast is in many parts precipitous, and the high districts are healthy. In the low, marshy tracts along the southern and

* Tasso. Imperfectly rendered by Fairfax—

Great Carthage low in ashes cold doth lie,
Her ruins poor the herbs in height scout pass ;
So cities fall, so perish kingdoms high ;
Their pride and pomp lie hid in sand and grass.

† McWilliam, p. 76. Other examples are found of the moral effect of high healthy places in the journals of travellers.

eastern coast and the estuaries of rivers, the health of the people is depressed. Around the Wash the mortality approaches that of the Tuscan Maremma. The Atlantic has, however, some sanatory as well as commercial advantages over the tideless Mediterranean.

The extensive observations which have been collected under the Registration Act, and the calculations in this Report, show indisputably that the elevation of the soil exercises as decided an influence on the English race as it does on the native races of other climates and soils.

The great, striking, practical fact which the Inquiry into the Mortality of Cholera in England has elicited, is the influence of slight degrees of elevation. In the vast population of London it is rendered evident. In the part of the parish of Lambeth near the level of the Thames, the cholera, in 10000 inhabitants, destroyed 163; at Kennington, 8 feet high, 90; at Brixton, 56 feet high, 55; and, finally, in Norwood, the highest subdistrict of the parish, where the inhabitants are at least 128 feet above the river, only 5 in 10000: and this was not accidental. Elevation within these moderate limits operated with the regularity of a general law; and the influence of elevation has been felt all over the kingdom. Everywhere the low cities have suffered.

Besides the trial which the population has gone through in the epidemic of the world, there is another test of health: the longevity of the inhabitants of various places, and the rate of mortality experienced from ordinary causes, and home epidemics. The hundred diseases which afflict, derange, and destroy the frame of man acknowledge various causes; camps and cities suffer certainly on low ground from one train of diseases; in high localities starvation, density, impurities, generate other maladies which are not less certainly fatal. The mortality of a dense, dirty city, on a hill, seated on cesspools, and ill supplied with water, may be higher than the mortality of an open town on the margin of low marshes; but the other conditions being equal the mortality in the long run will be greatest in the low situation. The causes which make cholera, plague, remittent fever, yellow fever, periodically fatal, are always in operation, and furnish their daily quota to the hospital, the sick chamber, and the grave. Accordingly we find on reverting to the Tables of Mortality, for the seven years 1838-44, that, as a general rule, the mortality declines as we ascend the rivers. The majority of the healthy districts are at a certain elevation above the sea.

Such is the variety of the soil of England, that tested by the rates of mortality—the children reared out of a given number born—the longevity of the inhabitants—the freedom from common epidemics—or the immunity from cholera, healthy districts are found in nearly every county. Large tracts of country are, however, so much healthier than the rest, that they may be justly called Salubrious Fields; and it is remarkable that here the finest races of animals are bred. The north districts of Northumberland around the beautiful Cheviot hills, covered with grasses, ferns, wild thyme—extending from the region of the heaths to the rich cultivated land at their bases, touching each other, or intersected by narrow valleys; the districts extending from the Tees over the North and East Ridings of York to Leicestershire, Herefordshire, and parts of Shropshire; some of the districts of Gloucestershire about the Cotswold hills; parts of Wales; North Devon including Dartmoor and Exmoor; the Surrey and Sussex hills with the Southdowns, have given names to the best breeds of sheep, fowls, cattle, and horses in the kingdom. The Old Lincoln and the Romney Marsh breeds of sheep attained a large size in the rich pastures of the drained fens; but they have either altogether given way to the other breeds, or been modified by the blood of other races. The immense dray horse of London is bred in the fens of Lincolnshire and Cambridgeshire. He is massive and powerful, but is slow, without mettle, without action; he does not step out, and is unanimated by the fire of the better breeds. The mountain races of horses, cattle, and sheep are small, for the herbage is scanty, but they are hardy, energetic, and intelligent. Their bulk augments on richer pastures, and appears, with the loss of some of the higher qualities, to attain its maximum in the drained fen land. The horse which in Arabia, Barbary, Persia, and England attains so high a development, is said to degenerate on the low coasts of Africa and Asia; but we have no means of tracing the certain degeneration on unhealthy soils

either of these animals, of oxen, or of sheep, in England. All that is well known is the improvement in healthy districts, and the fatal effects of marshes and of the unhealthy atmosphere of towns on the higher classes of animals.*

The dry and most inland are not always the healthiest regions of the country. The salubrious fields are sometimes watered by running streams, and diversified by lakes; the dew is abundant; they are often veiled—not by infectious fogs—but by mists drawn from the sky as it breathes over them; the mountains rise over, the ocean rolls at the distance below them, as on the coast of Sussex, North Devon, the western region of Wales, extending under Snowdon and Cader Idris in a vast amphitheatre round Cardigan Bay; the lake land and moors of the North, rising between the Irish Sea and the German Ocean. The land is sometimes heathy, but may be covered by the sweetest herbage and bees feeding on the flowers: the cereal grains, the hop, the timber, are often of the finest quality; the animals are healthy, the native breeds are vigorous, and those fine varieties are produced at intervals, which men of the genius of Bakewell, Ellman, Tomkins, Colling, and O'Kelly, make the permanent stock of the country. Industry and the army receive their best recruits from the population; while they get their worst from the people of the low parts of sickly towns. Agriculture has reclaimed many unhealthy districts on the plains, so that a considerable extent of the cultivated land is now in a state of comparative salubrity; and vast systems of drainage have subdued the noxious fens, although carried out less efficiently than is desirable, and interfered with by mill-dams on the rivers, descending like the Nene, from the inland highlands.

The population is never uniformly distributed over a country. The soil is washed down into the valleys, and is followed by a fertile vegetation, which supplies animals, and finally man, with food. The places of resort for the performance of public acts, and for the interchange of commodities, have usually a central situation, easily accessible along level roads, where water is abundant: accordingly almost all inland towns of any magnitude are on rivers; and as the commerce by sea increases, the population is brought down to the coast, or to the point up to which the river is navigable by large vessels. The seaport towns are frequently near the deltas of rivers on low coasts; and higher up the rivers a large part of the people are often so insensible that they sink or settle on the lowest ground, to avoid the labour and expense of living on the better sites which are in the neighbourhood. Canals have also had a tendency to draw the population down to low towns on their banks.

The population of England increased slowly in the seventeenth and in the first half of the eighteenth century. The towns and seaports were not then places of great magnitude, and their population was sustained by immigrants from the country—the high nursing grounds of the kingdom. “The supply of London alone,” says Davenant, from King’s observations, “takes up above *half the neat increase* of the kingdom.” The burials greatly exceeded the christenings in London, and it is probable that of the whole population of England only an insignificant portion was born in the low parts of towns and ports. The great increase of the town population in the present century is chiefly due to immigration; which has not only sustained the old proportion of the population, but has introduced a great excess of healthy life from the high inland. The result is, that a large proportion of the population of England is now in the low seaports, manufacturing towns, and cities. The population in 117 districts, comprising the chief towns, was 6,612,958 in 1841, and 7,795,882 in 1851; the population in 506 districts, comprising chiefly small towns and country parishes, was 9,301,190 in 1841, and 10,126,886 in 1851. A large proportion of the next generation of Englishmen will consequently be born in town districts; some of which are high and healthy, while others, low, insalubrious, subject to inundations and to the incursions of cholera, present many of the circumstances in which a degradation of race is inevitable. So, while the drainage of the marshes, the cultivation of the soil, the sanatory measures in the old towns, and the diffusion of education have tended to promote the

* The Domesticated Animals of the British Islands, by David Low, Esq., Prof. of Agriculture. Univ. Edinburgh, 1845.—Journal of the Royal Agricultural Society of England, vol. ix., Prize Essay—On Farm Horses, by W. C. Spooner, p. 249; and Prize Essay—On Cattle, by Hall W. Keary, p. 425.

amelioration of the English race; the descent of the population to the low places, which have in the last ten years increased twice as fast (2 per cent. per annum), as the healthy parts—the sudden growth of large mining and manufacturing places left undrained, ill-cleansed—the liberation of multiplying vagabonds and criminals who were in the old times transported, cruelly destroyed by jail fever or hanged, have had a tendency to increase the proportion of deteriorated organizations. Idiots and lunatics, who are no longer plunged in cells for a short life, and other persons labouring under hereditary diseases, are also increasing, probably from a similar cause. In addition to the inhabitants of the old towns, which have always been fatal, several millions of people are now in the seaports, in South Wales, in Staffordshire, in the mining districts of the north, in the towns of the West Riding of Yorkshire, and in the dense districts of Lancashire; where the health of parents is depressed, and the circumstances are often so prejudicial to their offspring that of the coming generation five instead of two of every ten born are destroyed in the first five years of life, and the survivors, with a few happy exceptions, are left with shattered, feeble, febrile, and disorganized frames. The countenance of the children is painful in these districts; and in all the places where cholera has raged, presents the most striking contrast to the healthy, hardy aspect of the children in salubrious fields. Their degeneration is as inevitable as the degeneration of horses, oxen, sheep, in circumstances equally unfavourable.

All analogy, however, proves that no extensive or permanent degeneration of a race can be accomplished in less than two or three generations. The great change is as slow and insidious as it is certain. It is rarely perceived by its victims; who remain rooted and benumbed on the spot unless they and the community are aroused by sudden and terrible catastrophes. That angel which, it would seem, it has pleased the Almighty Creator and Preserver of Mankind to charge with this dread mission is the Pestilence. Wherever the human race, yielding to ignorance, indolence, or accident, is in such a situation as to be liable to lose its strength, courage, liberty, wisdom, lofty emotions—the plague, the fever, or the cholera comes; not committing havoc perpetually, but turning men to destruction, and then suddenly ceasing, that they may consider. As the lost father speaks to the family and the slight epidemic to the city, so the pestilence speaks to nations in order that greater calamities than the untimely death of the population may be averted. For to a nation of good and noble men Death is a less evil than Degradation of Race.

The acknowledged greatness of England has been variously accounted for; and it would be illogical to refer it to any single circumstance. Among its primary causes are, however, unquestionably to be classed the character and quality of the race of men—derived in happy proportions from a Scandinavian, Celtic and Saxon, stock—and bred mostly in pure air on the hills and grounds of moderate height supplied with running water, or on the fertile plains and valleys of an island, pregnant with mineral wealth and well placed for commerce on the frontier of the old and in the way to the new world. Englishmen have derived weapons in industry and war from the coal and iron mines; but their strength and courage, in modern as in ancient days, came from other sources. Their skill, industry, science, religion, justice, freedom, sense of duty, love of country, and goodwill for other people, have all contributed to their success; they were bestowed on them by nature, circulate in their blood, and beat in their hearts. No race of men, living in marcmias, marshes, deltas, low sea-coasts, low riversides, could have acquired or wielded the Power of this Empire.

In the ten years 1841–50 more than 744,809 children were born in seventeen port districts, six inland districts, and eleven districts of London on the south side of the Thames, where cholera destroyed 26258 lives in 1849; and it is probable that more than one-fourth part of the next generation of the English race will be born and bred in insalubrious places, which must in the long run induce degeneracy. The proportion of such births is rapidly increasing. Is it not time, then, to take heed? Are we not on the verge of a great calamity? This question is more than a question of life and death for the people. If degeneration should extend, and large numbers of the English race be divested of its noblest characteristics, their reclamation would be an arduous if not impracticable undertaking. For while nature

in time supplies a loss of numbers, it is difficult by the most consummate art in favourable circumstances, to retrieve the loss of generous qualities. How few genuine instances are there of the regeneration of a fallen man, class, or nation?

Facilis descensus Averni :

Noctes atque dies patet atri janua Ditis :

Sed revocare gradum, superasque evadere ad auras,

Hoc opus, hic labor est. Pauci, quos æquus amavit

Jupiter, aut ardens exivit ad æthera virtus,

*Diis geniti, potuere.**

Great Britain enjoys undoubtedly many advantages over the Babylons of the ancient world, and the decayed maritime city-states. Extensive habitable highlands and fertile fields must always be the birth-place of a majority of its children. Its population and power can never be circumscribed within a single city or within the low ports of an alluvial coast; and it is surrounded by the refreshing sea. The vast populations which have recently settled in bad localities may almost invariably find in the neighbourhood, sites at elevations which in these latitudes cholera does not climb. With wealth, industry, and science at command, it is still possible to drain, and supply with pure water and a purer air, districts as low as Southwark, Westminster, Liverpool, and Hull; thus disarming them of much of their fatal power.

But malaria begets apathy. The unhappy inhabitants of unhealthy places disregarded statistical calculations—the counsels of their medical men—the analogies of nature, and the results of experience. The wan looks of their children, and the multitudinous Voices of their Dead did not move them. The Community was also in the wrong; for the laws left them without warning, punishment, or effectual assistance. Then Cholera came; and in two heavy visitations carried off more victims than the United Kingdom has lost in many wars. It may, if nothing is done, after a season return, for it still reigns in India.† But let these human sacrifices suffice. The great Sanatory Reforms which will shield the country from pestilence, while they save the lives of thousands, will prevent the degradation of successive generations; and promote the amelioration and perfection of the Human Race.

The organic matter and the water of a country are constantly carried from the high grounds down to the sea. The water, by simple evaporation, and a large part of the organic matter by conversion into volatile ammonia and carbonic acid gas, are raised and redistributed through the atmosphere over the world; but the incessant aid of living beings is required to sustain the equilibrium. Sea fish and sea birds live on the residual spoil. And that man may fight against the eternal force of gravitation, and carry up and fix the falling matter on the High Places of the earth, these have by their salubrity been especially designated for the sites of a larger portion of his great works, his dwellings, and his cities: but a rank soil, and immediate commercial facilities, have too often led him to dwell near the low estuaries of the sea. Our life is fleeting; a generation soon passes away. But the economy of nature is the embodied wisdom of God, and His operations extend through an endless series of countless ages. The existence of the present living races has been rendered possible by processes and formations in the earliest geological eras; and the remotest generations of men are indissolubly connected in one immortal race, susceptible of an indefinite, glorious development. It should not, then, excite our surprise that in the vast arrangements of nature the conditions of well-being and of happiness should

* Smooth the descent to hell: both day and night

The gates of gloomy Dis wide open stand:

But difficult the task thence back to escape

And gain the unclouded sky. This mighty toil

None can achieve, except the chosen few

Whom Jove regards, or they of heavenly birth

Whose soaring virtue bears them to the stars.—HORACE MANN.

† Assistant-Surgeon Balfour, in his interesting Tract on Cholera, shows that the disease is as fatal now as it ever was in India.

be secured for the generations of men who are to live through thousands of years to come. Organic matter must be carried to the raised ground and high lands by man. There he must dwell. In fulfilling this law he escapes from the terrible pestilence, retains his health, exalts his race, and has the fairest opportunity of recovering that Divine Image after which he is continually aspiring.

CONCLUSION.

The history of cholera, and the knowledge which we have acquired of the circumstances in which pestilences are fatal, suggest some useful practical rules and works.

(1.) Persons who have the means may, by an early removal from an *infected district*, always find safety in such salubrious districts, as the tables show, had deaths neither from diarrhoea nor cholera in the year 1849. The sportsman on the moors, and the people near the river sources of the country, in the first week of September, when the cholera killed 2157 persons in London and 4991 persons in other places, were in those high situations in no danger whatever of an attack. Many people left London and went, as usual, to the sea-side. This was an error: sometimes the disease within them was developed on the low land; sometimes they were attacked, not only in the towns, but in the villages on the coast.

(2.) *Strangers* who can avoid it should not visit a town in an epidemic. They appear to be peculiarly liable to an attack. Persons whose duties confine them to an infected town will find that removal from districts in which the epidemic is raging, to high, clean districts of the same town, insures a great degree of immunity.

(3.) In outbreaks, where it may be necessary to move large numbers of people, they should be sent to high, dry ground, where good water can be procured. Clean *ships* generally find safety by going out to sea; *armies*, by removing from the camp in which they are attacked, and encamping on high ground.

(4.) High places are also generally safe asylums from plague, yellow fever, remittent fever, and ague. It is necessary in the epidemics, as it is in cholera, to keep away from marshes and rivers in the lower parts of their course, and to obtain water, if possible, from unpolluted springs.

(5.) *Armies* suffer more from cholera *on march* or immediately afterwards, than they do in station. Many instances are adduced from Indian experience by Mr. Orton; and the fact is placed beyond doubt by the statistical analyses of Assistant-Surgeon Balfour.* The encampments and marches of the Indian armies lie often by rivers, on low grounds. Cholera found the Marquess of Hastings near the margin of the Sind, in Bundelkund, on November 7, 1817, and destroyed in one week 764 fighting men, and some thousands of the camp-followers of the grand army; it ceased after the 19th, when he crossed the clear stream of the Betwah, and encamped upon its high and dry banks at Erich.† Colonel Pearse had been marching, in 1781, on the sea-coast six days through "sand and sea water," when his 5,000 men were "attacked with inconceivable fury," and the road was strewn with the dead in the first well-recorded epidemic of Asiatic cholera.‡

* See some good observations on the movement of troops, in the "Statistics of Cholera," by Assistant Surgeon Edward Balfour. He shows, that of the native soldiers of the Madras army, 32 died of cholera in cantonment, 86 when marching, to an average strength of 10000. The attacks were respectively 85 and 200 in 10000. Dr. Lorimer's Reports show that the troops were more frequently attacked on long than on short marches: thus, the troops in 219 marches of 20—40 days were attacked 39 times; while in 14 marches of 100—120 days they were attacked 7 times. If we take 100 marches as the basis, they were attacked 18 times in about 30 days, in the one case; while in the other case they were attacked 50 times in about 110 days, that is, at the rate of 14 times in 30 days. This is no proof that *fatigue* increases the liability to attack; it only proves that, on the long marches, the men are exposed a longer time to the causes of the disease.

Mr. Balfour would assuredly expect more men to be wounded in a battle of three days, than in a battle of one day's duration.

It would be a great advantage if soldiers in the field could sleep on raised camp beds.

† Jameson on Cholera, pp. 15, 16.

‡ Algiers is as fatal to the French as India is to the English soldier; for the annual mortality was, as M. Boudin has shown, in his valuable papers on Algeria, and "Statistique de l'Armée," 7.58 per cent. in 1837-46, or four times as great as the mortality (1.86 per cent. in 1842-6) in France. The mortality was as low as 4.5 in 1838, and as high as 14.1 per cent. in 1840: it varied at the different

If an army had been marched through or encamped on the low streets of Southwark south of the Thames, in August 1849, it would no doubt have suffered severely from cholera; while it might have been moved down the high roads north or south of London with impunity. The danger from pestilence of every kind is diminished by keeping troops on high ground: they often lose their strength, and perhaps some of their courage as well as health, on low ground near rivers and marshes; which, judging by the event, notwithstanding some advantages, make as bad lines of defence for armies as they do places of refuge for feeble nations, who only survive and permanently resist in the hills.

The Walcheren expedition is an illustration of the fate of military operations on the deltas of great rivers, or on the low islands at their mouths.*

The Peninsular war offers an example of a different kind: our troops suffered severely on the Guadiana: but the earth fought for the English on the high lines of Torres Vedras; and against Masséna in the humid plains below until he retired to Santarem, and finally retreated with the loss of 40000 veterans. The French army remained starving for five winter months, in the midst of marshes; and the disastrous incidents of the retreat showed that they there lost many of their finest qualities.† They began the retreat with 10000 sick.

(6.) *Travellers* in unexplored countries should not rest on low, swampy spots; they have the best chance of preserving their health and the health of their horses and cattle by passing the nights on high ground, in the neighbourhood of springs, or near small rapid rivers. The two Landers, after Captain Clapperton, by adopting this course, landing at Badagry, and, as their map and journal show, keeping on the high grounds, arrived at Yaouri, and both succeeded in *descending* the Niger alive.‡ An attentive examination of journals of travels establishes the value of this rule.

(7.) *Intercommunication*. It does not appear that the Quarantine has been of any avail in cholera. But the arrangements of all the lower classes of vessels are far from satisfactory; and the circulation of dirty pestilential ships like the "Eclair," from low port to low port is not unattended with danger to the health of the community. A sanatory maritime police is therefore indispensable; into which it would be advantageous to convert all the quarantine officers of Europe. The futile, superstitious practices of the lazarettos are as contemptible in the eyes of science as they are injurious to commerce.§ Vagrants are the pestilential ships of the land; and they carry diseases and zymotic

stations in 1845, and was 3.6 in Algiers, 3.7 in Mostaganem, 4.2 in Oran, 5.5 in Philippeville, 6.6 in Blidah, and 14.1 in El-Arouch. The following order, addressed by Marshal Bugeaud, in 1847, to his Generals, shows that the French had become alive to the danger of encamping on low grounds:—

"J'ai remarqué que MM. les commandants de colonne choisissent leur campement au bord des cours d'eau, dans l'intention louable sans doute d'éviter à leurs troupes des corvées pour aller à l'eau. Mais l'expérience a démontré que cette manière de camper donne un nombre considérable de malades.—*Une seule nuit passée dans un bas-fond suffit quelquefois pour donner une centaine de malades sur un effectif de 3000 hommes.* On comprend avec quelle rapidité une colonne serait fondue si cette manière de camper se renouvelait.

"Je recommande donc de la manière la plus formelle à tous les commandants de colonne de choisir toujours leurs campements sur des hauteurs et des coteaux, toutes les fois que le terrain le permettra.—Pourvu que l'on puisse bien se garder dans la position que l'on choisit, peu importe la forme donnée au camp si l'on est dans un endroit salubre. Il vaut infiniment mieux imposer quelques corvées aux hommes pour aller à l'eau et pour mener les chevaux et mulets à l'abreuvoir. La santé des soldats en souffrira beaucoup moins que de camper dans un endroit soumis à des influences morbides."

* "Select Dissertations," by Sir Gilbert Blane, Dis. III. He notices that those who slept in the upper stories of houses were less liable to the Walcheren fever, and had it in a milder form, than those who slept on the ground floors. Dr. Ferguson remarked in St. Domingo, that two-thirds more men were taken ill on the ground floors than on the upper stories. The celebrated Dr. Cullen observed the same thing in the sickness which he witnessed in Porto Bello in the year 1740. p. 91.

† Dispatches of the Duke of Wellington, vol. vii., pp. 256, 270, 448. "I never saw an army so healthy as this [the English]. Indeed I may say that we have scarcely any sick, excepting in the Walcheren regiments."—16 Feb., 1811. "The enemy's loss in this expedition to Portugal is immense; I should think not less than 45000 men, including the sick and wounded; and I think that, including the 9th corps, they may have 40000 on this frontier."—9th April, 1811.

§ See the details in the French Report on Quarantine.

venoms, as well as vermin and vice, to lodging-houses, workhouses, and gaols over the country. This peculiar and degraded race can only be dealt with by special measures.

(8.) *Food.* The temperate use of sound meat, bread, rice, potatoes, grapes, apples, and other fruit for food—with exercise—and sweet water, beer, cider, wine, for beverage, are excellent preservatives before and in times of pestilence. The first great epidemic of cholera in India was preceded by the failure and deterioration of the rice crops; and in England the large importations of grain for three years before 1832 and before 1849 show that the home crop of food had failed, and suffered in quality. The vegetable acids and other compounds in fruits are an essential part of food: that the want of them causes scurvy, undermines the general health, and prepares the way for the zymotic diseases, is proved by the experience of the Navy, and by the most decisive observations.

The exemption of Herefordshire from cholera is evidence that *cider*, notwithstanding the popular prejudice, is a much safer beverage in the time of an epidemic than the spirits which were so largely consumed during the time of cholera in the places where it was most fatal.*

(9.) *Water.* The precautions to take against cholera, in regard to *water*, are well stated by Dr. Snow; and they are of so simple a nature that, considering all the facts, no person can prudently neglect them.†

(a.) Water into which sewers flow, or which is navigated by persons living in boats, or which is any other way contaminated by the contents of drains or cesspools, should be entirely disused.

[To warn any class of men against the use of unclean excremental water, even filtered, may appear useless. But it is now known that it enters into the supply of some of the principal cities of Europe, and contaminates the *eau sucrée* of Paris as well as the house water of London. The disagreeable revolting nature of this truth has probably been a cause of its suppression, and the consequent perpetuation of an insufferable nuisance.]

(b.) Hand-basins and towels, with sufficient water, should always be in readiness in the sick person's room, where every one should observe strict cleanliness: nurses and other people should invariably wash their hands before touching food.

(c.) The healthy should be separated from the sick, and be removed to another abode when they have no place but the sick-room in which to prepare and take their meals.

(d.) Soiled linen should be immersed in water until it can be scalded and washed; for if it should become dry the matter might be wafted about in the form of dust. [The washing of the linen of cholera patients in the ordinary way is apparently not unattended with danger.]

The sanatory value of pure water, as well as the danger of habitually using water holding organic matter of any sort in solution, has been known from the earliest period. Instinct and science hallow springs and streams of living water. It is a difficult engineering task to place an adequate supply of fresh water within the reach of every householder in the large towns: but the task is of such vital importance that it cannot be neglected; and the mission of bringing it within the range of the municipal institutions of London, Paris, and every city, is too beneficent to be overlooked by statesmen. The quality of the best water is only to be discovered by experience;

* It has been shown, in the *Lancet* of January 31st, 1852, that the pickles now on sale in London contain copper solutions, which, taken in considerable quantity, induce attacks somewhat resembling cholera. "In the whole of 16 different samples of pickles analyzed for copper, that poisonous metal was discovered in various amounts: 2 of the samples contained a small quantity; 8 rather much; 1 a considerable quantity; 3 a very considerable quantity; in 1 copper was present in highly deleterious amount; and in 2, in poisonous amounts." The vinegar was weak, and adulterated with sulphuric acid. These analyses of the common articles of food are a great public benefit, and will promote public health by increasing the vigilance, skill, and honesty of manufacturers and traders. Pickles, properly made, are wholesome articles of food; and much of their discredit is no doubt due to the adulterations so ably exposed by the *Lancet*.

† Slightly altered from Paper on Cholera, by J. Snow, M.D., p. 23.; read May 5, June 2, 1851, before the Epidemiological Society.

and may be learnt with sufficient accuracy from analyses of the waters of the salubrious fields.

(10.) *Refuse.* Water, vegetables, hay, grain, cattle, food of every kind, worth many thousands of pounds sterling, are brought from the country every week into the towns of the kingdom. The consumption of this matter by men and animals destroys a great part of its value: and the practice has been (1), to throw the refuse into the streets; (2), to deposit it in cesspools; (3), to wash it down the sewers into the rivers. The third is the modern practice in England; and where the river water is not used, is, in low towns, the least evil. But it has these intolerable disadvantages: that the sewers invariably emit poisonous vapours, that the rivers are polluted, and that the organic matter is thrown away. It becomes, then, a great question whether, by the use of ashes, peat charcoal, or some other stuff, a modification of the old system of nightmen, mechanical arrangements, and the use of the railways and canals, the manure of the towns may not be returned to fertilize the fields of the country in the place of guano; for which it is found to be an adequate substitute.*

(11.) *Air*, not stagnant—sweet, pure, and dry, rather than moist—is the healthiest; and is sometimes a preservative against pestilence on ground otherwise unfavourably placed and watered: but pure air and water are almost inseparable, and conversely so are impure air and impure water. Lancisi lays it down as a physiological axiom: *ubi bonæ sunt aquæ, ibi bonus, ubi malæ, malus itidem est ær.*†

The air of London and of many of the large towns of the island, is moist and foggy. The low situation of parts of the ground, and the vast extent of the evaporating surface of the rivers, often warmer than the air, are the causes of the excess of fog. No water should, therefore, be thrown artificially into the London atmosphere. Fountains in damp places are evils. Lakes lying between mountain ranges, beat by the impetuous winds, and traversed by rivers, as Lake Lemane is by the Rhone, are beautiful and salubrious. The latter qualification, at least, must be refused to stagnant waters in low situations. It is true that a strong stream of fresh water, discharged through the lakes or ponds in the London parks, if they were made so shallow as not to require the intervention of the Humane Society, would keep the water sweet; but the moist London atmosphere requires drying; and might be very advantageously deprived of the damp supplies from the waters in Regent's Park, the Serpentine, and a considerable portion of the bed and muddy banks of the Thames.

(12.) *Earth.* If it is important that travellers, armies, and all moving bodies of men should avoid damp, low grounds, it is evidently of still greater importance that the habitations of a people should be raised on dry, drained land of a certain elevation, washed by rains, and ventilated by the breezes of heaven. The sites of many English towns are unexceptionable; they lie beautifully on the slopes of hills against the sun; the spires of their churches stand out against the sky. The sites of other cities and of parts of nearly all are, as we have seen, singularly bad, and should never have been selected for building. Sites of towns are as much a matter of public concern as lines of road, canals, or railways; and legislation could not be more advantageously employed than in directing and facilitating selection. The present law of settlement, and the mixed, complicated, uncertain tenure of land, interfere seriously with the choice of

* One of the most distinguished Physiologists of the day, inspired, probably, by the grand simplicity of the mechanical arrangements of the human body, has sketched the project of a circuit railway and cloaca within the borders of the Thames, by which "the same railways which bring cattle and corn from our fields, should be made to restore them in their changed form of manure." It is impossible that the travelling and the traffic of London can long be carried on through the streets, which are obstructed by waggons and slow omnibuses. The completion of the outer railway circuit, which now runs from Chalk Farm to Blackwall, with the erection of the second proposed circuit round the embanked Thames, and a due number of anastomosing branches—would provide a free circulation of passengers and goods all over London; while the night trains would afford facilities for collecting and re-distributing every kind of refuse over the country. It is relatively less difficult (that is, less expensive to each individual) to provision or to execute public works for a vast metropolis of two and a half millions of people, organized municipally, than it is to perform the same offices for smaller towns. But ordinary professional minds, occupied with details, shrink at the magnitude of combined operations which they have never contemplated on the grand scale; and it is from without that they often receive their mission and inspiration.

† De Nat. Rom. cœl. qualit. c. vi.

ground, and exclude the people from many of the best sites in the immediate neighbourhood of the places in which they dwell. This evil may be remedied. The railways now offer extraordinary facilities for distributing the population over a wider area; and as the canals and navigable rivers have drawn the population down, the roads, stations, and warehouses, kept as high as is practicable, may counteract this tendency, raise people to a higher level, and at once facilitate drainage and the application of the sewage to agricultural purposes.

The higher districts of Middlesex, Surrey, and Kent, immediately around London, are as healthy as any in the world; so that a moderate extension of the building area in the right direction, would be sufficient to secure salubrious sites. The cost of conveyance and carriage would be speedily compensated even to artizans by their increased health and energy; their children would be saved from death, disease, deformity, vice, drunkenness, degradation, the prolific fruits of malaria. They would be susceptible of religious and intellectual culture; which, in their present dwellings, is made difficult for the children of good and worthy workmen.

The houses in England and Wales amounted to 3,117,182 in 1841, and to 3,433,859 in 1851; the increase in the interval was 316,677, in addition to those, which were built to replace decayed and destroyed houses; so that in the towns of England the selection of building sites is a question constantly open.

(13.) In the *Colonies* the choice of sites for new towns is a matter of primary importance. The sites lying most conveniently for commerce are often low and insalubrious; but as low shores are more subject to inundations, earthquakes, pestilences, and the influences that deteriorate the English race, the tempting facilities which they offer should not weigh against the enduring advantages of high healthy lands. Regard must of course be had to defence, commercial convenience, and fertility of soil; but in taking possession of new countries, the proper course would appear to be to ascend the rivers sufficiently high to secure vigour of race, and then gradually to descend towards the deltas, draining and cultivating the land on the way. The rule is the result of all our present investigations; it is quite in conformity with the traditional course of the primæval races. The example of Holland, of America, and of parts of England, shows that low fen and marsh land is habitable; and with efficient drainage, it is probable that, if thinly peopled by a race well fed and naturally hardy, neither disease nor degeneration would go beyond a certain point, quite compatible with a comfortable if not a very spiritual and exalted existence. A moderate elevation in temperate climates is a protection against many evils: as cholera has shown in London.

(14.) *Climate.* Long experience alone can ultimately determine what climates are healthy; and every locality must be ultimately judged by the test of such a calculation as has been applied to the districts of England and Wales. But analogy justifies the inference from experience, in some cases brief and imperfect, that in parts of Canada, the United States, South America, New Zealand, the Isles of the Pacific Ocean, Australia, and Southern Africa, the English race retains the energy, which it invariably loses in two or three generations on the low tropical lands of the West India Islands, of the West Coast of Africa, and of Southern Asia; where much of the best blood of England has been sacrificed without establishing permanent settlers, making any evident impression on the native population, or producing any lasting fruits. Near the spot which has, for many years, been the centre and the capital of the imperial power in India the devastating epidemic cholera was generated, which has twice ravaged these islands, and twice encircled the world. The average mortality of the English troops in India has hitherto exceeded 5 *per cent. annually*. The removal of the European population from the low to the high land, railways, vast systems of drainage, and the steady prosecution of the sanitary measures which have been commenced, are required to justify the credit which the Government of India has latterly obtained for enlightenment and beneficence.

(15.) *The Medical Profession.* The development of the public health is a science and an art. The true doctrines have not only to be discovered but to be taught; not only to be taught, but to be inculcated, in season and out of season. It is the office of medicine to raise men up to a high standard of health, and not merely

to heal the sick. Under this head a passage in the London Weekly Return of September 15, 1849—one of the last pages in the *Journal of the Pestilence*,—may be quoted; which, while it does the medical profession no more than justice for their conduct in the epidemic then subsiding, expresses the high character of their duties.

“No city, perhaps, ever possessed such an efficient body of medical men as are now practising in London. During this epidemic they have performed services which in any other field must have won the highest honours; combating the disease night and day in the most pestilential quarters, on much more settled principles than the public might be led to suspect from certain discussions at the medical societies. And their office has been discharged with so much kindness as to deserve the gratitude of the poor; instead of drawing down on their heads the charges with which the physicians of other countries have often been assailed by the populace. Nearly all the sick have been seen by these practitioners; yet 12837 persons have already died of cholera in London. How is this? The medical force will be found to have been employed at an immense disadvantage. It is called into action at the wrong end of the malady. Inquiries prove that while medical advice is generally sought in the characteristic stage, it is seldom obtained in the premonitory stage when the power of medicine is decisive; and to that earlier and still more important period preceding the premonitory stage which is prevented as easily as cured, medical practice has had little or nothing to say. Cholera here also only shows in high relief what exists in ordinary circumstances. Medical men rarely, if ever, treat the beginnings of diseases; and are scarcely ever consulted professionally on the preservation of the health of cities or families. The art of preserving health is taught in no regular course of lectures at any of the great schools of medicine in the United Kingdom. Yet the classical sanatory works of Pringle, Lind, Blane, Jackson, Johnson, and Martin have been framed from observation in the British navy and army. In the science of health there are more exact demonstrable truths than in the science of disease; and the advantage of ‘prevention’ over ‘cure’ requires no proof. In the *Cyropædia* of Xenophon physicians who only treat the sick are compared to ‘menders of torn clothes,’ while the preservation of health is declared a noble art worthy of Cyrus himself. Vegetius speaks in similar, Jackson in stronger terms, but perhaps unjustly; for if it is godlike to save many from suffering and to carry them in healthy life up to the natural term of existence, it is a worthy occupation to rescue a few from the arms of death or incurable infirmity. But the preservation and the restoration of health are parts of one science; and if, as has been done by the City of London and by Liverpool, Health Officers be appointed in all the districts of the kingdom, the art of preserving health will be studied by a high order of men well paid by the public; and ultimately, with an increase of their remuneration, the diminution of sickness, the disappearance of epidemics, immense advantage to the public,—the whole medical profession may devote themselves to the preservation and development of the vigour of the human faculties, instead of being tied down to the treatment of the sick and dying. ‘And this,’ Lord Bacon says, after his great survey of learning, ‘we hope might redound to a general good, if physicians would but exert themselves, and raise their minds above the sordid considerations of cure; not deriving their honour from the necessities of mankind, but becoming Ministers of the Divine power and goodness, both in prolonging and restoring the life of man; especially as this may be effected by safe, commodious, and not illiberal means, though hitherto unattempted. And certainly it would be an earnest of Divine favour if, whilst we are journeying to the land of promise, our garments, those frail bodies of ours, were not greatly to wear out in the wilderness of this world.’” *

* Hist. Vitæ et Mortis.

T A B L E S

REFERRED TO IN THE FOREGOING REPORT.

ANNUAL MORTALITY per Cent. from all Causes during the Seven Years 1838-44, in the Statistical Districts of ENGLAND, arranged in the order of the Mortality of Females of all Ages;—the healthiest districts being placed first.

No.	DISTRICTS.	All Ages.	
		Females.	Males.
293	(a) Glendale, (b) Bellingham, (c) Haltwhistle . . . Northumberland	1.383	1.417

NOTE.—In the above calculations, the population enumerated March 31, 1851, has been used, a correction having been applied for the purpose of reducing it to the number estimated to have been living in the middle of the Year 1849. The calculations in a subsequent table were made before the population of 1851 was known.

DEATHS from CHOLERA on each DAY of each WEEK in the Year 1849.

NOTE.—In calculating the mortality from cholera and diarrhœa, the population enumerated in 1841 was used without any correction for increase. The mortality of places in which cholera was most fatal, will be found in a previous table, a correction in the calculations there given having been made for increase of population.

DISTRICTS in which there was NO DEATH from CHOLERA in 1849; POPULATION 1841 and 1851; Deaths from DIARRHŒA in 1849; and Deaths from all Causes, in the 10 Years 1841-50.

* The deaths registered from cholera in the district of West London include those occurring in St. Bartholomew's Hospital. In calculating the mortality, a correction has been made for the purpose of distributing a due proportion of the deaths in the hospital over the districts of East London, West London, and London City. For this purpose, the researches of J. Simon, Esq., the Health Officer of the City, were made use of: the number of deaths from cholera thus corrected were, in East London, 197; West London, 278; and London City, 213.

NOTE.—Columns 1 and 2 have been estimated for the Registrar-General by Captain Dawson, R.E., of the Tithe Commission. Columns 3 and 4 are extracted from the Appendix to the Ninth Annual Report (folio) of the Registrar-General, pages 118–124. Column 5 is obtained from the Return of Real Property Assessed to the Property and Income Tax for the year ending April 5, 1843. Column 6 is obtained by raising the population enumerated, June 6–7, 1841, to the middle of the year 1841; and column 7 by reducing the population enumerated March 31, 1851, to the middle of 1849, by employing the same rate of increase as was found to have existed between the two censuses, 1841 and 1851.

The estimated population of each district has been separately calculated according to the rates of increase ascertained to have existed in such district.

In some central and well-covered districts (St. Martin in the Fields—St. James, Westminster—St. Giles—West London—and Hanover Square and May Fair,) the population during the 10 years 1841–51 was found either to have decreased or to have increased but slightly; no rate of increase has therefore been applied to the population of these districts as given in the above Table.

The number of houses in Hampstead was 1796 in March 1851; the Registrar, Mr. Paxon, after special inquiries, finds that, in January 1850, only 206 houses are supplied by the West Middlesex Company.

AVERAGE OF THE RESULTS IN THE DISTRICTS WHICH SUFFERED THE HIGHEST AND LOWEST MORTALITY FROM CHOLERA IN THREE GROUPS OF DISTRICTS.

* The City of London within and without the walls is divided into three Unions for the relief of the poor, making three registration districts—the City, the West, and the East districts: in the West district is Bartholomew's Hospital, the deaths in which from cholera of persons belonging to the City have been distributed over each of the three districts.
† For Registration purposes, Paddington is united with the sub-districts of Kensington, Brompton, Hammersmith, and Fulham, under the name of Kensington. The district of St. George Hanover Square, comprises the sub-districts of Hanover Square, May Fair, and Belgrave.
‡ Including the deaths from cholera in St. Thomas's Hospital.
§ In Shoreditch are included the deaths from cholera in St. Luke's workhouse.

The deaths of several children who were removed from Mr. Dronet's establishment at Tooting, in the Wandsworth district, occurred and were registered in other districts of London.
In some few instances a small part of a district is supplied with water by other companies than those denoted in this diagram. In other instances the supply is imperfect, or by pumps and by ditches.

The Diagram represents the relative position of the districts of London, and shows in a condensed form the results derived from the data in other tables. The inhabitants of the north side of the Thames are, it will be seen, at an average elevation of 31 feet above the high-water mark, and the density, in the proportion of 52 to an acre, is to a house; the houses averaging in annual value 42. Their water is chiefly supplied from the Thames above Battersea, from the New River, and the Lea. The inhabitants of the south side of the Thames are, on an average, only 5 feet above Trinity high-water mark; and as regards density, the proportion of 14 to an acre, 6 to a house; the houses averaging 25. In annual value. The money expended in the relief of the poor by the inhabitants of the north side was 12d. in the lb.; by those of the south side 12d. in the lb. of the poor. The water is chiefly from the Thames below Battersea, and from the Ravenshoe. The general mortality did not

differ much on the north and south sides of the river; it was 251 annually in 10000 inhabitants of the north, 227 in 10000 inhabitants of the south side of the Thames. The density is less in the Surrey districts of London, which have only this great advantage over their northern neighbours. The mortality from cholera was very different; it was 41 on the north, and 120 on the south side of the Thames in 10000 inhabitants. It will be observed that the value of houses decreases very regularly in the bonds of districts proceeding eastward from Marylebone, Hanover-square, and St. Martin-in-the-Fields to Bethnal Green. Thus the average annual value of houses was in Hanover-square, 132d.; St. James, 121d.; St. Giles, 121d.; St. Giles, 121d.; Clerk-gate, 32d.; St. Luke, 28d.; Shoreditch, 25d.; Bethnal Green, 24d.

NOTE.—In each Sub-district the LARGE FIGURES denote the Mortality from Cholera, and are placed *above the Small Figures* expressing the Elevation : thus, in Hampstead, Cholera 8 deaths in 10000 ; Elevation 350 feet. The name of each DISTRICT only is given, excepting in the case of the most distant and extensive Sub-districts. Some disturbance in the results of this Table are caused by the Union Workhouses, which were sometimes used as Cholera Hospitals. The lines showing the boundaries of the Districts do not represent their exact shape, but indicate as nearly as possible their relative position.

MORTALITY from CHOLERA, 1849, in the SUB-DISTRICTS of LONDON, arranged in the order of the Elevation of the Soil above the Trinity High-Water Mark of the Thames.

[The results in this Table were obtained by dividing the Deaths from Cholera in 1849 by the population returned at the Census (March 31st, 1851). No correction was made for increase of population from July 2nd, 1849, to March 31st, 1851; the mortality is consequently somewhat understated in the outlying Sub-districts. This does not materially affect the general results.]

1593.

1603.

PLAGUE YEARS.

1625.

1636.

1665.

Greater Diagrams representing the weekly Deaths in the years 1593, 1603, 1625, 1636, 1665, 1849, and the average weekly Deaths of 1640-46.

The distance between the Centre and the second, the second and the third circles represents 500 Deaths. The inner circle represents the average weekly Deaths of the period six in the diagram of 1849, the average of the 10 years 1640-49, and from the 7 years 1640-46. The number of the weeks are arranged round the outer circle. The number of deaths in any particular week is shown by the length of the radial line extending from the centre in the direction of the number of the week indicated on the outer circle.

Thus in the 15th week of the year 1665 the number of deaths was 1368, which is shown by the length of the 15th line. In order to make the deaths in the different years admit of comparison with one another it was necessary to increase the number of deaths in the early years in the same ratio as the population, or to diminish the deaths of later years in the same proportion; but as the former plan of adoption would have made either the diagram immensely large or the scale of deaths too small, the latter plan was thought preferable.

Note in which the mortality of the Cholera Year (1849) was deduced.

Estimated population of London (Graunt) 1661 = 281,100
1849 = 2,376,976

consequently the population in 1661 was to that in 1849 nearly as 174 to 1000; the deaths in 1849 were therefore reduced in that ratio and the diagram now shows the deaths in 1849 to 284,000 of the population.

The diagrams 1636 and 1665 are from the actual returns; the population was assumed to be the same as in 1661 when estimated by Graunt.

The London Bills of Mortality in 1636 had several other parishes added to them: viz. St. John, Hackney, St. Mary, Abington, St. Mary, Lambeth, St. Mary, Avington, St. Mary

Rothemith, St. Dunstan, Stepney; consequently the Bills down to the year 1625 returned less than the actual number that occurred in the Metropolis as defined in 1636; the population of which was also probably increasing.

It has been assumed that the parishes not in the Bills registered Burials equal to one fourth of those included in the Bills.

The total number of weekly Deaths returned has therefore been raised one fourth in the years 1593, 1603, and 1625. It is believed that the mortality of those years is thus understood, notwithstanding the addition to the return.

AVERAGE MORTALITY FROM CHOLERA IN GROUPS OF SUB-DISTRICTS IN LONDON.—Arranged in the order of the ELEVATION of the SOIL.

NAMES of the SUB-DISTRICTS in each Group—of Columns 2, and 4.

NAMES of the SUB-DISTRICTS in each Group—of Columns 2, and 4.				
Elevation in Feet above Trinity High-water Mark of the Thames.	Derived from all the Sub-districts without Correction for Hospitals or Workhouses, &c.	Excluding some Sub-districts which contain large Hospitals or Workhouses.	Derived from all the Sub-districts corrected by distributing the Deaths in Workhouses.	Calculated Series derived from the Formula (65 + 13) 25 e + 13 (See page lxiii.)
Annual Mortality from Cholera in 1849 to 1851.

NOTE.—The numbers for the years 1640-46, 1593, 1603, 1625, 1636, 1665 are taken from the "Mortality of the Metropolis," by J. Marshall, Esq., (pp. 65 and 66). The deaths in 1849 are from the Weekly Return of the Registrar-General. No deaths were returned in the first 11 weeks of the years 1593 and 1603; those in the corresponding weeks of 1606 are applied to the latter year.

* These Totals are the sums of the several columns, and do not in some cases correspond with those given by Mr. Marshall in page 65.

MAP OF ENGLAND

SHADED
to show the prevalence of
CHOLERA
in the Several Districts
DURING THE EPIDEMIC OF
1849.

Note. The Relative degree of Mortality is expressed by the darkness of the Shading. Thus in Hull where the Mortality was 287 in 1000 inhabitants the Shade is darkest, in Gaultford, Surrey, where the Mortality was 5 in 1000, the Shading is imperceptible. The dates indicate the time at which the Epidemic broke out. The slight eruptions in 1848 and in the earlier part of 1849 are not noticed in the Map, as the dates refer exclusively to the principal Epidemic which prevailed in the Summer & Autumn of 1849. The Name of no town except Gaultford is inserted where the rate of mortality was less in the year than 4 deaths from Cholera to 1000 inhabitants.

CHOLERA 53293. DEATHS

ALL ENGLAND.

DIARRHŒA 18887. DEATHS

DIAGRAM REPRESENTING THE DEATHS FROM CHOLERA AND DIARRHŒA ON EACH DAY OF THE YEAR 1849.
WITH THE METEOROLOGICAL PHENOMENA REGISTERED AT GREENWICH ON THE CORRESPONDING DAYS.

The elevation of the Blue Line from the base indicates the relative number of deaths from Cholera on every day of the year. The scale is on each side.
The elevation of the Yellow Line indicates the relative number of deaths from Diarrhoea on every day of the year.
The Black Line indicates the daily fall of Rain at Greenwich in Inches. The scale is on the side.
The height of the upper Red Line from the base indicates the mean Temperature of Greenwich of every day of the year. The scale in Degrees of Fahrenheit is at the sides of the Diagram.
The height of the Red Lines in the middle of the Diagram indicates the extent of the daily movement of the Wind. The Black lines point out the direction of the Wind.
The elevation of the upper Red Line indicates the height of the Barometer.

TEMPERATURE AND MORTALITY OF LONDON For every week of 11 years (1840-50.)

Circular Diagrams showing the relation Mortality and the mean temperature in each week of the 11 years 1840-50. The distance between each circle represents either 10° or 20° of temperature; the radii represent the weeks of the year the numbers of which are arranged round the outside circle from 1 to 52. Outside these circles which were for a number of years are two others, the one running inside the yellow colour and inside the black, the other outside.

the blue and inside the red colour represent respectively the average weekly deaths of the ten years 1840-49, corrected for increase of population, and the mean temperature at 32° the 52 years 1770-1820. The outer irregular line represents the Deaths, and the inner irregular line the mean temperature in each week of the year. The black colour denotes the extent to which the weekly

deaths exceed the average (Excessive Mortality), and the yellow colour denotes the extent by which the weekly deaths are below the average (Subaverage). The red colour denotes the extent by which the mean temperature of the week exceeds the mean temperature of the 52 years (Heat), and the blue colour the extent by which the mean weekly temperature is below the mean temperature of the 52 years (Thaw). In the year that the number of deaths registered in the 52nd week was 315, the

average weekly number for the 10 years was 212 below the average difference is shown by the width of the yellow mean temperature for the same week was 69° the average mean for the 52 years was only 48° the mean temperature of that week was 21° above mean, which extent is shown by the width of 6°

220 the which four. The whole is that range above.

NOTES ON CHOLERA.

1849.

LONDON.—WEST DISTRICTS.

MIDDLESEX (PART OF).

[The figures refer to the number of the District and Sub-District. The name of the District is in SMALL CAPITALS, and the Sub-District in *italics*.]

I; 1. KENSINGTON; *Paddington St. Mary*.—Pop. 6436.—Chol. 12; Diarr. 15.—Includes the north part of the parish of Paddington, west of the Edgware-road; bounded on the south by Westbourne-grove-road, Bishop's-road, and the Canal basin.

On May 25th, the first fatal case of cholera occurred at the Workhouse; the next on July 30th, at Pickering-place; the last death from cholera was recorded in the workhouse on September 11th. Church-place, Dudley-street, Brindley-street, Kent's-place, &c., and the neighbourhood of North Wharf-road, chiefly suffered from cholera and diarrhoea. 3 deaths from cholera, and one from diarrhoea, occurred in the Workhouse, in which the inmates number about 200.

I; 2. KENSINGTON; *Paddington, St. John*.—Pop. 18737.—Chol. 23; Diarr. 39.—This Registrar's district lies west of the Edgware-road, between the Canal basin and Hyde-park, and includes the north part of the Kensington-gardens.

Cholera appeared on June 28th, at 27 St. Peter's-burgh-place, where a solicitor died in 30 hours after the attack commenced; the next 2 deaths occurred in July, on the 11th and 15th; in August 11 deaths; September 7; October 2, the last fatal case on the 11th. Of the 23 deaths from cholera, 19 were adults, and of the 39 deaths from diarrhoea, 24 were children under 4 years of age. The epidemic was fatal in Praed-street, Chapel-side, Star-street, Market-street, Oxford-terrace, Gloucester-terrace, &c.

I; 3. KENSINGTON; *Kensington Town*. Pop. 17369.—Chol. 97; Diarr. 35.—On January 9th and 14th, 2 pauper children died in the workhouse of cholera, after removal from Drouet's establishment at Tooting. By February 7th, the next 18 fatal cases occurred in Jennings's-buildings; in this locality the epidemic prevailed throughout the year, and 30 deaths from cholera occurred; also 18 in the potteries, and 7 in the Workhouse (which contains about 300 indoor paupers); 7 in New-street; 5 in James-street, Kensington-square, &c. The last case recorded occurred on October 11th, at Prince's-place; the majority of the persons attacked were labourers and their families.

The following notes are selected from the Registrar's reports:—

In his return for the week ending January 20th, the Registrar states that "23 children had been removed from Drouet's school at Tooting. Of this number 16 were attacked by cholera, but owing to careful treatment only 2 cases proved fatal. Jennings's-buildings is the resort of the poorest class of persons (principally Irish). In many cases there are seven or ten persons living constantly in a single room."

"On July 28th, at the potteries, Kensington, the son of a tile-maker died of cholera in 42 hours; this death was attributed by the medical attendant to the malaria arising from a pond of stagnant water, called 'the

Ocean,' a receptacle for dead animals and filth of various descriptions, and into which the adjacent piggeries and privies have been drained for the last 20 years. This enormous cesspool has recently become more dangerous to health in consequence of the erection of St. James's National Schools, on that side where there is the greatest accumulation of the foul drainage. Several cases of dysentery and diarrhoea have occurred in the neighbourhood."

"On August 17th, at the potteries, son of a carman, aged 2 years, died of diarrhoea. The most unhealthy place in this district; it may be almost considered a village of pig-feeders, without drains, and surrounded on all sides with stagnant pools of water."

"On August 31st, at 3 Trafalgar-place, widow of a soldier, cholera 36 hours. This woman was engaged as nurse to a person who died of cholera on August 25th; it is stated she took home the clothes of deceased and washed them."

"On September 20th, at 5 Uxbridge-street, widow of a labourer, cholera 3 days. This woman laid out the body of a lady who died of cholera, took home the clothes to wash, and placed them in a tub of water under her bed."

I; 4. KENSINGTON; *Brompton*. Pop. 9465.—Chol. 27; Diarr. 14.—Forms the south-east part of the parish of Kensington, bounded on the west by the Kensington canal, on the south by the Fulham-road, &c. Cholera was fatal in 12 hours, on July 9th, to a music-seller's widow, at Michael's-place; the epidemic was most prevalent in September; the last death took place at 5 Yeoman's-row, on October 2nd, duration of attack 17 hours. In the Consumption Hospital, 10 deaths from cholera were registered; and Brompton-row, Sloane-place, Chapel-place, Yeoman's-row, &c. are localities in which the epidemic was fatal.

The annexed cases are selected from the Registrar's reports:—

"On July 25th, at 44 Chapel-place, a labourer, aged 31 years, cholera 13 hours. The medical attendant stated that 'the deceased was annually subject to severe monitory diarrhoea; on this attack, medical aid was employed until collapse set in. The locality (Chapel-place) is damp and very badly drained. In consequence of stagnated filth of every kind, fever and sickness frequently prevailed."

"On August 14th, at 6 Sloane-place, widow of a soldier, cholera 6 hours. Sloane-place is occupied by the poorer classes; it is in a crowded neighbourhood and unfavourable to health."

"On September 13th, at 41 Chapel-place, a spinster, aged 45 years, cholera 26 hours. The deceased had attended a person who died in the house of cholera on the previous Sunday."

"On September 12th, at 5 Sloane-place, son of a lawyer's clerk, diarrhoea 8 hours, cholera 6 hours. The informants stated that a cow-shed and pigs in the locality render the place at times very offensive."

"On October 1st, at 13 Yeoman's-row, a female, aged 55, supposed to be a married woman, cholera 15 hours. The deceased had washed the clothes of a person who died of cholera on 25th ultimo."

"On October 2nd, at 5 Yeoman's-row, wife of a journeyman baker, aged 63 years, cholera 17 hours. This person, to clean her room, had made use of

suds in which the clothes of a person who died of cholera had been washed."

1; 5. KENSINGTON; *St. Peter, Hammersmith*.—Pop. 3565.—Chol. 8; Diarr. 8.—Includes the chapelry of *St. Peter*, extending east from Turnham Green, &c. On July 7th the first death from cholera, in 16 hours, occurred in New-street; another on the 6th August, in 14 hours, at Ravenscourt-cottage. The two succeeding deaths, on the 16th and 19th, were at 12 Trafalgar-street, occupied by a laundress, and in the same house 2 deaths from diarrhoea also occurred on the 19th. 2 deaths were recorded from cholera at 8 South-street on the 24th and 28th August, namely, a painter and his wife; the last case registered was on September 11th, at *St. Peter's wharf*. The Registrar, in his cholera returns, describes the following cases and localities:—

"On August 16th, at 12 Trafalgar-street, laundress, cholera 12 hours, consecutive fever 3 days. The street is almost without drainage, the water during three-fourths of the year lying 2 or 3 inches deep in the roadway. The houses are inhabited by very poor people, and are dirty, ill ventilated, and badly drained. This is one of the worst localities in the district."

"On August 16th, at 4 New-street, daughter of labourer, diarrhoea 3 weeks. The neighbourhood in which these deaths have occurred is traversed by a creek from the Thames, the bed of which is covered by a thick layer of most filthy mud, emitting a sickening effluvia in warm weather upon every recession of the tide. The houses are mostly very dirty and ill ventilated, and inhabited by several families."

1; 6. KENSINGTON; *St. Paul, Hammersmith*.—Pop. 9888.—Chol. 33; Diarr. 12. Includes the east part of the parish of Hammersmith, bounded on the south by the river Thames, and comprises Brook-green, Shepherds-bush, &c.

On February 24th, a death from cholera occurred at No. 8 Scott's-cottages, Shepherds-bush. In the first week of March a labourer and his son died of cholera at 2 Scott's-row, in the same neighbourhood; the next fatal case on July 12th, at Providence-place; the epidemic continued to increase in August, and prevailed throughout the month of September. On the 27th the last fatal attack was at the Lower Mall. At No. 7 Margaret's-row, Brook-green, 4 persons died, 2 dying on one day (August 28th); and at No. 5 Crafter-terrace, Latymer-road, the 2 children of a potter; in this terrace 4 other persons died of cholera. The annexed particulars are selected from the Registrar's remarks:—

"Two deaths took place from cholera in Scott's-row, Shepherds-bush; the row consists of eight cottages on the Uxbridge-road, inhabited by the families of labourers, of whom some appear to be in great destitution. The locality is swampy, badly drained, and has some stagnant ditches. In the rear of the cottages, at the distance of 25 feet, is a foul ditch, into which a quantity of nuisance is emptied."

"On August 14th, at 1 Brook-green-place, son of a labourer, diarrhoea one week, convulsions 24 hours. A close, overcrowded, filthy street, chiefly Irish inhabitants."

"On August 25th, at Albion-lodge, Brook-green, gentleman, diarrhoea 5 days, cholera 16 hours. Regular and temperate in his habits, living retired from business. All the symptoms of malignant cholera appeared about 2 hours after having been visited by his medical attendant for simple diarrhoea, when his case did not present any particular feature. His appearance when in health indicated obstructed circulation about the heart, and bronchial disease."

"On August 28th, at Spring Vale Factory, Blythe-lane, workman at a bleaching factory, cholera 7 hours."

"Four cases of cholera which occurred at Margaret's-row, Brook-green, were characterized by extreme severity."

"Margaret's-row consists of 10 or 12 cottages, situated at the west end of Brook-green, open in front to the common; they are small and crowded; the owner lived amongst them in a large and commodious house—his death from cholera was reported on August 25th, at Albion Lodge. The first case occurred on the 27th, at No. 7, a gardener; he had been labouring previously under diarrhoea, collapse had set in before he was visited. At 3 p.m. a girl about 12 years was attacked in the same house, collapse at the very commencement, and at about 11 p.m. the mother, who had been in attendance upon these two cases, was likewise attacked, and became immediately collapsed, all on the same day. The cases at No. 8, which occurred next morning, were still more rapid—father and child; the former worked at a bleaching factory close by, left his house about 6 a.m. in good health, had slept well, had neither been sick nor purged, nor any other premonitory symptoms, and in about an hour was seized with all the most malignant symptoms. The child at home was seized much about the same time, and died almost as rapidly. Within 80 yards of these cottages there is a most foul, filthy, and offensive ditch, containing a large quantity of black putrid matter. The wind on Sunday and Monday was directly over this ditch towards these houses."

"On September 4th, at 7 Margaret's-row, Brook-green, charwoman, died of cholera 2 days, typhoid fever 3 days. Was in the same house where 3 people died in the previous week."

"On September 6th, Broadway, a charwoman, cholera 24 hours. Locality open: this person was in great poverty, intemperate, and was nurse in a house where cholera had appeared."

"On September 8th, at 1 Salem-place, Bridge-road, wife of journeyman tailor, cholera 18 hours. Husband, wife, and 3 children occupying one room; always filthy and offensive. The family in the utmost destitution and poverty, not intemperate. Wife of a feeble constitution, and subject to epilepsy; returned from Bermondsey the day previous, where she had been to visit a sister and 2 children, all dead from cholera; no premonitory symptoms, but collapse ushered in the disease; she never rallied in the slightest, although she had immediate medical assistance."

"On September 13th, at 5 Crafter-terrace, Latymer road, son of potter, cholera 12 hours. An open situation, but low and damp; close to the potteries in Kensington district; a foul, filthy situation, where cholera has been very prevalent."

1; 7. KENSINGTON; *Fulham*. Pop. 9319.—Chol. 60; Diarr. 23.—This district comprises the entire parish of Fulham, bounded on the south-east, south, and south-west by the river Thames, Kensington canal, &c., and includes Walham-green, Parsons-green, &c.

At Sun-street, North End, the first fatal attack of cholera was on July 3rd, the next death August 4th; the epidemic continued to increase to the first week of September; from the 5th to the 12th 20 persons were deprived of life; after this date the epidemic declined. On October 6th the last victim was a labourer's wife, at Carpenter's-row, Walham-green. From August 4th to the 10th, a labourer, his wife, and child, were fatally attacked at 8 Willow-place; at 5 Pond-place the 2 children of a labourer, in the same house, died of cholera; in the Cholera Hospital, on October 3rd, a labourer removed from Parsons-green-

lane, in which locality 11 deaths took place from cholera; also 7 in Willow-place, 6 in Star-lane, 4 in Peterborough-row, Parsons-green, 3 in Orchard-place, 3 in Sun-street, North End, &c. Amongst the families of labourers and gardeners the epidemic was most fatal. The Registrar, in his returns of cholera, describes the following localities:—

"On August 13th, at 11 Munden-place, wife of a labourer, cholera 13 hours. A yard of dirty and ill-drained cottages."

"On August 14th, at Willow-place, wife of a labourer, cholera 34 hours. These cottages, 21 in number, are small, dirty, and have no thorough draft; privies and cesspools in front."

"On August 20th, at Parsons-green-lane, wife of a labourer, cholera 12 hours. A row of dirty, ill-drained, and overcrowded cottages."

"On August 27th, at Broomhouse-cottages, a watchman at a market gardener's, cholera 10 hours. A row of gardeners' cottages, very near the Thames; deceased was a remarkably fine man, but had been out of employment for some time."

"On August 31st, at 16 Star-lane, labourer, cholera 20 hours. The whole of this neighbourhood is in a most filthy condition; no drainage, dwellings unhealthy. Typhus and small-pox are often prevalent here. The informant states that the water that is used here is so bad, that it is often discoloured, and that the well is in the immediate vicinity of several cesspools."

"On September 5th, at 2 Orchard-place, North End, widow of a bone-boiler, cholera 12 hours. Cottages very small, neighbourhood dirty for want of drainage, close to where 2 deaths were recorded in the previous week."

"On September 7th, at North End, gardener, aged 52 years, cholera 16 hours. The widow of deceased states, that a short time ago her husband was employed with 2 other men in digging in some very offensive dung at Earl's-court, and that both the other men have died since of cholera."

"On September 11th, at Parson's-green-lane, wife of a labourer, cholera 20 hours. The deceased washed the clothes, and had worn a shawl belonging to a family in which 3 deaths had been previously recorded."

"On September 13th, at Sun-street, North End, son of a labourer, cholera 13 hours. Street in a most deplorable condition, no drainage."

2; 1. CHELSEA; *South*. Pop. 14467. Chol. 102; Diarr. 42.—On the south, bounded by the river Thames from the Kensington canal to the Grand Junction water-works, on the north by the King's-road, &c., includes Chelsea Hospital, &c.

In the early part of the year 4 deaths from cholera were recorded in the Royal Hospital, Chelsea, and one case at 6 Wellington-buildings; after a lapse of 4 months, on July 4th, a lighterman died of cholera, at 4 World's End-passage, from this time to the end of the month 15 persons were deprived of life, in the month of August 41 persons died, in September 37, in October 3; the last on the 6th at 4 Union-place. 15 deaths from cholera and 5 from diarrhoea were of pensioners in the Royal Hospital, Chelsea; the number of pensioners living in the Hospital is about 500. In the Royal Military Asylum, the son of a soldier died of cholera, on September 13th (contains about 400 boys from 5 to 15 years of age).

The localities principally infected were—Wink's-buildings, George-street, Wilderness-row, World's End-passage, Millman-row, Jackson's-place, Church-street, Wellington-buildings, Evans-place, Duke-street, Queen-street, Radnor-street, Bolton-gardens, &c. With few exceptions the deaths from diarrhoea were in children under the age of 2 years, and those advanced in

age beyond 60; it was prevalent in July, August, and September.

2; 2. CHELSEA; *North West*. Pop. 12638.—Chol. 97; Diarr. 22.—Bounded on the north by the Fulham-road, on the south by the King's-road, on the east by the Marlborough-road, &c. 3 deaths from cholera occurred in January, and one in the month of May, at the workhouse, Chelsea. The next case was recorded on July 6th, at 18 King-street; the epidemic attained its height on September 7th, on this day 7 persons died, 4 of whom were in the Workhouse; from this date the virulence of the disease gradually subsided, and on October 17th the last fatal case was registered, at 28 Regent-street; between August 27th and 29th, 2 persons died of cholera, at 2 Little College-street; and also 2 at 6 Leader-street, on July 27th and 28th. The following are some of the localities in which cholera was fatal:—James-place, Wellesley-grove, Keppel-street, Pond-place, Marlboro'-court, Camera-street, Oakham-street, &c. In the Workhouse, Chelsea (the number of pauper inmates about 450), 25 deaths were recorded from cholera and 4 from diarrhoea. In the St. George's Workhouse, not belonging to this district although situated therein, the first case was registered on July 28th, subsequently 7 more occurred of persons removed from the parish of St. George Hanover-square (the number of pauper-inmates about 400). The Registrar describes the following cases:—

"On August 13th, a man aged 49 years, cholera 12 hours, at Camera-cottage, Camera-street. Formerly retailer of coals, of late years living on a small property. His wife and one child have also fallen victims to cholera. The wife was a notorious drunkard, and her family were living surrounded by dirt and filth of every description. The cesspool in the yard was overflowing, and emitting deleterious smells; the drain in front was broken in, and the refuse of the house thrown into it. Both within and without were in a poisonous condition. Another son (removed to the workhouse) recovered from the stage of collapse."

"On September 3rd, at 17 Pond-terrace, daughter of a porter, diarrhoea one week, cholera 12 hours. This place is a narrow court, containing about thirty four-roomed houses, inhabited by poor but generally clean persons."

2; 3. CHELSEA; *North East*. Pop. 13074.—Chol. 48; Diarr. 28.—This district is bounded on the south by the King's-road and Marlboro'-road, extending from Sloane-square to Knightsbridge, &c.

Cholera appeared in this sub-district on the 22nd July. A bricklayer died of the disease, in 36 hours, at 5 Earl-street; the epidemic was at its maximum on the 5th September, in which month 33 fatal cases were recorded, and 4 in October, the last on the 29th, a servant at No. 2 Lower North-street. A father and son died of cholera on the 24th August, at 7 Charles-mews; the following were some of the infected localities:—

North-street, South-street, Henry-street, Cumberland-street, Exeter-street, Milner-street, June-street, &c.

3 only of the 28 deaths from diarrhoea were of adults.

The following cases are selected from the Registrar's reports:—

"On the 23rd of August, at 46 North-street, wife of journeyman coachsmith, aged 48 years, cholera 12 hours. A butcher's slaughter-house at back of the premises, in which pigs are kept, producing offensive smells."

"On the 5th September, at 3 Henry-street, plasterer, aged 49 years, cholera 17 hours. His 2 children died in the same house, on the 3rd."

"On the 5th September, at 9 Cumberland-street, son of livery coachman, cholera 16 hours. In the same house, on the 7th September, livery coachman, cholera 8 hours, father of the above."

"On the 9th September, at 13 June-street, daughter of a journeyman butcher, premonitory diarrhoea 3 hours, cholera 8 hours. Nothing offensive about the premises until within 7 or 8 days, during which the drains have been in a state of cleansing; on the 5th and 7th, 2 persons died of cholera in one of the houses."

"On the 10th September, at 1 Milner-street, son of a labourer, cholera. A large open sewer runs at the back of the premises, a receptacle of offal and other offensive matter, frequently causing most annoying and unwholesome effluvia."

"On the 23rd September, at 4 Bull's-gardens, labourer, aged 40 years, cholera 6 hours."

In reference to this case, the following is an extract from a letter addressed to the Registrar by the chairman of the Board of Guardians:—

"I find another death from cholera has taken place in Bull's-gardens, which makes the 12th, at least, from this disease within the last 2 months—about the 25th attack of cholera, and, I understand, about the 70th of diarrhoea, in these gardens and the immediate neighbourhood."

"In addition to the pigsties kept by the inhabitants of the gardens, there is an open main sewer running in front of them, from which most offensive exhalations are constantly emanating."

"There were 3 deaths (children of the same family) from cholera at 2 Lower Symon's-street, described as a poor and dirty neighbourhood, the house inhabited by 5 families (consisting of 15 persons) in 5 rooms, one of which has no chimney. Another person lies dead of cholera in the same house, and another was attacked, but recovered. The drains are in a very bad state, the soil from the privy occasionally overflowing the yard. A sewer-grating in front of the house is occasionally so offensive as to oblige the inmates to close the windows and street-door."

"On the 17th September, at 13 June-street, journeyman cabinet-maker, aged 32 years, cholera 3 days. Open sewer near the premises, from which noxious exhalations proceed, to the great annoyance of the neighbourhood."

"Also at No. 13, June-street, on September 17th, widow of a journeyman butcher, cholera 13 hours. Her child died of the same disorder on the 9th."

3; 1. ST. GEORGE, HANOVER SQUARE; *Hanover Square*.—Pop. 21398.—Chol. 7; Diarr. 14.—This Registrar's district lies between Oxford-street, Mount-street, Conduit-street, Regent-street, and includes the greater part of Hyde Park.

The mortality from cholera was comparatively low; the first fatal case occurred on the 10th August, at 31 Gilbert-street, Oxford-street. On the 10th September, the last death occurred; a stableman, aged 49 years, died of cholera, at a stable in Three Kings'-yard, Davies-street. North Audley-street, Robert-street, Carpenter-street, and Norfolk-street, are streets in each of which a fatal case of cholera was registered.

"On the 20th August, at 3 Steel's-court, Lee's-mews, carman, diarrhoea 4 days. Informant states that there was constantly a bad smell in the house."

"On the 23rd August, at 6 Gilbert-street, Grosvenor-square, wife of a master butcher, diarrhoea a few hours, cholera 12 hours; a healthy woman, seized 5 weeks after delivery, having eaten some plums the day previously. House well ventilated, neighbourhood crowded."

The Registrar, in his remarks for the quarter ending 30th September, states, that "while Asiatic

cholera has been so destructive in London, the mortality in this district, from that disease and from diarrhoea, has been so small that the total number of deaths from all causes is scarcely above the quarterly average. A few cases were removed out of the district to the Mount-street Workhouse. To my knowledge, as a medical practitioner, diarrhoea of an unusually severe form has been very prevalent."

In the St. George's Workhouse, situated in the north-west part of the parish of Chelsea, 8 deaths from cholera are recorded, of persons belonging to the parish of St. George, Hanover-square.

3; 2. ST. GEORGE, HANOVER SQUARE; *May Fair*. Pop. 15048.—Chol. 19; Diarr. 9.—This district lies to the west of Bond-street, extending to Hyde Park, between Mount-street and Piccadilly.

On the 28th June, in the Workhouse, Mount-street, the first case of cholera proved fatal; subsequently in this Workhouse 11 persons died of the epidemic; the last fatal case in this district occurred at the Workhouse on the 23rd September, the inmates number about 350; a portion of the deaths in the Workhouse were of persons belonging to other districts situated within the parish.

3; 3. ST. GEORGE, HANOVER SQUARE; *Belgrave*. Pop. 30106.—Chol. 105; Diarr. 46.—This Registrar's district is bounded on the south by the river Thames, from the Grand Junction Water Works to near Vauxhall Bridge, extending on the north to Hyde Park Corner, Albert Gate, Knightsbridge, &c.

A considerable increase of mortality arose from the prevalence of cholera in the months of July, August, and September, when 16, 34, and 46 deaths were registered. A few isolated cases occurred in the early part of the year; the epidemic then commenced on the 6th July, and continued to the 9th October, when the last death from cholera occurred in St. George's Hospital; in this Hospital there were several deaths from cholera, of persons removed from localities not within this district; during the first 12 days of September the cholera epidemic was at its height. On the 1st August, a labourer and his daughter died at 3 Hanover-place, Thames Bank; a son of the above, aged 5 years, on the same day died of cholera in St. George's Hospital, and at 4 Eaton-cottages 2 deaths from cholera occurred on the 9th September. In the following localities the epidemic proved fatal:—Coleshill-street, Erin-place, Hendon-street, Passmore-street, Allington-street, Gillingham-street, Eccleston-street East Eccleston-street South, Westbourne-street, Belgrave-street South, Warwick-street, Grosvenor-row, Ranelagh-road, St. George's-place, St. George's-terrace, &c. In St. George's Hospital 15 deaths were recorded from cholera; the indoor patients number about 300. On the 26th July, a Hospital nurse, aged 56 years, died of cholera in the Hospital. The following cases are selected from the Registrar's cholera reports:—

"On the 24th July, at 1 Flask-lane, labourer, aged 34 years, cholera 24 hours. This man had been without work for nearly 12 months, and had been before his attack employed in emptying some soil barges; he was much afraid of the cholera."

"On the 16th August, at 1 Allington-street, wife of a soldier, aged 45 years, had diarrhoea 2 weeks ago, cholera 12 hours. The husband of deceased stated that the smells in this house were very bad; the landlord, to add to the evils, had emptied a cesspool into a hole in the yard. A person died of cholera a short time since in same house. The Registrar states that the pumping of the contents of cesspools into the sewers, thereby stinking a whole district, and the unvaulted main sewers, are the adjuvants at all seasons to fevers,

&c., besides frequent accidents by children and grown persons falling into them."

"On the 27th August, at 2 Eccleston-street East, wife of bootmaker, aged 48 years, cholera 17 hours. This person nursed an elderly lady who died of cholera in this district on the 26th July; she complained of not having felt well since."

"On the 3rd September, at a cottage, Commercial-road South, Pimlico, horsekeeper, aged 37 years, cholera 16 hours. This cottage is situate in an omnibus yard, close to the main open sewer, and near waste ground that is the receptacle of much filth."

"Wife of the above, residing in the same cottage, died in St. George's Hospital on the 8th September: they lived on the worst and cheapest kind of food and in the filthiest mode."

4; I. WESTMINSTER; *St. John*. Pop. 26223.—Chol. 212; Diarr. 60.—This district includes the parish of St. John the Evangelist, between Rochester-row and the Thames, extending from the Houses of Parliament to a short distance beyond Vauxhall Bridge. During the year, 110 males and 102 females were deprived of life by cholera, which prevailed in this district with considerable severity, commencing in June, on the 2nd; by the end of the month 13 persons died; in July, 36; in August, 86; in September, 68; in October, 2; and in November, one; the last on the 10th. In the last week of August, and the first 7 days in September, 80 deaths from cholera were recorded, chiefly of mechanics, labourers, and their families, residing in Regent-street, Douglas-street, Chapter-street, Causton-cottages, Dorset-street, Lower Garden-street, Emery-cottages, Edward-street, Duck-lane, Rochester-row, &c. The epidemic in this district attained its maximum in the last 5 days of August; on the 27th and 28th respectively, 12 deaths from cholera were registered; from the commencement of the attack to the termination of life, in the majority of cases, a few hours intervened. In the months of July, August, and September, the deaths from all causes exceeded the births by 170; in this period 190 deaths arose from cholera, and 221 from all other diseases. In the Millbank Prison 41 deaths took place from cholera, 20 cases proved fatal from the 21st June, to the 17th July: the number of prisoners about 1100. In the Grenadier Guards Hospital, Rochester-row, 4 deaths from cholera and one from diarrhoea are recorded; the patients in the Hospital number about 80. In the Coldstream Guards Hospital, Vincent-square, 3 deaths from cholera are recorded; the number in this Hospital is about 50. In the Scots Fusilier Guards Hospital, Lillington-street, 4 deaths from cholera are recorded; the patients in this Hospital number about 65. The annexed cases are selected from the Registrar's reports:—

"On the 23rd January, at No. 27 Rochester-street, stoker at a gas works, aged 45 years, spasmodic cholera 7 hours. This man laboured under severe diarrhoea during the night preceding the attack; the next day while engaged at his work he was stripped to the skin, and exposed to extremes of temperature."

"On the 11th August, at 3 Vincent-square, surgeon, aged 76 years, cholera 16 hours. Was attacked after visiting 2 cases of cholera he had under treatment."

"On the 13th August, at 121 Regent-street, wife of labourer, 9 months advanced in pregnancy, cholera 14 hours. Cæsarean operation was performed immediately after death, but the foetus was dead. Another death from cholera occurred in this house."

"On the 20th August, at 72 Regent-street, on the same day, in the same house, the 3 children of a

labourer died of cholera, which makes 6 that have occurred in this house, all being children."

"On the 22nd August, at 6 Rochester-terrace, Rochester-row, army pensioner, aged 51 years, cholera 3 days. This man was attacked the second day after attending upon and laying out a brother pensioner, who died at No. 2 in the same terrace. He was previously in good health."

"On the 27th August, at 14 Dorset-street, son of a stonemason, cholera 8 hours. In this house one man had lost all his family, viz., his wife and 2 children; and another person lost one child. The house consists of 6 rooms, not by any means in a confined situation; it appears cleanly and well supplied with water, but the occupier says there are 2 gratings in the yard from which steuch arises, and the drain which carries off the soil from the privy in the yard runs under the house and is defective."

"On the 28th August, at 15 Douglas-street, labourer, cholera 24 hours. Of the 14 deaths which occurred in Douglas-street, 11 took place on the south or lower side. The houses consist either of 3 or 4 rooms, but are situated so low that for the most part there is a descent of one or 2 steps from the foot pavement to the entrance passage. The drainage is extremely defective, and several of the occupants complain of the nuisance from the laundresses throwing their dirty soapsuds into the street, leaving continually black stagnant puddles along the gutter in front of these houses, even in the driest weather."

"On the 2nd September, at 5 Lower Garden-street, widow of a general dealer, aged 41 years, cholera 17 hours. Cholera in this case is said to have been induced by fear, her husband died from the same cause 2 days previously; both were in perfect health before the attack."

"On the 2nd September, at 5 Williams'-place, Great Tufton-street, a girl, aged 3 years, diarrhoea 14 hours, cholera 9 hours."

"In the same house, on the 4th September, widow of a smith, cholera with congestive fever, whole duration 5 days."

"On the 9th September, at 1 Upper Garden-street, son of a labourer, cholera 5 days. The parents, with 6 children, were living in a kitchen. One child died in the previous week, and other children of the same parents were attacked."

"On the 14th September, at 8 Hugh-place, Vincent street, a wheelwright, aged 49 years, cholera with consecutive fever 5 days. Second death from cholera in this house."

"On the 19th September, at 94 Regent-street, spinster, aged 23 years, cholera with consecutive fever 18 days; the third death from the same cause in this house during 3 weeks."

"On the 22nd September, at 7 Lower Garden-street, porter, aged 30 years, cholera 15 hours. The sanitary condition of this street is truly wretched; it is situated extremely low, with inefficient drainage, the houses old and ill-cleansed, and many deaths from cholera have taken place in it."

4; 2. WESTMINSTER; *St. Margaret*. Pop. 30489. Chol. 225; Diarr. 52.—The eastern part of this district is bounded by the river Thames, including the Houses of Parliament to Whitehall, and includes the west part of St. James's Park, &c. The loss of life from cholera was severely felt in this parish, commencing on the 14th June, and continuing to the 13th October; after this time the epidemic ceased. On the 27th August the greatest mortality occurred, and continued to prevail to the 23rd September before any great decline was perceptible: thus in the month of June, 7 persons perished from cholera; in July,

38; in August 83; in September, 89; and in October, 6.

Diarrhœa prevailed, and proved fatal to 26 males and 26 females; the one-half were children under 5 years of age.

Age.	Deaths from Cholera.		
	Males.	Fem.	Total.
From birth to 15 years	36	24	60
15 years to 60	74	68	142
60 years and upwards	11	12	23
Total	121	104	225

In the Sick House, York-street, established for the reception of persons attacked with cholera, the first fatal case occurred on the 21st July, subsequently, by the 1st October, 69 more were registered. In the Workhouse, Dean-street, 14 deaths from cholera occurred, and 9 from diarrhœa; the number of pauper inmates about 550. In the Westminster Hospital, at the Broad Sanctuary, 37 deaths from cholera and 3 from diarrhœa are recorded (the indoor patients number about 150). Owing to the above 3 institutions, the number of deaths from cholera is unduly augmented, arising from the removal of persons after attacked by cholera into those institutions, from localities not within this district. In the House of Correction, Tothill-fields, 13 deaths from cholera and one from diarrhœa are recorded (the number of prisoners range about 700); and in Hyde Park Barracks, Knightsbridge, 7 deaths from cholera are also recorded; the regiment was removed from this Barracks during the height of the epidemic. At 21 York-street, in one day, the 20th September, the 2 children of a soldier died of cholera, in 24 and 13 hours after the attack. The working classes and their families were the greatest sufferers from the epidemic, resident in Tothill-street, Gardener's-row, King-street; Willow-street, Smith's-place, York-street, Providence-row, Palmer's Village, York-street, &c. A remarkable fatality was observed in those localities in which there existed surface drainage, overcrowded dwellings, insufficient supply of water, and obstructed ventilation.

5; 1. ST. MARTIN-IN-THE-FIELDS; *Charing Cross*. Pop. 13299.—Chol. 60; Diarr. 15.—The south-east portion of this district is bounded by the river Thames from Whitehall to the Adelphi, and includes the Green Park and part of St. James's Park. Cholera appeared in Charing Cross Hospital, on the 6th July, subsequently in this Hospital 18 deaths were recorded and 2 from diarrhœa (the average indoor patients are about 100); a prior case of cholera was registered in the Workhouse on the 7th April. In the month of July 7 persons fell victims to the epidemic; in August, 22; in September, 24; in October, 5; in November, one; the last case on the 19th, a coach-lace maker, aged 20 years, at Charing Cross Hospital. In the Workhouse, 20 deaths from cholera were recorded and one from diarrhœa, the inmates number about 650; a portion of these deaths were of persons removed into the Workhouse from the Registrar's district of Long Acre. In the following localities the inhabitants suffered from cholera and diarrhœa, viz.,—Villiers-street, Duke-street, Charles-street, Lowther Arcade, &c., &c.

The subjoined cases are selected from the Registrar's reports:—

"On the 12th August, at 15 Buckingham-street, a solicitor, aged 56 years, cholera 4 days. Street leading to river Thames; enormous accumulation of mud at end of street, with vegetation on it, uncovered by tide twice every 24 hours."

"On the 6th September, at the Police-station, Northumberland-street, a police constable, aged 28 years, cholera 48 hours. This station has the whole sewerage of Tottenham Court-road passing in front of it, a grating close to front door, and at the time of inspection the tide had flooded the kitchen floor with very foul water from the sewer. The sewer debouches into the Thames about 60 yards S.E. of the station."

"In the Workhouse, on the 6th September, from No. 8 Eagle-court, the wife of a labourer, cholera 26 hours. From the same room, in 1840, were removed the bodies of a grandfather and grandmother, the daughter, and 2 grandchildren, who died of typhus."

"On the 8th September, at 9 Duke-street, Adelphi, a gentleman, aged 67 years, cholera 17 hours. This street, as well as Villiers-street, may be affected by the mud bank off York-buildings and the sewer from Tottenham Court-road, emptying at the Charing Cross Suspension Bridge."

"In the Workhouse, on the 8th September, a hawker of fruit, aged 70 years, cholera 48 hours. Taken from an underground kitchen, at 9 Bedfordbury. Stood at a stall in a street near a sewer grating."

"On the 15th of September, at 19 Northumberland-street, the wife of a builder, aged 47 years, cholera 15 hours. House in good order, open at back to garden of Northumberland-house. The Tottenham Court-road and Charlotte-street sewers pass in front of the house into the Thames about 60 yards south-east."

"On the 22nd September, at 1 Lowther Arcade, a perfumer, aged 59 years, diarrhœa 2 days, cholera 16 hours. The deceased only survived his wife (who died of cholera in the same house) 6 days. The house in good condition, the drainage of the best kind."

5; 2. ST. MARTIN-IN-THE-FIELDS; *Long Acre*.—Pop. 11792.—Chol. 31; Diarr. 12.—First fatal case of cholera occurred on May 10th, at 13 Cecil-court; the next on July 21st, in Wilson-street. By the end of this month 3 deaths were registered; in August 14; in September 11; in October 2. The last fatal case was recorded on the 21st, at Brewhouse-court; the other places affected by the epidemic were Crown-street, Crown-court, Russell-court, Drury-lane, Mercer-street, Bedfordbury, Long Acre, Castle-street, &c.

6; 1. ST. JAMES, WESTMINSTER; *Berwick Street*. Pop. 10449.—Chol. 19; Diarr. 23.—This district extends from Oxford-street on the north to Coventry-street on the south. On July 18th a case of cholera proved fatal at 1 Archers-court; 2 other deaths occurred in this month; in August 6. An increase took place in September, viz., 10 deaths; the last death on the 23rd of this month, at Pulteney-court. Diarrhœa proved most fatal in the month of July. Peter-street, Queen's Head-court, Pulteney-place, Peter-street, Rupert-street, Noel-street, Richmond-street, &c., are some of the neighbourhoods in which cholera proved fatal. The following notes are extracted from the Registrar's reports:—

"On July 20th, at 4 Hopkins-street, a cabman, aged 56 years, died of cholera, 44 hours. This death took place at a common lodging-house, consisting of 5 sleeping rooms, and containing 24 beds; there are 7 beds in one room, and 6 in another. The deceased was a night cabman, and came in on Wednesday morning about 6 o'clock, drunk. He was of intemperate habits."

"On August 20th, at 5 Queen's Head-court, umbrella maker, aged 26, cholera 14 hours. A very temperate

man, of weak constitution. In a coal vault, and at the back of the house, was a large accumulation of oyster-shells and refuse of the same kind, the smell of which was very offensive, they were removed some days before the attack."

"On September 4th, at 26 Peter-street, son of a labourer (deceased), cholera 24 hours. This child was interred on the same day with its father, who died of cholera a few days before in the hospital. Peter-street is considered very unfavourable to health; mostly inhabited by the lowest description of Irish."

"On September 21st, at 5 Queen's Head-court, coach-maker, aged 58 years, cholera 15 hours. The deceased was a very temperate man; he removed from No. 7 Archer-street in good and perfect health on the day before his death. The house, No. 5 Queen's Head-court, not only abuts on the back yards of 2 or 3 of the houses in Little Pulteney-street, but has the wall of an old cesspool projecting several feet into the back kitchen. The brickwork is not only damp, but very often quite wet, and frequently emits a most intolerable stench to the lower parts of the house."

"On September 23rd, at 2 Pulteney-court, son of a house-painter, cholera 3 days. Pulteney court is most unfavourable to health, the sewers passing under the houses."

6; 2. ST. JAMES'S, WESTMINSTER; *St. James's Square*. Pop. 13337.—Chol. 15; Diarr. 5.—This district comprises the southern part of the parish of St. James, Westminster, bounded by the Green Park and St. James's Park, with the Haymarket on the east, continuing south from Vigo and Brewer streets.

The mortality from cholera in this Registrar's district was comparatively slight; the first fatal attack occurred August 10th, at 41 Jermyn-street, a physician, aged 50 years, died in 10 hours; and by September 23rd this disease ceased to be fatal: the last death was in Great Windmill-street. In Angel-court, King-street, 4 deaths from cholera are recorded of a very malignant character; 2 other cases proved fatal in the Workhouse to persons removed from this court; 3 fatal attacks commenced at No. 6. The following notes are from the Registrar's returns of cholera, &c. :—

"On August 21st, at 7 Little St. James-street, son of a tailor, aged 20 years, cholera. Situation not considered unfavourable to health. Attack brought on from excess in eating cherries in brandy, which produced vomiting."

"On August 22nd, at 16 Ham-yard, Great Windmill-street, son of a tailor, aged 16 years, cholera. Bad locality, surrounded by cow-sheds, stables, and dung-heaps; bad smells from drain gullies. Deceased was attacked with bowel complaint and recovered; after recovery, indulged in eating oysters and eels sold in the street, and relapsed."

"On August 25th, at 9 Smith's-court, Great Windmill-street, daughter of a labourer, aged 5 years, cholera 24 hours, fever 5 days. Bad locality. Neither in this or the adjoining house is there any privy or closet; the inmates throw the excrement into the street."

6; 3. ST. JAMES'S, WESTMINSTER; *Golden Square*. Pop. 13612.—Chol. 23; Diarr. 12.—This district is bounded on the north by Oxford-street, on the west by part of Regent-street, Conduit-street, and New Bond-street, on the east by Poland-street, &c., and on the south by Vigo and Brewer streets.

On the 18th May, cholera fatally attacked a milliner residing in Regent-street; the next case occurred 5th July; by the end of the month, 3 deaths were recorded; in August 6; in September 12; after a lapse of 2 months, a solitary case occurred which proved fatal at Great Pulteney-street, on the 13th December, to a fringe-maker's wife, aged 70 years; 10 deaths from

cholera occurred in the Workhouse, situated in Poland-street, several of whom belonged to other parts of the parish; the number of pauper inmates is about 600. Marshal-street, South-row, Carnaby-street, Little Windmill-street, Little Marlborough-street, are amongst the infected localities of this district.

On the 5th July, at 10 Cross-street, Carnaby-street, a female, aged 38 years, "cholera, accelerated by bad drainage, 14 hours" (*inquest*). The Registrar states that "deceased was in good health previous to the attack. A full cesspool, which communicates with the drain, became overcharged, and was opened for the purpose of being cleansed at the time deceased was attacked, which circumstance is supposed to have accelerated her death. Her husband was likewise attacked."

On the 10th August, in Saint James's Workhouse, a servant, aged 30 years, cholera 26 hours. The Registrar states that "she left the Workhouse well on the previous Monday, to nurse a cholera patient who died on the following morning, in Archer-street; next day she washed linen used by deceased, and returned to Workhouse the same evening; attacked the following morning with cholera."

On the 31st August, at 33 Little Windmill-street, widow of a porter, aged 53 years, cholera 14 hours, suffering many years from diarrhoea. Informant and medical attendant says the stench from the cesspool, drain, and dust-hole is most offensive, and was a powerful incentive to this death.

LONDON.—NORTH DISTRICTS.

MIDDLESEX (PART OF).

7; 1. MARYLEBONE; *All Souls*. Pop. 27003.—Chol. 71; Diarr. 38.

This Registrar's district is bounded on the west by Portland-place and part of Regent-street; on the south by Oxford-street, continuing east to Tottenham Court-road; on the north by the New-road; and on the east by Cleveland-street, &c.

A fatal case of cholera took place on June 9th, in Ogle-square. The epidemic prevailed till September 24th, on which day the last 2 deaths occurred, one in Newman-street and the other in Middlesex Hospital, where previously 29 deaths from cholera were registered, and one from diarrhoea. In the following localities the epidemic was prevalent, viz.—

Upper Charlton-street,	Norton-street,
Ogle-mews, Foley-street,	Cleveland-street,
Cambridge-court, Cleveland-street,	Castle-street East,
	Carburton-street, &c.

The subjoined notes, &c., are selected from the Registrar's reports :—

"On August 17th, at 12 Saville-street, wife of a carter, aged 34 years, cholera 12½ hours; blue stage commenced 7½ hours before death. A very noxious street, densely populated and badly drained."

"On August 28th, at 22 Union-street, wife of a turner, aged 42 years, cholera 30 hours. A densely-populated, dirty, and unhealthy street, occupied exclusively by the poorer classes. Intemperance and uncleanness prevails."

"In the same house, on September 1st, wife of tailor, aged 32 years, cholera 24 hours; another female was attacked, but recovered. On the same day the daughter of the turner above, 15 years of age, was attacked with cholera, and removed to the Marylebone Infirmary. This is the fourth case of cholera (during 5 days) which occurred in this house, and 2 have

proved fatal. Many of the houses are hotbeds for cholera and all epidemics."

! "On September 7th, from 31 Cleveland-street, painter, aged 33 years, cholera 20 hours. Street neglected and dirty; vegetable and varied refuse cast from the greengrocers' and other shops being allowed to remain for many days. In this parish the state of Upper Rathbone-place, Union-street, part of Wells-street, Ogle-street, Saville-street, Charlton-street, and the whole of Cleveland-street, requires strict investigation."

7; 2. MARYLEBONE; *Cavendish Square*. Pop. 15192.—Chol. 16; Diarr. 8.

Bounded on the east by Portland-place and part of Regent-street; on the south by Oxford-street, continuing west to Marylebone-lane, extending north to the New-road; and on the west by High-street, &c.

First death from cholera July 18th, the last on October 2nd. The epidemic was prevalent in the subjoined localities—

Great and Little Chesterfield-street,	Mill Hill-place,
Marylebone-court and lane,	Bowling-street,
	Little Welbeck-street,
	Queen Ann-street, &c.

7; 3. MARYLEBONE; *The Rectory*. Pop. 26714.—Chol. 91; Diarr. 47.

Bounded on the east by High-street and Marylebone-lane; on the south by Oxford-street, continuing west to Portman-street, north by the New-road; and on the west by Gloucester-street, &c.

After 11 fatal cases of diarrhoea, cholera made its appearance July 2nd, in Northumberland-street, and continued to November 16th. Between July 7th and October 12th, 71 persons died of cholera in Marylebone Workhouse; the inmates number about 1700.

July	Aug.	Sept.	Oct.
13	25	30	3
Men	Women	Children	
20	45	6	

Of this number 13 were recorded as washerwomen and charwomen, and 2 were described as nurses.

11 persons died of diarrhoea in Marylebone Workhouse, the greater proportion before cholera made its appearance on July 7th. The Workhouse deaths include those persons removed from all parts of the parish, after attacked by the epidemic, thereby causing an undue preponderance of mortality for this district. The following localities chiefly suffered—

Orchard-place,	Gray's-buildings,
East-street,	Blandford-mews,
York-court,	Great York-mews,
Gray-street,	&c.

7; 4. MARYLEBONE; *St. Mary*. Pop. 21988.—Chol. 18; Diarr. 40.

This district is situated between the Edgeware-road and Gloucester-street, bounded on the south by Oxford-street, and on the north by the New-road; Southampton-street, &c., forming the western part of the Parish.

First death from cholera June 24th, the last on December 9th; cholera and diarrhoea prevailed in—

Horace-street,	Crawford-street,
Salisbury-place,	Virgil-place,
Walmer-place,	Tooting-court,

7; 5. MARYLEBONE; *Christchurch*. Pop. 28911.—Chol. 34; Diarr. 57.

Bounded on the west by the Edgeware-road from Southampton-street; on the south to New Church-street; on the north continuing on the Alpha-road, and includes the Regent's Park, excepting the north-east part; bounded on the south by the north side of the

New-road, from the Edgeware-road to Osnaburgh-street, &c.

A death took place from cholera May 15th, another June 19th; the last fatal case on November 15th.

The following places suffered from the epidemic, viz.—

Lisson Grove, North,	Bell-street,
Exeter-street,	Earl-street,
Hereford-street,	Little James-street.

7; 6. MARYLEBONE; *St. John*. Pop. 18356.—Chol. 31; Diarr. 39.

Bounded on the south by New Church-street, Alpha-road, and the Regent's Park; on the west by the Edgeware-road, continuing north to Greville-place, extending east to Primrose-hill, &c.

First fatal case of cholera June 30th, last case September 27th. The epidemic prevailed in—

Salisbury-street,	High-street,
Luton-street,	Richmond-street, &c.

The following cases are selected from the Registrar's reports:—

"On June 30th, at 11 Portland-terrace, St. John's Wood, a male, aged 60 years, cholera 3 days. The deceased, according to his medical attendant, caught the infection at his house on Ludgate-hill, in consequence of impure air, which issued from a public privy at the back of the premises. It is stated that 4 persons have since died there from the same cause."

"On August 18th, at 53 Richmond-street, a laundress, aged 62 years, cholera 36 hours. The informant attributes this case to the deceased having washed the linen of a cholera patient."

"On September 1st, at Avenue-road, wife of a coachman, aged 38 years, diarrhoea 3 days, cholera 18 hours. Street good; lived over the stables. Washed the linen of her master, who died of cholera on August 27th."

"On September 5th, at 12 Alm Houses, widow of grocer, aged 66 years, cholera 14 hours. Attended upon and washed the linen of a person who died of cholera in the same house, on September 1st."

"On September 11th, at 1 Marlborough-road, female servant, aged 35 years, cholera 54 hours. Attended upon her master, who died of cholera at the same place on the 9th instant."

8; 1. HAMPSTEAD; *Hampstead*. Pop. 10093.—Chol. 9; Diarr. 11.

Includes the entire parish of St. John Hampstead, situated north of the Regent's Park.

On July 30th, a female aged 35 years died of cholera; between this date and September 4th, 9 persons fell victims to the epidemic.

The Registrar refers to the following cases:—

"On August 9th, at the Heath, Wesleyan preacher, aged 61 years, cholera 8 hours; came to Hampstead with a friend the morning preceding for a change of air. It appears that the deceased had left his home, Albion-terrace, Wandsworth-road, having lost his wife the day before, his mother and 2 servants within 2 or 3 days, in the same house, all from cholera."

"On August 27th, at Flask-walk, wife of labourer, aged 46 years, cholera 16 hours. Had been attending a youth who was attacked with cholera some days ago."

"On August 22nd, at Church-lane, wife of wheelwright, aged 48 years, cholera. Had been attending a family attacked by cholera (*inquest p.m.*)."

9; 1. PANCRAS; *Regent's Park*. Pop. 26488.—Chol. 64; Diarr. 39.

Bounded on the south by the New-road, extending east from Osnaburgh-street to Tottenham Court-road; on the north by Pancras-vale to Primrose-hill; on the

east by the Hampstead-road, and on the west includes the east part of the Regent's Park.

The first death assigned to cholera occurred May 1st, at 3 Prince of Wales-court, Frederick-place; the second, on June 17th, in Osnaburgh-street; and others on July 22nd, 25th, &c.; and from August 21st to September 7th, both inclusive, 44 deaths were referred to cholera. On August 28th the greatest mortality happened; on this day, 6 persons were deprived of life by the epidemic, which was severely felt in the following streets, &c., viz.—

Henry-street,	High-street, Camden-town,
Grove-street,	Stanhope-street,
Cumberland-market,	Edward-street,
Cumberland-street, West,	Eden-street, &c.

At the Cavalry Barracks in Albany-street, 3 soldiers died from cholera.

The annexed two cases, and notes, are selected from the Registrar's reports:—

"On August 7th, at 5 Black-cap-yard, High-street, son of labourer, aged 5 months, cholera 60 hours. Black-cap-yard, entrance from 91 High-street, Camden-town, has several small tenements, densely populated, with no outlet, and bad ventilation. The drainage very imperfect, and runs into an open ditch, partially uncovered, which emits a foul effluvia of the most noxious character, more especially at this season of the year."

"On September 4th, at 17 Edward-street, wife of porter, aged 30 years, cholera 2 days, professionally attended only a few hours previous to her death. This house is opposite a wharf, which is the deposit for all kinds of manure, decomposed vegetable matter, and refuse of the worst description, exhaling the most obnoxious effluvia, and which is much complained of by the inhabitants."

9; 2. PANCRAS; *Tottenham Court*. Pop. 26800. —Chol. 60; Diarr. 35.

This Registrar's district is situated south of the New-road, from Cleveland-street to Burton-crescent; bounded on the south by Tavistock-place, Francis-street, &c.; continuing south, on the east side of Tottenham Court-road, to Oxford-street, &c.

The cholera epidemic was fatal to 2 persons in January, one in February, and 2 in March. Ten weeks then intervened, when cholera appeared in Charlotte-street, June 11th; next case July 21st. In this month, 6 deaths; August 25, September 21, and October 2, which occurred on the 2nd, the one in John-street, and the other in Upper Tottenham-place.

In the University College Hospital, 31 persons died of cholera—the number of patients about 110, and in the Strand Union Workhouse, one from diarrhoea. The epidemic was also fatal in—

Upper Cleveland-street,	Market-street,
Little Gower-place,	Grasse-street and place,
Stephen-street,	&c. &c.

During the months of July, August, and September, the deaths from all causes were 80 in excess of the births.

The following cases and notes, are selected from the Registrar's reports:—

The 2 following cases occurred in University College Hospital:—

"On August 11th, male, aged 40, bedstead-maker, cholera (*inquest*). Brought from 5½ Little Pancras-street."

"On August 13th, female, aged 32, wife of ostler, cholera 36 hours. Brought from 5½ Little Pancras-street. The house from which these 2 persons were brought is very small and contains 49 persons; the wife of the male and 2 children were in the Hospital suf-

fering from cholera. The house was in a most filthy and neglected state, the drainage bad, and a cow-shed very near to it."

"On August 27th, at 21 Tottenham Court-road coffee-house keeper, aged 49 years, cholera 10 hours. Drainage very bad, a slaughter-house adjoining, and a tallow-melter's in the rear."

"On August 29th, at 8 Grasse-street, wife of labourer, aged 45 years, cholera 12 hours. This house was overcrowded, the drains very bad; 3 other persons from same place have died during the week at Middlesex Hospital. Each room let to weekly tenants."

The 3 following cases occurred in University College Hospital:—

"Widow, aged 52 years, nurse, diarrhoea 55 hours, cholera 24 hours, September 12th. From Grafton-street. This nurse had been attending her sister who had died of cholera."

"Widow, aged 33 years, charwoman, diarrhoea 24 hours, cholera 3 days 8 hours, 'post mort.' September 17th. From 10 York-buildings, Somers-town. This woman had been nursing a man with cholera at the time she had diarrhoea."

"Wife of beadle, aged 62 years, diarrhoea 4 days, cholera 36 hours, 'post mort.' From 21 Little Gower-place. Several cases of cholera have occurred in this ill-ventilated place, the houses being immediately behind those in Gower-place, and having immediately in front of them a high wall, the boundary of the University College, against which the inhabitants are permitted to throw potato skins, pea and bean shells, and other refuse. The air is shut out at both ends, the inlet and outlet being each formed by a kind of gateway from Gower-place. The house surgeon at the hospital states that, from the filthy condition of the place, the cases of fever which come under his notice from that locality are numerous."

"On September 16th, at 3 Pancras-street, green-grocer, aged 29 years, cholera 14 hours. House badly drained and ventilated; abutting on a cow-yard, the smell of which is very offensive, close to New Inn-yard; a place occupied chiefly by costermongers, and where there is allowed to accumulate quantities of stale greens, stale fruit, tainted meat, and unsaleable fish."

29 fatal cases occurred in University College Hospital (the majority brought in from places out of the district). In the Strand Union workhouse there has not been a single case of cholera.

9; 3. PANCRAS; *Gray's Inn Lane*. Pop. 22149. —Chol. 104; Diarr. 34.—Bounded on the north by the New-road, on the east by Hamilton-place, Lower-road; on the south includes Guildford-street, on the west Burton-crescent, &c.

Seven deaths from cholera in the month of January, took place in the Royal Free Hospital—the inmates number about 50; subsequently to October 1st, in this hospital, 53 more died from this epidemic, and one from diarrhoea. On June 27th, a fatal case occurred in Hunter-street, next on July 25th, then the 27th, 29th, &c.; in August 41 persons were deprived of life, principally between the 17th and 31st; in September 47, chiefly between the 4th and 13th; after the 23rd the epidemic considerably declined; in October 2 deaths, the last from cholera November 2nd, in Claremont-place, a gentleman aged 20 years, survived the attack 24 hours. By excluding the fatal cases of cholera in the Royal Free Hospital, the number belonging to all other parts of this district is 44. In the 3 months of July, August, and September, 91 deaths were assigned to cholera, and but 121 to all other causes of death; and in this period the births were 166, deaths 212. Cholera prevailed with great severity in the subjoined localities, viz.—

Judd-street,
George-street,
Chads-place,
Wood-street,

James-street,
Hastings-street,
Cromer-street,
Cooper's-buildings, &c.

The following cases, &c., are selected from the Registrar's reports:—

"In the Royal Free Hospital, January 6th, a boy aged 6 years, Asiatic cholera 14 hours; a girl aged 9 years, Asiatic cholera 10 hours. The above 2 cases are those of pauper children in Holborn Union, brought from Drouet's school at Tooting."

"On August 22nd, at 15 Britannia-street, the wife of a labourer, aged 45 years, cholera 4 days. The street is overcrowded and ill cleansed. Three other persons were attacked with the same malady in this house."

"On August 27th, at 17 Wood-street, the wife of an engineer, aged 19 years, cholera 18 hours. The street is very dirty and crowded, and occasionally the stench from the drains is almost intolerable."

"On September 22nd, at 2 Cooper's-buildings, the wife of a dealer, aged 65 years, cholera 3 days. Situation confined, dirty, and unwholesome. Several persons in this place have been attacked with cholera. One died on the 3rd instant."

9; 4. PANCRA; Somers Town. Pop. 28910.—Chol. 53; Diarr. 51.

Situated east of the Hampstead-road; bounded on the north by Fig-lane, on the south by the New-road, and on the east by Brewer-street, Skinner-street, &c.

The first fatal case of cholera was recorded June 18th, in Seymour-street; the next followed on July 13th, then the 16th, 20th, &c.; in August 26 deaths, in September 16, and in October 2, the last on the 9th; principally fatal in the annexed localities, viz.—

Skinner-street,
Drummond-crescent and
mews,
Seymour-street, and row,
Ossulston-street,

Sidney-street,
Hampden-street,
Melton-street,
Charrington-street, &c.

Diarrhoea prevailed with great severity in the months of July, August, and September; the deaths from this disease respectively were 14, 11, and 12; the far greater number were of children under the age of 5 years.

The following notes are selected from the Registrar's report:—

"On August 30th, at 23 Melton-street, wife of market gardener, aged 64 years, cholera 7 days. Drainage, &c., good: deceased, who was from the country, came up to attend a sister at the same house, who died of the same disease, after 3 days' illness, on the 20th August, and kissed her sister just before the funeral. She was in perfect health when she came to London."

"On September 12th, at 58 Middlesex-street, daughter of drover, aged 9 years, cholera 3 days. No complaint as to drainage or otherwise. Deceased's father died at 25 Weston-street, on the 8th instant, of cholera, after a few hours' illness; and on the 9th instant, deceased (who was removed from the house in Weston-street on the previous evening) was taken ill."

"On October 2nd, at 3 Seymour-row, wife of general dealer, aged 64 years, cholera 36 hours. Mostly stables, occupied by cabmen, carmen, sweeps, and dealers in fish and vegetables. Deceased resided with her husband in a room over a place formerly used as stables, but now occupied by a dealer in wood. No place of convenience on the premises. There had previously been a death at No. 4 in the same row."

9; 5. PANCRA; Camden Town. Pop. 15018.—Chol. 54; Diarr. 45.

Bounded on the west by Skinner-street, Brewer-street, and High-street; on the east by Maiden-lane; on the

south by the New-road; and on the north by the Regent's Canal, &c.

During the month of January, cholera was fatal to 13 persons in the St. Pancras Workhouse, and by October 23rd, 2 more deaths from the same cause occurred, and 12 from diarrhoea; the number of inmates about 1200. In the London Fever Hospital a fatal case of cholera was reported June 30th, brought from a court in Fleet-street. On March 31st, a death from the epidemic took place in Cheny-row, Pancras-road, and on June 12th, another in College-street west; in July 2 deaths, August 13, and in September 20, the last on the 29th, in Stephenson-street. During the last 10 days of August and the first 10 days of September, great mortality was caused by the epidemic; diarrhoea likewise was remarkably prevalent. In the months of July, August, and September, the deaths respectively were 10, 15, and 9. The poorer classes chiefly suffered from cholera resident in—

Pratt-street,
Ashby-street,
Weston-street,
King-street,
Bayham-street,

Queen-street,
Spann's-buildings,
Weston-place,
College-street, West, &c.

The annexed cases are selected from the Registrar's reports:—

"9 children who died of cholera in the St. Pancras Workhouse had been brought from Surrey Hall, Tooting, while under the influence of the disease."

"On March 31st, at 2 Cheny-row, a hawker, aged 34 years, Asiatic cholera—active symptoms 18 hours, continued fever 3 days. All the symptoms of Asiatic cholera were well marked in the patient, except cramps, which were very partial, and restricted to the upper extremities; lips and face blue and collapse, diarrhoea, rice-water. Transfusion of 30 ounces of blood was tried while in collapse, which rallied him for a day, but he died 3 days afterwards of continued fever."

"On September 13th, at 33 Cambridge-street, Agar Town, labourer in gas-works, aged 40 years, cholera 48 hours. Open place, but ill drained, house small, two families, not overcrowded."

"The whole number registered since June 27th to September 15th inclusive, a period of between 2 and 3 months, are—

Cholera	26
Diarrhoea	25
Dysentery	6
Total	57

In 26 cases of cholera, 11 were in the healthy part of Camden Town, and 11 near the Fever and Small Pox Hospitals, a very crowded and dirty neighbourhood, and all within a short distance of each other. Of the remaining 4, 2 were brought to the district, and 2 died in an unhealthy house in Pratt-street."

"On September 17th, at 8 Canterbury-terrace, Agar Town, wife of labourer, aged 36 years, diarrhoea, cholera 4 days. Small house, ill drained. Had attended her mother, who died of cholera 4 days previously."

9; 6. PANCRA; Kentish Town. Pop. 10398.—Chol. 25; Diarr. 28.

Situated between Maiden-lane on the east and Hampstead on the west; bounded on the south by the Regent's Canal, and on the north by Highgate, &c.

On April 16th a death from cholera occurred in 12 hours, at 10 Winchester-street, Agar Town. The next fatal case followed on July 26th: the epidemic was prevalent to September 22nd; on this day a horse-keeper, aged 52 years, died in 30 hours, at 3 Ley-

bourne-road. Also the following localities suffered, viz.—

Junction-place,	Alfred-place, Maiden-
Swain's-lane, Highgate,	lane,
Lower Mansfield-place,	High-street, Highgate,
College-street, North,	Salisbury-street, &c.

Diarrhœa prevailed with great severity in the autumn, afflicting the very young and the aged.

10; 1. ISLINGTON; *Islington West*. Pop. 25396. —Chol. 64; Diarr. 44.

Bounded on the south by Pentonville; on the west by Maiden-lane; extending north to the Holloway-road; including on the east the west side of Upper-street, &c.

Cholera broke out at 60 Gibson-square, June 9th; in the same house another death happened on the 14th, next on the 16th in Upper Park-street; in this month 6 deaths, in July 8, in August rose to 20, and increased to 26 in September. Towards the latter part of this month the virulence of the epidemic nearly expended itself,—in October but 2 deaths occurred, the last case on the 4th, in Charlotte-place, Holloway. 6 persons died from cholera, and one from diarrhœa, in the Islington workhouse; the number of in-door poor averages about 350. The epidemic was also fatal in—

Sidney-street,	Gordon-place, Upper
Palmer-street, place, and	Holloway,
mews,	Salisbury-terrace,
Belitha-terrace,	Thornhill-street,
Matilda-street,	Upper Winchester-street,
	&c.

28 males and 36 females died from cholera, chiefly attacking those between the ages of 15 and 60 years. The annexed table indicates the mortality at 3 periods of life:—

Age.	Deaths from Cholera.		
	Males.	Fe- males.	Total.
From birth to 15 years .	5	7	12
15 to 60 years . . .	22	25	47
60 and upwards . .	1	4	5

Diarrhœa prevailed extensively in July and August, especially fatal to children under 2 years of age: of the 44 deaths from this disease, 11 are described as adults and the rest as children, affecting the sexes in about equal proportions.

The subjoined cases are selected from the Registrar's reports:—

"On June 14th, at No. 60 Gibson-square, widow of a colonel, aged 53 years, cholera 48 hours. The deceased occupied a house situated in one of the open squares. The attention of the family was directed immediately after the death to offensive effluvia proceeding from the kitchen stairs, which they traced to an unused closet or cupboard. In the previous week was reported a death which occurred suddenly in the same house, of a gentleman, aged 60, from cholera, after 15½ hours' illness, whose sleeping-room was partly over this cupboard. Both parties had been previously in excellent health."

"On August 10th, at 10 Palmer-mews, Holloway, a labourer, aged 45 years, cholera 14 hours; the deceased drank 3 quarts of sour table beer just previous to the attack."

"On September 2nd, at 3 Rodney-place, White Conduit-fields, wife of a coal-porter, aged 45 years. Close confined place—had been attending upon her

brother in the next street, who died of cholera on the same day."

"On September 4th, at 14 Thornhill-street, Caledonian-road, a brickmaker, aged 27 years, cholera 48 hours. There is a gully-hole opposite the house, which emits a horrible stench at times; 2 of the neighbours died 2 days before of cholera."

"On September 5th, at 3 Burnard-place, Holloway, wife of printer, aged 40 years, cholera 2 days. Had attended her mother's funeral a week back, who died of cholera at Lambeth."

"On September 9th, at Paradise House, Holloway, wife of foreman to an iron wharf, aged 22 years, cholera 12 hours. This is a detached residence with paddock; the deceased had only 2 days previous left the neighbourhood of Blackfriars, where she had been constantly attending upon a friend ill with cholera."

"On September 20, at 1 Cornwall-place, Holloway, a schoolmaster, aged 54 years, morbus jecoris 2 years, cholera [24 hours, atrophy 3 weeks, coma one week. Nothing objectionable about the house or drain. His wife died on 28th ultimo in the same house, of cholera."

"On September 26th, at 1 Adam's-place, Holloway, daughter of baker (a twin) aged 6 years, cholera 5 days. 30 persons occupy this house, which consists of six or eight rooms, each family inhabiting only one."

"We have now over this parish 7 efficient medical house-to-house visitors, under authority of Board of Health and direction of medical inspector. Each case is daily reported and attended to, and many are discovered in time to be checked."

"On October 1st, at Starkey's-cottage, Sutton-gardens, Caledonian-road, wife of carpenter, aged 51 years, cholera 9½ hours, collapse 7 hours (had a severe attack of diarrhœa 5 weeks back). A foul drain runs at the back of the house. The houses or hovels in this spot are generally without drains."

"On September 29th, at 2 Gordon-place, Upper Holloway, daughter of labourer, diarrhœa 10 days, rice water purging 2 days. The place is ill-cleansed, and the dwellings let out in tenements to travellers and excavators."

"On October 4th, at 3 Charlotte-place, George's-place, Holloway, widow of bricklayer, aged 69 years, cholera 21 hours. The drain was lately opened, and left so for 3 or 4 days, emitting an offensive smell. Her sister, who was the occupier, and had dwelt there for many years, died in the previous week of cholera."

10; 2. ISLINGTON; *Islington East*. Pop. 30294. —Chol. 123; Diarr. 66.

Bounded on the west by the east side of Upper-street and the Holloway-road; on the east by Southgate-road, part of Green-lane, and part of Kingsland-road; on the south by part of City-road and Regent's Canal.

On April 9th, a death from cholera occurred at 22 Albion-place, Ball's Pond; an interim of 11 weeks ensued to July 1st, on which day a case was fatal at No. 5 Anglers'-gardens; in the remaining part of this month 5 persons died; the epidemic considerably increased in August, and was fatal to 49 persons, and attained the high mortality of 66 in September; the last and only death in October occurred on the 2nd, in Sussex-place, Rotherfield-street; the greatest number of deaths in one day took place September 5th, and in 6 days to the 10th, 32 were deprived of life; after this date the virulence of this disease abated, and nearly ceased by the end of the month. Diarrhœa was remarkably severe in August, from the 10th to the 31st both inclusive, was fatal to 24 persons, and in September to 17; of the 66 deaths from this disease,

16 were of adults, namely, 4 men and 12 women, and the rest children under the age of 15 years.

The subjoined table illustrates the sexes, and mortality at three periods of life :—

Age.	Deaths by Cholera.		
	Males.	Females.	Total.
From birth to 15 years . . .	21	17	38
15 to 60 years . . .	39	30	69
60 and upwards . . .	6	10	16
Total . . .	66	57	123

Mechanics, labourers, &c., with their families, principally suffered from the epidemic, residing in—

Cross-street, Ball's Pond,	Albion-place,
Elder Walk,	Anglers'-gardens,
Shepperton-place, cottages,	Rutland-place, Hornsey-
&c.	road,
Windsor-street,	Brand-court and street,
Lower and Upper Terrace,	Holloway, &c.
Popham-place and Terrace,	

During the months of July, August, and September, 52 deaths occurred more than the births registered, or 4 births to 5 deaths; and on an average in every 3 deaths, one was assigned to cholera.

The annexed cases, &c., are selected from the Registrar's reports :—

"On July 10th, at No 3 Ward's-buildings, or place, Lower-road, son of a licensed victualler at nurse, 3 months, cholera 14 hours. The place is approached from the Lower-street by an arched passage. Immediately under a window of the sitting-room is a shed, containing a quantity of detritus of all kinds, the accumulation of months; and beyond, there is a common privy."

"On August 12th, at 3 William-street, New North road, compositor, aged 42 years, cholera. Drains in a bad condition—a cholera case in this house the previous week."

"On August 13th, at 3 Graham-street, City-road, labourer, aged 25 years, cholera 12 hours. Drains complained of."

"On August 14th, at 12 Elizabeth-place, Ball's Pond, son of master bricklayer, cholera 13 hours. Had eaten a quantity of apples prior to the attack."

"On August 23rd, at 16 Albion-terrace, New North-road, pianoforte-maker, aged 55 years, cholera 10 hours. Had heard the day before of the death of two friends from cholera, which gave him mental uneasiness."

"On August 23rd, at 2 New Norfolk-street, widow of painter and glazier, aged 61 years, cholera 14 hours. A nurse; she had been attending some relatives attacked with cholera in Rotherhithe, and was labouring under much excitement."

"On August 20th, at 10 King-street, a sewer flusher, aged 50 years, cholera 24 hours. Had been in the same occupation more than 20 years; second attack."

"On August 20th, at 5 Porter's-place, Holloway, journeyman gas engineer, aged 68 years, diarrhoea 3 days, cholera 2 days. An habitual hard drinker."

"On August 30th, at 1 Anglers'-gardens, wife of journeyman picture-frame-maker, aged 39 years, cholera 12 hours. Many persons in this place keep pigs; in rear of this man's house nearly a dozen are kept. These gardens are only gardens in name."

"On September 5th, at No. 3 Brand-court, Hollo-

way, a labourer, aged 39 years, cholera 2 days. Cholera has been very prevalent in this court. The drainage of this place, as well as the whole of Brand-street, is very defective, and an open sewer runs at the back of all the houses on one side of Brand-street. The houses are all very damp, from the want of good drainage; the floors of the lower rooms rest upon the ground."

"On September 6th, at 3 Slaney place, Brand-street, Holloway, labourer, aged 39 years, cholera 7 hours. Many of these courts were at one time comparatively in the country, and their bad construction was neutralized by an allowance of fresh air; but they are now so hemmed in with new streets, that all their faults are aggravated to a degree that cannot be described without personal inspection. Common decency is hardly maintainable under these circumstances, and a 'state of being' is produced detrimental to themselves and all surrounding them."

"On September 17th, at 10 Rutland place, son of smith, cholera 5 days, previously suffered from marasmus. Sister died of cholera September 14th; mother attacked and lying dangerously ill. In the same house, on the same day, brother of the above, cholera 7 days. This makes 7 deaths from 10 houses."

"On September 19th, at 8 Rutland place, Islington, daughter of labourer, cholera 8 days. Deaths from cholera in this place: one at No. 7, 2 at No. 8, one at No. 9, 4 at No. 10. Before the first death at No. 8, 17 persons were living in that house, containing 4 very small rooms, with no back windows."

"On September 26th, at Highbury Terrace-mews, Islington, wife of harness-maker, aged 62 years, diarrhoea 12 hours, cholera 19 hours. Highbury-terrace is at the summit of a gentle acclivity, at the bottom of which at a short distance is Brand-street, &c., where the cholera has been most rife."

11; 1. HACKNEY; Stoke Newington. Pop. 4490. Chol. 8; Diarr. 2.

Bounded on the west by Green-lane, on the east by Kingsland-road, on the south by Newington-green, and includes the entire parish of St. Mary.

Cholera commenced in August; on the 21st a case terminated in 13 hours at No. 12 Cock and Castle-lane; the next case in the same locality on the 26th; 4 fatal cases of cholera took place in Cock and Castle-lane; the last death occurred September 26th, in Church-street.

The following notes are selected from the Registrar's reports :—

"On August 21st, at 12 Cock and Castle-lane, master shoemaker, aged 50 years, cholera 13 hours. Close, 2 families living in 4 rooms; the whole street is unfavourable to health, and has a dirty gutter running down one side."

"On September 3rd, at 18 Prospect place, Back-road, wife of brickmaker, aged 25 years, cholera 13 hours, in the stage of collapse. The house close and overcrowded, and very unfavourable to health."

"On September 5th, at 5 Elizabeth-terrace, Edward's-lane, son of a coachman, diarrhoea 3 days, rice-water purging. The street is open and well cleansed. This child was one of a family of 7; 5 children, father and mother, occupying 2 rooms, the house consisting of 4 rooms; the 2 lower ones occupied by another family of 6; the whole 7 slept in one chamber. The child was in a state of collapse when first seen, and lived 10 or 12 hours afterwards."

11; 2. HACKNEY; Stamford Hill. Pop. 5140.—Chol. 13; Diarr. 8.

Includes the chapelry of Stamford-hill and the hamlet of Upper Clapton.

At High Hill-ferry, Upper Clapton, January 27th, the wife of a labourer died of cholera; in the same house, within 3 days, 3 persons died of the epidemic, which visited this locality with great severity; on this spot 7 persons were deprived of life by cholera and 3 from diarrhoea. The first case in August occurred on the 13th, in Spring-lane, and the last in this district was recorded September 29th, at High Hill-ferry, Upper Clapton.

The subjoined cases are selected from the Registrar's reports:—

"On January 27th, at High Hill-ferry, the wife of a labourer, aged 43 years, cholera 2 days, typhus 5 days. High Hill-ferry lies at the foot of a hill from 40 to 60 feet above the bed of the River Lea, at an angle of nearly 45°; and receives all the sewerage and surface water from it. The drainage is very bad, and the houses in which the deaths took place are of the lowest class, and generally very dirty, owing to the poverty of the inhabitants. The other parts of the district are perfectly healthy."

"On August 30th, at Stamford-hill, wife of harness-maker, aged 74 years, cholera 36 hours. The house in which the death occurred is situated at the rise of the hill, opposite Abney Cemetery; it has a black uncovered ditch running at the back, and emptying itself into Hackney brook."

11; 3. HACKNEY; *West Hackney*. Pop. 11108.—Chol. 23; Diarr. 17.

Bounded on the west by Southgate-road and the Kingsland-road; on the south by the Regent's Canal; on the east, part of Hackney Brook, Love-lane, and the Queen's-road, Dalston.

A case of cholera terminated in 20 hours, February 18th, in Pullen's-place; an interim of several months follows to June 18th, and was prevalent to October 13th; on this day a furrier, aged 43 years, died of the epidemic in 24 hours, in Derby-court, De Beauvoir-town. The subjoined neighbourhoods were likewise afflicted—

Tottenham-road, Kingsland,	John-street, Shacklewell,
Cock and Castle-lane,	Bartholomew-place, De
Kingsland,	Beauvoir-town, &c.
Frederick-place,	

11; 4. HACKNEY; *Hackney*. Pop. 14634.—Chol. 75; Diarr. 48.

Bounded on the west by part of Hackney Brook, Love-lane, Queen's-road, Dalston; on the east by the River Lea, &c.

Cholera was fatal to a servant and 5 infant paupers in Park-house, Church-street, between January 10th and 15th, the above children belonging to the Islington Poorhouse. After 7 deaths from diarrhoea were recorded in the Hackney Workhouse, Lower Homerton, cholera proved fatal to 2 persons on February 6th, and by October 22nd, 18 persons were deprived of life by the epidemic, and 19 from diarrhoea. In the German Hospital, Dalston, 9 persons died from cholera between May 23rd and September 18th. The following table represents the deaths from cholera in three periods of life.

Age.	Males.	Females.	Total.
Birth to 15 years . .	12	7	19
15 and under 60 years .	19	20	39
60 and upwards . .	7	10	17

Diarrhoea was very prevalent in February, also in August and September: of those fatally attacked, 16

were children under 15 years, 14 between 15 and 60 years, and 18 were aged persons over 60. In the following localities cholera and diarrhoea were fatal, viz.—

Hockley-street, Homerton,	King's-road,
Down-terrace,	Grove-lane,
Victoria-street,	Water-lane, &c.

The annexed cases are selected from the Registrar's reports:—

"On January 14th, a female, aged 50 years, cholera 30 hours."

"On January 15th, a female, aged 11 years, cholera 18 hours; low consecutive fever 3 hours."

"The first was a servant who belonged to the Islington Poorhouse, and had been brought to Hackney to nurse the sick children. The second was a girl belonging to the Islington Poorhouse, who had been brought to Hackney from Drouet's asylum at Tooting."

The 2 following cases occurred in the German Hospital, Dalston:—

"On June 6th, a male, aged 16 years, cholera 14 hours."

"On June 7th, a male, aged 6 years, cholera 10 hours."

"The above were natives of Switzerland, and had come from Germany with a view of emigrating to New York. The disease, which appeared in its worst form seemed to have been produced principally by drinking large quantities of sea-water, and living in a ship overcrowded by passengers."

"On September 2nd, at Grove-lane, a gardener, aged 30 years, cholera 16 hours. The houses in Grove-lane stand open and airy, but the drainage is imperfect."

"On September 13th, at 20 Victoria-street, Homerton, son of a labourer, cholera 5 days. Victoria-street is situated at the back of High-street, Homerton with about 100 houses, each containing 4 small rooms in many of them 3 or 4 families, from 15 to 20 persons. The whole street is unhealthy, from the overcrowded houses and bad drainage."

12; 5. HACKNEY; *South Hackney*. Pop. 6889.—Chol. 20; Diarr. 18.

On the south includes the north part of Victoria Park and the Regent's Canal, bounded on the north by part of Hackney-brook, Waterloo-terrace, &c., extending from Hackney Wick to East Haggerstone.

After 3 deaths from cholera in February, the epidemic again appeared on July 24th, in Victoria-grove in the succeeding month the mortality rose to 7, in September also 7, and in October 2; the last on the 5th, in North-street. The subjoined localities greatly suffered, viz.—

Goring-street,	Wells-street.
----------------	---------------

Diarrhoea chiefly prevailed in February and August the greater proportion attacked were children under the age of 2 years.

The annexed cases, &c., are selected from the Registrar's cholera reports:—

"On February 8th, at 27 Goring-street, wife of printer, aged 37 years, cholera 2 days."

A locality of the worst possible condition as regards drainage, most of the inhabitants having no other means of getting rid of refuse in a liquid state than by casting it into the street. The whole of the street is continued pool of filth.

"On August 17th, at 1 Tryon's-court, widow labourer, aged 69 years, cholera 14 hours. The house and the court in which it is situated are close and ill ventilated. The deceased had been attending on a man who died in the same house 4 days previously of cholera."

"On September 6th, at Wood's-yard, Well-street

daughter of journeyman file-cutter, cholera 15 hours. The houses in this yard are in a very bad state, being shut in by other buildings at the back, with drains and privies in close proximity to the dwellings."

LONDON.—CENTRAL DISTRICTS.

MIDDLESEX (PART OF).

12; 1. ST. GILES; *St. George Bloomsbury*.
Pop. 16981.—Chol. 19; Diarr. 15.

Comprises the entire parish of *St. George Bloomsbury*, bounded on the south by Broad-street, High Holborn, from George-street on the west to King-street on the east, extending north to Tavistock-place, Compton-street, &c. First death from cholera the 9th July, at 24 Montague-place; the epidemic was prevalent during the months of August and September, and entirely ceased after the 13th October, on which day the wife of a grocer, aged 46 years, died in Everett-street. The inhabitants of the following streets and adjacent neighbourhood suffered: Kenton-street, Duke-street, Museum-street, Henrietta-street and Mews, &c.

The following cases are selected from the Registrar's reports:—

"On the 18th August, at 61 Guildford-street, daughter of a warehouseman, aged 18 years, cholera 54 hours. The surgeon who attended this case stated that the mother and her 3 daughters had resided at Margate for some weeks. On the 13th, the mother was seized with Asiatic cholera at 18 Upper Marine-terrace, Margate, and died in 22 hours; on the same day a gentleman in the same house died of cholera in 12 hours. The 3 daughters returned to Guildford-street on the 14th, and on the 16th the 2 youngest were attacked with cholera."

"On the 22nd August, at 4 Colonnade-mews, Russell-square, son of coachman, cholera, fever of a typhoid character 7 days. A gully-grating to the sewer opposite the stable, which, the inmates say, emits at times a stench almost intolerable, and frequently becomes choked."

"On the 28th August, at 17 Brunswick-mews, coachman, aged 30 years, diarrhoea 5 days, cholera 18 hours. This mews is without a current of air passing through it, and generally dirty, with much vegetable and other decayed matter lying about."

"On the 29th August, at 44 Kenton-street, shoemaker, cholera 24 hours, collapse 19 hours. The place or tenement in which the deceased resided is through a passage and behind the front house, like many others on the Foundling estate."

"On the 3rd September, at 18 Little Coram-street, widow, formerly a servant, aged 64 years, cholera 6 days. Very close, having no back windows, and the street unfavourable to health."

"On the 5th September, at 33 Hyde-street, wife of a carpenter, aged 43 years, cholera 11 hours. The informant stated that the privy was situated in the front area, and so confined as to emit the stench up the house, which at times was intolerable."

12; 2. ST. GILES; *St. Giles South*. Pop. 19634.—Chol. 194; Diarr. 32.

Bounded on the north by Broad-street and High Holborn, from St. Andrew-street on the west to the east side of Lincoln's Inn Fields, on the south by Castle-street, Drury-lane, Duke-street, &c. The mortality from cholera was very considerable in the Union Workhouse, where 109 persons died from the 7th July to the 5th October, both inclusive, and on which days the first and last

fatal cases in this Registrar's district occurred; a great portion of the 109 deaths were persons not belonging to this part of the parish, but removed into the Workhouse from the North and Bloomsbury sub-districts, namely, from Church-lane, Kennedy-court, Tower-street, &c. By excluding the Workhouse, 85 instead of 194 would represent the deaths from cholera in this district.

	Deaths from Cholera in St. Giles Workhouse.				Total.

Total Cholera . .	16	49	43	1	109
Total Diarrhoea . .	1	1	1	..	3

Throughout the month of August and the first 9 days of September, 144 persons were deprived of life; the greatest severity of the cholera epidemic was felt on the 3rd September; on this day 11 died; 5 took place in the Workhouse, where the number of indoor poor is about 770; and here in 9 days, from the 29th August to the 8th September, 29 fatal cases of cholera were recorded. The following localities suffered from the epidemic, viz., Wild-court, Great Earl-street, King-street, Lascelles-court, Charles-street, Endell-street, Brownlow-street, Queen-street, Great Wild-street, &c. In King-street, 16 deaths were referred to cholera and 3 to diarrhoea, exclusive of those persons who died after removal into the Workhouse. An engraver, aged 33 years, at No 14 King-street, the 16th August, was fatally attacked by the epidemic, survived 16 hours; in 2 days after, in the same house, his wife also died of cholera; in the next house, No. 15, between the 26th and 29th, the 3 children of a carpenter died; in this house a previous death by cholera occurred on the 19th August, and another on the 8th September, making 5 persons who died from cholera in this house; and at No. 16 in the above street a death from cholera in 20 hours was recorded, the 5th September; 15 women, described as charwomen, died of cholera and diarrhoea in the Union Workhouse. The greatest mortality was observed amongst the poorer and working classes inhabiting the above localities. The following cases, &c., are selected from the Registrar's reports:—

"On the 13th August, at 5 Lascelles-court, a labourer, aged 70 years, cholera 18 hours. Close, ill-cleansed, and overcrowded (one common privy for the whole of the inhabitants)."

"On the 6th September, at 31 Charles-street, Drury-lane, a journeyman coach-body maker, aged 52 years, cholera 15 hours. 2 deaths in the same house previously registered."

"On the 9th September, at 1 Duke-street, Lincoln's Inn-fields, the daughter of a boot-closer, cholera 24 hours. House close, ill-cleansed, and overcrowded; the basement converted into a slaughter-house. 7 people ill in the house and one removed with cholera to the Hospital."

"On the 11th September, at 22 Broad-street, a spinster, aged 23 years, cholera 2 days. This is the third death in the house from cholera."

"On the 11th September, at 2 New-street, a pavior, aged 52 years, cholera 6 hours. This is the fourth death in the house from cholera."

12; 3. *St. GILES; St. Giles North.* Pop. 17677.
—Chol. 72; Diarr. 30.

Extends on the east side of Crown-street and Tottenham Court-road to Francis-street, to George-street, to St. Andrew-street, and to Torrington-square, &c.

Cholera prevailed with great severity in the Rookery, Church-lane, Kennedy's-court, and the following streets, &c.: George-street, New Compton-street, Dudley-street, Tower-street, New-street, High-street, &c. 34 persons were fatally attacked by cholera in Church-lane; 5 of these persons died after being admitted into the Union Workhouse. The first fatal case was recorded on the 11th July, at No. 11 George-street, a hawker, aged 65 years, survived the attack 13 hours; next case on the 20th, then the 22nd, 23rd, &c.; by the end of this month 8 deaths. Cholera destroyed in August 36 persons, and in September 28; after the 13th this district was relieved from the epidemic, which was at its maximum during the first 11 days of September; the greatest number in one day happened on the 11th; all that part known as the Rookery suffered severely. In the 3 months of July, August, and September, the deaths were 102 from cholera and diarrhoea, whilst but 63 were referred to all other causes, independently of those removed out of the district, when attacked by cholera, and afterwards died in the Workhouse, situated in the south district of the parish. The subjoined notes are selected from the Registrar's reports:

"Cholera and diarrhoea have been very prevalent within the last fortnight in the neighbourhood of Church-lane (known as the Rookery) and the courts adjoining, particularly in Kennedy's-court, in which there is a nest of 7 houses (crowded and dirty) with only one privy, and the drainage defective. The occupants have complained sadly for some time of the stench arising from the drain, which frequently overflowed the pavement. The locality is both confined and unhealthy, from the dirty habits of the Irish who frequent it, and the drainage of the houses and the ventilation of the sleeping-rooms very imperfect."

The mortality from the prevailing epidemic in Church-lane (the 'Rookery'), among the poor Irish families, has been excessive; it first showed itself on July 21st. There are 15 houses on each side of the way, and there were 28 deaths, viz.:—In the house No. 3 Church-lane, 3 deaths have been registered; at No. 4, 2; No. 6, 2; No. 7, 4; No. 8, 2; No. 15, one; No. 17, one; No. 18, 3; No. 20, one; No. 21, 2; No. 22, 2; No. 24, one; No. 27, 3; and No. 28, one. Many of the inhabitants of the lane have dispersed, and the deaths of several have been registered elsewhere, independently of those removed and dying in the workhouse."

"On September 16th, at 1 Carrier-street, daughter of labourer, aged 7 years, diarrhoea (not certified). The house is in a most filthy and wretched condition, being close, ill-cleansed, overcrowded, and ill-ventilated, and 20 persons slept in a small room on the previous night. The staircase was covered with filth, and the stench arising from the house was so offensive that the Registrar was obliged to request the mother to accompany him to the adjoining house to register the death of her child. Carrier-street forms a part of the 'Rookery' of St. Giles."

House-to-house visitation has been attended with the greatest benefit and success, and many lives have been saved by thus having early recourse to medical advice.

13; 1. *STRAND; St. Anne, Soho.* Pop. 16480.—Chol. 47; Diarr. 28.

Includes the entire parish of St. Anne, Soho; viz. the south side of Oxford-street, from Wardour-street on the west to Crown-street on the east, extending south to Leicester-square, &c.

At No. 6 Dean-street, July 15th, a carpenter's wife died of cholera in 10 hours; next case the 16th, then on the 21st, 26th, &c. During this month 5 deaths, August 26, September 15, and October one, on the 3rd, in Crown-street; from the 5th August to the 13th September, the epidemic was most fatal, and during this period 38 persons died: cholera nearly ceased by the end of September.

In the following streets and contiguous neighbourhoods the epidemic prevailed, viz.:—Dean-street, Falconberg-court, St. Anne's-street and court, King-street, Crown-street and court, Grafton-street, Market-street, Porter-street, Lisle-street, &c.

At No. 10 Great Newport-street, on the 30th August, the 2 children of a bookbinder died of cholera, the one in 11 and the other in 21 hours after the attack.

The following selections are made from the Registrar's reports:—

"On the 24th August, at 4 Falconberg-court, costermonger, aged 25 years, cholera 7 hours. Close-court, overcrowded, and unfavourable to health. 2 privies close to the room. Every room in the house let out to separate families. The deceased had lost, within 3 weeks, his 2 brothers, his sister, and child from cholera, in Lascelles-place, St. Giles."

"On the 28th August, 20 Lichfield-street, wife of journeyman bootmaker, cholera 26 hours. Open street. A female died in same house, of cholera, August 19th."

"On the 1st September, at 8 Prince's-row, son of journeyman tailor, aged 8 years, cholera 18 hours. House all let out to lodgers, and close to a slaughter-house."

"On the 2nd September, at 425 Oxford-street, needlewoman, aged 62 years, cholera 11 hours. Her sister died in the same house on the 31st August. Open street."

"On the 4th September, at 11 Grafton-street, gas-fitter, aged 27 years, cholera 12 hours. Offensive smell in house, with slaughter-house at the back. Open street."

"On the 5th September, at 3 Market-street, carpenter, aged 34 years, cholera 18 hours. House dirty and crowded, having a slaughter-house at back."

"In the same house, on the 8th September, wife of tailor, cholera 60 hours. She attended upon the above person who died of cholera."

13; 2. *STRAND; St. Mary-le-Strand.* Pop. 11732.—Chol. 19; Diarr. 9.

This Registrar's district extends on the south side of Long Acre to Maiden-lane and Tavistock-street, bounded on the west by Bedford-street, including Bow-street, Bridges-street on the east, &c.

Died of cholera, a fruiterer, aged 37 years, at No. 2 Bow-street, the 31st May; the next case on the 23rd June, fatal in 12 hours; another on the 27th July, in 7 hours; the epidemic prevailed in the months of August and September, and ceased on the 9th October.

The residents in the following localities suffered from the epidemic, viz., Windsor-court, Drury-court and lane, Bow-street, White Hart-street, Clements-lane (part of), &c., independently of those persons removed, after attacked by cholera, into the Workhouse and King's College Hospital.

13; 3. *STRAND; St. Clements Danes.* Pop. 15386.—Chol. 90; Diarr. 25.

Bounded on the south by the river Thames, Cecil-street on the west, to Middle Temple-lane on the east, extending north to Lincoln's Inn-fields, Cur-sitor-street, Tavistock-street, Duke-street, &c., and includes the Middle Temple, Clifford's Inn, Clements Inn, Liberty of the Rolls, &c.

48 cases of cholera were fatal in King's College

Hospital, between the 10th July and the 9th November; viz., in

July	Aug.	Sept.	Oct.	Nov.
14	21	11	1	1

The persons in the hospital number about 90.

First case, 12th July, at 10 Sheffield-street; last case, 25th September, at 2 Kingsbury-place; the epidemic was at its maximum the 6th September, and nearly ceased after the 20th. The mortality from cholera, in the annexed localities, has been excessive, viz., Clements-lane and court, Birches-place, Searle's-place, Milford-lane, Crown-court, White's-alley, &c., and all that part known as the Liberty of the Rolls. Between the 19th and 21st July, a porter's wife, aged 30 years, and 3 children, all one family, within 3 days, died of cholera in King's College Hospital; nearly half the deaths in this district, during the months of July, August, and September, are attributed to cholera, and in this period 103 deaths from all causes were registered in excess over the births. The annexed notes, &c., are selected from the Registrar's reports.

The six following cases occurred at King's College Hospital:—

"On the 1st August, a bridle-cutter, aged 31 years, cholera 12 hours, from 75 Brandon-street, Walworth. Deceased left Walworth in the morning early, and was attacked during the day—dying in the Hospital at 8½ p.m. His wife, whom he left well at Walworth in the morning, died there also, of cholera, at ¼ to 8, p.m., half an hour before the husband."

"On the 30th July, wife of policeman, aged 49 years, cholera, state of collapse 20 hours, from Duke's-court, Drury-lane. Had been to Greenwich 2 days previous, to nurse her son affected with cholera."

"On the 31st July, female, aged 45 years, nurse at the Hospital, cholera diarrhoea 2 days, collapse 10 hours."

"On the 1st August, female, aged 28 years, wife of labourer, a nurse at the Hospital, cholera 37 hours."

"The above were 2 nurses in the cholera wards of King's College Hospital, after being in attendance during 2 days and nights on the sick. They retired to rest at 11 o'clock, p.m., on the 30th July, within 2 hours of which time they were both attacked. The first died at 9 o'clock, a.m., on July 31st, and the second at 3½ o'clock, a.m., on the 1st August."

"On the 11th August, a journeyman tailor, aged 50 years, disease of bladder 18 months, cholera 15 hours, p.m., from 16 Little Gray's Inn-lane, Holborn, in the ward adjoining the cholera ward."

"On the 12th August, a journeyman farrier, aged 49 years, abscess of leg one month, cholera 9 hours, from 4 Charles-street, Drury-lane. Perhaps the filthiest street in the metropolis, harbouring the scum of St. Giles's. Took cholera in a bed adjoining the doorway of the cholera ward."

The preceding 2 men had been in Hospital some time for surgical treatment.

"On the 12th August, daughter of journeyman tailor, diarrhoea one week, at 13 Bear-yard, Clare-market. This is the third child this man has lost within 1½ year. Bear-yard consists of stables, &c., with dung heaps."

"On the 15th August, son of a compositor, cholera degenerating into typhus, 4 days, at 6 Lower Searle's-place, Liberty of the Rolls, formerly Shire-lane, a closely crowded district, the drainage bad, accumulation of filth in the kitchen, cesspool overflows."

"On the 20th August, at 175 Strand, master grocer, aged 66 years, diarrhoea 12 hours, cholera 40 hours. Had been attending the funeral of some relatives who died of cholera in the country, and was attacked almost as soon as he got home."

The backs of the houses in which the 3 following cases occurred nearly meet; the smells from stables and cowsheds are horrible. Costermongers go down these narrow dark lanes near the river and throw about stinking fish, decayed vegetables, and all kinds of refuse. There is a drain in front of 4 Milford-lane, which is kept covered in by the neighbours, the stench from which is almost intolerable.

"On the 22nd August, at 4 Milford-lane, wife of journeyman lamp-wick maker, diarrhoea 3 days, cholera 24 hours."

"On the 23rd August, at 10 Milford-lane, wife of journeyman engineer, cholera 24 hours."

"On the 24th August, at 37 Arundel-street, wife of labourer, cholera 14 hours."

"On the 25th August, at George-yard, Drury-lane, journeyman picture-frame maker, aged 25 years, cholera 12 hours. Close by a burial-ground, raised 9 or 10 feet above the neighbouring ground-level by the interments."

"On the 30th August, at 6 Cromwell-place, labourer, aged 21 years, cholera 3 days. A low, dirty, crowded court, opening into Little Shire-lane, and terminating in a 'cul de sac.' Drainage bad and offensive."

"On the 11th September, at 9 Lee's-buildings, Liberty of the Rolls, daughter of footman, aged one year, dentition cholera 4 days. The mother of deceased ascribes the attack to the impure air of the locality, and states that a month ago a cesspool (into which all the drains of the buildings empty themselves), situated opposite her door, was opened, and remained open several days; that since then many people in the vicinity have died of cholera."

"On the 13th September, at 45 Clement's-lane, son of policeman (deceased), cholera 2 days. His younger brother died on the 15th, in King's College Hospital. An overcrowded, filthy lane."

"On the 16th September, at 14 White's-alley, Liberty of the Rolls, daughter of journeyman shoemaker (deceased), aged 21 years, cholera 2 days. Cholera raged in this cluster of close, crowded, dirty courts to an alarming extent. This is the adjoining court to Lee's-buildings, previously alluded to, situated between Chancery and Fetter lanes."

"On the 17th September, at 10 Milford-lane, widow of labourer, aged 49 years, cholera 2 days. Her husband died of cholera a week before her; and this is the 6th death from cholera in the same house."

"On the 25th September, at 2 Kingsbury-place, Liberty of the Rolls, adjoining White's-alley, wife of coal-heaver, aged 36 years, diarrhoea 48 hours, cholera 36 hours."

"In this close, crowded court the houses have only one window at the back, and that is on a staircase. The privies, communicate with a cesspool in the centre of the place, and smell dreadfully."

"For the 3 months ending the 30th September, the deaths are not more than one-third above the average, if the cases brought to King's College Hospital from other parishes were omitted. Diarrhoea and cholera appear to have superseded, to some extent, other diseases peculiar to the season."

"On the 1st October, at 10 Milford-lane, St. Clements Danes, son of journeyman tailor, diarrhoea 7 days. Several fatal cases of cholera have occurred in the same house. The privy is on the first floor and smells."

"On the 3rd October, widow of labourer, aged 50 years, cholera 2 days, secondary fever 2 weeks (post mort.), at King's College Hospital, from 29 Clements-lane. The deceased's husband died on the same day of typhus."

"The epidemic in this district was fatal in 4 dis-

tinct quarters; they may be distinguished as the White's-alley district, situate between Chancery and Fetter lanes; the Shire-lane district, opening into Fleet-street, near Temple-bar; the Clements-lane district; and Milford-lane district, near the river, which are dirty, close, badly-drained, stinking, and filthy, every room tenanted by a distinct family of the poorest description, and in many of the houses there are 30 people; almost every house contains a cesspool, emptied occasionally by the lodgers, who throw the contents by pailfuls into the court. Scarcely a case has occurred in the more respectable and open part of this district."

14; 1. HOLBORN; *St. George the Martyr*.—Pop. 17407.—Chol. 20; Diarr. 10.

Bounded on the south by Holborn, Cursitor-street, &c.; by King-street and Lincoln's Inn-fields on the west, to Gray's Inn-lane on the east; extending north to Guildford-street and Henry-street, including Lincoln's Inn, Gray's Inn, Staple Inn, &c.

Cholera was fatal on the 20th February at No. 4 Raymond's-buildings, Gray's Inn; the next case the 14th July, a surgeon, aged 64 years, at Southampton-buildings; the greatest mortality occurred in the months of August and September, on the 30th the epidemic ceased, and was most prevalent in Fulwood's-rents, Eagle-street and court, Castle court, Lamb's Conduit passage, &c., &c., exclusive of those removed after attacked by cholera to the Workhouse and St. Bartholomew's Hospital. The Registrar, in his reports, describes the following cases and localities:—

"On the 19th August, at 19 Fulwood's-rents, wife of journeyman shoemaker, aged 56 years, cholera 12 hours. This is a large house, with about 80 feet of space between the back, front, and any other building. The lodgers complain of a cesspool in the yard (near the house) belonging to No. 18, the effluvia from which is at times very offensive. There are 9 families resident in this house."

"On the 27 August, at 1 Eagle court, Eagle-street, son of journeyman cabinet-maker, aged 7 years, diarrhoea one week, cholera 17 hours. A very close court, without a thoroughfare, consisting of 3 houses. The drainage is very bad."

"On the 7th September, at 13 Fulwood's-rents, wife of groom, aged 30 years, diarrhoea 4 days, cholera 30 hours. This is a densely-populated neighbourhood. The house is very large, with yard at back, one side open to Gray's Inn-gardens."

"On the 7th September, at 3 Castle-court, waiter, aged 49 years, diarrhoea 14 days, cholera 12 hours. This court branches out of Fulwood's-rents. No thoroughfare; thickly populated."

"On the 30th September, at 2 Lamp Office-court, Lamb's Conduit-street, daughter of journeyman cabinet-maker, aged 4 years, cholera 2 days, effusion of the brain 5 days. This court contains 3 houses, open in front. No back rooms nor yard behind; generally full of lodgers. 2 deaths occurred in this house on the same day."

14; 2. HOLBORN; *St. Andrew Eastern*. Pop. 12613.—Chol. 110; Diarr. 39.

Extends east of Gray's Inn-lane to Leather-lane, from the north side of Holborn to Warner-street, Eyre-street, &c., and includes Furnival's Inn. In January the prevalence of cholera occasioned a great excess of mortality; the deaths from the epidemic were 19, all of whom died in the Union Workhouse, and here also in the succeeding month 2 more perished; a lapse of nearly 4 months ensued, when again cholera was fatal in the Workhouse, on the 30th May; the following day a boot-maker, aged 45 years, died in Brook-street; the annexed table represents the deaths from cholera and diarrhoea:—

	Union Workhouse, Grays's Inn Lane.	
	Chol.	Diarr.
January	19	10
February	2	5
March	3
May	2	..
June	4	1
July	17	2
August	30	2
September	10	2
Total	84	25

A great proportion of the above deaths were persons removed into the Union Workhouse, after attacked by cholera, from the Saffron-hill and St. George-the-Martyr districts, belonging to the same Union; and if the 84 deaths in the Workhouse were deducted, 26 would be the number of persons who died of cholera in other parts of this district; the number of pauper inmates about 700; the cholera epidemic in the Union-house ceased on the 22nd September, and in other localities on the 20th September. In this district many persons residing in Tindall's-buildings, Portpool-lane, &c., were attacked by cholera, and died after removal into St. Bartholomew's Hospital. The principal neighbourhoods which suffered from the epidemic are Crown-court, Liquorpond-street; Tindall's-buildings, Gray's Inn-lane; Brook-street, Portpool-lane, Baldwin's gardens, Union-buildings, Leather-lane; Tash-street, Fox-place and court, &c., &c. The following cases are selected from the Registrar's reports:—

"On the 20th August, in the workhouse, removed from Tindall's-buildings, Gray's Inn-lane, a widow, aged 40 years, cholera 16 hours. Tindall's-buildings is a large open court, densely populated with Irish families. The court is clean, with a large sewer at the bottom."

"On the 21st August, at the Hole-in-the-Wall passage, Brook's Market, wife of greengrocer, aged 52 years, diarrhoea one month, dropsy 4 years. The Hole-in-the-Wall passage is very narrow, with houses on both sides, and one privy for the whole. Has a large slaughter-house in the centre."

"On the 21st August, at 6 Tash court, Tash-street, Gray's Inn-lane, wife of labourer, aged 43 years, cholera 36 hours. Tash-court is very thickly populated; is a thoroughfare, and appears generally clean; small open yards behind, with water butts, &c."

"On the 21st August, at Bell-court, Gray's Inn-lane, painter and glazier, aged 51 years, cholera 24 hours. Bell-court is large and open; a great thoroughfare from Gray's Inn-lane. They have all open yards behind, with good drainage."

"On the 23rd August, at George-court, Fox-court, labourer, aged 54 years, cholera 10 hours. George-court, Fox-court, and several courts adjoining, thickly populated. Is a thoroughfare leading out of Gray's Inn-lane to Brook-street, Holborn."

"On the 7th September, at 20 Back-hill, Hatton-garden, daughter of compositor, cholera 6 hours. Back-hill is a large open street, with good drainage and plenty of water."

14; 3. HOLBORN; *Saffron Hill*. Pop. 14441.—Chol. 31; Diarr. 6.

Bounded on the west by Leather-lane, including Saffron-hill on the east, extending north from Holborn hill to Ray-street, Vine-street, &c.

Cholera became fatal the 2nd July, at 38 Kirby-street, next case on the 9th. During this month 9 deaths, in August 6; in September 14; and 2 in October; namely, one on the 2nd, in Leather-lane, and the last on the 30th, in George-yard.

The following localities suffered from the epidemic—Saffron-court, Great Saffron-hill, Union-court, Leather-lane, Greenhill's-rent, George-yard and alley, Hatton-yard, &c.

During the 3 months ending the 30th September, 15 more deaths than births were registered, not including those persons attacked by cholera who died after admission into the Workhouse or the Hospital of St. Bartholomew.

The following cases, &c., are selected from the Registrar's reports:—

"On the 31st August, at 20 Union-court, Saffron-hill, widow of shoemaker, aged 50 years, cholera 18 hours; the stench from the privy of this house is sometimes very offensive."

"On the 1st September, at 2 Hatton-yard, shopman to cheesemonger, aged 28 years, cholera 6 days. The deceased was shopman to a cheesemonger of Ludgate-hill, where 2 persons were attacked with cholera and died a few weeks previous."

"On the 8th September, at 18 Field-lane, Saffron-hill, wife of labourer, aged 52 years, cholera. The house in which this death occurred is a lodging-house for tramps and prostitutes, in a narrow lane, badly cleansed."

"On the 10th September, at 7 Back-hill, Saffron-hill, son of gas-fitter, aged 18 years, cholera 48 hours. There is a cesspool in the next house which occasionally overflows, and the drains smell very offensive."

"On the 11th September, at 110 Great Saffron-hill, son of tinman, aged 5 years, cholera. The second child of this family who has died within a week; offensive smell from drain."

"On the 6th September, at 16 Saffron-street, blacksmith, aged 43 years, cholera 14 hours. There is a fat-melter's at the back of this house, which (when they are boiling) smells very offensive."

15; 1. CLERKENWELL; St. James. Pop. 19417. —Chol. 53; Diarr. 48.

Includes the southern part of the parish, bounded on the east by Goswell-street, from Charter House-square, extending north to Percival-street, west to Ray-street, Turnmill-street, &c., on the south by West Smithfield, Cow Cross-street, &c.

In the Middlesex House of Detention, a spinster, aged 26 years, died of cholera on the 10th February; the epidemic subsequently, on the 28th June, proved fatal in 24 hours to a grocer, aged 49 years, at 34 St. John-street. The next case followed on the 9th July, then on the 19th, 21st, &c. During September, 25 persons were destroyed by cholera and 18 by diarrhoea. In the month of August the numbers were 18 and 8 respectively. The last death by cholera on the 9th November. The deaths from diarrhoea were numerous, and more especially to children under 3 years of age. In 48 cases, 8 were adults above the age of 20 years. In the Middlesex House of Detention 2 cases of cholera proved fatal: the average number of prisoners about 110. At the Workhouse in Coppice-row, one death from cholera and 2 from diarrhoea: the average indoor poor number about 430. The comparative number of deaths from cholera during 3 periods of life is here shown:—

	Males.	Females.	Total.
From birth to 15 years . . .	7	5	12
15 and under 60 years . . .	15	20	35
60 years and upwards . . .	2	4	6

The following places were infected by cholera and diarrhoea:—

White Horse-court, Coppice-row, Cock-court, Turnmill-street, King-street, Clerkenwell Green and Close, Great Sutton-street, Rose-alley, Pear Tree-court, Bit-alley, Northampton-street, St. James-street, &c.

Several persons belonging to this Registrar's district, when attacked by cholera, were removed to St. Bartholomew's Hospital, where their deaths were subsequently registered.

Artisans, tradesmen, &c., including their families, were the principal sufferers from the cholera epidemic, and chiefly those in the middle age of life. In the majority of fatal cases the attack was sudden and the termination of life rapid, in many instances not exceeding 24 hours.

At No. 11 Paradise-court, a tailor died of cholera, the 16th August, in 7 hours after the attack; on the following day his son also died.

The following selection of cases, &c., are made from the Registrar's reports:—

"On February 10th, in Middlesex House of Detention, female, aged 26 years, malignant cholera 10 hours, produced by causes occurring out of the prison, in a person of debilitated condition (*inquest*). This person had come from a house of bad character in Whitechapel. She was brought in the prison van on the 9th inst., had a warm bath, and was taken to her cell, but died on the morning of the 10th. It appeared that she had suffered from a very bad leg almost in a state of mortification."

"On July 9th, a prisoner in the Middlesex House of Detention, male, aged 18 years, Asiatic cholera 75 hours (*inquest*). Deceased was admitted on the 6th inst., and died on the 9th inst. The prisoner attributed the disease to his having partaken of tainted meat the day previous to admission."

"On August 6th, at 4 Broad-court, Turnmill-street, costermonger, aged 40 years, sudden, cholera (*inquest*). The court is close, ill-cleansed; the drains of the houses on this side run through the passages, with a loose board to cover them."

"On August 16th, at 11 Paradise-court, Peter-street, tailor, aged 34 years, cholera 7 hours. The court is confined, abutting on a horse-slaughterer's, the smells from which at times are very offensive. On the following day a son died of choleraic diarrhoea."

"On August 19th, at 11 White Horse-court, Turnmill-street, widow of journeyman bootmaker, aged 45 years, diarrhoea 36 hours, cholera 19 hours. Defective drainage. The court leads to a horse-slaughterer's, and is occupied by very poor people."

"On August 27th, at 1 Hooper-street, female servant, aged 23 years, cholera 14 hours. Was servant in Ludgate-hill, where she was attacked about 3 o'clock in the morning, and brought to Hooper-street; where she had been the day before, apparently in good health, she had attended some of the family in cholera. Four of the domestics were attacked—2 died."

"On September 8th, at 6 Caroline-place, Goswell-street, wife of tailor, aged 37 years, cholera 25 hours. This is a very close, ill-cleansed, and overcrowded court; there are 12 houses in it of 3 rooms each, one over the other, which are occupied by separate families—about 180 individuals. There are but 2 privies common to the whole court, with a large cesspool, which has been emptied twice with the machine; there is also a large slaughterhouse in this court, and many pigs kept at the back of the houses."

"On September 23rd, at 22 Pear Tree-court, wife of labourer, aged 43 years, cholera 20 hours. She was engaged to lay out a person, the daughter of a watch-

maker, who had died of the disease, and to wash the clothes. Since then, a married daughter who attended her during illness has been taken ill. She had an infant at the breast, who was also attacked, and removed to St. Bartholomew's Hospital."

15; 2. CLERKENWELL; *Amwell*. Pop. 13490.—Chol. 17; Diarr. 17.

The west part of the parish of St. James, Clerkenwell, bounded on the east by Rosamon and Amwell streets, on the west by Hamilton-place, Lower-road, Warner-street, &c., and on the north by the south side of Pentonville-hill, &c.

First fatal case of cholera, July 13th, in Holford-place; the next succeeding case, August 14th. In the month of September the epidemic increased in severity, and carried off 12 persons. The last case occurred October 7th. Cholera and diarrhoea prevailed in the following localities:—St. Helena-place, Exmouth-street, Vineyard, court, and walk, Holford-street, Amwell-street, Ann-street, &c. At No. 8 Ann-street, 4 deaths from cholera took place within a fortnight; the first attacked was a boy, 7 years of age, survived 13 hours. The subjoined cases, &c., are selected from the Registrar's cholera reports:—

"On August 14th, at 13 William-street, discharged gunner in the artillery, aged 40 years, bilious diarrhoea, collapse 5 days. The deceased was a confirmed drunkard, and was intoxicated when attacked; his wife, supposing him to be merely suffering from the effects of drink, did not apply for medical aid for several hours after."

"On August 17th, at 42 Exmouth-street, house-keeper in a linen-draper's family, aged 63 years, cholera 18 hours. The deceased was in health up to the moment she was stricken. Medical assistance was immediately procured."

"On August 14th, at 16 Wood-street, bookbinder, cholera 14 hours, diarrhoea 2 days. The drainage all about this locality very bad."

"On August 14th, in the Middlesex House of Correction, prisoner, aged 26 years, cholera sudden (*inquest*). The deceased was seized on his entrance into the Prison. Medical treatment was had immediately. Out of more than a thousand persons in the prison at this time there was scarcely a sick person."

"On September 2nd, at 14 Exmouth-street, servant of a jeweller, aged 16 years, cholera. The house in which this girl died abuts on the Spa-fields burying-ground; the window of the kitchen in which she lived opens nearly upon the earth; graves are allowed to remain open all night, and the exhalations therefrom are most offensive."

"On September 7th, at 3 Vine-court, wife of glass-grinder, aged 35 years, cholera 20 hours. This death took place within a few yards of Spa-fields burying-ground. The space of ground now open for interment is only 72 feet by 72, and from 15 to 30 persons are buried in this space weekly!"

15; 3. CLERKENWELL; *Pentonville*. Pop. 9474.—Chol. 29; Diarr. 11.

This district includes the north part of Pentonville-hill, from Battlebridge-road to the west side of High-street, Islington, on the north bounded by Thorn-hill, James-street, &c.

A case of cholera proved fatal in 20 hours, on June 27th, at 12 Claremont-place; 30 days then intervened before the next death, which occurred on July 27th, at 2 Mount-court; in the month of August the epidemic prevailed with increased severity, and was fatal to 14 persons, in September to 12. The last death took place September 26th, at 2 Panton-grove. In the same house, a spinster, aged 32 years, previously was attacked and survived 11 hours, and on September 24th, a musician,

aged 57 years, died from cholera in the same house in 16 hours after 5 days' neglected diarrhoea. In the following localities cholera prevailed: Union-square, Field-court, White Lion-street, Baker's-place, Winchester-street, &c.

The Registrar states, that "in the house, 8 Union-square, 4 cases of cholera have occurred; 2 have died, 2 recovered, and 2 after leaving the house had cholera, one died and one recovered; the water-closet communicates with the house. In the next house 2 cases of cholera have occurred, one died and one recovered; 2 houses further off a case of cholera was fatal in 7½ hours. A large cesspool is said to be in the centre of the court, with an open drain and no trap to it; the water the people drink comes within one yard of the cesspool. The water-closets are full, having a drain to carry off the overflowing into the above-mentioned cesspool. In the whole of this division of Pentonville there is no sewer, and large houses with 20 to 30 inhabitants have only a barrel drain to carry off the soil and other refuse; the smell from the drain and water-closets is intolerable, especially at night, and almost every inhabitant of that court, and the courts immediately behind it, have had cholera or diarrhoea."

15; 4. CLERKENWELL; *Goswell Street*.—Pop. 14327.—Chol. 22; Diarr. 16.

This district is situated to the east of Amwell-street and Rosamon-street, extending south from Claremont-square to Percival-street, bounded on the east by the west side of Goswell Street-road, &c. Cholera first commenced June 21st, in St. John Street-road, then in Gloucester-street on the 28th, and continued to prevail in July, August, and September; the deaths were successively 3, 12, and 5. After September 16th the epidemic ceased to be fatal. The following places were infected by cholera:—Gloucester-street, St. John Street-road, Spencer-place, Ashby-street, Middleton-place, Arlington-street, &c. At 15 Whiskin-street, between the 4th and 7th August, two deaths were recorded from cholera.

"On August 28th, at 6 Spencer-place, a widow of a general dealer, aged 70 years, cholera 30 hours. Her general habits were cleanly; but she was lying on a bed, the head of which was against a wall, saturated with moisture from an adjoining privy or water-closet, the stench from which was at times intolerable."

16; 1. ST. LUKE; *Old Street*. Pop. 9841.—Chol. 13; Diarr. 15.

Includes Goswell-street and road on the west, to York-street and Brick-lane on the east, extending north from Old-street to the City-road.

Cholera appeared July 11th, and was fatal in 12 hours to a girl 8 years of age, at 6 Noble-street; the next case followed on the 19th. In August 2 persons died, and in September, when the epidemic was more severely felt, 9 persons were deprived of life,—the last sufferer on the 25th, the widow of a labourer, aged 56 years, died in 24 hours, at 27 Peartree-street.

Cholera was fatal in the subjoined localities—

Noble-street,	Powell-street, West,
Macclesfield-street, North,	Charles-street, &c.

Diarrhoea was prevalent in July, August, and September.

On July 11th, at 6 Noble-street, daughter of a morocco-case maker, aged 8 years, "Asiatic cholera, 12 hours" (*inquest*). The Registrar states that "there are no drains on the side of the street where the death occurred; all refuse water is thrown in the kennel in front of the houses, which are very densely inhabited. The street adjoins the Bricklane gas-works."

16; 2. ST. LUKE; *City Road*. Pop. 14711.—Chol. 56; Diarr. 26.

Bounded on the south by Old-street, on the west by Brick-lane, York-street; the north-east includes the City-road, St. Luke's Hospital, &c.

The mortality was considerably augmented through the prevalence of cholera in the months of August and September. The epidemic was first fatal at 70 Brick-lane, June 15th; next case, the 27th, in Rose-street; in July 7 persons died, August 22, September 24, and in October one, on the 5th, at 36 Bath-street. In the last 10 days of August, and the first 10 days of September, cholera was most malignant; in this period 26 deaths were registered, and after September 22nd the disease was nearly extinct. Diarrhoea prevailed throughout the year, and was more especially fatal to the very young and those advanced in years.

The following are places in which cholera prevailed—

Brick-lane,	York-street,
Bath-street and buildings,	New-street,
Little Mitchell-street,	Mitchell-street,
Clarence street and place,	Galway-street,
Waterloo-street,	Green-court, Brick-lane,
Radnor-street,	&c.
Old-street,	

On September 6th, at No. 26 Galway-street, a furrier and his wife on the same day both died of cholera, the first in 22 hours, and the wife in 14 hours after the attack.

The annexed cases are selected from the Registrar's reports:—

"On August 13th, at 28 Ironmonger-street, daughter of French polisher (deceased), journeyman, aged 15 years, cholera 10 hours. A long passage containing 9 or 10 houses; a filthy place. The houses are very confined at the back."

"On August 13th, at 20 Waterloo-street, daughter of journeyman butcher, diarrhoea 4 days. The drainage in this street is very defective; the houses are small and badly ventilated."

"On August 19th, at 12 Clarence-place, wife of journeyman tooth-brush maker, aged 33 years, cholera 4 days. Small confined houses, with scarcely any yard; had attended a brother and sister attacked with cholera."

"On August 24th, at 25 Norman's-buildings, wife of journeyman watchmaker, aged 64 years, cholera 25 hours. Small confined house, in the immediate neighbourhood of the gas works and churchyards."

"On August 26th, at 6 Radnor-street, journeyman baker, aged 23 years, cholera 8 hours. Previous good health; had been working near Shoreditch church, in the immediate neighbourhood of which cholera raged."

"On September 1st, at 7 Galway-street, daughter of journeyman jeweller, cholera 12 hours. No sewer down this street."

"In the same house, on September 6th, wife of journeyman jeweller, aged 31 years, cholera 3 days. Mother of the above."

"On September 6th, at 26 Galway-street, wife of journeyman furrier, aged 31 years, cholera 14 hours."

"In the same house, and on the same day, husband of the above, cholera 22 hours."

"On September 9th, at 17 Rose-street, son of labourer, cholera 5 days. This child was removed from 1 Macclesfield street, North, and 3 adults were removed from this house into the workhouse at the same time; 2 since dead."

"On September 8th, at 17 Ratcliffe-grove, wife of ironmoulder, cholera 14 hours. Badly drained. The backs of houses in this court join the backs of houses in Galway-street, where 4 fatal cases have occurred."

"At 53 Brick-lane, son of journeyman smith, aged 2 years, cholera 18 hours. The house is in a very dirty

state, facing the Gas Company's works. There have been several attacks and deaths of parties resident in this house."

"On September 22nd, at 6 Page's-place, John's-row, son of journeyman type-founder, cholera one week. A court containing 6 small 2-roomed houses; very damp and confined; 2 privies in the court common to all, one within 4 feet of the door where this child died. The smell is most offensive. Informant states that nearly all the inmates have had diarrhoea. During the 3 months ending September 30th, the births occurring in the City of London Lying-in Hospital, City-road, have decreased very much."

16; 3. ST. LUKE; *Whitecross Street*. Pop. 12963. —Chol. 66; Diarr. 35.

Situated on the south side of Old-street, extending south to Fan-street and Beech-street, Barbican, &c.

The prevalence of cholera in the months of July, August, and September, occasioned a great excess of mortality. The deaths respectively were 10, 19, and 33. At 10 Red Lion-market, July 3rd, a fatal attack was recorded, succeeded by another on the 13th, in 15 hours, a butcher, aged 30 years, at 22 Reform-place. The epidemic considerably extended its virulence in August, and attained its maximum severity on September 10th; in the first 10 days of this month 22 persons lost their lives. From the 15th, the cholera epidemic nearly ceased. In October, 4 deaths are recorded, the last on the 28th, at No. 10 Crown-court.

In many instances, those persons who were attacked by cholera in the parish of St. Luke were afterwards removed into the St. Luke's Workhouse, situated in the Hoxton New Town sub-district of St. Leonard's, Shoreditch. The deaths in this workhouse numbered 64 from cholera and 16 from diarrhoea, which were persons removed from the 4 Registrars' districts comprised within the parish of St. Luke's, and having no connexion with the parish of St. Leonard's, Shoreditch, in which the Workhouse is situated.

Cholera was severely felt in the following streets and neighbourhoods—

Reform-place,	Gloucester-buildings,
Old-street,	Hartshorn-court,
Baltic-street and court,	George's-buildings,
White Lion-yard,	Golden-lane
Playhouse-yard,	Red Lion-market, &c.
White Horse-court,	

Several persons in this district, when seized with cholera, were removed into St. Bartholomew's Hospital, where they subsequently died.

At No. 2 Reform-place, a butcher, aged 30 years, was attacked by cholera; death succeeded in 15 hours. In 4 days after, a porter's wife perished from the epidemic. In many instances the attack was sudden, and rapidly terminated in death within a few hours. A few isolated cases of diarrhoea were registered in the early part of the year. In August and September this disease became prevalent, and generally visited those localities where cholera was most fatal. The majority of the deaths from diarrhoea were, of the very young or of those advanced in years, whilst from cholera persons of all ages suffered indiscriminately.

16; 4. ST. LUKE; *Finsbury*. Pop. 12314. —Chol. 48; Diarr. 21.

Comprises the south-east part of the parish of St. Luke, bounded on the north by Old-street, extending on the west to Tabernacle-walk, Wilson-street, &c., including Finsbury-square, Chiswell-street; on the south bounded by Ropemakers'-street, Finsbury-circus, &c.

First case, June 7th, a gentleman's wife, aged 23 years, died in 10 hours, at No. 6 Wilson-street; the

next case followed the 11th July, fatal in 17 hours, at 11 Finsbury-street; then on the 17th, 18th, &c. During this month, 9 deaths; increased to 24 in August, and subsided to 14 in September, the last on the 23rd, in 20 hours, in Blue Anchor-alley. The epidemic was at its height on September 9th.

The following localities suffered from cholera, viz.—

Bunhill-row,	Featherstone-court,
Tabernacle-row,	Blue Anchor-alley,
Staple's-court,	Prince's-buildings,
Bank's-court,	Twister's-alley, &c.

On August 24th, at No. 7 Bank-court, a sawyer's wife, aged 46 years, died from cholera in 12 hours; and on the following day his son, aged 10 years, was fatally attacked.

17; 1. EAST LONDON; *St. Botolph*. Pop. 20494. —Chol. 101; Diarr. 24.

This Registrar's district comprises the parishes of *St. Botolph*, *Aldgate*, and *Bishopsgate Without*, forming the north-east part of the city without the walls.

Cholera appeared in July, the first fatal case the 6th, at 171 *Bishopsgate-street Without*. A continued increase was observed towards the end of this month; in August the epidemic prevailed extensively, and increased until September 10th; from July 6th to this date, 84 persons were fatally attacked. From September 10th the epidemic gradually subsided, and in the remaining part of this month but 12 deaths were registered; 4 in October, and one in November, a labourer's son, aged 9 years, survived the attack 12 hours, on November 2nd, at No. 12 *Seven Step-alley*, *Gravel-lane*, *Aldgate*. On the last 11 days of August, and during the first 10 days of September, the greatest loss of life occurred; in this period 39 persons died, 5 of this number in the *Bishopsgate Workhouse*. On August 21st, the 2 children of a porter, at No. 38 *Half Moon-street*, *Bishopsgate*, died of cholera, in 9 and 12 hours respectively after the attack; the mother, in the same house, on the 23rd, died in 12 hours, having had diarrhoea on the 2 previous days; one death from cholera occurred at No. 35, another at No. 37, and another at No. 39.

At No. 11 *Angel-alley*, *Bishopsgate Without*, a paper-stainer's wife and a policeman's wife were both afflicted with the epidemic and died in the same house, one on August 30th, the other on September 8th; and at No. 1, 3 fatal attacks commenced, one terminated after removal into *St. Bartholomew's Hospital*.

In the East London, or *St. Botolph's workhouse* for females, in *Dunning's-alley*, 31 died of cholera and 5 from diarrhoea, viz., in

	Cholera.	Diarrhoea.
July . .	14	..
August .	11	3
September	6	2
Total .	31	5

The above were females, with the exception of 3 boys. The average number of in-door poor about 300.

At No. 14 *Sparrow-corner*, *Minories*, a smith, aged 46 years, and his two daughters, were all attacked by cholera, and died between the 7th and 15th September.

At No. 5 *Seven Step-alley*, August 25th, a labourer's daughter died of cholera in 5 hours; on the following day, in the same house, a labourer, aged 74 years, survived the attack 9 hours. Two deaths also occurred at No. 9 and also at No. 12.

The following are the localities in which the epidemic principally prevailed—

	Deaths.
Half Moon-street, <i>Bishopsgate Without</i> . .	8
Angel-alley	5
Seven Step-alley, <i>Gravel-lane</i>	8
Sparrow-corner, <i>Minories</i>	4

also in *Farrer's-rents*, *Thompson's-rents*, *Sweet Apple-court*, &c. &c.

From this Registrar's district, 10 persons were removed, after attacked by cholera, into *St. Bartholomew's Hospital*, where they subsequently died.

The subjoined notes, &c., are selected from the Registrar's reports:—

"On August 16th, at 10 *Little George-street*, *Minories*, *Aldgate*, mason, foreman at a builder's, aged 61 years, cholera 10 hours. The house is cleansed and ventilated; the deceased lived there many years, but has been much annoyed of late by the effluvia arising from the manufacture of violin strings at the rear of his house, which nuisance has since his death been removed."

"On August 21st, at 38 *Half Moon-street*, *Bishopsgate*, daughter of porter, cholera 9 hours. A sister of the above, in the same house and on the same day, died of cholera 12 hours. The house in which these 2 children died is very old and crowded, ill cleansed, and, like the surrounding tenements, unfavourable to health. The father states that they were in perfect health on retiring to rest previous to the attack."

"In the same house on August 23rd, wife of porter, diarrhoea 2 hours, cholera 12 hours. The deceased was the mother of the above 2 children who died of cholera. The evening previous to her death she attended the burial of her children, and retired to rest in apparent good health."

"On August 25th, at 81 *Sun-street*, *Bishopsgate*, wife of milkman, aged 52 years, diarrhoea 10 hours, cholera 11 hours. She had been attending on her son, who was dangerously ill from cholera; the son, in consequence of the mother being attacked, was sent to *St. Bartholomew's Hospital*. House drained and cleansed."

"On August 26th, at 5 *Seven Step-alley*, *Aldgate*, labourer, cholera 9 hours. The house is close and unfavourable to health, the room in which the deceased died is about 8 feet by 6, with 6 or 8 persons (adults) living together; the wife was sent to *Bartholomew's Hospital* and died there; last week a grandchild died of cholera in the same room."

"On August 29th, at 16 *Seven Step-alley*, *Gravel-lane*, *Aldgate*, son of charwoman, aged 6 years, diarrhoea, cholera 17 hours. Close, ill cleansed, and unfavourable to health; a locality in which there have been many deaths from cholera within the last month."

"On August 30th, at 11 *Angel-alley*, *Bishopsgate*, wife of master paper-stainer, aged 33 years, cholera one day. Crowded neighbourhood; the house is now being drained and cleansed, previously it was very offensive, from the hot water and steam passing under it from a distillery at the back."

"On September 7th, at 7 *Sweet Apple-court*, *Bishopsgate*, wife of journeyman shoemaker, aged 57 years, diarrhoea a few hours, cholera 17 hours. House drained, and not overcrowded. The deceased had been nursing a friend ill of cholera in *Tooley-street*, and was brought home ill."

"On September 8th, at 11 *Angel-alley*, *Bishopsgate*, wife of City policeman, aged 38 years, cholera 36 hours. Another death had previously occurred in this house."

"On September 10th, at 8 *Three King-court*, *Minories*, wife of labourer, aged 64 years, diarrhoea 11 hours, cholera 11 hours. House close, and crowded

neighbourhood; there is only one privy for 9 houses, situated against the back of the house in which the deceased lived, the smell from which is most offensive."

"On September 10th, at 5 Thompson's-rents, Half Moon-street, Bishopsgate, son of a journeyman brush-maker, aged 9 years, diarrhoea 6 hours, cholera 30 hours. This is the third child of the same family, out of the same house, that has died within 10 days."

"On September 15th, at 14 Sparrow-corner, Minories, daughter of journeyman smith (deceased), diarrhoea, cholera. The death of the father was reported on the 13th, and a sister on the 8th. The drain at the back of the house still remains open; and in consequence of new cisterns being made, there has been a very deficient supply of water for the last month."

17; 2. EAST LONDON; Cripplegate. Pop. 19161.—Chol. 81; Diarr. 33.

This district is formed by the parishes of St Giles Without, Cripplegate, and St. Botolph, Aldersgate, extending westward from Little Moorfields, including Aldersgate-street, &c.

Great mortality was occasioned by cholera in August and September, namely 30 and 38 deaths respectively. Diarrhoea was prevalent in June; on the 3rd, at 5 Glover's Hall-court, a painter's daughter, aged 5 years, died of this disease; on the 5th, her brother, aged 12 years, in the same house, died of cholera in 5 hours, from effects of accumulation of noxious matter in the cellar of the house (*inquest*); and in the same house, on June 6th, a tailor's daughter died of diarrhoea, and in 4 days after, her brother was seized with cholera and died; also another death from cholera occurred on August 30th, a smith, aged 36 years. In the month of June, 3 fatal cases of cholera are recorded, in July 5, and October 5; the last case on the 13th, at 26 Fore-street.

The epidemic rapidly spread after August 10th, and attained its height on September 5th; in this period 42 persons died; it continued prevalent to September 18th, it then declined and entirely ceased by October 13th. From different parts of this district, 16 persons were removed after attacked by cholera into St. Bartholomew's Hospital.

The following places are enumerated in which cholera was prevalent, viz.—

Golden-lane,	Three Herring-court,
Bridgwater-place and	Hartshorn-court,
gardens,	Collier's-court,
Smith's-court,	Moor-lane,
Maidenhead-court,	Garter-lane, &c.
Brackley-street,	

On July 11th, at No. 12 Barbican, a clogmaker, aged 27 years, survived an attack of cholera 22 hours, in the same house, on the 13th, a hairdresser died in 20 hours, previously had diarrhoea 28 hours. At No. 1 Moor-lane, the daughter of a turnkey died from cholera in 9 hours; in 3 days after, in the same house, a spinster, aged 67 years, was seized with cholera, death succeeded in 21 hours. At No. 8 Collier's-court, the 3 children of a labourer died of cholera from September 29th to October 2nd, likewise at No. 1, 2 deaths are recorded from the epidemic; at No. 6 May-square, 2 deaths are referred to cholera; at No. 8 Hartshorn-court also 2 deaths; and at No. 11, 3 fatal cases, one terminated after admitted into St. Bartholomew's Hospital.

The subjoined cases are selected from the Registrar's reports:—

"On August 15th, at 16 Bridgwater-place, Aldersgate, son of a currier, diarrhoea 7 days, cholera 10 hours. The house in which this case occurred contained a family in each room. The drains had been stopped for

some time, and at night when the house was closed, the stench arising therefrom was intolerable. One man had been removed from this house to the hospital, and died shortly after from an attack of cholera."

"On August 15th, at 25 Golden-lane, master butcher, aged 30 years, cholera 12 hours, diarrhoea 3 days. This person, who was of intemperate habits, kept a shop for the sale of bullocks' heads and cats' meat, and had a number of rabbits in the cellar; the refuse of animal matter also in the cellar was in a decomposed state, and the effluvia arising therefrom was very bad. Two other persons in this house were attacked by cholera, but by timely assistance, recovered."

"On August 23rd, at 3 Long-walk, cordwainer, aged 68 years, cholera 20 hours. The drains from a neighbouring court pass under the parlours of this house, and the stench arising therefrom rendering the place very unhealthy, so that the rooms on the ground floor have been closed by the collector as uninhabitable; each of the remaining rooms contains a separate family."

18; 1. WEST LONDON; West London, North. Pop. 12682.—Chol. 261; Diarr. 20.

Includes the parishes of St. Bartholomew-the-Great and St. Bartholomew-the-Less, and part of St. Sepulchre, Newgate; extending east of Farringdon-street to near Aldersgate-street, containing West Smithfield, St. Bartholomew's Hospital, &c.

Of the 261 deaths assigned to cholera, 198 took place in St. Bartholomew's Hospital, thus leaving 63 for the other localities within this district. The first case happened on June 17th, in Brazier's-buildings, Farringdon-street; the last on September 20th, at 32 Hosier-lane, Smithfield. In the West London Union House, West-street, a death from cholera was recorded on February 20th, next on June 7th; last case September 20th. In St. Bartholomew's Hospital a fatal case of cholera, in 17 hours, on June 17th, next the 26th, in 12 hours, on the 27th, 4 fatal cases were registered, the last death on October 15th. The average number of inmates is about 500. The deaths by cholera in St. Bartholomew's Hospital amount to about one-fourth of the entire number registered within the boundaries or liberties of the city of London; and that of the deaths in the Hospital, 11 in 20, were persons removed from the city, and 9 in 20 from other parts of the metropolis, which should be assigned to the respective localities in which the attack commenced prior to removal into the Hospital: it is also ascertained that 29 deaths only from cholera, or 15 per cent. of those which occurred in St. Bartholomew's Hospital, belong to the Registrar's district in which the Hospital is situated, and that 41 per cent. were transferred from the other districts of the city, and 44 per cent. from other parts of the metropolis.

On July 27th, a Hospital nurse, aged 42 years, died of cholera; also in the Hospital, August 28th, another nurse, aged 45 years. On each of the 4 following days 5 deaths were referred to cholera, viz., August 13th, 23rd, 27th, and September 12th. On each of the 2 following days 6 deaths, viz., August 20th and September 2nd. The annexed table represents the sex, and the progress of cholera in St. Bartholomew's Hospital.

	June.	July.	Aug.	Sept.	Oct.	Total.
Men . .	4	24	30	32	2	92
Women .	2	18	28	20	3	71
Children .	3	7	11	12	2	35
Total . .	9	49	69	64	7	198

Of the 198 cases of cholera, 110 were of persons removed from places within the boundaries or liberties of the City during the attack, whilst 88 persons were removed from other parts of the metropolis to the Hospital, where they subsequently died,—the proportion is thus:—

Residing within the City boundaries, 56 per cent.
 „ in other parts of London, 44 per cent.

The subjoined neighbourhoods show the residences, not within the City, of 88 persons prior to admission into St. Bartholomew's Hospital, viz.—

Gray's Inn-lane and Leather-lane . . .	16
Clerkenwell and Saffron-hill . . .	8
Cow Cross-street and adjacent courts, &c. .	9
St. Luke's, Old-street, Brick-lane, &c. .	11
Shoreditch	8
Bethnal-green	5
Blackfriars	3

and others from Pentonville, Islington, Spitalfields, Westminster, Lambeth, Finsbury, &c.

The deaths from cholera in the West London Union-house numbered 12, and from diarrhoea 5; the number of pauper inmates is about 450. Two persons, during an attack of cholera, were removed from the Union-house in West-street, and died after admission into St. Bartholomew's Hospital.

The proportion of the sexes, and the comparative loss of life by cholera in 3 periods of age, is illustrated in the annexed table:—

Age.	Deaths from Cholera.		
	Males.	Fe-males.	Total.
From birth to 15 years . . .	23	25	48
15 years to 60 years . . .	97	85	182
60 years and upwards . . .	17	14	31
Total	137	124	261

In the following localities the epidemic principally prevailed, viz.—

Sea-coal-lane, Cock-lane, Elliot-court, Old Bailey, Long-lane, King-street,	Hosier-lane, Cloth-fair, Bartholomew's-close, Fox and Knott-court, &c. &c.
---	--

On August 15th, at No. 3 St. John's-court, West-street, a hawker's daughter died of cholera in 9 hours; on the 16th, in the same house, her mother also died in 36 hours. The 2 daughters of a smith were fatally attacked by cholera, at No. 11 Cloth-fair, on August 23rd and 26th.

In the following houses 2 deaths from the epidemic occurred, viz., at

No. 58 Skinner-street, Snow-hill,
 No. 26 Sea-coal-lane,
 No. 10 Cock-lane, Snow-hill.

At No. 2 Bull's Head-court, King-street, 3 persons were fatally attacked by cholera; one case terminated after removal into St. Bartholomew's Hospital. Four fatal cases of cholera commenced at No. 13 Sea-coal-lane, and 2 terminated after admission into St. Bartholomew's Hospital.

18; 2. WEST LONDON; *West London, South*.—Pop. 16460.—Chol. 168; Diarr. 43.

This district extends west of Blackfriars-bridge to Middle Temple-lane, exclusive of the precinct of

Whitefriars; bounded on the north by Holborn, from Staples Inn to Holborn-bridge inclusive; continuing on the west side of Farringdon-street, New Bridge-street, including a part of Ludgate-hill, &c., and formed by the parishes of St. Bride, St. Dunstan in the West, and part of St. Andrew, Holborn, with the precinct of Bridewell, &c.

Cholera prevailed extensively in the parishes of St. Bride and St. Dunstan in the West, and St. Andrew, Holborn, during the months of June, July, August, and September; the deaths successively were 19, 47, 63, and 37. Between August 12th and September 12th, 81 persons were deprived of life; the greatest mortality from the epidemic was observed in the last 5 days of August, in this period 25 persons died, averaging from 4 to 6 daily; after September 13th, the virulence of the epidemic abated, and entirely ceased on October 3rd. On May 4th, at 112 Chancery-lane, the first fatal case; the next followed June 8th, at 43 Primrose-hill, St. Bride's; then on the 12th, 18th, &c., and rapidly spread after the 26th, extending over the parish of St. Bride's, Fleet-street, and surrounding districts.

The following localities were the principal seats of the epidemic, viz.—

Shoe-lane	8 Deaths.
St. Dunstan's-court	6 „
Harp-alley, St. Bride	8 „
Plum Tree-court, Fleet-street	11 „
Poppins-court	12 „
Hanging Sword-alley	10 „
Ludgate-hill	8 „
Primrose-hill, Salisbury-square	4 „
Bride-lane	5 „
Fleet-street	16 „
Fetter-lane	8 „
Farringdon-street	11 „

of which 10 occurred on the west side.

36 persons during an attack of cholera were removed from some of the above localities, and died after admission into St. Bartholomew's Hospital, and there registered, which, if added to the 168 deaths from cholera, increases the number to 204. During the months of July, August, and September, in every 9 deaths, 5 were assigned to cholera, and 4 to some other disease.

The annexed table represents the sex and the mortality from cholera in 3 periods of life:—

Age.	Deaths from Cholera.		
	Males.	Fe-males.	Total.
From birth to 15 years . . .	8	11	19
15 years to 60 years . . .	47	81	128
60 years and upwards . . .	7	14	21
Total	62	106	168

On July 28th, at No. 24 Hanging Sword-alley, St. Bride's, a scavenger's wife and child died on the same day from cholera; and in the same house, on the 30th, a female, aged 56 years, died of the same disease.

At No. 8 St. Dunstan's-court, 4 fatal attacks of cholera commenced, 2 terminated after removal to St. Bartholomew's Hospital; at 29 Poppins-court, 3 deaths are recorded; and 3 also at 7 Salisbury-square, St. Bride's.

In each of the following houses, 2 fatal cases of

cholera occurred, or terminated after admission into St. Bartholomew's Hospital—

No. 19 Primrose-hill,	No. 45 Ludgate-hill,
" 3 Shoe-lane,	" 94 Fetter-lane,
" 20 & 21 Harp-alley,	" 20, 11, & 2 Plum
" 22 Poppins-court,	Tree-court,
" 100, 104, 147, & 152	" 13 Black Horse-court.
Fleet-street,	

Diarrhoea was prevalent in a malignant form in July, August, and September; in these months the deaths respectively were 7, 9, and 15, &c.

Men.	Women.	Boys.	Girls.	Total
8	14	13	8	43

With reference to the trades and occupation of those afflicted by cholera, it appeared the labourers, porters, and mechanics, with their families, were the greatest sufferers.

19; 1. LONDON CITY; *London City South West*.—Pop. 8839.—Chol. 97; Diarr. 21.

This district extends east of Blackfriars-bridge to Trig-lane, and on the north includes the Cathedral of St. Paul; continuing on the east side of New Bridge-street to Blackfriars-bridge, and includes the precinct of Whitefriars.

The inhabitants suffered severely from cholera; the attacks in the majority of cases were sudden and of short duration. The first case terminated in 48 hours, June 26th, at No. 5 Crescent, Blackfriars; the next in 24 hours, on the 29th, at No. 4 Pilgrim-street; on the 28th 2 deaths, on the 29th 4. In July the mortality rose to 32, and attained its height August 28th; in this month there were 32 deaths, and declined to 24 in September; after September 27th, the epidemic appeared to have ceased; a solitary case occurred November 25th, at 9 Printing-house-lane, described as the wife of a smith, aged 27 years, debility after 2 attacks from cholera.

In the following localities the epidemic prevailed, namely—

Ashen Tree-court, Whitefriars,	Huish-court,
Evangelist-court,	Temple-lane,
Pleydel-court,	New-street, Blackfriars,
Water-lane, Blackfriars,	Printing-house-lane,
Shoemaker-row,	Glasshouse-yard,
	Whitefriars-street, &c.

Seven fatal cases of cholera commenced in the above neighbourhoods, and terminated after admission into the hospital of St. Bartholomew, which are not included in the 97 deaths from cholera that occurred in this district. Four attacks of cholera commenced at No. 7 New-street, St. Andrew's-hill, 2 were sent to St. Bartholomew's Hospital, and there died; and 3 deaths from the epidemic took place at No. 3 Printing-house-lane, and 2 fatal cases happened in each of the following houses—

No. 28 Water-lane,
" 3 Ashen Tree-court,
" 3 Broadway, Ludgate-hill,
" 32 Whitefriars-street, &c.

On August 26th, a cabdriver died, after an attack of cholera, at No. 2 Pleydel-court, Whitefriars; in the same house, on September 6th, his wife died of diarrhoea, and on the 13th, a spinster, aged 20 years, in 26 hours, and also on the 30th, a basket-maker's son died of diarrhoea, making 4 deaths in the same house in a little more than a month. In July, August, and September, the deaths from cholera numbered 88, whilst from all other causes of death but 54, or in

every 3 deaths 2 were assigned to cholera; for the same period, 142 deaths were registered against 66 births.

The annexed cases are selected from the Registrar's reports:—

"On July 14th, at 36 Water-lane, a hairdresser's wife, aged 47 years, cholera 72 hours. Deceased was debilitated by over anxiety and long continued lactation. Nursed her child 3 years."

"On August 23rd, at 1 Phoenix Wharf, Whitefriars, wife of journeyman printer, aged 30 years, cholera 24 hours. This joins a lay-stall, where all kinds of filth is emptied by scavengers, &c. It is one of the 3 City lay-stalls that wants removing from the metropolis."

"On August 29th, at 3 Printing-house-lane, Blackfriars, widow of journeyman bricklayer, aged 44 years, cholera 12 hours. The husband of this woman was brought from Bushey, dead, August 23rd, of cholera."

"In the same house, on August 30th, son of journeyman bricklayer, cholera 24 hours. This is a grandchild of the above."

19; 2. LONDON CITY; *London City North West*.—Pop. 12427.—Chol. 18; Diarr. 9.

Includes, on the south, Ludgate-street, Paternoster-row, and north side of Cheapside; on the east, Old Jewry and Basinghall-street; on the north, London Wall; and on the north-west, Newgate, &c.

In this district, although nearly in the centre of the metropolis, cholera but slightly prevailed: the first case occurred June 28th, in 15 hours, at No. 5 St. Martin's-court, Ludgate-hill; next in Basinghall-street, July 19th, in 12 hours, and on September 26th, the last case recorded terminated in 13 hours, in Bird-court, Philip-lane: it prevailed also in—

Ludgate-street,	Prujean-square, Old
St. Martin's-court,	Bailey,
Ludgate-hill,	Winchester-court, &c.

Three persons were removed to St. Bartholomew's Hospital during an attack of cholera, and there died.

The following notes are taken from the Registrar's cholera reports:—

"On August 30th, at 6 St. Martin's-court, Ludgate-hill, spinster, schoolmistress, aged 53 years, cholera 3 days. The deceased came from Farwig, near Bromley, Kent, on August 25th, to spend a few days with her friends, and was taken ill the following day. Nothing objectionable to this house, with the exception of there being no windows at the back."

"On September 7th, at 5 Prujean-square, Old Bailey, wife of porter at a tavern, aged 38 years, cholera 12 hours. The informant states, that the smell from the privy has been very bad during the whole summer. The deceased had 2 or 3 attacks before the present fatal one, had been washing the day previous to her death in the cellar, which is very damp, and smells offensively."

"On September 9th, at 3 Holiday-yard, wife of scavenger, aged 76 years, cholera 24 hours. A short time ago complaints were made from most of the houses in the yard respecting the privies, which have at times overflowed: a sewer has since been made to communicate with the houses."

19; 3. LONDON CITY; *London City South*. Pop. 11954.—Chol. 31; Diarr. 3.

Bounded on the south by the river Thames, from Trig-lane, continuing east to Swan-lane, including on the north Cornhill, Poultry, and the south side of Cheapside.

Cholera commenced in Hatchet-court, Little Trinity-lane, July 15th: next on the 17th, 19th, &c. By the end of the month 5 deaths, in August 10, and in September 16; the last recorded case, the 24th, at No. 2

Kennet's Wharf-lane. The epidemic was prevalent in—

Upper Thames-street,	Brook's-yard,
Greenhithe,	Trig-lane,
Salter's Hall-court,	Lambeth-hill,
Cannon-street,	Hatchet-court, &c., &c.

Three persons in this district, after being attacked by cholera, were removed to St. Bartholomew's Hospital, in which district their deaths were subsequently registered. At No. 2 Brook-yard, September 12th, a labourer's daughter died of cholera in 18 hours; subsequently in the same house, on the 15th, her brother and sister died of cholera in 9 and 12 hours' illness from the commencement to the termination.

The annexed cases are selected from the Registrar's reports, &c.:—

"On August 20th, at 172 Upper Thames-street, son of tailor, aged 10 years, cholera 12 hours. No complaint of house or water. Went with his father to see his uncle, at the Cholera Hospital, taken bad as soon as he came back, and died in 12 hours."

"In the same house, on August 24th, wife of tailor, aged 42 years, cholera one day. Mother of the boy above."

"On August 21st, at Brooks'-yard, Upper Thames-street, daughter of dairyman, aged 6 years, cholera 9 hours. No complaint of drains or water: it is a long narrow place, leading to Brooks'-wharf, close to the Thames."

"On September 9th, at 5 Crown-court, Great Trinity-lane, son of flour porter, aged 10 years, cholera 12 hours. A narrow court; the drains do not go into the sewer."

19; 4. LONDON CITY: *London City South East*. Pop. 10597.—Chol. 26; Diarr. 6.

The boundary of this district on the south is the river Thames, from Swan-lane to the Tower-dock; on the north including Fenchurch-street, and part of Gracechurch, Leadenhall, Lime, and Jewry streets, &c.

At 110 Fenchurch-street, July 11th, a wine-merchant died of cholera; on the same day, at No. 7 Mercer's-court, St. Mary-at-Hill, the son of a labourer, lived 13 hours after the attack, in the same house, the mother of this child, on the 18th, survived an attack of cholera 16 hours; 15 deaths from the epidemic were registered in August, and 6 in September, the last on the 17th. The subjoined localities also suffered from the epidemic, viz.—

Pudding-lane,	Lower Thomas-street,
Miles-lane,	Fish Street-hill,
Swan-lane,	Fox-court, Miles-lane,
Love-lane, Eastcheap,	Meeting House-court, &c.

and in a steam-vessel lying off the Custom-house quay, one fatal case of cholera was recorded. In the months of July, August, and September, the deaths from all causes numbered 78, whilst the births registered did not exceed 58, in the proportion of 11 births to 14 deaths; and in every 14 deaths in this period, 5 were assigned to cholera and 9 to some other cause of disease. Three persons, after they were attacked by cholera, were removed into St. Bartholomew's Hospital, and there their deaths were subsequently registered.

"On September 17th, at 6 Priest-alley, Great Tower-street, wife of labourer, aged 31 years, cholera 36 hours. The house in which this death took place is rendered very unhealthy by the bad smells arising from the cess-pool or privy in the house. Her husband and her little boy, aged about 7 years, were both taken ill with cholera, and removed to St. Bartholomew's Hospital without hope of recovery. Another family residing in the same house was compelled to move out; 2 deaths

occurred at the "Duke's Head" public-house, in the same court, from cholera, one on the 6th and the other on the 24th of August."

"On September 3rd, at 21 Love-lane, Lower Thames-street, daughter of labourer, aged 14 years, cholera 10 hours. This female was out at service, and was brought home ill, and died in a few hours."

"In the same house, on September 7th, a labourer, aged 54 years, cholera 12 hours, father of the above."

19; 5. LONDON CITY: *London City North East*. Pop. 12103.—Chol. 35; Diarr. 8.

This district on the north includes Finsbury-circus, Wormwood-street, Camomile-street, &c.; on the south, Leadenhall-street, Aldgate, Lothbury, and the Bank of England; on the west Coleman-street, &c.

The first and only fatal case of cholera in July occurred the 27th, at No. 28 New Broad-street, duration of attack 13 hours, premonitory diarrhoea 2 or 3 days; the next case followed on August 12th, at No. 8 Brown's-buildings, St. Mary Axe; the epidemic from this date continued to spread, on the 23rd the greatest mortality occurred; in this month 23 persons were deprived of life, in September 10, and October one, last on the 6th; at 4 Longthorne-court, Bell alley, the widow of a waiter, aged 52 years, survived the attack 24 hours. Between August 12th and September 17th, both inclusive, 33 had fallen victims to the cholera epidemic, which prevailed in the subjoined localities, viz.—

Pea Hen-court,	Little Swan-alley, London Wall,
St. Helen's-place,	Brown's-buildings, St. Mary Axe,
Brown's-buildings, St. Mary Axe,	Sun-court, Bell-alley, Mulberry-court, &c.

Three deaths from cholera in the same family took place at No. 81 Bishopsgate-street Within, 2 at No. 15 and No. 5 Pea Hen-court, and 2 at No. 12 St. Helen's-place.

"On August 29th, at 42 Old Broad-street, master grocer and tea dealer, aged 58 years, cholera and congestion of the brain. The wife of the deceased died in the previous week, and the person who attended her at her death died three days after her."

LONDON.—EAST DISTRICTS.

MIDDLESEX (PART OF).

20; 1. SHOREDITCH; *Holywell*. Pop. 16722.—Chol. 223; Diarr. 37.

Constitutes the south-east part of the parish of St. Leonard, bounded on the south by Finsbury-circus; on the west by Wilson-street and part of the Curtain-road; on the east by Shoreditch, High-street, Long-alley, &c.; and on the north by Bateman-street, &c.

Two fatal cases of cholera were recorded in May and 6 in July; in the first 12 days of August 11 deaths, during the remainder of the month 129; in September 71, in October 4, the last recorded on the 12th, in Holywell-place. The epidemic was at its height in the middle of August, made considerable progress after the 12th, and continued with great severity to September 8th. During this period 159 persons died. Cholera was less fatal towards the end of the month, and entirely ceased in October. In 5 days, viz., on the 21st to the 25th August, both inclusive, 49 deaths were ascribed to cholera.

Deaths from Cholera.

Men	60
Women	88
Children	75

Tradesmen, mechanics, and their families were the principal sufferers from cholera residing in—

Holywell-lane and place,	New Inn-street, yard, and square,
Whitecross-place,	Jane Shore-court,
High-street, Shoreditch,	Curtain-road,
Bounty-street and place,	Clifton-street, &c. &c.
Long-alley,	

On July 20th, 2 adults died from cholera at 39 Whitecross-place, the duration of illness in each case 12 hours; in the same house another victim to the epidemic on the 23rd, and another on September 8th, and also on September 9th, making 5 deaths from cholera in this house.

At No. 33 Christopher-square, Long-alley, 3 deaths from cholera occurred between September 3rd and 4th. In each of the following houses 2 deaths or more from cholera are recorded, viz., at—

32 Clifton-street,	12 Holywell-lane,
2 Rumball's-buildings,	4 Holywell-place,
16 Reliance-square,	4 York-place, Broadway,
60 High-street,	11 & 14 New Inn yard.
4 Crooked Billet-court,	

Of the 37 deaths from diarrhoea, 29 were children. The annexed description of cases and localities are selected from the Registrar's reports:—

"On May 2nd, at 12 Holywell-lane, a bookbinder's son, aged 6 years, Asiatic cholera 9½ hours; 26 persons lived in this house, of whom 8 slept in the garret in which the child died. Attributed to extreme poverty, bad ventilation, and noxious effluvia arising from the gorged state of the cesspools. Another child has since died of cholera in the same room."

"On August 27th, at 4 Jane Shore-court, labourer, aged 44 years, cholera 48 hours. A filthy, dirty place, inhabited by the lower order of Irish."

"On September 18th at 1 Ann's-place, Boundary-street, Shoreditch, spinster, aged 50 years, cholera 6 days. The premises of a tripe and dogs' meat boiler in contact with this house; very offensive."

20; 2. SHOREDITCH; *St. Leonard*. Pop. 17976. —Chol. 202; Diarr. 42.

Bounded on the east by part of the Curtain-road and Hackney-road; south by Bateman-street, part of Worship and Castle-street; on the north by Huntingdon and Thomas-street and part of Old Street-road; on the west by part of Horton-road, &c.

Fourteen deaths from cholera occurred in the "Refuge for the Destitute," from February 15th to the 29th, and 3 in other parts of the district. On March 1st one fatal case in Hoxton-square; from this period to July 19th the epidemic ceased, but again reappeared at this date in French-alley, Shoreditch; by the end of the month 5 deaths occurred; in August 92, in September 65, and in October 21; the last on the 28th at Hoxton House Lunatic Asylum. The epidemic suddenly increased in severity on August 13th and continued with little abatement to October 7th; on August 24th to the 28th the epidemic was at its height, on the 25th 9 persons died: the proportion of the sexes was 69 males, 133 females.

The great excess of women who died of cholera as compared with men, in some degree arose from the female mortality in the "Refuge for the Destitute," and also in the Hoxton House Lunatic Asylum, in those institutions, of 35 deaths, 33 were of females. In the above Lunatic Asylum the first fatal case of cholera occurred September 11th, and it prevailed to October 28th; in this period 21 deaths from cholera and one from diarrhoea; the following streets, &c., likewise suffered from the epidemic—

Union-buildings and walk,
Norfolk-street, place, and gardens,
Paul-street,
High-street,
Bateman's-row,

Curtain-road,
Willow-street, walk, and gardens,
Huntingdon-street,
Crooked Billet-yard,
Guy's-buildings, Kingsland-road, &c.

At No. 7 Willow-gardens, August 26th, a printer's wife died of cholera in 8 hours, and the widow of a brushmaker in 18 hours; and at No. 2 Charles-street, Curtain-road, two persons died, the one in 12 and the other in 14 hours after the attack; also 2 deaths from cholera at No. 10 Bateman's-row. Diarrhoea was prevalent throughout the year; in 42 deaths, 7 were adults and the rest children. The Registrar, in his reports, describes the localities and cases.

On February 15th, the two following cases occurred in the Female Refuge for the Destitute:—

"A female servant, aged 19 years, diarrhoea 48 hours, cholera 24 hours; a female servant, aged 17 years, cholera 14 hours."

"The above deaths occurred near the rear of the building. The whole of the houses in that locality are badly drained, and the cesspools overflow. The girls had, at a former time, led irregular lives, but had been inmates of the institution—the former for nearly five months, and the latter for more than a year. Every attention had been paid to cleanliness, diet, and other comforts."

"On August 13th, at 2 Crooked Billet-yard, Kingsland-road, wife of hawker, cholera 12 hours. A place filled with dirt, and the most extreme of poverty and wretchedness."

"On August 12, at 153 High-street, wife of master brushmaker, cholera 10 hours. In the rear of this house is a slaughterhouse, and a very filthy court, of miserable hovels with wretched inhabitants, all in a bad state from dirt and effluvia."

"On August 24th, at 9 Pear Tree-court, charwoman, cholera 19 hours. Very dirty and poor, being inhabited by the lowest class of costermongers and sellers of water cresses."

"On August 23rd, at 7 Kingsland-road, carver and gilder, cholera 6 hours. The deceased has been a very hard drinker for several years past, up to the time of his death."

"On August 29th, at 4 Alder's-court, Curtain-road, dustman, aged 45 years, cholera 18 hours. Very badly drained and unhealthy."

"On August 30th, at 15 Willow-walk, Curtain-road, daughter of a cabinet maker, cholera 9 hours. In the same house, sister of the above, cholera 24 hours; brother of the above, cholera and effusion on the brain, 3 days. The whole of this densely-populated locality has suffered severely from the epidemic. The principal cause appears to be bad drainage, over population, and poor occupants, with small houses let in tenements."

"On September 11th, at 2 White Bear-gardens, Kingsland-road, wife of labourer, cholera 26 hours. In the same house, on September 12th, son of the above, cholera 25 hours. A very poor, damp, ill-drained, and wretched locality."

"On September 29th, at 4 Phipp-street, Holywell-mount, painter, aged 46 years, cholera 12 hours. A very damp and ill-drained locality, and over populated with very poor inhabitants."

"On October 1st, at 3 John's-place, Old Street-road, son of costermonger, cholera 36 hours. No drainage, and otherwise damp; place very closely populated by the poorest."

20; 3. SHOREDITCH; *Hoxton New Town*. Pop. 15751.—Chol. 125; Diarr. 40.

Comprises the north-west part of the parish of St.

Leonard, Shoreditch, bounded on the north by the Regent's Canal, on the east by the New North-road, on the south by part of Old Street-road, and on the west by part of the City-road, Canal Basin, &c.

Cholera became fatal on June 29th, next case on July 14th, in Shaftesbury-street; during this month, 11 deaths; the epidemic increased in August, prevailed in September, and ceased in October, in which months the deaths successively were 36, 69, and 8. In the St. Luke's workhouse, cholera was fatal, during the same periods, to 7, 47, and 7, respectively, in addition to 16 deaths from diarrhoea; all were of persons removed into the Workhouse from the parish of St. Luke, and not living in this district or in the parish of St. Leonard, Shoreditch. The last fatal case of cholera on October 16th, at Walbrook-place: the epidemic prevailed in—

Union-street,	Walbrook-place,
Britannia-street,	Plumber-street,
Edward-street,	Moneysers-street, &c.
Chatham-gardens,	

On September 5th, 6 persons died of cholera in St. Luke's Workhouse, and from the 1st to the 14th, both inclusive, 33 persons were deprived of life belonging to the parish of St. Luke's. Two deaths from the epidemic were registered at 21 Edward-street, 2 at 10 Bristowe-street, and 2 at 1 Union-street.

The following cases are from the Registrar's reports:—

"On September 7th, at 26 Plumber-street, son of a furrier, cholera 6 hours. This child was prematurely born, the mother showed strong symptoms of cholera before her confinement."

"On October 14th, in St. Luke's workhouse, wife of a labourer (deceased), aged 38 years, cholera 8 days, typhus 3 days. Brought from 1 Warwick-place, Whitecross-street, St. Luke's. The husband, aged 34, and a daughter, aged 5 years, both died of cholera."

20; 4. SHOREDITCH; Hoxton Old Town. Pop. 13994.—Chol. 36; Diarr. 19.

Bounded on the west by the New North-road and Pitfield-street, on the east by Hoxton-road, on the south by part of Old Street-road, extending north to the Regent's Canal.

The first recorded case of cholera January 28th; in the month of May 1, July 5, August 14, September 15; the last occurred on the 30th, at Salisbury-street, the wife of a labourer, aged 41 years, cholera 13 hours' duration.

The epidemic was fatal in—

Bridport-place,	Upper John-street,
Canning-terrace,	Boot-street,
Hoxton-market,	Aske-street,
Little John-street,	Francis-street, &c.

At No. 2 Whitmore-street, on August 25th and 26th, a carman and his daughter died of cholera. The deaths from diarrhoea, with 4 exceptions, were all of children.

The following cases are selected from the Registrar's reports:—

"On July 23rd, at 15 Bridport-place, commercial clerk, aged 65 years, cholera 10 hours."

"In front of Bridport-place there is a brickfield, surrounded by a ditch of stagnant water, into which some privies used by the brickmakers empty themselves. The inhabitants of this neighbourhood have for a long time complained of the offensive effluvia arising from this cause, and consider it highly prejudicial to their health. The drainage of the locality is generally bad, being mostly superficial."

"On August 31st, at 2 Pimlico-walk, wife of a carman, exhaustion from cholera 5 days, 30 minutes

after delivery, child still-born. Drainage bad, the houses small and crowded."

"On September 4th, at 2 Sun-row, son of a carman, cholera 10 hours. This locality consists of small houses, and the drainage is bad, being mostly superficial."

"In the same house, on September 6th, daughter of carman, cholera 24 hours."

"On September 6th, at 3 Garden-court, Hoxton-market, son of a labourer, diarrhoea 7 weeks. This is a dirty court, very crowded, badly ventilated, and the drainage is bad."

"On September 9th, at 19 Boot-street, Hoxton-market, daughter of turner, cholera 7 days. This street is dirty, ill-cleansed, and densely crowded with inhabitants; the drainage is also very bad."

"In the same house, on September 10th, son of turner, cholera 8 days, brother and sister."

"On September 11th, at 19 Crown-street, wife of wood-carver, aged 49 years, cholera 8 days. This is a narrow street, densely populated. The cesspools, being within a few feet of the backs of the houses, cause a most offensive smell, and very injurious to the health of the inhabitants."

20; 5. SHOREDITCH; Haggerstone West. Pop. 12013.—Chol. 174; Diarr. 36.

This district is bounded on the south by Huntingdon-street, Thomas-street, &c.; on the west by the Hoxton-road; on the north as far as the canal and Kingsland-crescent; and on the east by Weymouth-terrace, &c.

The deaths of 91 males and 83 females took place from cholera, which was very prevalent in the months of August and September, when the deaths were 102 and 58 respectively. In July, 10 fatal cases, and in October, 3. A single case was recorded on January 31st; one in July, the next fatal attack occurred on the 10th, at No. 10 Hertford-street; in this house, by the 16th, a compositor and 3 children died, and at No. 8 a plasterer and his wife on the 14th and the 21st. About August 13th, a great increase of cholera was perceptible; on the 20th the mortality was highest, and prevailed with great severity to September 11th; a considerable decrease subsequently followed, and on October 24th, the last case was recorded in the Shoreditch Workhouse. The deaths in the Workhouse from cholera amounted to 103 and from diarrhoea 13, which, if deducted from the number registered in this district, leave 71 cholera, and 23 diarrhoea; each of the 6 sub-districts formed within the parish of St. Leonard's contributed more or less to the above number of fatal cases recorded in the Workhouse, where the epidemic was most severe; thus on one day, August 20th, 7 persons were victims to this disease, on the following day 5, and in 12 days, from the 20th to the 31st August, 27 deaths were recorded from cholera alone. The subjoined table shows the progress of the epidemic in Shoreditch Workhouse—the number of indoor paupers about 800.

	Deaths from Cholera in Shoreditch Workhouse.				
	July.	Aug.	Sept.	Oct.	Total.
Males	1	32	13	2	48
Females	30	25	..	55
Men and women .	1	53	31	2	87
Children under 15 .	..	9	7	..	16
Total	1	62	38	2	103

After 6 fatal cases of diarrhoea in the above Workhouse, the first case of cholera terminated in 10 hours, on July 31st, the last on October 24th. Labourers, cabinet-makers, shoemakers, mechanics, &c., with their families, were sufferers to a great extent from cholera—principally resident in

Hertford-street,	James-street,
Windmill-street,	Wilmer-gardens, Kings-
Canal-road,	land-road,
Whitmore-road, Shore-	Mary-street, Shoreditch,
ditch,	Queen's Head-walk,
Ely-street, and place,	Mill-row, &c.

At No. 5 and No. 3 Windmill-square, in each of those houses 2 persons died of cholera. At No. 7 William-street, a packer, aged 31 years, died of cholera in 12 hours, and in 4 days after, his son also died. The 2 daughters of a labourer, aged 7 and 8 years, died of the epidemic on September 5th, after attacks of 15 and 20 hours respectively, at 53 Essex-street.

The following cases are selected from the Registrar's reports:—

"On July 16th, at 10 Hertford-street, son of a compositor, aged 9 years, cholera 10 hours. This is the fourth victim in the same house and same family. This street is without drainage of any kind, not even to carry off the surface water; this, added to the intemperate habits of the father and filthy state of the house, would be quite sufficient to engender disease."

"On August 10th, at 5 Windmill-square, Canal-road, widow of tailor, aged 63 years, cholera 29 hours. Windmill-square is composed of eight small huts or cottages, forming two sides, four on each, containing two rooms on the ground, without any drainage."

"On August 13th, at 3 Windmill-square, Canal-road, wife of journeyman, cabinet-maker, aged 34 years, cholera 18 hours. All the rooms on the ground; very damp; privies close to the doors, and no drainage whatever. In the same house, on the same day, a daughter of the above, aged 9 years, cholera 3 days."

"On August 14th, at 13 York-row, Kingsland-road, labourer, cholera 27 hours. The houses in this row consist of 2 rooms, one over the other, very small and damp; smells from the privies in front at times very bad."

"On August 13th, at 7 William street, Canal-road, a packer in the City, cholera 12 hours. Drainage into cesspools, and that has been stopped for some time."

"On August 30th, at 15 Appleby-street, Pearson-street, Kingsland-road, widow, aged 60 years, cholera one week. The deceased (as a nurse) was employed to attend on a tradesman in Shoreditch who was attacked with cholera. The day after his death, she was seized with the same complaint and brought home. Her own home clean, airy, and well drained."

"In the workhouse, on August 31st, from 9 Bull-court, Kingsland road, shoemaker, aged 26 years, cholera 24 hours. A very close confined place, the houses in general let in single rooms for the accommodation of tramps, at 2d. or 3d. per night."

The Registrar states that, during the 3 months ending September 30th,—

"The births were rather less than usual, owing to an unusual number of still-born children, and miscarriages caused by fright from cholera."

"On October 16th, at 29 Hertford street, daughter of journeyman watchmaker, diarrhoea 3 weeks. Many deaths occurred in this street in August. The informant states, that nothing has been done as regards

drainage, nor even whitewashing the interior of the houses, which are in a most filthy state."

20; 6. SHOREDITCH; *Haggerstone East*.—Pop. 6976.—Chol. 29; Diarr. 15.

Bounded on the south by part of the Hackney-road, from Weymouth-terrace to Glo'ster-place; extending east on the Glo'ster-row to Duncan-place; on the west by Stonebridge-lane, &c.

Cholera was fatal on January 31st, at James-place; in February 3 deaths; May 1, July 3, August 7, September 10, and October 4. The last case on the 29th, at Maidstone-place. The first death in July occurred on the 21st, at Martha-street.

The following localities suffered from cholera—

Margaret-street,	Great Cambridge-street,
Martha-street,	Goldsmith-grove and
Dove-row,	row,
Brunswick-street,	Maidstone-place, &c.

The following cases are from the Registrar's reports:—

"On August 3rd, at 1 Union-street, Dove-row, twine spinner, aged 37 years, cholera (*inquest*). The back garden of this house is bounded by an open sewer. He worked on the rope-ground adjoining this sewer."

"On August 25th, at 20 Brownlow-road, widow of cheesemonger, aged 56 years, cholera 24 hours. She was removed from 191 High-street, Shoreditch, where her husband had died only a few days before."

"On September 6th, at 3 Oakford-place, Goldsmith's-row, daughter of brickmaker, aged 4 years, cholera 4 days, congestion of the brain 2 days, convulsions. Near the edge of the open sewer in Ann's-place, where many deaths have occurred from cholera."

21; 1. BETHNAL GREEN; *Hackney-road*.—Pop. 20031.—Chol. 233; Diarr. 54.

This district forms the north-west part of the parish of St. Matthew, extending from Shoreditch eastward to Barossa-terrace and Cambridge-heath, &c.

The mortality from cholera in this district was very considerable; 117 males and 116 females were deprived of life, chiefly in the months of August and September, when the deaths from the epidemic amounted to 204. In the months of January and February 15 deaths were registered, in July 5, commencing on the 4th, at No. 24 Old Castle-street; in August 153, September 51, October 8, and in November one, viz., on the 5th, at No. 3 Weatherhead-gardens. On August 12th the cholera epidemic suddenly increased, and was fatal on this day to 12 persons; on the previous day one only died, but on the 13th 22 persons were deprived of life, on the 14th, 12; on the 15th, 7. From August 12th to 31st, both inclusive, 135 persons died. After September 7th, the epidemic gradually subsided, and nearly ceased by the end of the month.

Two or more deaths occurred in the following houses, viz.—

7 Clare-street,	2 Cross-street,
10 Turville-street,	1 Maidstone-street,
61 Old Nichol-street,	20 Caroline-street,
57 Old Castle-street,	1 Virginia-row,
19 Half Nichol-street,	1 Shepherd's-court, &c.

Diarrhoea was very prevalent: of the 54 deaths 22 were of males and 33 females,—of this number 41 are described as children under 15 years of age, and the remaining 13 as adults. Weavers, mechanics, &c., and their families, were the chief sufferers from cholera and diarrhoea.

The proportion of the sexes and the deaths in 3 periods of life is shown in the annexed table:—

Age.	Deaths from Cholera.		
	Males.	Females.	Total.
From birth to 15 years .	52	46	98
15 and under 60 years .	62	54	116
60 and upwards . . .	3	16	19
Total . . .	117	116	233

During the months of July, August, and September, the deaths from all causes exceeded the births by 145.

The Registrar, in his reports, describes the subjoined cases and localities:—

"On August 2nd, at 10 Turville-street, son of a coal-whipper, aged 2 years, measles and pneumonia 3 weeks, cholera 10 hours. Neighbourhood low, crowded, and ill drained. A drain emitting offensive smells runs under the house, which contains 30 inmates."

"On August 3rd, at 20 Virginia-row, daughter of a weaver, diarrhoea 6 hours, cholera 6 hours. A densely inhabited street and low neighbourhood. There is an excellent sewer through it, with scarcely any communication with the adjacent houses."

The Registrar states, "The fatal nature of the calamitous visitation which has afflicted only a very limited, though densely peopled portion of my district, seems to point at human agency in the production of the sad catastrophe. These deaths have chiefly happened in a space of about 400 yards by 150. In Turville-street there is a sewer, and a communication from the privies thereto, but no drainage for the waste water, which is uniformly thrown into the street. But few deaths from cholera have as yet (August 18th) occurred beyond the specified area, and there must be some adequate cause for so singular a phenomenon. The 12th, 13th, and 14th of this month, will long be remembered in this neighbourhood; the outbreak of this fatal disease being without any adequate preparation; surgeons were wanted in many places at once; the hurried passing and repassing of messengers, and the wailing of relatives, filled the streets with confusion, and impressed on all a deep sense of an awful calamity."

"On August 24th, at 11 Old Castle-street, son of doll-maker, cholera 3 days. A close, overcrowded, and ill-cleansed street, with an excellent sewer, but few communications therewith."

The Registrar observes that, "in the last fortnight, I find that 99 out of 107 fatal cases of cholera and diarrhoea have occurred in a space occupying less than a tenth of my district. This portion of my district is almost wholly without sewers, all fluids, whether animal secretions or the waste of culinary or ablutionary processes, being carried off by surface drainage; it has no proper circulation of fresh air, three-fourths of the people are closely packed together, and from necessity as well as habit, no sufficient cleanliness of person or of habitation is generally observed. Moreover, the cholera district is precisely the fever district of past times."

"On August 28th, at 7 Turville-buildings, daughter of wadding dealer, cholera 4 hours. A close, confined, crowded, and ill-drained court—the very type of misery. This court is a small parallelogram, containing 6 inhabited and 2 uninhabited houses, with no backyards, and with an almost total stagnation of air—the chief supply being perpendicular; no water laid

on, and the drainage being through a stone grating in the centre of the court, having communication with a sewer."

"On September 3rd, at 1 Maidstone-place, Old Nichol-street, wife of itinerant musician, aged 35 years, cholera 2 days. A close, dirty, undrained court. The third death in the same house—the family then removed, and the father since dead."

"On September 7th, at 1 Gibraltar-walk, spinster, aged 32 years, shoebinder, cholera 12 hours. A narrow, close, and crowded street—not otherwise injurious to health."

The Registrar says, "notwithstanding the abatement of cholera in its original location, it is gradually creeping over my district; in its progress discovering with apparently instinctive sagacity every deficiency of precaution, every absence of the essentials to good health, whether existing in a street, a house, a family, or an individual, and more rarely appearing where none of the predisposing causes are known to exist. But whilst there are no sewers in streets a century old, or no communications into existing sewers from contiguous houses; whilst houses remain contaminated with the filth of years; whilst the streets remain for days uncleansed from accumulating dirt; whilst the free circulation of fresh air continues to be impeded; and whilst the daily supply of water of questionable purity continues, from various causes, to be locally deficient, so long may the periodical occurrence of such appalling visitations as that which at this time afflicts my district be expected."

"On September 11th, at 11 Cambridge-circus, daughter of labourer, aged 18 years, cholera 12 hours. Informant states that an offensive drain passes under this house into a sewer full of fetid matter, and that across the narrow street is a manufactory of lard or grease, which, when melting, fills the neighbourhood with noxious smells."

"On September 16th, at 4 Crown-court, Gascoigne-place, daughter of journeyman bricklayer, cholera 8 days, typhus 6 days. A crowded court; no drainage for the 3 houses within it, except into a small tub sunk into the earth; waste water carried out of the court, which is low, and thrown into the gutter of the adjoining street."

"On September 12th, at 20 Caroline-street, wife of journeyman cordwainer, aged 38 years, cholera 3 days, typhus 6 days. The third death in the same house, said to be occasioned by fright excited by seeing a cholera patient carried through the streets. The street narrow and close, but not otherwise unfavourable to health."

"On September 27th, at 7 Austin-street, daughter of journeyman house-painter, diarrhoea 2 months. A crowded, ill-cleansed, and undrained street, adjoining Shoreditch churchyard."

"On September 27th, at 2 New Nichol-street, journeyman weaver, cholera 24 hours. An overcrowded, ill-cleansed, close, and undrained street."

The Registrar, in his quarterly return of births and deaths for the 3 months ending September 30th, states, "that out of 342 deaths, 208 were from cholera, and 27 from diarrhoea. The principal seat of this visitation has been a very small portion of my district, and which is in a very wretched state from defective sewerage; has suffered much from the want of timely sanitary arrangements. The following table shows the principal seat of this fatal epidemic, the deaths occurring in the House of Refuge at the Bethnal Green Workhouse, of persons taken from this district, are not included. In none of the other streets did more than 3 deaths from cholera occur:"—

	Chol.	Diarr.
Old Nichol-street and courts	41	1
New Nichol-street and courts	19	2
Half Nichol-street and continuous streets	25	3
Nichol's-row	7	..
Turville-street and courts	31	2
Boundary-street (only half in this parish)	12	..
Collingwood-street	6	4
Old Castle-street	8	1
Vincent-street	9	1
Virginia-row	6	2
Gibraltar-walk	7	..
Crabtree-row	5	1
Caroline-street	5	1

"On November 6th, at 3 Weatherhead-gardens, Crab Tree-row, journeyman cordwainer, aged 38 years, cholera 2 days. A low and undrained spot, with a porous soil, through which the waste water percolates freely."

21; 2. BETHNAL GREEN; *Green*. Pop. 16766.—Chol. 233; Diarr. 68.

Comprises the eastern part of the parish, including the west part of Victoria Park, extending south to the Eastern Counties Railway; on the west by the Cambridge-road.

On February 3rd cholera appeared at No. 1 East London-place, and on the 15th broke out at Warburton's Lunatic Asylum, and fatally attacked 21 females in the asylum by the end of the month, and 2 on March 7th. The next fatal case took place on July 9th, at No. 24 Collingwood-place; in this month 12 deaths occurred; during the first 18 days of August, 17; and in the remaining 13 days, 73. In the first 18 days of September, 82, and in the remainder of the month, 10; in October, 9 deaths, the last on the 10th, at No. 3 John's-court. After August 18th the mortality rose rapidly, and attained its maximum on the 25th; the epidemic prevailed extensively to September 14th, after this date it abated, and by the end of the month nearly ceased.

The following streets and vicinities were infected by the epidemic, namely—

Cambridge-place & road,	Prospect-place,
Bonner's-lane,	Collingwood-place,
Suffolk-street,	Digby-street,
Northampton-street,	Norfolk-street,
Park-street,	Wisker's gardens,
Chester-place,	&c. &c.

A carpenter and his wife died of cholera at 26 Globe-road, the 8th and 9th August, and at No. 2 Wisker's-gardens, a horse-hair weaver and his son; also at No. 4 June-street, 2 deaths from the epidemic; in 20 and 16 hours each after the attack.

At the Bethnal Green, or Warburton's Lunatic Asylum, from the 15th to the 26th February, both inclusive, 21 females died of cholera; on February 20th, 5 deaths were recorded, and 2 in March, on the 7th; from this date several months intervened to September 1st, when the epidemic again appeared, and by October 2nd was fatal to 32 persons in the asylum, and in this period 4 cases of diarrhoea also proved fatal; the average number of inmates about 500.

In the Workhouse, Bethnal Green, 5 persons died of cholera in February, the next case followed on August 3rd, and extensively prevailed in this month and the following; from August 18th to the end of the month, namely, 14 days, 57 persons were deprived of life by cholera, and 16 by diarrhoea; the number of in-door poor about 800. The subjoined table represents the progress of cholera in the above Lunatic Asylum and Workhouse:—

	Cholera Deaths.					
	Feb.	Mar.	Aug.	Sep.	Oct.	Total.
<i>Bethnal Green Workhouse:—</i>						
Men	1	..	24	20	2	47
Women	2	..	26	16	1	45
Boys	1	..	6	4	1	12
Girls	1	..	7	2	..	10
Total	5	..	63	42	4	114
<i>Bethnal-Green Lunatic Asylum:—</i>						
Men	19	..	19
Women	21	2	..	11	2	36
Total	21	2	..	30	2	55

A great proportion of the above 114 deaths were persons removed into the Workhouse, after being attacked by cholera, from the Hackney-road, the Church, and the Town Registrar's districts comprised within this parish, and if deducted, would make the 233 cholera deaths registered less by 114, as compared with other districts without the Workhouse.

The annexed table shows the mortality in 3 periods of life:—

Age.	Deaths from Cholera.		
	Males.	Fem.	Total.
From birth to 15 years	19	16	35
15 and under 60 years	83	69	152
60 and upwards	15	31	46

The cholera epidemic chiefly prevailed in the families of weavers, mechanics, &c.

Diarrhoea was prevalent throughout the year, and proved fatal to 32 adults and 36 children under 10 years of age, principally affecting those localities in which cholera appeared.

21; 3. BETHNAL GREEN; *Church*. Pop. 17293.—Chol. 92; Diarr. 32.

Comprises the centre part of the parish, between the Hackney-road and the Town Registrar's districts.

Three deaths were recorded from cholera in February. On July 12th the next death happened, at No. 32 Pleasant-place, followed by another in Orange-street, on the 21st; in August 47, and in September 40 persons died, the last on September 30th. The cholera epidemic was most prevalent from August 21st to September 4th, both inclusive; the greatest mortality in any one day was on August 27th. Between the ages of 20 and 60, the proportion were 20 men and 30 women; diarrhoea prevailed of a severe character; in 32 deaths, 3 were of adults, and the remainder chiefly children under 2 years of age. One half the deaths from all causes arose from cholera and diarrhoea, in the months of July, August, and September; and during this period but 8 births were registered to every 9 deaths, exclusive of the deaths in the Bethnal Green Workhouse, of persons removed from this district, after attacked by cholera. Weavers, mechanics, &c., were the greatest sufferers, residing in those places where defective drainage, overcrowded habitations, and poverty abounded. Cholera prevailed in—

Bethnal Green-road,
Church-street,
Beckford-row,
Edward-street,
Fuller-street,
King-street,
Walverly-street,
Orange-street, &c.

The following cases are selected from the Registrar's returns:—

"On August 4th, at 22 Charlotte-street, wife of a weaver, aged 30 years, cholera 2 days. The husband was removed into the Town district; was seized and died the following day. Street ill drained, and ventilation bad."

"On August 1st, at 31 Pitt-street, wife of a tobacco-nist, aged 50 years, cholera 12 hours. Low and narrow, without drainage."

"On August 15th, at 2 Punderston's-gardens, labourer, aged 18 years, cholera 36 hours. The house low and dirty, built on the ground, the floor one foot below the surface, and before the houses constantly is a channel of stagnant water and vegetable matter."

"On August 14th, at 10 North Conduit-street, son of a painter, cholera 3 days. Church-street is a continuation of the Bethnal Green-road into Shoreditch, and is entirely without drainage. In this street the chamber slops are cast into the road. In Bethnal Green-road the only means of getting rid of the water is by cesspools."

"On August 28th, at 187 Bethnal Green-road, widow of slater, aged 47 years, cholera 8 hours. This house consists of a small shop with a room behind, in which lived 5 adult persons in a filthy condition. There is neither drainage nor proper ventilation."

"On September 20th, at 8 Alfred-row, Bethnal Green, wood-chopper, aged 35 years, natural death (sudden) from cholera (*inquest*). It is almost impossible to imagine a place better adapted to foster disease than this row of hovels, the state of which precludes the possibility of a current of air. The dwellings consist of a room or two in each, upon the ground, and considerably below the roadway, without drainage, the privies against the entrance, and water obtained only from a single stand-cock for the supply of perhaps 20 families, each of 5 or 6 persons, huddled together in these miserable abodes."

"On September 25th, at 19 Scott-street, widow of painter, aged 30 years. The house abuts upon the Jews' burial-ground, and consists of 3 small rooms, in which were packed 15 human beings, in the midst of filth and wretchedness. On the following day, the son, aged 13 years, died of cholera in the same house."

21; 4. BETHNAL GREEN; *Town*. Pop. 19998.—*Chol.* 231; *Diarr.* 53.

This Registrar's district forms the south-west part of the parish of St. Matthew, Bethnal Green.

The mortality from cholera was very considerable in August and September, 135 and 78 deaths were respectively registered; 4 deaths from this fatal epidemic occurred in February; 2 in June, viz., on the 10th and 19th; 7 in July, and 5 in October; in this month, the last case, on the 23rd, at No. 3 Rose-street. From August 1st to the 10th, 14 deaths; after this date a rapid increase took place, and in 4 days, viz., to the 14th, 36 deaths took place, and in the next 7 days, 43. The mortality then declined, and on August 31st but one case occurred; a subsequent increase took place in the first 7 days of September, in this period the deaths were 31; in one day, the 7th, 12 persons died, in the next 7 days, 32 deaths; from this time the epidemic subsided, and by the end of the month 15 more were recorded.

The deaths in 3 periods of life is shown in the following table:—

Age.	Deaths from Cholera.		
	Males.	Females.	Total.
From birth to 15 years .	40	29	69
15 and under 60 years .	66	73	139
60 years and upwards .	9	14	23
Total . . .	115	116	231

In the months of July, August, and September, in every 5 deaths registered, 3 were assigned to cholera; the deaths numbered in excess 173 over the births, in the proportion of 2 to 1. Diarrhoea was fatal to 23 boys and 6 girls, under 2 years of age; the total deaths from diarrhoea were 37 males and 16 females.

The cholera epidemic proved most fatal to weavers, artisans, and families of the working classes, resident in the following streets, &c.—

Church-street,
Anchor-street,
Nelson-street,
Tyssen-street,
Rose-street,
Little York-street,
James-street,
Patience-street,
Swan-street,
Selater-street,
Bacon-street,
Hare-street,
Turk-street,
&c.

At 156 Church-street, a father and son died of cholera, in 18 and 30 hours after the attack. At No. 10 Tyssen-street, on August 14th, a weaver, aged 37 years, was seized with cholera, and survived 16 hours; his wife, aged 37 years, was attacked and died in 24 hours, in this house, on the same day; also in this house, on September 7th, a subsequent death from cholera is recorded in 12 hours, viz., a chandler aged 42 years; at No. 2 Patience-street, a mother and daughter died from cholera, in 9 and 24 hours after the attack, and 2 children of a cooper, at 15 Little York-street, survived the attack 17 and 9 hours respectively, on September 18th. Between September the 7th and 11th, 3 deaths were referred to cholera, at No. 4 Derbyshire-street.

The subjoined notes are selected from the Registrar's reports:—

On August 11th, the Registrar states, "that 6 cases of cholera in Church-street occurred within a very short distance from each other. The first, that of a tripe-dresser or boiler; the neighbours complained of the effluvia arising therefrom. A very large cesspool was opened in the yard of the house adjoining, and kept open for several days. The houses in Church-street are large and densely populated, the drainage bad, having only cesspools. There is no common sewer up Bethnal Green-road or Church-street, although it is the main road from Shoreditch."

"On August 13th, at 2 Farthing-hill, wife of wood-cutter, aged 26 years, cholera 10 hours. The husband of this woman is also dead of cholera, same day. A narrow, confined place, and the house filthy, having a bad drain running under it."

"On September 7th, at 2 William-street, Fleet-street, wife of twine-spinner (deceased), cholera 48 hours. The husband of this woman died of cholera in Shoreditch, where they resided; their 4 children were taken into Shoreditch Workhouse, where one died; she then came to this place, to acquaint her mother of it, when she was attacked."

"On September 8th, at 3 Sherwood-place, daughter of chair-caner, cholera 18 hours."

"In the same house, on September 12th, wife of

chair-caner, cholera 4 days. The husband and father of the above person states, that the drainage of his house is very good, but that on Thursday morning, the 6th instant, they were emptying some privies in Austin-street (a short distance from his place), with the apparatus and hose, into the sewer, which caused a bad effluvia to arise up the grating of the drain in his yard; on that day his wife was taken ill, and the child was shortly after affected, and died of cholera. The wife died of cholera on the 12th; and a boy about 13 years of age, working for him, was also taken ill, went home, and died of cholera in a few days, in the Green sub-district. The wife was delivered of a dead child the day before she died."

"On September 13th, at 23 Church-street, shopman to cheesemonger, aged 22 years, cholera 4 days, second attack. Drainage bad. His master and daughter died of cholera in this house."

22; 1. WHITECHAPEL; *Artillery*. Pop. 6221.—Chol. 14; Diarr. 12.

Comprises the western part of the parish of Christ Church, Spitalfields, including the liberties of Norton Folgate and Old Artillery Ground.

First fatal case of cholera, July 26th, at No. 63 Wheler-street; the last, on October 2nd, at No. 14 Older-street, Norton Folgate, a chair and sofa maker, aged 24 years, cholera 18 hours. The epidemic was prevalent in—

Wheler-street, Christ-church,	Older-street, Norton
Cock-alley,	Folgate,
Parliament-court,	Gun-street,
	&c.

At No. 64 Wheler-street, the 2 sons of a labourer, aged 9 and 10 years, died of cholera, the first in 19 and the other in 48 hours. Another death in the same house 4 days after, that of a cabinet-maker's wife, aged 31 years, who survived the attack 24 hours.

On October 4th, at 16 Fort-street Old Artillery Ground, son of silk mechanist, aged 16 years, epilepsy 2 days, diarrhoea. The Registrar states that "there are no sewers in any of the streets or places in this Liberty."

22; 2. WHITECHAPEL; *Spitalfields*. Pop. 15121. Chol. 90; Diarr. 32.

This Registrar's district is bounded on the south by Wentworth-street, extending northward to Phoenix-street; on the east by Brick-lane, &c.; on the west by the Artillery district.

In January and February 3 deaths from cholera were registered; the next occurred July 11th, at No. 68 Wentworth-street, the last, on October 28th, at No. 4 Paternoster-row; the epidemic attained its maximum August 28th, and principally prevailed in the months of August and September, namely, 49 and 27 deaths respectively; towards the middle of September cholera nearly ceased. The above deaths are exclusive of those which happened in the London Hospital, situated in the Church sub-district, and in the Workhouse, situated in the North sub-district of Whitechapel, of persons removed from this district when attacked by cholera.

During the months of July, August, and September, the deaths were 39 more than the births, or 7 births to 9 deaths; and in this period about one-half the deaths from all causes were ascribed to cholera. Weavers, labourers, &c., with their families, suffered, chiefly resident in—

Flower and Dean-street,	Union-court, Fashion-
King-street,	street,
Wentworth-street,	Phoenix-street,
Dorset-street,	White's-row,
Wilkes-street,	Grey Eagle-street,
Wheler-street,	Wilson's-place,
Quaker-street,	Great Pearl-street, &c.

In several instances 2 or more deaths occurred in the same house.

The following cases are selected from the Registrar's reports:—

"On August 18th, at 15 Great Pearl-street, son of smith, aged 2 years, cholera 15 hours."

"In the same house, and on the same day, a brother of the above, aged 7 years, cholera 21 hours. This makes the third of the same family within 3 days in one house."

"On September 5th, at 1 Upper Keate-street, wife of labourer, aged 65 years, cholera 34 hours. Overcrowded and badly drained."

"On September 6th, at 3 Diamond-court, Great Pearl-street, daughter of porter, cholera 18 hours. Close and badly drained."

"On September 6th, at 4 Dorset-street, carpenter, cholera 20 hours; no medical attendant. Crowded and badly drained."

"On September 6th, at 43 Phoenix-street, wife of weaver, cholera 18 hours."

"In the same house on September 7th, son of weaver, cholera 30 hours. Third death in this house."

"On September 25th, at 10 Quaker-street, daughter of weaver, cholera 9 hours."

"In the same house on September 29th, daughter of weaver, cholera 9 hours. Crowded and uncleanly. These are 2 children of one family."

"On October 10th, at 10 Quaker-street, daughter of weaver, cholera 7 days, consecutive fever 4 days, congestion of brain 3 days. This is the third death from cholera in the same family, and another occurred on October 17th."

22; 3. WHITECHAPEL; *Mile End, New Town*.—Pop. 12141.—Chol. 85; Diarr. 18.

Bounded on the west by Brick-lane, on the south by Montague and Prince's-street, on the east by Charles-street, and on the north part of Pelham-street, &c., forming the eastern part of the parish of Christ Church, Spitalfields.

Cholera was prevalent in July, August, and September, the deaths respectively were 5, 35, and 38; the epidemic commenced at No. 4 Charles-street, on July 16th, and entirely ceased on November 16th. Two deaths had been previously registered in February; the greatest number in one day happened on August 31st and September 17th, it declined from this time, and by the end of the month was nearly extinct.

In the families of weavers, labourers, mechanics, and the industrious classes generally, the epidemic was mostly felt, inhabiting the following streets and adjoining neighbourhoods, viz.—

Buxton-street,	Hunt-court,
Luke-street,	Dunk-street,
Spring-gardens	Spital-street,
Church-street,	Brick-lane,
Pelham-street,	Well-street,
King-street,	&c.

In the Christchurch Workhouse, one death from cholera and 2 from diarrhoea were recorded; the indoor paupers average about 300. At No. 38 Spicer-street, the wife of a tailor, aged 23 years, died of cholera in 16 hours, on September 20th; her infant, aged 7 months, died of cholera 3 days previously. At No. 21 Charles-street, on September 19th, the 2 children of a drayman were deprived of life; and on September 24th, 2 persons also died of cholera at 6 Hunt-court.

The annexed cases are selected from the Registrar's reports:—

"On July 26th, at 5 Buxton-street, wife of lawyer's clerk, aged 42 years, cholera 13 hours. The deceased

had been attending her sister's child for 2 days previous, who died of cholera, and the day after her return home was taken ill and died on the following day. The family were in comfortable circumstances and particularly cleanly; the houses have been recently built, and the street is the best in the hamlet."

"On September 1st, at 14 Montague-street, Spital-fields, a weaver, aged 33 years, cholera 4 days, typhoid fever 2 days. This man's mother died in the same house 2 weeks ago of cholera. House overcrowded."

"On September 3rd, at 49 High-street, a weaver, cholera 3 days, fever 4 days. Mother of this man died of cholera in the same house 2 weeks ago."

"On September 8th, at 7 Halifax-street, wife of shoemaker, aged 45 years, cholera 11 hours. Five in family in one room. Her son was brought home on the 5th instant, and died in 9 hours, of cholera."

22; 4. WHITECHAPEL; *North*. Pop. 12296.—Chol. 114; Diarr. 53.

Bounded on the west by Middlesex-street; on the north by Wentworth-street, Prince's-street, &c.; on the east by Collingwood-street; and on the south by the north side of High-street, Whitechapel-road.

Cholera was chiefly fatal in July, August, and September, in which months the deaths successively were 18, 45, and 39. Diarrhoea was most prevalent in April, May, and June. On February 8th, the first case of cholera was recorded at No. 28 Wellington-street; the next in this month on the 9th and 10th, at No. 46 Queen Ann-street; after an interval of 4 months the epidemic appeared at No. 6 New-court, George-yard, on June 6th; during this month there were 7 deaths, the last death October 14th, in the Workhouse. Cholera attained the greatest mortality from August 29th to September 13th, the highest number in any one day took place on the 10th and 13th of this month; from the latter period a gradual decline ensued, and nearly ceased by the termination of the month. The poorer classes were principally attacked residing in—

New-court, George-yard,	Castle-alley and street,
Thomas-street,	King's Arms-court,
Queen Ann-street,	White's-row, &c.

The first fatal case of cholera in the Whitechapel workhouse happened on June 16th, and it continued to prevail to October 14th; during this period 77 persons died of the epidemic. The subjoined table represents the progress in each month:—

	June.	July.	Aug.	Sept.	Oct.	Total
Men	8	12	11	..	31
Boys	1	1	3	3	..	8
Women	2	7	13	10	1	33
Girls	2	3	..	5
Total	3	16	30	27	1	77

The following are the deaths from diarrhoea in the above Workhouse—

January	4	August	1
February	1	September	1
March	3	October	5
April	10		
May	8	Total	40
June	7		

The deaths from cholera and diarrhoea in the Whitechapel Workhouse amounted to 117, many of these persons, after attacked by cholera, were removed from

the 6 other sub-districts of this Union into the Workhouse, where they subsequently died; but excluding these deaths, the mortality in the other parts of this sub-district would be from cholera 37 and from diarrhoea 13, which, including the workhouse deaths, are returned as 114 and 53 respectively; the average number of in-door paupers about 550. At No. 2 Castle-alley, the wife of a labourer, aged 34 years, died of cholera in 14 hours, on September 30th; her son previously died of cholera on the 26th, in the same house; and 2 deaths from cholera and one from diarrhoea took place at No. 15 White's-row.

On July 13th, at No. 3 Prince's-place, Prince's-street, son of a labourer, aged 19 years, Asiatic cholera 19 hours, vomiting and purging 17 hours, cramp 15 hours, and blue collapse 8 hours." The Registrar states "that the house in which deceased lived contained 3 rooms and 16 occupants."

"On September 25th, at 6 Horse Shoe-alley, Petticoat-lane, daughter of general dealer, rice-water purging 3 days. Close and crowded."

22; 5. WHITECHAPEL; *Church*. Pop. 6990.—Chol. 65; Diarr. 7.

This Registrar's district lies on the south of High-street and Whitechapel-road, extending east and west from Raven-street to Somerset-street, Aldgate, in which is situated the London Hospital, where a fatal case of cholera occurred January 17th.

Deaths in London Hospital—

January	1	August	22
February	1	September	8
April	1		
June	1	Total	40
July	6		

The above number in the hospital were not all belonging to this district, but removed from other localities when attacked. Exclusive of the London Hospital, where the average number of indoor patients is about 320, the first death from cholera in other parts of the sub-district occurred July 24th, at No. 5 Duncan-street, followed by 12 in August, 11 in September, and one in October, on the 6th, at No. 5 Buckle-street. The number of cholera deaths are thus—

In the London Hospital	40
In other parts of the district	25
Total	65

In 5 days, from August 24th to the 28th, both inclusive, 11 deaths were referred to cholera in the London Hospital, where the last fatal case which occurred was that of a sailor, aged 38 years, died in 12 hours on September 29th; during the months of July, August, and September, the deaths were 92 more than the births, or about 7 births to 17 deaths. Excluding the Hospital deaths by cholera, the proportion is about 5 births to 11 deaths in this period; 63 deaths are assigned to cholera, and 99 to some other cause. The following localities suffered from the cholera epidemic, namely—

Plough-street and court,	Mountford-street,
Buckle-street,	Raven-street,
High-street,	Duncan-street, &c.

The following cases are selected from the Registrar's reports:—

"On September 7th, at 7 Love-court, Petticoat-lane, general dealer, aged 43 years, cholera 2 days. A close and crowded place, chiefly occupied by Jews, but this is the first case among them which has occurred in my district."

"On September 20th, at 65 High-street, wife of fishmonger, aged 32 years, cholera 30 hours, habitual diarrhoea; fear and anxiety, arising from the sudden return of her daughter from the Kent-road in collapse of cholera."

"In the same house, on September 22nd, daughter of fishmonger, cholera about 30 hours, consecutive fever one week. This child is the daughter of the above, was brought home on September 14th, from the Kent-road, in a state of collapse, from which she recovered in about 30 hours, when the consecutive fever came on, and daily increased in unfavourable symptoms until death."

"On September 12th, at 249 Whitechapel-road, wife of porter, aged 31 years, cholera 9 hours. The surgeon states that he was called in to see the deceased 5 hours previous to death, and 4 hours after the severe symptoms had set in. She had been ill from diarrhoea 3 or 4 days, but refused to take food, and took nothing but porter. The neighbourhood is very open, and considered healthy."

22; 6. WHITECHAPEL; *Goodman's Fields*.—Pop. 9848.—Chol. 34; Diarr. 16.

This district includes part of the parish of Holy Trinity, Minories, bounded on the east by Church-lane, on the south by Rosemary-lane, and on the west the Minories (part of, &c.).

In January 7 deaths were registered from cholera, 6 occurred in the Cholera Hospital, at No. 88 Leman-street. In February 3 deaths, 2 recorded in the Cholera Hospital; in March 3, all in the Hospital; next fatal case June 22nd, at No. 117 Rosemary-lane; the last death from cholera took place October 23rd, at No. 85 Chamber-street.

The epidemic prevailed in the following neighbourhoods, viz.—

Rosemary-lane,	Swallow's-gardens.
Goodman's-yard,	Gower's-place and walk,
Everard's-place,	Well's-place, &c.

From January 4th to March 14th, 11 deaths from cholera took place in the Whitechapel Cholera Hospital, Leman-street, of persons removed from infected localities into the Hospital, where their deaths were subsequently registered; and at No. 8 Swallow's-gardens, 2 children of a labourer died in 12 and 7 hours after being attacked by cholera. This place is inhabited by very poor people; there are no drains, and each house has a cesspool.

"On July 12th, at 2 Providence-court, Brunswick-place, Back Church-lane, a charwoman, aged 46 years, cholera 8 hours." The Registrar states that there are 6 houses in the court, having 2 rooms; a small drain running in front of these houses was being opened."

"On August 27th, at 1 St. Mark's-terrace, Tenter-ground, daughter of servant, diarrhoea 7 days. In this ground there are 15 dung heaps, and is a receptacle for all sorts of decayed vegetable matter and fish guts; there is no surface drainage, and the water lies in stagnant pools; not overcrowded or close."

22; 7. WHITECHAPEL; *Aldgate*. Pop. 9148.—Chol. 104; Diarr. 17.

This district includes the Tower of London on the river side; eastward to Dock side, St. Katherine's Dock; extends north to Rosemary-lane, &c.

Cholera was prevalent chiefly in July, August, and September; the deaths respectively were 17, 35, and 41; the highest mortality on September 2nd, and from August 29th to September 9th, both inclusive, 32 deaths were recorded from cholera, in January 2, February one, April one, June 4; the first case in this month on the 2nd, on board a vessel in St. Kather-

rine's Docks, a sailor, aged 29 years, survived the attack 12 hours; next on the 20th, then on the 28th, 30th, &c.; 3 fatal cases were registered in October, the last on the 13th. Cholera was severely felt in—

Cooper's-court, Blue	Dock-street,
Anchor-yard,	Crown-court,
Royal Mint-street,	Shorter's-rents, Dock-
Windmill-court, Rose-	street,
mary-lane,	Slater's-court,
Blue Anchor-yard,	&c.

Deaths

On board vessels in the St. Katherine's Docks . 2
,, ,, laying off in the river Thames . 7

In the Whitechapel Cholera Hospital, at No. 1 Dock-street, the first fatal case of cholera on August 5th, and by October 5th, 25 persons perished, including a nurse who died on August 13th, in 13 hours after the attack.

At the Military Hospital in the Tower of London, a death from cholera was recorded on June 21st; subsequently 5 more deaths were registered. In the Barracks 4 deaths from cholera and one from diarrhoea took place; likewise in the Old Mint, 4 persons died of the epidemic, 2 in one house, at No. 31. The deaths by cholera in the Tower of London during the year amounted to 16, and from diarrhoea 2. During the months of July, August, and September, the deaths were 101 more than the births, or about 4 births to 11 deaths; in 162 deaths from all causes in the above period, 93 were ascribed to cholera.

The following cases are selected from the Registrar's reports:—

"On August 10th, at 2 Cow-yard, Blue Anchor-yard, fruit seller, aged 29 years, cholera 20 hours. Filthy neighbourhood; deceased ate a great quantity of unripe fruit, and sat at her fruit-stall in all weathers."

"On September 9th, at Shorter's-rents, Dock-street, son of labourer, aged 3 years, cholera 12 hours."

"In the same house, on the same day, a brother of the above, aged 13 years, cholera 14 hours. This court is close and crowded. There is a large privy opposite the doors of this house; also at the entrance of the court the refuse from a soap work runs down as surface drainage."

"On September 2nd, at 3 Queen-street, wife of tailor, aged 38 years, cholera 27 hours. A very close, confined street, the houses without ventilation."

"On August 31st, at 8 Crown-court, Glasshouse-street, coal-whipper, diarrhoea 6 hours, cholera 12 hours. This court is very densely populated by persons of dirty and intemperate habits."

"On September 3rd, at 5 Cooper's-court, Blue Anchor-yard, wife of labourer, cholera 6 days. In this court there are above 200 persons closely packed; in one house containing 3 rooms there are 19 persons living."

"On September 2nd, at 17 Darby-street, Royal Mint-street, wife of carpenter, cholera 9 hours. Open street, but surrounded by a bad locality."

23; 1. ST. GEORGE-IN-THE-EAST; *St. Mary*. Pop. 15875.—Chol. 55; Diarr. 22.

Bounded on the north by the Commercial-road; on the south by the London Docks, lying between Church-lane and Cannon Street-road, &c.

First fatal case of cholera on July 6th, at No. 7 Thomas-street. The epidemic carried off, in August and September, 23 and 20 persons respectively; the last case on October 24th, at 69 Parsons-street. In July, August, and September, cholera was fatal to 53 persons, and to 88 from all other diseases.

The epidemic prevailed in—

Prince's-street,	Grove-street,
Pell-street,	Denmark-street,
Cable-street,	Bett's-place,
John's-hill,	Ellen-street, &c.

A dock labourer, aged 37 years, and his wife, on July 29th, died of cholera, 5 Juniper-street, Chigwell-hill.

The annexed cases are selected from the Registrar's reports:—

"On July 22nd, at 11 Prince's-street, wife of a watchman in London Docks, aged 32 years, diarrhoea 36 hours, cholera 12 hours. Deceased resided in a healthy and public thoroughfare, well cleansed, drained, and ventilated; her husband thinks she was seized with the disease through fright and attendance on a person in the same house, who died of cholera a few days previously."

"On August 9th, at 4 Ellen-street, widow of mariner, aged 30 years, cholera 24 hours. The husband of deceased died on the 9th instant, of cholera, in the same house. Street well paved, cleansed, and drained. An open and public thoroughfare."

The 2 following cases occurred in a narrow street contiguous to several sugar-refining houses, but not considered unhealthy:—

"On August 20th, at 11 Elizabeth-street, wife of working farrier, cholera 11 hours."

"On August 21st, at 11 Elizabeth-street, working farrier, cholera 11 hours, husband of the above."

"On August 22nd, at 45 Cable-street, wife of dock labourer, cholera 10 hours. Street not unhealthy; no complaint of offensive smells or other nuisances. Deceased was in good health on previous evening, and went to see her sister, who was suffering from an attack of cholera. She was attacked with diarrhoea about 5 a.m., and died from cholera the same day."

"On August 25th, at 27 Providence-street, son of slipper-maker, cholera 10 hours. Rather narrow street, partially paved, and imperfectly drained; the inhabitants chiefly poor persons, and houses overcrowded."

"On the same day, and in the same house, a slipper-maker, cholera 10 hours. Father of the above child."

"On August 27th, at 27 Providence-street, wife of shoemaker, aged 26 years, cholera 17 hours. This death and the 2 preceding occurred in the same house."

"On August 30th, at 22 Mary Ann-street, umbrella maker and seller, cholera 8 hours. He attended the funeral of his brother the previous Sunday, who had died of cholera."

"On September 5th, at 16 John's-hill, Ratcliff-highway, son of waterman, diarrhoea 4 days, cholera one day."

The medical attendant states, "this family live over a cellar, into which the night soil from a privy close to the door is allowed to flow, and where it now remains, mixed with the water from the late rains; it is disgustingly offensive, and he had attended 5 cases of bowel complaint within a month."

23; 2. ST. GEORGE-IN-THE-EAST; St. Paul. Pop. 17724.—Chol. 85; Diarr. 28.

This is the north-east part of the parish of St. George, Middlesex, bounded on the west by Cannon Street-road, on the east by John-street, on the north by the Commercial-road, and on the south by the New London Dock and part of Back-lane, &c.

In the month of February 3 deaths were referred to cholera, in March 4, which occurred in the Cholera Hospital, at No. 3 Bath-terrace; in May one, on the 15th, at No. 6 Kinder-street; in June 4, all in the Cholera Hospital; in July 19. The epidemic continued throughout the months of August and September, to

October 27th, from this date cholera ceased to be fatal. A fatal case of cholera occurred in the parish Cholera Hospital, at No. 3 Bath-terrace, February 22nd; subsequently was fatal to 37 persons by October 27th.

Total	17	15	5	37

Diarrhoea was prevalent in July, August, and September. The following localities suffered from cholera, viz.—

Spencer-street,	Charles-street,
King's Arms-gardens,	Martha-street,
Phillip's-street,	Chapman-street, &c.
John-street,	Old Gravel-lane, &c.

The subjoined notes are selected from the Registrar's reports:—

"On July 13th, at the parish Cholera House, 3 Bath-terrace, female, aged 28 years, cholera 10 hours. The deceased drew her sister's breast, who was labouring under cholera."

The 2 following cases occurred in the Cholera House, 3 Bath-terrace.

"On July 21st, female, aged 31 years, wife of a sugar-baker, diarrhoea 2 days, cholera 10 hours."

"On July 22nd, female, aged 19 years, wife of a mariner, low fever consequent on cholera 19 days since. Removed from King's Arms-gardens, a low damp place, containing about 30 miserable huts; no drainage and badly supplied with water; fever, &c., always prevailing."

"On July 27th, at 6 New-court, Bluegate-fields, a bricklayer's labourer, aged 53 years, diarrhoea 24 hours, cholera 18 hours. This court contains 9 houses, with 2 public privies having communication with the drain, from which most obnoxious effluvia arises."

"On July 28th, at 8 Seven Star-alley Ratcliff-highway, daughter of a tailor, cholera 9 hours. A close, overcrowded place; several stables in the alley."

"In the Cholera House, on September 7th, from 4 Hungerford-street, a ship-rigger, aged 26 years, cholera 12 hours. Hungerford-street is the worst street in this district, chiefly inhabited by prostitutes and low characters; ill-cleansed, and cellars full of water from want of drainage."

"On October 2nd, in the Cholera House, 3 Bath-terrace, wife of a labourer, aged 59 years, cholera 24 hours; from 52½ Richard-street. The deceased had come the day previous from Mitcham to nurse her daughter lying in, who had a child lying dead with cholera, was taken ill shortly after and removed to the Cholera House, where she died; 3 other children of the same family were at this time ill of the same disease."

The 2 following cases occurred in the Cholera House:—

"On October 26th, son of a blacksmith, cholera 24 hours."

"On October 27th, blacksmith, cholera 9½ hours. The above were a father and son, removed from 69 Parsons-street, Ratcliff-highway. Six persons were attacked with cholera residing in this house about the same time, which is occupied by a coal dealer, and numerous lodgers."

23; 3. ST. GEORGE-IN-THE-EAST; St. John. Pop. 7751.—Chol. 59; Diarr. 20.

Comprises the south part of the parish, including the London Docks, &c.

In the early part of the year the mortality from cholera was very considerable; in the workhouse, in February, 3 deaths, and in March, 11, were ascribed to this disease. In June 5 deaths were recorded, the first on the 3rd, on board a barque in the London Docks; next on the 20th, at No. 6 Plough-alley. The 2 last deaths took place September 28th, at No. 3 Hermitage-street, and at No. 6 Sampson's-gardens. Cholera was fatal to a mariner's widow, in 6 hours, at the Workhouse in Prince's-street, February 5th; from this date to March 19th, 14 persons died of the epidemic, the last death in the Workhouse, August 13th; in this Workhouse 20 died of cholera and 4 from diarrhoea; the number of in-door poor about 650. On board ships in the London Docks, 6 seamen are recorded as having died of cholera; the annexed localities likewise suffered, viz.—

Plough-alley,	Prince's-street.
Green-bank,	King-street,
Queen-street,	Great Hermitage-street,
Wapping-street,	Sampson's-gardens, &c.

At No. 6 Plough-alley, 2 labourers died of cholera, in 29 and 26 hours after the attack, between January 20th and 25th. At No. 8 Green-bank, the 2 children of a nautical-instrument maker were fatally attacked by cholera, between July 24th and 27th, and another child of the same family, August 1st; and also at No. 21 Wapping, a mother and child, August 16th and 17th, died of the epidemic.

The following cases, &c., are selected from the Registrar's notes:—

"On September 2nd, at 9 Calvert-street, a lighterman, aged 40 years, cholera 6 hours. The house is very near to a soap and candle manufactory. The street is not close nor ill-cleaned."

"On September 6th, at 7 Plough-alley, a labourer, aged 34 years, cholera 12 hours. The house and street are very close. The deceased, his wife and 3 children, occupied only one very small room."

"On September 8th, at 3 King-street, waterman, aged 64 years, cholera 24 hours. In front of this house (south-east of the London Docks) is often accumulated filth of various descriptions; it is near to a manufactory of animal charcoal."

"On September 10th, at 3 Whitethorn-court, son of coal-whipper, cholera 22 hours. The houses of this court are small and close, but generally clean. There are 3 open spaces near to this court which have become receptacles for the filth of the surrounding neighbourhood."

24; 1. STEPNEY; Shadwell. Pop. 14168.—Chol. 128; Diarr. 39.

This Registrar's district comprises the entire parishes of St. John, Wapping, and St. Paul, Shadwell, extending eastward on the side of the river from Dock-side to St. Katherine's Dock to Love-lane; bounded on the north by part of the Commercial-road and the London Docks, &c.

Cholera appeared on June 18th, at No. 333 High-street, Wapping, the wife of a shipwright died in 14 hours; likewise a fatal case occurred on the 19th, and another on the 20th in the same house. The epidemic increased in July, continued with great severity in

August, and attained its maximum on September 8th then gradually declined to October 7th, when the last death occurred at No. 3 Peel-alley.

Mariners, coal-whippers, labourers, &c., and their families, were amongst the greatest sufferers from cholera, residing in—

Old and New Gravel-lane,	Spring-street,
High-street,	Three Cup-alley,
Labour-in-Vain-street,	Billet-court,
Dean-street,	Fox-and-Goose-yard,
Wapping Wall,	Bell Wharf-hill, &c.

Seventeen deaths by cholera occurred on board ships and barges lying in the river Thames, off Shadwell and Wapping.

In the Workhouse, Wapping, 11 deaths were referred to cholera and 8 to diarrhoea.

At 125 High-street, Wapping, 2 deaths from cholera took place in 14 hours and 6 hours after the attack, and in the same house a death from diarrhoea, all within 4 days; and at No. 61, the wife of a licensed victualler, aged 49 years, died in 16 hours; in the same house 4 days after, September 3rd, a carpenter also died of cholera in 22 hours. At No. 4 Billet-court, 3 children died from cholera and one from diarrhoea.

The following cases are selected from the Registrar's reports:—

"On August 21st, at 4 Mermaid-court, hat-maker, aged 15 years, diarrhoea one day, cholera 11 hours. A narrow, confined, and ill-ventilated court."

"On August 22nd, at 1 Cross-alley, Wapping, daughter of a labourer, diarrhoea 6 weeks. A very dirty house, with an offensive privy in the passage."

"On August 21st, at 4 Star-street, coal-whipper, aged 46 years, cholera 64 hours. House clean; cows kept at the back."

"On August 23rd, on board the brig "Heron," off Cole-stairs, mariner, cholera 15 hours. Ship clean, and well ventilated."

"On August 28th, at 7 Match-walk, a labourer, aged 26 years, cholera 20 hours. Thirty persons lived in this house."

"On August 30th, at 5 Rance's-place, Shadwell, needlewoman, aged 19 years, cholera 16 hours. A close confined court, having two open privies facing the house, the stench very offensive."

"On September 4th, at 28 Spring-street, wife of cow-keeper, aged 31 years, cholera 4 days. House close and badly ventilated; cows kept in the front. This is the second case that has occurred in this house."

"On September 6th, at 2 Bell Wharf-hill, mariner, aged 23 years, cholera 7 hours. Privy in the cellar, slowly diffusing its deleterious and poisonous effluvia through the house. The informant further states, that the stench is so intolerable at times, as to compel them to leave the house."

"On September 6th, at 7 Three Cup-alley, daughter of labourer, cholera 15 hours. A very dirty house and overcrowded. Facing the house is a bone and offal boiler's, pouring forth its horrid stench; a little farther on a dust-yard, with its decomposing animal and vegetable matter, around which several cases of cholera have occurred."

"On September 7th, at 5 Three Cup-alley, son of coal-whipper, cholera 10 hours. Thirty-four persons live in this house, which consists only of 6 rooms."

"On September 8th, at 7 Three Cup-alley, daughter of labourer, cholera 14 hours. This makes the third fatal case in this place, and several other persons were attacked."

"On September 8th, at 18 Fox's-lane, wife of mari-

ner, aged 34 years, cholera 10 hours. Facing this house is a gully-hole, emitting its disgusting and offensive effluvia, to the great annoyance of the inmates and foot-passengers; also a foul drain in the cellar."

"On September 22nd, at 6 Martin's-buildings, charwoman, aged 18 years, cholera 19 hours. A court, consisting of a row of six houses, shut in on all sides; the entrance is at one end, under a long and narrow arch, and in consequence badly ventilated. Supply of water very deficient, and place much overcrowded. Close by is a dust yard, also an animal charcoal manufactory, and a bone boiler's, diffusing their noxious effluvia through the whole neighbourhood."

24; 2. STEPNEY; *Ratcliff*. Pop. 11874.—Chol. 96; Diarr. 29.

Bounded on the south by the river Thames, from Love-lane, Shadwell to Kidney-street, extending north to part of Commercial-road to Stepney-green, &c.

Cholera became fatal on June 10th, in a vessel on the river Thames; next case the 20th, at No. 4 Vine-yard-place; it continued during the month of July, when there were 25 deaths; in August, 30; and in September, 32; and it entirely ceased on October 15th, on which day a mariner, aged 34 years, died on board a ship in the Regent Dock.

Between August 26th and September 13th, 35 persons were deprived of life; the greatest number of deaths in one day occurred August 30th.

Eight fatal cases of cholera are recorded on board ships in the river Thames off Ratcliff.

In the Cholera Hospital, White Horse-street, 3 deaths were registered.

In the Union Workhouse, York-street West, 6 deaths from cholera and 2 from diarrhoea.

The following localities likewise suffered—

Vine-yard, place, passage,	Broad-street,
&c.	Three Fox-court,
Painter's-rents,	Ratcliff-square,
London-street,	Stone Stairs-court,
Queen-street,	Dunstan's-court,
Brook-street,	James-place, &c. &c.

A beer-shop keeper and his wife died of cholera on July 11th and 13th, at "The Cricketers," in London-street.

On July 29th, 2 children died of cholera at No. 20 London-street, and another on the 21st, in 4 hours after the attack; also at No. 45, 2 fatal cases of cholera were recorded.

During July, August, and September, the deaths from all causes numbered 158, whilst the births amounted to 108, and in this period more than half the mortality arose from cholera.

The annexed cases are selected from the Registrar's reports:—

"On August 19th, on board a ship in the river Thames, ship carpenter, aged 34 years, cholera 13 hours."

"On August 19th, at 4 Harris-court, ballast heaver, cholera 10 hours. Close neighbourhood, densely populated by the lower classes."

"On August 20th, at 2 Three Compass-court, wife of tobacco-pipe maker, cholera 26 hours. Confined and crowded situation."

"On August 21st, at 5 Queen Catherine-court, son of labourer, diarrhoea. Very close, overcrowded by low persons, and ill cleansed."

"On August 23rd, at 17 Ratcliff-cross, house-keeper, aged 64 years, cholera 26 hours. An open street, close to the river. A common sewer in front discharges itself into the river."

"On September 4th, at 8 Stone Stairs-court, widow of labourer, aged 57 years, cholera 12 hours. This

is the fourth death within the month which has occurred in this house."

"On September 6th, at 4 George-court, Harris-court, mariner, aged 29 years, cholera 6 hours. Close, overcrowded, and not cleanly."

24; 3. STEPNEY; *Mile End, Old Town, Upper*. Pop. 25570.—Chol. 80; Diarr. 35.

On the north bounded by Oxford-street, Redman's-row, &c.; on the south by the Commercial-road; on the west by Union-street, &c.

Cholera broke out at No. 16 Diamond-row, on June 9th; next case the 24th, then the 30th; in July, 5; rose to 47 in August; 24 in September, and one in October, on the 1st, at 30 Baker-street; a previous death occurred at this house on September 27th, 31 persons died of cholera from the 9th to the 19th August; after September 3rd it declined, and nearly ceased by the end of the month.

The following localities suffered from the epidemic, namely—

New-street,	York-street,
Turner-street,	Sidney-square,
Plumers's row,	Oxford-street,
Fairfield-street,	Gloucester-street,
Charles-street,	Baker-street,
Wellington-street,	&c.

In Deacon's farmhouse for paupers belonging to the City of London Union, 6 deaths were recorded from cholera and 6 from diarrhoea.

A man, aged 72 years, died of cholera in 12 hours, on August 9th, at No. 4 Horsley's-buildings; in the same house, on the 11th, a single woman, aged 22 years, died 14 hours after the attack. At No. 10 New-street, between July 11th and 14th, the wife of a porter and 2 children died of cholera.

At 96 York-street, on September 1st, a floor-cloth painter, aged 26 years, was seized with cholera, and died in 12 hours. On the following day his son was attacked, and also died in 12 hours; had had diarrhoea previously.

The following cases are taken from the Registrar's reports:—

"On August 11th, at 4 Horsley's-buildings, a female servant, aged 22 years, cholera 14 hours, vomiting and purging 11 hours, cramp and collapse 7 hours. This court (in which there are 13 houses) is next to a yard where they mix night-soil with cow dung, &c., for manure, and there had not been any water on in the court for 7 days."

"On August 19th, at 14 New-street, wife of comb-maker, aged 39 years, diarrhoea 3 days, cholera 24 hours. Nearly all the houses on one side have been visited with the epidemic, whilst on the other side there has not been a case. On the side where the disease has been raging, there was formerly a black ditch, and at the back of the houses there is a large pickling warehouse, which is a great nuisance to the houses."

"On September 8th, at 83 Heath-street, a cooper, aged 56 years, cholera 12 hours. A very narrow and confined street, densely populated, in which there are upwards of 100 houses, many of them with several families."

24; 4. STEPNEY; *Mile End, Old Town, Lower*. Pop. 19738.—Chol. 86; Diarr. 47.

This district lies east of the Cambridge-road, south of the Eastern Counties Railway, and includes a part of Bow-common.

Cholera appeared on June 21st, in the Workhouse, and was fatal in 12 hours to a widow, aged 60 years; the next 3 deaths occurred on June 26th, at No. 7 John's-terrace, the 2 sons and a daughter of a retired grocer, each attack not exceeding 12 hours' duration;

in August the mortality considerably increased, and was fatal to 41 persons; in September 28, and entirely ceased on October 15th. The epidemic was at its height on August 22nd, on this day 5 deaths were recorded; diarrhoea was prevalent in August, September, and October.

Between August 21st and September 10th, 43 deaths were assigned to cholera. The epidemic was principally fatal in the following streets, &c.—

Nelson-street,	Green-street,
Regent-street,	Hayfield-passag and
Spring Gardens-place,	place,
Devonshire-street,	Ann-street and row,
James-street,	Globe-fields, &c. &c.

The annexed table shows the deaths by cholera in the Globe-road Workhouse:—

	Males.	Females.
June	1
July . . .	6	1
August . . .	12	8
September . .	3	8
Total . .	21	18
Cholera . .	39	
Diarrhoea . .	12	

In-door paupers about 240.

At No. 6 Green-street, Globe-fields, September 1st, the wife of a traveller, aged 71 years, died of an attack of cholera in 18 hours; her husband, aged 69 years, in 4 days after, was likewise attacked and died in 15 hours; and on September 9th, a salesman's clerk, aged 45 years, was deprived of life from the same cause in 18 hours.

The following cases are from the Registrar's reports:—

"At No. 1 Cottage-row, on September 12th, an engraver's widow, aged 70 years, and her daughter, aged 28 years, on the same day and in the same house, died from cholera."

"On September 13th, at 6 Queen-street, Globe-fields, son of clerk to salesman (deceased), cholera 4 days. The fourth death in the same house."

"On September 4th, at 15 Ann-street, Globe-fields, wife of labourer, aged 24 years, diarrhoea, cholera 4 days. No drains, all the waste water thrown into the street."

24; 5. STEPNEY; Limehouse. Pop. 19337.—Chol. 111; Diarr. 34.

Extends east on the side of the river Thames, from Kidney-street to Limehouse Dock, and on the north to Bow-common, North-street, &c.

First fatal case of cholera on June 24th, at Salmon's-lane; on the 25th, in the same house, another death occurred; the following table represents the deaths from cholera and diarrhoea:—

	June.	July.	Aug.	Sept.	Oct.
Cholera	4	25	50	31	1
Diarrhoea	1	3	12	10	4

Cholera attained its maximum on August 15th, and continued very prevalent to September 12th. The last case on October 9th, at 51 North-street.

On August 24th, a death from cholera occurred on board a vessel in the river Thames, off Limehouse. The subjoined localities suffered from the epidemic.—

Watchman's-court,	Five Bell-alley,
New River Head,	Ropemaker's-fields,
Nightingale-buildings	Rigman's-rents,
and lane,	Rugg-street,
Ann's-court and place,	Eastfield-street,
Salmon's-lane,	North-street, &c.

At No. 16 Gill-street, on June 2nd, a labourer and his daughter died of cholera. On the same day, at No. 3 Nightingale-lane, 2 blacksmiths, aged respectively 52 and 62 years, also died from cholera, each case of 24 hours' duration. On August 23rd, the wife of a nail-maker, aged 33 years, died of cholera in 36 hours, at 142 Eastfield-street; in the same house, on the 25th and 26th, 2 children died in 13 hours and 8 hours after the attack.

25; 1. POPLAR; Bow. Pop. 10780.—Chol. 113; Diarr. 42.

Comprises the parishes of Bow and Bromley St. Leonard; bounded on the east by the river Lea, on the south by the East India Import Dock, on the west by Bethnal-green and Stepney; the north including the south-east part of Victoria Park, &c.

Four deaths from cholera were registered in January, 7 in February, and 2 in March; after an interval of 3 months, on July 2nd, a straw-bonnet maker, aged 31 years, was attacked and died in 11 hours, at 4 Mill-street, Bromley; next case on the 7th, another on the 10th; during the month 21 persons died, August 29, September 43, and the number declined in October to 7; on the 20th the last fatal case, at Bow-common. In the first 11 days of September 26 persons fell victims to the cholera epidemic; the greatest mortality was observed on September 4th and 5th.

Mechanics and labourers, with their families, chiefly suffered, the epidemic prevailing extensively in the subjoined localities and adjacent neighbourhoods, viz.—

Mary-street,	High-street, Bow,
Frederick-street,	Tetley-street,
Old Ford,	Ammiel-street,
Thomas-street,	Bromley-terrace, Bow
Orchard-street,	Bridge,
Bow-common,	Bow-lane. &c.
Four Mill-street,	

At No. 3 Henry-street, on July 10th, a brass-worker, aged 49 years, died of an attack of cholera in 11 hours; on the following day his daughter was attacked, death succeeded also in 11 hours. At No. 8 Mary-street, 3 deaths from cholera were recorded between July 21st and 28th. At No. 5 Bromley-terrace, Bow Bridge, September 15th, a lamplighter, aged 32 years, died of cholera in 12 hours; in 2 days after, at the same house, his wife was attacked, and died in 24 hours. Diarrhoea of a severe character prevailed in the autumn, and was fatal to 22 inmates of the Grove Hall Lunatic Asylum, where also 3 are recorded as having died of cholera contains near 400 inmates.

The annexed cases are selected from the Registrar's reports:—

"A labourer, aged 52 years, cholera 20 hours, premonitory symptoms 2 days previously" (*inquest*).

"A licensed victualler, aged 52 years, cholera, consecutive fever, congestion of the brain, 8 days."

"A female, aged 25 years, cholera 24 hours."

"The first of the above was a labourer, who resided in a small house and yard of the most filthy description, situated in Quay-lane, Bromley. The next was a licensed victualler at the 'Five Bells,' Old Ford, Bow, a low dirty neighbourhood adjoining the River Lea.

He had suffered from diarrhoea previously, which was removed by medical aid, but immediately afterwards he incautiously ate a quantity of preserved sloes before going to bed. The third resided in a court near the River Lea, in Bromley."

"On July 7th, at 8 George-street, Bromley, labourer aged 31 years, Asiatic cholera 29 hours (*inquest*). The street is well ventilated, but has no other than surface drainage."

"On July 15th, at 4 Mill-street, near River Lea, wife of a bricklayer, aged 68 years, cholera, preceded by diarrhoea for 7 hours. There not being any water supplied to these houses, the inmates are compelled to fetch their water from the River Lea, at the mouth of the Bromley Canal, otherwise called the Limehouse Cut, on the sides of which are numerous factories or chemical works, which pour off their waste liquors, &c., into the waters of the canal; the canal is also a receptacle for dead dogs, cats, and other small animals, frequently seen floating on the discoloured waters; and on every occasion of opening the locks at the Bromley end, there is a rush of the floating scum into the Lea, where already float large quantities of similar impurities which have descended the river, but are kept back at this point by a mill-head. It is here, in this conflux, or rather concentration of liquid filth, that the poor of the neighbourhood dip their pails or tubs for their daily supplies, whilst those who do not dip for themselves are supplied from the same source by persons who vend it through the streets."

"On September 9th, at 38 High-street, Bow, wife of hatter, aged 47 years, cholera 20 hours. A low neighbourhood, lying near the River Lea, into which it is drained; and at the flowing of the tide the stench is described as being nauseous in the extreme. This locality includes Ammiel-street, Bromley-terrace, part of High-street, Bromley, and part of High-street, Bow. Eleven cases have happened in this locality during the last week."

"On September 2nd, at 1 Pivot's-place, Old Ford, servant, aged 35 years, cholera 18 hours. Open and airy, but without drainage, and at heavy rains the water overflows the privies and floods the yard, which was the case a day or two before this death occurred."

"On September 9th, at Bow-common, Bromley, son of labourer, cholera 18 hours. Surrounded by numerous chemical manufactories, and adjoining the Bromley Canal, from which water is chiefly obtained."

"On September 11th, at Old Ford, Bow, son of barge-builder, scarlatina with diarrhoea 5 days, cholera 2 days. Open and airy, but situated in the marshes, adjoining the River Lea."

"On September 19th, at 23 Carter-street, Bromley, wife of hay and straw dealer, aged 42 years, cholera 20 hours. The husband states that his wife and family were with him on board of a barge, which he inconsiderately anchored off a filthy sewer at Woolwich a few evenings ago, and during the night one of his children was seized with cholera; he came the next day to Blackwall, and removed his family into lodgings in Bromley, where other children were affected with the like disease, and subsequently his wife. The children are still living, but the wife died after 20 hours' illness."

"On September 25th, at 3 Summer-street, daughter of painter, diarrhoea 8 days. A small street, having no thoroughfare, badly ventilated. House consists of 4 small rooms, occupied by 3 families."

"On September 21st, at 1 Tavern-terrace, Bromley, groom, cholera 8 days. A very low neighbourhood, adjoining ditches; very crowded, and every way unfavourable to health."

"On September 27th, at 2 Bromley-terrace, Brom-

ley, widow of shipwright, diarrhoea 2 weeks. Well drained and ventilated, but adjoining open ditches and the marshes. This is not the Bromley-terrace near Bow-bridge, where also many deaths have happened from cholera."

25; 2. POPLAR; Poplar. Pop. 20342.—Chol. 200; Diarr. 35.

Comprises the entire parish of All Saints, Poplar, bounded by the river Thames from Limehouse Dock to the river Lea, and the parts of the river known as Limehouse Reach, Greenwich Reach, and Blackwall Reach, enclosing the Isle of Dogs; off the north including part of the East India Dock-road, &c.

Cholera was very prevalent in this district, and continued with great severity after July 10th; from this date, in 11 days, 50 persons died. The greatest mortality was on July 21st; on this day 11 had fallen victims to the cholera epidemic, which prevailed throughout August and September and the first 8 days of October; from this time it ceased to be fatal.

	June.	July.	Aug.	Sept.	Oct.
Cholera	4	72	48	69	5
Diarrhoea.	5	6	12	6

A fatal case of cholera occurred on February 13th, in 7 hours, on board a ship in the West India Dock, and another, March 11th, in Island-row, Mill-wall.

On board ships in West India Docks . . . 2 deaths.

" Tyndall's Dock, Mill-wall 1 "

" River Thames, off Poplar, &c. 2 "

The following localities suffered severely from cholera, viz.—

Cold Harbour,	Ferry-row, Isle of Dogs,
Cubitt's Brickfield, Isle of	Silver Lion-court,
Dogs,	Chapel-house, Isle of Dogs,
Sophia-street,	High-street,
Nelson-court,	Robin Hood-lane,
Well's-street,	India-row, Well's-street,
Albert-place,	Woolmore-street, &c.

Shipwrights, mariners, watermen, labourers, &c., were principally afflicted with cholera. In the Union Workhouse Infirmary, in North-street, 38 persons perished from the epidemic, of this number 10 were labourers, and 6 described as mariners, and in this infirmary a shoemaker and his 3 children died of cholera between July 16th and 18th. The annexed table shows the progress of cholera in the Workhouse Infirmary:—

	June.	July.	Aug.	Sept.	Total.
Men	1	9	10	4	24
Women	1	2	7	10
Children	4	4
Total	1	14	12	11	38

The in-door paupers about 600. Three deaths from diarrhoea were also recorded in the Workhouse.

At No. 53 Cold Harbour, Poplar, July 10th, a shipwright's son died in 9 hours of cholera; in 2 days after, in the same house, a mastmaker, aged 28 years, death succeeded in 13 hours after the attack; and also in the same house, on July 19th, a shipwright and his wife, both on the same day, died of cholera, the first in 22 hours and the second in 18 hours after the attack. Two deaths from the same disease happened at No. 25.

At No. 37 Robin Hood-lane, on July 13th, the 2 children of a shoemaker died of cholera; and at No. 14 Silver Lion-court, on the 28th and 29th August, a labourer and his wife were seized with cholera; the first survived 7 hours and the second 8 hours after the attack.

LONDON.—SOUTH DISTRICTS.

SURREY (PART OF).

26; 1. ST. SAVIOUR; *Christchurch*. Pop. 14616. —Chol. 256; Diarr. 50.

Bounded on the north by the river Thames, extending east and west of Blackfriars Bridge; on the south by Surrey-row, &c., and on the west by the Broadwall, comprising the entire parish of Christchurch, Southwark.

Cholera became fatal in this locality on June 27th; on that day 2 deaths were recorded in the Workhouse, and on the 29th 2 more; 35 deaths ascribed to cholera were registered in different parts of this district in July, 131 in August, 78 in September, 5 in October, and one in November, the last on the 7th, at Boundary-row. The epidemic attained its height in the last week of August and the first week in September, during which period 68 persons were fatally attacked; the greatest number in any one day occurred on September 4th, after which date the epidemic began to subside. The proportion of the sexes were 106 males to 150 females. The deaths from diarrhoea were chiefly children under 2 years of age. In the following localities cholera proved fatal—

Broadwall	14 deaths.
Holland-street,	7 "
Charlotte-street	9 "
Gravel-lane	9 "
Blackfriars-road	11 "
Bear-lane.	7 "
Collingwood-street	11 "
John-street	8 "
Surrey-street	8 "

In St. Saviour's Workhouse, 53 deaths from cholera and 14 from diarrhoea were registered during the year; the number of in-door poor about 450, some of whom were persons removed into the Workhouse from the Registrar's district of St. Saviour. On August 24th, a fishmonger and his wife died of cholera, at 13 Cross-street; also, on September 9th, a butcher's widow and her daughter, at 4 Goodwin-square. 150 births and 379 deaths from all causes were registered in the 3 months of July, August, and September. The deaths from cholera numbered 244 during the 3 months, whilst from all other diseases but 135.

26; 2. ST. SAVIOUR; *St. Saviour*. Pop. 18359. —Chol. 283; Diarr. 61.

Bounded on the north by the river Thames, west of London Bridge, forming the entire parish of St. Saviour, Southwark.

124 males and 159 females died of the cholera epidemic, chiefly in the months of July, August, and September, the numbers being respectively 56, 119, and 91; in the early portion of the year 7 cases proved fatal, then after a lapse of 3 months the epidemic broke out on June 18th, at 32 Red Cross-street; from this date a gradual augmentation continued to September 4th, on which day 12 fatal cases were recorded; from this time a decline was observable to October 14th, on which day the last fatal case occurred at 115 Great Guildford-street; 20 of the deaths from diarrhoea were

of adults. The following were some of the localities in which cholera prevailed—

Great Guildford-street,	Russell-place,
Emerson-street,	Gravel-lane,
Back-alley,	Bedford-row,
Red Cross-street,	Dyers'-buildings,
Union-street,	Holland-street,
Ewer-street,	Bank-side,
Norfolk-street,	High-street, &c.
Stoney-street,	

One death from cholera is recorded in Guy's Hospital, and in St. Thomas's Hospital one death from diarrhoea. (For further information see the St. Olave district.) On February 4th, the son of a shoemaker died of diarrhoea, on the 7th, another son from cholera, and on the 9th the father from the same cause, all in the same house, at No. 7 Orange-street. On August 11th, the 2 children of a hatter died of cholera, after attacks of 12 and 13 hours, at 9 Norfolk-street; an engineer's wife and son were likewise fatally attacked on September 6th, at 34 King-street. The working classes and their families chiefly suffered.

27; 1. ST. OLAVE; *St. Olave*. Pop. 9172. —Chol. 157; Diarr. 16.

Cholera made its appearance in this district (comprising the parishes of St. Olave and St. Thomas) on June 10th; was fatal in July to 39 persons, in August to 59, in September to 48, and in October to 4, the last case recorded on the 7th; in six days, from September 5th to the 10th, 22 deaths occurred, after which date the epidemic subsided.

The principal neighbourhoods attacked were—

Magdalen-court,	Green Bank,
St. Thomas-street East,	John-street,
Vine-yard,	Marble-court,
Tooley-street,	Robin Hood-court,
Webb-street,	Stoney-lane, &c.

Sixty-one deaths from cholera and 5 from diarrhoea occurred in St. Thomas's Hospital, number of patients about 430; and 3 deaths from cholera and one from diarrhoea in Guy's Hospital, average patients about 490. (See the St. Saviour district, in which a part of these hospitals are situated.) Some of the deaths were of persons removed into St. Thomas's Hospital from localities not within this Registrar's district, and more properly belong to those districts in which the fatal attack commenced prior to removal. Three nurses died from cholera in St. Thomas's Hospital, and one from diarrhoea in Guy's.

At Carpenter Smith's wharf, on August 1st, the 2 daughters of a wharfinger died of cholera, and also on the 5th a brother and sister of the above.

Two persons died of cholera at Robin Hood-court on September 6th.

Five deaths from cholera took place in vessels lying off in the river Thames (the northern boundary of this district east from London Bridge).

The following cases are selected from the Registrar's reports:—

"On August 12th, at 6 Greivson's-rents, Webb-street, son of labourer died of cholera in 26 hours. A close court, and ill drained; several deaths have occurred there from cholera."

"The wife of a hide-sorter and 2 children died of cholera within 4 days at No. 4 John-street, Webb-street. The medical certificate contains the following remark:—'The drainage of the house, and the stench therefrom, is most poisonous.'"

"On August 23rd, at 9 Webb-street, wife of hatter, premonitory diarrhoea 3 days, cholera one day. The medical attendant adds on the certificate, 'the state

of the drainage in this house is pestilential, and the water is in a bad state."

27; 2. ST. OLAVE; *St. John, Horsleydown*. Pop. 10665.—Chol. 192; Diarr. 33.

Includes the entire parish of St. John, Horsleydown.

Cholera prevailed in this district, commencing on June 12th, at Susanna-place, and gradually increased to September 4th and 5th, on which days the epidemic attained its greatest severity; after September 13th a perceptible decline continued to October 1st, from this date the locality was free from the disease. The number of fatal cases returned in 3 months were in July 48; in August 79; and September 56. In these 3 months the deaths from all causes exceeded the births by 181; 183 deaths were from cholera, and 79 from all other causes.

In the Union Workhouse, 28 deaths from cholera and 13 from diarrhoea were registered during the year, including those removed from the Registrar's district of St. Olave, the number of inmates about 340. The epidemic was prevalent in—

Fair-street, Surrey buildings, Toohey-street, Freeman's-lane,	Gainsford-street, Thomas-street, Vine-yard, &c.
--	--

In vessels lying off Horsleydown in the river Thames, 3 deaths from cholera occurred, situated nearly opposite the Tower of London.

The following notes are selected from the Registrar's reports:—

"On January 13th, at 2 Griffith's-rents, a dressmaker, aged 25 years, cholera 14 hours. The above case occurred in a filthy place, exposed to an open sewer."

"On July 13th, at 30 College-street, son of a toy-maker, aged 4 years, cholera 10 hours, convulsions 4 hours. Two street-gratings in front of this house, in which 2 cases had previously occurred."

In his return for the week ending August 4th, the Registrar states that "no less than 9 deaths have taken place this week in Surrey-buildings from cholera, and other persons are lying dangerously ill. The court contains about 14 houses, which are constantly exposed to the effluvia of an open sewer; the water they drink is from a well, which is not protected from the drainage of the sewers."

"On August 15th, at 3 Freeman's-lane, widow, aged 64 years, cholera 24 hours. Four persons have died of cholera in this house."

"On August 22nd, at 22 Fair-street, wife of currier, neglected diarrhoea one week, cholera 13 hours. Bad sewerage."

"In the same house, on August 23rd, a single woman, cholera 26 hours."

"The complaints of the inhabitants have been numerous for many years past, but especially during the prevalence of cholera. More deaths from cholera have taken place in this street than any other place in the parish (Surrey-buildings excepted). Sewers run under every third or fourth house, and the inhabitants are not sufficiently protected from the effluvia thereof."

"On September 10th, at 18 Butler's-place, currier, aged 37 years, diarrhoea, cholera 3 days. The house is situated close to a burial ground."

"On September 14th, at 13 John-street, son of lighterman, aged 11 years, cholera 18 hours, congestive fever 2 days. Two persons have died in this house, and several in the street."

28; 1. BERMONDSEY; *St. James*. Pop. 12451.—Chol. 249; Diarr. 46.

This district forms the eastern part of the parish of St. Mary Magdalen, viz., St. James Chapelry,

bounded on the north by the river Thames, and on the east by Rotherhithe, &c.

109 males and 140 females were deprived of life by cholera during the year; in the first 2 months, 4 deaths from cholera were recorded; the epidemic then reappeared on June 6th, at No. 18 Mill-street; by the end of the month 21 persons died, in July 58, August 89, September 71, October 5, and in November one; last fatal case on the 7th, at No. 3 Drummond-road. The greatest mortality in one day was shown on September 2nd, and in this week, ending the 8th, there were 40 deaths from cholera. The annexed table shows the age and sex in 3 periods of life:—

Age.	Deaths from Cholera.		
	Males.	Females.	Total.
From birth to 15 years	42	52	94
15 years to 60 years	60	73	133
60 years and upwards	7	15	22
Total	109	140	249

Watermen, shipwrights, mariners, bargemen, tanners, labourers, mechanics, &c., including their families, suffered severely in the following localities, viz.—

Brewer's-yard, Mill-street London-street, Jacob-street, Bird's-gardens . Salisbury-lane and street, Folly,	Napoleon-place, Cherry Garden-street, Anthony-street, West-street, Corrugated-row, Printer's-place, Perseverance-place, &c.
--	---

Many of the above neighbourhoods are close to a tidal ditch, emitting pestilential effluvia. The Registrar particularly refers, in the subjoined cases and description of localities, to this tidal ditch, at Jacob's Island, as spreading destruction to the surrounding inhabitants. One death by cholera is recorded in a vessel lying off in the river Thames, on August 27th.

"The 9 cases of cholera registered during the week ending June 16th occurred on the banks of the tidal ditch. Seven of them occurred within 50 yards of each other. This ditch, formerly used as a mill-stream, is now the receptacle of all kinds of filth. Putrid fish in large quantities is frequently thrown in; many of the poor drink the water and use it for culinary purposes."

"On August 10th, the 2 daughters of a labourer died of cholera, in Bird's-gardens. The father had just recovered from cholera; on the 11th the mother was attacked, and in collapse, lying in a room not 8 feet square, in a cottage containing 2 rooms, the bodies of her children in coffins close to her bed. This cottage forms one of a group situate in Bird's-gardens, a locality principally inhabited by the lower order of Irish, where numbers of pigs have been kept, with no drainage and no water laid on; one pump in the garden from which land-water is drawn highly contaminated by the surface drainage from several pigsties and privies (which are always emptied into the gardens); in an opposite house a child is dying of cholera; diarrhoea abounds. Seven cases in one house this week."

"On August 14th, at 4 James-court, waterman, cholera 3 days. Third fatal case in this court, which is situate close to the tidal ditch."

"On August 12th, at 5 Perseverance-street, daughter of journeyman leather-dresser, diarrhoea 14 days, aphthæ.

This child's mother, and also a lodger, died in the same house, of cholera, a few days before."

"On August 12th, at 4 Folly, son of labourer, cholera 12 hours. Several cases of cholera have occurred within a few yards of this filthy spot, close to tidal ditch."

"On August 15th, at 15 Printer's-place, widow of tanner, cholera 18 hours. This is the fourth case of cholera in same house in 10 days; 3 have proved fatal."

"On August 23rd, at 4 Jacob-street, son of a deceased sail-maker, consecutive fever 6 days, cholera 30 hours. Close, small, badly-ventilated house, near to tidal ditch; second death of cholera in same house."

"On August 21st, at 11 Perseverance-street, wife of tanner, consecutive fever 7 days, cholera 18 hours. Many cases of cholera have occurred on this spot, which was originally a pond."

"On August 21st, at 20 Earnest-street, wife of wharfinger's clerk, aged 35 years, cholera 17 hours. New house, airy, clean, drainage good. Under the influence of fear and dread of the cholera, having lost a sister in same street a few days before."

"Six of the deaths registered in the week ending September 1st occurred on the banks of the disgusting tidal ditch, now rendered more offensive than ever, from a great length of its narrow part having been covered in; nearly all the refuse from the very poorest houses having accumulated at that part of the ditch near to the new water pipes, and where, under the window of a typhus patient, might have been seen the bodies of 13 dead dogs and cats on one day, beside other offensive matter."

"September 2nd, at 2 Butler's-terrace, rope-maker, aged 40 years, cholera 17 hours. Small house, badly drained, close to tidal ditch."

"On September 7th, at 32 New Church-street, daughter of master mariner (deceased), cholera 13 hours. Third fatal case in same family within a few days."

"On September 9th, at 2 Crosby-place, daughter of engineer, cholera."

"On September 10th, in the same house, mother of the above, cholera 24 hours. A close, ill-ventilated house, with 6 small rooms, in which 2 families, consisting of 15 persons, resided; the back kitchen boarded over a sewer, the stench from which is very foul; there have been 5 cases of cholera in this house; 2 have proved fatal."

"On September 12th, at 24 East-lane, wife of fireman, aged 30 years, cholera 30 hours, consecutive fever 10 days. Second death within a few days in same house, a death next door also."

"On September 11th, at 23 Edward-street, labourer, aged 21 years, cholera 24 hours, fever 6 days. Narrow street, house small, generally dirty, badly drained, and close over tidal ditch."

"On September 12th, at 7 Napoleon-place, son of hoop-bender, cholera 23 hours. Narrow court; badly ventilated and drained. Third death in same house in 3 weeks."

"On September 14th, at East-lane, son of master lighterman, aged 4 years, cholera 14 hours. Several deaths in this lane within a few days. House good, airy, clean, well ventilated, bad drainage around."

"On October 2nd, at 10 Corrugated-row, brass-founder, aged 57 years, diarrhoea some days, neglected, cholera 36 hours. Apparently well drained, new houses, open situation, clean; but nevertheless this is the 24th death from cholera or diarrhoea within 200 yards of this spot. Some open drains and many offensive exhalations in the immediate neighbourhood."

"On October 8th, at 4 Goat-alley, wife of mariner, aged 53 years, cholera 2 days, exhaustion and debility

26 days. Second fatal case in same house; one fatal case occurred next door; houses very small and close; drainage bad; smell offensively; houses crowded."

"On October 16th, at 10 London-street, son of clock-case maker, cholera 40 days, consecutive fever. The sister of this boy was seized with cholera at same time and died. Close lodging-house, within 5 yards of tidal ditch."

28; 2. BERMONDSEY; *St. Mary Magdalen*.—Pop. 9721.—Chol. 259; Diarr. 55.

Cholera was fatal to 113 males and 146 females; the epidemic prevailed extensively in the months of July, August, and September, successively 76, 100, and 67 deaths. On June 13th the first case was registered at Mellick-place, a costermonger's wife, aged 25 years, survived the attack 24 hours. The next case occurred at No. 1 Wellington-street, on the 16th. By the end of June, 6 deaths were registered. The epidemic continued to spread in July, and increased in August. During the first 21 days of September the mortality did not show any abatement, but after that period it declined; in October, 7 fatal cases occurred, the last 2 took place on the 8th, the one at Bell-court, the other in Bermondsey-square. The greatest mortality from the epidemic was on August 1st and 30th, on each of which days 9 deaths from cholera were registered, and 8 on September 16th.

Tanners, leather-dressers, dyers, cutters, &c., mechanics and the working classes generally, were sufferers from cholera, residing in the following localities, which intersect the centre of the parish between the St. James's and Leather Market districts—

Millick-place,	Willow-walk,
Bermondsey-street,	Grange-walk,
Bermondsey-square,	Fawcett-court,
Great George-street,	Hanover-street,
Albert-street,	Fendall-street,
Cross-street,	Crucifix-lane, &c.

In the Bermondsey Workhouse during the year 1849 (the inmates numbering about 600), 57 deaths were recorded from cholera and 15 from diarrhoea, a portion of which were of persons removed from the St. James's and Leather Market districts situated in this Union.

Age.	Deaths from Cholera.		
	Males.	Fe- males.	Total.
From birth to 15 years .	26	36	62
15 to 60 years . . .	61	84	145
60 years and upwards .	26	26	52
Total . . .	113	146	259

Of the 55 deaths from diarrhoea, 14 only were of adults.

28; 3. BERMONDSEY; *The Leather Market*.—Pop. 12775.—Chol. 226; Diarr. 48.

This district comprises the western part of the parish of St. Mary Magdalen, Bermondsey.

An isolated case of cholera proved fatal on March 3rd, at No. 6 Ship and Mermaid-row; after an interval of 13 weeks, the epidemic was fatal on June 13th, at No. 2 West-street, and by the end of the month 5 other cases proved fatal; in July 60, in August 75, in September 79, in October 3; the last and only case in November, on the 10th, at No. 1 Green-walk. In the first 12 days of September, 60 deaths were ascribed to cholera; 8 deaths were registered on the 3rd, and 8 on

the 6th; the epidemic declined after September 20th. Tanners and their families suffered more than any other class in this district. On August 13th, at No. 5 Aldred-street, 3 persons died of cholera in one day; the duration in each case respectively was 8, 12, and 8 hours. Cholera was most fatal in—

William-street,	Alice-street,
Edward-street,	Smith's-buildings,
Snow's-fields,	Crosby-row,
Long-lane,	Bermondsey New-road,
Chapel-place,	John-street,
Baalzephon-street,	&c.

The Registrar, in his returns, describes the following cases:—

"On August 13th, at 17 King-street, Bermondsey New-road, wife of brush-maker, cholera 32 hours. Thickly inhabited by a very poor and dirty class of people."

"On August 16th, at 1 Kirby-street, Snow's-fields, son of labourer, diarrhoea 8 or 9 days, convulsions from dentition 4 hours. Thickly populated with the lowest and dirtiest order of people."

"On August 27th, at 8 New Weston-street, wife of journeyman carpenter, cholera 3 hours."

"In the same house, on August 28th, journeyman carpenter, cholera 12 hours. This and the preceding were husband and wife, and very recently come from the country."

"On August 27th, at 22, John-street, son of a journeyman leather-strainer, cholera 7 hours."

"In the same house, on August 29th, wife of journeyman leather-strainer, cholera 13 hours. Mother of the above, and 2 more of her children were attacked with the same disease."

"On September 2nd, at 47 Baalzephon-street, Long-lane, journeyman cordwainer, cholera 12 hours, collapse 4 days."

"On September 6th, in the same house, widow of journeyman cordwainer, cholera 12 hours. Wife of the above; and on August 26th, a child of theirs (6 years old) died of cholera."

29; 1. ST. GEORGE, SOUTHWARK; *Kent Road*.—Pop. 15671.—Chol. 267; Diarr. 44.

Cholera prevailed with much severity in this district. Five fatal cases are recorded in the early part of the year. The epidemic subsequently broke out on June 7th, at No. 6 York-street; by the end of the month 4 persons died. In July the mortality rose to 70, increased to 103 in August, 76 in September, and decreased to 9 in October,—the last fatal attack on the 28th, at No. 34 Wycombe-place: on September 9th, the epidemic was at its height; on this day 10 persons were deprived of life. The deaths from diarrhoea were 37 children, and 7 adults.

Cholera was fatal in—

Henry-street,	Kent-street,
Hunter-street,	Red-cross,
Paul's-yard,	Potter-street,
Stanford-place,	Noel-court,
St. George's-place,	Mermaid-court, &c.,

forming the eastern part of the parish of St. George the Martyr, Southwark, lying between Bermondsey and Newington.

The following cases are selected from the Registrar's reports:—

"On July 20th, at 31 Hunter-street, single woman, aged 17 years, cholera 14 hours. The deceased attended upon 3 persons who died of cholera in the same house on the 19th instant, and was herself taken ill and died the next day."

"On July 30th, at 9 Surrey-place, woolstapler, cholera 16 hours."

"On July 31st, in the same house, wife of the above, cholera 26 hours."

"Also on the same day, and in the same house, son of the above, aged 17 years, cholera 30 hours."

"The above deaths occurred in one of the best houses in the parish, and in a neighbourhood usually considered remarkably healthy."

"On August 12th, at 5 Fox's-buildings, single woman, cholera 16 hours. A dirty court, leading out of Kent-street; houses and court in a very damp and filthy condition."

"On August 10th, at 10 Rephidim-street, son of bricklayer, diarrhoea 14 days. The inhabitants of this street complain of a bad ditch in the rear, from which arises a most intolerable odour."

"On August 31st, at 7 Russell-place, Kent-street-road, daughter of painter, cholera 16 hours. The father of this child complained of a catgut manufactory situate in the rear of his house, the effluvia from which has often made him ill, to which he attributes the death of his child."

"On September 17th, at 5 Caroline-place, Mina-road, wife of carpenter, cholera, consecutive fever 9 days. The death of her son from cholera was registered on the previous day. The informant in this case complained of the stinking ditch which runs before her door, and of the almost total want of water for the purposes of cleanliness and domestic use."

29; 2. ST. GEORGE, SOUTHWARK; *Borough Road*. Pop. 14794.—Chol. 312; Diarr. 48.

This district is bounded on the south by the London-road, west by Blackfriars-road, east by Blackman-street and the Borough, Southwark, &c.

One death from cholera was recorded on February 13th, at No. 2 Mint-street; the next case on June 29th; after this date the epidemic spread over the district; in July, 80 deaths were recorded; August, 123; September, 103, and in October 4, the last death on the 11th, at No. 55 Lant-street. The mortality from cholera nearly ceased after September 21st. On August 3rd, 10 deaths were recorded; in the first 4 days of September, 27. The epidemic was chiefly confined to the working classes residing in—

	Deaths.
Mint-street.	14
Wellington-street	10
Lant-street	10
Blackman-street	7

Also in—

Friar-street,	Gun-street, Friar-street,
Little Surrey-street,	Caroline-crescent,
Martin-street, Friar-street,	King-street,
Red Cross street, Mint-street,	&c. &c.

In the Workhouse, situated in Mint-street, 64 deaths from cholera are recorded, and 12 from diarrhoea, the number of inmates about 300; a portion of these deaths were of persons removed into the Workhouse from the Kent-road and London-road sub-districts. In the Queen's Bench prison, one death from cholera and 2 from diarrhoea are recorded. The number of prisoners about 180.

During the months of July, August, and September, the deaths from all causes exceeded the births by 297. In the above 3 months, 306 deaths arose from cholera, and 121 from all other diseases.

The Registrar, in his reports, describes the annexed cases and places:—

"On June 29th, at 54 Lant-street, carman, aged 44 years, cholera 30 hours. On Wednesday the deceased ate heartily of strawberries, and drank a pint

of spring water mixed with raspberry vinegar at night; early next morning he was seized with diarrhoea; at mid-day was under medical treatment, and died on Friday."

In reference to several deaths from cholera which occurred in the Workhouse, the Registrar states that "nearly all were cases taken into the house after the disease had made such inroad upon the patients as to set medical skill at defiance, whilst upon the inmates themselves (although several have been attacked) its effects have been comparatively trifling, not more than two or three having died of cholera during the prevalence of the epidemic. Up to this time the Guardians caused handbills to be circulated through the parish, containing directions to the poor inhabitants where they may obtain medical aid, with instructions on the best means for the prevention of disease, concluding in the following terms:—'In case of any poor wayfarer or friendless person being attacked with cholera, they will be immediately admitted, if brought to the Workhouse.' Hence the increase in the number of deaths in this establishment."

"On August 14th, at 11 Windsor-place, Southwark Bridge-road, son of builder, cholera 8 hours. This death and another occurred in the same house, within a short time of each other; both were children, one 4 years, the other 5½ years old, and the medical certificates represent both to have been ill 8 hours."

"On August 13th, at 1 Revel's row, journeyman baker, aged 48 years, cholera 16 hours. This is the eighth death from cholera in Revel's row since July 20th. The informants, in most cases, complain of the offensive smells arising from the drains."

"On August 10th, at 8 King-street, Union-street, labourer, cholera 24 hours."

"On August 13th, in the same house, wife of journeyman carpenter, cholera 10 hours. Sister to the above, resided at Camden town, came to see her brother, was taken ill, and died."

"On August 13th, at 54 Surrey-street, wife of a groom, cholera 19 hours. Cholera has proved fatal to 5 persons since July 29th, in Little Surrey-street. The deaths have taken place in houses within a short distance of each other, thus—2 in No. 46, one in No. 50, one in No. 54, one in No. 55, and one in No. 61."

"On August 18th, at 9 Mason's buildings, Green-street, Friar-street, son of hammerman, aged 8 years, cholera 24 hours. Small houses inhabited by the poorer classes. Green-street is a cross-street between Friar-street and Wellington-street; in it is a soap-factory, two horse slaughter-houses, a bone-boiler, and other similar premises. The inhabitants of the surrounding neighbourhood frequently complain of the effluvia emitted from these places, but the street and slaughtermen's yards are kept much cleaner than formerly, and the mortality in Green-street has not been greater than at other parts of the district."

"On September 4th, at 2 Belvidere-place, widow of journeyman shoemaker, cholera."

"On September 3rd, in the same house, widow of journeyman shoemaker, cholera. Relatives resided in the same room, both became much alarmed by hearing of so many deaths from cholera."

"On September 8th, at 24, King-street, Borough-road, journeyman cork-cutter, aged 33 years, cholera about 30 hours."

"On September 10th, in the same house, widow of journeyman cork-cutter, cholera about 12 days, husband and wife: the latter had cholera about a fortnight since, but was fast recovering, when the sudden illness and death of her husband produced a relapse, which carried her off in a few hours. House in a back-street, not very confined, also cleanly."

"On September 8th, at 5 York-place, Revel's-row, daughter of journeyman printer, cholera 11 hours. York-place is a crowded court; its inhabitants, since the epidemic has prevailed, have been very persevering in washing the privies and small yards attached to their dwellings, and this is the first death from cholera in that spot."

"On September 14th, at 18 Mint-street, widow of journeyman carpenter, cholera 22 hours. Moved from No. 16 two days previous to being taken ill, in which house her husband died last week, and two other men previously. Informant stated, that a privy in No. 16 is very offensive."

"On September 19th, at Farm House, Harrow-street, Mint, mariner, cholera 36 hours. A lodging-house in which from 40 to 60 persons sleep every night. Accommodation can be afforded to 100. Deceased was taken ill about 3 o'clock in the morning with diarrhoea, which was totally disregarded until 11."

"On September 16th, in the Queen's Bench prison, tailor, aged 42 years, from near Regent's-circus, cholera. At the inquest, the coroner stated this to be the first case of cholera which had occurred at any prison within the city of London or the Borough of Southwark."

29; 3. ST. GEORGE, SOUTHWARK; *London Road*. Pop. 16179.—Chol. 257; Diarr. 33.

This Registrar's district includes the south-west part of the parish of St. George the Martyr, Southwark, lying west of the Newington-road, &c.

The mortality was considerably increased, through the prevalence of cholera in the months of July, August, and September; the deaths from the epidemic successively were 57, 88, and 104, whilst the deaths from all other causes during the above 3 months amounted to 92. The first death occurred at Prince's-row, Westminster-road, on June 26th, then on July 2nd, followed by another on the 9th; about this time the epidemic extended rapidly, and attained its maximum on the first 4 days of September, when 35 deaths were registered; after the 13th it declined, and was nearly extinct by the end of the month; in the following month, October, 5 deaths are recorded, 3 occurring on the 11th, on which day the epidemic ceased.

Deaths from
Cholera.

Men of the age of 20 years to 60	• 40
Women ditto ditto	• 75

In the Bethlehem Hospital, St. George's-road (the inmates about 400), 5 deaths from diarrhoea and one from cholera were recorded during the year. Mechanics and the working classes, including their families, were the chief sufferers from the cholera epidemic, residing on those spots where bad drainage, density, and poverty abounded. The following are some of the places where cholera prevailed—

Duke-street, Westminster-road,
Tower-street, Waterloo-road,
Mount-place, Gibraltar-row,
Webber-row,
Union-street, London-road,
Elliot's-place, St. George's-road,
Garden-row, London-road,
Gray-street, Webber-street,
York-street, London-road, &c.

The following cases are selected from the Registrar's reports:—

"On July 23rd, at 7 Webber-row, son of a harness-maker, cholera 12 hours."

"In the same house, on July 26th, daughter of a harness-maker, cholera 12 hours."

"On July 26th, at 14 Alfred-place, Newington-causeway, son of a sculptor, cholera."

"In the same house, on the same day, a sister of the above died of cholera."

"On September 4th, at 2 Lynn-street, son of tinman, aged 6 years, cholera. The houses in Lynn-street and Gaywood-street are very damp, having water under them, and smell badly; in Lynn-court they have no drains."

"On September 2nd, at 16 Elizabeth-place, Waterloo-road, wife of labourer, diarrhoea 6 hours, cholera 12 hours. In this court there is no throughfare: the privies are in the centre of it, and every time the water comes on there is a very noxious smell of gas from the drain."

"On September 4th, at 8 Duke-street, Westminster-road, carman, cholera 16 hours."

"In the same house, on September 5th, painter, cholera 9 hours. This death and the one above occurred through fright."

"At 47 London-road, on September 16th, a green-grocer, aged 53 years, died of cholera in 48 hours; on the following day his wife died in the same house, in 24 hours after the attack."

30; 1. NEWINGTON; *Trinity, Newington*. Pop. 19064.—Chol. 318; Diarr. 57.

This Registrar's district comprises the northern part of the parish of St. Mary, Newington Butts, viz. Trinity Ecclesiastical district, lying between the Newington-road, Blackman-street, extending east to Kent-street, &c.

On June 8th cholera appeared at George's-road, and also at No. 5 Royal Tent-court, Kent-street; in this house, on June 11th and 13th, a labourer and his wife likewise died of cholera, and on the 21st another death at No. 1 in the same court.

The epidemic increased rapidly towards the end of July; in this month there were 64 deaths, in August 122, in September 124, in October 2, both of which occurred on the 2nd; the highest mortality was observed in the first 7 days of September, when 58 persons were deprived of life; the greatest number on any one day on September 9th, when 11 deaths were registered; after the 15th of this month a rapid decline ensued; between the ages of 15 and 50, the proportions were 59 males and 104 females who died of cholera; diarrhoea prevailed, and was principally fatal to children under 2 years of age.

During the 3 months, July, August, and September, the deaths from cholera were 310, and from all other causes but 137.

The following cases are selected from the Registrar's reports:—

"On June 11th, at 5 Royal Tent-court, Kent-street, a labourer, aged 30 years, Asiatic cholera 36 hours."

"In the same house, on June 13th, wife of the above, Asiatic cholera 36 hours. The Registrar states these two persons had taken for supper, previous to the attack, the refuse of rotten potatoes and stinking meat."

"On August 18th, at 2 Harmer's-buildings, Ayliffe-street, widow of wine porter, cholera, typhoid fever 6 days. A narrow court, close to an open sewer; a foul drain passes under the house."

"On August 21st, at 9 Adam-street, New Kent-road, daughter of porter, cholera 16 hours. At the house adjoining a pigsty is erected against the kitchen of this house; the wall is but 4 inches thick, and the soil drains through the brickwork, causing a most intolerable stench."

"On August 18th, at 10 John's-place, Lock's-fields, wife of hatter, cholera 10 hours. An open sewer in front of the house."

"Three fatal cases occurred in Poplar-row, a close, dirty court."

"On August 28th, at 47 George-street, Harper-street, brushmaker, cholera 20 hours. In this house there is always a most unpleasant smell, arising from a drain: during last summer this man had 3 out of his 4 children die of scarlatina."

"On September 21st, at the County Gaol, Horse-monger-lane, labourer, aged 19 years, cholera (*inquest*). This is the first death from cholera that occurred in this prison. The deceased was brought in on the 13th instant, and had resided previously in the neighbourhood of Lambeth; the number of prisoners about 170."

The Registrar states that "the most important local causes are the very defective drainage, and over-populated and ill-cleansed condition of the habitations of the poorer class. The supply of water is, in general, tolerably good in quality, but very limited in quantity."

The other localities afflicted with cholera were—

Newington Causeway,	Bull Head-court, Kent-
Horse-monger-lane,	street,
William-street, Newing-	Wellington-street,
ton Causeway,	Brandon-street, Lock's-
Etham-place, Kent-	fields,
road,	Chatham-place,
Kent-street,	Flying Horse-yard, Black-
Trinity-square,	man-street, &c.

30; 2. NEWINGTON; *St. Peter, Walworth*. Pop. 23299.—Chol. 446; Diarr. 64.

Comprises the south east portion of the parish, viz., the Ecclesiastical district of St. Peter, Walworth.

On June 9th, a printer, aged 49 years, died of cholera in 12 hours, at Cancel-street; previous to this case, 5 others proved fatal in January, 3 of the 5 in the Workhouse; the epidemic was at its height in the first 9 days of September, during that period 108 persons died: the highest mortality in any one day was on the 4th, when 18 persons died; after September 18th, a perceptible decline followed; in the succeeding 18 days, viz., to October 6th, 21 deaths are recorded; the last fatal case in this Registrar's district was on November 4th, at King's-row. The progress of the epidemic is thus illustrated: in the month of June 4; July 115; August 135; September 181; October 5; and November one.

Age.	Deaths from Cholera.		
	Males.	Females.	Total.
From birth to 15 years .	86	81	167
15 years to 60 years .	88	117	205
60 years and upwards .	21	53	74
Total . . .	195	251	446

On the average, the ground in this district is below Trinity high-water mark. In the Union Workhouse, Walworth, 48 deaths were registered from cholera and 9 from diarrhoea. The Registrar's districts of St. Mary and Trinity, both in this Union, contributed to the above mortality; the number of pauper inmates about 350.

In the following localities, the number of deaths from cholera in each street, &c., is given:—

	Deaths.
Nursery-row, Lock's-fields	8
Webb-street	7
Sun-street and Little Sun-street	7
Pleasant row and place, East-street	11
Trafalgar-street and row	17
John-street and place, Hill-street	8
Flint-street, East-street	9
Camden-street	8
King-street and row, East-street	11
Pilgrim-street and place, Walworth Common	8
Nelson's-place and court, Lock's-fields	10
North-street	13
Eltham-place, Lock's-fields	11
Queen-street and row, York-street	9
Clandon-street	9
Dean's-buildings, North-street	5
Northampton-place, North-street	6

The cholera epidemic proved most fatal to artisans, mechanics, and families of the working classes, resident in the above neighbourhoods.

The annexed cases, &c., are selected from the Registrar's reports:—

"On January 11th, in Newington Workhouse, a boy, aged 10 years, cholera 30 hours (parents unknown). This boy had been removed from the establishment at Tooting, and his death is the second that has occurred since the return of the children to Walworth. Some others have been attacked, but are now doing well."

The Registrar states, "the cases of cholera which have occurred in the Workhouse are those of persons brought there almost in the last stage of collapse, and not inmates of the house."

"On August 11th, at 33 James-street, York-street, spinster, aged 29 years, cholera 12 hours. No drainage; a fat-melter's premises at the bottom of the street."

"On August 10th, at 2 Bedford-street, Lock's-fields, shoebinder, spinster, cholera 12 hours. House crowded; no drainage. Street in bad weather very dirty; the smell from the back premises is very offensive."

"On August 20th, at 5 Hen and Chicken-lane, son of journeyman bricklayer, typhoid gastro enteritis, cholera 10 hours. The brother of this child died the same day, making 5 of the family in 3 weeks, mother and 4 children: 4 are certified to be cholera, all in the same house."

"On August 24th, at 6 North-street, wife of shoemaker, aged 43 years, cholera 8 hours. House very much crowded, and neighbourhood dirty; this and the following are mother and child; a child died in the house on August 15th."

"In the same house, on August 24th, daughter of shoemaker, cholera 12 hours."

"On August 24th, at 5 Charles-street, Walworth-common, son of coal porter, aged 19 years, diarrhoea 2 days, cholera one day. House very much crowded, street dirty, no drainage. This person was taken ill in the neighbourhood of Shoreditch, and sent home."

"On August 26th, at 3 Red Lion-row, son of labourer (deceased), cholera 2 days. Father and brother of this child died of cholera in the previous week in the same house."

"On August 29th, at 17 Nursery-row, Lock's-fields, wife of shoemaker, cholera 12 hours. A ditch that was in front of this row has lately been filled up, but no drainage provided. There are about 25 houses in the row, and the slops are thrown out in front, keeping the place in a filthy state."

"On September 1st, at 11 Elizabeth-street, daughter of gentleman, cholera 9 hours."

"In the same house, and on the same day, a sister of the above, cholera 10 hours."

"On September 4th, at 14 Webb-street, son of shoemaker, cholera 24 hours. Close, dirty house, with an open ditch at the back, street very dirty; this is the fourth death from cholera in this house."

"On September 3rd, at 50 Queen's-row, wife of poulterer, aged 43 years, diarrhoea 7 days, cholera one day. Three persons have died in this house; the mother on the 3rd, one child on the 5th, and one on the 7th."

"On September 3rd, at 10 Robinson's-cottages, Portland-street, late soldier in 23rd R.W. Fusiliers, aged 26 years, cholera 9 hours. This person was discharged from his regiment in August, in consequence of loss of sight, and had only reached his home a few days. There is an open ditch running before the house, which the whole neighbourhood complain of being at times almost unbearable."

"On September 9th, at 8 Portland-street, daughter of a smith, aged 4 years, cholera 24 hours. House dirty; there is an open ditch running along one side of this street, unbearable at times, since the flushing operations have been adopted, though inconvenience was not felt before."

"On September 9th, at 6 Horsley-street, poulterer, aged 45 years, cholera 24 hours. This man lost his wife and two children in the previous week of cholera in Queen's-row."

"On September 23rd, at 6 Adelaide-place, Portland-street, widow of wine-merchant, cholera one month, consecutive fever one week. An open ditch runs in front of the house, which is very offensive."

30; 3. NEWINGTON; *St. Mary*. Pop. 12243.—Chol. 143; Diarr. 14.

This Registrar's district consists of the Ecclesiastical district of St. Mary, extending from Kennington-common, lying east of Kennington-road to the New Kent-road.

In Amelia-street, on July 4th, the epidemic commenced, and continued to spread to September 9th, when it attained its maximum, it then gradually declined, and by October 4th the last fatal case was recorded at Cumberland-place. In the following streets and adjacent localities cholera prevailed—

Weymouth-street,	Church-place,
New-street,	Brandon-street,
Charles-street,	Lion-street, New Kent-
Union-court,	road, .
Caroline-place,	Cross-street, &c.

During the months of July, August, and September, the deaths from cholera numbered 140, and from all other diseases but 71, whilst the births in the same period numbered 103.

The subjoined cases are selected from the Registrar's reports:—

"On August 19th, at 2 Church-passage, a hatter, aged 31 years, cholera 12 hours. House small, and overcrowded; his daughter died of cholera, in the same place, on the 17th inst."

"On September 4th, at 6 Staverton-row, Walworth-road, a cheesemonger, aged 40 years, cholera 14 hours. Two other deaths have subsequently occurred in this house."

"On September 8th, at 6 Lion-street, New Kent-road, wife of mariner, aged 22 years, cholera 15 hours. This and the following case are those of daughter and mother. The cases in this locality were malignant in the extreme."

"On September 9th, in the same house, widow of master butcher, diarrhoea 3 weeks, cholera 4 days."

"On September 28th, at 5 Horse and Groom-yard, a truss-maker, aged 52 years, cholera 24 hours. A very close and ill-ventilated place, although this is the first case of cholera that has proved fatal in it."

31; 1. LAMBETH; *Waterloo Road 1st.* Pop. 12767.—Chol. 193; Diarr. 27.

Bounded on the north by the river Thames, extending east of Waterloo Bridge to the Broadwall, including the New Cut on the south, and the east side of Waterloo-road.

One fatal case of cholera at Whitehorse-street, on February 3rd; the epidemic subsequently broke out on June 23rd, at Short-street, and continued, to increase to July 31st, on which day the greatest mortality occurred, namely 10 deaths; in this month 60 deaths from cholera were registered, in August 77, in September 51, and in October one, on the 12th, at 56 Cornwall-road, a solicitor's wife, aged 65 years. A perceptible decline was observed after September 14th.

At No. 10 Mitre-place, Broadwall, the 3 children of a labourer, within 3 days, died of cholera. At No. 15 Eaton-street, a mother and son. At No. 60 Cornwall-road, on July 30th, the widow of a cooper and 2 children; and on July 29th, at No. 11 Brad-street, the 2 daughters of a compositor died. In the following streets, &c., cholera was most fatal—

Roupell-street,	New-street,
Mitre-place, Broadwall,	Little Windmill-street,
Whitehorse-street,	Salutation-place,
Eaton-street,	Le Grand-place
Cornwall-road,	Wootton-street, &c.

Ten adults and 17 children under 3 years of age died of diarrhoea. In the months of July, August, and September, the deaths by the cholera epidemic exceeded the births registered by 53.

The Registrar, in his reports, describes the following cases and localities:—

"On July 25th, at 5 Bate's-buildings, Broadwall (*inquest*), a shoemaker, aged 20 years, natural death, cholera 11 hours. Bate's-buildings is one of the narrow courts in Broadwall, crossing the boundary sewer. A younger sister died of cholera in July; the mother was next taken ill and removed to the Work-house, where she also died of cholera. The father was in the Hospital during the period of the illness and death of his wife and 2 children. Half the number of cases of cholera have taken place near the sewers which form the boundary of the parish."

"On August 27th, at 14 Whitehorse-street, a lighterman, cholera 24 hours. There have been 3 deaths from cholera in this house."

In his return for the week ending August 4th, the Registrar states that "during the week there has been a great increase in the deaths from cholera. About half the cases have occurred in the vicinity of Broadwall, Eaton-street, Whitehorse-street, Wootton-street, &c.—places more or less subject to effluvia from bad drainage: the other half have occurred in all parts of the district, without any apparent exciting cause, beyond crowded rooms and, probably, indifferent food."

In his return for the week ending August 11th, the Registrar states that "the deaths from cholera, though still numerous, are less than half the number of the preceding week, viz., 34 and 15. As before, full half the deaths have occurred in the locality of the boundary sewer. As an additional proof of the influence of the effluvia from that source on animal life, he had ascertained that a cowkeeper, whose premises are close to the boundary ditch in Little Duke-street, and whose wife died of cholera on August 4th, has, during his residence there, lost several valuable cows by death."

"On August 11th, at 36 Windmill-row, daughter of shoemaker, cholera 13 hours, collapse 9 hours. Row ill cleansed and overcrowded; filthy in the extreme."

"On August 14th, at 20 Brad-street, an artist,

cholera 24 hours. The end of Brad-street where this death took place is ill cleansed, and frequently one mass of mud and water."

"On August 13th, at 12 Little Windmill-street, a labourer, cholera 50½ hours, collapse 14 hours. This street is at the back of Windmill-row, and is equally filthy and dirty. They are both chiefly inhabited by Irish families and vendors of decayed fruit, fried fish, or vegetables, the effluvia from which effects the whole locality."

"On August 15th, at 3 Victoria-place, Broadwall, wife of labourer, aged 31 years, cholera 4 days, fever one day. This place is comprised of 10 or 12 houses built a few years ago, over and close to the sewer which forms the boundary at the back of Broadwall, into which the houses are drained. They are overcrowded, every room containing a family."

"On August 15th, at 5 New-street, a single woman cholera 7 days, typhus."

"In the same house, on August 16th, son of a smith, scarlatina 4 days, cholera 4 days. The street is narrow and densely populated. The houses are inhabited chiefly by mechanics."

"On August 19th, at 3 Isabella-place, Broadwall, widow of bricklayer, aged 49 years, cholera 3 days." The Registrar states that "Isabella-place is of all others the most filthy in this district; the entrance is not more than 4 feet wide; there are 6 or 8 dilapidated houses in it of 2 rooms each, all front, no air through them, and each room containing a family; a recess on the left is the receptacle of all manner of filth, dust, decayed vegetables, fish guts, &c. The stench is very bad at all times."

"On August 23rd, at 16 Cornwall-road, a widow, aged 60 years, cholera 21 hours. This female attended on a younger one, who died in the same house on the 20th. She subsequently washed the deceased female's clothes, and was immediately after taken ill."

"On August 26th, at 6 Church-terrace, a gentleman, cholera 13 hours. This terrace faces the churchyard, which is now so often opened for funerals that effluvia must enter the surrounding houses, though they are otherwise clean and open."

"On September 1st, at 9 Le Grand-place, daughter of journeyman carpenter, cholera. The sixth death in this place of 12 small houses."

"On September 7th, at 6 Little Windmill-street, a coal porter, cholera 20 hours. Several deaths before recorded in this most dirty street."

"On September 8th, at 30 John-street, Cornwall-road, a labourer, aged 17 years, cholera. The mother of this youth died in the same house on the 4th."

31; 2. LAMBETH; *Waterloo Road 2nd.* Pop. 17319.—Chol. 243; Diarr. 38.

Bounded by the river Thames from Waterloo Bridge to Westminster Bridge, embracing the northern part of Westminster Bridge-road, extending north to the Waterloo-road, of which it includes the west side, &c.

A fatal attack of cholera occurred on January 16th, at 8 Burdett-street; the next case on June 15th, at Agnes-street, a carpenter's wife, aged 54 years, diarrhoea 4 days, cholera 18 hours; followed by another on July 3rd, at James-street. From this date the epidemic spread to September 8th, it then attained its maximum; on that day 13 persons had fallen victims, on the following day 11. From this time it declined to October 17th, when the last death was recorded, at 11 Lambeth-square. In July there were 48 deaths; August 81; September 106; October 6; in the first 9 days of September, there were 63 deaths from cholera. In the 3 months July, August, and September, 256 deaths were registered from cholera and diarrhoea, and but 96 from all other causes. At No. 14 Manners-street, the wife

of a sawyer, aged 40 years, died of cholera in 12 hours, on October 1st; and on the 3rd, her daughter, aged 13 years, died. Two fatal cases occurred at 19 Charles-street; a labourer's wife and daughter, August 7th, at No. 20 Anne-street; at No. 4 Farnham-place, a mother and son, on September 4th; and a tailor and his wife, on same day, July 31st, at No. 35, Lower-marsh. The deaths from cholera were numerous in the subjoined localities—

Lower-marsh,	Gibson-street,
James-street,	Anne-street,
Granby-street,	Thomas-street,
Charles-street,	Apollo-buildings,
Frances-street,	Oakley-street,
Jurston-street,	Belvidere-road, &c.

With the exception of 3 cases, the deaths from diarrhoea were all of children.

The following cases are selected from the Registrar's reports:—

"On July 26th, at 80 James-street, wife of shoemaker, aged 34 years, cholera 18 hours. This spot lies quite in a hollow; it was built on very marshy ground, the drainage is defective, and there are ditches partially filled up, which often serve as receptacles for decayed vegetables, stinking fish, &c. With few exceptions, the deaths have occurred to persons extremely poor, residing generally in one room, and in dirty narrow streets."

"On August 19th, at 35 Frances-street, Westminster-road, son of labourer, cholera 9 hours. Densely crowded with Irish, of dirty, intemperate habits; a long open sewer runs parallel to it. Pigs, ducks, &c., kept in the vicinity. Numerous have been the attacks of cholera in this street, 9 of which were fatal."

"On August 29th, at 14 Apollo-buildings, son of tailor, cholera 16 hours. This small spot abounds with noxious effluvia. The privies are most offensive, and the water scarcely fit to drink; heaps of refuse matter thrown about by the costermongers. Pigs, horses, rabbits, and all sorts of animals are kept here. The fish, vegetables, &c., in which the people deal are at night frequently placed under the bed. There are 2 cats'-meat dealers in Apollo-buildings, the stench from which is much complained of."

"On September 2nd, at 16 James-street, daughter of butcher, cholera 12 hours. The attacks and deaths in this street have been more severe than in any other part of this district; it was built on a swamp—the ditches formerly complained of are now filled up."

"On September 8th, at 9 Thomas-place, Gibson-street, son of chemist, choleraic diarrhoea 6 days. The father of this child states: there are 3 gulley-holes within 20 yards of each other in this street, the smells from which are so offensive as to alarm the residents. Thomas-place is a narrow, confined spot."

"On September 10th, at 12 James-street, bricklayer, aged 33 years, cholera 16 hours. This is the 17th case in this street. A pigsty and slaughterhouse at the back of this house are much complained of."

"On September 11th, at 20 Jurston-street, son of publican, cholera 8 hours. A very dirty, crowded street, with a long open sewer behind it. This is a child of Jewish parents. Although persons of that persuasion are rather numerous in this district, it is the first death from cholera amongst them."

"On September 12th, at 3 Grove place, son of labourer, diarrhoea 7 days. Cholera broke out in this house July 21st, attacking a female of 45 years; the landlady (who attended) was attacked the next day at church, and removed during Divine service; on August 12th, a girl aged 14 suffered from vomiting and diarrhoea; on the 29th a female aged 24 years died of cholera; the same day a child aged 8 was severely attacked, and

narrowly escaped death; the following night a boy of 4 had vomiting and relaxation; the husband of the landlady has also suffered from relaxation; out of 11 inmates 2 have died, and 8 others had been attacked. Grove-place is a most filthy spot, near the worst end of James-street, where 17 deaths have occurred. There is a bad smell in the house, which cannot be traced. The rooms are very small, but not particularly dirty."

"On September 19th, at 35 Hooper-street, son of labourer, cholera 8 days. A long, narrow, densely crowded street; the dirtiest spot in the district, in close connexion with filthy ditches, and surrounded by an unwholesome neighbourhood, in which many deaths have occurred; inhabited by costermongers, &c."

"On September 25th, at 17 Mary's-buildings, domestic servant, aged 25 years, cholera 13 hours. Narrow, confined place; had previously nursed 2 persons who died of cholera."

The Registrar states that "the deaths from cholera and diarrhoea are far more numerous with females than with males, after the age of 16. Until that age the deaths were almost equally divided, viz., 56 males and 51 females; but after the age of 16, when the female becomes useful as a nurse, the deaths are 99 females against 50 males. The difference may arise from 2 causes, namely, an advanced state of pregnancy when the attack came on, and that females are almost always the attendants on the sick, thus being confined to the vitiated atmosphere of the room, and wearied by night and day exertions, they are much more likely to take the disease. Many females appear to have imbibed cholera in their unremitting attendance in the sick chamber."

"On October 1st, at 14 Manners-street, wife of sawyer, aged 40 years, cholera 12 hours. Attack came on suddenly and violently; she had been nursing her daughter, dangerously ill with consecutive fever. Drainage good."

In the same house, on October 3rd, daughter of the above, aged 13 years, cholera 3 days, consecutive fever 7 days.

31; 3. LAMBETH; Church 1st. Pop. 18446.—Chol. 215; Diarr. 38.

This Registrar's district extends along the river from Westminster Bridge to Vauxhall Bridge; bounded on the north by the Westminster Bridge-road, on the south-east by Vauxhall and Lambeth-walks, and Bethlehem Hospital, &c.

Two deaths from cholera occurred in January; the next fatal case was on June 27th, at Lower Fore-street; in July 51 deaths were recorded, in August 54, in September 101, in October one, on the 1st; in November 2, one on the 3rd, and the last on the 14th, at 18 Salamanca-street, Vauxhall-walk. The epidemic was at its height on September 5th, on that day 13 deaths took place; it gradually abated in severity to the end of the month; 91 males, and 124 females during the year died of cholera. The following neighbourhoods suffered from cholera—

High-street,	Broad-street,
Duke's Head-court,	Hercules-buildings,
High-street,	Glasshouse-street,
Felix-street,	North-street, Vauxhall-
Vauxhall-walk,	walk,
Lambeth-walk,	Salamanca-street, Vaux-
Upper Marsh,	hall-walk,
Canterbury-place, Lam-	Royal-street,
beth-walk,	Lower Fore-street, &c.

At No. 2 Ferry-street, 3 persons died of cholera, from June 29th to July 2nd (both inclusive); a silver-chaser, aged 35 years, and his son, died at No. 4 Duke's Head-court, on July 9th and 10th; and a

surgeon, aged 45 years, died in 8 hours, on September 3rd, at Carlisle-place, Carlisle-street; the next cases are described by the Registrar:—

"On August 18th, at 19 Glasshouse-street, Vauxhall, coachmaker, aged 33 years, cholera 9 hours. Ill cleansed, badly drained, and overcrowded."

"On August 19th, at 16 Vauxhall-row, wife of journeyman carpenter, aged 69 years, cholera 75 hours. Ill-cleansed neighbourhood—crowded, and in the immediate vicinity of the Lambeth Gas Works and the Potteries."

"On August 23rd, at 3 Granby's-buildings, Vauxhall-walk, son of potter, cholera 3 days. An unhealthy neighbourhood, ill cleansed and drained, and surrounded by bone-crushers, potteries, soap-makers, and other offensive establishments."

Diarrhœa prevailed mostly in August and September, respectively 17 and 9 deaths; the far greater proportion were of children under 4 years.

31; 4. LAMBETH; Church 2nd. Pop. 22931.—Chol. 544; Diarr. 90.

Extends east of Vauxhall and Lambeth-walk; to the west side of Kennington-lane and Kennington-street; including on the north, Brook-street, &c.

Cholera visited this district with great severity; 2 deaths from the epidemic occurred in January, one in March, and the next on June 11th, at 79 Lower Kennington-lane; by the end of the month, 5 deaths were recorded; it continued rapidly to increase in July; on the 16th, 14 deaths occurred, 6 of which were in the Workhouse; during this month, 125 deaths were registered from cholera; in August, 167, in the last 7 days of this month, 64; in the month of September 236; during the first 8 days of this month, 120 persons were deprived of life; the epidemic attained its maximum on the 4th, on this day 21 deaths were recorded, and 20 on the 8th; from this period, cholera gradually subsided, and in October, 8 deaths occurred, the last on the 21st, at 118 Vauxhall-street, a warehouseman, aged 31 years; 205 males and 339 females were deprived of life by cholera. The numbers in 3 periods of life are shown by the following table:—

Age.	Deaths from Cholera.		
	Males.	Females	Total.
From birth to 15 years	74	63	137
15 to 60 years	107	202	309
60 years and upwards	24	74	98
Total	205	339	544

In the Union-house, Prince's-road, 161 deaths from cholera are recorded, and 26 from diarrhœa, 11 of these occurred before cholera became fatal. The Lambeth Union is formed into 8 Registrars' districts, each contributing more or less to the 161 deaths in the Union Workhouse; if this number is deducted from the district, 383 instead of 544 represents the number of deaths, not including those in the Workhouse, where the pauper inmates number about 1000. The cholera epidemic was also fatal in—

	Deaths.
Union-street	10
Wickham-street	22
Park-street and place	17
Vauxhall-walk and street	20
George-street, Vauxhall	11

	Deaths.
King-street	9
New-street Union-street	20
Chester-street and place	12
Tyers-street and terrace	15
East-street and Little East-place	21
Princes-road and place	15
Regent-street	16
Pleasant-place, Brook-street	9

Several fatal cases also occurred in Brook-street, Cardigan-street, Devonshire-street Kennington-lane, John-street, Cross-street, Lambeth-walk, &c.; the epidemic, at the commencement, principally visited Francis-street, and Lower Kennington-lane. At 22 Windmill-street 3 persons were attacked, and died after removal into the Workhouse; 3 died of cholera at No. 91 East-street; 2 at No. 113 Brook-street; 2 at No. 28 Union-street; 3 at No. 8 Wickham-street; 3 at No. 114 Park-street; 2 at No. 87 Vauxhall-walk, &c.

The chief occupations of those attacked by cholera were as follows:—

Labourers and their families	64
Carpenters	65
Chairmakers, &c.. }	27
Bricklayers	10
Stonemasons	21
Cabmen	17
Printers	9
Smiths	40
Bakers	15
Boot and shoemakers	24
Coal porters	22
Costermongers	10
Painters, &c.	62
Washerwomen	176
Laundresses	35
Spinsters	
Wives	
Widows	

Diarrhœa was prevalent in July, August, and September, viz., 14, 14, and 31 deaths respectively; more than one-half were of children under 3 years of age.

The following cases are selected from the Registrar's reports:—

"On August 10th, at 4 Globe-court, Regent-street, son of bonnet-shape maker, cholera 18 hours. A narrow, badly-ventilated court, running between Regent-street and King-street. Two-roomed houses, and very confined."

"On October 12th, at 75 Wickham-street, moulder at an engineer's, aged 47 years, cholera 24 hours. This street is in a very bad condition, no drainage, badly ventilated, and crowded. In winter the roadway is impassable to foot passengers, there being accumulated a quantity of mud and stagnant water, quite green. The inhabitants are obliged to form a gutter to prevent the surplus water from running into the lower rooms of their houses, which are below the crown of the road. Cholera has been fatal, 19 deaths since July 14th; and previous to the present epidemic, scarlet fever was prevalent."

"On August 19th, at 21 Pleasant-place, spinster, aged 25 years, secondary fever, cholera. In front of this row of houses is an open sewer, very offensive."

"On August 25th, at 24 Neville-street, Vauxhall, daughter of wharf labourer, cholera 26 hours. A newly-built and tolerably clean street. Cholera has been very severe in this street."

"In the workhouse, on August 28th, from 9 Globe-court, Regent-street, son of law-stationer, cholera 5 or 6 days. This death makes 5 in the same family from cholera; the mother and 4 children were all seized in

the court named, but the husband having deserted his family, they were all removed into the house in a hopeless condition. Another death occurred next door."

"On September 4th, at 2 Graves'-cottages, Saunders'-street, widow, cholera 9 hours, collapse 5 hours. The state of the premises is highly prejudicial to health."

"On September 6th, at 20 Barrett-street, son of lithographic printer, cholera 24 hours."

"On September 7th, in the same house, lithographic printer, cholera 40 hours. Father of the above. At the back of these premises there are a number of pigs kept by a neighbour; the stench is so bad that they frequently cannot have the back door or window open."

"On September 11th, at 1 Vauxhall-walk, daughter of a builder, cholera 72 hours, coma and convulsions 34 hours. At the back of this house is a court, called White Lion-yard, a wretched place, inhabited by Irish; a number of half-starved pigs are kept; they have no drainage, and the stench very great. The filth from the sties is thrown under the railway arches adjoining."

"On September 13th, at 7 Hampshire-street, widow of ship carpenter, aged 65 years, cholera 12 hours. This place contains 8 houses, in every one of which cholera has made its appearance. In No. 3 died a mother, just on the point of confinement, and 4 children. The husband, after the loss of all his family, fled. The landlord, or his agent, let the premises to another family, who entered the house ignorant of what had taken place, and were almost immediately seized with cholera. The daughter died, on September 3rd, in a few hours; the mother was attacked, and fled from the spot."

"On September 27th, at 11 Albion-cottages, Barrett-street, widow of candle-maker, aged 46 years, neglected diarrhoea 3 days, cholera 12 hours. The Registrar states that this locality has been visited with much sickness. A case of cholera, 2 doors off, was removed to the Work-house, where the patient died. Two children died at No. 7, and 2 cases occurred at No. 3; a person died at No. 8. Several children have within the last 2 months died of fever."

31; 5. LAMBETH; *Kennington 1st.*—Pop. 17235.—Chol. 187; Diarr. 31.

This district extends by the side of the river Thames, from Vauxhall Bridge to Nine Elms, continues north-east to the west side of Kennington-road, to High-street; and on the south-east to the west side of Clapham-road, to Bedford-place, &c.

On June 27th cholera first appeared; 2 deaths occurred, one at No. 1 Clayton-street, and the other at No. 4 South Lambeth; in July there were 43 deaths, in August 46; rose to 91 in September, and declined to one in October, on the 1st; and 2 in November, the last on the 11th, at No. 8 York-street, Dorset-street; the epidemic was at its height on the first 4 days of September, during which period 31 deaths were recorded, and after the 13th it gradually subsided; with 2 exceptions the duration of illness did not exceed 24 hours; 201 deaths from cholera and diarrhoea occurred, in July, August, and September, whilst for the same period but 83 deaths were registered from all other causes, and to every 2 deaths but one birth was recorded, during those 3 months. The parts of the district which suffered most are Spring-place and the small streets adjoining near the Wandsworth-road, a neighbourhood thickly populated and badly drained; the following localities likewise suffered—

Southampton-street,	Pleasant-row, Kenning-
Nine Elms,	ton-lane,
Regency-square, White	Clayton-street,
Hart-street,	Church-street,
Kennington-place,	Devonshire-place,
Alfred-street and place,	&c.

Those attacked were chiefly labourers, mechanics, &c.

31; 6. LAMBETH; *Kennington 2nd.* Pop. 14054.—Chol. 153; Diarr. 23.

Includes Kennington-common, and the east side of Clapham-road to Stockwell, extending east to Camberwell.

First fatal case of cholera June 28th, at Bolton-street; next on July 8th, at Camberwell New-road; from this date a continuous increase to September 2nd, when the epidemic attained its maximum; on this day 7 deaths were recorded; during the first 9 days of the month the mortality rose to 40, and subsided from this time to October 10th, when the last 2 deaths took place, the one at No. 5 Park-place, and the other at No. 7 St. Ann's-road. The deaths of 67 males and 86 females were assigned to cholera, the greater portion during the months of July, August, and September, respectively 45, 43, and 60; in the subjoined streets, &c., cholera prevailed, viz.—

Camberwell New-road,	Chapel-street,
North-place,	Vassall-road,
Thomas-street,	Holland-retreat,
James-street and place,	Henry-street,
North Brixton,	Robert-street, &c.

31; 7. LAMBETH; *Brixton.* Pop. 10175.—Chol. 81; Diarr. 27.

Comprises the Ecclesiastical district of St. Matthew, Brixton; includes Denmark-hill, Dulwich-hill, Stockwell, &c.

At Brixton gaol, on June 15th, a convict died of cholera, in 19 hours; the next case on July 6th, the epidemic reached its maximum on September 19th; the last case was recorded on October 3rd, at Denmark-hill. On July 20th, 3 deaths were ascribed to cholera in Regent-row; in the Brixton gaol 7 deaths from this disease were also recorded; cholera and diarrhoea were prevalent in the following localities, viz.—

Bedford-lane, Stockwell,	East Brixton,
Robert-street,	Acre-lane,
Loughborough-place,	Barrington-road,
Regent's-row,	&c.

The Registrar describes, in his reports, the under-mentioned cases:—

"On July 8th, at Regent-row, Water-lane, widow, aged 63 years, cholera 10 hours."

"On July 13th, in the same house, a daughter-in-law, aged 33 years, who waited on the above, cholera 17½ hours. At the back of the houses is an open drain, which at times runs over the surface of the ground, into which all the cesspools and drains are carried. In the front, on the opposite side, is another open ditch, into which many other houses are drained. Another death from cholera occurred in the next house. The inhabitants complain much of stench."

"On August 25th, at Pleasant-retreat, bricklayer, aged 56 years, diarrhoea 3 days, cholera 22 hours. Contains a great number of small houses. At the end of houses at the back of the House of Correction is an open ditch, which is in a most filthy state."

"On September 25th, at 1 Barrington-crescent, daughter of a solicitor's clerk, cholera. Since September 4th, to this day, there have been 18 deaths from cholera and diarrhoea in this and adjoining parts. At the back are various depositories of night-soil, extending full half a mile in length, which is much complained of, as emitting a most pestilential effluvia."

"On September 20th, at Loughborough-park, son of gentleman, diarrhoea. A woman, aged 79 years, died of cholera in the same house, on September 4th. Two other children of the same gentleman died of

diarrhœa in this house, and he was also taken ill after the family had left the house."

31; 8. LAMBETH; *Norwood*. Pop. 2961.—Chol. 2; Diarr. 2.

Comprises the Ecclesiastical district of St. Luke, the southern part of the parish of Lambeth.

At Knight's Hill-road, on August 27th, the wife of a cowkeeper, aged 60 years, cholera 24 hours; and on September 3rd, in the Workhouse, *Norwood*, a girl aged 7 years, diarrhœa, cholera one day; a death from diarrhœa occurred in the Workhouse on September 23rd.

The Registrar states that "a ditch immediately opposite the Workhouse emits most offensive and noxious odours, the result of the soil of the workhouse passing through this uncovered ditch."

32; 1. WANDSWORTH; *Clapham*. Pop. 12106.—Chol. 114; Diarr. 24.

Includes the entire parish of Clapham, lying between the Battersea and Brixton districts.

On July 10th, at No. 5 Union-street, Larkhall-lane, the first fatal case of cholera terminated in 11 hours. By the end of the month there were 22 deaths, in August, 57; in September, 33; and in October, 2; the last case at Park-road, on October 7th; the epidemic attained its maximum on August 4th. On this day 4 deaths occurred in Albion-terrace, Wandsworth-road; 19 deaths from cholera in this terrace are recorded in 17 days, between July 28th and August 13th, both inclusive. The epidemic first commenced at No. 13, on July 28th; in the same house, August 4th, another death occurred. At No. 14, 2 deaths; at No. 6, 5; at No. 12, 2; at No. 2, 3, &c.; on an average of 13 cases of the above 19 in Albion-terrace, life was extinct in 15 hours after the attack.

At No. 2 New-street, a letter carrier and his wife were seized with cholera on September 20th, and died on the same day; and 2 cases were fatal at No. 15 Nelson-row, one on the 8th, and the other on the 9th September. Cholera was also fatal in—

Park-road and place,	White-square,
Northumberland-place,	Union-street, Larkhall-lane, &c., &c.

The following cases are selected from the Registrar's reports:—

"On August 4th, at Northumberland-place, daughter of labourer, aged 15 months, cholera 7 hours. The father of the above was at this time suffering from typhus, after an attack of cholera; there is a very offensive ditch in front of the house."

"On August 11th, at 7 Howard-street, Wandsworth-road, widow of a gardener, aged 55 years, cholera 15 hours. The same offensive ditch runs at the bottom of Howard-street that runs along the back of Albion-terrace; the woman had been nursing in Albion-terrace."

"On August 13th, at 2 Albion-terrace, Wandsworth-road, commercial clerk, aged 24 years, cholera 6 days. He was taken ill the same day that his brother died of cholera."

"On August 16th, at Northumberland-place, son of labourer, cholera 24 hours. This is the third death that has occurred opposite the ditch, which still remains open and flowing over the road."

"On August 18th, at 2, Pensbury, Wandsworth-road, stationer, aged 28 years, cholera 10 days, hæmorrhage from bowels 8 hours. Was first attacked at 7 Albion-terrace, Wandsworth-road, and removed to 2 Pensbury, nearly opposite."

"In the house No. 6 Albion-terrace, Wandsworth-road, 5 deaths were registered from cholera between the 4th and 9th August inclusive—a Wesleyan minister's wife, aged 59; his mother, 80; a widow,

49; and two old servants. The Registrar of Hampstead adds, that on August 8th, an aged man came with a friend to Hampstead for change of air, at 6 o'clock the next morning he felt ill, and had medical advice, but died in eight hours. This old minister, aged 61 years, was apparently the last of his family, for he had seen his mother, wife, and servants die before him in Albion-terrace."

"A stock-broker died of cholera at No. 12 Albion-terrace; the daughter of a grocer, a child of 5 years of age, at No. 1; the widow of a coach proprietor, and two commercial clerks, at No. 2; a gentleman's widow at No. 3; a surgeon's daughter at No. 4; a spinster aged 41 at No. 5; a young woman aged 21 at No. 10; a gentleman at No. 12, where the stock-broker died; a young woman aged 19 at No. 13, where a young woman also died on July 28th; and a gentleman's wife at No. 14, who had seen her daughter die there the day before. Nineteen persons died of cholera; many of the inhabitants of the terrace were dispersed, and the deaths of several have been registered elsewhere. "It appears," says the Registrar, "that at No. 13, where the first death occurred, the refuse of the house had been allowed to accumulate in one of the vaults (which is a very large one) for about two years, and when removed last week the stench was almost intolerable, there being about two feet of wet soil covered with maggots. The drains also had burst, overflowed into the tank, and impregnated the water with which the houses were supplied. On the back ground, in the distance, was an open ditch, into which nearly the whole of the soil of Clapham runs."

Fourteen deaths by cholera occurred in 5 houses of the above terrace in about a fortnight.

32; 2. WANDSWORTH; *Battersea*. Pop. 6617.—Chol. 111; Diarr. 16.

This district is bounded by the river Thames from the Nine Elms to Wandsworth, extending south to Clapham.

Cholera prevailed in January and February, more especially at the Union Workhouse and Althorp House Lunatic Asylum; a single case in May, and another in June, in July 19 deaths were recorded, in August 41, September 34, the last and only case in October on the 5th, at New-street; from this period cholera ceased; the epidemic was most fatal on August 24th and on September 4th; the first death from cholera in July occurred on the 1st, at No. 2 Green-lane; next on the 6th, then on the 15th and 16th, &c. In the Union workhouse 22 deaths from cholera and 5 from diarrhœa, the number of in-door poor about 430; and in Althorp House Lunatic Asylum, 5 deaths from cholera between January 10th and February 4th; at No. 8 York-row, Battersea-fields, September 4th, a boiler-maker's wife, aged 40 years, and her daughter on the same day, died of cholera, the first in 18 and the second in 10 hours after the attack; also a younger daughter in the same house, was fatally attacked on the 1st; in the next house, No. 7, a carpenter and his wife likewise died on the 11th and 13th September; informant complained of the bad state of the water.

In the following localities the epidemic principally prevailed,

York-street and row,	Sleaford-street, Batter-
Battersea-fields,	sea-fields,
The Marsh,	New-street,
Nine Elms,	High-street, &c.

The working classes and their families chiefly suffered from cholera, and females to a greater extent than males. During the 3 months, July, August, and September, 106 deaths were referred to cholera and diarrhœa, and but 46 to all other diseases.

by cholera and 8 certified as caused by diarrhoea, dysentery, mesenteric disease, &c. The total deaths registered in this and the previous week, which have occurred in the Institution, or amongst children who have been removed from it since the appearance of the epidemic, amount to 140, of which 122 were returned as caused by cholera, though most of the others were probably connected with the epidemic."

"On September 23rd, at Manor-park, Mitcham-road, widow of a brickmaker, aged 55 years, cholera 24 hours."

This death occurred at one of 6 small tenements, chiefly occupied by brickmakers (adjoining the brick fields of this estate), which were formerly horse-stalls or bullock-sheds, all on the ground-floor, without drains or any place to throw their refuse, and with only 2 privies for their use. They are overcrowded, badly ventilated, and have only stagnant water for drink or use.

33; 1. CAMBERWELL; *Dulwich*. Pop. 1904.—Chol. 1; Diarr. 1.

Comprises the hamlet of Dulwich, in the parish of Camberwell.

At Dulwich College, on September 26th, one of the sisters of the college, aged 83 years, died of cholera, duration of attack 3 days.

33; 2. CAMBERWELL; *Camberwell*. Pop. 14176.—Chol. 235; Diarr. 37.

Bounded on the north by Bowyer's-lane, part of New Church-road, Edmund-street, Wellington-street, &c., extending south to Peckham Rye.

Three deaths from cholera occurred during the first 3 months of the year; the epidemic subsequently broke out in George-street, on June 5th, and carried off by the end of the month 7 persons, in July 67, August 82, September 75, and in October one, which was registered on the 4th, at 8 James-street; during the first 11 days of September, 56 deaths were ascribed to cholera, after the 11th it declined; the greatest mortality in one day took place on September 3rd, when 9 deaths were recorded.

The first death from cholera in the Workhouse occurred on June 25th, next on July 27th, and continued to September 19th, in which period 24 died, and 5 from diarrhoea; some of these persons were removed from the other districts of Camberwell into the Workhouse, where the number of in-door poor is about 400.

A fatal case of cholera was registered January 16th, at Peckham House Lunatic Asylum, duration 12 hours; next case June 25th, another death on the 28th, and it continued to September 4th; by this time 28 died of cholera and 9 from diarrhoea, the number of inmates about 500.

At Camberwell House Lunatic Asylum, the first death from cholera on July 1st, and it continued to prevail to September 9th; during this period 18 died of cholera and 6 from diarrhoea; the number of inmates about 300.

In the following institutions the progress of cholera is shown:—

	June.	July.	Aug.	Sept.
Peckham House Lunatic Asylum	2	18	6	1
Camberwell House ditto	12	5	1
" Workhouse	1	3	9	11

During July, August, and September, the deaths from all causes exceeded the births by 240; in the same period 224 persons died of cholera, and 136 from other diseases.

The deaths from cholera were numerous in the undermentioned localities:—

George-street, Wyndham-road,	Banbury-buildings and place, George-street,
Acorn-street,	Waterloo-street,
Queen-street, row, &c.	James-street,
Picton-street,	Harris-street,
Denmark-street,	Varandah-place, Church-street, &c.
Artichoke-place and row,	

At No. 14 Acorn-street, on June 21st and 23rd, the 2 children of a policeman died of cholera; and on July 13th, 2 deaths at No. 8; also on the 20th at No. 17, a gardener and his daughter, aged 28 years, died on the same day.

At No. 3 William-place, Waterloo-street, a coachman's wife and 2 children died of cholera; the mother and son on the same day, September 23rd, and the other child on the 21st.

Four adult persons of the same family died of cholera, at No. 5 Troy Town, Peckham Rye, one on the 4th September, and 3 on September 6th.

At No. 1 Mary Anne-place, South-street, the 3 children of a labourer died on August 13th, and the mother also on the 20th, from the epidemic.

Three deaths from cholera occurred at No. 4, and 3 at No. 5 Absalom-place, South-street, within 4 days, from July 31st to August 3rd, both inclusive.

Diarrhoea prevailed in July, August, and September.

The following notes are selected from the Registrar's reports:—

"On August 12th, at James-street, child of labourer, cholera 20 hours. Small houses, but open and ill cleansed; an uncovered common sewer close by, of which the inhabitants complain very much."

"On August 16th, at 18 Clarendon-place, wife of master bootmaker, aged 58 years, cholera 3 days. Wide, open street, but very near an uncovered common sewer."

"On August 30th, at 15 Acorn-street, bricklayer, aged 27 years, cholera 48 hours. The next house, No. 14, is where the cholera broke out on June 21st, and many deaths took place in this street of that disease for some weeks after. The informant complains of a very offensive smell from an open ditch near the house, also from some pigsties at the rear."

"On September 2nd, at 6 Banbury's-buildings, George-street, a farrier, aged 61 years, cholera 36 hours. These houses are built close on the bank of an open sewer, the smell from which is very offensive; it was here that the first case of cholera took place on June 5th, followed by another on the 16th, &c."

"On September 6th, at 5 Troy Town, Peckham Rye, widow of a coachman, aged 66 years, cholera 17 hours. This woman was in attendance on her neighbour at No. 6, who died on the 1st instant; her son, who lived with her, was attacked and died on the 4th; the 2 daughters, one living at Blackheath and the other in Peckham Rye, as servants, came home to see their brother, when the 3 were all attacked with cholera, and died the same day, within a few hours of each other."

33; 3. CAMBERWELL; *Peckham*. Pop. 12563.—Chol. 92; Diarr. 21.

Includes the hamlet of Peckham, bounded on the north by the Grand Surrey Canal, extending south between the Registrars' districts of St. Paul, Deptford, and Camberwell.

A single death in June is referred to cholera, on the 17th, at Burt-place, Old Kent-road; the next, on July 4th, at Canterbury-row. The epidemic prevailed throughout the months of July, August, and September, in which the deaths respectively were 18, 25, and

44. On October 24th the last death was recorded at Carlton-place, Park-road; the greatest number of deaths in one day occurred on September 13th. 73 grown up persons and 19 children died of cholera, and nearly one-half the deaths in July, August, and September were ascribed to this epidemic. During this period 143 births were registered to 210 deaths from all causes, and the proportion of the sexes were 44 males to 48 females. No class of occupation appeared to be exempt. Diarrhoea was prevalent in the months of August and September; with the exception of 4 adults, the rest were children who died from this disease.

In the following neighbourhoods cholera prevailed:—

Caroline-street, Old Kent-road,	High-street, Orchard,
Canterbury-row,	Melon-ground,
Park-street and road, New Peckham,	Alpha-street, &c.

At No. 13 Park-street, New Peckham, 2 females died of cholera on September 13th, the one in 12 and the other in 18 hours after the attack; also another fatal case of cholera on the 19th, in the same house.

The annexed cases are selected from the Registrar's reports:—

"On August 13th, at 4 Britannia-terrace, Melon-ground, single woman, aged 18 years, cholera 15 hours. All the neighbourhood of the Melon-ground is poor and badly drained, and near this house is a very foul ditch."

"On August 25th, at 2 Orchard, Peckham, wife of bootmaker, aged 34 years, cholera 12 hours. All the Orchard is very foul and badly drained, and inhabited only by the poorer classes."

"On September 2nd, at 2 Hannah-cottages, Commercial-road, son of banker's clerk, diarrhoea 4 days, collapse 4 hours, cholera. This is in the neighbourhood of the Melon-ground, and close to the canal, the whole of which district has been much visited by the epidemic."

"On September 15th, at 2 John-street, Melon-ground, daughter of carpenter, mesenteric disease 4 months, cholera 4 days. This is the third death in this family within a week."

"On September 25th, at 20 Alpha-street, New Peckham, widow of stoker at gas factory, aged 26 years, cholera 2 days, fever 6 days. A very badly-drained street."

"On September 30th, at 7 Elizabeth-place, Asylum-road, Old Kent-road, spinster (lady), aged 20 years, bilious vomiting and purging, ending in cholera. A good open road. The second death from cholera in this house."

33; 4. CAMBERWELL; *St. George*. Pop. 11225. —Chol. 176; Diarr. 27.

Includes Albany-street on the north; bounded on the south by the north side of New Church-road, Edmund-street, Wellington-street, Commercial-road, and part of the Grand Surrey Canal, running east and west.

The deaths of 81 males and 95 females are referred to cholera. The first and only case in June occurred on the 17th, in Wyndham-road; the next on the 7th July, another on the 12th: from this period the epidemic increased in severity, during the month 33 persons died, in August 70, in September 70; in the first 8 days of this month 53 had fallen victims to the virulence of the disease, which attained its maximum on September 6th, on this day 10 deaths were recorded. The last fatal case on the 13th October, at Brown's-terrace Wyndham-road.

The proportion of the sexes, in 3 periods of life, is here shown:—

Age.	Deaths from Cholera.		
	Males.	Females.	Total.
From birth to 15 years .	28	25	53
15 and under 60 years .	42	54	96
60 years and upwards .	11	16	27
Total . . .	81	95	176

In the subjoined localities several deaths from cholera occurred—

Thomas-street, Wyndham-road,	Albany-road,
Nelson-street, Wyndham-road,	Southampton-street,
Lovegrove-street, Old Kent-road,	Gloucester-place,
	Diamond-street,
	Wellington-street,
	&c.

The 2 children of an attorney died of cholera on the same day, August 14th, at No. 3 Vittoria-place, in 12 and 6 hours after being seized with the epidemic.

At No. 9 Lovegrove-street Old Kent-road, August 14th and 15th, the wife and son of a cordwainer died of cholera.

Of the 19 deaths from the cholera epidemic registered in Nelson-street, 12 occurred within 7 days, viz., July 28th to August 3rd; 3 fatal cases are recorded at No. 6; 2 at No. 16; 2 at No. 19, &c.

In Thomas-street, Wyndham-road, 13 deaths from cholera happened, and at No. 1 and No. 2, two deaths took place at each house; and at the Friendly Female Asylum, Albany-road, 2 deaths were ascribed to this disease, one on the 4th, the other on the 7th September.

Labourers, mechanics, and tradesmen, including their families, were afflicted with the epidemic.

Diarrhoea was fatal to 14 males and 13 females; all except 9 were under the age of 2 years.

The Registrar describes, in his reports, the following cases and localities:—

"The following occurred at 91½ Albany-road on August 25th: a civil engineer, aged 40 years, cholera 18 hours. Very filthy open ditch at the back of all the houses in the Albany-road. He was in perfect health when taken with cholera. His wife was suddenly attacked, and died in a few hours afterwards. The nurse who attended them is also dead."

"On August 31st, at No. 21 Lovegrove-street, Old Kent-road, daughter of labourer, cholera 22 hours. Very dirty small houses, occupied by several poor families in a filthy state, principally Irish. Numerous have been the attacks of cholera in this street, 10 of which were fatal."

"On September 29th, at No. 1 Adelaide-place, New Church-road, widow of bricklayer, aged 77 years, cholera 24 hours. This female had not washed her feet for upwards of 20 years. A bag of gold was found under her pillow; previously to her death she had pleaded poverty."

34; 1. ROTHERHITHE; *Rotherhithe*. Pop. 13917. —Chol. 352; Diarr. 44.

This district comprises the entire parish of St. Mary, Rotherhithe; the north and east, bounded by the river Thames, termed the Pool, and Limehouse Reach opposite to Shadwell, Ratcliff, Limehouse, and the Isle of Dogs; extends south to St. Paul's, Deptford; on the west bounded by St. James Bermondsey.

The greater part of the parish lies below Trinity high water mark, and is most populous on the river side; here the cholera epidemic was more severely felt than in any

other metropolitan district; 5 fatal cases are recorded in February, one in March, 10 occurred in June; in the month of July a considerable augmentation of mortality arose, viz., 138 deaths; in August 95; in September 97, and in October 6. The first case in June happened on the 8th, at Gomm-cottages, Lower-road, the daughter of a gentleman, aged 32 years, survived the attack 15 hours; the next death followed on the 16th, succeeded by another on the 24th, and it continued to spread with great rapidity to September 17th; after this period a decline was perceptible to October 16th, on which day the last fatal case was recorded. The greatest number of fatal attacks took place on the 2nd, 13th, and 25th July, and on the 2nd, 9th, and 10th of September. The inhabitants of the following streets and adjoining neighbourhoods suffered severely:

	Deaths from Cholera.			
	Total.	July.	August	September
Silver-street	13	13
Paradise-street and row .	13	2	8	3
Surrey-place	8	8
Lower Queen-street . . .	8	5	2	1
Charlotte-row and place .	18	13	1	4
Rotherhithe-street . . .	18	13	2	3
Dodd's-place	8	7	1	..
Adam-street	18	8	4	6
Church-street and passage	11	5	3	3
Swan-lane and Island . .	8	3	1	4
Globe-street	7	4	2	1
On board ships off Rother- hithe	10	4	5	1
John's-place	6	2	..	4
Neptune-street	5	1	2	2
Elephant-lane	7	4	3	..
Ram-alley	7	..	6	1
Hanover-street	10	1	3	6
Commercial Docks and ships	8	..	2	6

In the Workhouse there were registered 16 deaths from cholera and 2 from diarrhoea. The pauper inmates number about 230. In Silver-street, during the first 3 days of July, 7 deaths were referred to cholera, and at No. 6, 3 deaths occurred between the 1st and 6th July.

At No. 2 Gillam's-court, from the 24th to the 30th June (both inclusive), 4 adults of one family died of cholera; and at 27 Rotherhithe-street, a labourer's wife and 2 children were fatally attacked; likewise at No. 10 Globe-street, a carpenter and his 2 sons; also at No. 7 Dunn's-cottages, on August 15th, a labourer died in 12 hours, and his daughter in 6 hours, from the commencement of the attack.

172 males and 180 females died from cholera.

The annexed table represents the sexes, and the number who died of cholera at 3 periods of life:—

Age.	Deaths from Cholera.		
	Males.	Females	Total.
From birth to 15 years	67	55	122
15 to 60 years . . .	84	91	175
60 years & upwards .	21	34	55
Total	172	180	352

During the 3 months of July, August, and September, 330 deaths were registered from cholera, and but 174 from all other causes, and but one birth was registered to every 4 deaths. Diarrhoea was principally fatal to children; in 44 deaths, 29 were under the age of 3 years.

Mariners, shipwrights, lightermen, carpenters, cordwainers, labourers, &c., with their families, suffered from cholera; in many instances the termination of life was rapid, a few hours only intervening between the attack and death.

The following cases are selected from the Registrar's reports:—

"On August 12th, at 3 Cow-lane, son of labourer, cholera 4 days, typhoid 2 days. The house is very old; much crowded, being occupied by several poor families, in a filthy state."

"On August 11th, at 4 Cow-lane, daughter of labourer, cholera 18 hours. There were 2 deaths in this house in 2 days. It would be impossible to keep this house in a healthy state, from its extreme dilapidation. The father of the above died of cholera on the 10th."

"On August 11th, at 12 Baker's-rent's, a blacksmith, cholera 5 days. This house stands in a narrow alley, badly drained."

"On August 14th, at 8 Providence-place, China-hall, a labourer, cholera 9 days, typhoid 7 days. This house is surrounded with several filthy ditches."

"On August 14th, at 6 Mary-street, a labourer, cholera 12 hours. An open sewer at the back of this house."

"On August 19th, at 7 Globe-street, son of shipwright, cholera 7 days. An open sewer at the back."

"On August 21st, at 4 Riches'-row, Lower-road, daughter of labourer, aged 11 years, typhus 5 days, cholera 7 days. Several very filthy ditches near this house."

"On August 23rd, at 1 George-street, a lighterman, aged 43 years, cholera 3 days. Very filthy open ditch at the back."

"On August 24th, at 6 Albion-street, wife of coal-meter, aged 43 years, cholera 16 hours. An offensive open sewer at the back of this house, on which the small gardens of all the houses in Adam-street and Albion-street abut—about 60 houses."

"On August 25th, at 6 Pasfield's-rents, labourer, cholera 4 days. The house small, outlet at the back very confined; bad water, and no drainage."

"On September 4th, at 8 Spread Eagle-court, a widow, aged 34 years, cholera 9 hours. She sold fruit in the street. This house and the locality has everything in it and about it unfavourable to health."

"On September 2nd, at 2 Neptune-street, daughter of engineer, cholera 12 hours. Drainage very bad, with a large open sewer at the end of the street."

"On September 6th, at 7 Hanover-street, daughter of labourer, cholera 10 hours. Very old house, filled with lodgers, 4 and 5 families in each house. Very damp locality; bad supply of water, and an offensive ditch in the rear."

"At a house in Russell-street, situated by the side of a filthy drain, a labourer and 2 children died; also the nurse who attended on 2 of them."

"On September 19th, at 3 Charlotte-row, daughter of labourer, cholera 16 hours. There are 28 houses in Charlotte-row, and the deaths from cholera since July 1st have been 16."

KENT (PART OF).

35; 1. GREENWICH; St. Paul, Deptford.——
Pop. 18664.—Chol. 150; Diarr. 53.

Includes the parish of St. Paul, Deptford, and

Hatcham Manor in the county of Surrey; bounded on the east by the river Ravensbourne; on the west by the South London Cemetery and Peckham; on the north by Rotherhithe and the west part of the town of Deptford; extending south to Deptford-common, &c.

Cholera appeared on June 14th, at 43 Prince's-street; next case July 3rd, then on the 5th, 7th, &c. In this month, there were 27 deaths; August 44, September 72, and in October 6, the last 2 cases on the 10th, at Victory-street and Edward-street. During the first 9 days of September, 41 lives were lost by this fatal epidemic, which attained its height on the 5th, when 7 persons died; after the 22nd, cholera was nearly extinct. More than half the deaths from all causes during the months of July, August, and September arose from cholera and diarrhoea. In this period the deaths from all causes were 306, and the births 177, or 129 deaths more than births. Diarrhoea was very prevalent in July, August, and September; the deaths were 9, 12, and 21 respectively. Of the total number, 42 were under the age of 3 years, the remaining 11, adults. The proportion of the sexes were 32 males to 21 females, from diarrhoea; and from cholera, 67 males to 83 females. At No. 2 Clifton-road, the wife of a hammerman in the last stage of pregnancy, and her 2 children, died of cholera between the 3rd and 5th September; and at No. 1 Waterloo-place, on September 5th, the wife of a railway servant, near her confinement, and her son died of cholera on the same day. The epidemic was severely felt in the following streets, &c. :—

Creek-street,	Church-street and row,
Fish-street,	Giffin-street,
Cannon-street,	New King-street,
Mill-lane,	Laurie-grove,
Torr's-terrace,	&c.

One death from cholera was recorded on board a ship lying off in the river Thames.

The annexed cases are selected from the Registrar's reports :—

"On August 11th, at 11 Creek-street, widow of labourer, aged 74 years, cholera 12 hours. This place is in a low and unhealthy situation."

"On August 11th, at 18 Torr's-terrace, Lower Deptford-road, son of labourer, aged 7 years, cholera 23 hours. Near the boundary line dividing Rotherhithe from Deptford. Deceased's brother, aged 12 years, died of cholera in the same house, 10 hours after he was attacked, on August 8th. There has been a death from cholera at No. 3, and also at No. 12, in the same terrace."

"On September 13th, at 5 Agutter's-buildings, Mill-lane, daughter of labourer (deceased), aged 9 months, cholera 36 hours. The father of the child died of cholera on the day previous in the same house. The houses in Agutter's-buildings are built back to back, and consist of 2 rooms only, one above the other; no current of air passing through them, not having either back doors or windows."

"On September 22nd, at 36 Giffin-street, daughter of labourer, aged 14 months, cholera. This child's brother, aged 4 years, died of cholera on September 16th; and their mother, of the same disease, on September 13th: all in the same house, within 10 days."

35; 2. GREENWICH; *St. Nicholas, Deptford*.—Pop. 6953.—Chol. 35; Diarr. 14.

Comprises the entire parish of St. Nicholas, bounded on the north-east by the river Thames, extending from Deptford Creek to the north side of Deptford Dockyard; on the south-west, the parish of St. Paul, and west by Deptford Creek, &c.

Two fatal cases of cholera were recorded at the

Emigrant Depot, on January 30th, and one in H.M.S. Adventure, February 11th. After an interval of some months, the next case occurred July 11th, on board a ship lying off Deptford, followed by 2 deaths on the 14th, in New-street and Backfields. In July there were 9 deaths; August, 12; September, 9; and in October, 2; the last on the 7th, at 31 King-street. The epidemic was also fatal in Dock-street, Collier-street, Butcher-row, &c., &c.

A mother and daughter died of cholera, at No. 3 Czar-street, on July 22nd and 25th. Also a lighterman and his son, at the Stowage, August 3rd and 5th.

35; 3. GREENWICH; *Greenwich, West*. Pop. 16552.—Chol. 306; Diarr. 26.

Bounded on the west by Deptford Creek and the river Ravensbourne; north by the river Thames; east by Church-street and Greenwich Park; south by Blackheath-hill, &c.

The mortality from cholera was very considerable during the months of July, August, and September, viz., 57, 136, and 80 deaths respectively; and in the month of August 41 deaths from the epidemic were registered in the Devonshire Hospital Ship for Seamen, and 39 in September; likewise 13 deaths were recorded in the Dreadnought Hospital Ship for Seamen, in the early part of the year. Cholera appeared on June 5th, at No. 7 Railway-place; next case on the 7th, then the 8th, &c., and by the end of the month 11 deaths; in July the mortality increased, in August it extended rapidly after the 8th, and attained its maximum on the 15th; the epidemic prevailed with great virulence in the early part of September, during the first 10 days 41 persons were deprived of life, but towards the end of this month its severity nearly subsided; in October 9 deaths occurred, the last on the 10th.

Deaths from
Cholera.

Men at the age of 15 years to 45	138
Women	36

The greater number of male deaths is accounted for by the circumstance of 137 having died in the Dreadnought and Devonshire Hospital Ships for Seamen.

Dreadnought.	39	} 137
Devonshire	98	

In the Dreadnought Hospital Ship for Seamen of all Nations, where the patients number about 150; 39 deaths from cholera were recorded between January 1st and July 18th; about this time the sick were transferred to the Devonshire ship, where the next death occurred on July 20th; subsequently, by 10th October, 98 were registered from cholera, and on August 16th, 5 deaths took place. In the following localities the epidemic prevailed :—

Royal-hill,
Thames-street,
Delany's-court,
Coltman-street, build-
ings, &c.
Frederick-street,

Wood-wharf,
Horseferry-place and
road,
London-court,
Blucher's-buildings,
Thomas-yard, &c.

In a boat on the river Thames, lying off the town, a death from cholera took place on June 21st. On August 12th and 13th, in London-court, a coal-porter's wife and child died of cholera in the same house; also the 2 children of a waterman, at 26 Thames-street, on August 17th. At No. 16 Blucher's-buildings, the 2 children of a coal-porter died of cholera, the one in 13 and the other in 23 hours after the attack; and on September 5th and 6th, the wife of a waiter and her daughter, at No. 5 Rymer's-buildings. From September 3rd to the 12th, a drayman's wife and 2 children died of cholera, at No. 20 Coltman-street. The annexed cases are selected from the Registrar's reports:—

"On August 17th, in London-court, daughter of labourer, aged 9 years, cholera 3 days. Four persons died in the same house, and were members of 2 families, comprising 10 in number. The house contains but 3 rooms. Inmates very poor and dirty in their habits."

"On August 18th, in London-court, daughter of labourer, aged one year, cholera 2 days, secondary fever 3 days. This is the fifth death in the same house in 6 days."

"On August 29th, in London-court, wife of labourer, aged 34 years, cholera 5 days. The fifth death in the same house within 15 days."

"On September 22nd, at 2 Orange-court, son of hatter (deceased), cholera about 6 days. A brother of this child died on the same day of cholera, aged 21 years, in Carr's-court."

35; 4. GREENWICH; *Greenwich, East.* Pop. 13043.——Chol. 134; Diarr. 60.

Bounded on the west by Garden-street, Church-street, and Croom's-hill.

Eighty-five males and 49 females were registered during the year 1849, as having died of cholera; of this number 42 were pensioners in Greenwich Hospital.

After 27 deaths by diarrhœa, namely, 8 in the Union Workhouse, 16 in Greenwich Hospital, and 3 in other localities, cholera broke out on July 2nd, at Prospect-place. A waterman, aged 21 years, died in 9 hours after the attack; next case on the 4th, at Morden-wharf; by the end of this month 18 persons died, in August 47, in September 66, and in October 3; the last on the 13th, at Maberley's-court. In the last week of August and the first 14 days of September, the epidemic was at its height, and fatal to 77 persons; the greatest mortality was on September 8th and 14th, when on each of those days 7 deaths were recorded. In the 3 months of July, August, and September, the deaths registered from cholera and diarrhœa amounted to 162, and from all other causes of death 149; and in this period but 85 births against 311 deaths. The inhabitants in the following streets, &c., suffered from cholera:—

Prospect-place,
Tyler-street, and build-
ings,
Hatchliffe-street,
East-street and lane,
Lower Park-street,

Wellington-street,
Maberley's-court,
Green-street,
Spring-gardens,
Marsh-lane,
&c.

In the Union Workhouse the first fatal case of cholera July 16th, subsequently by September 26th, 15 persons died; the in-door paupers number about 1000, which include the poor who belong to the other districts in the Greenwich Union. Amongst the pensioners in the Royal Hospital, Greenwich, cholera was

very fatal; first case July 12th; from this period to October 3rd, 39 old seamen were deprived of life; in the majority of cases, but a few hours elapsed between the attack and death. The number of pensioners in the Royal Hospital number about 2600.

The following table shows the progress of cholera and diarrhœa in the above institutions:—

		Royal Hospital, Greenwich.		Greenwich Workhouse.	
		Chol.	Diarr.	Chol.	Diarr.
January	5	..	1
February	2
March	4
April	1	..	1
May	3	..	1
June	1	..	3
July	. . .	4	2	3	7
August	. . .	6	3	4	7
September	. . .	31	2	8	5
October	. . .	1	3
December	2
Total	. . .	42	26	15	27

The above number of deaths in the Royal Hospital includes the deaths by cholera of 2 nurses, and the wife of a Lieutenant, Royal Navy; the rest were pensioners, and, with the exception of 2, all above 60 years of age; in 9 days, from September 6th to the 14th, both inclusive, 23 died of the epidemic. The fatal cases of cholera in the Hospital and the Workhouse amounted to one-half of those registered in the district; 41 males and 19 females died of diarrhœa, of these, 7 were children and 53 adults, 26 of whom were pensioners.

The subjoined cases are selected from the Registrar's reports:—

"On August 17th, in Maberly's-court, daughter of shoemaker, aged 9 years, cholera 4 days. The informant stated that, a few nights ago, himself and family were awoken by a dreadful stench, which was found to proceed from the emptying of a privy adjoining his house, the soil of which was 6 or 7 feet deep; a hole was dug close by, where the soil was deposited. The deceased had inhaled the effluvia, and was seized with headache and sickness, with pain in bowels. Other branches of the family were attacked. Maberly's-court itself is a very dirty place."

"On July 17th, in Bennet-street, wife of waterman, aged 54 years, cholera 28 hours (*inquest*). This woman's son died of cholera in the same house, on July 2nd."

"On September 8th, in the Union workhouse, a labourer, aged 63 years, cholera 20 hours. This was one of the men engaged to perform the duty of coffining the dead, attending funerals, &c. He is supposed to have taken the cholera by getting into the hearse to assist in taking out a very offensive corpse for interment."

"During the quarter ending September 30th, the deaths exceeded the usual number by 130. The following are the deaths during the 3 months from 5 causes: cholera 130, diarrhœa 33, typhus 12, measles 2, and small-pox one. North side of the district, chiefly below high water mark and (Greenwich Hospital excepted) badly drained, 102 cholera, and 12 diarrhœa. South of the district, a rising ground and healthy, 28 cholera and 21 diarrhœa."

35; 5. GREENWICH; *Woolwich Dockyard*. Pop. 12418.—Chol. 35; Diarr. 26.

First death from cholera on July 13th, at 45 Church-street, a pork butcher, aged 33 years, died in 12 hours after the attack; next deaths on the 17th, 23rd, &c. The last fatal case, September 29th, at No. 16 Green-hill; 27 males and 8 females died of cholera; the disproportion of the sexes arose from the deaths in the Unité Hospital Ship for convicts; also the military, engineers, shipwrights, &c., living in this district, having suffered from the epidemic, residing principally in—

Kidd-street,	Green-street and hill,
Frances-street,	Artillery-place,
Warwick-street,	Church-street, &c.

A labourer's wife, aged 40 years, and her son, aged 9 years, died of cholera on September 9th and 11th, the woman in 8 hours and the boy within 9 hours after the attack. In the Royal Artillery Barracks, 4 children died of diarrhoea. In the Royal Marine Hospital, a stoker, aged 32 years, died of cholera, in 36 hours. In the Marine Infirmary, a labourer, aged 52 years, died of cholera in 12 hours. In the Royal Dock yard one death, and in ships lying off in the river 2 deaths from cholera. In the Unité Hospital Ship for convicts, one death from diarrhoea was registered in March, and 6 from cholera in August, between the 17th and 31st, both inclusive; 10 deaths from cholera had previously occurred in the Unité Convict Hospital Ship, from June 11th to July 23rd, which were registered by the Registrar of the Arsenal sub-district of Woolwich, the Unité being removed to moorings in this district after the 23rd; 4 adults died of diarrhoea; the rest were those of children under the age of 3 years.

35; 6. GREENWICH; *Woolwich Arsenal*. Pop. 13367.—Cholera 58; Diarrhoea 23.

Cholera was fatal in 18 hours in the Royal Ordnance Hospital on April 6th, to a gunner in the Royal Horse Artillery, aged 23 years; the next 9 cases were in the Unité Hospital Ship for convicts, namely, on June 11th, 13th, and 16th, and on July 2nd, 5th, and 7th, &c. Cholera then appeared at 20 Meeting House-lane, July 19th; the last case November 9th, at No. 15 Nightingale-vale.

In the first 21 days of September, 26 deaths were referred to cholera.

In the months of July, August, and September, nearly one-half the deaths arose from cholera and diarrhoea; in this period the births registered were 110, whilst the deaths were 144. 35 males and 23 females died of cholera; the excess of males is assigned to the mortality amongst the convicts in the Unité Hospital Ship. In the following localities cholera was prevalent, viz.—

High-street,	Meeting House-lane,
Union-street,	Powis-street,
Gough-yard,	Salutation-alley,
Surgeon-street,	&c.

On board a ship lying off the arsenal in the river Thames, one death occurred from cholera.

At No. 50 High-street, 5 persons died of cholera in 8 days, from August 21st to the 28th; and at No. 33 Union-street, a journeyman tailor and his wife died on September 1st and 3rd.

At No. 2 Gough-yard, The Gardens, on September 1st to 5th, 3 labourers died of the epidemic; 6 deaths from cholera were recorded in the Royal Ordnance Hospital, and one from diarrhoea. From June 11th to July 23rd (both inclusive), 10 convicts died of cholera in the Unité Hospital Ship; subsequently 6

deaths were registered by the Registrar of the Dock-yard sub-district, making together 16 cholera and one diarrhoea.

The following cases are selected from the Registrar's reports:—

"On August 12th, at 7 Warren-lane, wife of pensioner, aged 63 years, cholera 11 hours. This lane runs from High-street to the river Thames. The house is one of the lodging-houses occupied generally by the lowest class of tramps."

"On August 18th, at 106 High-street, an apprentice to shoemaker, aged 15 years, cholera 14 hours. In the immediate neighbourhood of this house there is a slaughterhouse and a tallow-melter's, both of which are complained of, especially the former, and particularly when the cesspool of filth is being cleared out."

"On August 28th, at 50 High-street, coal porter, aged 40 years, cholera 13 hours. This is the fifth death from cholera in this house; drainage much wanted."

"On September 12th, in the Royal Ordnance Hospital, gunner, Royal Artillery, aged 20 years, cholera 5 days, resided in Royal Artillery barracks. This is the second gunner who has died from cholera within 3 days; they were both on duty on the convict guard on the previous Saturday, and were brought into hospital from the Royal Arsenal."

"On September 14th, at 2 Spray's-buildings, a journeyman tailor, cholera 7 days. A very dirty, confined neighbourhood; no drainage. The principal part of the street is in Plumstead parish; the open gutters at times are exceedingly offensive."

"On September 12th, at 3 Mount-street, New-road, son of labourer, aged 6 years, cholera 11 hours."

"On September 13th, a sister of the above in the same house, cholera 8 hours."

"These make 3 deaths from cholera in 9 days in this house. There are 7 houses in the row, recently built, but mostly let in rooms. The house No. 3, contained 13 or 14 persons, in 5 rooms and a wash-house. Within half a rod at the back of these residences is a row of privies; the stench from them is very offensive, and behind them a number of low gardens in very damp condition; no drainage whatever."

36; 1. LEWISHAM; *Plumstead*. Pop. 5471.—Chol. 14; Diarr. 13.

First fatal case of cholera July 10th, and another on the 26th, both in Plumstead; the next on August 14th, in Mount-street, Charlton. The epidemic ceased on September 15th. Cholera and diarrhoea prevailed in the following streets:—

Mount-street, Charlton,	Thomas-street,
Church-lane,	Lower Burrage-place,
Spray's-buildings,	&c.

At No. 1 Mount-street, Charlton, the son of a smith, aged 10 years, died of cholera on August 14th, in 16 hours; on the 21st the mother was fatally attacked in the same house; and between September 13th and 15th, 2 adult persons died of cholera at 15 Upper Burrage-place, West Plumstead.

36; 2. LEWISHAM; *Eltham*. Pop. 2310.—Chol. 4; Diarr. 5.

First death from cholera August 23rd; the last on September 20th.

On September 10th, the wife of an ostler died of cholera; also on the 20th her daughter, aged 20 years.

On July 25th, the daughter of a merchant's clerk died of diarrhoea; subsequently her father, aged 32 years, died of cholera on August 23rd.

36; 3. LEWISHAM; *Lee*. Pop. 6938.—Chol. 35; Diarr. 13.

Cholera commenced on July 7th, at 4 King-street and 8 Regent-street; by the end of the month 8 persons died; in August, 20; and in September, 7; the last on the 14th at Phoenix-square, Blackheath. The deaths from cholera occurred chiefly in the following streets:—

King-street	12 deaths.
Regent-street	4 „
Essex-place	3 „
Bath-place, Blackheath	2 „
Dacre-street	6 „

At No. 18 Regent-street, on July 15th and 18th, on each of those days a death occurred from cholera; at No. 1 King-street, 2 deaths; at No. 4, 2 deaths; and at No. 10, one death from cholera and one from diarrhoea. At 32, Dacre-street, on August 26th, the 2 children of a labourer died of cholera; also at No. 31, the widow and a son of a policeman; and at No. 30, on September 7th, the wife of a bricklayer, aged 30 years.

The Registrar states that the above neighbourhoods are densely populated, badly drained, and badly supplied with water, the privies, in many cases, overflowing.

36; 4. LEWISHAM; *Village*. Pop. 5380.—Chol. 38; Diarr. 22.

NOTE.—Where the number of Inmates of Public Institutions in London is mentioned, it has been taken from a return made to the Registrar General on March 31, 1850.

In the Union Workhouse, Lewisham, the first death from cholera occurred on June 24th; next the 26th, at Homes Dale. In July there were 17 deaths; in August, 8; and in September, 11; the last on the 30th. The deaths from cholera in the workhouse numbered 11, from diarrhoea, 8; the in-door poor number about 240. The following localities suffered from cholera, viz.:—

Hanover-street,	Botany-bay,
North-row,	Loam Pit-vale,
Stratford-place,	Price's-row, &c.

The Registrar states that, "Price's-row and Botany-bay are situated where about 3000 of the working classes reside—localities badly ventilated, and no drainage."

On July 22nd and 23rd, at No. 7, North-row, one death from cholera and one from diarrhoea occurred in the same family; and at No. 8 Hanover-street, 2 deaths from cholera took place.

36; 5. LEWISHAM; *Sydenham*. Pop. 2915.—Chol. 5; Diarr. 1.

Cholera was fatal on July 11th at Park-hill, the next 3 cases were members of the same family, residing in Wells-road, and who died in two days, namely, July 15th and 16th. The other death occurred at Sydenham, August 31st.

II. SOUTH EASTERN DIVISION.

I. SURREY (PART OF).

37; 1. EPSOM; *Carshalton*. Pop. 5809.—Chol. 5; Diarr. 7.—The first death from cholera in this sub-district took place at Carshalton, February 11th, a labourer's wife, aged 45; the second at Banstead, July 25th. 2 cases were recorded at Sutton, August 20th and 23rd; and another at Carshalton August 28th.

37; 2. —; *Epsom*. Pop. 6157.—Chol. 6; Diarr. 3.—Of the 5 parishes in this sub-district, Epsom alone was visited fatally by the epidemic. Three persons died from cholera there in July (first case, an upholder, aged 33, on the 18th), one in August, and 2 in September.

37; 3. —; *Leatherhead*. Pop. 5282.—Chol. 0; Diarr. 0.—The Registrar, in his return for the quarter ending September 30th, remarks:—"The whole of the sub-district is very healthy. No death in Leatherhead, with a population of nearly 2000, has taken place since the 5th May, except those of 2 seven-months children. I think much is owing to the activity of the sanitary committee in this place. Every house has been examined, and dunghills removed, drains laid down, and water-closets moved to a distance from the dwellings."

38; 1. CHERTSEY; *Walton*. Pop. 3601.—Chol. 0; Diarr. 1.

38; 2. —; *Chertsey*. Pop. 6352.—Chol. 35; Diarr. 3.—Cholera appeared in this sub-district in August, and continued to prevail from the 8th of that month (when the first death, a labourer aged 60, occurred at New Haw) until September 16th. In Guildford-street, Chertsey, 13 persons died; at Abbey Green 15, and at New Haw 3. The disease in some cases proved fatal to more than one person in a family; the deaths of a shoemaker, his wife, and 2 children were recorded.

38; 3. —; *Chobham*. Pop. 4975.—Chol. 1;

Diarr. 2.—This death from cholera took place at Chobham, August 17th, a butcher, aged 53.

39; 1. GUILDFORD; *Woking*. Pop. 4563.—Chol. 2; Diarr. 0.—Both deaths occurred in Woplesdon parish, viz.—August 3rd, a labourer's son aged 16; and October 20th, a dissenting minister, after 16 hours' illness.

39; 2. —; *Ripley*. Pop. 2333.—Chol. 1; Diarr. 2.—The death from cholera took place at Send, July 4th, a labourer, after an attack of 14 hours' duration. The Registrar states that this person was a casual inmate of the workhouse.

39; 3. —; *Albury*. Pop. 4349.—Chol. 1; Diarr. 2.—The case of cholera occurred at Albury, April 27th, a labourer.

39; 4. —; *Guildford*. Pop. 6815.—Chol. 5; Diarr. 5.—The first death from cholera occurred June 9th, a shipowner, aged 70; followed by that of a bargeman on July 21st: 3 cases in August. One death from diarrhoea at the Union workhouse.

39; 5. —; *Godalming*. Pop. 5021.—Chol. 3; Diarr. 2.—The 3 cases of cholera occurred in Godalming parish, viz., on July 20th, a bargeman; October 10th, a railway labourer; and October 14th, a tanner's wife.

40; 1. FARNHAM; *Frimley*. Pop. 2220.—Chol. 0; Diarr. 3.

40; 2. —; *Farnham*. Pop. 8438.—Chol. 6; Diarr. 12.—The first case recorded as cholera occurred June 24th in Frensham parish, an infant, after an attack of 5 days' duration; the other deaths took place in Farnham parish September 2nd, and October 10th, 13th, 18th, and 19th. The Registrar, in his return for the quarter ending September 30th, remarks, "My sub-district is at present very healthy, which is more than could be hoped, considering the bad drainage of some parts of our town, and the thousands of strangers of the poorest class who come to it during the hop-picking."

41; 1. FARNBOROUGH; *Farnborough*. Pop. 4187.—Chol. 0; Diarr. 2.

41; 2. —; *Headley*. Pop. 2937.—Chol. 0; Diarr. 2.

42; 1. HAMBLEDON; *Witley*. Pop. 5952.—Chol. 0; Diarr. 4.—All children.

42; 2. —; *Cranley*. Pop. 6859.—Chol. 0; Diarr. 2.—One of these deaths from diarrhoea was that of a hawker, after an attack of only 24 hours' duration, at Womersh, September 5th.

43; 1. DORKING; *Capel*. Pop. 3972.—Chol. 2; Diarr. 4.—One case of cholera occurred in Capel, February 1st, a child of the relieving officer, after 24 hours' attack; and the other at Wotton, a railway labourer, July 19th.

43; 2. —; *Dorking*. Pop. 7006.—Chol. 2; Diarr. 1.—Both deaths from cholera took place in Dorking, June 25th and July 1st, labourers.

44; 1. REIGATE; *Reigate*. Pop. 8094.—Chol. 6; Diarr. 2.—First death from cholera, July 18th, in the workhouse, a labourer, attacked 12 hours (*inquest*). In August, 3 fatal cases occurred in Reigate Foreign, and one in Headley. Last case, September 13th, in Reigate borough, a labourer, after 2 days' illness.

44; 2. —; *Horley*. Pop. 6234.—Chol. 2; Diarr. 2. The deaths from cholera occurred at Horley, on July 31st, in a farmer; and at Chartwood, on August 2nd, in a labourer.

45; 1. GODSTONE; *Godstone*. Pop. 11459.—Chol. 5; Diarr. 1.—3 cases of cholera (*inquests*) in the Union workhouse, Bletchingly, on July 21st, 23rd, and August 1st. The other two took place at Bletchingly, on August 26th, and at Chelsham 3 days later.

46; 1. CROYDON; *Croydon*. Pop. 18867.—Chol. 66; Diarr. 37.—The epidemic appeared in this sub-district in July, but did not prevail to any serious extent until the last week in August, from which time to the middle of September it was exceedingly fatal. The first case of cholera occurred on July 13th, in the Waterman's Asylum, Penge. In Barrack Field, 13 persons died; on Croydon Common 11; and 17 in the Union workhouse. 7 deaths took place on one day, August 27th. At Pitlake 4 persons in one family (the wife and 3 children of a sawyer), and a painter and his wife, died from cholera. Last case, on October 10th, in Church-street Croydon. The Registrar stated, in his return for the quarter ending September 30th, that the part of the sub-district situated in the immediate vicinity of the gas-works has been entirely free from the epidemic.

46; 2. —; *Mitcham*. Pop. 8853.—Chol. 28; Diarr. 6.—A death from cholera occurred in Mordon parish, on June 18th, a calico-printer, aged 68. Second case on July 16th, a tailor's wife, after an attack of 9 hours. In August, 3 cases were recorded in the Causeway, Mitcham, one at Wallington, and one at Rush in Merton parish. In the latter place cholera proved fatal to 12 persons in September; 3 persons died at Common-side. Last case, on October 3rd, in Swaine's Lane, Mitcham.

47; 1. KINGSTON; *Wimbledon*. Pop. 2630.—Chol. 4; Diarr. 2.—The deaths from cholera in this sub-district (which is conterminous with Wimbledon parish) occurred as follows:—on July 27th, a female aged 47, after 12 hours' illness; August 17th, a gardener, 33, attacked about 12 hours; August 30th, an ostler, 70, and his wife, 72, died on the following day.

47; 2. —; *Kingston*. Pop. 9992.—Chol. 22; Diarr. 18.—Two deaths from cholera occurred in January at the Union workhouse, labourer's children, aged 8, and 10 years, both after attacks of about 16

hours' duration. The second visitation of the epidemic commenced in July. Several cases occurred in Kingston: and at Canbury cholera proved fatal to 7 persons within a few days. Four more deaths took place in the workhouse. Last case, September 11th, a fisherman, in Back Lane.

47; 3. KINGSTON; *Esher*. Pop. 5443.—Chol. 4; Diarr. 5.—Cholera appeared in this sub-district as well as in the last at the beginning of the year, a labourer, aged 74, having died after 24 hours' illness at Thames Ditton, January 30th. The subsequent cases occurred at Esher, August 31, a gardener's wife aged 47; at Thames Ditton, September 2nd, a labourer's wife; and at Long Ditton on the same day, a female, aged 26, attacked only 5 hours.

47; 4. —; *Hampton*. Pop. 5910.—Chol. 2; Diarr. 1.—Both cases of cholera occurred in Hampton parish, September 16th, a labourer's wife, aged 33, after an attack of 48 hours' duration, and September 26th, a shoemaker, aged 86, attacked 19 hours.

48; 1. RICHMOND; *Richmond*. Pop. 9319.—Chol. 26; Diarr. 9.—Cholera first proved fatal in this sub-district on July 18th, to a merchant, aged 43, on Richmond-hill; 2 other cases were recorded in the same month, 13 in August, and 11 in September. Water-lane furnished 5 cases, and the workhouse one. A waterman died from cholera in a barge on the river Thames.

48; 2. —; *Mortlake*. Pop. 4239. Chol. 22; Diarr. 4.—The epidemic appeared in this sub-district nearly at the same time as in Richmond. A death from cholera (the first) occurred July 15th in Princes-court, Mortlake (a labourer's widow, aged 70); and a second at Barnes, 12 days later. In August 16 persons died (including a carpenter and his 3 children in Sheen-lane), and 4 in September. The deaths from diarrhoea were those of infants. The Registrar remarks in his return for the quarter ending September 30th, "The deaths are more than treble the average, there being more than 20 from Asiatic cholera; these cases have arisen principally from defective drainage, deficient ventilation, overcrowded habitations, and intemperance."

2. KENT (PART OF).

49; 1. BROMLEY; *Bromley*. Pop. 9401.—Chol. 3; Diarr. 4.—2 cases of cholera terminated fatally at Bromley on the same day, August 5th, viz., a labourer, aged 30, and a gardener, aged 52. The other case, also that of a labourer, occurred at Keston, August 26th.

49; 2. —; *Chislehurst*. Pop. 6676.—Chol. 7; Diarr. 9.—A fatal case of cholera occurred at Chislehurst, February 1st, a farmer, aged 72. A second case was recorded in June, a baker's widow, after 18 hours' illness, at Chislehurst. In August a death from cholera took place in the workhouse, Farnborough, and a second in September. St. Paul's Cray, St. Mary Cray, North Cray, and Foot's Cray, each furnished one case. Of the 9 deaths from diarrhoea, 7 were those of children.

50; 1. DARTFORD; *Bexley*. Pop. 9000.—Chol. 46; Diarr. 12.—A case described as cholera terminated fatally in Bexley, January 14th, but the disease did not become prevalent in the sub-district until the end of June, when a seaman, aged 43, died from cholera at Erith, after an attack of 12 hours. Another seaman and a waterman's wife died at Erith in July. Cholera prevailed in Crayford from the end of July to the second week of September, and proved fatal to 35 persons in that parish. At Bexley 3 cases were recorded, and at Erith 6 of diarrhoea and 7 of cholera.

50; 2. DARTFORD; *Dartford*. Pop. 11059.—Chol. 58; Diarr. 3.—The epidemic became fatal in this sub-district July 11th, when a baker's wife died at 30 Hall's-place, Waterside, after being attacked 8 hours. An engineer, attacked 6 hours, died on the following day in Water-lane. Cholera continued prevalent until October 26th; 17 deaths took place in the Union workhouse, 20 at Waterside, 3 at Greenhithe, and 2 on board vessels lying in the Thames off the latter place. At Dartford 6 persons died in one family, viz., a labourer, his wife, and 4 children.

50; 3. —; *Farningham*. Pop. 5307.—Chol. 13; Diarr. 4.—The first cases of cholera in this sub-district occurred in Farningham, July 18th, 19th, and 20th, labourers' children. No others were recorded until the middle of August, when 2 deaths took place in Eynsford. 5 persons subsequently died at Horton, 2 at Eynsford, and one at Hartley.

51; 1. GRAVESEND; *Gravesend*. Pop. 15670.—Chol. 196; Diarr. 38.—The death of a Custom-house officer, from Asiatic cholera, on board the revenue schooner stationed off Milton, was registered at the end of March. No other case was recorded until June, when another Custom-house officer died at 5 Terrace-street, on the 15th, and on the 29th a hardwareman, aged 26. The Registrar states, in reference to these cases, "neither originated in the town; the officer was attacked on board a vessel near London Bridge, and the other in London, after partaking of a crab for supper; the latter came to Gravesend with diarrhoea." Cholera prevailed in the district throughout July, August, and September. In the month of August it was most fatal; the deaths from the 9th and 27th of that month (17 days) numbered no less than 84 from cholera and 6 from diarrhoea. The last case of cholera occurred October 31st, in John's-court. 26 persons died on board vessels lying off Gravesend; 34 in the workhouses; 9 in Passengers-court; and 8 in Kempthorne-street, including 4 in one house, No. 14. The Registrar, in his return for the quarter ending September 30th, remarks:—"The mortality for the last 3 months has been unprecedented in modern experience. Cholera has prevailed in the same and similar localities as those that were severely visited with fever in the September quarter of last year. There are no available common sewers, and the sanitary state of the town must be inevitably bad; the whole of the surface and underground drainage falls into rudely constructed cess-pools."

52; 1. NORTH AYLESFORD; *Northfleet*. Pop. 7210.—Chol. 32; Diarr. 12.—The first death from cholera recorded in this sub-district took place July 9th, on board a vessel off Northfleet—a mariner attacked 5 hours. Second case, July 18th, a fisherman at Northfleet, where 29 persons subsequently died from the epidemic. A few cases were recorded in other parishes of the sub-district, viz., Chalk, Shorne, and Cobham. The last case was that of a shipwright's daughter at Northfleet, October 14th.

52; 2. —; *Strood*. Pop. 7466.—Chol. 41; Diarr. 4.—A death from cholera, the first recorded in the North Aylesford district, took place June 20th, in High-street, Strood—a shoemaker's widow, aged 65. No other cases occurred until July 22nd, when a labourer's widow and son died at Cliffe, in which parish 9 deaths were subsequently registered. 7 persons died from cholera in the Union workhouse, 6 in High-street, and 4 in Church-street, Strood. Last case September 11th, on Strood-hill.

53; 1. HOO; *Hoo*. Pop. 2794.—Chol. 7; Diarr. 3. A female, described as a "harvester," died from cholera at Hoo, July 28th, after an attack of 13 hours. The epidemic was not again fatal in the district until

September 6th, when a death took place at Stoke, followed by 5 others (including 3 from diarrhoea) in that parish, a second in Hoo, and one each in All-hallows and St. Mary.

54; 1. MEDWAY; *Rochester*. Pop. 14587.—Chol. 49; Diarr. 13.—2 deaths from cholera (the first in this sub-district) took place on July 30th, at Fort Pitt, both soldiers' wives. The epidemic was prevalent during the whole of August, and, in a lesser degree, in September. It was not fatal after October 3rd. Amongst the deaths recorded were those of 6 persons in Ordnance-place, 5 in part of High-street, and 5 soldiers at Fort Pitt.

54; 2. —; *Gillingham*. Pop. 23029.—Chol. 78; Diarr. 49.—A case of cholera was recorded January 29th, a shoemaker's daughter, aged 5, near High-street, Chatham. The next case occurred June 16th, at Grange, a fisherman's son (*inquest*). In July after 8 deaths from diarrhoea, 2 from cholera were recorded on the 28th and 30th in the Union workhouse. During August and September 74 persons died from cholera, and 26 from diarrhoea. 14 fatal cases took place in the workhouse, 10 at Gad's Hill, 10 in Jefferys-place, and 7 (marines) in Melville Hospital.

55; 1. MALLING; *Aylesford*. Pop. 5576.—Chol. 5; Diarr. 2.—The first death from cholera in the Malling district took place July 18th, at East Malling, in this sub-district—a labourer, aged 57, after 48 hours' illness. The other 4 cases occurred in Aylesford, August 11th (2), 12th, and September 6th—all labourers.

55; 2. —; *East Peckham*. Pop. 7071.—Chol. 6; Diarr. 10.—After several fatal cases of diarrhoea had been recorded, a death from cholera took place in the workhouse, on August 7th, a blacksmith, aged 70, after 13 hours' illness. The next deaths occurred in West Malling, Sept. 2nd and 7th; followed by one in West Peckham, a second in the workhouse, and one (the last in the sub-district) in East Peckham, September 19th, a labourer's widow, aged 55.

55; 3. —; *Wrotham*. Pop. 5286.—Chol. 8; Diarr. 6.—First death from cholera, July 24th, in Wrotham, a labourer's daughter. Five other deaths in the same parish were recorded, one in Ightham, and one (the last in the Malling district, October 11th, a farmer, aged 56) in Trotterscliffe.

56; 1. SEVENOAKS; *Shoreham*. Pop. 5176.—Chol. 2; Diarr. 1.—The deaths from cholera occurred at Otford, July 22nd, a farmer's wife, aged 57, after an attack of 20 hours; and at Shoreham, Aug. 14th, a labourer's wife, aged 32, ill 17 hours.

56; 2. —; *Sevenoaks*. Pop. 9607.—Chol. 3; Diarr. 4.—The three deaths from cholera occurred as follows:—at Sevenoaks, July 5th, a draper's widow, aged 85; at the Union workhouse, July 30, a labourer, 49; and at Riverhead, September 6th, a labourer's daughter, aged 6.

56; 3. —; *Penshurst*. Pop. 7426.—Chol. 0; Diarr. 1.—An infant.

57; 1. TUNBRIDGE; *Tunbridge Wells*. Pop. 10768.—Chol. 4; Diarr. 14.—The first death from cholera recorded in this sub-district occurred August 13th, a flyman, aged 41, attacked 12 hours; second case, September 3rd, a labourer's widow, aged 75—both in Tunbridge parish. The other two deaths were those of a schoolmaster and his wife at Southborough, September 20th and 22nd; of the latter cases the Registrar, in his report for the quarter ending September 30th, remarks, "These persons had returned from Dover only 2 days before they were attacked, and slept in their house, which stands under trees

in a damp situation: the house had been closed for a fortnight."

In a former return, the Registrar states "Sanitary arrangements have been strictly attended to since the passing of the Nuisance Removal Act, and the dwellings of the poor much improved by proper drainage, &c."

57; 2. **TUNBRIDGE**; *Tunbridge*. Pop. 8266.—Chol. 15; Diarr. 7.—A case of cholera terminated fatally in Tunbridge, August 14th, a bargeman, aged 38, after 6 hours' illness. On August 26th, two deaths occurred, and from September 1st to 16th, 7 other persons died in Tunbridge, 3 in Hadlow, and 2 in Capel parish.

57; 3. —; *Brenchley*. Pop. 4783.—Chol. 0; Diarr. 0.—The Registrar remarks in his return for the quarter ending September, "The deaths are much below the average of the last twelvemonth, in consequence of the disappearance of the several epidemics, and I believe also in consequence of the employment in the open air of a large portion of the population in hop-picking."

58; 1. **MAIDSTONE**; *Yalding*. Pop. 4204.—Chol. 5; Diarr. 5.—First death from cholera, on September 8th, at Yalding, a labourer's wife, aged 50; second case, in the same parish, two days later. A third occurred in Yalding, September 15th, and on the same day the epidemic proved fatal in Teston and Nettlestead parishes to two labourers.

58; 2. —; *Marden*. Pop. 4629.—Chol. 11; Diarr. 5.—Three persons died from cholera in Marden parish, the first on August 9th, a labourer, aged 49. The other cases occurred in the Union workhouse, Linton, the last being that of a female, aged 82, Sept. 22nd.

58; 3. —; *Loose*. Pop. 5453.—Chol. 44; Diarr. 6.—A case of cholera was recorded at East Farleigh, August 5th, a labourer aged 74, attacked 30 hours; the next case occurred at Barming, Sept. 7th. Eight days later the epidemic broke out with much virulence amongst the hop-pickers at East Farleigh, and was subsequently confined to that parish. It proved fatal to 3 persons there on September 15th, to no less than 11 on the 16th, to 6 on the 17th, and to 16 in the following 5 days. The last case occurred Sept. 30th. The Registrar states that the mortality from cholera in the sub-district was, "with two or three exceptions, confined to the vagrants, chiefly Irish, who came into the parish of East Farleigh to obtain employment in picking hops."

58; 4. —; *West Maidstone*. Pop. 8817.—Chol. 26; Diarr. 26.—The first death from cholera in this sub-district took place July 5th, in Market-buildings, a pipemaker, aged 31, after 10 hours' illness (*inquest*). The next cases recorded were on July 25th, and two following days. None occurred from August 3rd to 12th, but in the 6 days following 10 persons died. Last cases, 2 females in the hospital, Mill-street, September 28th, diarrhoea prevailed during the same period, chiefly amongst children. Six persons died from cholera in Bristow's-yard, Upper Stone-street.

58; 5. —; *East Maidstone*. Pop. 9207.—Chol. 12; Diarr. 14.—A case of cholera, the first recorded in the Maidstone district, occurred in Astley-street, July 2nd, a female, aged 32, after 6 hours' illness. No other case until August 2nd, when a gentleman, aged 72, died at Albion-place. Six deaths occurred in August, 6 in September, and 2 (the daughters of a brazier, in Stone-street) October 3rd and 8th—of the 14 deaths from diarrhoea, 10 took place in September.

59; 1. **HOLLINGBOURN**; *Hollingbourn*. Pop.

4666.—Chol. 0; Diarr. 6.—Two females, aged 86 and 73, and 4 children under one year. Three cases in the Union workhouse.

59; 2. **HOLLINGBOURN**; *Lenham*. Pop. 3932.—Chol. 0; Diarr. 3.—Children under one year. Scarlet-fever and measles prevailed in the quarter ending September 30th.

59; 3. —; *Headcorn*. Pop. 5221.—Chol. 10; Diarr. 4.—Cholera was fatal in Headcorn parish, August 22nd, (a farmer, aged 66, after 12 hours' attack) on September 4th (2 cases), and September 5th; in Sutton-Valence, where the second case in the subdistrict occurred, August 31; and in Chart-next-Sutton-Valence, September 23rd and 27th (2 cases), October 3rd and 5th. The 4 cases of diarrhoea occurred in September.

60; 1. **CRANBROOK**; *Cranbrook*. Pop. 6394.—Chol. 0; Diarr. 4.—Two of these cases occurred at the Union workhouse in January, females, aged 67 and 7, ill 6 and 7 days respectively.

60; 2. —; *Hawkhurst*. Pop. 6769.—Chol. 0; Diarr. 4.—All in Goudhurst parish; ages 4, 86 (an agricultural labourer, "diarrhoea and want of proper nourishment"), 47, and 45.

61; 1. **TENTERDEN**; *Rolvenden*. Pop. 4526.—Chol. 0; Diarr. 4.—One case of diarrhoea in Rolvenden, that of a farmer's daughter, aged 3, was fatal after an attack of only 19 hours' duration, September 15th.

61; 2. —; *Tenterden*. Pop. 6473.—Chol. 2; Diarr. 8.—Both cases of cholera occurred in Woodchurch, viz., a female servant, aged 18, May 17th; and a soldier's widow, 49, May 21st, both attacked about 24 hours. Three cases of diarrhoea in the Union workhouse, Tenterden, and 3 in other parts of that parish.

62; 1. **WEST ASHFORD**; *Calehill*. Pop. 5455.—Chol. 9; Diarr. 4.—The whole of the deaths from cholera, with one exception, took place in the Union workhouse, Westwell, between August 13th and September 1st; 5 were labourers, and the others females, aged 10, 11, 12. The excepted case occurred in Smarden parish, August 25th, a hawker's wife, aged 26.

62; 2. —; *Ashford*. Pop. 5874.—Chol. 1; Diarr. 4.—The case of cholera occurred September 4th, in Marsh-lane, Ashford, a brewer's widow, aged 49, attacked 14 hours.

63; 1. **EAST ASHFORD**; *Aldington*. Pop. 2489.—Chol. 2; Diarr. 1.—The first case of cholera (upon which an inquest was held) occurred in Ruckinge parish, January 26th, a female, aged 30; the other case was that of an infant, in Orlestone parish, September 15th.

63; 2. —; *Brabourne*. Pop. 3074.—Chol. 3; Diarr. 2.—The cases of cholera occurred April 17th, at Bircholt, a labourer's child, at Brabourne May 1st, also a child; and in the workhouse, Willsborough, August 15th, a sailor, attacked 16 hours.

63; 3. —; *Wye*. Pop. 5967.—Chol. 1; Diarr. 6.—The case of cholera occurred at Chilham, September 9th, a labourer's wife, aged 35 (*inquest*); the deaths from diarrhoea, with one exception, took place in the same parish.

64; 1. **BRIDGE**; *Chartham*. Pop. 4850.—Chol. 4; Diarr. 2.—The whole of these cases occurred in Westgate Without. First case of cholera, July 17th, a tailor, aged 47; followed by the deaths of 2 children of a labourer, July 19th; last case, July 23rd. Inquests were held on the 4 cases of cholera.

64; 2. —; *Barham*. Pop. 6131.—Chol. 1; Diarr. 7.—The case of cholera occurred at Womenswold, April 25th, and terminated fatally in 30 hours.

The Registrar states that the deceased person, a labourer, aged 36, lived in the highest situation in the sub-district, near Barham-downs. Three cases of diarrhoea (aged persons) in the Union workhouse, Bridge, on September 15th and 17th, were recorded.

65; 1. CANTERBURY; *Canterbury*. Pop. 15003.—Chol. 37; Diarr. 13.—The first case of cholera recorded in Canterbury occurred July 20th, in St. Mildred parish, a labourer, aged 61 (*inquest*). On the following day a bricklayer's son died, and two persons on the 26th: of six cases in August, 2 occurred in the workhouse, and 2 in Ruttington-street, where 3 persons died from diarrhoea. In September, a bricklayer, and 4 children of a cork-cutter, died from cholera in White-horse-lane. The epidemic appeared in Burgate-lane, in the first week of October, and proved fatal to 6 persons there, viz., a bricklayer (*inquest*), his wife and 2 children, a nurse, and another person on the 3rd and 4th. Last case, October 14th, in the workhouse, a single woman, aged 40.

66; 1. BLEAN; *Sturry*. Pop. 5879.—Chol. 8; Diarr. 4.—Two deaths from cholera, the first in the sub-district, occurred on July 25, labourers, aged 48 and 63 (*inquests*), in St. Stephens. Two other persons died in the same parish, August 19th and September 21st. In Blean, 2 cases were recorded; in Staplegate, one; and in Archbishop's-palace, one.

66; 2. —; *Herne*. Pop. 4424.—Chol. 13; Diarr. 2.—A death from cholera took place July 9th, in the Union workhouse, Herne; a mariner, aged 40 (*inquest*). No other cases until September 13th, when a fisherman died at Herne Bay. Seven other deaths from cholera, and 2 from diarrhoea, took place at Herne Bay; 3 in other parts of Herne parish, and one at Upstreet, Chisleth. Four cases were investigated by coroner's inquest.

66; 3. —; *Whitstable*. Pop. 3484.—Chol. 2; Diarr. 3.—Two cases of cholera occurred at Whitstable, viz., a mariner's wife, aged 26, Aug. 6th; and a carrier, aged 32, Aug. 12th (*inquests*). The diarrhoea cases were recorded in September, ages 16, 3, and one year.

67; 1. FAVERSHAM; *Boughton*. Pop. 4869.—Chol. 2; Diarr. 4.—The first case of cholera occurred at Boughton, Sept. 21st, a hosier from London, aged 30; the second at Felling, Oct. 1st, a child, aged 19 months. There were three deaths of children from diarrhoea in the Ashford Road, Sheldwich.

67; 2. —; *Faversham*. Pop. 6960.—Chol. 9; Diarr. 7.—The first death from cholera in this sub-district took place July 23rd, in the Ospringle-road, a cutler's wife, aged 28; the next, in the workhouse, three days later; followed by 4 in Tanner-street, 2 on July the 31st. The other cases occurred in Davington, August 8th; in Abbey-street, a mariner, September 10th; and in Tanner-street, a brickmaker, October 8th. Five cases of diarrhoea in September.

67; 3. —; *Teynham*. Pop. 4085.—Chol. 5; Diarr. 1.—A mariner died from cholera in Teynham parish, June 7th, after 16 hours' illness. The second case occurred in Eastling, July 22nd, a labourer, aged 25; and the remaining three in Doddington, viz., two children of labourers on August 14th; and a labourer's daughter 2 days later.

68; 1. MILTON; *Milton*. Pop. 11492.—Chol. 68; Diarr. 16.—Cholera broke out in the parish of Rainham in this district at the end of May, and proved fatal to 9 persons there, the first deaths being those of a widow aged 61, attacked 24 hours, and a child aged 4, ill 8 hours. No case was recorded in Rainham after June 7th. The next deaths from

cholera were at Sittingbourne, July 3rd (a barge-man's wife) and 5th. The first case at Milton occurred in the Union workhouse, July 7th, a labourer's wife, aged 72. From this time the epidemic became very fatal in the district, more especially at Milton and in the workhouse, in which institution 17 persons died in July (including 3 on the 14th and 4 on the next day) and 4 in August. The disease was at its height between July 10th and 20th; 32 deaths took place in the 11 days. Last case, September 20th, in Milton, a dredgerman, aged 70, ill 48 hours.

69; 1. SHEPPEY; *Minster*. Pop. 9318.—Chol. 53; Diarr. 17.—The first death from cholera in this sub-district took place July 24th, in the Union workhouse, Minster, a labourer, aged 24, after an attack of 24 hours' duration. Second case, July 30th, a rigger in Spring Garden-passage, Mile Town, Sheerness. After an interval of 6 days the epidemic became very fatal, both in Blue Town and Mile Town, Sheerness, and prevailed during August and part of September. The last case occurred September 23rd in King's Head-alley, Blue Town, a mariner. Seven persons died in High-street and 6 in King-street, Blue Town; 8 in High-street, Mile Town. Diarrhoea was fatal chiefly amongst children under 2 years of age.

69; 2. —; *Eastchurch*. Pop. 1540.—Chol. 1; Diarr. 0.—This case occurred at Eastchurch, July 22nd, a labourer, aged 23 (*inquest*).

70; 1. THANET; *Minster*. Pop. 3835.—Chol. 17; Diarr. 2.—First case of cholera at Sarre, July 23rd, a female servant. The whole of the subsequent cases occurred in the Union workhouse, Minster, where the first person to whom the epidemic proved fatal was a nurse, aged 64, on July 27th. On each of the three days following a case occurred, and on July 31st, 4 paupers died. Last case, September 1st, a blacksmith, aged 24.

70; 2. —; *Margate*. Pop. 11050.—Chol. 113; Diarr. 19.—Four deaths from cholera occurred in January at the Chateau Belle-vue or the "Wilderness," an institution for farmed paupers; first case, January 8th, a pauper from Newington, after an attack of 11 hours; 2 paupers from Greenwich died on the 11th, and another on the 23rd. The subsequent visitation of the epidemic commenced July 19th with the death of a mariner after an attack of 13 hours' duration, the disease having been taken, according to the certificate of the medical attendant, "in London, on the River Thames." Another mariner died July 21st at No. 7 King-street, in which house a second case occurred 5 days later. No other deaths from cholera were recorded until August 5th, when a mariner died in Pump-lane. From August 13th (on which day 4 persons died) to Sept 14th, 83 deaths from the epidemic took place. The parts of Margate in which the chief mortality occurred were:—High-street, 16 deaths; King-street, 9 (3 in one house, No. 7); Lansells-place, 7 (4 in No. 8); in the Sea-bathing Infirmary, 9; Kidman's-row, 5; Dixon's-yard, 5. A gentleman and his wife died at 18 Upper Marine-terrace, August 13th. Last case, October 6th, in Prospect-place.

The Registrar in his return for the quarter ending September 30th, remarks:—"The increase in deaths is very great, and fully two-thirds more than usual, arising from cholera. The number of sick visitors and others frequenting the place this summer has been unusually large, and to this circumstance must the excess of mortality from the epidemic to a great extent be due."

70; 3. —; *Ramsgate*. Pop. 16581.—Chol. 73;

Diarr. 36.—The first case of cholera which terminated fatally in Ramsgate occurred July 14th, at the "Admiral Napier" beer-shop, a plumber's son, aged 10. Five days later the second death took place in Camden-square, a victualler, after an attack of 8 hours' duration. The next two cases occurred at Camden House, July 21st. The epidemic became more fatal after the first week in August, and was at its height about the same time as in Margate, but the mortality from cholera was less. Diarrhœa broke out with great virulence in certain parts of Ramsgate; on August 9th and 10th, no less than 6 children died from it in Portland-court (3 in one house No. 10), and two in Portland-place. Cholera was subsequently very fatal in both of these places, 7 deaths having occurred in Portland-court (one at No. 10), and 3 in Portland-place. The following localities also suffered from the epidemic:—Brunswick-place, 8 deaths (3 at No. 11); Salem-place, 6 (3 at No. 3); Little Addington, 6. Five persons died at Broadstairs, including a cooper, his wife, and child, in Harbour-street. The last case at Ramsgate was that of a carrier at Albert Cottage, King-street, October 11th, his wife and child had died a few days before.

71; 1. *EASTRY; Sandwich.* Pop. 8749.—Chol. 4; Diarr. 12.—Two deaths from cholera (those of a labourer, aged 63, and a labourer's wife, aged 26) occurred in January at the Union workhouse, Estry; a third in the Richborough-road, Woodnesborough, June 7th; and the remaining case in Strand-street, Sandwich, September 29th, a gardener, aged 66. The cases of diarrhœa were, with two exceptions, those of persons in middle and advanced life.

71; 2. —; *Wingham.* Pop. 3005.—Chol. 0; Diarr. 2.—Infants under one year.

71; 3. —; *Eythorn.* Pop. 2099.—Chol. 0; Diarr. 0.

71; 4. —; *Deal.* Pop. 10068.—Chol. 3; Diarr. 10.—Of the three fatal cases of cholera at Deal, 2 occurred in Ark-lane, the first on July 24th, a seaman's wife, aged 24, ill 20 hours, and the other a male, aged 30, September 4th; and one at No. 14 Beach-street, a seaman, aged 22. The deaths from diarrhœa took place chiefly in the autumnal months, 6 were those of children under 5 years.

72; 1. *DOVER; St. James.* Pop. 8626.—Chol. 23; Diarr. 9.—Cholera became fatal in this sub-district, August 3rd, on which day two deaths took place in Colbran-street, Charlton, viz., a widow, aged 72, and a labourer's son, aged 11, after attacks of 12 and 16 hours' duration. The next case occurred August 8th, on board a vessel, viz., a master mariner who was ill 10 hours; two other cases were recorded in August, in Peter-street, and High-street Charlton. In the first week of September, 5 deaths took place at Commercial Quay, including those of 4 children of a police constable; subsequently, the epidemic was chiefly fatal in Paper-alley, Charlton, where 11 persons died in a few days, more than one death in a family having occurred in three instances. Last case, October 9th.

72; 2. —; *St. Mary.* Pop. 10159.—Chol. 48; Diarr. 11. The epidemic broke out in this sub-district at the end of July. The first cases were 4 in one family, that of a stone-mason, between July 31st and August 4th in Stroud-lane, the average duration of the attacks being less than 10 hours. A mariner died in the harbour August 5th; no other case for 7 days. During the last 10 days of August, however, and in September, the epidemic proved fatal to 41 persons. The localities chiefly affected were:

Seven-Star-street, 8 deaths; Beach-street, 7; Middle-row, 7; Spring-place, 5. Last case, October 8th, in Hawkesbury-street, a labourer's wife.

72; 3. *DOVER; Hougham.* Pop. 5738.—Chol. 23; Diarr. 10.—Cholera was not fatal in this sub-district until several days after cases had been recorded in St. James and St. Mary sub-districts. First case August 13th, in Hougham, a baker, aged 49; a second case occurred in the same parish, August 24th. A few days later the epidemic broke out in the Military Barracks, Western Heights, and proved fatal to a Lieutenant, R.A., an army surgeon, and 6 soldiers, a mortality the more remarkable as no deaths were recorded in the barracks at Dover Castle, on the opposite heights. Twelve persons died from cholera in Buckland parish. Last case, a female, aged 70, October 13th. Four deaths from diarrhœa in the Union workhouse.

73; 1. *ELHAM; Folkestone.* Pop. 5737.—Chol. 1; Diarr. 5.—The case of cholera, the only one recorded in the Elham district, comprising the towns of Folkestone and Hythe, with 19 parishes, occurred August 26th, at No. 8 Grove-terrace, a painter, aged 19. It is stated that this person had been suffering from diarrhœa for a week, but had totally neglected it; the case terminated fatally 18 hours after it had assumed a choleraic form. Of the diarrhœa cases, two were those of infants. About 500 convicts were located in the parish of Cheriton in this sub-district.

73; 2. —; *Elham.* Pop. 3995.—Chol. 0; Diarr. 3.—Two deaths from diarrhœa in the Union workhouse (adults) and one, an infant, at Lyminge.

73; 3. —; *Hythe.* Pop. 4930.—Chol. 0; Diarr. 7. Of these cases, 5 were children under 3 years of age.

74; 1. *ROMNEY MARSH; New Romney.* Pop. 2587.—Chol. 1; Diarr. 3.—The death from cholera, the only case reported in this extensive marshy district, comprising 19 parishes, occurred at New Romney, September 6th, a labourer's daughter, aged 15, after an attack of 24 hours' duration.

74; 2. —; *Lydd.* Pop. 2613.—Chol. 0; Diarr. 0.

3. SUSSEX.

75; 1. *RYE; Rye.* Pop. 6049.—Chol. 7. Diarr. 2.—The whole of these deaths took place at Rye. The first fatal case of cholera was recorded in August, a labourer's wife, aged 52; the second, Sept. 12th, a mendicant female, aged 35. The other 5 cases also occurred in Sept., the last on the 27th, viz., a carrier's daughter, aged 30, whose mother, aged 61, and brother, aged 21, had died from cholera a few days before.

75; 2. —; *Beckley.* Pop. 5743.—Chol. 1; Diarr. 4.—The fatal case of cholera which occurred at Brede, Sept. 16th, was that of an Irish woman engaged at hop-picking.

76; 1. *HASTINGS; Ore.* Pop. 3047.—Chol. 2; Diarr. 11.—The whole of these deaths took place in the Union workhouse, Ore; cholera proved fatal to a railway labourer, aged 26, on September 21st, and to a boy, aged 13, the son of a traveller, October 9th. Of the 11 cases of diarrhœa 8 were those of children under 2 years.

76; 2. —; *All Saints.* Pop. 6028.—Chol. 26; Diarr. 9.—After 3 deaths from diarrhœa (attacks of short duration) in July a fatal case of cholera occurred on the 26th, in the tap-room of a beer-shop: a fisherman's widow, aged 45, after 13 hours' illness (*inquest*). On July 29th, a case terminated fatally, in Britt's-lane, after 11 hours' attack, a

labourer's wife aged 37; and on the following day a railway labourer died in Lavender's House. 8 cases were recorded in August, 12 in September, and 5 in October, the last being that of a fisherman's child, on the 9th, at Meadow's Cottages.

76; 3. **HASTINGS; St. Mary in the Castle.** Pop. 5761; Chol. 23; Diarr. 8.—The first fatal case of cholera occurred July 8th, at Undercliff, St. Mary's, a single woman, after 8 hours' attack, preceded by diarrhoea 6 hours. The next case, that of a "navvie," aged 25, occurred July 29th, near the Roman Catholic Grounds, a part of the sub-district in which several other deaths took place. Cholera proved fatal to 7 persons in August, 11 in September, and 3 in October; amongst its victims were 6 railway labourers.

77; 1. **BATTLE; Bexhill.** Pop. 4083.—Chol. 2; Diarr. 1.—Both cases of cholera occurred at Westfield: the former on August 7th, a railway labourer, aged 42 (*inquest*); and the latter on September 8th, a labourer, aged 50, after 20 hours' illness.

77; 2. —; **Ewhurst.** Pop. 2717.—Chol. 0; Diarr. 1.—An infant, aged 10 months.

77; 3. —; **Battle.** Pop. 5236.—Chol. 1; Diarr. 3.—The death from cholera took place at Battle, September 8th, a butcher's widow, aged 58, after 2 days' illness.

78; 1. **EASTBOURNE; Westham.** Pop. 2555.—Chol. 0; Diarr. 0.

78; 2. —; **Eastbourne.** Pop. 5395.—Chol. 2; Diarr. 1.—Both cases of cholera occurred at Eastbourne, the first on September 2nd, a labourer's wife, aged 59, after 15 hours' attack, and the other 5 days' later, a female, aged 8, attacked 20 hours.

79; 1. **HAILSHAM; Hailsham.** Pop. 5761.—Cholera 3; Diarr. 0.—A travelling tinker, aged 60, died from cholera, at Herstmonceux, September 8th, and his wife 2 days after. The third case was that of a schoolmistress, at Hailsham, September 20th.

79; 2. —; **Hellingly.** Pop. 6672.—Chol. 0; Diarr. 7.—Three children and 4 adults.

80; 1. **TICEHURST; Ticehurst.** Pop. 4558.—Chol. 1; Diarr. 8.—The case of cholera which terminated fatally, after 3 days' illness, was recorded in February, a child aged 4. Three deaths from diarrhoea occurred in the Union workhouse.

80; 2. —; **Salehurst.** Pop. 3296.—Chol. 0; Diarr. 0.

80; 3. —; **Wadhurst.** Pop. 4063.—Chol. 7; Diarr. 7.—With one exception, the deaths from cholera took place in Wadhurst parish. The first case was that of a blacksmith, aged 30, 14 hours after being attacked, August 31st; followed by those of 4 railway labourers.

80; 4. —; **Frant.** Pop. 2280.—Chol. 3; Diarr. 2.—The cases of cholera in this sub-district, which is co-extensive with the parish of Frant, were those of railway labourers, two of whom died, September 15th (one from starvation and cholera), and the other on the following day. Of these cases the Registrar says: two were those of railway labourers wandering in a state of destitution; the other from neglected diarrhoea.

81; 1. **UCKFIELD; Rotherfield.** Pop. 5979.—Chol. 3; Diarr. 5.—Two cases of cholera proved fatal at Rotherfield, viz., on July 9th, a labourer's daughter, aged 7 (*inquest*), and another child two days after. The third case occurred at Mayfield, October 12th, a labourer, aged 46, after 48 hours' illness. One of the deaths returned as diarrhoea was from "exhaustion, caused by excessive purging and vomiting, 18 hours" (*inquest*).

81; 2. **UCKFIELD; Framfield.** Pop. 3106.—Chol. 0; Diarr. 1.—An infant.

81; 3. —; **Isfield.** Pop. 2289.—Chol. 0; Diarr. 2.—Persons aged 87 and 33.

81; 4. —; **Maresfield.** Pop. 5067.—Chol. 0; Diarr. 1.—A female aged 69.

82; 1. **EAST GRINSTEAD; Withyham.** Pop. 3210; Chol. 1; Diarr. 3.—The case of cholera occurred at Withyham, August 23rd, a painter's wife, aged 45 (*inquest*).

82; 2. —; **East Grinstead.** Pop. 5452.—Chol. 0; Diarr. 0.

82; 3. —; **Worth.** Pop. 3967.—Chol. 0; Diarr. 1.—An infant.

83; 1. **CUCKFIELD; Lindfield.** Pop. 5035.—Chol. 2; Diarr. 1.—Both deaths from cholera took place at Linfield, that of a shoemaker, aged 39, on September 11th, after an attack of 12 hours' duration; and a labourer's wife, 57, three days later.

83; 2. —; **Cuckfield.** Pop. 6386.—Chol. 1; Diarr. 3.—The case of cholera was that of a labourer, aged 84, at Cowfold, December 4th.

83; 3. —; **Hurstpierpoint.** Pop. 5711.—Chol. 14; Diarr. 5.—The whole of the deaths from cholera took place at Pyecombe (one of 7 parishes forming the sub-district) where the epidemic broke out with great malignancy in June. Its first victims were three children, of labourers, on the 20th, and a fourth on the 22nd. Four cases terminated fatally on August 1st, and 2 on the following day; a shepherd died on the 6th, and his widow on the 10th. The recorded duration of attack was in some instances remarkably short—4, 5, and 6 hours—7 hours being the average.

84; 1. **LEWES; Ditchling.** Pop. 3437.—Chol. 1; Diarr. 1.—The case of cholera was that of a traveller, aged 70, at Street, September 7th, about 10 hours after being attacked.

84; 2. —; **Chailey.** Pop. 4372.—Chol. 0; Diarr. 0.

84; 3. —; **Lewes.** Pop. 9845.—Chol. 1; Diarr. 11.—The death from cholera in this sub-district was that of a carpenter, aged 75, in Spring-gardens, Southover, September 25th. Of the 11 fatal cases of diarrhoea, 7 were those of infants, and 4 of aged persons; 8 occurred in September and October.

84; 4. —; **West Firle.** Pop. 2529.—Chol. 0; Diarr. 1.—A child, aged 8 months.

84; 5. —; **Newhaven.** Pop. 2238.—Chol. 0; Diarr. 6.—Including 4 infants.

84; 6. —; **Rottingdean.** Pop. 2395.—Chol. 0; Diarr. 2.—Both infants.

85; 1. **BRIGHTON; Kemp Town.** Pop. 9453.—Chol. 30; Diarr. 20.—Cholera became fatal in this sub-district at the beginning of August; some weeks, however, after cases had been recorded in the other sub-districts of Brighton. The first death was that of a female, aged 40, at No. 30 Camelford-street; the next a bricklayer, aged 91, August 16th. Five other cases were recorded in August, and the rest in September, the last being on the 25th. Six persons died in Lavender-street (2 at No. 28), 5 in Lodge-buildings, and 3 in Little James'-street.

85; 2. —; **St. Peter.** Pop. 20606.—Chol. 128; Diarr. 38.—The epidemic broke out in this sub-district about the middle of June, the first fatal case of cholera being that of a tailor's daughter, at No. 53 Bread-street, followed by two deaths in Vine Cottages a few days after. From this period it became extremely prevalent; 14 cases terminated fatally in July, 17 in August, 81 in September, and 6 in October. Its greatest intensity was from the

1st to the 19th of September; on the 7th 11 persons died, and 8 on the following day. The last case, a female aged 32, occurred in John-street, October 19th; 31 deaths took place in the workhouse, 7 in Woburn-place (3 at one house, No. 108), 5 in Nottingham-street (3 at No. 62), 5 in Albion-street, 4 in Nelson-street (2 at No. 23), 2 at No. 27 New Dorset-street, 2 at No. 87 Edward-street, &c. The Registrar observes in reference to one of the early cases—that of a fisherman, who died at the Brighton Hospital, on the 28th of June—that the deceased was “from Greenwich, and was taken ill about 12 miles off the coast, being brought on shore in a moribund state.”

85; 3. BRIGHTON; *The Palace*. Pop. 16602.—Chol. 36; Diarr. 28.—The first death from cholera in this sub-district took place June 26th, at No. 29 Artillery-street, a child, aged 5, after 31 hours' illness. The next case was that of a fisherman's daughter, June 30th. The epidemic proved fatal to 10 persons in July, 10 in August, 12 in September, and 2 in October, the last case being that of a railway engineer, in King-street, October 10th. In Suffolk-place 5 persons died (3 at No. 31), 4 in Little Russell-court, and others in Great and Little Russell-street, Russell-square, Clarence-street, West-street, &c.

86; 1. STEYNING; *Shoreham*. Pop. 8526.—Chol. 22; Diarr. 9.—The master of a smack, aged 40, died from cholera in Shoreham Harbour, June 7th, after an attack of 7 hours' duration. No other case was recorded until August 17th, when a labourer's wife, aged 62, was fatally attacked in New Shoreham. Several other deaths took place there in August and September, including 4 in Surrey-street, and 5 (including a mother and 3 children) in White Lion-street. Three persons died in Southwick, one at Sompting, and one in the Union workhouse.

86; 2. —; *Steyning*. Pop. 5827.—Chol. 2; Diarr. 0.—Both cases occurred at Steyning—a cabinetmaker's wife, aged 50, after 14 hours' attack, September 1st, and a female servant, attacked 12 hours, September 7th.

87; 1. HORSHAM; *South Horsham*. Pop. 4228.—Cholera 2; Diarr. 2.—The cases of cholera were those of a carpenter, aged 67, after 20 hours' illness, August 3rd, and a labourer's child, 11 months, September 7th, both at West Grinstead.

87; 2. —; *North Horsham*.—Pop. 9172.—Chol. 2; Diarr. 7.—The first death from cholera was that of a child, aged 2, after 14 hours' attack, at Bishoprick, Horsham, August 16th (*inquest*); and the other a labourer's son, aged 9, in North-street, Horsham, September 3rd.

88; 1. PETWORTH; *Billingshurst*. Pop. 4343.—Chol. 0; Diarr. 0.

88; 2. —; *Petworth*. Pop. 5337.—Chol. 1; Diarr. 0.

89; 1. THAKEHAM; *Pulborough*. Pop. 3651.—Chol. 4; Diarr. 2.—A case of cholera terminated fatally after 7 hours' attack at Hardham, August 28th, a miller's wife, aged 55. The other cases occurred at Pulborough in September; an ostler and two children. Premonitory diarrhoea was recorded in each case.

89; 2. —; *Washington*. Pop. 4114.—Chol. 0; Diarr. 1.

90; 1. WORTHING; *Broadwater*. Pop. 7069.—Chol. 1; Diarr. 4.—The case of cholera was that of a wheelwright, aged 63, at West Tarring, August 26th.

90; 2. —; *Littlehampton*. Pop. 6463.—Chol. 1; Diarr. 1.—The case of cholera occurred

at Leominster, September 12th, a carpenter's wife, aged 54, after 24 hours' illness.

90; 3. WORTHING; *Arundel*. Pop. 4036.—Chol. 6; Diarr. 2.—The whole of these deaths took place in Arundel, the other 7 parishes in the sub-district having escaped the fatal effects of the epidemic. The first case was that of a labourer's wife, aged 52, after 12 hours' attack, June 24th; the next that of a woodman in Maltravers-street, 6 days afterwards. Two cases (those of a brother and sister) occurred in Ship-yard on July 6th, and on August 2nd a hawkier died in the same place.

91; 1. WESTHAMPNETT; *Manhood*. Pop. 3519.—Chol. 1; Diarr. 0.—This case, which occurred at Selsey, August 15th, was that of a labourer, aged 73.

91; 2. —; *Wyke*. Pop. 2820.—Chol. 0; Diarr. 3.—All persons upwards of 70 years of age.

91; 3. —; *Yapton*. Pop. 2351.—Chol. 0; Diarr. 0.

91; 4. —; *Boxgrove*. Pop. 3530.—Chol. 2; Diarr. 8.—With one exception, the whole of these deaths occurred in the workhouse, Westhampnett. The first case of cholera was that of a labourer, aged 67, in the workhouse, August 12th; the other a blacksmith, aged 46, at Oving, August 17th.

91; 5. —; *Singleton*. Pop. 1937.—Chol. 1; Diarr. 2.—The case of cholera occurred at Midlavant, August 25th, a toll collector, aged 69.

92; 1. CHICHESTER; *Sutton*. Pop. 3618.—Chol. 0; Diarr. 0.

92; 2. —; *Chichester*. Pop. 8512.—Chol. 11; Diarr. 27.—The first fatal case of cholera in Chichester was that of a sailor's wife, aged 26, at the Pest House, July 21st, after 5 days' illness. No other case was recorded until August 6th, when a labourer, aged 55, died in High-street, followed by 3 on one day, August 12. Five persons died from cholera in September, and one in October in various parts of the sub-district. Diarrhoea was fatal to children and aged persons.

92; 3. —; *South Bersted*. Pop. 2490.—Chol. 1; Diarr. 2.—The case of cholera occurred at Bognor, July 9th, a labourer, aged 62 (*inquest*).

93; 1. MIDHURST; *Midhurst*. Pop. 5696.—Chol. 0; Diarr. 3.—Two children and a female, aged 55 (at the workhouse).

93; 2. —; *Fernhurst*. Pop. 2859.—Chol. 0; Diarr. 1.—An infant.

93; 3. —; *Harting*. Pop. 4770.—Chol. 1; Diarr. 5.—The case of cholera was that of a butcher, aged 22, at Rogate, October 4th.

94; 1. WESTBOURNE; *Funtington*. Pop. 3032.—Chol. 0; Diarr. 2.—Two children (brother and sister), August 14th and 18th, at Funtington.

94; 2. —; *Westbourne*. Pop. 3637.—Chol. 2; Diarr. 5.—The first case of cholera was that of an agricultural labourer, aged 66, on August 20th, at Chickens-lane, Bosham, where his son had died from “bowel complaint” two days before. The other death took place at the Hermitage, Westbourne, August 26th, a gentleman, aged 62. The Registrar states, respecting these cases, that one was of English and the other of malignant cholera.

4. HAMPSHIRE.

95; 1. HAVANT; *Havant*. Pop. 6643.—Chol. 3; Diarr. 5.—The first case of cholera recorded in this sub-district was that of a mariner, at Havant, August 8th; the second, also that of a mariner, occurred at Emsworth, August 19th; and the remaining case (a bricklayer, aged 67), in the latter parish, September 12th.

96; 1. PORTSEA ISLAND; *Kingston*. Pop. 12170.—Chol. 188; Diarr. 31.—Several deaths from diarrhœa took place in April. The first recorded case of cholera occurred June 3rd, in Fountain-street, a rope-maker, aged 64, after 4 days' illness. No other case was fatal until July 4th, at which time the epidemic broke out with great violence. It continued to prevail during July, August, and part of September, suddenly ceasing to be fatal from the 21st of that month until October 3rd, after which only 7 cases occurred. The period of its greatest intensity was from July 9th to 31st. 104 persons died in the 23 days. At the Union workhouse, 43 deaths from cholera took place, 5 on one day, July 29th, and the mortality in Fountain-street and Nance's-row was very great. The Registrar refers to the latter places in the following terms:—

"I beg to call attention to two localities in my district; the first a place called Fountain-street, which has the main sewer of the parish passing longitudinally under it. During the wet season of last winter the sewer was blown, and the whole place became for a time inundated with its contents. The inhabitants, who are poor, were obliged to wade through an average depth of 14 inches of foul refuse. It was in this low, ill-drained, and ill-ventilated place the dire disease first appeared (on the 3rd of June last, being the first case in the Union), and afterwards continued to make its greatest ravages. The second is a place known as Nance's-row, situated in an open field containing about 20 houses, the inmates being very poor and numerous. At the south end there is a junction of the four parish water-courses of about 6 feet deep, where a vast accumulation of foul stagnant matter becomes formed, and at this spot the cholera in its most fatal and malignant form first appeared, and 22 fell victims in the 7 southern houses, and, strange as it may seem, not a single case occurred in any of the others."

96; 2. —; *Portsea Town*. Pop. 14768.—Chol. 99; Diarr. 25.—The first death from cholera in this sub-district took place on board H.M.S. *Topaz*, in Portsmouth Harbour, July 2nd, a carpenter, R.N. Second case, a smith's wife, July 7th, in Unicorn-street. The epidemic prevailed until October 5th, being at its height in the middle of July. Seven persons died in Catherine-row (4 in one house, No. 8); 7 in White's-row; 4 in Runwell's-court (3 at No. 7); and 4 in Unicorn-street.

96; 3. —; *Portsmouth Town*. Pop. 8893.—Chol. 114; Diarr. 18.—The first case of cholera recorded in this sub-district occurred in East-street, July 6th, a mariner's son, aged 4. Two deaths, one in the same street, took place on the following day; and between July 14th and 21st, cholera proved fatal to 39 persons. The localities which chiefly suffered were Prospect-row, where 13 deaths occurred (3 in each of the houses, Nos. 21 and 22); East-street, 9 deaths; West-street, 8 deaths. The Registrar, in his report for the quarter ending September 30th, thus adverted to the measures taken to arrest the progress of the epidemic:—

"The visitation commenced in this district about the 7th July. As soon as the character of the disease was fully known, the local Boards met, and unanimously agreed to throw aside all consideration of expense, and adopt every plan in their power to stay the ravages of this frightful disorder; and I may venture to assert, that to their energy and promptitude we may attribute the fact that in the early stage of the disease it succumbed to the remedies applied, and, where it had established itself, it was alleviated as far as human means could go."

96; 4. PORTSEA ISLAND; *Landport*. Pop. 17227.—Chol. 167; Diarr. 54.—The epidemic broke out in Landport as well as in the two foregoing sub-districts, in the first week of July. The first fatal cases occurred July 5th, viz., 2 at Landport, the wife and child of a seaman, and one at Victoria-terrace, Kingston. Cholera prevailed during July, August, and September, being most intense in the week ending July 19th, during which no less than 65 persons fell victims to its attacks. Several instances of mortality in the same families are presented in the registers:—A shoe-maker, aged 43, and 3 of his children, died on July 14th; and another child, two days later, all at No. 1 Hyde-street. A mariner, his wife, and 2 children, at No. 50 Montague-street; the wife and 2 children of a pensioner, in Brunswick-street, where 7 other deaths occurred.

97; 1. ALVERSTOKE; *Alverstoke*. Pop. 13510.—Chol. 126; Diarr. 20.—Cholera had been fatal in Gosport at the close of 1848, and a case was recorded, with several deaths from diarrhœa, in February. On June 30th, the child of a soldier died of "cholera infantum," but no other cases were recorded until July 6th, on which day, almost simultaneously with the outbreak at Portsmouth, 4 cases occurred in the sub-district, viz., a driver of flies, at Alverstoke; a naval pensioner, and a rope-maker's wife, at Gosport; and a warder on board the Invalid ship for Convicts, in Portsmouth Harbour. As at Portsmouth, the greatest mortality occurred in the second and third weeks of July; 81 deaths were recorded in that month, 17 in August, and 22 in September. Last case, October 6th. In Haslar Hospital, 13 deaths took place, and 18 (chiefly convicts) on board the Invalid receiving ships in Portsmouth Harbour.

98; 1. FAREHAM; *Fareham*. Pop. 9271.—Chol. 9; Diarr. 9.—The first death from cholera took place at the gas-works, Fareham, July 5th, the manager of the works, aged 62. No other case occurred until July 19th, when a female, aged 33, died at a lodging-house in Fareham, after an attack of 7 hours. Of the 18 deaths, 12 took place at Fareham.

98; 2. —; *Titchfield*. Pop. 5328.—Chol. 2; Diarr. 5.—After 3 cases; described as spasmodic diarrhœa, one at Hook, August 19th, and 2 at Sarisbury, September 4th and 9th. A death from cholera was recorded at the latter place, September 11th, a labourer's wife, aged 49, and another on the same day, at Warsash.

99; 1. ISLE OF WIGHT; *Cowes*. Pop. 7665.—Chol. 21; Diarr. 10.—The first death from cholera in the Cowes sub-district was that of a sweep's son, aged 3, after 3 days' illness, in Cross-street, West Cowes, July 4th; another death took place in the same street, July 11th, a mariner's daughter; and a third (the brother of the first child) 2 days after. The 3 next cases were in Whippingham parish, 2 being in Cross-lane, where other deaths were subsequently recorded. Last case, November 2nd, at No. 25 Cross-street, West Cowes. Of the 31 deaths from cholera and diarrhœa, 15 took place at West Cowes, 6 at East Cowes, 9 in Whippingham parish, and one at Parkhurst Prison.

99; 2. —; *Newport*. Pop. 12067.—Chol. 70; Diarr. 15.—A female, aged 50, died from cholera, after an attack of 4 days' duration, March 28th, at Nodehill, Newport. No other case recorded until July 10th, when an attorney's clerk died at the House of Industry, Carisbrooke parish. The next death took place, July 14th, in Tontine-yard, Newport, and from that period to the first week in Sep-

tember the epidemic was very fatal in the sub-district. 18 deaths occurred in the House of Industry, 13 in other parts of Carisbrooke parish, 5 in Arreton parish, and the rest chiefly in Newport, including 8 in Pyle-street.

99; 3. ISLE OF WIGHT; *Ryde*. Pop. 11795.—Chol. 55; Diarr. 9.—The epidemic appeared in Ryde nearly at the same time as in the Cowes sub-district. First case, July 8th, a fisherman, after diarrhoea 6 days and cholera one day. On July 11th, two deaths occurred, and on the 12th and 13th, each three. Cholera prevailed in Ryde until August 15th, after which day only one case (on September 17th) was recorded. Two persons (a labourer and his wife) died in Oakfield-street, St. Helen's, 2 in Binstead, and 8 (including 3 children of a cabinetmaker, whose father died also of cholera in the infirmary) in Union-road, Ryde. No cases were recorded in Shanklin, Brading, or Yaverland parishes.

99; 4. —; *Godshill*. Pop. 5990.—Chol. 4; Diarr. 1.—First case, July 28th, in Whitwell parish, a labourer's son, aged 5. The other cases occurred in September, viz., on the 4th at Blackgang, a draper's wife; on the 8th, at Berryl, a yeoman's wife; and on the 22nd, at Chale, a carpenter.

99; 5. —; *Calbourne*. Pop. 5033.—Chol. 2; Diarr. 1.—The cases of cholera were as follows:—At Wellon, Shalfleet, July 30th, a labourer, aged 71, after 16 hours' attack; and at Yarmouth, August 4th, also a labourer, attacked 12 hours. Scarlatina prevailed in this sub-district throughout the quarter ending September 30th.

100; 1. LYMINGTON; *Lymington*. Pop. 7629.—Chol. 0; Diarr. 6.

100; 2. —; *Milford*. Pop. 3849.—Chol. 0; Diarr. 2.—One of these cases, which occurred at Pennington, September 25th, was described as "vomiting and diarrhoea."

101; 1. CHRISTCHURCH; *Christchurch*. Pop. 7838.—Chol. 0; Diarr. 0.

102; 1. RINGWOOD; *Ringwood*. Pop. 5305.—Chol. 0; Diarr. 2.—The Registrar observes in his return for the quarter ending September 30th, "The deaths are considerably below the average, which no doubt may be attributed to the exertions of the Board of Guardians and their clerk, in causing nuisances to be removed, drains cleansed, and, in many instances, covered over. There has been no case of cholera."

103; 1. FORDINGBRIDGE; *Fordingbridge*. Pop. 6705.—Chol. 9; Diarr. 1.—First recorded case of cholera, July 20th, in Martin parish—a farmer aged 28; followed by 7 deaths in Fordingbridge, 2 being in the Union workhouse. The last case occurred at Martin, September 8th. 7 males and 2 females, all adults, died from cholera.

104; 1. NEW FOREST; *Lyndhurst*. Pop. 3483.—Chol. 0; Diarr. 3.

104; 2. —; *Fawley*. Pop. 4358.—Chol. 2; Diarr. 6.—Two deaths from diarrhoea took place at Fawley, in July, after short attacks, and on August 30th, a labourer's son died of cholera, 3 hours. The second case occurred at Hardley, September 8th.

104; 3. —; *Eling*. Pop. 5404.—Chol. 4; Diarr. 7.—First case of cholera July 8th, in Biddlesalme, Eling, a carpenter, 62. The other cases occurred in the same parish, including two at Longdown.

105; 1. SOUTHAMPTON; *Southampton*. Pop. 27103.—Chol. 240; Diarr. 53.—The first death from cholera in Southampton was that of a painter's wife, aged 36, after 12 hours' attack, June 30th. The next case occurred July 2nd, and followed by 4 on the 3rd. The epidemic became very prevalent from this

time; 11 persons died on July 12th, and on several subsequent days it proved fatal to 7 or 8 persons, after attacks frequently of a few hours' duration. In July 115 deaths from cholera were recorded; in August, 104. The epidemic began to abate towards the end of the latter month, only 20 cases occurred in September, 6 being on one day, the 6th. 2 persons died September 21st, after which day cholera ceased to be fatal in the district. More than one death occurred in the same house in several instances. At No. 16 Northam-street, the wife and 2 children of a butcher; at No. 3 Queen-street, a stonemason and daughter; at No. 3 Winchester-terrace, a porter and wife.

106; 1. SOUTH STONEHAM; *St. Mary Extra*. Pop. 2746.—Chol. 14; Diarr. 5.—A death from cholera took place at Hamble, July 5th, a fishdealer's wife, aged 70. The other 13 cases occurred at Itchen (a village on the river of that name), where 2 persons died on July 23rd, and the rest between that day and August 19th. 9 deaths were in the families of fishermen.

106; 2. —; *South Stoneham*. Pop. 4667.—Chol. 8; Diarr. 7.—The first case was that of a blacksmith's wife, aged 37, at Botley, May 24th; the second occurred on June 29th, in the Union workhouse, where another death from cholera, and 2 from diarrhoea, took place.

106; 3. —; *Milbrook*. Pop. 5280.—Chol. 12; Diarr. 11.—The 12 deaths from cholera, and 10 of the deaths from diarrhoea took place at Milbrook. First case July 11, a female aged 20—one death on the following day and 2 on the 13th. The last recorded case occurred after an interval of 21 days, on September 19th.

107; 1. ROMSEY; *Romsey*. Pop. 6305.—Chol. 13; Diarr. 8.—The first death from cholera in the Romsey district took place July 6th, in Banning-street, Romsey Extra, a shoemaker's son, aged 7 (*inquest*): 8 deaths were subsequently recorded in the same street. There were 11 deaths from cholera in July and 2 in August, 8 having occurred in Romsey Extra and 5 in Romsey Infra.

107; 2. —; *Mitchelmersh*. Pop. 4083.—Chol. 2; Diarr. 4.—Both deaths from cholera took place in East Dean on the same day, August 10th, labourer's widows, aged 70 and 30 respectively.

108; 1. STOCKBRIDGE; *Broughton*. Pop. 3549.—Chol. 2; Diarr. 0.—The cases of cholera occurred as follows:—At West Tytherly, January 24th a shopkeeper's wife, aged 43, after 16 hours' attack (*inquest*); and at Broughton, August 7th, a carpenter, aged 92.

108; 2. —; *Stockbridge*. Pop. 3545.—Chol. 0; Diarr. 1.

109; 1. WINCHESTER; *Mitcheldever*. Pop. 2602.—Chol. 0; Diarr. 1.

109; 2. —; *The Worthys*. Pop. 2751.—Chol. 0; Diarr. 1.

109; 3. —; *Winchester*. Pop. 11186. Chol. 35; Diarr. 19.—The first death from cholera in Winchester was that of a soldier in the Barrack hospital on July 8th. 2 fatal cases occurred on the following day, and 2 others July 15th and 16th; from the latter day the epidemic ceased to be fatal until August 1st. It prevailed although not severely during the whole of August and part of September. 6 cases of cholera occurred in the County hospital, and 6 described as diarrhoea in the Union workhouse.

109; 4. —; *Twyford*. Pop. 3913.—Chol. 3; Diarr. 2.—Two of the cases of cholera occurred at Compton, August 4th and 7th, viz., a shepherd, aged 47; and a labourer's widow, aged 72; the third at Bishop's Stoke, September 13th.

109; 5. WINCHESTER; *Hursley*. Pop. 2592.—Chol. 4; Diarr. 6.—Of the 4 deaths from cholera, 3 took place in Otterbourne on July 9th (a baker's child), August 16th and 19th. The remaining case occurred at Hursley, August 12th.

110; 1. DROXFORD; *Bishop's Waltham*. Pop. 3199.—Chol. 0; Diarr. 4.

110; 2. —; *Westmeon*. Pop. 2117.—Chol. 1; Diarr. 2.—The case of cholera occurred at Warnford, March 2nd, a smith's son, aged 3.

110; 3. —; *Hambledon*. Pop. 4965.—Chol. 0; Diarr. 0.

111; 1. CATHERINGTON; *Horndean*. Pop. 2356.—Chol. 2; Diarr. 0.—These cases, which both occurred at Chalton, were those of a labourer's wife, aged 49, after 24 hours' attack, August 3rd; and a labourer, 63, after 36 hours' illness, August 10th.

112; 1. PETERSFIELD; *Petersfield*. Pop. 4726.—Chol. 3; Diarr. 3.—Two cases of cholera were recorded in January, viz.: on the 10th, a miller's daughter, aged 6, and on the 30th, a labourer's infant; the third case that of a thatcher's child, occurred March 16th. All in Sheet tithing.

112; 2. —; *Eastmeon*. Pop. 2735.—Chol. 0; Diarr. 6.—Of these deaths 5 took place in August; the whole occurred in Eastmeon, and were returned as "purging," generally followed by "collapse." In returning these cases the Registrar observes: "several deaths were supposed to be from cholera, but were certified some as from colic, and some from purging, by the medical officer of the Union."

113; 1. ALRESFORD; *Ropley*. Pop. 3430.—Chol. 0; Diarr. 0.

113; 2. —; *Alresford*. Pop. 3664.—Chol. 0; Diarr. 0.

114; 1. ALTON; *Alton*. Pop. 6501.—Chol. 9; Diarr. 6.—The first death from cholera took place July 13th, in High-street, Alton, a brewer, aged 60, after an attack of 11 hours' duration. All the deaths from cholera occurred in July, and in Alton parish, including 3 cases at the Union workhouse, and 3 in New Buildings.

114; 2. —; *Binstead*. Pop. 4798.—Chol. 0; Diarr. 0.

115; 1. HARTLEY WINTNEY; *Odiham*. ——— Pop. 5972.—Chol. 0; Diarr. 0.

115; 2. —; *Hartley Wintney*. Pop. 4750.—Chol. 0; Diarr. 1.

116; 1. BASINGSTOKE; *Basingstoke*. Pop. 7303.—Chol. 2; Diarr. 3.—These deaths from cholera took place in Basingstoke, July 21st, a carpenter, aged 39; and September 11th, a draper's wife, aged 43.

116; 2. —; *Bramley*. Pop. 4665.—Chol. 0; Diarr. 4.

116; 3. —; *Dummer*. Pop. 4659.—Chol. 0; Diarr. 3.

117; 1. WHITCHURCH; *Whitchurch*. Pop. 5495.—Chol. 1; Diarr. 3.—The case of cholera occurred at Whitchurch, October 3rd, a sawyer, aged 50.

118; 1. ANDOVER; *Longparish*. Pop. 4234.—Chol. 2; Diarr. 2.—Both cases of cholera occurred at Abbot's Ann, July 21st and 23rd, and were those of a labourer's child, aged 2, and a labourer's wife, aged 38. No cases were recorded in the other seven parishes of the sub-district.

118; 2. —; *Ludgershall*. Pop. 3780.—Chol. 0; Diarr. 0.

118; 3. —; *Andover*. Pop. 6101.—Chol. 7; Diarr. 0.—Of the 7 deaths from cholera, 6 took place in London-street, Andover; the first, on August 12th, a labourer, aged 18, after three days' illness. The last case recorded in the district occurred in the London-road, August 24th.

118; 4. ANDOVER; *Hurstborne Tarrant*. Pop. 2883.—Chol. 0; Diarr. 0.

119; 1. KINGSCLEERE; *Highclere*. Pop. 3237.—Chol. 1; Diarr. 1.—The case of cholera was that of a labourer's wife, aged 57, after 22 hours' attack, at Highclere, July 4th.

119; 2. —; *Kingsclere*. Pop. 5225.—Chol. 4; Diarr. 3.—The first cases of cholera in the district were two at the Union workhouse, Kingsclere, viz.: May 28th, a labourer, aged 31, and June 1st, another labourer, aged 75. Two other persons died in Kingsclere, June 11th and 14th.

5. BERKSHIRE.

120; 1. NEWBURY; *Thatcham*. Pop. 5240.—Chol. 8; Diarr. 1.—Half the deaths from cholera took place in Thatcham parish, and the others at Greenham Mills, Greenham: all between August 7th and 21st: a labourer's wife, aged 37, was the first person to whom the epidemic proved fatal.

120; 2. —; *Newbury*. Pop. 7366.—Chol. 7; Diarr. 10.—The first cases of cholera in this sub-district, occurred in Northcroft-lane, Newbury, August 2nd (a ragman, aged 48), 5th, and 6th; followed by four deaths in the Union workhouse, from August 11th—13th.

120; 3. —; *Speen*. Pop. 7358.—Chol. 12; Diarr. 3.—The 12 deaths from cholera took place in Speen parish, in the ten days, August 16th—25th: the first case being that of a male, aged 83. The epidemic proved fatal to two persons on the 17th, and to three on the 23rd. All the cases of cholera in the Newbury district occurred between August 2nd and 25th.

121; 1. HUNGERFORD; *Kintbury*. Pop. 4439.—Chol. 0; Diarr. 2.

121; 2. —; *Hungerford*. Pop. 9688.—Chol. 1; Diarr. 15.—The case of cholera occurred January 20th, in the Union workhouse, where seven persons died from diarrhoea. Six other deaths from diarrhoea took place in Ramsbury parish.

121; 3. —; *Lambourn*. Pop. 5769.—Chol. 0; Diarr. 3.

122; 1. FARINGDON; *Shrivenham*. Pop. 4718.—Chol. 0; Diarr. 0.

122; 2. —; *Faringdon*. Pop. 6030.—Chol. 1; Diarr. 1.—The case of cholera was that of a baker's wife, at Lechlade, June 30th.

122; 3. —; *Buckland*. Pop. 4835.—Chol. 0; Diarr. 1.

123; 1. ABINGDON; *Fyfield*. Pop. 1743.—Chol. 0; Diarr. 0.

123; 2. —; *Abingdon*. Pop. 8104.—Chol. 30; Diarr. 19.—The first death from cholera, in Abingdon, that of a carrier's son, aged 8, on July 17th, was accelerated, in the opinion of the coroner's jury, by the "effluvium arising from putrid matter lying about the premises." In August and September the epidemic was prevalent and fatal in Ock-street, Otwell-lane, West-street, Helen-street, and other parts of Abingdon. The death of a labourer, August 2nd, was referred by a jury, to "cholera, accelerated by the putrid state of the waters of a ditch." A child, aged 5, died after being attacked eight hours, "without premonitory symptoms;" the mother died the next day, having been ill from diarrhoea three days, and cholera 14 hours.

123; 3. —; *Cumnor*. Pop. 2235.—Chol. 3; Diarr. 3.—The three cases of cholera occurred at Cumnor, August 17th, a boy, aged 12; September 3rd, a labourer, aged 53, and September 10th, a labourer's widow, aged 60.

123; 4. ABINGDON; *Nuneham Courtney*. Pop. 2981.—Chol. 0; Diarr. 4.

123; 5. —; *Sutton Courtney*. Pop. 3717.—Chol. 1; Diarr. 0.—This case was that of a confectioner, aged 30, at Sutton Wick, August 26th.

124; 1. WANTAGE; *Wantage*. Pop. 7141.—Chol. 0; Diarr. 9.—Of these cases, 5 were those of infants, and 3 of persons upwards of 60 years of age.

124; 2. —; *Ilsley*. Pop. 5365.—Chol. 0; Diarr. 1.—A death described as from "cholera," had occurred at East Ilsley, in this sub-district, in October 1848.

124; 3. —; *Hendred*. Pop. 4326.—Chol. 0; Diarr. 0.

125; 1. WALLINGFORD; *Cholsey*. Pop. 6037.—Chol. 0; Diarr. 5.

125; 2. —; *Wallingford*. Pop. 7913.—Chol. 0; Diarr. 2.

126; 1. BRADFELD; *Bucklebury*. Pop. 5682.—Chol. 1; Diarr. 6.—The case of cholera occurred at Bradfield, August 27, a female, aged 68.

126; 2. —; *Mortimer*. Pop. 4757.—Chol. 2; Diarr. 2.—The cases of cholera were those of a labourer, aged 22, after 18 hours' illness, on June 5th (*inquest*); and a child, aged 7, June 14th; both at Burghfield.

126; 3. —; *Tilehurst*. Pop. 5116.—Chol. 0; Diarr. 0.

127; 1. READING; *St. Mary*. Pop. 8431.—Chol. 5; Diarr. 20.—The first recorded cases of cholera in this sub-district occurred on September 1st and 2nd, the wife and child of a dyer, in Sun-street; these deaths were followed by others in Coley-street, Coley-terrace, and a third in Gun-street, on the 6th, 8th, and 9th of September.

127; 2. —; *St. Lawrence*. Pop. 4285.—Chol. 2; Diarr. 9.—The cases of cholera occurred at Blake's Wharf, June 15th, and at Oxford-street, July 24th, both adult females.

127; 3. —; *St. Giles*. Pop. 6805.—Chol. 10; Diarr. 15.—The epidemic appeared in this sub-district at the close of 1848, and in January 1849. From January 1st—10th, 5 persons died from cholera and 3 from diarrhoea, including 5 members of one family, in Silver-street; but no other case of cholera occurred until July 25th, on which day a gardener,

aged 74, died in Thames-street, and 4 other persons subsequently, in different parts of Reading.

128; 1. WOKINGHAM; *Wokingham*. Pop. 6679.—Chol. 1; Diarr. 1.—The case of cholera was that of a carpenter, aged 38, in Wokingham parish, July 30th.

128; 2. —; *Wargrave*. Pop. 6124.—Chol. 0; Diarr. 0.

129; 1. COOKHAM; *Bray*. Pop. 5604.—Chol. 3; Diarr. 6.—The first case of cholera, which occurred on September 19th, in Bridge-street, Maidenhead, was accelerated, according to the verdict of the coroner's jury, by the "bad state of the premises occupied by deceased, and by his intemperate habits." The other two deaths also took place in Maidenhead.

129; 2. —; *Cookham*. Pop. 5454.—Chol. 5; Diarr. 5.—The whole of the deaths from cholera occurred in the part of Maidenhead situate in Cookham parish, between August 28th and September 14th. The first case, that of a labourer's child, was pronounced by a jury to have been one of "cholera, accelerated by effluvia arising from the bad state of the drains near the dwelling."

130; 1. EASTHAMPSTEAD; *Bracknell*. Pop. 5364.—Chol. 0; Diarr. 0.

130; 2. —; *Sandhurst*. Pop. 562.—Chol. 0; Diarr. 2.

131; 1. WINDSOR; *Egham*. Pop. 7568.—Chol. 9; Diarr. 1.—The whole of the deaths from cholera in this sub-district, which comprises Egham, Thorpe, Sunninghill, and part of old Windsor parishes, took place in Egham. The first case on July 14th, was that of a labourer's daughter, aged 23; followed by 6 deaths in that month, and 2 in August. Last case, a waterman, August 25th.

131; 2. —; *Windsor*. Pop. 12936.—Chol. 49; Diarr. 3.—The first death from cholera took place at the Union workhouse, July 27th, a female, aged 44. The next case occurred August 11th, in Bierlane, Clewer where 10 persons died in August, 4 in one house (No. 21), one in September, and 5 in October. In Garden-court, in the same parish, the cholera proved fatal to 14 persons, a mother and 2 children in one house, No. 9, from September 22nd to October 9th. Nine persons died in New Windsor, and 6 in the workhouse.

III. SOUTH MIDLAND DIVISION.

6. MIDDLESEX (PART OF).

132; 1. STAINES; *Sunbury*. Pop. 5713.—Chol. 4; Diarr. 7.—The first fatal case of cholera took place August 17th, at Hanworth, in a labourer, aged 31. 3 deaths happened at Feltham; the last was the death of a labourer, aged 36, September 8th.

132; 2. —; *Staines*. Pop. 7505.—Chol. 37; Diarr. 13.—A case of cholera occurred on January 16th, a labourer's wife, who died after 4 days' illness, aged 48; another case on January 23rd; and a third, May 8th. No other case occurred until July 2nd, at Staines, in a fishmonger's son, aged 13; many other cases followed. Out of the total cases of cholera 15 happened in Staines and 14 in Stanwell, 4 of which were in the Union workhouse. The last case was at Staines, September 27th, a labourer, aged 68.

133; 1. UXBRIDGE; *Hillingdon*. 7221.—

Chol. 16; Diarr. 5.—Cholera was first fatal in this sub-district July 16th, to a labourer's wife, aged 41, died in 27 hours, at Uxbridge Moor. Four fatal cases occurred in the Union workhouse, 4 at Yeurley, 2 at Hillingdon-end. The last case was that of a labourer, aged 25.

133; 2. UXBRIDGE; *Uxbridge*. Pop. 5131.—Chol. 8; Diarr. 4.—The first case recorded in this sub-district was on August 10th, in Uxbridge, a labourer's wife, aged 45, who died after 12 hours' illness. Ickenham furnished 2 more. Last case in Ickenham, a labourer, aged 20.

133; 3. —; *Hayes*. Pop. 6527.—Chol. 16; Diarr. 12.—Cholera was first fatal in this sub-district August 5th, at Woolpack Botwell, to a labourer, aged 21, after 2 days' illness; Common Ruislip furnished 12 cases. Last case at Hayes Town, a labourer's son, aged 5.

134; 1. BRENTFORD; *Isleworth*. Pop. 10685.—

Chol. 21; Diarr. 6.—Cholera was first fatal in this sub-district on May 26th, in the workhouse, to a female, aged 25, a labourer's widow. Eight other cases occurred in the workhouse between June and September, 3 in Brentford-end, 2 in North Hyde Heston; other parts of the district were attacked, but less severely. The disease disappeared August 3rd, the last case being in a labourer's wife, aged 30.

134; 2. BRENTFORD; *Twickenham*. Pop. 5208.—Chol. 14; Diarr. 4.—The first case of cholera in this sub-district occurred on July 29th: a spinster, aged 40, died after 21 hours' illness (ROST. MORT.), in the London-road; 5 cases were recorded in Bell-lane, 3 in Church-alley (one of them in the Alms-room), 1 in King-street, 1 in Church-street, 1 in Sion-row, 1 in Whitton, 1 in Swan-alley; this was the last case, a gardener's widow, aged 43.

134; 3. —; *Brentford*. Pop. 10581.—Chol. 110; Diarr. 17.—Cholera appeared in this sub-district June 5th, when a lighterman's daughter, aged 22, died in New Brentford; the following cases also occurred in New Brentford;—a labourer's daughter, aged 13; a labourer's son, aged 6; a labourer's daughter, aged 15; a bargeman's son, aged 1; a chairmaker's daughter, aged 13; a labourer, aged 26; a hawker, aged 26 (female); a shoemaker, aged 35; a labourer's son, aged 7; a labourer's son, aged 4; a post-boy's wife, aged 38; a labourer's daughter, aged 2; a bargeman, aged 44; a lock-house keeper's wife, aged 36; a lighterman's son, aged 2; a female servant, aged 22; a cabinet-maker, aged 62; a nurse, aged 45; a waterman's wife, aged 46; a hoop-bender's son, aged 12. Ealing furnished 3 fatal cases, Old Brentford, 86. 14 of the diarrhoea cases occurred to children mostly under one year of age. Last case of cholera was recorded September 23rd.

134; 4. —; *Chiswick*. Pop. 5811.—Chol. 33; Diarr. 2.—The first fatal case of cholera in this sub-district occurred July 5th, in a policeman, aged 33, at 1 Strand-on-the-Green; 14 other cases were recorded in the same locality; during the epidemic 5 were fatal in Bennett-street, 2 in James-street; other parts of the sub-district were slightly visited; last case, October 9th, a gentleman, at Little Sutton House.

134; 5. —; *Acton*. Pop. 4768.—Chol. 6; Diarr. 10.—The first fatal case of cholera in this sub-district occurred August 14th, to a builder, aged 72, who died after 30 hours' illness; 5 other fatal cases were recorded in September, all in Acton; 8 of the diarrhoea cases were of persons aged 40, and upwards. Last case of cholera September 13th, a sawyer's widow, aged 73.

135; 1. HENDON; *Harrow*.—Pop. 5958.—Chol. 2; Diarr. 0.—Two fatal cases of cholera were recorded in this sub-district, the first August 19th, a carpenter, aged 63, died after 24 hours' illness, at Roxeth; the 2nd case August 25th, at Roxeth, a carpenter's widow, aged 62.

135; 2. —; *Edgware*. Pop. 3202.—Chol. 2; Diarr. 2.—Cholera destroyed 2 persons in this sub-district: the first on July 21st, a labourer's widow, 28 years of age, in 36 hours, at Little Stanmore; second, on August 26th, a farmer, aged 64.

135; 3. —; *Willesden*. Pop. 2957.—Chol. 7; Diarr. 6.—The first fatal case of cholera in this sub-district occurred July 22nd, in a policeman's son, aged one, at 11 Gloster-gardens. Carpenters' Farm, 3 Morris-place, 7 Gloster-gardens, Harlesdon, each supplied a fatal case; 2 were fatal in Regent-street, in which the last case occurred on September 14th.

135; 4. HENDON; *Hendon*. Pop. 3327.—Chol. 3; Diarr. 6.—Cholera first proved fatal in this sub-district, July 17th, in a labourer, aged 24 (*inquest*). Second case, September 16th, Barnet-gate Farm, in a farmer; last case, September 17th, at Cricklewood, in a labourer, 36 years of age.

136; 1. BARNET; *South Mims*. Pop. 4749.—Chol. 4; Diarr. 11.—September 7th was the first day on which a fatal case of cholera was recorded, in a railway labourer, aged 40, died after an attack of 20 hours, at New Road; second case, September 9th, a brickmaker, aged 30; third case, a brickmaker's daughter, aged 6; fourth and last case, a brickmoulder, aged 22. These 3 cases occurred at the railway, Brickfield, near Potters' Bar.

136; 2. —; *Barnet*. Pop. 4497.—Chol. 13; Diarr. 13.—Out of 13 cholera cases recorded in this sub-district 7 occurred at Under Hill, Chipping Barnet, and 6 in the workhouse; other parts were slightly visited. The first case happened August 7th, at Under Hill, a bricklayer's daughter, aged 3 years, after 12 hours' illness; last case in Union workhouse, a labourer, 30 years.

136; 3. —; *Finchley*. Pop. 4513.—Chol. 11; Diarr. 5.—The first fatal case of cholera recorded in this sub-district was that of a labourer, aged 24, on July 28th, at Green-lane Cottage, after 19½ hours' illness; 2 cases occurred at Whetstone. Each of the following places lost an inhabitant—Lodge-lane (a place near the White Lion), East-end; Russell's-cottages; Hollick-wood; Field-cottages; Church-end, and a place near Black Horse-lane; this was the last case, a brickmaker, aged 30, October 9th.

137; 1. EDMONTON; *Hornsey*. Pop. 5985.—Chol. 5; Diarr. 4.—The first case of cholera in this sub-district occurred July 12th at 12 Victoria-grove, a baker's daughter, aged 3 months, after 12 hours' illness. The next case at Crouch End, July 28th, followed by another death at the Nightingale Inn. The last case at the foot of Muswell Hill, September 14th, a smith.

137; 2. —; *Tottenham*. Pop. 8584.—Chol. 13; Diarr. 12.—Cholera was first fatal in this sub-district March 12th, at 8 Grove-place, in a spinster, aged 80, after an illness of 30 hours. No other case was recorded until August 20th, when a coachman's daughter, aged 10 months, died in 40 hours, in White-hart-lane. High-street; King-street; 4 Union-row; 3 Church-road; West Green; 3 Wagon-Horse-lane; and Scotland-green, were likewise visited: at 2 Hope-place, 2 brothers died—but one was from diarrhoea. The last case occurred October 5th, in the Cholera Hospital, a coachman's son, aged 2 years.

137; 3. —; *Edmonton*. Pop. 9027.—Chol. 41; Diarr. 25.—The first fatal attack of cholera in this sub-district occurred on January 24th, in the Union workhouse, when a widow, aged 76, died after 3 days and 6 hours' illness; several other cases of the disease proved fatal in the workhouse between that date and February 6th, when it subsided; but returned with renewed violence August 20th, attacking fatally a butcher, aged 39, in Church-street, who died after 28 hours' illness; on the same day a labourer's son, died after 7 hours' illness, at 2 Claremont-street. The disease was at its height between August 25th and September 27th. The Chase, Southgate, furnished 18 victims. In the workhouse 8 more deaths took place. The epidemic finally disappeared October 3rd, when a labourer, 58, died at the workhouse.

137; 4. —; *Enfield*. Pop. 9367.—Chol. 25; Diarr. 13.—The first fatal case of cholera in this

sub-district was recorded July 26th, at Enfield Highway, in a female, aged 60, a widow, after 27 hours' illness; 3 cases occurred in Ponder's-end; 3 in Carterhatch-lane; 3 in Enfield Highway; 4 in Hollybush; many other parts of the sub-district were visited. The last case was in a boy, aged 5, in the Union workhouse.

137; 5. EDMONTON; *Waltham Abbey*. Pop. 4177.—Chol. 6; Diarr. 6.—A cholera case was recorded January 22nd, in Green-yard, a labourer, aged 33, after 5 days' illness. No other fatal case happened until August 30th, when a labourer's daughter died at Back Way, after 4 days' illness. Another case occurred at Romeland, September 7th, in a labourer's daughter, aged 12 years, after 12 hours' illness; this was followed by 2 cases on September 8th, one in Highbridge-street, a female, aged 10 years; and one in Sewardstone-street, a baker, aged 42 years. Cholera disappeared September 14th, when it was fatal to a child, aged 3 months, at Holyfield.

137; 6. —; *Cheshunt*. Pop. 5402.—Chol. 11; Diarr. 4.—Cholera was fatal in this sub-district at the travellers' lodging house, August 5th, in a labourer, aged 30, who died in 24 hours. Broadfield Farm, Waltham Cross, and Twinford, each furnished a fatal case. In Cheshunt-street, 6 cases were recorded. The last death occurred October 3rd, in a painter, aged 40 years.

7. HERTFORDSHIRE.

138; 1. WARE; *Hoddesdon*. Pop. 4431.—Chol. 6; Diarr. 4.—A case of cholera occurred January 8th, a labourer's son, aged 9, after an attack of 6 days, at Wormley. At Great Amwell 4 cases terminated fatally; the first, August 26th, a gardener's wife, aged 42, after 24 hours' illness; the last, a female, aged 3, September 21st.

Pop. 10430.—Chol. 8; Diarr. 7.—First case occurred January 3rd, at Childwick Hedge's Farm, St. Michael's, a farmer's son, aged 17 weeks; the next case was at Poundfield, St. Michael's, January 10th, a servant, aged 20. No other fatal case occurred until June 6th, when an agricultural labourer died, aged 53, at Aps-pond, St. Michael's. The last case occurred September 8th, at Chequer's-street, an engine-driver, aged 34.

145; 1. WATFORD; *Bushey*. Pop. 4337.—Chol. 3; Diarr. 0.—First case August 22nd, at Bushey Heath, Bushey, a bricklayer, aged 49. The next case occurred at Back-lane, Bushey, September 23rd, a widow, aged 57, after an attack of 24 hours' duration. The other case occurred October 23rd, at Chalk Hill, Bushey, a labourer's son, aged 8.

145; 2. **WATFORD**; *Watford*. Pop. 5989.—Chol. 23; Diarr. 5.—The first fatal case of cholera, August 26th, at Butcher's-yard, a laundress, aged 52. The next 4 cases occurred in High-street, all labourers. Of the 23 cases, 9 occurred in High-street, 6 at the Silk Mills, and 2 in the Union workhouse. Last case took place October 27th, at the Silk Mills, a silk thrower's daughter, aged 6, after an attack of 12 hours' duration.

145; 3. —; *Rickmansworth*. Pop. 5568.—Chol. 19; Diarr. 6.—The whole of these cases occurred at Rickmansworth. The first death took place July 30th, a labourer, aged 28, after an attack of 24 hours' duration. The next, August 16th, a labourer's wife, aged 37, attacked 8 hours. Of the 19 cases of cholera, 13 occurred during the month of September. Last case occurred October 10th, a labourer, aged 49.

145; 4. —; *Abbot's Langley*. Pop. 2115.—Chol. 0; Diarr. 0.

146; 1. **HEMEL HEMPSTEAD**; *King's Langley*. Pop. 2996.—Chol. 0; Diarr. 2.

146; 2. —; *Hemel Hempstead*. Pop. 5901.—Chol. 21; Diarr. 9.—Five cases of cholera occurred in January; 2 in Hemel Hempstead, one in the workhouse, one in Marlowes, and one in Queen-street. The next case happened on September 14th (a labourer's daughter, aged 12, after 12 hours' illness) at Crouchfield. At Bury Mill End 4 cases occurred; 3 in Union workhouse. Crouchfield altogether furnished 7 cases, including the last, a straw plaister's son, aged 3 days.

146; 3. —; *Flamstead*. Pop. 2601.—Chol. 0; Diarr. 0.

147; 1. **BERKHAMSTEAD**; *Berkhamstead*.—Pop. 4796.—Chol. 3; Diarr. 7.—First case of cholera occurred July 28th, at West Berkhamstead, a labourer, aged 19, after an attack of 20 hours' duration. The next case, September 11th, at Frithsden, North Church, a labourer, aged 81. The other case occurred September 17th, at North Church, a boatman, aged 40, after an attack of 27 hours' duration.

147; 2. —; *Tring*. Pop. 6729.—Chol. 2; Diarr. 7. Both cases of cholera occurred at Marsworth, one on September 6th, a labourer's son, aged 8, after an attack of 12 hours; the other, September 15th, a tailor, aged 33, after an attack of 16 hours' duration. Of the diarrhoea cases, 4 were children under one year.

8. BUCKINGHAMSHIRE.

148; 1. **AMERSHAM**; *Missenden*. Pop. 2367.—Chol. 0; Diarr. 1.

148; 2. —; *Chesham*. Pop. 5811.—Chol. 4; Diarr. 2.—Three of these cases of cholera occurred in Chesham, and the other at Waterside. First case on January 2nd, in a labourer, aged 59, after an attack of 28 hours' duration. 2 other cases occurred January 18th and 24th, females, aged 75 and 61. The last case took place on September 2nd, a female, aged 24.

148; 3. —; *Amersham*. Pop. 3645.—Chol. 5; Diarr. 4.—Three of these cases of cholera occurred at Amersham, August 29th, 30th, and 31st, viz., one labourer and 2 females, after an average attack of 16 hours' duration. The 2 other cases occurred in the Union workhouse, October 6th and 12th, one being a labourer, and the other a single woman.

148; 4. —; *Chalfont*. Pop. 3336.—Chol. 0; Diarr. 6.—All these cases of diarrhoea took place in Chalfont parish, between July 7th and September 13th, in some cases after attacks of very short duration; 4 were children under one year of age.

148; 5. —; *Beaconsfield*. Pop. 3053.—Chol. 2;

Diarr. 2.—Both cases of cholera occurred in Beaconsfield. The first, August 16th, a labourer, aged 21, and the other, September 11th, a labourer's wife, aged 55.

149; 1. **ETON**; *Iver*. Pop. 5757.—Chol. 20; Diarr. 8. The first death from cholera occurred in Iver parish, August 18th, a labourer's son, aged 2, after an attack of 16 hours' duration. The other cases, with 3 exceptions, took place in the parishes of Iver and Langley Marsh; the last death having occurred September 18th, a whipmaker's daughter, aged 5. The cases of exception occurred in Denham parish.

149; 2. —; *Eton*. Pop. 8472.—Chol. 15; Diarr. 4.—Of these cases of cholera, 9 took place in Eton, the first having occurred February 1st, a labourer, aged 46, after an attack of 5 days. 5 other cases occurred in August, and 3 in September. Of the remaining cases 2 took place in Horton, 2 in Chalvey, the last death took place at Eton, September 16th, a tobacco-pipe maker, aged 65, after an attack of 24 hours' duration.

149; 3. —; *Burnham*. Pop. 6014.—Chol. 6; Diarr. 4.—Three of these cases of cholera occurred in Taplow, the first on August 27th, in a coachman's wife, aged 38, after an attack of 3 hours' duration; 2 cases occurred at Burnham, and the last death at Boveney, September 22nd, a traveller, aged 37.

150; 1. **WYCOMBE**; *High Wycombe*. Pop. 9431.—Chol. 43; Diarr. 7.—The first case of cholera occurred August 3rd, at Narrow, in a butcher's daughter, aged 8; there were also several cases during the same month in the town of Wycombe, but the greatest mortality appears to have taken place at New Land, where 17 deaths occurred during September and October. There were also 6 cases in Wycombe Marsh, 4 in Londwater, 2 in Bassetsbury, and a few others elsewhere, the last case occurred at New Land, October 23rd, in a chairmaker's daughter, aged one.

150; 2. —; *Great Marlow*. Pop. 5335.—Chol. 42; Diarr. 10.—All these cases of cholera took place in Great Marlow, the first having occurred, July 24th, in a postboy's wife, aged 48, after an attack of 8 hours' duration. The mortality increased very much during the month of August. In St. Peter's-street a bargeman lost 3 children between the 13th and 23rd of August, at the ages of 4, one year, and 3 months respectively. In October there were several cases; a cordwainer lost his wife and son at the ages of 31 years and 6 years. The last case occurred October 16th, in Dean-street, in a labourer's daughter, aged 4, after 12 hours' attack.

150; 3. —; *West Wycombe*. Pop. 6622.—Chol. 3; Diarr. 0.—These cases of cholera occurred at Little Missenden: the first, August 13th, a labourer, aged 37; on the 16th, a labourer's wife, aged 35; and September 7th, a labourer's son, aged 2.

150; 4. —; *Wendover*. Pop. 5200.—Chol. 0; Diarr. 1.

150; 5. —; *Princes Risborough*. Pop. 5458.—Chol. 12; Diarr. 4.—All these cases of cholera occurred in the Union workhouse at Saunderton, during the month of October, with one exception, a death having occurred September 29th, in a male, aged 35. The other cases were all at advanced ages.

151; 1. **AYLESBURY**; *Haddenham*. Pop. 4554.—Chol. 18; Diarr. 9.—The first case of cholera occurred at Haddenham, July 19th, a labourer, aged 70; an inquest was held in this case. All the other cases occurred at Gibraltar Cuddington, during the

month of August. The last death took place August 18th, in a labourer, aged 47, after an attack of 4 days.

151; 2. *AYLESBURY*; *Aylesbury*. Pop. 7280.—Chol. 1; Diarr. 10.—This case of cholera took place in Castle-street, July 21st, a labourer's daughter, aged 3. The cases of diarrhoea, with the exception of a female, aged 27, were in children.

151; 3. —; *Aston Clinton*. Pop. 4618.—Chol. 0; Diarr. 3.—One case at Bieston, January 16th, a labourer, aged 52; the other cases were of children.

151; 4. —; *Waddesdon*. Pop. 5683.—Chol. 0; Diarr. 6.

152; 1. *WINSLOW*; *Winslow*. Pop. 8376.—Chol. 0; Diarr. 5.—These cases were all of children. Four of them took place between January 17th and February 9th.

153; 1. *NEWPORT PAGNEL*; *Fenny Stratford*. Pop. 9222.—Chol. 2; Diarr. 2.—The first case of cholera occurred at Fenny Stratford, May 14th, in a Chelsea pensioner, aged 80, after an attack of 14 days. On May 18th, at the same place, his wife, aged 79, died, after 7 days' illness.

153; 2. —; *Newport Pagnel*. Pop. 3569.—Chol. 0; Diarr. 4.—All these deaths took place in Newport Pagnel, and were all of children.

153; 3. —; *Olney*. Pop. 10206.—Chol. 2; Diarr. 5.—The first case of cholera occurred at Olney, February 24th; it was in a labourer, aged 53. The other case took place at Clifton Reynes, June 29th, in a labourer's daughter, aged 16 months; fatal 24 hours after the attack.

154; 1. *BUCKINGHAM*; *Leckhampstead*. —.—Pop. 4146.—Chol. 0; Diarr. 1.

154; 2. —; *Buckingham*. Pop. 6229.—Chol. 1; Diarr. 2.—This case of cholera occurred at North End, March 1st, in a labourer, aged 60.

154; 3. —; *Tingewick*. Pop. 3864.—Chol. 0; Diarr. 3.—Two of these cases were aged persons, the other a child.

9. OXFORDSHIRE.

155; 1. *HENLEY*; *Henley*. Pop. 13187.—Chol. 3; Diarr. 13.—An ostler's wife, aged 50, died of cholera, 36 hours after the attack. It was the first case in Henley. On the same day, an inn-keeper died, in Hart-street, aged 64. The last case occurred September 10th, also in Hart-street. It was a coachmaker, aged 62. Two deaths from diarrhoea occurred in the Union workhouse (labourers, aged 78 and 79), and 3 at Lower Caversham.

155; 2. —; *Watlington*. Pop. 4358.—Chol. 1; Diarr. 0.—This case occurred at Swyncombe, June 29th, a labourer, aged 42, 4 days after attack.

156; 1. *THAME*; *Lewknor*. Pop. 4057.—Chol. 0; Diarr. 1.

156; 2. —; *Thame*. Pop. 5830.—Chol. 0; Diarr. 1.

156; 3. —; *Brill*. Pop. 5718.—Chol. 0; Diarr. 0.

157; 1. *HEADINGTON*; *Wheatley*. Pop. 3505.—Chol. 0; Diarr. 4.—Three of these cases were in children under one year, the other was aged 13.

157; 2. —; *St. Clement*. Pop. 10499.—Chol. 31; Diarr. 14.—(This is a part of the City of Oxford.) Of the deaths from cholera, 25 took place in the Cholera Hospital, situate in the parish of St. Giles; the first having occurred there on August 26th, in a tramp (male), aged 39, 10 hours after attack. A tailor's son, aged one, died of cholera, in the workhouse. A few cases occurred in High-street, Bath street, St. Giles's, and St. John's road; the last death took place in the hospital, October

7th. It was a stonemason's son, aged 8. The epidemic attained its greatest height in September; 4 cases of diarrhoea occurred in the workhouse, 2 were children and 2 aged.

158; 1. *OXFORD*; *Oxford*. Pop. 19796.—Chol. 44; Diarr. 22.—This is only a part of the city of Oxford. The rest of the city is in Headington. 190; 4. —; *Littleport*. Pop. 5514.—Chol. 0; Diarr. 5.—Four were children under 2 years of age, the other a person aged 77.

191; 1. NORTH WITCHFORD; *Chatteris*.—Pop. 7928.—Chol. 16; Diarr. 10.—First 2 cases of cholera occurred in the Union workhouse, March 6th and 7th, labourers, aged 39 and 52. No other fatal case occurred until October 7th, when a labourer died, aged 25, after an attack of 12 hours' duration. Of the 16 cases, 11 took place at Welches Dam. 8 cases occurred during the month of October, and 3 in November. Last case, November 11th, at Welches Dam, a labourer's daughter, aged 3.

191; 2. —; *March*. Pop. 6805; —Chol. 69; Diarr. 5.—The whole of these cases occurred at March during the months of September, October, and November. The first case of cholera took place September 1st, a labourer, aged 21, after an attack of 12 hours' duration. On the following day 2 other labourers (aged 32 and 33) died after an attack of 10 and 19 hours. Of the 69 cases of cholera, 50 were of labourers and their families. Last case occurred November 25th, a labourer's widow, aged 74, attacked 27 hours.

192; 1. WHITTLESEY; *Whittlesey*. Pop. 6874.—Chol. 12; Diarr. 7.—First case of cholera occurred at Horsegate, June 12th, a labourer's wife, aged 64. The next case was on August 13th, at Briggate, a widow, aged 21, after an attack of 10 hours' duration. Of the 12 cases, 2 occurred at Briggate, and 4 at Lutterseyfield. Last case, October 3rd, at Union workhouse, a labourer, aged 53, after an attack of 12 hours' duration.

193; 1. WISBEACH; *Leverington*. Pop. 5148.—Chol. 22; Diarr. 4.—First case of cholera occurred at Fen Parson Drove, February 8th, a labourer's daughter, aged 3, attacked 16 hours. No other fatal case is recorded until August 16th, at Guyhirn, when a labourer's two daughters died, aged 7 and 5, after an attack of 16 hours each. Last case occurred at Leverington September 25th, a labourer's wife, aged 44.

193; 2. —; *Wisbeach St. Peter*. Pop. 8530.—Chol. 80; Diarr. 17.—First case of cholera occurred August 13th, at Bevis Lane, in a labourer's daughter, aged 28, after an attack of 16 hours' duration. On August 16th, two other cases occurred, a labourer's wife, and a mariner's wife, aged 31 and 21; from this to the end of September scarcely a day passed without some deaths being recorded. On September 2nd, 5 cases occurred; on the 3rd, 6 cases; 7th, 6 cases; 8th, 7 cases. The epidemic was now at its

height, and continued very fatal until the end of the month; but not one case occurred after the 30th. It was most fatal in the following localities, viz., Canalside, Old-horse Fair, North and South Brink, Elm-road; and 6 cases in the Union workhouse. Last case occurred September 30th, at Nettle Bank, a labourer's daughter, aged 4.

193; 3. **WISBEACH; Walpole St. Peter.** Pop. 2883.—Chol. 3; Diarr. 0.—First case occurred August 23rd, in a single woman, aged 48, after an attack of 22 hours' duration. Next case August 26th, a labourer's wife, aged 67. Last case September 1st, a farmer's daughter, aged 8, after an attack of 14 hours, all three deaths took place at West Walton.

193; 4. —; **Terrington St. Clement.** Pop. 4408.—Chol. 1; Diarr. 3.—The death from cholera occurred at Tilney St. Lawrence, September 1st, a labourer, aged 44. Of the diarrhoea cases 2 were of children under 2 years of age, the other a female aged 18.

193; 5. **WISBEACH; Walsoken.** Pop. 5369.—Chol. 27; Diarr. 13.—First case of cholera occurred at Walsoken August 25th, in a labourer, aged 48, after an attack of 2 days' duration. On September 5th 2 fatal cases took place at Elm, a bailiff's son and daughter, aged 13 and 11. On the 7th, 4 other deaths occurred at the same place. Of the 27 cholera cases, 15 occurred at Elm, 10 at Walsoken, and 2 at Enmeth. Last case at Walsoken, October 11th, a labourer, aged 63.

193; 6. —; **Upwell.** Pop. 5147.—Chol. 5; Diarr. 9.—First death from cholera occurred on January 12th, a labourer's widow, aged 48. No other cholera case is recorded until October 3rd, when a labourer's wife died, aged 53; on October 31st, a labourer, aged 27, died after an attack of 14 hours' duration. November 13th, a labourer, aged 18, after an attack of 40 hours. Last case occurred November 20th, a labourer, aged 40.

IV. EASTERN DIVISION.

14. ESSEX.

194; 1. **WEST HAM; Stratford.** Pop. 7690.—Chol. 64; Diarr. 11.—Cholera had appeared in this sub-district at the close of 1848, and in January 1849 it proved fatal to three children under 4 years of age. 2 cases were recorded in June, viz., on the 9th and 14th, a labourer, aged 32, and a child, 5. The subsequent visitation commenced with the death of a bricklayer's wife, aged 25, after 21 hours' attack, at Harrow Bridge, on the 24th July; a hawker, 29, died 2 days after (*inquest*); and on the 30th, 2 cases occurred in Wood's-yard, and one (that of a cabinet-maker, aged 38) in James-place. During August the epidemic was fatal in New-street, West-street, Farringdon-place, Waterworks-row (in each of which more than one death took place), and in other localities. In September 36 deaths from cholera took place, including several in the places mentioned, 4 in Laboratory-yard, 3 in East-street, 3 in High-street, and 4 in one family (the children of a cabinet-maker, all on September 5th), in Stratford-place. 6 cases were recorded in October, the last being that of a labourer's son, on the 16th, in Waterworks-row.

194; 2. —; **West Ham.** Pop. 6698.—Chol. 48; Diarr. 10.—The first fatal case of cholera in this sub-district was that of a sawyer's wife, after 30 hours' attack, at Plaistow, June 26th. No other case was recorded until July 13th, when a female, aged 79, died in the almshouses, West Ham, after 36 hours' illness. The 3rd death occurred in Greengate-street, Plaistow, July 30th. During August and September the epidemic was fatal to 44 persons, including 8 (5 of whom were of one family) in Church-street, West Ham; 5 at Whitehall-place, Forest Gate (3 being of one family at No. 3); 3 at No. 4 Plaistow lane, and 2 at No. 19 Baker's-row. The last case was that of a labourer's wife, at East Ham, October 3rd, after 17 hours' attack.

194; 3. —; **Leyton.** Pop. 4882.—Chol. 17; Diarr. 11.—A labourer, aged 20, died from cholera at Leyton, May 26th (*inquest*), but no other fatal cases occurred until July 18th, when a female, aged 25, died at the Union workhouse, after 2 days' illness. Diarrhoea was prevalent during August. In September 5 deaths from cholera were recorded at

Wanstead, 4 at Leytonstone, and one at Leyton. In October there were 4 deaths from cholera, all at Wanstead: the last being that of a labourer's son, aged 15, on the 27th.

194; 4. **WEST HAM; Walthamstow.** Pop. 7650.—Chol. 5; Diarr. 7.—A case described as "sporadic cholera" terminated fatally, after 58 hours, at Woodford, February 21st, a banker, aged 83. 2 deaths from cholera took place in August, viz., a coach-master, at Salway Hill, Woodford, on the 2nd; and a shoemaker, at Woodford Bridge, on the 24th. The other cases occurred at Walthamstow, in September, and were those of a labourer's son, aged 14, at Chapel-end, and a blacksmith in Wood-street.

195; 1. **EPPING; Chigwell.** Pop. 4901.—Chol. 4; Diarr. 4.—The fatal cases of cholera were as follows:—a draper's wife, aged 37, at Loughton, August 1st, after 26 hours' attack; a policeman's wife, at Chigwell, August 23rd; a child in England's-lane, Loughton, September 28th, and a labourer's daughter, 17, in the Old Road Loughton, October 5th.

195; 2. —; **Epping.** Pop. 5423.—Chol. 7; Diarr. 5.—A death from cholera, that of a labourer, aged 71, took place in February, at the Union workhouse, Thoydon Garnon, where 2 fatal cases occurred on September 20th, and another 2 days later. The remaining 3 cases were those of a labourer and 2 females, aged 66 and 75, in Pump-yard, Epping.

195; 3. —; **Harlow.** Pop. 5663.—Chol. 9; Diarr. 8.—Cholera was fatal in this sub-district in 2 localities only,—Fore-street, Harlow, and Latton-common, in both of which the first cases occurred on September 8th, and were those of children 5 years of age. On the following day a female, aged 56, died in Fore-street, and 5 other deaths took place there shortly afterwards. A brother of the first case at Latton Common died September 12th.

196; 1. **ONGAR; Bobbingworth.** Pop. 5804.—Chol. 1; Diarr. 0.—This case was that of a female, 64, at High Ongar, August 24th.

196; 2. —; **Chipping Ongar.** Pop. 5997.—Chol. 2; Diarr. 2.—The cases of cholera were as follows:—September 18th, a chair-maker, 67, at the Anchor public-house, Chipping Ongar; and on December 8th, a female, 57, at Abridge, after 30 hours'

illness. The Registrar states that "the poor cottages were visited by the parochial officers, and offensive nuisances removed, doubtless with much benefit."

197; 1. ROMFORD; *Romford*. Pop. 8038.—Chol. 68; Diarr. 13.—Cholera became fatal in this sub-district at Beacontree Heath, Dagenham, on July 30th, when a labourer's son, aged 14, died after 13 hours' attack. The next 2 cases occurred in the same family, in Wood-lane, Dagenham, August 13th, and 3 other deaths occurred there a few days afterwards. In Romford the first fatal case was that of a labourer, 77, at the workhouse, August 17th; followed by 2 deaths in Collier-row. The epidemic prevailed in this town during September, and, in a lesser degree, throughout October. In the first week of September it broke out with great virulence in Well-yard; 4 persons died there on the 2nd, and 2 on the following day. Other localities also furnished several deaths, viz., Dog-lane 2, High-street 11, Sun-yard 6 (including a labourer and his 2 children, September 14th), Collier-row 4, Balls-yard 2 (a bricklayer and his wife, September 19th). The last case recorded was on September 29th, in Dagenham parish, where 25 deaths from cholera had previously taken place.

197; 2. —; *Ilford*. Pop. 4500.—Chol. 59; Diarr. 12.—A labourer died from cholera (17 hours), after fever, on March 14th, in Union-court, Great Ilford. No other case was recorded until July 23rd, when cholera proved fatal to a gentleman, aged 77, at the Angel Inn, 24 hours after the commencement of the attack. In August and September the epidemic was fatal in Back-street (16 deaths), Sams-green, Philpots-yard, Chapel-row, Woods-row, Cottage-row, White-row, the Grove, and in other parts of Ilford. Six cases terminated fatally at Barkingside. The last case recorded in the sub-district was that of a female, 72, in the Grove Ilford, September 23rd. The deaths from diarrhoea were, without exception, those of very young children, chiefly in July and at the beginning of August.

197; 3. —; *Barking Town*. Pop. 4218.—Chol. 29; Diarr. 5.—A death from cholera, that of a fisherman's wife, took place in Barking on February 19th, after an attack of 24 hours. The disease was not again fatal in the sub-district until July 12th, on which day a fisherman, aged 45, died on board a vessel in the River Thames, after 18 hours' illness; and 4 days later another fisherman died, in Prince Regent's-court. 3 other deaths from cholera occurred in July, 9 in August, and 13 in September, chiefly fishermen and their families. The last case recorded was that of a labourer, 35, in Fisher-street, October 1st, after being ill only 8 hours. Amongst the victims of the epidemic in Barking were 6 in Heath-street, 7 in Axe-street, 6 in Fisher-street, and 2 in Hart-street.

197; 4. —; *Hornchurch*. Pop. 5450.—Chol. 7; Diarr. 13.—Cholera became fatal in this sub-district on August 25th, when a labourer's wife, aged 75, died at Great Warley. The next case was that of a female, 59, at Hornchurch, 2 days afterwards. The other deaths from the epidemic, were 2 at Rainham. 2 at Upminster, and one at Great Warley. Diarrhoea was fatal to 11 children and 2 aged persons.

198; 1. ORSETT; *Grays*. Pop. 5322.—Chol. 13; Diarr. 11.—A death from cholera occurred in January, at Grays, a sailor, aged 22 (*inquest*). No other case was recorded until August 2nd, when a labourer's wife, aged 50, died after 12 hours' attack. With the exception of 2 deaths at South Ockendon, the mortality from cholera in this sub-district was confined to Grays, and occurred almost

entirely amongst the labouring population of that parish.

198; 2. ORSETT; *Orsett*. Pop. 4834.—Chol. 15; Diarr. 3.—The first fatal cases of cholera in this sub-district occurred in July, viz., on the 23rd, a labourer's wife, aged 19, after 14 hours' attack, and on the 27th, a labourer, 59, attacked 9 hours, both at Orsett. The epidemic proved fatal to another person at Orsett, to a bargeman, and a labourer in the Union workhouse, 5 persons at Mucking, 3 at Fobbing, one at Stan-ford-le-Hope, and one (the last case recorded, October 14th) at Bulpham.

199; 1. BILLERICAY; *Brentwood*. Pop. 6377.—Chol. 1; Diarr. 2.—The case of cholera was that of a female, 62, in James's-place, Brentwood, September 9th.

199; 2. —; *Great Burstead*. Pop. 5072.—Chol. 3; Diarr. 5.—The deaths from cholera were those of a labourer's wife, 20, on August 25th, after 30 hours' attack; a child, 4, September 13th; and a chemist, 36, 2 days later, all at Great Burstead. Two aged paupers died from diarrhoea in the workhouse.

199; 3. —; *Wichford*. Pop. 2158.—Chol. 0; Diarr. 1.—An infant.

200; 1. CHELMSFORD; *Ingatstone*.—Pop. 6581. Chol. 0; Diarr. 0.

200; 2. —; *Chelmsford*. Pop. 7151.—Chol. 3; Diarr. 3.—The fatal cases of cholera were as follows:—September 10th, in Conduit-street, a shoemaker, 46; September 30th, near Baddow-lane, Maulsham, a labourer, 42, after 15 hours' attack; and October 5th, in Duke-street, Chelmsford, a female, 53, attacked 24 hours.

200; 3. —; *Writtle*. Pop. 5018.—Chol. 0; Diarr. 2.

200; 4. —; *Great Waltham*. Pop. 5267.—Chol. 0; Diarr. 2.

200; 5. —; *Great Baddow*. Pop. 6590.—Chol. 1; Diarr. 2.—The case of cholera was that of a person aged 35, at Great Baddow, August 8th.

201; 1. ROCHFORD; *Rayleigh*. Pop. 5347.—Chol. 9; Diarr. 6.—The first fatal case of cholera in this sub-district was that of a labourer's daughter, aged 8, at Rayleigh, August 11th, after 36 hours' illness. A second death from the epidemic took place August 24th, followed by one at South Benfleet, 3 days after. In September the deaths of 5 persons at Raleigh, and one at South Benfleet, were recorded, the last case having occurred in the former parish on the 29th.

201; 2. —; *Prittlewell*. Pop. 4042.—Chol. 41; Diarr. 7.—A case of cholera, that of a labourer's child, aged 2, occurred at Prittlewell, January 6th, after 36 hours' attack. No other cases were recorded in the sub-district until July, when a waterman died, after 16 hours' illness, at Southend, on the 5th; a female, aged 60, at Southchurch, 3 days afterwards; a female, aged 56, and another waterman, aged 27, at Southend, on the 10th and 11th. The next death from cholera took place on August 2nd, on board a vessel off Southend; from this day to September 16th (when the last case occurred, the master of a brig, off Southend) it proved fatal to 16 persons at Leigh, chiefly fishermen and their families. 10 at Prittlewell, 4 at Southend, one at Southchurch, and 4 in vessels.

201; 3. —; *Rochford*. Pop. 3986.—Chol. 20; Diarr. 5.—Cholera became fatal in this sub-district August 16th, on which day a baker, aged 63, died after 23 hours' illness, at Rochford. The next cases occurred at Paglesham, September 3rd and 6th,—a gentleman, 69, and a mariner's widow, 75; fol-

lowed by single deaths at Canewdon and Great Stambridge. From September 25th all the deaths recorded took place in the Union workhouse, Rochford, where 15 persons died from cholera in about 3 weeks.

201; 4. **ROCHFORD; Great Wakering.** Pop. 2545.—Chol. 35; Diarr. 1.—With one exception, the whole of the deaths from cholera were in Great Wakering parish, where the first case occurred August 2nd, a labourer's wife, 20, after 23 hours' attack, followed by that of a child, attacked 36 hours, on the 3rd. The epidemic continued to prevail until September 30th, its greatest intensity being from September 6th (on which day 4 persons died) to the 19th. A farmer's wife, 46, died after 30 hours' attack, at North Shoebury, September 6th. The principal mortality was in the families of labourers.

202; 1. **MALDON; Southminster.** Pop. 4580.—Chol. 16; Diarr. 2.—Cholera appeared in this sub-district at the close of 1848 and in the early part of 1849. A fatal case occurred at Burnham, February 2nd, a labourer, aged 39, and another at Althorne, March 8th. The disease re-appeared in September, at Althorne, where one death took place, followed by 13 at Steeple, between September 25th and October 30th.

202; 2. —; **Bradwell.** Pop. 2754.—Chol. 10; Diarr. 4.—The first death from cholera in this sub-district was that of a labourer's daughter, 19, on the 14th July, at Bradwell, in which parish the second case occurred on the 30th, and another, August 6th. The epidemic proved fatal to a labourer, 163, on August 30th, and to 7 other persons in September, at Tillingham. The last cases occurred at St. Lawrence, September 17th and October 2nd.

202; 3. —; **All Saints.** Pop. 4608.—Chol. 1; Diarr. 6.—The case of cholera was that of a female, aged 53, after 16 hours' illness, in All Saints, Maldon, August 16th. Of the deaths from diarrhoea, 4 were those of infants.

202; 4. —; **St. Peter.** Pop. 5707.—Chol. 5; Diarr. 10.—The fatal cases of cholera in this sub-district were as follows:—In St. Peter's, Maldon, a mariner's daughter, aged 13, on July 28th; at Heybridge, another mariner's child, aged 4, July 30th; a groom, 66, on September 17th; and a female, 79, 3 days afterwards, both in St. Peter's; and an infant, at Great Totham, September 24th. Diarrhoea was fatal to 3 persons in the Union workhouse.

202; 5. —; **Tollesbury.** Pop. 3162.—Chol. 0; Diarr. 0.

203; 1. **TENDRING; St. Osyth.** Pop. 6196.—Chol. 2; Diarr. 2.—Both cases of cholera occurred at Thorington. A corn-merchant, 49, on September 1st, after 12 hours' attack; and a labourer's daughter, aged 16, September 27th.

203; 2. —; **Thorpe.** Pop. 6131.—Chol. 0; Diarr. 4.

203; 3. —; **Harwich.** Pop. 3829.—Chol. 69; Diarr. 17.—A case of cholera terminated fatally in 24 hours on January 14th, a mariner's daughter, aged 14. The next case recorded occurred on June 18th, a mariner, 44, in King's Head-street, after 12 hours' attack; and on the 30th, another mariner died on board a vessel in Harwich Harbour. During the months of July, August, and September, the epidemic was very prevalent and fatal in Harwich, chiefly in the families of mariners, fishermen, and dredgers. On several days 3 or 4 deaths occurred. On August 27th and September 6th the daily mortality from cholera was 6. 25 persons died in the week ending September 8th. The parts of the town in which the epidemic was most fatal were

as follow:—King's Head-street, 17 deaths; Castle Gate-street, 12; West-street, 11; Custom House-alley, 6; Bath-side, 5; King's Quay-street, 4; Church-street, 4; and on board ships in the Harbour, 5. No case of cholera or diarrhoea was recorded after September 30th.

203; 4. **TENDRING; Manningtree.** Pop. 5189.—Chol. 0; Diarr. 6.

203; 5. —; **Ardleigh.** Pop. 4908.—Chol. 0; Diarr. 4.—Of these cases 3 occurred at Great Bromley, in October, and terminated fatally, after attacks of one day in two instances, and 2 days in the other.

204; 1. **COLCHESTER; Colchester First Ward.** Pop. 7176. Chol. 2; Diarr. 4.—The cases of cholera were those of a policeman, 49, in Magdalen-street, September 30th, after 3 days' illness, and a labourer's widow, 82, in the same street, October 26th.

204; 2. —; **Colchester, Second Ward.** Pop. 5347.—Chol. 0; Diarr. 1.—An infant.

204; 3. —; **Colchester, Third Ward.** Pop. 5267.—Chol. 2; Diarr. 0.—The first of these cases occurred in February, in Maidenburgh-street, a dressmaker, 18, after 24 hours' attack (*inquest*); the other at Parson's Heath, Greenstead, September 17th, a hawker, 50, after 4 days' illness.

205; 1. **LEXDEN; Wivenhoe.** Pop. 3654.—Chol. 0; Diarr. 13.—Of these cases, 11 occurred in Brightlingsea, chiefly in October, and nearly all in the families of mariners.

205; 2. —; **Peldon.** Pop. 4366.—Chol. 2; Diarr. 6.—The cases of cholera were those of a merchant, 78, at East Donyland, October 10th, after being attacked 24 hours following diarrhoea; and a mariner, 58, at Salcot, October 14th, after 32 hours' attack.

205; 3. —; **Stanway.** Pop. 4125.—Chol. 0; Diarr. 4.—A labourer, 73, in the Union workhouse and 3 children at Copford.

205; 4. —; **Fordham.** Pop. 4355.—Chol. 1; Diarr. 8.—The case of cholera occurred at Fordham, January 19th, a labourer's son, 6, after 24 hours' attack, preceded by diarrhoea. Of the deaths from diarrhoea, 4 took place in Great Tey and 2 in Chapel.

205; 5. —; **Dedham.** Pop. 4395.—Chol. 0; Diarr. 2.

206; 1. **WITHAM; Kelvedon.** Pop. 4090.—Chol. 1; Diarr. 4.—The case of cholera occurred at Rivenhall, July 24th, a gentleman, aged 66, after 2 days' illness.

206; 2. —; **Witham.** Pop. 6619.—Chol. 0; Diarr. 1.

206; 3. —; **Coggeshall.** Pop. 4701.—Chol. 1; Diarr. 8.—The case of cholera was that of a labourer, aged 55, in Stoneham-street, Great Coggeshall, October 31st, after 3 days' illness. The 8 cases of diarrhoea also occurred in that parish, chiefly in October.

207; 1. **HALSTEAD; Halstead.** Pop. 10325.—Chol. 0; Diarr. 13.—2 cases of diarrhoea were fatal in the Union workhouse, Halstead; the others were chiefly those of children in Halstead parish.

207; 2. —; **Hedingham.** Pop. 7395.—Chol. 0; Diarr. 1.

208; 1. **BRAINTREE; Finchingfield.** Pop. 5128.—Chol. 0; Diarr. 1.

208; 2. —; **Bocking.** Pop. 5315.—Chol. 0; Diarr. 3.

208; 3. —; **Braintree.** Pop. 5575.—Chol. 0; Diarr. 4.

209; 1. **DUNMOW; Stebbing.** Pop. 5150.—Chol. 0; Diarr. 2.

209; 2. DUNMOW; *Dunmow*. Pop. 5370.—Chol. 0; Diarr. 4.

209; 3. —; *Hatfield Broad Oak*. Pop. 4637.—Chol. 3; Diarr. 2.—The 3 deaths from cholera occurred in White Roothing. The Registrar gives the following particulars of these cases:—"A woman and her child (6 years old) came from West Ham (where it was at that time very fatal) on the evening of September 8th; about 2 hours after eating her supper, the child was attacked with severe and constant vomiting and purging; collapse took place the following morning, when they applied for assistance; she died on the same evening, September 9th, after 19 hours' illness. The grandmother of the child, aged 62, was seized with diarrhoea, and after 3 days' illness applied for assistance, collapse having begun; she died on the morning of September 14th. The grandfather, aged 61, was attacked with severe vomiting and purging on the 20th, collapse took place a few hours after, from which he recovered, but he died of consecutive fever on September 24th. The father and mother of the deceased child were attacked with choleraic symptoms, but by timely application soon recovered. No other deaths from cholera have occurred."

209; 4. —; *Thaxted*. Pop. 4723.—Chol. 0; Diarr. 5.

210; 1. SAFFRON WALDEN; *Newport*. Pop. 5103.—Chol. 1; Diarr. 2.—The death from cholera was that of a child, aged one year, at Debden, July 22nd, after influenza.

210; 2. —; *Saffron Walden*. Pop. 8736.—Chol. 0; Diarr. 2.

210; 3. —; *Radwinter*. Pop. 4991.—Chol. 0; Diarr. 3.

15. SUFFOLK.

211; 1. RISBRIDGE; *Haverhill*. Pop. 7063.—Chol. 4; Diarr. 2.—The cases of cholera were all of children under 10 years of age, at Kedington, between May 21st and July 4th.

211; 2. —; *Wickhambrook*. Pop. 5163.—Chol. 0; Diarr. 2.

211; 3. —; *Clare*. Pop. 5214.—Chol. 0; Diarr. 5.

212; 1. SUDBURY; *Bulmer*. Pop. 4908.—Chol. 0; Diarr. 3.

212; 2. —; *Bures*. Pop. 5820.—Chol. 0; Diarr. 1.

212; 3. —; *Sudbury*. Pop. 7969.—Chol. 0; Diarr. 12.—Of these deaths 4 occurred in the Union workhouse (aged paupers), and 5 in other parts of Sudbury parish.

212; 4. —; *Melford*. Pop. 5280.—Chol. 1; Diarr. 0.—This case occurred at Melford, April 19th, a female, aged 72.

212; 5. —; *Hartest*. Pop. 6042.—Chol. 0; Diarr. 2.

213; 1. COSFORD; *Lavenham*. Pop. 8064.—Chol. 0; Diarr. 4.

213; 2. —; *Hadleigh*. Pop. 10174.—Chol. 0; Diarr. 8.—Two cases in the Union workhouse, 2 in Hadleigh, and 2 in Elmsett.

214; 1. THINGOE; *Rougham*. Pop. 6304.—Chol. 0; Diarr. 0.

214; 2. —; *Fornham*. Pop. 5534.—Chol. 0; Diarr. 1.

214; 3. —; *Ixworth*. Pop. 6197.—Chol. 0; Diarr. 3.

215; 1. BURY ST. EDMUNDS; *Bury St. Edmunds*. Pop. 12538.—Chol. 3; Diarr. 4.—The 3 fatal cases of cholera at Bury were as follows:—a labourer's wife, 28, in Steel's-yard, Churchgate-street,

January 17th; a draper, 38, in Abbey Gate-street, June 28th, after 11 hours' attack; and a female, 35, at 7 Almsrow, September 26th.

216; 1. MILDENHALL; *Worlington*. Pop. 3682.—Chol. 0; Diarr. 1.

216; 2. —; *Lakenheath*. Pop. 5502.—Chol. 0; Diarr. 0.

217; 1. STOW; *Walsham-le-Willows*. Pop. 5727.—Chol. 0; Diarr. 0.

217; 2. —; *Rattlesden*. Pop. 6386.—Chol. 1; Diarr. 3.—The death from cholera was that of a labourer, 71, at Onehouse, January 10th, after 18 hours' attack.

217; 3. —; *Stow-Market*. Pop. 7565.—Chol. 1; Diarr. 4.—The case of cholera was that of an infant at Stowmarket, September 9th.

218; 1. HARTISMERE; *Mendlesham*. Pop. 5985.—Chol. 0; Diarr. 2.

218; 2. —; *Botesdale*. Pop. 5536.—Chol. 1; Diarr. 3.—The case of cholera occurred at Redgrave, June 16th, a harness-maker, aged 26.

218; 3. —; *Eye*. Pop. 7009.—Chol. 0; Diarr. 4.—All in the Union workhouse, Eye, aged paupers.

219; 1. HOXNE; *Stradbroke*. Pop. 8286.—Chol. 0; Diarr. 5.

219; 2. —; *Dennington*. Pop. 7510.—Chol. 1; Diarr. 4.—The case of cholera was that of a farmer's wife, 29, after childbirth, at Southolt, June 14th.

220; 1. BOSMERE; *Coddenham*. Pop. 8860.—Chol. 0; Diarr. 7.

220; 2. —; *Needham Market*. Pop. 7661.—Chol. 1; Diarr. 3.—The case of cholera was that of a labourer's child, aged 3, at Bramford, October 25th, after 24 hours' attack, with symptoms of incipient scarlatina.

221; 1. SAMFORD; *Capel, St. Mary*. Pop. 6589.—Chol. 1; Diarr. 5.—The death from cholera occurred on September 8th, at Burstall, an agricultural labourer, aged 74, after 2 days' illness.

221; 2. —; *Holbrook*. Pop. 5224.—Chol. 1; Diarr. 2.—The case of cholera was that of a mariner, aged 50, at Chelmondiston, on September 16th.

222; 1. IPSWICH; *St. Matthew*. Pop. 9841.—Chol. 4; Diarr. 22.—Diarrhoea was epidemic in this sub-district during August and September, but assumed the choleraic form in 4 fatal cases only, the first being that of a mariner, 20, on August 15th, at the Lock Tavern, St. Peters; the others occurred respectively in Portman-street, Stoke-street, and Falcon-street.

222; 2. —; *St. Clement*. Pop. 7625.—Chol. 5; Diarr. 13.—The 5 deaths from cholera were as follows:—on July 6th in Fore-street, a master mariner, 61; on August 9th, in Rope-lane, a gentleman's wife, 44, after 9 hours' attack; on August 12th, in the Wet Dock, St. Clements, a master mariner; on the following day, in John-street, a mariner, 27; and on August 16th, in Fore hamlet, a mariner's wife, 29. In September 7 fatal cases of diarrhoea, but none of cholera, were recorded.

222; 3. —; *St. Margaret*. Pop. 7798.—Chol. 9; Diarr. 24.—Cholera became fatal in this sub-district on August 13th, when a mariner, aged 43, died in St. Helens (*inquest*); and 4 days later, a labourer's widow, 66, in the Rope-walk. The other 7 cases occurred at intervals until September 19th, after which day no death from cholera was recorded, although diarrhoea continued prevalent and fatal. Of the 24 cases of diarrhoea, 14 were those of children under one year of age.

223; 1. WOODBRIDGE; *Carlford*. Pop. 5324.—Chol. 1; Diarr. 5.—The case of cholera occurred at

Plaford, on July 17th, a labourer's child, aged 2 years.

223; 2. **WOODBIDGE: Colneis.** Pop. 5715.—Chol. 2; Diarr. 3.—Both cases of cholera occurred in the Union workhouse, viz., on August 23rd, the porter of the institution, aged 44, and two days afterwards, a labourer, aged 71.

223; 3. —; **Woodbridge and Wilford.**—Pop. 8275.—Chol. 3; Diarr. 6.—The deaths from cholera were as follows:—on January 2nd, at Hollesley, a labourer's child, aged 8; on September 3rd, a labourer, 61, at Boyton; and on September 10th, an infant at Sutton.

223; 4. —; **Woodbridge Out.** Pop. 3687.—Chol. 0; Diarr. 0.

224; 1. **PLONESGATE; Earl Soham.** Pop. 2780.—Chol. 0; Diarr. 0.

224; 2. —; **Framlingham.** Pop. 3616.—Chol. 0; Diarr. 1.

224; 3. —; **Wickham Market.** Pop. 4119.—Chol. 0; Diarr. 0.

224; 4. —; **Orford.** Pop. 3426.—Chol. 0; Diarr. 0.

224; 5. —; **Aldeburgh.** Pop. 3991.—Chol. 0; Diarr. 1.

224; 6. —; **Saxmundham.** Pop. 3119.—Chol. 0; Diarr. 1.

225; 1. **BLYTHING; Westleton.** Pop. 9405.—Chol. 1; Diarr. 12.—The single case of cholera was that of a labourer, aged 64, at Yoxford, on January 14th, after 5 days' illness. Diarrhoea was fatal amongst children and aged persons.

225; 2. —; **Halesworth.** Pop. 8637.—Chol. 1; Diarr. 4.—The death from cholera occurred on June 2nd, at Walpole, a labourer, aged 66.

225; 3. —; **Wenhaston.** Pop. 9279.—Chol. 2; Diarr. 6.—Both cases of cholera occurred at Wrentham, viz., on January 3rd, a labourer, aged 74, and on June 15th, a schoolmaster's wife, 65.

226; 1. **WANGFORD; Bungay.** Pop. 6886.—Chol. 1; Diarr. 10.—The case of cholera was that of a child, aged 2, on February 10th, in Bungay, Holy Trinity, where diarrhoea prevailed amongst children and persons of advanced ages.

226; 2. —; **Beccles.** Pop. 6974.—Chol. 9; Diarr. 8.—The first fatal cases of cholera in this sub-district, were those of 2 children of a blacksmith, on August 23rd and 24th, at Pudding-moor, Beccles; a waterman's wife, aged 62, died on the latter day, in the same place. Four deaths at Swines-green, 2 being in one family; one in Peddars-lane, and one in Smallgate-street, were also recorded.

227; 1. **MUTFORD; Kessingland.** Pop. 3470.—Chol. 0; Diarr. 2.

227; 2. —; **Lowestoft.** Pop. 7607.—Chol. 23; Diarr. 6.—Cholera became fatal in this sub-district in June; a mariner, aged 51, died on the 11th, in the Infirmary, and another, aged 24, in the workhouse, Oulton, 5 days later. In Lowestoft, cholera was fatal to a female, aged 49, on August 28th, and to 8 persons during September; the last case in the Mutford district occurred on November 1st, in that town. The mortality from cholera in the workhouse was 12.

227; 3. —; **Gorleston.** Pop. 5315.—Chol. 4; Diarr. 2.—The 4 cases of cholera were as follows:—on September 5th, at South Town, a surgeon's wife, aged 75, after 2 days' illness; on the following day a fisherman's daughter, 14; and on September 10th, a fisherman, 58, both at Gorleston; and on October 13th, at South Town, a shoemaker's wife, aged 74.

16. NORFOLK.

228; 1. **YARMOUTH; Yarmouth Southern.**

Pop. 10009.—Chol. 17; Diarr. 22.—After several fatal cases of diarrhoea in August, the first death from cholera in the sub-district occurred on the 26th, in Row No. 102, a mariner, aged 62, after 12 hours' attack. The next cases were those of a "beachman" on September 3rd, in Row 125, and a coal-heaver's wife, in Row No. 78, on the following day. The mortality from cholera was confined almost exclusively to the Rows, two persons in one family died in Row No. 120, and the same in Row No. 128. No cases were recorded after October 9th.

228; 2. —; **Yarmouth Northern.** Pop. 14077.—Chol. 70; Diarr. 22.—Cholera became fatal in this sub-district 16 days before any case had been recorded in the foregoing. The first death was that of a mariner's widow, aged 62, on August 9th, in Row No. 62; followed by that of a ship's carpenter, 23, in the Market, on the 10th. Two cases were fatal on the North Quay a few days after, and from that time until the middle of October the epidemic was very prevalent, particularly in the Rows, where the total mortality from cholera was 24, and from diarrhoea 11. In the workhouse 20 deaths from cholera took place, and at Fuller's Hill 8. Of the 70 cases recorded, 46 were those of males, including 16 mariners.

229; 1. **FLEGG; East Flegg.** Pop. 3291.—Chol. 1; Diarr. 4.—The case of cholera was that of a labourer's wife, aged 55, at Caister, September 20th, after 12 hours' attack.

229; 2. —; **West Flegg.** Pop. 4385.—Chol. 1; Diarr. 5.—The single death from cholera in this sub-district was that of a labourer's widow, 77, after 14 hours' illness, at Martham, September 6th.

230; 1. **TUNSTEAD; Ludham.** Pop. 3805.—Chol. 2; Diarr. 3.—The cases of cholera occurred at Potter Heigham, October 8th, a labourer's child, after 12 days' illness, without medical attendance; and at Catfield, November 8th, a female, 13, attacked 9 days.

230; 2. —; **Smallburgh.** Pop. 4834.—Chol. 2; Diarr. 6.—The 2 deaths from cholera took place at Honing, an innkeeper, 53, after 17 hours' attack, on October 7th; and a pensioner, 51, a fortnight later. At Smallburgh, a daughter of the master of the workhouse died from diarrhoea and exhaustion, 13 hours, on June 27th.

230; 3. —; **Stalham.** Pop. 4265.—Chol. 0; Diarr. 2.

230; 4. —; **North Walsham (or Bacton).** Pop. 2529.—Chol. 0; Diarr. 0.

231; 1. **ERPINGHAM; North Walsham.** Pop. 6953.—Chol. 1; Diarr. 3.—The case of cholera was that of a brewer's daughter, 27, at North Walsham, September 17th, after 3 days' illness.

231; 2. —; **Cromer.** Pop. 6744.—Chol. 0; Diarr. 5.—Three infants and 2 aged females.

231; 3. —; **Holt.** Pop. 6810.—Chol. 0; Diarr. 2.

232; 1. **AYLESHAM; Eynsford.** Pop. 9486.—Chol. 0; Diarr. 2.

232; 2. —; **Buxton.** Pop. 10570.—Chol. 21; Diarr. 5.—Cholera broke out in Buxton about the middle of September; the first fatal case was that of a labourer, 21, "after a night of intemperance," on the 15th; and on the following day two children of a bricklayer died, after being attacked "without premonitory symptoms," 20 and 26 hours. A fourth case occurred in Buxton on the 18th, followed by 5 deaths in one family, a carpenter, his sister, and 3 children. In October the epidemic appeared at

Coltishall, where 8 deaths occurred; 3 others were recorded at Buxton and one at Belaugh.

233; 1. ST. FAITHS; *St. Faiths*. Pop. 5708.—Chol. 0; Diarr. 0.

233; 2. —; *Sprowston*. Pop. 5837.—Chol. 6; Diarr. 0.—These cases were as follows:—at Horstead, October 3rd, a labourer's daughter, 4, after 12 hours' illness; at Sprowston, October 21st, a pensioner, 55; and the rest at Wroxham, a labourer's wife, 37, and 3 children (2 of the same family), all in October.

234; 1. NORWICH; *Costany*. Pop. 11942.—Chol. 4; Diarr. 21.—The following are the particulars of the 4 cases of cholera:—On the 29th of August, in Infirmary-road, St. Clements, the daughter of a hawker, aged 4 years, after 6 hours' attack; September 19th, in St. John's Head-yard, a shoemaker's daughter, 7, ill 22 hours; and on October 27th, a single woman, 21, after 3 days' illness; and a weaver, 32, after 7 hours' attack, both in Distillery-yard, St. Mary. Of the 21 deaths from diarrhoea, 17 were those of children, and 3 of aged persons.

234; 2. —; *East Wymer*. Pop. 12274.—Chol. 12; Diarr. 28.—The first case of cholera recorded in this sub-district was that of a servant girl, aged 14, on September 11th, in Two Brewers' Yard, after 12 hours' illness. A second fatal case occurred 10 days later in Fishgate-street, followed by 2 in Pig-lane, the children of a weaver. In October cholera was fatal to 4 persons in Queen's Head-yard, 2 in Le Neves-yard, one in Magdalene-street, and one (the last in the sub-district, on the 30th) in Cock-yard. Diarrhoea was fatal exclusively amongst children and aged persons.

234; 3. —; *Conisford*. Pop. 11050.—Chol. 4; Diarr. 21.—The 4 cases of cholera were as follows:—on September 16th, in St. Peter Southgate, a shoemaker's wife, 35; September 27th, in St. Etheldred, another shoemaker's wife, 38, after 16 hours' illness; October 8th, a tailor, 58, attacked 36 hours, and 4 days later his wife, after 3 days' illness, in St. Julian parish (particular streets not stated in the registers). Of the 21 cases of diarrhoea, 15 were those of children under 2 years of age.

234; 4. —; *Mancroft*. Pop. 13379.—Chol. 1; Diarr. 14.—The single case of cholera in this sub-district was that of an umbrella-maker's daughter, 11, in Row No. 21, Lakenham, July 28th, 9 infants under one year, 4 aged persons, and one adult died from diarrhoea.

234; 5. —; *West Wymer*. Pop. 13201.—Chol. 17; Diarr. 15.—Cholera was chiefly fatal in the part of this sub-district called Cockey-yard, where a warper's wife, aged 31, died 18 hours after being first attacked, on September 3rd, and her daughter, after 18 hours' attack, 4 days afterwards; and by September 16th, 7 other persons (all females) had fallen victims to the epidemic in that place. Cases were also recorded in Osborn's-yard, Church-alley, Lower Westwich-street (2), the workhouse (1), and City-road, Heigham: the last being that of a weaver's widow, aged 61, in Lord Camden-yard, November 2nd.

235; 1. FOREHOE; *Costessy*. Pop. 4318.—Chol. 3; Diarr. 1.—The cases of cholera were as follows:—on October 3rd, at Bawburgh, a bricklayer, aged 42, after 14 hours' illness; on the 16th at Colton, a labourer, 24, cholera followed by typhoid fever, 11 days; and on the 22nd, also at Colton, a shoemaker's daughter, 5, after 8 hours' attack.

235; 2. —; *Wymondham*. Pop. 9212.—Chol. 0; Diarr. 2.

236; 1. HENSTEAD; *Humbleyard*. Pop. 5840.—Chol. 1; Diarr. 2.—The case of cholera was that of a farm-servant, aged 20, at Colney, September 22nd.

236; 2. —; *Henstead*. Pop. 5541.—Chol. 0; Diarr. 0.

237; 1. BLOFIELD; *Blofield*. Pop. 5310.—Chol. 0; Diarr. 4.

237; 2. —; *South Walsham*. Pop. 5245.—Chol. 0; Diarr. 4.

238; 1. LODDON; *Aldeby*. Pop. 4977.—Chol. 0; Diarr. 1.

238; 2. —; *Loddon*. Pop. 5015.—Chol. 0; Diarr. 1.

238; 3. —; *Woodton*. Pop. 4480.—Chol. 2; Diarr. 1.—The cases of cholera were as follows:—on March 15th, at Ditchingham, a labourer, aged 32; and on October 8th, at Seething, a charcoal burner, 29.

239; 1. DEFWADE; *Harleston*. Pop. 5973.—Chol. 0; Diarr. 3.

239; 2. —; *Diss*. Pop. 7093.—Chol. 0; Diarr. 3.

239; 3. —; *Stratton*. Pop. 6456.—Chol. 0; Diarr. 3.

239; 4. —; *Fornsett*. Pop. 6067.—Chol. 1; Diarr. 0.—This case occurred at Carleton-rode on September 17th, a labourer's wife, aged 47, after 4 days' illness.

240; 1. GUILTCROSS; *Banham*. Pop. 5805.—Chol. 0; Diarr. 0.

240; 2. —; *Kenninghall*. Pop. 6159.—Chol. 0; Diarr. 1.

241; 1. WAYLAND; *Attleborough*. Pop. 5216.—Chol. 0; Diarr. 1.

241; 2. —; *Watton*. Pop. 5946.—Chol. 0; Diarr. 0.

242; 1. MITFORD; *Shipdham*. Pop. 3138.—Chol. 0; Diarr. 0.

242; 2. —; *Mattishall*. Pop. 4630.—Chol. 0; Diarr. 0.

242; 3. —; *Bawdeswell*. Pop. 3471.—Chol. 0; Diarr. 3.

242; 4. —; *East Dereham*. Pop. 6944.—Chol. 0; Diarr. 4.

242; 5. —; *Litcham*. Pop. 5456.—Chol. 20; Diarr. 1.—Cholera was epidemic in this sub-district throughout the month of January. On the 3rd, a labourer's child, aged 3, died at Mileham, after 3 days' illness, and on the following day the disease proved fatal to a shopkeeper's wife, at Tittleshall. The whole of the subsequent deaths from cholera occurred between the 6th and 31st of January, and, with one exception, at Mileham, no less than 6 cases having terminated fatally in that parish on one day, January 23rd. On the 14th, a labourer, 57, died at East Lexham. All the deaths, except that at Tittleshall, were those of labourers and their families.

242; 6. —; *North Elmham*. Pop. 4833.—Chol. 1; Diarr. 0.—This case occurred on January 6th, at Colkirk, a labourer, aged 57, after 26 hours' attack.

243; 1. WALSINGHAM; *Fakenham*. Pop. 6814.—Chol. 0; Diarr. 0.

243; 2. —; *Walsingham*. Pop. 6629.—Chol. 0; Diarr. 2.

243; 3. —; *Wells*. Pop. 7517.—Chol. 0; Diarr. 0.

244; 1. DOCKING; *Burnham*. Pop. 6259.—Chol. 0; Diarr. 3.

244; 2. —; *Snettisham*. Pop. 5292.—Chol. 0; Diarr. 1.

244; 3. —; *Docking*. Pop. 5376.—Chol. 17; Diarr. 1.—Epidemic cholera appeared in this sub-

district at the commencement of the year, but was fatal in 2 only of the 13 parishes comprised in it, viz., East and West Rudham. The first case recorded was that of a labourer's wife, aged 48, at West Rudham, January 5th, followed by 4 other deaths in that parish, and 12 in East Rudham, where the last took place February 13th. Of the 17 cases, 11 were in the families of labourers. East and West Rudham are situated inland, contiguous to each other.

245; 1. FREEBRIDGE LYNN; *Hillington*.—Pop. 4114.—Chol. 0; Diarr. 0.

245; 2. —; *Gayton*. Pop. 4289.—Chol. 0; Diarr. 1.

245; 3. —; *Middleton*. Pop. 2147.—Chol. 0; Diarr. 0.

245; 4. —; *Castle Rising*. Pop. 2030.—Chol. 0; Diarr. 1.

246; 1. KINGS LYNN; *Kings Lynn North*. Pop. 4857.—Chol. 2; Diarr. 1.—The cases of cholera were those of a corn-porter's wife, aged 49, in Pilot-street, after 7 days' illness, on January 1st, and a labourer, 68, in North-street, on the following day.

246; 2. —; *Kings Lynn Middle*. Pop. 5652.—Chol. 0; Diarr. 11.—Of these cases 4 were persons upwards of 70 years of age, and the rest children.

246; 3. —; *Kings Lynn South*. Pop. 6045.—Chol. 0; Diarr. 7.

247; 1. DOWNHAM; *Wiggenhall*. Pop. 6065.—Chol. 3; Diarr. 4.—The deaths from cholera were as follows: on January 7th, a labourer's son, aged 7, at Willenhall, St. Mary Magdalen; on September

7th, in the same parish, a labourer, 33; and on September 16th, at Holme, a carpenter's wife, 27.

247; 2. DOWNHAM; *Downham*. Pop. 8290.—Chol. 4; Diarr. 3.—The following are the particulars of the 4 cases of cholera: on May 26th, at Downham, a labourer, aged 53; on September 17th, a labourer's child, 2, at Fordham; on September 24th, a labourer's wife, 35, in the same parish; and on October 3rd, a labourer's widow, 60, at Denver (*inquest*).

247; 3. —; *Fincham*. Pop. 4847.—Chol. 0; Diarr. 0.

248; 1. SWAFFHAM; *Swaffham*. Pop. 6139.—Chol. 4; Diarr. 0.—These cases were as follows: on January 19th, at Newton by Castleacre, a labourer, 32, after 6 days' illness; on January 23rd and February 4th, 2 sons of labourers, aged 14 and 5, at the same place; and on February 4th, a labourer, 58, at Narburgh.

248; 2. —; *Saham Toney*. Pop. 6947.—Chol. 2; Diarr. 1.—The cases of cholera were those of a labourer's son, aged 5, at Necton, April 22nd, and a bricklayer's wife, 68, at Ashill, May 31st.

249; 1. THETFORD; *Methwold*. Pop. 8321.—Chol. 1; Diarr. 1.—The case of cholera occurred at Methwold, July 24th, a labourer's widow, aged 47.

335; 2. —; *Redmarley*. Pop. 5218.—Chol. 0; Diarr. 0.

336; 1. GLOUCESTER; *Kingsholm*. Pop. 5903.—Chol. 9; Diarr. 2.—The first of the deaths from cholera occurred February 26th, at Barnwood, a farmer's son, aged 20; the next 4 on June 3rd, at the County Gaol, North Hamlet, male adults (*inquets*); the next, July 10th, at Sandhurst, a single-woman's son, aged 2; the other 3 in October and November, labourers at Barnwood, Longford, and Wotton St. Catherine.

336; 2. —; *St. Nicholas*. Pop. 6933.—Chol. 63; Diarr. 17.—The deaths from cholera in this sub-district occurred in May, June, July, August, and September, in Royal Oak-yard, Deacon-street, the Island, Sweet Brier-street, King's Holm, St. Mary, Reform-court, Westgate-street, Swan-lane, and St. Catharine's-buildings; most of them occurred in labourers' families; the first death from cholera took place May 8th, at Royal Oak-yard, a female pinner, aged 50, after 20 hours' illness, where also 10 others died; the last, November 11th, in St. Catharine's-buildings, a drover's son, aged 5, ill 14 hours.

336; 3. —; *St. John the Baptist*. Pop. 7219.—Chol. 34; Diarr. 7.—These deaths from cholera were nearly all of labourers and their families, in Union-street, Brothers'-place, Columbia-street, in June and July; the first death from cholera occurred May 26th, at 4 Suffolk-street, a cordwainer's wife, aged 60; the last, November 5th, in Clarence-street, St. Michael's, a wine merchant's wife, aged 50, where also a female servant, aged 27, died; a cordwainer's 3 children, a sister and her 2 brothers, died at 3 Brothers'-place; a customs' officer's wife and her 2 sons died in Brothers'-place (14 died in this place); a labourer's 2 daughters died in Columbia-street.

336; 4. —; *South Hamlet*. Pop. 6760.—Chol. 13; Diarr. 3.—These deaths from cholera were mostly of labourers and their children at Elmore, Littleworth, and Barton-street, St. Mary, in June and July; the first death from cholera took place June 9th, at Elmore, a labourer, aged 57; the last, in South Hamlet, a master mariner, aged 39.

337; 1. WHEATENHURST; *Frampton*. Pop. 4778.—Chol. 13; Diarr. 2.—These deaths from cholera occurred chiefly in labourers' families, at Arlingham, Frampton, Eastington, and Saul, in June, July, and August; the first, June 9th, a waterman's son, aged 14 months, June 13th, his brother, aged 3; June 10th, a labourer's wife, aged 38, and her 2 sons, all at Arlingham; the last death from cholera took place November 4th, at Eastington, a millwright's wife, aged 55.

337; 2. —; *Haresfield*. Pop. 3182.—Chol. 4; Diarr. 4.—These deaths from cholera were of labourers and their children, at Longney, Hardwick, Haresfield, and Moreton Valence, in June and August.

338; 1. STROUD; *Stonehouse*. Pop. 4564.—Chol. 11; Diarr. 2.—These deaths from cholera were

chiefly in the families of clothworkers, in Stonehouse, Can-lane, and Beard's Mill, Leonard Stanley, in July; the first at Beard's Mill, on July 9th, a clothworker's son, aged 7; the last, August 21st, in Stonehouse, a widow, aged 61.

338; 2. STROUD; *Painswick*. Pop. 4910.—Chol. 1; Diarr. 1.—August 27th, a clothworker's son, aged 7, in Painswick, of cholera.

338; 3. —; *Bisley*. Pop. 5339.—Chol. 2; Diarr. 2.—August 25th, a washerwoman's son, aged 9, at Chalford Hill, and a lock-keeper, aged 51, at Fulcomb, November 6th, of cholera.

338; 4. —; *Stroud*. Pop. 8680.—Chol. 15; Diarr. 13.—Three deaths from cholera took place as early as January 13th, 24th, and 26th, in the Union Workhouse, all of females, aged 24, 54, and 60; several deaths from diarrhoea occurred also in the same place; the next death from cholera occurred in the Union Workhouse, but not until June 23rd; it then appeared, on August 16th, in Stroud, amongst clothworkers, and labourers, in Summer-street, Parliament-street, and Stroud-hill; the last death from cholera took place on September 21st, a tailor, aged 21, Tower-hill.

338; 5. —; *Rodborough*. Pop. 5255.—Chol. 3; Diarr. 1.—The first death from cholera took place June 22nd, in a labourer, aged 48, at Button-row; the other 2 in Rodborough; the last of these 2, September 22nd, a boatman, aged 26.

338; 6. —; *Minchinhampton*. Pop. 4890.—Chol. 2; Diarr. 3.—April 3rd, a labourer's wife, aged 66, at Box; and on July 15th, an itinerant singer, aged 21, in Minchinhampton, of cholera.

338; 7. —; *Horsley*. Pop. 5291.—Chol. 0; Diarr. 0.

339; 1. TETBURY; *Didmarton*. Pop. 1591.—Chol. 0; Diarr. 1.

339; 2. —; *Tetbury*. Pop. 4300.—Chol. 0; Diarr. 0.

340; 1. CIRENCESTER; *Cotswold*. Pop. 3929.—Chol. 1; Diarr. 1.—January 16th, a labourer, aged 84, at Sapperton; an inquest was held upon this case, verdict, "Visitation of God, having been suffering apparently from cholera."

340; 2. —; *Cirencester*. Pop. 10736.—Chol. 0; Diarr. 3.

340; 3. —; *Fairford*. Pop. 6063.—Chol. 0; Diarr. 3.

341; 1. NORTHLEACH; *Bibury*. Pop. 5485.—Chol. 0; Diarr. 0.

341; 2. —; *Chedworth*. Pop. 5176.—Chol. 0; Diarr. 0.

342; 1. STOW-ON-THE-WOLD; *Bourton-on-the-Water*. Pop. 4617.—Chol. 0; Diarr. 0.

342; 2. —; *Stow-on-the-Wold*. Pop. 4905.—Chol. 0; Diarr. 1.

343; 1. WINCHCOMB; *Guyting*. Pop. 5876.—Chol. 0; Diarr. 3.

343; 2. —; *Cleeve*. Pop. 4124.—Chol. 0; Diarr. 1.

344; 1. CHELTENHAM; *Charlton Kings*. Pop. 8835.—Chol. 0; Diarr. 5.

344; 2. —; *Cheltenham*. Pop. 31411.—Chol. 6; Diarr. 46.—Diarrhoea appears to have prevailed, and to have been unusually fatal in Cheltenham during the months of June, July, August, and September, amongst labourers, mechanics, and their children: having been in this place preceded by 5 deaths from cholera, on May 6th, 19th, and 20th, the first on the 6th, in Cheltenham, a female of intemperate habits, aged 32; then 3 females, aged 60, 63, and 4, in the Workhouse, Bethel Union, on the 19th and 20th; and a labourer, aged

63, back of 17 Worcester-street; the other death from cholera occurred August 25th, at 6 Stanhope-street, a combmaker, aged 34. No death from cholera at Charlton Kings.

345; 1. TEWKESBURY; *Deerhurst*. Pop. 4392.—Chol. 5; Diarr. 3.—These deaths from cholera were of labourers' wives and their children, at Withey Bridge and Barrow in Boddington parish and Hasfield, in May, June, and July.

345; 2. —; *Overbury*. Pop. 2922.—Chol. 0; Diarr. 2.

345; 3. —; *Tewkesbury*. Pop. 7644.—Chol. 54; Diarr. 12.—These deaths from cholera took place chiefly in labourers and weavers' families, in Bird's-court, Wilkes-alley, the Union Workhouse, and St. Mary's-lane; the first, from cholera, on August 1st, a stocking-weaver, aged 23, in Bird's-court; the last, on October 8th, a stocking-weaver, aged 61, in George-yard; 6 deaths from cholera and 5 from diarrhoea took place in the Union Workhouse.

23. HEREFORDSHIRE.

346; 1. LEDBURY; *Ledbury*. Pop. 8398.—Chol. 0; Diarr. 0.

350; 2. —; *Bishops Frome*. Pop. 4110.—Chol. 0; Diarr. 0.

350; 3. —; *Brockhampton*. Pop. 3826.—Chol. 0; Diarr. 0.

351; 1. LEOMINSTER; *Leominster*. Pop. 5679.—Chol. 1; Diarr. 2.—This case of cholera occurred at Bargates, September 30th, a labourer's son, aged 9.

351; 2. —; *Bodenham*. Pop. 3859.—Chol. 0; Diarr. 0.

351; 3. —; *Kingsland*. Pop. 4857.—Chol. 0; Diarr. 3.—The first case of diarrhoea occurred at Lucton, a labourer's son, aged 5 months. The 3 deaths from diarrhoea in this sub-district were by accident not included in the total for the Leominster district, as given in the tables.

24. SHROPSHIRE.

352; 1. LUDLOW; *Leintwardine*. Pop. 2211.—Chol. 0; Diarr. 0.

352; 2. —; *Ludlow*. Pop. 8459.—Chol. 0; Diarr. 1.

352; 3. —; *Cainham*. Pop. 2538.—Chol. 0; Diarr. 2.

352; 4. —; *Munslow*. Pop. 2162.—Chol. 0; Diarr. 0.

352; 5. —; *Diddlebury*. Pop. 2151.—Chol. 0; Diarr. 0.

353; 1. CLUN; *Clun*. Pop. 3789.—Chol. 0; Diarr. 0.

353; 2. —; *Bishops Castle*. Pop. 2688.—Chol. 0; Diarr. 1.

353; 3. —; *Norbury*. Pop. 1744.—Chol. 0; Diarr. 0.

353; 4. —; *Lydbury*. Pop. 1801.—Chol. 0; Diarr. 0.

354; 1. CHURCH STRETTON; *Church Stretton*.—Pop. 3849.—Chol. 2; Diarr. 2.—The first case of cholera occurred at Church Stretton, August 11th, a mail-cart driver, aged 37, followed on August 21st, at the same place, by a labourer's widow, aged 83, after an attack of 20 hours.

354; 2. —; *Wall*. Pop. 2217.—Chol. 0; Diarr. 1.

355; 1. CLEOBURY MORTIMER; *Cleobury Mortimer*. Pop. 5818.—Chol. 1; Diarr. 7.—This case took place in the New Road, August 29th, a single woman's son, aged 5, after an attack of 2 days, after eating unripe fruit. Of the cases of diarrhoea, 2 were children under 3 days, and 3 occurred in the Union Workhouse, aged 86, 88, and 55.

355; 2. —; *Stoddesden*. Pop. 2890.—Chol. 0; Diarr. 0.

356; 1. BRIDGNORTH; *Chetton*. Pop. 4940.—Chol. 0; Diarr. 2.—These 2 cases occurred in September, ages 76 and 63.

356; 2. —; *Bridgnorth*. Pop. 6199.—Chol. 70; Diarr. 8.—The epidemic first made its appearance on July 24th, at the Library Steps, when a charwoman, aged 56, died, after an attack of 36 hours' duration; it continued with great virulence during the months of August and September. During that time, 10 fatal cases took place in Listley-street, 9 in Friar-street, 7 in St. Mary's-street, 7 at New Town, 6 in Underhill-street, and 6 in St. Leonard's Workhouse; the last case occurred December 31st, in Underhill-street, a sawyer, aged 37. One death from diarrhoea took place in St. Mary's Workhouse, a male, aged 57; the others were chiefly children under one year.

356; 3. —; *Worfield*. Pop. 4739.—Chol. 5; Diarr. 0.—The first case of cholera occurred at Gatacre Claverley, January 20th, an agricultural labourer's daughter, aged one; 2 cases took place August 18th and 22nd, at Hermitage, a male and female, aged 60 and 72 (husband and wife).

357; 1. SHIFFNAL; *Albrighton*. Pop. 3741.—Chol. 0; Diarr. 1.

357; 2. —; *Shiffnal*. Pop. 7309.—Chol. 1; Diarr. 2.—This case occurred at Pain's-lane, September 17th, a labourer's widow, aged 73, attacked 36 hours.

358; 1. MADELEY; *Dawley*. Pop. 8942.—Chol. 2; Diarr. 0.—The first case took place at Dawley Green, September 6th, a collier, aged 46; the other at Hinckley, October 14th, a puddler, aged 32.

358; 2. —; *Madeley*. Pop. 8732.—Chol. 33; Diarr. 5.—The first fatal case of cholera took place at Madeley Wood, August 8th, when a shoemaker's

son, aged 15, died: 14 other cases occurred at the same place during August and September, and 9 at Coalbrookdale, in the same period; 2 cases took place in the Madeley Workhouse, September 9th, males, aged 61 and 70. The last case of cholera occurred September 30th at Lincoln Hill, a collier aged 29. Two deaths from diarrhoea occurred at Madeley Workhouse, both old people.

358; 3. MADELEY; *Broseley*. Pop. 6094.—Chol. 13; Diarr. 2.—Cholera first made its appearance in High-street, August 3rd, a farmer, aged 45, having died after 2 days' attack; several other cases occurred at Salthouse, Cockshut-lane, Lloyd's Head, &c., in the months of August and September. The last case occurred at Ladywood.

358; 4. —; *Much Wenlock*. Pop. 2487.—Chol. 13; Diarr. 2.—The first case of cholera occurred September 1st, at Farley, a labourer's son, aged 3, followed September 3rd, by his daughter, aged 5; on the 10th and 11th, 2 children of a labourer died; and on 25th and 26th, a labourer and his daughter died, aged 55 and 18; a few cases occurred at Back-lane during October.

359; 1. ARCHAM; *Condover*. Pop. 5567.—Chol. 15; Diarr. 3.—13 of these cases of cholera occurred in August, at the Union Workhouse, Cross Houses, mostly aged people; the last case took place at the Union Workhouse, September 4th: one death also occurred there from diarrhoea, a person aged 69.

359; 2. —; *Pontesbury*. Pop. 3603.—Chol. 0; Diarr. 0.

359; 3. —; *Westbury*. Pop. 2435.—Chol. 0; Diarr. 0.

359; 4. —; *Alberbury*. Pop. 2288.—Chol. 0; Diarr. 1.

359; 5. —; *Montford*. Pop. 1161.—Chol. 0; Diarr. 0.

359; 6. —; *Battlefield*. Pop. 1846.—Chol. 0; Diarr. 1.

359; 7. —; *Atcham*. Pop. 1942.—Chol. 0; Diarr. 1.

360; 1. SHREWSBURY; *St. Mary*. Pop. 12698.—Chol. 63; Diarr. 19.—Cholera first made its appearance February 24th, at Wyle Cop, Saint Julian; a gentleman's widow, aged 66, having died after 4 days' attack; a few cases occurred in July, 4 of them at Salop gaol; the epidemic attained its greatest height in August; in St. Alkamond-square, an ostler and his daughter died, August 5th and 7th; several cases occurred in Coleham, St. Julian, Castle Foregate, Canal Buildings, &c. Six cases occurred in Salop Gaol during this month. The epidemic prevailed much during September, chiefly in the same places, 8 deaths having occurred on the 8th; the last case took place October 1st, in Coleham.

360; 2. —; *St. Chad*. Pop. 8820.—Chol. 53; Diarr. 7.—The epidemic first commenced July 25th, 10 cases having occurred on that day in the House of Industry and Lunatic Asylum, followed on the 26th by 10 other cases in the same places; it continued very prevalent during August, 5 cases occurred on the 15th, 2 of them, a tanner and his daughter, living in St. Austin's-court; a few deaths occurred in September; the last on the 17th, a labourer's daughter, aged 8.

361; 1. OSWESTRY; *Knockin*. Pop. 4293.—Chol. 0; Diarr. 1.

361; 2. —; *Llansillin*. Pop. 4172.—Chol. 0; Diarr. 1.

361; 3. —; *Oswestry*. Pop. 8843.—Chol. 2; Diarr. 3.—The first case of cholera occurred on September 11th, in a commercial traveller, aged 27; the other took place October 11th, in the Salop-road, a labourer's daughter, aged 5.

361; 4. OSWESTRY; *St. Martin*. Pop. 5764.—Chol. 1; Diarr. 3.—This case occurred September 8th, at Gobower, Whittington, an engine-driver's wife, aged 18.

362; 1. ELLESMERE; *Overton*. Pop. 2140.—Chol. 0; Diarr. 0.

362; 2. —; *Hanmer*. Pop. 3206.—Chol. 0; Diarr. 1.

362; 3. —; *Ellesmere*. Pop. 7506.—Chol. 3; Diarr. 3.—The first case of cholera occurred at Cockshutt, April 7th, a labourer, aged 40. The 2 other cases took place in the Workhouse, August 30th and 31st, a male and female aged 66 and 75.

362; 4. —; *Baschurch*. Pop. 3482.—Chol. 0; Diarr. 0.—No deaths from cholera or diarrhoea in this sub-district.

363; 1. WEM; *Wem*. Pop. 7586.—Chol. 0; Diarr. 2.—One of these cases of diarrhoea took place in the Union Workhouse, a labourer's widow, aged 60.

363; 2. —; *Prees*. Pop. 3986.—Chol. 1; Diarr. 0.—This case occurred February 8th, at Prees Heath, a shoemaker's son, aged 2, after an attack of 3 days' duration.

363; 3. —; *Whitchurch*. Pop. 6282.—Chol. 5; Diarr. 2.—Cholera first appeared April 9th, at Yardington, when a labourer's daughter, aged 5, died, after an attack of 36 hours' duration; 3 other cases took place at Yardington during September.

364; 1. MARKET DRAYTON; *Moreton Say*. Pop. 4050.—Chol. 1; Diarr. 1.—This case of cholera took place January 29th, at Ashley, a farmer's daughter, aged 7, ill 27 hours.

364; 2. —; *Market Drayton*. Pop. 4680.—Chol. 14; Diarr. 5.—The epidemic first proved fatal at Berringtons, January 28th, in a labourer's wife, aged 74; 2 cases occurred at Drayton in July; it disappeared during August, but became prevalent in September, 9 cases having occurred, 8 of them in the Workhouse, mostly aged persons; 2 also occurred in the Workhouse during October. Of the cases of diarrhoea, 3 took place in the Workhouse, one of them a child under one year.

364; 3. —; *Hodnet*. Pop. 5220.—Chol. 0; Diarr. 1.

365; 1. WELLINGTON; *Ercall Magna*. Pop. 3375.—Chol. 0; Diarr. 1.

365; 2. —; *Wellington*. Pop. 12157.—Chol. 4; Diarr. 9.—Cholera first proved fatal September 11th, at Ketley, in a miner, aged 35; 2 cases occurred at the same place on the 20th, females of the same family; another case also on the 27th, a labourer, aged 50; one death from diarrhoea took place at the Workhouse, March 4th, a female, aged 40.

365; 3. —; *Wombridge*. Pop. 4366.—Chol. 5; Diarr. 7.—All these cases of cholera occurred at Wrockwardine Wood, the first on September 14th, a labourer's wife, aged 60, followed by 2 more cases on the 17th and 18th, colliers' wives; 2 other deaths took place October 4th, one of them a founder's daughter, aged 3 months, after an attack of one day. Three of the cases of diarrhoea occurred at the same place, one in a child 2 years.

366; 1. NEWPORT; *Newport*. Pop. 9908.—Chol. 2; Diarr. 4.—The first case of cholera occurred February 16th, at Edgmond, a labourer's widow, aged 68; the other, August 14th, at Jones's-yard, a labourer's widow, aged 47.

366; 2. —; *Gnosall*. Pop. 4809.—Chol. 2; Diarr. 3.—Of these cases of cholera, the first took place September 21st, at Norbury, in a boatman's son, aged 17 months; the other case occurred October 2nd, at High Offley, a labourer, aged 52.

25. STAFFORDSHIRE.

367; 1. STAFFORD; *Stafford*. Pop. 12273.—Chol. 2; Diarr. 4.—The first death from cholera occurred in the Infirmary on January 10th, when a labourer, aged 27 years, died in 62 hours after the attack; the other case was recorded on October 27th, at St. Chads'-place.

367; 2.—; *Castle Church*. Pop. 3477.—Chol. 1; Diarr. 5.—The only fatal case of cholera recorded in this district occurred on September 19th, at Bradley, a labourer, aged 23 years; duration 4 days.

367; 3. —; *Colwich*. Pop. 4542.—Chol. 0; Diarr. 2.

368; 1. STONE; *Stone*. Pop. 8593.—Chol. 2; Diarr. 1.—A boatman, aged 41 years, died of cholera, (24 days) on July 24th, at Church-street; the other case, August 24th, in Newcastle-street.

368; 2. —; *Eccleshall*. Pop. 6150.—Chol. 2; Diarr. 1.—Cholera was fatal to the wife of a labourer, aged 48 years, at Millstone-green, on September 4th; the other case, with premonitory diarrhoea, occurred on October 2nd.

368; 3. —; *Trentham*. Pop. 4063.—Chol. 3; Diarr. 1.—The first case of cholera which proved fatal in this district occurred on September 3rd, at Butterton Hall; the next case on the 5th, at Meer Heath, and the last case on the 8th, at Hanford, viz., a butcher, aged 40 years, who survived the attack 10 hours.

369; 1. NEWCASTLE-UNDER-LYME; *Whitmore*. Pop. 1291.—Chol. 2; Diarr. 0.—First death from cholera on September 2nd, the other on the 3rd; the first a labourer's son, the second a labourer's wife, both at Meer Sutton.

369; 2. —; *Newcastle-under-Lyme*. Pop. 12524. Chol. 239; Diarr. 19.—After 2 fatal cases of diarrhoea on May 8th and June 13th, in the Union Workhouse; the first case of cholera occurred in the above Workhouse on June 19th, in a spinster's daughter, aged 14 years, duration of attack 7 hours; next fatal case at Red Lion-square, July 29th, another on August 3rd, at Lower-street, and from this time the epidemic was most malignant in character. By the end of August 129 persons died; the greatest number in any one day was on the 17th, when 14 deaths occurred; in the following day they declined to 4, but on the succeeding day, the 19th, 13 deaths happened. In September there were 94 deaths; the epidemic declined towards the end of this month, and on October 30th, in the Union Workhouse, the last case recorded was a widow, aged 80 years; after this date cholera ceased to be fatal. In the months of July, August, and September, 225 deaths from cholera were registered, and only 95 from other diseases. During the year 1849, the epidemic proved fatal to 93 males and 146 females; all excepting 41 were above 20 years of age. In the Union Workhouse 7 cases of cholera were fatal, and 5 of diarrhoea. The infected streets in this town were Lower-street, 24 deaths, 23 of which were in August; Roebuck-lane 5; Penkhult-street 11 (5 in August and 6 in September); High-street 6; Church-street 8; Friar-street 4; Pepper-street 4; Bridge-street 6; Holborn 4; Hick-street 5; Cross-street 4; Fletcher-street 16 (3 in August, 9 in September, and 4 in October); Ireland Newcastle 12, all in September; Lower-green 19 (3 in August and 16 in September); Liverpool-street 4; Shoreditch 3; Hagrells-street 9 (8 in September and one in October).

369; 3. —; *Audley*. Pop. 5674.—Chol. 0; Diarr. 5.

370; 1. WOLSTANTON; *Wolstanton*. Pop. 4144.—Chol. 3; Diarr. 0.—The first death from cholera occurred in this district on August 12th, at Dunkirk, Chesterton; the next on September 6th, at Four-lane-ends; and the other in the same locality on the 12th.

370; 2. —; *Tunstall*. Pop. 12431.—Chol. 7; Diarr. 31.—On August 12th, cholera appeared at Kids Grove, Brieryhurst, and proved fatal to a collier's wife, aged 48 years; the next death occurred on the 13th at Rathbone-street, where another also occurred on the 20th; on October 6th, the last case proved fatal to a slip-maker, aged 38 years. Diarrhoea prevailed through the year, 10 cases proving fatal in the Union Workhouse, and one of cholera.

370; 3. —; *Burslem*. Pop. 16091.—Chol. 69; Diarr. 34.—Cholera was prevalent in July and August; the first fatal case in this district occurred on June 16th, at Nile-street, a coal-dealer, aged 29 years; another in the same street on the 17th; by July 10th, 3 other deaths were registered, and on that day the epidemic rapidly increased, and 3 attacks were fatal; the following localities mostly suffered, viz.:—

Deaths from Cholera.	Deaths from Cholera.
Nile-street. . . . 6	Daniel's-row . . . 3
Mayer's Bank. . . . 2	Navigation-road . . . 3
Greenhead 4	Pit-street 6
Holehouse 11	Kilncroft 4
Bourne's Bank . . . 6	Church-street . . . 4

The epidemic in this town caused great mortality amongst potters, colliers, labourers, &c., and their families; in 16 deaths from cholera, the average duration of illness was 11 hours. Of the 69 fatal cases, 57 were 10 years of age and upwards, and of the 34 deaths from diarrhoea, 11 only were above the age of 10 years; by the middle of September, cholera considerably declined; in the month of October one death occurred, the last and only fatal case in November was on the 16th, at Bleak Hill; a dancing master, aged 40 years, was attacked with diarrhoea, which terminated in cholera.

371; 1. STOKE-UPON-TRENT; *Hanley*. Pop. 10218.—Chol. 30; Diarr. 6.—In this town cholera was very fatal in September; the epidemic commenced on August 6th, in Wood-street, and was fatal to a potter aged 56 years; the next following on the 19th, at Northwood; 16 died in September, and 6 in October; the last death on the 9th, in Slock-lane, a potter's overman's wife, aged 28 years (diarrhoea 2 days, cholera 3 days). The cholera was prevalent in Joiner's-square, Northwood, New-street, Chapel-field, &c. The families of potters and colliers chiefly suffered.

371; 2. —; *Shelton*. Pop. 11955.—Chol. 43; Diarr. 18.—Cholera prevailed in this locality on April 19th; from April to August 18th, 2 other cases proved fatal; from this date the epidemic increased, but a decline was perceptible after October 10th; the last case recorded was on October 23rd, at Mill's Bank. In Joiner's-square, 12 deaths occurred; Etruria 5; Mill-street 3; Marsh-street 3; Hope-street 3. Diarrhoea proved fatal to 13 children.

371; 3. —; *Stoke-upon-Trent*. Pop. 8430.—Chol. 28; Diarr. 15.—Cholera appeared on August 15th, first case recorded at Spittals Workhouse, a labourer aged 40 years; in this Workhouse cholera was fatal to 17 persons. Previous to the first case of cholera in the Workhouse, 9 deaths from diarrhoea occurred, subsequently 2 more; the last case of cholera proved fatal on October 7th, at Sloke-lane, a pottery painter, aged 81 years.

371; 4. *STOKE-UPON-TRENT*; *Fenton*. Pop. 4923.—Chol. 1; Diarr. 4.—The only case of cholera in this district occurred on October 10th; at Park-lane, in the wife of a potter, aged 40 years.

371; 5. —; *Longton*. Pop. 12425.—Chol. 1; Diarr. 20.—Diarrhœa was prevalent during the year in this locality; 13 deaths were those of children, not exceeding 12 months old; the only case of cholera that proved fatal was at Market-street, on October 4th, the son of a pawnbroker aged one year.

372; 1. *LEEK*; *Norton*. Pop. 3989.—Chol. 1; Diarr. 3.—One fatal case of cholera in this district, at Smallthorn, on July 26th, a collier's son, 10 years of age.

372; 2. —; *Leek*. Pop. 9572.—Chol. 2; Diarr. 7.—Diarrhœa prevailed in the early part of the year; on August 21st a case of cholera proved fatal at Pickwood-road, a silk-twister, aged 46 years, died in 74 hours after the attack; the other case occurred on September 23rd, at Compton.

372; 3. —; *Leek Frith*. Pop. 2010.—Chol. 0; Diarr. 0.

372; 4. —; *Longnor*. Pop. 5726.—Chol. 0; Diarr. 0.

373; 1. *CHEADLE*; *Alton*. Pop. 2788.—Chol. 0; Diarr. 1.

373; 2. —; *Ipsstones*. Pop. 4748.—Chol. 0; Diarr. 0.

373; 3. —; *Dilhorne*. Pop. 3602.—Chol. 0; Diarr. 0.

373; 4. —; *Cheadle*. Pop. 6721.—Chol. 2; Diarr. 8.—The son of a labourer, aged 12 years, died of cholera (15 hours) on September 24th at Paradise-lane; it was likewise fatal to a sister of the above in the same house on the 26th: one death from diarrhœa was recorded in the Workhouse.

374; 1. *UTTOXETER*; *Uttoxeter*. Pop. 7985.—Chol. 0; Diarr. 0.

374; 2. —; *Abbot's Bromley*. Pop. 2979.—Chol. 0; Diarr. 0.

374; 3. —; *Sudbury*. Pop. 3968.—Chol. 0; Diarr. 1.

375; 1. *BURTON-UPON-TRENT*; *Tutbury*. Pop. 6520. Chol. 1; Diarr. 2.—On August 8th, at Foston, a joiner aged 30 years died of cholera in 14 hours after the attack. The 2 deaths from diarrhœa were children under the age of one year.

375; 2. —; *Repton*. Pop. 5904.—Chol. 0; Diarr. 0.

375; 3. —; *Gresley*. Pop. 6087.—Chol. 0; Diarr. 0.

375; 4. —; *Burton-upon-Trent*. Pop. 10365.—Chol. 5; Diarr. 11.—First fatal case of cholera occurred on October 7th, at Goose Moor, the wife of a labourer, aged 29 years, died in 11 hours; the next two deaths in the same locality on the 8th and 12th; the fourth case in the Workhouse on the 18th, and the last in the Cholera Hospital on the 21st, the daughter of a single woman, aged 6 months. Four deaths from diarrhœa in the Workhouse, Horninglow, and one from cholera.

376; 1. *TAMWORTH*; *Tamworth*. Pop. 7710.—Chol. 1; Diarr. 3.—At Anstrey, August 25th, a labourer died of cholera aged 30 years.

376; 2. —; *Fazeley*. Pop. 5194.—Chol. 1; Diarr. 2.—At Fazeley, July 20th, a cattle-dealer died of cholera, aged 48 years.

377; 1. *LICHFIELD*; *Lichfield*. Pop. 12475.—Chol. 2; Diarr. 9.—The first case of cholera, on the 12th September, at Shire Oaks Hill, parish of Shenstone, the son of a labourer, aged 15 years. The Registrar states that "this case of cholera was imported into this district from the parish of Rushall;" the other case, October 14th, at Bird Street, the son of a chemist,

aged 3 weeks, cholera 6 hours; 3 cases of diarrhœa proved fatal in the Union Workhouse.

377; 2. *LICHFIELD*; *Yoxall*. Pop. 5025.—Chol. 0; Diarr. 0.

377; 3. —; *Rugeley*. Pop. 6616.—Chol. 4; Diarr. 5.—Cholera appeared on September 16th, at Longdon, the wife of a butcher, aged 48 years, survived the attack 25 hours; the last fatal case on October 3rd.

378; 1. *PENKRIDGE*; *Penkridge*. Pop. 4256.—Chol. 4; Diarr. 2.—Cholera was fatal on August 1st to a labourer's son, aged 2 years, at Teddesley Hay; the last case recorded October 11th, a boatman, aged 52 years.

378; 2. —; *Brewood*. Pop. 5785.—Chol. 3; Diarr. 5.—In the Union Workhouse, cholera appeared on August 18th, a labourer's son, aged 14 years, died in 9½ hours; the next fatal case on September 1st, a labourer aged 41 years, cholera 12 hours; the last, the daughter of a labourer, aged 19 years, died in 20 hours; on September 2nd, one death from diarrhœa is also reported in the Union Workhouse. The Registrar, in his quarterly report to the Registrar-General, states that, "the first case of cholera was supposed to have been imported from an infected district in Wolverhampton; the other 2 occurred to Irish, who, while harvesting, slept at night in an uncleaned feeding-stall, exposed to the exhalations of a large fold yard." Scarlatina was prevalent in the last 3 months of the year.

378; 3. —; *Cannock*. Pop. 6033.—Chol. 1; Diarr. 2.—A pot-seller, aged 40 years, died of cholera on August 30th.

379; 1. *WOLVERHAMPTON*; *Tettenhall*. Pop. 5142.—Chol. 4; Diarr. 3.—At Aldersby, on July 30th, the first case of cholera was fatal to a female servant, aged 18 years, followed on September 3rd by another death; on September 17th the last death occurred, the daughter of a labourer, aged 17 years.

379; 2. —; *Wombourn*. Pop. 3714.—Chol. 4; Diarr. 3.—Cholera was fatal on August 30th, at Seisdon Trysull, a labourer died aged 66 years; the next case on September 6th in the same locality; the last recorded case occurred on October 2nd, at Upper Germ, a higgler, aged 46 years, died of diarrhœa and cholera.

379; 3. —; *Kinfare*. Pop. 3439.—Chol. 0; Diarr. 2.

379; 4. —; *Wolverhampton Western*. Pop. 13356.—Chol. 44; Diarr. 36.—Diarrhœa prevailed in August and September, and proved fatal to 9 persons before cholera made its appearance; the first death from cholera was recorded on August 17th, a thumb-latch-maker, aged 74 years, at Hen and Chicken-yard, Dudley-street, the following case on the 20th, a steel-yard-maker's daughter, aged 6 years, died in 4 hours; from this time 16 days elapsed before another fatal case occurred, when on September 5th, a farmer aged 77 years died in Temple-street, another case on the 7th, the wife of a japanner aged 50 years also died in Temple-street, having survived the attack 11 hours, from which time to the end of September 21 cases proved fatal, in October 13, and in November 6, the last on the 13th, at Bennetsfold. The following localities mostly suffered, viz.:—

	Deaths.		Deaths.
Pountney-street . . .	9	Temple-street . . .	3
Pountneyfold, Dudley-street . . .	10	Pool-street . . .	2
Pountney Pool . . .	2	Dunstall-lane . . .	3

At Pountney-street, on September 28th and 29th inclusive, 4 deaths from cholera occurred in the same family. At Pountney Pool, a father and son both

died on October 5th. Diarrhœa proved fatal to 30 children under the age of 2 years.

379; 5. WOLVERHAMPTON; *Wolverhampton Eastern*. Pop. 23026.—Chol. 420; Diarr. 109.—Cholera was very prevalent in the month of September, when 339 persons were fatally attacked by the epidemic; the first case proved fatal at Monmore Green, on June 9th, the daughter of a sawyer, aged 16 years, attacked 9 hours; the next on August 5th at Canal street, subsequently in the same street 5 deaths from cholera, by the 11th. Towards the end of the month a considerable increase was perceptible; in one day, August 31st, 7 fatal cases were recorded; in September the epidemic extended, fluctuating between 3 and 28 deaths daily, and on an average throughout the month of September, 11 cases of cholera daily proved fatal. In 12 days, from September 3rd to the 14th inclusive, 216 persons died; and after the 18th, on which day 15 deaths occurred, the epidemic somewhat abated; from the 18th to the end of the month, 62 cases proved fatal; in the first 6 days of October 25 persons died, by the end of the month 10 more were added to the lists of mortality. The last fatal case was recorded on October 23rd in the Union Workhouse, a labourer's son, aged 4 years; the greatest number of deaths from cholera took place on September 14th, on which day 28 persons died, 8 of whom were in the Union Workhouse, the others chiefly in Walsall street, Willenhall-road, Canal-street, Bilston-street, &c.; 230 males and 190 females died from cholera. The following are the ages in 3 periods of life:—

	Male.	Fem.	Total.
Under 15 years of age .	75	59	134
15 years and under 60 .	123	103	226
60 years and upwards .	32	28	60

In the Bilston-road 3 deaths from cholera occurred on September 10th, also 2 on the 11th, 5 on the 12th, and 3 on the 13th; on September 5th, 8 persons died of cholera, in Willenhall-road; a labourer aged 40 years, with his 3 sons, aged 5, 10, and 12 years, and his 3 daughters, aged 2, 8, and 16 years, all died from cholera, in Willenhall-road, in 7 days, from September 4th to the 10th inclusive; the 2 daughters of a miner also died in one day, September 4th, in the Willenhall-road; a blacksmith and his wife both died from cholera, on the same day, in the Union House, also a weaver and his wife at Caribbee Island on September 12th. The following are the occupations of some of the sufferers from cholera, and the localities infected:—

Cholera Hospital in } Union Workhouse . . .	19	..	16	3

One case of diarrhœa proved fatal in the Workhouse; diarrhœa prevailed in the months of August and September, and was fatal to 45 children under the age of one year, to 46 at one year of age and under 15; to 7 at 15 and under 60; and to 11 at 60 years of age and upwards.

379; 6. WOLVERHAMPTON; *Willenhall*. Pop. 11863.—Chol. 281; Diarr. 27.—Cholera was very fatal in this sub-district, and 160 males and 121 females were in a short time deprived of life; it was fatal to 167 persons in 12 days, viz., from September 1st to the 12th, both inclusive; the first case occurred on August 17th, at Moseley Hole, the son of a brickmaker, aged 7 years, who survived the attack 8 hours; the succeeding case occurred on the 21st, then followed a continuous increase of mortality to the 29th, on which day 19 deaths were recorded; the greatest severity of the epidemic was felt on September 4th, when 21 persons died; the duration of attacks fluctuated between 8 and 48 hours; after September 16th the mortality abated, and from October 21st the epidemic ceased. On August 28th, the 2 sons of a locksmith died of cholera, in Birmingham-street, and on August 28th and 29th, the 3 children of a tailor in Wolverhampton-street. It was most fatal in the families of labourers, locksmiths, miners, boltmakers, keymakers, latchmakers, &c., &c. The localities in which cholera greatly prevailed were:—

Deaths from Cholera.	Deaths from Cholera.
Portobello . . . 78	Morfield-lane . . . 7
Moseley Hole . . . 7	Leeve-lane . . . 6
Birmingham-street . . . 8	Heath . . . 11

The Registrar, in his quarterly report to the Registrar-General, states that "the greatest number of cholera cases has taken place in those localities where drainage, sewerage, ventilation, and water are most wanted."

379; 7. —; *Bilston*. Pop. 20181.—Chol. 612; Diarr. 63.—Cholera in a malignant form visited the township and chapelry of Bilston with great severity; a gradual augmentation of mortality occurred in August, a very considerable increase in September, and a manifest tendency to abate by the middle of October; during these months the deaths from cholera were 68, 457, and 83 respectively. The first 2 cases occurred on July 17th at Moorcroft, viz., the widow of a blacksmith, aged 68 years, who survived the attack 6 hours; the other, a puddler, aged 19

years, died in 14 hours; the next case followed on the 24th, succeeded by another on August 7th, and continued to increase with rapidity to September 9th, on which day 30 deaths were recorded. In the following 13 days the epidemic fluctuated between 9 and 27 deaths daily; during the remainder of the month, from the 23rd to the 30th inclusive, 57 deaths took place; the average daily deaths from cholera throughout the month of September was 15. At Pipes Meadows in 7 days, from September 3rd to the 9th, both inclusive, 21 cases of cholera proved fatal, 5 occurring in one day, the 7th; the 4 children of a tailor residing in Union-street died of cholera on September 18th and 19th; also at Quarry-lane, the 3 children of a miner died on September 8th and 9th; and on October 16th, a labourer and his wife both died at Hallfields; 5 deaths from the epidemic are recorded on September 5th in Birch-buildings, and 6 on the 13th in Temple-street; a father and son were both attacked in Gibbet-lane on the 13th September, and died on the same day. In the first 9 days of October the deaths from cholera ranged from 4 to 16 on each day; after the 9th the mortality perceptibly declined, and from that time to the end of the month 16 deaths were recorded; one death was registered in November, on the 11th, after which date the town was relieved of a visitation from which the sacrifice of human life was fearfully great. The following streets and contiguous neighbourhoods suffered severely.

In the Cholera Hospital, Bilston, 42 deaths took place from cholera, and 2 in the Workhouse at Old Bilston. 314 were males, and 298 females, who died of cholera during the year 1849; of this number 238 were under 15 years of age, 329 were from 15 to 60 years of age, and 45 at 60 years and upwards; in August, September, and October, 608 deaths were ascribed to cholera, and during those 3 months 63 to other causes of death. Diarrhoea prevailed throughout the year, a few isolated cases occurring prior to the first appearance of cholera, and was most fatal in September, principally to children; remarkably severe in a few cases, approaching in character to cholera, from the quick termination of life, namely from 7 to 27 hours' illness. With reference to the trades and occupations of the sufferers from cholera, it appears that miners, puddlers, shinglers, blankmakers, mechanics, labourers, &c., with their wives and children, suffered severely; from the commencement of the attack to the termination of life, in the majority of cases, but a few hours intervened. The Registrar, in his quarterly report to the Registrar-General, states that "about 60 interments in the September quarter took place without registration, owing to my own severe illness, and the impossibility of my deputy leaving home to seek proper informants, from the constant applications made to register deaths."

380; 1. WALSALL; Darlaston. Pop. 8672.—Chol. 44; Diarr. 16.—On July 15th, a labourer, aged 42 years, died of cholera, at Fallen's-heath; the next fatal case was on August 25th, followed by another on the 30th. In September 34 persons died of this disease, and in October 7, the last death occurring on the 17th. A Heathfield, the Green, Catherine's Cross, Pinfold-street, Moxley, &c., the attacks were of short duration and most malignant. Miners, gun-lock filers, locksmiths, screw-forgers, labourers, &c., with their families, fell victims to the epidemic.

380; 2. —; Bloxwich.—Pop. 4827.—Chol. 1; Diarr. 1.—October 29th, the wife of a bitmaker, aged 30 years, died of cholera in 24 hours.

380; 3. —; Walsall. Pop. 16056.—Chol. 138; Diarr. 27.—The mortality from cholera during the months of September and October was considerable; 138 persons died after a few hours' illness. The first case, in a labourer, aged 25 years, was fatal on September 1st, in the Union Workhouse; the next 2 cases on the 7th, another on the 11th; in September 27 deaths were recorded; in the month of October the epidemic rapidly increased in severity, on the 2nd 17 deaths occurred; on the 3rd, 13; on the 4th, 8; by the end of the month, 105 persons died chiefly of the working classes, residing at Wolverhampton-road, Rushall-street, Newtown-row, New-street, Townend Bank, Stafford-street, Marsh-lane, Green-lane, Blue-lane, Wisemore, Rye-croft-street, Park-street, &c. In the Union Workhouse 28 cases of cholera proved fatal. At Townend-street the wife of a rim-lock maker and her 3 children died of cholera, between October 4th and 12th; also a tailor and his wife, in the same street, on October 2nd and 7th.

380; 4. —; Aldridge. Pop. 4698.—Chol. 3; Diarr. 10.—The first case of cholera proved fatal on September 7th, in Ann-street, Rushall, a miner, 57 years of age, who died in 39 hours. The next case occurred on the 21st, in Ann-street; the last case in Rye-croft, October 1st. 6 children died of diarrhoea.

381; 1. WEST BROMWICH; Handsworth.—Pop. 6138.—Chol. 1; Diarr. 4.—At Birchfield, on

September 19th, a labourer, aged 50 years, died of cholera, after 7 hours' illness.

381; 2. **WEST BROMWICH; Oldbury.** Pop. 8694.—Chol. 16; Diarr. 21.—The deaths of 11 males and 5 females are referred to cholera; the first fatal case occurred on September 7th, at Bristnall Fields, a labourer, aged 43 years. The last death from cholera was on November 11th. 5 adults died of diarrhoea; the rest were children belonging to miners, labourers, cordwainers, &c.

381; 3. —; **South West Bromwich.** Pop. 13034.—Chol. 11; Diarr. 16.—In Duke-street, a widow aged 74 years died of cholera, on July 21st. It was the first case. Another person died on September 15th; 3 fatal cases followed on the 24th. The last death occurred on October 22nd. The epidemic prevailed in Greet-green, Sheepwash-lane, Glover-street, &c.

381; 4. —; **North East Bromwich.** Pop. 13087.—Chol. 10; Diarr. 16.—First fatal case of cholera in this sub-district was recorded on August 31st, at New-street, Hill-top, a pattern-maker, aged 57 years, died in 12 hours, collapse 4 hours. The last case on October 18th at Hill-top, the son of a tailor, aged one year, died in 6 hours. One death from cholera and one from diarrhoea occurred in the work-house.

381; 5. —; **Wednesbury.** Pop. 11625.—Chol. 212; Diarr. 51.—Cholera appeared in the parish of Wednesbury in September and October, in which months the deaths were 143 and 67 respectively; the first fatal case was recorded at Kingshill Fields, on August 6th, the wife of a labourer, aged 33 years; the only other case in August occurred on the 31st, at Bolton-square, where subsequently, on September 1st and 2nd, the next cases proved fatal to members of the same family, namely, a puddler's wife and 2 children, averaging each about 12 hours between the attack and death; also on September 6th and 7th, the wife of a labourer and daughter died in the above square. From the commencement of September, the epidemic increased up to the 17th, on which day 10 deaths took place; after this period a gradual decrease was observable, which continued towards the close of the month, but was of short duration; in October it increased, in the first 9 days 50 deaths took place, and by the 29th of the month 17 more occurred; the last death was on the 29th, at Potter's-lane. Cholera was fatal to 126 males and 86 females.

Smiths, miners, carpenters, labourers, moulders, nailmakers, &c., &c., and their families, were the greatest sufferers, of whom 79 were under 20 years of age, and 123 adults above that age; of the deaths from diarrhoea, 61 were under the age of 20 years, and 8 adults. Three children of the same father died of cholera at Daisey Bank, 2 on the 27th and one on September 29th, also the wife and child of a labourer at Brierly-lane on September 26th and 28th, and a miner and his daughter died on September 22nd, at Hall-green.

382; 4. DUDLEY; *Dudley*. Pop. 31232.—Chol. 84; Diarr. 96.—Diarrhoea was prevalent in September, October, and November; the mortality was considerable amongst children under 5 years of age. The first fatal case of cholera occurred on September 4th, at the Poorhouse, a labourer, aged 17 years, survived the attack 19 hours; the next case on the 10th, in the Union Workhouse, Tower-street; by the end of the month of September 21 persons were fatally attacked. The epidemic increased in the early part of October; during the first 11 days, 26 fatal cases occurred, followed by 12 more by the end of the month; in November 16, and in December 8. The last case that proved fatal occurred on December 22nd, at Netherton. Four deaths from diarrhoea were recorded in the Union Workhouse, and 12 from cholera, viz., 9 in September, 2 in October, and 2 in December; in the following streets, &c., the inhabitants suffered from cholera and diarrhoea:—Birmingham-street, Wolverhampton-street, Grey-stone-street, Woodside, Oakley Well-street, Holly Hall, Bowling Green, &c.

26. WORCESTERSHIRE.

383; 1. STOURBRIDGE; *Hales Owen*. Pop. 8111.—Chol. 7; Diarr. 8.—Cholera in this locality was fatal to 5 males and 2 females; its first appearance was at Husbury, on July 22nd, a labourer died, aged 30 years, duration of attack 18 hours; subsequently 3 other cases proved fatal at Husbury; the last case recorded was at Islington, on November 14th, the wife of a nailer, aged 47 years.

383; 2. —; *Stourbridge*. Pop. 17597.—Chol. 95; Diarr. 38.—Ten cases of diarrhoea proved fatal in the early part of the year; the first appearance of cholera was on July 22nd, at Lower-lane, a forgerman died, aged 48 years; the next case on August 27th; from this time to the end of the year the epidemic prevailed, and was fatal in September to 15 persons; in October 23; in November 39; and in December 15. Children under 15 years of age suffered in the proportion of nearly one-half; the last case that occurred was on December 29th, at Waste Lye, the son of a chair-maker, aged 3 years. At Waste Bank, Woilescote, 25 deaths from cholera were registered, 13 occurring between the 1st and 12th November (both inclusive);

the following localities also suffered, at Waste Lye, 19 deaths; Banden's Green Lye, 7; Crown-lane, 6; Crab-street, 4; Angel-street, 3; &c. With reference to the trades and occupations of the sufferers, it appears that 47 were nailers, or their wives and children; 16 labourers, 9 miners, 8 anvil-makers, including their families. The Registrar states that "there were 29 deaths more from cholera than took place on the visitation of this disease in 1832, and there has been an unusually large number of children still-born."

383; 3. STOURBRIDGE; *Kingswinford*. Pop. 22221.—Chol. 212; Diarr. 27.—Cholera was very prevalent in September and October, in which months were recorded respectively 131 and 72 deaths; the epidemic appeared on August 28th, at Wallheath, a pedlar, aged 26 years, died in 15 hours; by the end of the month 3 other deaths occurred. On September 13th, there were 10 deaths; on the 14th, 7; and on the 30th, 11; after October 14th, on which day 5 deaths occurred, the epidemic abated, and from that time to the end of the month there were 12 deaths; in November, 3; and in December, 2; the last case on December 19th, at Thornes, a forgerman, aged 24 years. In the Union House, Wordsley, on September 2nd to November 1st inclusive, 29 deaths from cholera took place, 4 deaths also occurred from diarrhoea. Miners and labourers, with their families, chiefly suffered in the following localities, viz.:—Commonside, Brockmoor, Bromley, Wordsley-green, Tansey-green, Bug Pool, &c.

384; 1. KIDDERMINSTER; *Chaddesley Corbett*.—Pop. 2058.—Chol. 2; Diarr. 1.—Two deaths from cholera at Chaddesley Corbett on the 5th and 24th September: first, a labourer, 80 years of age; second, a bricklayer, 37 years of age.

384; 2. —; *Wolverley*. Pop. 2384.—Chol. 1; Diarr. 2.—At Churchill, on September 17th, died of cholera, an itinerant beggar, aged 65 years.

384; 3. —; *Kidderminster*. Pop. 17741.—Chol. 10; Diarr. 24.—In this town during the month of October, 6 cases of cholera proved fatal; the epidemic first appeared on September 9th, at New-place, Borough, the daughter of a weaver, aged 5 years; the next case on the 14th, in Orchard-street, the last case occurred on October 19th, at Mill-street, described as a labourer, aged 18 years. In Patt's-lane, 3 deaths, viz.:—on the 8th, 9th, and 10th October respectively, and in Clensmore-lane, a mother and daughter, on the same day, also died of cholera. 16 cases of diarrhoea during the year proved fatal to children.

384; 4. —; *Lower Mitton*. Pop. 3012.—Chol. 0; Diarr. 1.

384; 5. —; *Bewdley*. Pop. 4212.—Chol. 0; Diarr. 6.

385; 1. TENBURY; *Tenbury*. Pop. 4045.—Chol. 0; Diarr. 2.

385; 2. —; *Bockleton*. Pop. 3021.—Chol. 0; Diarr. 1.

386; 1. MARTLEY; *Martley*. Pop. 3203.—Chol. 0; Diarr. 0.

386; 2. —; *Witley*. Pop. 3168.—Chol. 0; Diarr. 0.

386; 3. —; *Holt*. Pop. 3196.—Chol. 0; Diarr. 1.

386; 4. —; *Leigh*. Pop. 3554.—Chol. 1; Diarr. 2.—This case of cholera proved fatal on the 9th October, in 36 hours, to a labourer, aged 27 years.

387; 1. WORCESTER; *West Worcester*.—Pop. 7912.—Chol. 6; Diarr. 9.—Cholera commenced in this sub-district on the 1st September; at 31 Broad-

street, All Saints, the son of a butcher, aged one year, died in 8 hours; the next case on the 2nd, in Newport-street; 2 cases on the 12th, at Dolby; the last fatal case on the 24th, at Friars-alley, a stone-mason, aged 20 years, duration of illness 15 hours.

387; 2. WORCESTER; *North Worcester*. Pop. 9851.—Chol. 22; Diarr. 12.—In this sub-district of Worcester is situated the Cholera Hospital and the Union Workhouse; in the former occurred 13 deaths from cholera, and one from diarrhoea; in the latter, 7 from cholera, and 4 from diarrhoea; apart from the above institutions, 2 cases of cholera were fatal, one on the 23rd September, at Park-place, the other on the 22nd, at Lowesmoor; the first death from cholera in the hospital occurred on the 14th July, the daughter of a labourer, aged 5 years; a sister of the above died on the 15th, and another on the 16th. The last death from cholera was recorded the 4th October, in the hospital, a charwoman, aged 40 years, cholera 14 days, fever 7 days, abortion 3 days. The Registrar, in his quarterly report to the Registrar-General, stated that "the Cholera Hospital admitted patients from all the parishes in the Union."

387; 3. —; *South Worcester*. Pop. 9370.—Chol. 15; Diarr. 6.—On the 29th June, cholera was fatal to a boy, aged 2½ years, in 9 hours, at Hooper's-buildings; the next case, on the 5th July, at Digles-street, the son of a leather-parer, aged 13 years; a brother of the above died of cholera on the 6th, the father on the 9th, and the mother on the 10th; the last death took place on the 7th October. Digles-street, Merivale, Quay-street, and Copenhagen-street mostly suffered from the cholera epidemic.

388; 1. UPTON-ON-SEVERN; *Hanley Castle*.—Pop. 7064.—Chol. 0; Diarr. 3.

388; 2. —; *Upton-on-Severn*. Pop. 6333.—Chol. 13; Diarr. 0.—Cholera prevailed in this district, more particularly in the Union House, where 8 persons died, chiefly in November, viz., 6 from the 1st to the 10th; the epidemic first appeared on the 7th June, at Long Green, a porter, aged 20 years, died of cholera in 2 days, and 3 children of the same family died at Fish-row, on the 26th to the 30th August.

388; 3. —; *Kempsey*. Pop. 3494.—Chol. 0; Diarr. 0.

389; 1. EVESHAM; *Evesham*. Pop. 7139.—Chol. 0; Diarr. 8.—There were two deaths from diarrhoea in the Union Workhouse.

389; 2. —; *Broadway*. Pop. 6750.—Chol. 0; Diarr. 0.

390; 1. PERSHORE; *Eckington*. Pop. 4237.—Chol. 0; Diarr. 1.

390; 2. —; *Pershore*. Pop. 6012.—Chol. 0; Diarr. 4.

390; 3. —; *Upton Snodsbury*. Pop. 3133.—Chol. 0; Diarr. 3.

391; 1. DROITWICH; *Claines*. Pop. 6264.—Chol. 3; Diarr. 3.—First case of cholera recorded 4th September, the daughter of a tallow-chandler, aged 4 years; next case on the 7th, and the last on the 11th; the daughter of a boatman, aged 2 years, who survived the attack 14 hours.

391; 2. —; *Omberley*. Pop. 4952.—Chol. 0; Diarr. 3.

391; 3. —; *Droitwich*. Pop. 6252.—Chol. 19; Diarr. 4.—Cholera was fatal to 11 males and 8 females; the first case was in the wife of a labourer, aged 48 years, on the 27th August, at Henbrook; another in the same locality, on the 28th; the epidemic gradually increased in September and October, and entirely ceased on the 10th November. Henbrook, Upton Brook, in the Liberties, and

Wickbould, &c., were the vicinities in which cholera prevailed.

392; 1. BROMSGROVE; *Bromsgrove*. Pop. 11247.—Chol. 19; Diarr. 15.—On the 23rd July a case of cholera proved fatal in 36 hours, at Holy-lane, to a labourer's widow, aged 28 years; next death the 21st August; and by the end of September, 13 more occurred, chiefly attacking the working classes and their families; the character of the epidemic was severe in 9 cases, the average duration between the attack and death was but 10 hours. On the 28th September and 5th October, in each of those days, 3 deaths from cholera occurred; the last case which proved fatal was recorded on the 6th October, on this day the epidemic ceased. In Stoke Prior, 5 deaths; Holy-lane, 3; Worcester-street, 3; Stoke Pound, 3. Four deaths from diarrhoea took place in the Union House, and 10 deaths from diarrhoea were described as children of nailers, labourers, &c.

392; 2. —; *Belbroughton*. Pop. 4459.—Chol. 0; Diarr. 4.

392; 3. —; *Tardebigg*. Pop. 6721.—Chol. 0; Diarr. 1.

393; 1. KING'S NORTON; *King's Norton*.—Pop. 6207.—Chol. 2; Diarr. 5.—At Strickley-street, on the 17th February, cholera proved fatal to the daughter of a gun-barrel-maker, aged 19 years; the other case, on the 22nd August, at Houndsfield, the son of a farmer, aged 5 weeks, cholera 6 days.

393; 2. —; *Edgbaston*. Pop. 8810.—Chol. 5; Diarr. 5.—Cholera appeared on the 1st September, at Woodgate, Northfield, subsequently in the same locality, by the 5th, 3 other deaths occurred. The last fatal case was on the 7th October, at Bell Barn-road, a bricklayer, aged 30 years, cholera 21 hours (*inquest*).

393; 3. —; *Harborne*. Pop. 6657.—Chol. 0; Diarr. 8.—With one exception, all were children about the age of 2 years.

27. WARWICKSHIRE.

394; 1. BIRMINGHAM, *Lady Wood*. Pop. 12325.—Chol. 5; Diarr. 24.—First fatal case of cholera, the 10th September, a gentleman's widow, aged 66 years, after 16 days' illness, at No. 1 Court, Tyndall-street; second, on the 19th, a japanner's daughter, aged 2 months, at St. Mark's-street; third, on the 20th, duration 4 days and 10 hours, a plater, aged 28 years, at 24 Hill-street; fourth, on the 2nd October, a labourer's daughter, aged 7 years, cholera 14 hours (*inquest*), at No. 13 Essington-street; last fatal case on the 11th October, a striker's son, aged 8 years, cholera 20 hours, (*inquest*), at No. 9 Court, 9 House Mill-street. Of the 24 deaths from diarrhoea, 21 were children under one year; diarrhoea prevailed throughout the year, principally in September.

394; 2. —; *St. Thomas*. Pop. 18237.—Chol. 3; Diarr. 44.—Cholera appeared in this district on the 4th September; first case, in a bricklayer's son, aged 16, Queen's Hospital, Bath-row; second fatal case on the 6th September, the daughter of a brass-founder, aged one year, at Latimer-street South; last case, October 8th, cholera 11 hours (*inquest*), a plumber, aged 29 years, at Box Iron-court, Fordrough-street. Diarrhoea was fatal in August to 11 persons, in September 8, in October 7, and in November 5; 20 persons were under the age of 2 years; one death from cholera was recorded in Queen's Hospital, Bath-row, and 2 from diarrhoea; Bishopsgate-street, Gough-street, Latimer-street, Wharf-street, &c., were some of the localities in which diarrhoea appeared.

394; 3. **BIRMINGHAM; St. Martin.** Pop. 16858.—Chol. 0; Diarr. 62.—No cholera in this sub-district; diarrhoea prevailed in June and July, and increased in August, at its height in September and October, and declined by the end of the year. 62 deaths occurred, and with the exception of 13 all were under the age of 4 years; the neighbourhoods of St. Martin's-lane, Park-street, Floodgate-street, Milk-street, Hurst-street, Bromsgrove-street, Trent-street, Allison-street, Oxford-street, &c., mostly suffered.

394; 4. —; **St. Peter.** Pop. 14166.—Chol. 1; Diarr. 50.—The first and only case of cholera occurred on the 19th July, at 40 Lawrence-street, a painter, aged 45 years; duration of attack, 5 days. Diarrhoea proved fatal in Park-street, Lawrence-street, Coleshill-street, Sheep-street, Stafford-street, Duke-street, &c.; 50 deaths were recorded, 40 of whom were children about 2 years of age, chiefly belonging to artisans and tradesmen.

394; 5. —; **St. Philip.** Pop. 12197.—Chol. 1; Diarr. 24.—The only recorded case of cholera occurred on the 17th August, a coachmaker's wife, aged 73 years; duration of attack, 28 hours at Park-lane. Diarrhoea prevailed in August, September, and October, fatal in the following localities.—Tonk-street, New-street, Inkleys-street, Cherry-street, &c.

394; 6. —; **St. Paul.** Pop. 11641.—Chol. 0; Diarr. 27.—No fatal case of cholera in this district. Diarrhoea appeared in the autumn, and proved fatal to one adult and 26 children, visiting Livery-street, Charles-street, Lionel-street, Fleet-street, &c., and adjacent neighbourhoods.

394; 7. —; **St. Mary.** Pop. 17679.—Chol. 16; Diarr. 83.—The first death from cholera took place on the 7th September, at No. 12 London Prentice-street, a tinman's wife, aged 27 years; the second on the 15th, at Court 10 House, 7 London Prentice-street, a slater's widow, aged 35 years, cholera 32 hours (*inquest*); the epidemic then assumed a malignant form in the Workhouse, and fatally attacked, between the 3rd and 19th October, 14 persons, all male adults (except 2), of whom 5 were insane paupers. 32 fatal cases of diarrhoea occurred in the Workhouse, chiefly before and after cholera had shown itself; diarrhoea proved fatal in August and September, cholera in October, the last case on the 19th, in the Workhouse. London Prentice-street, John-street, Lancaster-street, Whittall-street, Loveday-street, Lichfield-street, &c., were localities in which the epidemic prevailed. The Registrar states in his quarterly report, that the first fatal case of cholera was that of a woman who came from Bilston; the second was a resident, supposed to have taken the disease from washing the clothes of the former.

394; 8. —; **St. George.** Pop. 24974.—Chol. 3; Diarr. 94.—Cholera was first fatal in the case, of the son of a spur-maker, aged 4 months, at 39 Great Hampton-street; second case, a button-turner's son, aged 2 years, cholera 10 hours (*inquest*); on the 6th September, at 14 Court-street, George-street, and on the 30th December, a boy, aged one year, died of cholera at the Asylum for Infant Poor, at which Asylum, 6 deaths from diarrhoea were recorded, and at the General Hospital, 2 deaths by diarrhoea; 86 other cases proved fatal in the vicinities of Upper and Lower Tower-street, Hospital-street, St. George-street, Blew-street, Smith-street, &c. Diarrhoea was very fatal to artisans and their children, in the months of July, August, September, and October; in a few cases a short time elapsed between the attack and death.

394; 9. —; **All Saints.** Pop. 10138.—Chol. 0; Diarr. 19.—7 males and 12 females died of diar-

rhoea; 2 only were adults, and 10 under the age of one year.

395; 1. **ASTON; Deritend.** Pop. 18019.—Chol. 3; Diarr. 32.—On the 28th April, a labourer's daughter, aged 4 months, died of cholera after 3 days attack, at Bardsley Green; last case on November 14th, a carpenter, aged 43 years, at Edward-street.

395; 2. —; **Duddeston.** Pop. 20079.—Chol. 2; Diarr. 58.—Cholera was fatal to a labourer, aged 33 years, 17th August, at 17 Court, Aston-road, the second case, a gun-maker, aged 83 years, ill 4 days at 63, Ashted-row. Diarrhoea was epidemic in August, at its height in September, and declined in October; it fatally attacked 58 persons, in the proportion of one adult to 15 children.

395; 3. —; **Erdington.** Pop. 7620.—Chol. 1; Diarr. 12.—First and only case of cholera on the 14th August, a wheelwright, aged 52 years, at Ward-end Little Bromwich.

395; 4. —; **Sutton Coldfield.** Pop. 5259.—Chol. 0; Diarr. 0.

396; 1. **MERIDEN; Coleshill.** Pop. 5268.—Chol. 0; Diarr. 4.

396; 2. —; **Meriden.** Pop. 6334.—Chol. 1; Diarr. 0.—On the 20th August died of cholera (attacked 2 days), at Filloughley, a single-woman's son, aged 2 years.

397; 1. **ATHERSTONE; Atherstone.** Pop. 10891.—Chol. 0; Diarr. 8.

399; 1. **FOLESHILL; Foleshill.** Pop. 12650.—Chol. 23; Diarr. 5.—The first death from cholera occurred on the 13th January, the son of a pattern reader, aged 2 years; from the 28th July, the epidemic spread rapidly, and proved fatal to 21 persons by the 11th September, at which date the epidemic ceased; the last sufferer was a female weaver, aged 62 years.

399; 2. —; **Sowe.** Pop. 4696.—Chol. 1; Diarr. 0.

400; 1. **COVENTRY; St. John.** Pop. 19123.—Chol. 91; Diarr. 52.—Cholera presented itself in this sub-district on the 14th July, first case recorded the son of an engine-driver, aged 11 months, at Spon-street; next case on the 13th August, at Much Park-street; between this time and the 5th September, 4 deaths occurred; from this date the epidemic increased in virulence, in the month of September to 78 persons; it declined in the succeeding month to 12 deaths, disappearing on the 25th October, the last case a weaver, aged 75 years, cholera 18 hours, at Whitefriars-lane. The termination of life in this district was rapid, in many instances under 20 hours, most fatal in the following streets, &c.:—In Spon-street, 13; Much Park-street, 9; Smithford-street, 4; St. John's-street, 4; Whitefriars-street, 4; Greyfriars-lane, 4; and in the barracks, 8, namely, 5 soldiers and 3 married women; the majority of deaths were the young and middle-aged, chiefly weavers and their families.

400; 2. —; **Holy Trinity.** Pop. 11909.—Chol. 111; Diarr. 54.—After 15 fatal cases of diarrhoea in the early portion of the year, cholera visited the district on the 15th July; first fatal case in a weaver's daughter, aged 2 years, ill 14 hours, at Far Gosford-street; next case a silk-tiller, aged 29 years, on the 16th, at Harnal-lane; it then spread with severity, and by the end of September, 106 persons were victims to its ravages; the

epidemic then abated, and on the 8th November the last case was recorded, a weaver's wife, aged 23 years, cholera 24 hours, at Brewery-street. In the month of September, 75 deaths by cholera occurred, and in one day, the 8th September, 9 deaths; on the 9th, 7; on the 10th, 4; the average duration of attack not exceeding 24 hours. In the following localities the epidemic was most fatal, particularly in Well-street; from the 27th to the 30th August, 13 deaths occurred, and in the same street, in the month of September, 23; in Harnal-lane, from the 16th to the 26th July, 9 deaths; including Bishops Gate-green, Agnes-lane, Chantry-place, Upper Well-street, &c. The Registrar states, in his quarterly reports to the Registrar-General, that "I have noticed by far the majority of deaths which have occurred were in houses built back to back, that is to say, having only a front door and windows; scarlatina and typhus prevailed in the last three months of the year."

401; 1. RUGBY; *Rugby*. Pop. 9515.—Chol. 1; Diarr. 2.—In the Union Workhouse, on 26th February, a button-maker, aged 45 years, died of cholera.

401; 2. —; *Crick*. Pop. 4953.—Chol. 0; Diarr. 0.

 430; 5. —; *Alford*. Pop. 6549.—Chol. 0; Diarr. 1.
 431; 1. LOUTH; *Withern*. Pop. 3884.—Chol. 1; Diarr. 0.—A labourer, aged 56 years, died of cholera, 7th May, at Belleau.
 431; 2. —; *Louth*. Pop. 12350.—Chol. 1;

Diarr. 4.—A bricklayer, aged 42 years, died of choleraic diarrhoea, October 6th, at Brackenborough.
 431; 3. LOUTH; *Binbrook*. Pop. 3852.—Chol. 0; Diarr. 1.
 431; 4. —; *Saltfleet*. Pop. 4704.—Chol. 1; Diarr. 0.—Cholera recorded on the 4th November, at North Corkerington, a cottager's son, aged 17 years; duration of attack 3 weeks, not certified by medical attendant.
 431; 5. —; *Tetney*. Pop. 4619.—Chol. 0; Diarr. 0.
 432; 1. CAISTOR; *Great Grimsby*. Pop. 9763.—Chol. 19; Diarr. 16.—Cholera appeared in this district early in the year: the 3rd February, in King Edward-street, a sawyer's wife, aged 63 years, died in 34 hours; next case, the 19th August, at Flottergate. From this date to the end of the month, 4 deaths were registered; the following month 10, and declined in October to 3. The families of the working classes suffered from the epidemic, in the following localities:—Burgess-street, Cleethorpe-road, Silver-street, Holme-street, Cleethorpes, &c. 5 deaths by cholera on board the ships in the roads, river head, &c.
 432; 2. —; *Caistor*. Pop. 8037.—Chol. 5; Diarr. 2.—The first 2 deaths by cholera occurred in one day, at Caistor, on the 5th September; the next case on the 6th; then in the Union House on the 18th. The last on the 25th September, a gipsy's son, aged 8 months.
 432; 3. —; *Market Rasen*. Pop. 9269.—Chol. 5; Diarr. 4.—5 deaths are ascribed to cholera. First fatal case, the 14th September, at Waddingham, a labourer's son, aged 6 weeks; last case, the 4th November, at Legsby, a mariner's son, aged 3 years. The other cases were under the age of 12 months.
 433; 1. GLANFORD BRIGG; *Brigg*. Pop. 10395.—Chol. 4; Diarr. 6.—First case of cholera, the 24th August, a weaver, aged 22 years; duration of attack 10 hours. Next case on the 29th. Last case, September 6th, at Kirton, a labourer, aged 85 years; ill 24 hours.
 433; 2. —; *Winterton*. Pop. 8945.—Chol. 6; Diarr. 2.—In this sub-district, on the 16th August, a death by cholera occurred at Burringham, the daughter of a labourer, aged 15 years; next case on the 20th, at Burton; last case on the 25th September, at Winkingham, a brick-maker, aged 47 years, after 11 hours' illness.
 433; 3. —; *Barton*. Pop. 10489.—Chol. 16; Diarr. 12.—The first fatal case of cholera took place on July 4th, at Barton House, in a cook, aged 39 years; duration of attack 2 days. The next case did not occur until the 27th August, on which day 2 deaths are recorded: the epidemic from this time continued to the 22nd September, the last case a railway guard, aged 33 years. The 12 deaths from diarrhoea, with one exception, were children under 4 years.
 434; 1. GAINSBOROUGH; *Owston*. Pop. 4487.—Chol. 16; Diarr. 11.—After one fatal case of diarrhoea, at West Ferry the 14th August, cholera suddenly appeared on the 16th in the same locality: first case, a farmer's widow, aged 67 years, died in 14 hours; next case on the 24th. In the month of August 8 deaths, the same number in September; the last case on the 26th, a labourer's son, aged 7 years, at West Butterwick, duration 2 days. The epidemic was most fatal at West Ferry and West Butterwick. On the first outbreak of cholera, the termination of life was rapid; the average duration of the 8 cases in the month of August was 17 hours; it disappeared from the locality on the

16th September. Of the 16 deaths from cholera, 12 were of labourers or their families.

434; 2. GAINSBOROUGH; *Scotter*. Pop. 4457.—Chol. 2; Diarr. 1.—First case of cholera, September 12th, at Blyton, a miller, aged 72 years; last case, at Blyton, on September 21st, a farmer, aged 58 years.

434; 3. —; *Misterton*. Pop. 3066.—Chol. 12; Diarr. 5.—Cholera was fatal to 8 males and 4 females; the first case, on the 16th August, at West Stockwith, a labourer, aged 71 years, expired in 13 hours after the attack. 8 other cases were fatal in August, after which time the epidemic abated, and entirely left this neighbourhood on the 17th September; on this day a waterman's widow died of cholera in 27 hours, at West Stockwith, which locality, with Walkeringham, were chiefly visited. The average lapse of time between the attack and death, in 10 cases of cholera, was 14 hours.

434; 4. —; *Gainsborough*. Pop. 7860.—Chol. 211; Diarr. 41.—This district suffered severely from cholera, the attack in the majority of cases fatal after a few hours' illness: the first fatal case was recorded the 17th July, at Bridge-street, a mariner's widow, aged 74 years; the next cases, on the 4th August, when 2 deaths occurred. From this date the ravages of the epidemic increased, and by the end of the month 137 attacks were fatal. On the 14th August 14 deaths occurred. The greatest mortality in one day was on the 15th August, when 17 died, the average duration between the attack and death being 19 hours. The epidemic continued with much severity in the early part of September; on the 5th, there were 12 deaths; a decline took place after the 13th, between which date and the end of September there were 16 deaths. In October, the only case on the 10th, followed by the last case, on the 27th November, at Morton, a tailor, aged 41 years, cholera 3 days. Diarrhoea prevailed in the month of August, 12 deaths, in September 14, on October 3, and in November 3; of the 41 deaths, 22 were adults, the remainder children. Cholera was most fatal in the following streets and contiguous localities:—

	Deaths.		Deaths.
Bridge-street . .	56	Morton . . .	12
Church-street . .	45	Hickman-street .	9
Pillard's-house . .	19	Beamont street .	9
Beast-market . .	16	Jerrew's-street .	8
Silver-street . .	7	East Stockwith .	4

On the Union Workhouse 4 deaths from diarrhoea. The greater number of persons attacked by cholera were tradesmen, mechanics, watermen, labourers, and their families; and it was more fatal to the female than to the male sex.

434; 5. —; *Willingham*. Pop. 3553.—Chol. 4; Diarr. 1.—First fatal case of cholera, August 27th, at Corringham, a labourer, aged 69 years (*inquest*). Last case, October 10th, at Wellingham, in a labourer's daughter, aged 3 years; duration of attack 24 hours.

434; 6. —; *Marton*. Pop. 2434.—Chol. 1; Diarr. 4.—At Marton, the 28th August, first and only fatal case of cholera, a labourer, aged 76 years, ill 7 days.

31. NOTTINGHAMSHIRE.

435; 1. EAST RETFORD; *Gringley*. Pop. 3792.—Chol. 1; Diarr. 0.—Cholera was fatal on the 18th August, to a boatman's wife, aged 46 years, who survived the attack 23 hours.

435; 2. —; *Clarlborough*. Pop. 5861.—Chol. 11; Diarr. 3.—Cholera was fatal to 4 males

and 7 females; first death, August 3rd, at Moorgate, a joiner, aged 53 years, duration of attack 10 hours; his son died of cholera on the 6th September following, aged one year, after 11 hours' illness; second and third case in the Union House, on the 4th and 6th August; last case at Spittle-hill, October 6th, a farmer's wife, aged 42 years. In the Union Workhouse, 2 deaths from cholera; at Moorgate, 7; and at Spittle hill, 2.

435; 3. EAST RETFORD; *East Retford*. Pop. 6722.—Chol. 8; Diarr. 4.—The first death from cholera, August 18th, at Ordsall, a bricklayer, aged 25 years, after 12 hours' illness; on the same day, another fatal case was recorded; the last death, September 21st, at Ordsall, a boatman's son, aged 9 months. The epidemic subsided on 21st September.

435; 4. —; *Tuxford*. Pop. 5001.—Chol. 1; Diarr. 1.—At East Markham, the 16th September, a female, aged 52 years, described as a farmer's wife, died of cholera in 16 hours after the attack.

436; 1. WORKSOP; *Worksop*. Pop. 6283.—Chol. 0; Diarr. 6.—With one exception, the deaths from diarrhoea were children.

436; 2. —; *Carlton*. Pop. 3566.—Chol. 1; Diarr. 1.—A farmer, aged 69 years, died of cholera at Carlton, the 13th May.

436; 3. —; *Anston*. Pop. 3155.—Chol. 0; Diarr. 1.

436; 4. —; *Carburton*. Pop. 4973.—Chol. 1; Diarr. 0.—At Whitwell, September 11th, an innkeeper, aged 67 years, died of cholera in 5 days.

437; 1. MANSFIELD; *Warsop*. Pop. 3255.—Chol. 1; Diarr. 1.—One case of cholera, July 18th, a labourer's widow, 70 years of age, not authenticated by a medical certificate.

437; 2. —; *Pleasley*. Pop. 2647.—Chol. 0; Diarr. 0.

437; 3. —; *Blackwell*. Pop. 3445.—Chol. 0; Diarr. 0.

437; 4. —; *Sutton-in-Ashfield*. Pop. 7338.—Chol. 0; Diarr. 5.—The deaths from diarrhoea were all children.

437; 5. —; *Mansfield*. Pop. 9788.—Chol. 4; Diarr. 2.—First death by cholera 27th August, in Union-street (subsequently in the same street, 2 other fatal cases occurred), a stocking-maker's wife, 62 years of age, survived the attack 26 hours; next case, September 4th; last case, 9th September, the son of a stocking-maker, aged 4 months. The 2 deaths from diarrhoea were children under the age of 3 months.

437; 6. —; *Blidworth*. Pop. 1154.—Chol. 0; Diarr. 0.

438; 1. BASFORD; *Greasley*. Pop. 13798.—Chol. 2; Diarr. 7.—The deaths by cholera both occurred on the 29th October, at Newthorpe; the first a collier, 23 years of age; the other a collier aged 46 years. The deaths from diarrhoea were all children, and occurred previous to the 29th October.

438; 2. —; *Ilkeston*. Pop. 9769.—Chol. 16; Diarr. 6.—On the 2nd of February, the first fatal case of cholera was recorded, at Ilkeston, a boatman, 44 years of age; 2 fatal attacks subsequently occurred in March, on the 12th and 28th; from this time to the 17th October the neighbourhood was free from the epidemic; at the latter date, a labourer's wife was attacked, and died, aged 32 years, at Little Hallom (*inquest*); the next case, 6th November, at Ilkeston, in which locality, by the 26th December (when the last death took place), 11 persons were carried off by cholera; 10 of the 11 occurred in the month of December.

438; 3. —; *Basford*. Pop. 12069.—Chol. 7;

Diarr. 11.—Cholera was fatal on 24th September, to a publican, aged 46 years (*inquest*); next case on the 3rd October; the last death occurred the 17th November, a male, aged 68 years, a frame-work knitter (*inquest*). In Wood-street, Mill-street, &c., the epidemic was fatal. Scarlatina prevailed during the first quarter of the year.

438; 4. BASFORD; *Bulwell*. Pop. 7057.—Chol. 8; Diarr. 8.—First fatal case of cholera, September 20th, a glover's son, aged 3 years, duration of attack one day; last case on the 30th October, the wife of a labourer, aged 46 years. The Registrar states that "during the June quarter, erysipelas and scarlatina had prevailed in populous parts of the sub-district; the first person attacked by cholera had been on a visit to Hull, and died the day after his return home."

438; 5. —; *Arnold*. Pop. 8415.—Chol. 0; Diarr. 1.

438; 6. —; *Carlton*. Pop. 3693.—Chol. 8; Diarr. 4.—Died of cholera, January 30th, at Stoke, a cottager's wife, 44 years of age; next case, August 19th; another, September 4th. The last fatal case on the 7th October, a frame-work-knitter's son, aged 16 months. Except the first case, all were frame-work knitters and their families.

438; 7. —; *Wilford*. Pop. 4826.—Chol. 1; Diarr. 3.—A fatal case of cholera occurred 25th October, at Barton, a boatman, aged 40 years (*inquest*).

439; 1. RADFORD; *Lenton*. Pop. 4462.—Chol. 4; Diarr. 4.—The first case of cholera, 20th August, at Kyte-street, a labourer, aged 50 years; next case, September 2nd; last case, September 18th, at Kyte-street, a lace-maker's wife, aged 29 years, cholera and consecutive fever, 10 days' duration.

439; 2. —; *Radford*. Pop. 7779.—Chol. 1; Diarr. 13.—The only fatal case of cholera took place on the 4th October, a widow, aged 70 years, brought on by the unhealthy state of the privy and drain belonging to the house (*inquest*). Diarrhoea was prevalent in September and October.

439; 3. —; *Hyson Green*. Pop. 3153.—Chol. 0; Diarr. 2.

439; 4. —; *Snenton*. Pop. 7079.—Chol. 2; Diarr. 20. 3 deaths from diarrhoea took place in the Lunatic Asylum. First case of cholera, 13th August, a frame-smith's son, aged 3 years, in Victoria-street; the other case on the 13th October, a draper, aged 29 years (*inquest*). Diarrhoea prevailed in August, September, and October. 16 deaths were of children, in 4 cases attended with teething.

440; 1. NOTTINGHAM; *Sherwood*. Pop. 5230.—Chol. 0; Diarr. 4.—These deaths from diarrhoea were of children under 2 years of age.

440; 2. —; *St. Mary*. Pop. 7156.—Chol. 2; Diarr. 17.—The 2 deaths from cholera occurred respectively on the 16th August and October 1st. First, a single woman, aged 28 years, at Island-street; second a schoolmaster's wife, aged 54 years, at St. Mary's-place. Diarrhoea was prevalent in the summer and autumn.

440; 3. —; *St. Ann*. Pop. 11062.—Chol. 0; Diarr. 32.—Diarrhoea was prevalent in the months of August and September. 6 deaths occurred in the Union Workhouse, to old people. The epidemic considerably abated in October; the last death was registered the 5th December.

440; 4. —; *Byron*. Pop. 11029.—Chol. 3; Diarr. 16.—Died of cholera, September 7th, the wife of a frame-work knitter, aged 42 years, at Hart's-yard, Goose Gate; next case, September 18th, in Pipe-street; last case, 30th September, at East-street, a frame-work knitter, 39 years of age. Diarrhoea was fatal to 13 children.

440; 5. —; *Exchange*. Pop. 5924.—Chol. 3;

Diarr. 7.—Without any previous diarrhoea, cholera on the 30th July appeared in Crossland-court, and fatally attacked the wife of a frame-work knitter, aged 46 years. The second occurred in the same court the 2nd August, and the last case October 7th, at Chandler's-lane, a publican, aged 68 years.

440; 6. NOTTINGHAM; *Castle*. Pop. 7117.—Chol. 6; Diarr. 12.—After 10 deaths from diarrhoea, cholera broke out on the 31st October, at Leen Side, a boatman died, aged 46 years; the next death, followed on the 17th December; 2 deaths took place on the 20th. The last case was recorded on the 25th in Albion-street, a labourer's wife, aged 34 years.

440; 7. —; *Park*. Pop. 5573.—Chol. 4; Diarr. 6.—The first case of cholera was recorded on the 5th August, at Hind's-yard, a joiner, aged 21 years (*inquest*); next case, the 16th; the last case was at Mount-street, on the 22nd December, a baker, aged 49 years. Diarrhoea prevailed in the summer and autumn. 3 of the deaths were of children, the eldest only 2 years of age.

441; 1. SOUTHWELL; *Southwell*. Pop. 13672.—Chol. 0; Diarr. 3.

441; 2. —; *Kneecal*. Pop. 11342.—Chol. 0; Diarr. 0.

442; 1. NEWARK; *North Collingham*. Pop. 5112.—Chol. 2; Diarr. 0.—On May 4th, at North Scarle, the wife of a cottager, 62 years of age, died of cholera; the other case, September 10th, at Swindarby, the wife of a farmer, aged 34.

442; 2. —; *Bassingham*. Pop. 3490.—Chol. 0; Diarr. 0.

442; 3. —; *Newark*. Pop. 10220.—Chol. 25; Diarr. 17.—Cholera prevailed in the months of October and November. The first attacked was a labourer, aged 52 years, on June 19th, at Castle Gate; next fatal case, August 15th; another on the 29th, then an interim of 49 days to October 18th, when the epidemic much increased in virulence, and was fatal, by November 18th, to 22 persons. From this period cholera ceased. The last death recorded on November 18th, a blacksmith, aged 49 years, at Ellis-row. The average duration between the attack and death, in 15 cases, was 14 hours; it prevailed among tradesmen, mechanics, labourers, &c., and their families. The following streets and localities suffered from the epidemic, namely, at

	Deaths.		Deaths.
Mill-gate . . .	6	Middle-gate . . .	1
Ellis-row . . .	3	Summer's-row . . .	1
Cotton-square . . .	3	Spittal-row . . .	1

444; 2. —; *Melbourne*. Pop. 5056.—Chol. 0; Diarr. 1.

444; 3. —; *Shardlow*. Pop. 4579.—Chol. 1; Diarr. 4.—Died of cholera, in 15 hours after the attack, October 3rd, at Aston, a boatman, aged 22 years. 2 deaths from diarrhoea occurred in the Workhouse.

444; 4. —; *Stapleford*. Pop. 8328.—Chol. 0; Diarr. 5.

444; 5. —; *Spondon*. Pop. 7436.—Chol. 0; Diarr. 4.

445; 1. DERBY; *St. Alkmund*. Pop. 15531.—Chol. 9; Diarr. 15.—Cholera appeared in January; a fatal case on the 16th, at 56 Willow-row, All Saints, the wife of a labourer, aged 66 years. The next death from cholera did not occur until September 23rd, at Court Goodwin-street, the daughter of a labourer, aged 10 years, after 15 hours' illness; next case was on the 26th, and the last on October 11th, at Goodwin-street, a labourer, aged 58 years, died in 30 hours after the attack. 6 deaths from cholera occurred in Goodwin-street and courts adjacent. Diarrhoea prevailed in August, September, and October.

445; 2. —; *St. Peter's*. Pop. 19488.—Chol. 9; Diarr. 25.—At the infirmary the first death from cholera occurred on August 6th, described as an Irish labourer, aged about 25 years; the next case at 24 Copeland-street, on the 27th; the last on October 21st, at St. Werburgh, following 2 other deaths in this vicinity, one on September 28th, the other on October 9th. Inquests were held in 5 instances. Diarrhoea carried off 19 children, was prevalent in August and September: at the Workhouse, Litchurch, 2 deaths were reported, and one at the County Gaol.

446; 1. BELPER; *Duffield*. Pop. 7100.—Chol. 1; Diarr. 4.—On September 16th, a blacksmith, aged 21 years, died of cholera (30 hours' duration).

446; 2. —; *Horsley*. Pop. 5986.—Chol. 0; Diarr. 1.

446; 3. —; *Belper*. Pop. 9885.—Chol. 0; Diarr. 12.—6 deaths from diarrhoea occurred in the Union Workhouse.

446; 4. —; *Ripley*. Pop. 9166.—Chol. 0; Diarr. 3.

446; 5. —; *Alfreton*. Pop. 7577.—Chol. 1; Diarr. 2.—At Birchwood, on March 22nd, the wife of a labourer, aged 26 years, died of cholera.

446; 6. —; *Wirksworth*. Pop. 6519.—Chol. 1; Diarr. 0.—A bricklayer, aged 46 years, died August 8th, at Packside, Alderwasley, of diarrhoea, 3 weeks, succeeded by cholera, one day's duration.

447; 1. ASHBORNE; *Brailsford*. Pop. 3303.—Chol. 0; Diarr. 0.

447; 2. —; *Mayfield*. Pop. 3393.—Chol. 0; Diarr. 0.

447; 3. —; *Ashborne*. Pop. 4817.—Chol. 2; Diarr. 3.—The first death from cholera is recorded on May 6th, at Osmaston, a man-servant, aged 27 years; the other case, August 23rd, at Compton, Sturston, the widow of a joiner, aged 82 years, died in 24 hours after the attack. 2 deaths from diarrhoea were in the Union Workhouse.

447; 4. —; *Calton*. Pop. 3141.—Chol. 2; Diarr. 0.—On June 4th, at Hope, township of Alstonfield, a farm-servant died of cholera, aged 42 years, and at Alstonfield, September 23rd, a shoemaker's daughter, aged one year.

447; 5. —; *Hartington*. Pop. 1692.—Chol. 0; Diarr. 0.

447; 6. —; *Brassington*. Pop. 5011.—Chol. 0; Diarr. 0.

448; 1. CHESTERFIELD; *Ashover*. Pop. 7737.—Chol. 0; Diarr. 1.

448; 2. —; *Chesterfield*. Pop. 16970.—Chol. 2; Diarr. 15.—Diarrhoea was prevalent in July, August, and September. Cholera appeared on July 27th, at Knivesmith-gate, the wife of a higgler, aged 52 years, ill 4 days. The other death occurred on August 6th, at Whittington, the wife of a miner, aged 24 years, at the latter end of pregnancy. One death from diarrhoea in the Union Workhouse.

448; 3. —; *Bolsover*. Pop. 2451.—Chol. 0; Diarr. 1.

448; 4. —; *Eckington*. Pop. 7995.—Chol. 1; Diarr. 5.—At the Renishaw Iron-works, on October 19th, an iron-moulder, aged 24 years, died of cholera in 24 hours after the attack.

448; 5. —; *Dronfield*. Pop. 4227.—Chol. 0; Diarr. 1.

449; 1. BAKEWELL; *Bakewell*. Pop. 11839.—Chol. 0; Diarr. 1.

449; 2. —; *Matlock*. Pop. 9432.—Chol. 0; Diarr. 4.

449; 3. —; *Tideswell*. Pop. 8122.—Chol. 1; Diarr. 1.—The daughter of a weaver, aged 15 years, died of cholera on March 5th; not certified by a medical certificate.

450; 1. CHAPEL-EN-LE-FRITH; *Buxton*. Pop. 3042.—Chol. 0; Diarr. 1.

450; 2. —; *Chapel-en-le-Frith*. Pop. 8645.—Chol. 4; Diarr. 0.—On May 5th, cholera was fatal to the son of a labourer, aged 5 years, at Sparrow-pit. Next death on June 25th, another on October 12th, and the last on October 20th, at the "Gisborne Arms," the widow of a publican, aged 56 years; she had been suffering from diarrhoea 7 days before applying for medical aid, cholera followed with collapse (survived the attack 20 hours).

451; 1. HAYFIELD; *Glossop*. Pop. 14577.—Chol. 8; Diarr. 2.—Cholera was fatal to 6 males and 2 females, all above 20 years of age. It first appeared at Hadfield, on June 12th, a labourer, aged 21 years, survived the attack 22 hours; next case on September 19th, at Higher Barn; on October 15th, 2 deaths occurred at The Heath, the wife of a farmer, aged 64 years, cholera 14 hours' duration, and a farmer, aged 72 years, 22 hours' duration. The epidemic subsided November 5th, when a labourer, aged 58 years, died at Whitfield, in 53 hours after the attack.

451; 2. —; *Hayfield*. Pop. 9516.—Chol. 2; Diarr. 4.—A cordwainer, aged 41 years, died of cholera on September 27th; the other case in the Workhouse, Ollerset, October 8th, a vagrant, aged 20 years, in 36 hours, followed by typhus fever, 4 days.

VIII. NORTH WESTERN DIVISION.

33. CHESHIRE.

452; 1. STOCKPORT; *Marple*. Pop. 5281.—Chol. 1; Diarr. 2.—The case of cholera occurred at Green End, Romiley, October 8th, a sawyer, aged 72. The deaths from diarrhœa were those of females aged 68 and 65.

452; 2. —; *Hyde*. Pop. 17375.—Chol. 2; Diarr. 18.—The cases described as cholera occurred July 30th in Wood-street (a female aged 56), and August 16th on the Peak Forest Canal (a boatman's child aged 5). Of the 18 cases of diarrhœa, 13 were those of children under 3 years of age.

452; 3. —; *Heaton Norris*. Pop. 15817.—Chol. 30; Diarr. 37.—The first death from cholera took place August 18th, at 3 Longson's Houses, a hand-loom weaver, aged 54, after 46 hours' illness. Second case, 4 days later, at 13 Thomas-street, followed by 2 deaths (sisters) at the back of the George Inn, August 29th and September 1st. From this day to October 3rd (when the last 2 cases occurred) 26 persons died from cholera, including 12 in the Hospital and 2 in Brown-street. Diarrhœa was fatal amongst infants, especially at the period of dentition; of the 37 deaths, 27 were those of children under 2 years of age. Seven persons died in "cellars" in various parts of the sub-district.

452; 4. —; *Stockport First*. Pop. 25310.—Chol. 29; Diarr. 59.—A death from cholera occurred May 24th at 17 Queen-street West, a printer's daughter, aged 17, after an attack of 2 days' duration. No other case until July 24th, when a cabinet-maker, aged 71, died at Great Underbank. In August only 4 cases of cholera were recorded but diarrhœa proved fatal to 22 persons between the 12th and 25th of that month. During September the epidemic prevailed in both forms with nearly equal malignity; diarrhœa, however, being confined almost exclusively to children. The last case of cholera occurred October 2nd, at 38 Ardern Field, a female, 62. Seven persons died in Chester-gate, 6 in Brinksway, 3 in Bamford-street, 3 in Spring Bank, 2 in the Workhouse, &c. Diarrhœa was fatal to 44 children under 2 years of age.

452; 5. —; *Stockport Second*. Pop. 12973.—Chol. 9; Diarr. 35.—A single case of cholera occurred in this sub-district in the month of May—on the 27th, a bleacher, aged 52, in Newbridge Lane. Next case, August 28th, a spinner, aged 42, in Avenue-street, Brinnington. In September, 6 deaths from cholera and 16 from diarrhœa were recorded; the last from cholera took place October 18th in Newbridge-lane, where the disease first appeared in the sub-district. Of the 44 deaths, more than half took place in various streets in Brinnington.

452; 6. —; *Cheadle*. Pop. 4660.—Chol. 1; Diarr. 5.—The case of cholera occurred February 23rd, at Gatley Etchells, a female, aged 11, after an attack of 38 hours' duration (*inquest*). The deaths from diarrhœa were those of infants.

452; 7. —; *Hazelgrove*. Pop. 4262.—Chol. 0; Diarr. 9.—3 adults and 6 children under 4 years of age.

453; 1. MACCLESFIELD; *Prestbury*. Pop. 4828.—Chol. 1; Diarr. 1.—The death from cholera took place at Adlington, September 4th, a labourer, aged 50.

453; 2. —; *Bollington*.—Pop. 8949.—Chol. 0; Diarr. 8.—3 adults and 5 children.

453; 3. MACCLESFIELD; *Rainow*. Pop. 3204.—Chol. 0; Diarr. 0.

453; 4. —; *East Macclesfield*. Pop. 11192.—Chol. 10; Diarr. 9.—First case of cholera, July 9th, a carter, aged 56 (*inquest*). The second death took place a fortnight later, in the Gap, a silk-washer, aged 56, followed by cases in Square-alley, Gutters, and other parts of the town. Last case, October 8th, at Waters, a shoemaker aged 34.

453; 5. —; *West Macclesfield*. Pop. 12945.—Chol. 16; Diarr. 23.—A death from cholera recorded June 24th, in West-street, a female, aged 34, after an attack of 7 hours. Next case, July 3rd, in King Edward-street, a shoemaker, aged 46. Other cases subsequently occurred in the following localities in the sub-district:—Little-street, Chester-gate, Stanley-street, Park-lane, Parsonage-street, Park-green (2 deaths), Oxford-road, Prestbury-road, Crompton-road, and Derby-street (3 deaths). One fatal case of cholera and 4 of diarrhœa in the Union Workhouse.

453; 6. —; *Sutton*. Pop. 7837.—Chol. 6; Diarr. 5.—The deaths from cholera were as follows:—August 8th, at Sutton, a charwoman, aged 35 (*inquest*); August 20th, in Lord-street, a wheelwright's son, aged 16, after being attacked 15 hours; August 25th, in High-street, a widow, aged 59; September 7th, in Mill-lane, an infant; September 12th, at Mill-green, a female, 62; and 5 days after the last case occurred in Pool-street, a female, aged 17.

453; 7. —; *Gawsworth*. Pop. 3453.—Chol. 0; Diarr. 0.

453; 8. —; *Alderley*. Pop. 3627.—Chol. 2; Diarr. 0.—These cases occurred at Nether Alderley, August 26th, and at Great Warford, September 25th, a coachman, aged 50, and a farmer aged 47.

454; 1. ALTRINCHAM; *Wilmslow*. Pop. 7070.—Chol. 3; Diarr. 1.—The deaths from cholera took place as follows:—August 12th, at Mobberley, a gardener, aged 30, after being attacked 24 hours; September 4th, a labourer, aged 71, at Bollin Fee; and on the following day a labourer, aged 27, at Pownall Fee.

454; 2. —; *Altrincham*. Pop. 10422.—Chol. 2; Diarr. 12.—The cases of cholera occurred August 11th, at Sale-Moor-Sale, and September 26th, at Goose Green, a labourer, aged 58, and a painter, aged 29. Of the 12 deaths from diarrhœa, 8 were those of infants under one year.

454; 3. —; *Lymm*. Pop. 6293.—Chol. 0; Diarr. 4.—3 infants and one aged person.

454; 4. —; *Knutsford*. Pop. 7234.—Chol. 2; Diarr. 2.—The deaths from cholera were as follow:—at Nether Knutsford, June 9th, a female, aged 62, after an attack of 13 hours' duration; and at Rostherne, August 19th, a female, aged 47, attacked 10 hours.

455; 1. RUNCORN; *Budworth*.—Pop. 4243.—Chol. 3; Diarr. 0.—These cases occurred at Appleton, viz.—July 30th, a labourer, aged 66, after 3 days' attack; October 8th, a farmer, aged 59, and on the following day, a farmer's widow, aged 52.

455; 2. —; *Daresbury*. Pop. 2872.—Chol. 1; Diarr. 1.—The case of cholera was that of a boatman, aged 45, who died in a boat at Preston-on-the-Hill, October 6th.

455; 3. —; *Runcorn*. Pop. 9853.—Chol. 75; Diarr. 21.—Cholera became fatal in this sub-district in July. The first cases occurred on the 9th of

that month, in Wivern-place and Mill-street, a "flatman," aged 47, and a "bricksetter," aged 22. These deaths were followed by others in July at Sutton, Halton (2), and the Rookery. During August and September cholera proved fatal to 63 persons. 4 cases were recorded in October—the last 2, on the 7th, in Bridgewater-street.—The epidemic was more than usually severe in the following localities:—Water-street, 8 deaths; High-street, 6; the Rookery, 5; Gilbert-street, 7; Nelson-street, 5; Stenhills, 7; Halton, 8; Halton-lane, 5. Diarrhœa was almost exclusively confined to children under 2 years of age.

455; 4. **RUNCORN; Frodsham.** Pop. 5924.—Chol. 3; Diarr. 3.—The 3 cases of cholera occurred at Kingsley: the first, April 29th, a child, aged 4; the second, July 29th, a farmer's widow, attacked 2 days; and the last, October 17th, a female, aged 9.

456; 1. **NORTHWICH; Weaverham.** Pop. 5647.—Chol. 5; Diarr. 1.—Of the cases of cholera, 2 occurred at Weaverham, viz., on August 1st, a female, aged 49, and October 6th, a labourer's child, aged 10; 2 at Hartford, September 5th, a labourer, aged 62, and October 3rd, a butcher's widow, 67; and one at Little Leigh, a labourer, aged 18.

456; 2. —; **Northwich.** Pop. 11151.—Chol. 35; Diarr. 10.—A death from cholera took place at the Workhouse, Leftwich, January 23rd, a boy, aged 14. A second case, also in the Workhouse, occurred May 7th. The next cases were in July, commencing with a labourer at the Workhouse on the 13th; 8 persons died in August, 13 in September, and 8 in October. Of the 45 deaths from cholera and diarrhœa, 16 took place in Northwich, 8 at Whitton, 6 at Leftwich, 5 at Castle-Northwich, 2 at Winnington, 2 at Marston, and 4 in the Workhouse.

456; 3. —; **Over.** Pop. 6477.—Chol. 4; Diarr. 5.—The cases of cholera occurred as follows:—July 13th, at Over, a saltmaker, aged 54; at Moulton, August 24th, a joiner; and at Over, September 4th and 16th, a waterman and a saltmaker.

456; 4. —; **Middlewich.** Pop. 5742.—Chol. 2; Diarr. 1.—The deaths from cholera occurred at Newton, July 12th, a labourer, aged 45; and at Shipbrook, October 22nd, a labourer, aged 52.

457; 1. **CONGLETON; Church Hulme.** Pop. 3491.—Chol. 0; Diarr. 1.—A child, aged 5.

457; 2. —; **Congleton.** Pop. 14684.—Chol. 0; Diarr. 6.—Nearly all infants.

457; 3. —; **Sandbach.** Pop. 10862.—Chol. 1; Diarr. 7.—The case of cholera, the only one recorded in the Congleton district, occurred at Sandbach, October 10th, a joiner, aged 46, after an attack of 18 hours.

458; 1. **NANTWICH; Wybunbury.** Pop. 7996.—Chol. 10; Diarr. 6.—First fatal case of cholera, July 11th, at Warmingham, a labourer's wife, aged 64, attacked 26 hours. The second case occurred, July 22nd, at Stapely, where 4 persons died on the 24th and 25th. 2 deaths took place at Monks Coppenhall and 2 at Crewe. The cases of diarrhœa were, with one exception, those of infants.

458; 2. —; **Nantwich.** Pop. 9431.—Chol. 164; Diarr. 8.—The epidemic broke out with great virulence in this sub-district in June. The first cases occurred in Welch-row and Wood-street; 8 persons died from cholera in the latter place, and 4 in Welch-row, between June 21st and 30th. In July the epidemic proved fatal to 108 persons, 9 dying on the 14th, and 6 on several other days. The mortality from cholera in August was 18, and in September 20. The following localities furnished a

large proportion of the cases, viz., Wood-street 28; Mill-street 15; Wych House Bank 16; Welch-row 11; Hospital-street 14; Pillory-street 13; Beam-street 9; Love-lane 13; and the Workhouse (where the last cases in the district occurred Oct. 8th and 10th) 8.

458; 3. **NANTWICH; Bunbury.** Pop. 7965.—Chol. 3; Diarr. 2.—On case of cholera occurred at Tarporley, July 10th, a painter, aged 29 (*inquest*); the others at Church Minshul, July 19th and August 12th, a labourer, 53, and a female, 74.

458; 4. —; **Wrenbury.** Pop. 8449.—Chol. 4; Diarr. 1.—Of the deaths from cholera, 3 took place at Audlem, viz., June 24th, a nutseller, attacked 12 hours; August 16th, a draper; and September 16th, a bargeman on the canal. The remaining case occurred at Broomhall, October 5th, a farmer.

459; 1. **GREAT BOUGHTON (CHESTER); Tattenhall.** Pop. 8160.—Chol. 0; Diarr. 0.

459; 2. —; **Chester Castle.** Pop. 16687.—Chol. 57; Diarr. 19.—Cholera became fatal in this sub-district in June; the first case occurred on the 25th at Boughton, a labourer, aged 19, after an attack of 10 hours' duration. A second case was recorded in June. Two persons died in July; 17 in August; 21 in September, and 12 in October, with occasional intervals of several days between the cases. The epidemic proved fatal to 10 persons in Greeway-street, 8 in Handbridge, 4 in Union-street, 3 in Duke-street, and to a prisoner in the castle.

459; 3. —; **Chester Cathedral.** Pop. 15812.—Chol. 32; Diarr. 15.—The first death from cholera in the Great Boughton district took place in the Infirmary in this sub-district; a slater, aged 29, attacked 40 hours. The next cases were those of a butcher's wife, in Wellington-street, June 13th, and a tin-plate worker, aged 40, induced (according to the verdict of the coroner's jury) by fatigue and want of the necessaries of life. Three cases were recorded in July, 8 in August, 13 in September, and 4 in October. Four deaths occurred in the House of Industry, Paradise-row; 5 at Handbridge, St. Bridget's Parish; and 3 in the Infirmary. Last case, December 3rd, in the House of Industry.

459; 4. —; **Hawarden.** Pop. 8438.—Chol. 2; Diarr. 7.—The deaths from cholera were, on August 23rd, at Hawarden, a female, 11, after 12 hours' attack, and October 1st, at Saltney, a female, 29, attacked 16 hours. Five adults (4 at advanced ages) and 2 infants died from diarrhœa.

460; 1. **WIRRAL; Neston.** Pop. 4783.—Chol. 2; Diarr. 3.—Both cases of cholera occurred at Neston; a female, aged 22, September 14th, and a collier, 44, November 8th.

460; 2. —; **Eastham.** Pop. 5476.—Chol. 5; Diarr. 6.—Two cases of cholera (the first and last recorded in the sub-district) occurred at Whitby; a female, aged 55, attacked 6 hours, July 19th, and a boatman 31, October 7th. Two at Lower Bebington, August 11th and 20th, and one at Higher Bebington, September 27th. The deaths from diarrhœa, were with one exception those of infants.

460; 3. —; **Woodchurch.** Pop. 4487.—Chol. 6; Diarr. 2.—The first death from cholera took place at Greasby, July 19th, a farmer's widow, aged 78, after 17 hours' illness. Second case, August 20th, at Hoose, where another occurred, September 15th. Great Meolse, Bidston, and Saughall each contributed a death from cholera. Of the 6 persons, 5 were females, at ages ranging 38 to 78.

460; 4. —; **Wallasey.** Pop. 6261.—Chol. 30; Diarr. 4.—The epidemic appeared in this sub-district in June, the first case having occurred at Liscard on

the 16th, a surgeon's daughter, aged 19, after 10 hours' attack. A few days after it broke out at Poolton-cum-Seacombe, and proved fatal to 10 persons, while no cases were recorded in any other part of the sub-district. On July 17th, cholera re-appeared at Liscard, and 9 persons were its victims between that day and August 1st. Four fatal cases occurred at Wallasey, all the others having taken place at the above-named places, viz., 13 at Liscard, and the same number at Poolton.

460; 5. WIRRAL; *Birkenhead*. Pop. 10777.—Chol. 96; Diarr. 55.—Cholera became fatal in this sub-district a week earlier than in the foregoing; the first case having occurred, June 9th, in Field-street, Birkenhead, a labourer's wife, attacked 8 hours. Eight other deaths in the same street, and 7 in other parts of Birkenhead, were recorded in June. In July the deaths from cholera were 14, and in August 15; diarrhoea being very fatal amongst children. The epidemic was at its height in September, when 44 persons died. The 3 last cases occurred at the same house, No. 14, Leicester-street, October 25th, November 3rd and 6th. The following localities furnished many of the deaths:—Field-street (10 cases); Oak-street; St. Anne-street; Chapel-street and Duke-street, Tranmere; Albert Terrace; Rose Cottages; and Lower Tranmere. Of the 55 deaths from diarrhoea, 40 were those of children under two years of age.

34. LANCASHIRE.

461; 1. LIVERPOOL; *St. Martin*. Pop. 35478.—Chol. 1136; Diarr. 273.

461; 2. —; *Howard-street*. Pop. 26197.—Chol. 742; Diarr. 163.

461; 3. —; *Dale-street*. Pop. 35861.—Chol. 820; Diarr. 153.

461; 4. —; *St. George*. Pop. 19723.—Chol. 198; Diarr. 32.

461; 5. —; *St. Thomas*. Pop. 34972.—Chol. 445; Diarr. 100.

461; 6. —; *Mount Pleasant*. Pop. 33042.—Chol. 228; Diarr. 126.

461; 7. —; *Islington*. Pop. 37730.—Chol. 604; Diarr. 134.

The observations on the district of Liverpool will be found in the remarks, in foregoing pages.

462; 1. WEST DERBY; *Toxteth Park*.—Pop. 41295.—Chol. 754; Diarr. 158.

462; 2. —; *Everton*. Pop. 13489.—Chol. 222; Diarr. 52.

462; 3. —; *Walton*. Pop. 5625.—Chol. [27; Diarr. 10.

462; 4. —; *Crosby*. Pop. 3194.—Chol. 10; Diarr. 4.

462; 5. —; *Litherland*. Pop. 2970.—Chol. 9; Diarr. 4.

462; 6. —; *West Derby*. Pop. 16921.—Chol. 100; Diarr. 47.

462; 7. —; *Wavertree*. Pop. 5186.—Chol. 13; Diarr. 4.

The observations on the district of West Derby will be found in the remarks, in foregoing pages.

463; 1. PRESCOT; *Hale*. Pop. 2294.—Chol. 5; Diarr. 2.—The first 2 cases of cholera occurred at Halebank, on August 10th and September 7th; the three others at Speke, on October 5th, 9th, and 10th.

463; 2. —; *Much Woolton*. Pop. 3185.—Chol. 7; Diarr. 6.—First death from cholera on July 19th at Allerton-road, a shoemaker, aged 33, duration of attack 10 hours. The last case was that of a shoemaker's son, aged 14, at 60 Quarry-street, on September 25th.

463; 3. PRESCOT; *Huyton*. Pop. 3798.—Chol. 1; Diarr. 2.—This death from cholera was that of a joiner, aged 35, at Knowsley, on May 18th, effusion of the brain supervened.

463; 4. —; *Farnworth*. Pop. 3836.—Chol. 0; Diarr. 2.

463; 5. —; *Prescot*. Pop. 10922.—Chol. 42; Diarr. 15.—Cholera appeared fatally on June 10th, in the case of a watchmaker, aged 68, at Whiston: duration of attack 2 days. The next 3 deaths were at the Workhouse, Whiston; Fall-lane suffered much, but it was at the Workhouse that the epidemic was most fatal, causing the death of no less than 24 inmates, in addition to 5 from diarrhoea.

463; 6. —; *St. Helen*. Pop. 17849.—Chol. 120; Diarr. 31.—Cholera first proved fatal to a labourer at glass-works, aged 63, at Peasley-cross on June 11th, duration of attack 9 hours; the next case was on June 24th, at Bold-street; 6 deaths occurred in July; throughout August and September it prevailed with great intensity; Peasley-cross, Parr-street, Parr-stocks, and near Merton-bank, suffered most. In the old Workhouse, 3 deaths took place: the last fatal case was that of a collier's daughter, aged 4, near Parr Mill, on November 17th. The families of colliers suffered severely. The deaths from diarrhoea were more frequent, when the cholera declined.

463; 7. —; *Rainford*. Pop. 1855.—Chol. 1; Diarr. 1.—This case of cholera was that of a labourer, aged 38, at Rainford, on October 18th, duration of attack 19 hours.

464; 1. ORMSKIRK; *Bickerstaffe*. Pop. 2679.—Chol. 1; Diarr. 4.—A labourer, aged 34, died of cholera at Mellin, on August 1st.

464; 2. —; *Aughton*. Pop. 3440.—Chol. 0; Diarr. 4.

464; 3. —; *Halsall*. Pop. 1958.—Chol. 2; Diarr. 1.—The deaths from cholera were those of a waterman and his son, on July 11th, at Halsall.

464; 4. —; *Formby*. Pop. 2493.—Chol. 4; Diarr. 0.—First death on July 2nd, at Formby—a stonemason, aged 27, duration of attack 8 hours; the other 3 cases occurred at Altcar on September 3rd, October 9th and 12th.

464; 5. —; *North Meols*. Pop. 7774.—Chol. 44; Diarr. 25.—Cholera first became fatal on June 27th, in the case of a timekeeper's wife, aged 60, at Southport; it was fatal throughout July, August, and September, at Southport, Crossens, and Marshside. The last case was that of a labourer's wife, aged 39, at Southport, on October 13. Diarrhoea, accompanied by vomiting, was very prevalent.

464; 6. —; *Tarleton*. Pop. 3296.—Chol. 0; Diarr. 1.

464; 7. —; *Scarisbrick*. Pop. 4185.—Chol. 6; Diarr. 9.—Excepting one case of diarrhoea at Scarisbrick, on November 8th, the whole of the deaths took place at Burscough. The first fatal case of cholera was on July 25th, and the last on August 14.

464; 8. —; *Ormskirk*. Pop. 4891.—Chol. 18; Diarr. 22.—After 5 deaths from diarrhoea in April, May and June, cholera appeared fatally on July 30th, at Blackhouse-hill; it prevailed, together with diarrhoea, throughout August and September. The last death from cholera occurred on September 27th in the fever ward, a labourer, aged 22.

464; 9. —; *Lathom*. Pop. 4259.—Chol. 1; Diarr. 7.—This death from cholera was that of a boatman's wife, aged 37, at Lathom, on September 7th; duration of attack one day.

465; 1. WIGAN; *Standish*. Pop. 6009.—Chol. 5;

Diarr. 3.—The first case of cholera was that of a boatman's son, aged 5, at Standish, on July 18th; he had no medical attendant, and died after an attack of 8 hours' duration; no fatal case occurred after October 15th, when a bookkeeper, aged 70, died at Shevington.

465; 2. **WIGAN**; *Aspull*. Pop. 6750.—Chol. 24; Diarr. 1.—These deaths from cholera occurred at Aspull; the first on August 4th, a collier, aged 51, after an attack of 9 hours; the last on November 26th, a collier's widow, aged 60, after an attack of 14 hours. The epidemic prevailed most fatally in the families of colliers.

465; 3. —; *Wigan*. Pop. 25517.—Chol. 348; Diarr. 116.—Diarrhœa prevailed from the beginning of the year, but it was not until July 16th that the first death from cholera was recorded, in the case of a collier, aged 35, at Douglas-bank, the duration of attack being 15 hours: one other case occurred on July 18th, at Belvoir-street; in August, 15 deaths took place. The epidemic continued with increasing violence throughout September, and attained its greatest height on October 18th, when 17 fatal attacks were recorded: it declined towards the end of the month, and in November only 15 deaths took place at intervals, the last case being on November 18th, a widow, aged 40, at the Workhouse. Wigan-lane, Spring-gardens, Frankfort-street, School-lane, Union-street, Scholefield-lane, Warrington-lane, Vauxhall-road, Scholes, and Nicholas-nook are among the places which suffered most. In the families of colliers and weavers, great numbers were carried off. Diarrhœa prevailed chiefly amongst young children, and no less than 63 died under the age of 2 years.

465; 4. —; *Hindley*. Pop. 8925.—Chol. 112; Diarr. 14.—Cholera prevailed at the Workhouse in March, when 4 deaths took place between the 8th and 16th of the month; no other case occurred until July 26th, when it proved fatal to a collier, aged 43, at Hindley. In August it became most prevalent: Mill-lane; Hindley; New Scholes; Wigan-road; Broom-street, and Platt-bridge, suffered severely: in Brackley-street, a collier and his wife died from cholera, and their daughter from diarrhœa, the first two on September 17th, and the latter on September 15th. The last death from cholera was that of a collier, aged 55, at Platt-bridge, on November 15th.

465; 5. —; *Pemberton*. Pop. 7553.—Chol. 62; Diarr. 8.—A weaver, aged 66, died of cholera, at Pemberton, on March 6th. No other cases occurred until July 9th and 16th, when a bricklayer and his daughter died at Pemberton: it then prevailed throughout August, September, and the early part of October. All the deaths took place in Pemberton and Orrell, chiefly in the families of colliers and weavers. The last death was that of a weaver, aged 46, at Pemberton, on October 18th.

465; 6. —; *Upholland*. Pop. 5858.—Chol. 10; Diarr. 4.—First case of cholera on June 20th, at Billinge Chapelend, a labourer's son, aged 19, duration of attack 8 hours. Most of the deaths took place at Billinge Chapelend, and Billinge Higher-end: the last fatal case was on October 29th.

465; 7. —; *Ashton-in-Makerfield*. Pop. 5410.—Chol. 2; Diarr. 11.—These deaths from cholera were those of a labourer, aged 48, at the Hole-house, on September 26th; and a locksmith's wife, aged 55, at Downall-green, on December 16th.

466; 1. **WARRINGTON**; *Newton*. Pop. 4422.—Chol. 4; Diarr. 3.—Cholera was first fatal to a smith and his son, at 26 Viaducts, Newton, on July

27th and 29th; the other 2 cases occurred at Red-bank, on August 19th; and at Parks Haydock, on October 27th.

466; 2. **WARRINGTON**; *Winwick*. Pop. 1993.—Chol. 1; Diarr. 1.—These deaths took place at South-wood-with-Croft; the case of cholera on August 25th, and that of diarrhœa on August 16th.

466; 3. —; *Sankey*. Pop. 2276.—Chol. 3; Diarr. 0.—The first 2 cases took place at Bintonwood, on July 21st and 31st, and the other at Sankey, on August 19th.

466; 4. —; *Warrington*. Pop. 18981.—Chol. 50; Diarr. 32.—Cholera was first fatal at the House of Recovery, on April 25th. The next 3 cases were at Goodier's-yard, on June 28th and 29th. The epidemic prevailed throughout July, August, September, and the early part of October, the last death occurring on October 14th. At the House of Recovery 25 deaths from cholera took place.

466; 5. —; *Latchford*. Pop. 3282.—Chol. 5; Diarr. 5.—These deaths from cholera occurred at Latchford, between August 29th and September 24th, inclusive.

466; 6. —; *Rixton*. Pop. 2084.—Chol. 0; Diarr. 1.

467; 1. **LEIGH**; *Lowton*. Pop. 4130.—Chol. 1; Diarr. 2.—This case of cholera was that of a white-smith's son, aged 9, at Golborne, on June 29th.

467; 2. —; *Culcheth*. Pop. 8391.—Chol. 6; Diarr. 9.—Of these cases of cholera one occurred on January 3rd, at Twist Green; one on May 28th, at Jones'-square; 3 on August 7th, 14th, and 17th, at Bury-lane; and one on November 7th, at Trafalgar-street.

467; 3. —; *West Leigh*. Pop. 6838.—Chol. 3; Diarr. 5.—First death from cholera on July 11th, at Liverpool-road; second on August 12th, at Dangerous Corner; third on October 7th, at Farrington's Fold.

467; 4. —; *Atherton*. Pop. 9193.—Chol. 1; Diarr. 7.—This death from cholera was that of a nailer, aged 34, at Atherton, on September 9th. Of the diarrhœa cases, 4 occurred at Tyldesley.

468; 1. **BOLTON**; *Farnworth*. Pop. 8265.—Chol. 2; Diarr. 7.—First case of cholera on June 6th, at Chapel-street; second on August 1st, at 33 Green Side.

468; 2. —; *Hulton*. Pop. 5697.—Chol. 3; Diarr. 1.—These deaths from cholera took place on June 16th, at Lanes End; on June 28th, at Mills Brow; and on September 10th, at Cat-row.

468; 3. —; *Westhoughton*. Pop. 4527.—Chol. 4; Diarr. 1.—On January 6th, a farmer and carrier, aged 51, died of cholera at Old Lees; duration of attack, 14 hours; he was of intemperate habits. The other cases occurred on June 10th, and September 1st and 14th, the last two being aged persons.

468; 4. —; *Halliwell*. Pop. 3955.—Chol. 2; Diarr. 0.—These were the deaths of a carter, aged 56, at Topoth-lane, on September 10th; and a bleacher's wife, aged 29, at Mortfield, on September 18th.

468; 5. —; *Horwich*. Pop. 4398.—Chol. 4; Diarr. 4.—The first 2 to suffer from cholera were a block-printer and his wife, at the top of the meadow, Horwich, on March 30th and April 2nd. The other cases took place on June 22nd at Scholes Bank; and on October 5th, at Brinks.

468; 6. —; *Tonge-with-Haulgh*. Pop. 5932.—Chol. 2; Diarr. 0.—These were the deaths of a labourer's son, aged 15, at Lane Ends, on September 28th; and a finisher's daughter, aged 14, at Hag Brow, on October 21st.

468; 7. **BOLTON; Turton.** Pop. 4553.—Chol. 2; Diarr. 3.—The deaths from cholera were those of a shopkeeper's wife, aged 42, at Dunscar, on April 30th; and a weaver's wife, aged 61, at Volunteer-row, on September 24th.

468; 8. —; **Edgeworth.** Pop. 2622.—Chol. 1; Diarr. 0.—This was the death of a winder of twist, in a cotton-mill, at Entwisle, on September 5th.

468; 9. —; **Sharples.** Pop. 3326.—Chol. 1; Diarr. 3.—This death from cholera was that of a hand-loom weaver's widow, aged 58, at Bank Top, on September 9th.

468; 10. —; **Little Bolton.** Pop. 15707.—Chol. 24; Diarr. 11.—The first death from cholera was that of a weaver's son, aged 7, at 2 Back Charles-street, on May 8th; no other case, however, occurred until August 22nd, when a weaver, aged 56, died at 6 Green Heyes: its prevalence after this increased, and it was not until October 7th that the last death was recorded.

468; 11. —; **Eastern Bolton.** Pop. 18254.—Chol. 37; Diarr. 28.—On January 27th, an inn-keeper's wife, aged 37, died of cholera at Mealhouse-lane. The next case was at the Workhouse, on June 12th; 2 deaths took place in July; in August and September its prevalence increased. The last fatal case was that of a tailor's son, aged 12, at Bradford-square, on October 11th. In the Union Workhouse there were 3 deaths from cholera, and 6 from diarrhoea.

468; 12. —; **Western Bolton.** Pop. 15356.—Chol. 38; Diarr. 45.—The presence of cholera is not recorded in this sub-district until July 26th, when a weaver, aged 72, died at Marshes-court, after an attack of 18 hours' duration: this case was preceded by several deaths from diarrhoea. The epidemic increased in August, and prevailed severely throughout September. On October 4th, 2 cases occurred at Green-street; and on November 9th, the last death from cholera took place at 10 Coronation-street. It was most fatal in Spring-gardens.

468; 13. —; **Lever.** Pop. 4937.—Chol. 3; Diarr. 2.—These deaths from cholera took place at Creams, Little Lever, on January 13th; at Lever-lane, on June 19th; and at Topoth Gorses, Darcy Lever, on September 12th.

469; 1. **BURY; Holcombe.** Pop. 5445.—Chol. 6; Diarr. 2.—The whole of these deaths from cholera took place at Ramsbottom; the first on June 25th, and the last on September 26th.

469; 2. —; **Tottington, Lower End.** Pop. 4484.—Chol. 0; Diarr. 0.

469; 3. —; **Walmersley.** Pop. 4564.—Chol. 7; Diarr. 4.—The deaths from cholera occurred between June 26th and September 7th, inclusive.

469; 4. —; **Birtle.** Pop. 4282.—Chol. 3; Diarr. 8.—These cases of cholera occurred at Fair-field, Heap, on August 5th and 12th; and at Ashworth Hallfold, on September 23rd. Diarrhoea prevailed at Birtle Dean and Hooley Bridge.

469; 5. —; **Heywood.** Pop. 14438.—Chol. 4; Diarr. 21.—Cholera was fatal at Vale-street, on September 4th; at 8 Back York-street, on September 1st and 2nd; and at Church-street, on September 6th. Diarrhoea prevailed until the beginning of December.

469; 6. —; **South Bury.** Pop. 9926.—Chol. 13; Diarr. 14.—Cholera was first fatal to a cotton-reeler, aged 30, at Clerke-street, on July 30th; it prevailed until October 10th, the last death being that of a calico printer, aged 33, at Back-square.

469; 7. —; **North Bury.** Pop. 11393.—Chol. 12; Diarr. 9.—A tile-maker's son, aged 3, died of cholera, at Hornby-street, on January 26th.

The next case was on March 31st, at Pump-street. In August, 7 deaths took place, and 2 in September: it ceased to be fatal after October 2nd, when a weaver's son died at Fernhill.

469; 8. **BURY; Elton.** Pop. 6646.—Chol. 6; Diarr. 9.—The deaths from cholera took place between June 18th and November 4th. Diarrhoea was most fatal in September.

469; 9. —; **Radcliffe.** Pop. 5133.—Chol. 0; Diarr. 2.

469; 10. —; **Pilkington.** Pop. 11186.—Chol. 7; Diarr. 15.—First death from cholera on June 8th, at Hollins-lane. The next 2 occurred at Whitefield, on July 25th and August 10th. The last 2 deaths were on October 1st, at Oak-gate and Higher-lane. Diarrhoea was most prevalent in the spring; it was fatal to two sons of a weaver, on October 16th, at Chapelfield.

470; 1. **WORSLEY; Worsley.** Pop. 9697.—Chol. 7; Diarr. 3.—On January 19th, a farmer, aged 82, died of cholera at Hill Top; the next case took place on July 20th, and the others from September 1st to September 21st.

471; 1. **CHORLTON; Barton.** Pop. 10865.—Chol. 4; Diarr. 14.

471; 2. —; **Stretford.** Pop. 6386.—Chol. 2; Diarr. 8.

471; 3. —; **Didsbury.** Pop. 3014.—Chol. 0; Diarr. 7.

471; 4. —; **Ardwick.** Pop. 17707.—Chol. 18; Diarr. 45.

471; 5. —; **Chorlton-upon-Medlock.** Pop. 28336.—Chol. 96; Diarr. 76.

471; 6. —; **Hulme.** Pop. 27418.—Chol. 160; Diarr. 155.

The observations on the district of Chorlton will be found in the remarks, in foregoing pages.

472; 1. **SALFORD; Pendleton.** Pop. 13230.—Chol. 5; Diarr. 34.

472; 2. —; **Broughton.** Pop. 3794.—Chol. 3; Diarr. 6.

472; 3. —; **Greengate.** Pop. 30682.—Chol. 165; Diarr. 148.

472; 4. —; **Regent Road.** Pop. 22518.—Chol. 64; Diarr. 73.

The observations on the district of Salford will be found in the remarks, in foregoing pages.

473; 1. **MANCHESTER; Ancoats.** Pop. 42231.—Chol. 376; Diarr. 228.

473; 2. —; **Deansgate.** Pop. 33153.—Chol. 172; Diarr. 140.

473; 3. —; **London Road.** Pop. 29049.—Chol. 148; Diarr. 129.

473; 4. —; **Market-street.** Pop. 27834.—Chol. 67; Diarr. 88.

473; 5. —; **St. George.** Pop. 31589.—Chol. 93; Diarr. 148.

473; 6. —; **Newton.** Pop. 7383.—Chol. 17; Diarr. 17.

473; 7. —; **Cheetham.** Pop. 8827.—Chol. 3; Diarr. 8.

473; 8. —; **Failssworth.** Pop. 4550.—Chol. 1; Diarr. 2.

473; 9. —; **Blackley.** Pop. 3640.—Chol. 1; Diarr. 3.

473; 10. —; **Prestwich.** Pop. 4147.—Chol. 0; Diarr. 2.

The observations on the district of Manchester will be found in the remarks, in foregoing pages.

474; 1. **ASHTON-UNDER-LYNE; Knott Lanes.** Pop. 5521.—Chol. 1; Diarr. 1.—This death from cholera was that of a roller-maker, aged 58, at Waterloo, on August 2nd.

474; 2. **ASHTON-UNDER-LYNE**; *Ashton Town*. Pop. 22678.—Chol. 30; Diarr. 65. After a prevalence of diarrhoea from the commencement of the year, cholera first became fatal on August 13th, to a blacksmith's daughter, aged 7 months, at Catherine-street. It prevailed chiefly in August and September: the last two cases occurred on November 29th and December 2nd. Adelphi-court and Scotland-brook suffered most; and 3 deaths from cholera and 3 from diarrhoea took place at the Hospital in Crickets-lane. Diarrhoea was fatal in 5 cases at the Workhouse.

474; 3. —; *Audenshaw*. Pop. 10307.—Chol. 0; Diarr. 10.—Diarrhoea was most prevalent in September.

474; 4. —; *Denton*. Pop. 6759.—Chol. 0; Diarr. 2.

474; 5. —; *Newton and Godley*. Pop. 8900.—Chol. 0; Diarr. 7. Diarrhoea was most fatal in the spring.

474; 6. —; *Dukinfield*. Pop. 22394.—Chol. 7; Diarr. 24. Cholera was first fatal in the case of a shoemaker's wife, aged 52, at 22 Grass Croft-street, on June 11th; the last deaths were those of a striper's two sons, at 12 Nelson-street, September 8th. Diarrhoea was prevalent throughout the year, but chiefly in September.

474; 7. —; *Hartshead*. Pop. 12731.—Chol. 8; Diarr. 7. First death from cholera on June 7th, at 23 Old-street, Staleybridge; the other cases occurred from September 2nd to September 14th.

474; 8. —; *Mottram*. Pop. 7613.—Chol. 21; Diarr. 0.—From the 9th to the 17th of June, cholera prevailed with much severity; 13 deaths occurring within that period, and the whole of them at Woodhead Tintwistle among the mining and labouring population: of the remaining cases 5 occurred in August, 2 on September 6th, and the last death on October 5th at Wednescough.

474; 9. —; *Stayley*. Pop. 4702.—Chol. 1; Diarr. 0.—This was the death of a shoemaker's wife, aged 57, at Warrington Place, on September 9th.

475; 1. **OLDHAM**; *Oldham-below-Town*. Pop. 21986.—Chol. 24; Diarr. 31.—Diarrhoea was very prevalent in the early part of the year. Cholera was first fatal to a mechanic's daughter, aged 5, at Morton-terrace, on August 14th; the next case was on August 26th, at Back Royton-street. The influence of the epidemic was most felt throughout September: several deaths took place in New Radcliffe-street; Maygate-lane, and North-moor; in October only 3 cases occurred, the last being on October 13th, at Royton-street.

475; 2. —; *Oldham-above-Town*. Pop. 20609.—Chol. 9; Diarr. 9.—Cholera was first fatal at New Earth, Oldham, on July 28th and August 3rd; the last case occurred on October 23rd, at Beever-street.

475; 3. —; *Chadderton*. Pop. 7820.—Chol. 4; Diarr. 7.—The first deaths from cholera were those of a mother and daughter at the workhouse, on May 16th and 17th; the other cases occurred on July 12th, at Lark-hill, Tonge, and on October 3rd, at the Fever ward.

475; 4. —; *Middleton*. Pop. 8078.—Chol. 2; Diarr. 8.—These deaths from cholera took place at Rhodes, on August 21st, an engraver, aged 40; and on September 10th, a grocer, aged 43.

475; 5. —; *Royton*. Pop. 7186.—Chol. 2; Diarr. 9.—The deaths from cholera were those of a shopkeeper, aged 46, at Trub Smithy, Thornham, and a cotton spinner, aged 30, at Downing-street, on September 12th. Diarrhoea was most prevalent in January.

475; 6. **OLDHAM**; *Crompton*. Pop. 6729.—Chol. 0; Diarr. 10.—Most of these deaths took place in the spring.

476; 1. **ROCHDALE**; *Butterworth Freeholdside*. Pop. 2313.—Chol. 2; Diarr. 1.—Cholera was fatal to a weaver and pensioner, aged 44, at Sungate, on August 13th; and to a carter, aged 21, at Stonepitfield, October 4th.

476; 2. —; *Butterworth Lordshipside*. Pop. 2775.—Chol. 0; Diarr. 1.

476; 3. —; *Castleton without*. Pop. 5860.—Chol. 3; Diarr. 5.—Two of the deaths from cholera occurred on July 29th, at Brimrod-lane and at Orchard, and the other, on August 23rd, at Balderstone.

476; 4. —; *Castleton within*. Pop. 8419.—Chol. 3; Diarr. 4.—Cholera was fatal at Milkstone, on September 16th; at Bell-street on September 28th; and at Church-lane, on October 8th.

476; 5. —; *Spotland-nearer-side*. Pop. 7537.—Chol. 3; Diarr. 5.—These deaths from cholera took place at College-street, on September 22nd; at Hamilton Buildings, on September 25th; and at Wham Bottom, on October 11th.

476; 6. —; *Spotland-farther-side*. Pop. 5211.—Chol. 2; Diarr. 3.—The deaths from cholera occurred at Dunisbooth, on February 3rd, and at Clapgate on July 6th.

476; 7. —; *Wardleworth*. Pop. 11400.—Chol. 4; Diarr. 14.—Cholera was first fatal to a male infant, aged 6 months, at John-street, on January 21st; the other cases occurred at Red Cross-street, on July 30th; at Yorkshire-street, on September 19th; and at Rope-street, on October 18th. The deaths from diarrhoea ranged between February 4th and October 19th.

476; 8. —; *Wuerdle*. Pop. 6875.—Chol. 2; Diarr. 8. The cases of cholera were those of a weaver, aged 44, at Smallbridge, on June 13th; and a weaver's wife, aged 41, at Hamerbottoms, on October 10th.

476; 9. —; *Blatchinworth*. Pop. 4456.—Chol. 1; Diarr. 5.—Cholera was fatal to a shoemaker, aged 55, at Littleborough Blatchinworth, on August 14th; duration of attack 2 days. 3 of the deaths from diarrhoea occurred in December.

476; 10. —; *Whitworth*. Pop. 5732.—Chol. 3; Diarr. 8.—On Feb. 1st a farmer's son, aged 7 months, died of cholera, after an attack lasting 30 hours, at Back Fields, Spotland; next case on February 22nd, at Bridge Mill, Spotland; and the last death on October 2nd, at Greave, Spotland.

477; 1. **HASLINGDEN**; *New-church*. Pop. 11668.—Chol. 3; Diarr. 13. The cases of cholera occurred on June 25th, at Edgeside; on September 17th, at Bridleway; and on September 24th, at Waterfoot. Diarrhoea prevailed chiefly from April 16th to September 7th; the exception being 3 cases in December.

477; 2. —; *Rossendale*. Pop. 7832.—Chol. 0; Diarr. 6.

477; 3. —; *Edenfield*. Pop. 4832.—Chol. 1; Diarr. 0.—This was the death of a labourer, aged 36, at Musden-head, Musbury, on December 4th, duration of attack 3½ days.

477; 4. —; *Haslingden*. Pop. 8239.—Chol. 1; Diarr. 6.—Cholera was fatal to a designer of colours at the market-place on September 3rd: duration of attack 8 hours; he had suffered from slight diarrhoea for 40 hours previous.

477; 5. —; *Accrington*. Pop. 8719.—Chol. 2; Diarr. 6.—The deaths from cholera were those of a block-cutter's widow, aged 62, at Black Abbey, on

June 14th; duration of attack 4 days: and a labourer's son, aged 4 months, at Grange, New Accrington, on August 4th; duration of attack 24 hours.

478; 1. *BURNLEY*; *Burnley*. Pop. 23546.—Chol. 28; Diarr. 20.—Diarrhœa was very prevalent in the early part of the year. A block-printer's wife died from cholera, on February 2nd, at Penny-street, Habergham Eves: it was not, however, until July 14th, that the next death from cholera took place. It then prevailed until November 24th, when the last case is recorded: several deaths occurred at Healey Wood, Thorny Bank, Cross-street, and Wood-street.

478; 2. —; *Padiham*. Pop. 7145.—Chol. 4; Diarr. 2.—The fatal cases of cholera occurred at Ightonhill-street, on June 24th; at Dame-street, on August 28th; at Syke-side Altham, on September 11th; and at Guy-street, on October 21st.

478; 3. —; *Colne*. Pop. 20761.—Chol. 0; Diarr. 4.

478; 4. —; *Pendle*. Pop. 2750.—Chol. 0; Diarr. 1.

479; 1. *CLITHEROE*; *Gisburn*. Pop. 3422.—Chol. 1; Diarr. 0.—This was the death of a farmer's wife, aged 40, at Rimmington, on September 17th; duration of attack 2 days, and she had diarrhœa for 3 days previously.

479; 2. —; *Slaidburn*. Pop. 2122.—Chol. 0; Diarr. 3.

479; 3. —; *Chipping*. Pop. 3746.—Chol. 0; Diarr. 3.

479; 4. —; *Clitheroe*. Pop. 10187.—Chol. 21; Diarr. 8.—The first death from cholera was that of a labourer's daughter, after an attack of 9 hours' duration, at Back Salford, on August 28th; after this it prevailed greatly in Russell-street, where 11 deaths took place, out of which number 7 were block-printers and their wives: the last case recorded is that of a labourer's wife, aged 54, at Shaw Bridge, on October 8th.

479; 5. —; *Whalley*. Pop. 3540.—Chol. 1; Diarr. 0.—This was the death of a railway labourer, aged 77, at Whalley, on May 18th; duration of attack 7 days.

480; 1. *BLACKBURN*; *Billington*. Pop. 1851.—Chol. 1; Diarr. 2.—Cholera was fatal to a railway labourer, aged 25, at Billington, on August 2nd, after an attack of 9 hours' duration.

480; 2. —; *Harwood*. Pop. 6114.—Chol. 3; Diarr. 8.—These deaths from cholera occurred at Rishton, on August 17th; at Oakenshaw, Clayton-le-moors, on October 9th; and at Great Harwood, on November 23rd.

480; 3. —; *Mellor*. Pop. 3682.—Chol. 0; Diarr. 0.

480; 4. —; *Blackburn*. Pop. 36629.—Chol. 35; Diarr. 59.—The first death from cholera was that of a bricklayer's son, aged 7 months, at 4 Mary Ann-street, on February 20th; second case on March 4th, at 81 Montague-street, a printer, aged 45; the next 2 cases were in July. In August the epidemic increased, and it prevailed until the end of September; one death, however, being recorded so late as November 18th, at 8 Jackson-street, a labourer, aged 38, after an attack of 4 days' duration. Diarrhœa was prevalent from January until the end of November.

480; 5. —; *Oswaldtwistle*. Pop. 8200.—Chol. 3; Diarr. 6.—The deaths from cholera took place at Cross, on October 26th; at Barlow-row, on December 3rd, and at Alletroyds, on December 11th.

480; 6. —; *Darwen*. Pop. 14003.—Chol. 3; Diarr. 6.—These fatal cases of cholera occurred on

September 14th at Chapels; on September 21st at Blackmoor; and on September 22nd at Henry-street. 480; 7. *CLITHEROE*; *Witton*. Pop. 4609.—Chol. 0; Diarr. 5.

481; 1. *CHORLEY*; *Brindle*. Pop. 6143.—Chol. 2; Diarr. 2.—Cholera was fatal to a quarryman's son, aged 10 months, at Wheelton, on January 25th, after an attack lasting one week; and to a cotton carder, aged 35, at Withnell, on September 22nd, after an attack of 22 hours' duration.

481; 2. —; *Leyland*. Pop. 8794.—Chol. 5; Diarr. 0.—The first death from cholera was that of a weaver's wife, aged 64, at Clayton-le-Woods, on June 17th; second case, at Euxton, on August 14th; and the other 3 deaths were those of a labourer's wife, daughter, and son, at Euxton, on October 17th and 18th.

481; 3. —; *Rivington*. Pop. 3166.—Chol. 3; Diarr. 3.—These deaths from cholera took place at Charnock Heath, on October 14th, 16th, and 17th.

481; 4. —; *Chorley*. Pop. 15970.—Chol. 11; Diarr. 8.—Cholera was first fatal on March 10th, to a spinner, aged 34, at Standish-street; the next two cases were on April 17th and May 8th; 2 deaths took place on September 24th, viz., a mother and son at Market-street: the last case was that of a book-keeper aged 33, at Standish-street, on November 6th; Standish-street and Market-street suffered most.

481; 5. —; *Croston*. Pop. 4763.—Chol. 7; Diarr. 2.—Excepting one case at Eccleston, on September 7th, all the deaths from cholera occurred at Croston, from August 21st to October 2nd; a joiner and his son died on September 30th.

482; 1. *PRESTON*; *Longton*. Pop. 6487.—Chol. 0; Diarr. 2.

482; 2. —; *Preston*. Pop. 50887.—Chol. 29; Diarr. 151.—Diarrhœa was very fatal in this sub-district, and prevailed throughout the year, though chiefly in July, August, September, and October; infant mortality was very great, upwards of $\frac{1}{3}$ of the deaths occurring amongst children under 2 years of age. Cholera first appeared in a fatal form on May 9th, at Holme Slack, in the case of a labourer's wife, aged 51; the next 2 deaths were in Vicar-street, on July 24th and 30th. Of the other cases, 12 took place in August; 8 in September; 5 in October; and the last on November 16th, at the House of Recovery, where 3 deaths had previously occurred: it was fatal to a labourer's widow and daughter, at 2 Bleasdale-street, on August 16th and 17th; to a spindle-maker and his twin daughters, at Snow-hill, on September 17th, 22nd, and 24th; and to a hatter's wife and son at Fitches-yard, on October 26th and 27th.

482; 3. —; *Walton-le-Dale*. Pop. 8493.—Chol. 4; Diarr. 10.—Excepting one case at Turner Green, Samlesbury, on September 8th, the deaths from cholera occurred at Moon's Mill, Walton-le-Dale, on September 15th, 16th, and 17th.

482; 4. —; *Alston*. Pop. 4676.—Chol. 0; Diarr. 4.

482; 5. —; *Broughton*. Pop. 6658.—Chol. 0; Diarr. 1.

483; 1. *FYLDE*; *Kirkham*. Pop. 8855.—Chol. 2; Diarr. 3.—These cases of cholera were those of a well-sinker's widow, aged 78, at Kirkham, on August 20th; and a flax-spinner, aged 27, at Kirkham, on November 12th.

483; 2. —; *Lytham*. Pop. 2547.—Chol. 0; Diarr. 3.

483; 3. —; *Poulton-le-Fylde*. Pop. 9538.—Chol. 2; Diarr. 3.—Cholera was fatal at Hawes Side, Marton, to a tailor, aged 62, on June 12th; and to a labourer's son, aged 10, on August 17th.

484; 1. GARSTANG; *Stalmine*. Pop. 3032.—Chol. 1; Diarr. 0.—This was the death of a labourer's widow, aged 54, at Pilling, on November 20th.
 484; 2. —; *St. Michael*. Pop. 3456.—Chol. 0; Diarr. 0.
 484; 3. —; *Garstang*. Pop. 6519.—Chol. 0; Diarr. 4.
 485; 1. LANCASTER; *Ellel*. Pop. 4472.—Chol. 0; Diarr. 0.
 485; 2. —; *Heaton*. Pop. 2474.—Chol. 2; Diarr. 0.—These were deaths of a boatman, aged 23, at Bare, on August 4th; and of a joiner's wife, aged 28, at Poulton, on August 14th.
 485; 3. —; *Lancaster*. Pop. 17816.—Chol. 92; Diarr. 39.—Cholera commenced its ravages in this sub-district on July 24th, when a printer's daughter, aged 2, died at Moor-lane, after an attack lasting 6 hours; 3 other cases occurred in July: the epidemic then increased and prevailed throughout August, September, October, and November. The last 2 deaths took place on December 3rd and 12th, at Bridge-lane: it was most fatal in Henry-street, Bridge-lane, and Main-street Skerton; 11 deaths occurred in the Dispensary and House of Recovery. Diarrhœa was very prevalent in the early part of the year.
 485; 4. —; *Caton*. Pop. 1984.—Chol. 0; Diarr. 0.

485; 5. LANCASTER; *Wray*. Pop. 2309.—Chol. 0; Diarr. 0.
 485; 6. —; *Tunstal*. Pop. 866.—Chol. 0; Diarr. 0.
 485; 7. —; *Arkholme*. Pop. 1017.—Chol. 0; Diarr. 0.
 485; 8. —; *Warton*. Pop. 3822.—Chol. 0; Diarr. 0.
 486; 1. ULVERSTONE; *Cartmel*. Pop. 4927.—Chol. 0; Diarr. 1.
 486; 2. —; *Colton*. Pop. 3701.—Chol. 0; Diarr. 2.
 486; 3. —; *Ulverstone*. Pop. 6101.—Chol. 1; Diarr. 13.—This case of cholera, was that of a female servant, aged 14, at Market-place, on October 31st; duration of attack 22 hours. 5 deaths from diarrhœa took place in the Union Workhouse.
 486; 4. —; *Dalton*. Pop. 4899.—Chol. 1; Diarr. 2.—Cholera was fatal to a labourer, aged 48, at Seales, on July 26th; duration of attack 3 days.
 486; 5. —; *West Broughton*. Pop. 3449.—Chol. 0; Diarr. 0.
 486; 6. —; *Hawkshead*. Pop. 3670.—Chol. 1; Diarr. 0.—This was the death of a farmer, aged 61, at Sawrey-ground Township, on September 5th; duration of attack 17 hours.

IX. YORK DIVISION.

35. WEST RIDING.

487; 1. SEDBERGH; *Sedburgh*. Pop. 2268.—Chol. 0; Diarr. 0.
 487; 2. —; *Garsdale*. Pop. 681.—Chol. 0; Diarr. 0.
 487; 3. —; *Dent*. Pop. 1887.—Chol. 0; Diarr. 0.
 488; 1. SETTLE; *Bentham*. Pop. 5418.—Chol. 0; Diarr. 0.
 488; 2. —; *Settle*. Pop. 5614.—Chol. 0; Diarr. 6.—The 6 deaths from diarrhœa all occurred at Giggleswick—2 males, 4 females—4 in January, 2 in October.
 488; 3. —; *Long Preston*. Pop. 1749.—Chol. 0; Diarr. 1.
 488; 4. —; *Kirkby Malham*. Pop. 868.—Chol. 0; Diarr. 0.
 488; 5. —; *Arncliffe*. Pop. 447.—Chol. 0; Diarr. 0.
 489; 1. SKIPTON; *Kettlewell*. Pop. 1244.—Chol. 0; Diarr. 0.
 489; 2. —; *Gargrave*. Pop. 2031.—Chol. 0; Diarr. 0.
 489; 3. —; *Barnoldswick*. Pop. 5732.—Chol. 0; Diarr. 0.
 489; 4. —; *Kildwick*. Pop. 5874.—Chol. 1; Diarr. 1.—A labourer, aged 71, at Farnhill, July 22nd, of cholera. A farmer's son, aged 14 weeks, at Cowling, of diarrhœa, on December 5th.
 489; 5. —; *Skipton*. Pop. 7826.—Chol. 4; Diarr. 3.—These 4 deaths from cholera occurred in September at Waller-hill, Carlton, Market-place, and Mill-fields—one male and 3 females. The first, September 4th, a boatman's wife, aged 47, at Waller-hill; the last September 29th, a gardener, aged 71, at Mill-fields.
 489; 6. —; *Addingham*. Pop. 2968.—Chol. 2; Diarr. 0.—Both these deaths occurred in Addingham, in November—a male aged 75, and a female lodging-house keeper, aged 66, both after 24 hours' illness.

489; 7. SKIPTON; *Grassington*. Pop. 3060.—Chol. 0; Diarr. 0.
 490; 1. PATELEY BRIDGE; *Ramsgill*. Pop. 1237.—Chol. 0; Diarr. 0.
 490; 2. —; *Pateley Bridge*. Pop. 3266.—Chol. 1; Diarr. 3.—The death from cholera occurred May 8th, a miller's son, aged 4 months, at Pateley Bridge. The 3 deaths from diarrhœa occurred in the Workhouse.
 490; 3. —; *Thornthwaite*. Pop. 1582.—Chol. 1; Diarr. 0.—August 7th, farmer's son, aged 24 weeks, at West End, Fewstone.

 491; 1. RIPON; *Markington*. Pop. 3011.—Chol. 0; Diarr. 2.
 491; 2. —; *Ripon*. Pop. 8235.—Chol. 3; Diarr. 6.—The first death from cholera occurred June 2nd, a labourer's wife, aged 71, in High-street, Agnesgate. The second, August 31st, a wool-comber, aged 63, at Bedern-bank. The last, September 2nd, a labourer's daughter, aged 11, at Bridge Hewick.
 491; 3. —; *Kirkby Malzeard*. Pop. 3398.—Chol. 0; Diarr. 5.—These were all children except one.
 491; 4. —; *Sutton Howgrave*. Pop. 1863.—Chol. 0; Diarr. 0.
 491; 5. —; *Dishforth*. Pop. 2394.—Chol. 0; Diarr. 0.
 492; 1. KNARESBOROUGH; *Boroughbridge*. Pop. 3404.—Chol. 1; Diarr. 6.—This death from cholera occurred September 21st, a labourer's wife, aged 34, in Boroughbridge, after 9 hours' illness.
 492; 2. —; *Harrogate*. Pop. 8248.—Chol. 1; Diarr. 8.—The death from cholera occurred June 20th, a labourer, aged 33, at Mill-lane, Follifoot.
 492; 3. —; *Knaresborough*. Pop. 8000.—Chol. 49; Diarr. 20.—These deaths from cholera occurred in October and November, in Knaresborough and the township of Scriven, amongst weavers and

labourers at Bond-end Scriven, Briggate, High-street, Market-place, Church-lane, and Horsemill-yard. The first death registered from cholera occurred, August 19th, at Bond-end, a dealer in earthenware, aged 68. The last, December 7th, at Briggate, a tinner or tinman, aged 27. The cholera here was accompanied and preceded by several deaths from diarrhoea.

492; 4. **KNARESBOROUGH**; *Whixley*. Pop. 3247.—Chol. 0; Diarr. 2.

492; 5. —; *Wetherby*. Pop. 4354.—Chol. 2; Diarr. 3.—June 21st, a labourer, aged 23, in Wetherby, of cholera; also a labourer, aged 55, in Wetherby, October 29th.

493; 1. **OTLEY**; *Harewood*. Pop. 4198.—Chol. 0; Diarr. 0.

493; 2. —; *Fewston*. Pop. 1706.—Chol. 0; Diarr. 0.

493; 3. —; *Otley*. Pop. 9028.—Chol. 3; Diarr. 0.—A horsekeeper, a tailor, and a copper-plate printer's wife, aged 29, 55, and 31, September 3rd, 15th, 17th, in Westgate, Gay-lane, and Cambridge in Otley.

493; 4. —; *Yeadon*. Pop. 8086.—Chol. 3; Diarr. 6.—September 9th, a clothier, aged 37, at Guiseley, and a gardener's 2 children at Rawdon, of cholera.

493; 5. —; *Baildon*. Pop. 4062.—Chol. 0; Diarr. 0.

494; 1. **KEIGHLEY**; *Bingley*. Pop. 11850.—Chol. 1; Diarr. 8.—August 1st, a worsted spinner, aged 55, at Wesley, 12 hours' illness, from cholera.

494; 2. —; *Keighley*. Pop. 18014.—Chol. 5; Diarr. 6.—The first death from cholera, January 19th, a mechanic, aged 57, in Brunswick-street. The second, March 17th, a dressmaker, aged 34, at Silsden. July 24th, a labourer, aged 69, at Cat-hole, Silsden. August 14th, a joiner, aged 70, at Upper Green; and the last, November 18, a woolcomber's daughter, aged 4 months, at Beeks Silsden.

494; 3. —; *Haworth*. Pop. 6303.—Chol. 1; Diarr. 0.—September 4th, a butcher, aged 58, at Scar Hall.

495; 1. **TODMORDEN**; *Hebden Bridge*. Pop. 15018.—Chol. 7; Diarr. 9.—The first death registered here from cholera took place April 15th, a widow lady, aged 67, at Hanksclough Wadsworth, after 2 hours' illness. The last, December 19th, a farmer's son, aged 16, at Law-hill, Erringden, after 24 hours' illness.

495; 2. —; *Todmorden*. Pop. 16638.—Chol. 5; Diarr. 15.—The first death from cholera occurred July 16th, a jobber, aged 57, at Brook-street, Todmorden, Langfield. The last, September 24th, a toll-collector's son, aged 5, at Wandsworth Mill.

496; 1. **SADDLEWORTH**; *Delph*. Pop. 9233.—Chol. 5; Diarr. 3.—The first death from cholera occurred August 3rd, a cotton-piecer, aged 25, in the New-road, near Lees. The last, September 13th, a farmer, aged 62, at Moscow, Highmoor.

496; 2. —; *Upper Mill*. Pop. 7596.—Chol. 0; Diarr. 2.

497; 1. **HUDDERSFIELD**; *Slaithwaite*. Pop. 7335.—Chol. 7; Diarr. 2.—The first 2 deaths from cholera, and one from diarrhoea complicated with dysentery; all occurred at Stubbin Marsden, Almondbury. August 12th, 20th, and 25th, labourers' sons, aged 15 months, 15, and 3. The others occurred at Dry Mill and Waterside in Slaithwaite. The last, a clothier's wife, aged 57, Water Side, October 10th.

497; 2. —; *Meltham*. Pop. 5968.—Chol. 4; Diarr. 10.—First death from cholera, January 3rd, a cotton-spinner's wife, aged 65, at Bunker's Hill.

The last, October 1st, a slubber's son, aged 3, at Lower Hey.

497; 3. **HUDDERSFIELD**; *Honley*. Pop. 6539.—Chol. 2; Diarr. 5.—The first death from cholera took place July 7th, a delver's daughter, aged one, at Honley. The second December 26th, a weaver, aged 71, at Shayhead.

497; 4. —; *Holmfirth*. Pop. 9761.—Chol. 3; Diarr. 1.—First death from cholera took place August 7th, a clothier's son, aged 4 months, at Bank End, Wooldale. October 5th, a clothier, aged 46, at Boothouse, Anstonley; and October 13th, a collier's widow, aged 39, at Underbank, Wooldale.

497; 5. —; *New-Mill*. Pop. 5495.—Chol. 1; Diarr. 1.—This death from cholera occurred on June 4th, a clothier, aged 71, at Lee-side, in Fulstone.

497; 6. —; *Kirkburton*. Pop. 10967.—Chol. 0; Diarr. 2.

497; 7. —; *Almondbury*. Pop. 9672.—Chol. 1; Diarr. 13.—This death from cholera occurred September 22nd, a weaver, aged 23, at Quarry-hill, after 49 hours' illness. The deaths from diarrhoea were most of them children teething.

497; 8. —; *Kirk Heaton*. Pop. 11930.—Chol. 1; Diarr. 2.—October 12th, a cloth finisher, aged 52, at Mould-green, Dalton.

497; 9. —; *Huddersfield*. Pop. 25068.—Chol. 20; Diarr. 26.—These occurred chiefly in August and September in clothiers' and cloth-dressers' families, at Paddock-head and Croppers-row. The first death from cholera occurred January 21st, a tailor, aged 50, Vagrant-office, Huddersfield. The last October 3rd, a cloth-dresser, aged 39, Croppers-row.

497; 10. —; *Lockwood*. Pop. 6407.—Chol. 3; Diarr. 7.—The first death from cholera occurred February 15th, a butcher, aged 38, at Rash Cliffe. The last, November 28th, a fulling miller's son, aged 2, at Crosland Moor.

497; 11. —; *Golcar*. Pop. 9869.—Chol. 10; Diarr. 2.—Most of these deaths from cholera occurred in September, nearly all females. The first took place February 3rd, a clothier, aged 65, at Leymoor, Golcar. The last, November 16th, a clothier's wife, aged 63, at Well-house.

498; 1. **HALIFAX**; *Rastrick*. Pop. 3881.—Chol. 1; Diarr. 0.—June 21st, a cloth-dresser's wife, aged 55, in Lerowtrees-lane.

498; 2. —; *Brighouse*. Pop. 8096.—Chol. 0; Diarr. 2.

498; 3. —; *Southowram*. Pop. 6478.—Chol. 1; Diarr. 0.—October 8th, a weaver's wife, aged 40, at Caddyfield.

498; 4. —; *Halifax*. Pop. 25118.—Chol. 13; Diarr. 26.—The first death from cholera occurred July 27th, a cardmaker's daughter, aged one month, at 41 Great Albion-street. The last took place December 12th, a labourer, aged 52, at Mearclough, Bottom Skircoat. Diarrhoea also prevailed.

498; 5. —; *Elland*. Pop. 10238.—Chol. 0; Diarr. 5.

498; 6. —; *Ripponden*. Pop. 7704.—Chol. 1; Diarr. 0.—September 5th, a farmer, aged 70, at Stott-hall, Rishworth.

498; 7. —; *Sowerby*. Pop. 13045.—Chol. 3; Diarr. 8.—The deaths from cholera occurred October 8th, 13th, and November 1st, in a cotton-twister, a boatman, and a millwright, aged 41, 55, and 66, at Mill Bank and Sowerby Bridge, Warley.

498; 8. —; *Luddenden*. Pop. 6312.—Chol. 0; Diarr. 0.

498; 9. —; *Ovenden*. Pop. 11799.—Chol. 2;

Diarr. 1.—The deaths from cholera took place August 22nd and September 6th, a spinner's widow, aged 55, and a labourer's son, aged 12, at Wheatley and Page-hill.

498; 10. HALIFAX; *Northowram*. Pop. 16402.—Chol. 6; Diarr. 4.—These were weavers, &c., at Madehouse-lane Shelf, Plowcroft, Haley Hill, Booth Town, and Only House, North Ofram, in August and September. The first death from cholera took place August 12th, the last October 3rd.

499; 1. BRADFORD; *Cleckheaton*. Pop. 7607.—Chol. 9; Diarr. 4.—These deaths from cholera occurred in August and September, in miners' and labourers' families, at Cleckheaton and Hunsworth. The first, August 15th, a banksman, 74, at Okenshaw. The last, October 23rd, a wire-drawer's son, aged 15, in Water-lane.

499; 2. —; *Drighlington*. Pop. 4561.—Chol. 14; Diarr. 3.—These were in miners' and labourers' families at Nethertown, Lamb Bottom in Drighlington. The first death from cholera took place August 1st, a nailmaker's daughter, aged 13, in Drighlington, her sister, aged 3, having died the day before of diarrhoea. The last death took place October 19th, a brickmaker's wife, aged 57, at Nethertown.

499; 3. —; *North Bierley*. Pop. 9512.—Chol. 6; Diarr. 3.—These were in miners' and labourers' families at Slack, Wibsey, and Odsall, in September and October. The first, a miner's son, aged 8 months, at Slack, September 4th. The last a miner, aged 35, also at Slack, October 20th.

499; 4. —; *Bowling*. Pop. 8918.—Chol. 14; Diarr. 10.—These were in labourers' and mechanics' families in Back-lane and Smiddles. The first death from cholera took place August 18th, a female spinner, aged 22, in Back-lane, after 9 hours' illness. The last, September 30th, a railway labourer, aged 35, at Smiddles, after 24 hours' illness.

499; 5. —; *Bradford East End*. Pop. 18128.—Chol. 210; Diarr. 64.—These deaths occurred chiefly in the families of woolcombers, weavers, and labourers in North Wing, Belgrave-street, New Leeds, Bradford Moor, Wellington-street, Melbourne-street, Spring-street, Wapping, Warwick-street, George-street, and Palladio's-buildings, Bolton-road, in June, July, August, September, October, and November. The first death from cholera took place June 7th, a smith's assistant, aged 55, at 103 North Wing, several deaths from diarrhoea having previously occurred. The last death from cholera took place December 28th, a labourer, aged 45, at 33 Spring-street.

499; 6. —; *Bradford West End*. Pop. 16432.—Chol. 76; Diarr. 79.—The deaths from cholera and diarrhoea are nearly equal. They were principally woolcombers' and labourers' families in Long Lands-street, Longcroft-place, Vagrant Office, Victoria-street, Providence-street, Thomas street, and Westgate-street. The deaths from diarrhoea preceded and accompanied those from cholera. The first death from cholera took place February 27th, a drover, aged 47, at 12 Back-lane, from drinking. The second, on March 6th, a grocer, aged 71, in Gracechurch-street, after 3 days' illness. The third June 4th, a dram-shopkeeper's widow, aged 72, at 27 Lamb-lane. The cholera prevailed in August and September. The 2 last deaths from cholera took place December 4th and 17th, a labourer, aged 40, at Mill Bank, and a labourer, aged 20, in Thompson's-alley.

499; 7. —; *Horton*. Pop. 23237.—Chol. 60; Diarr. 51.—The majority of these deaths occurred

in the families of woolcombers, weavers, and labourers in Chapel-street, Hope-street, Duke-street, John-street, High-street, King-street, and Preston-place in the township of Horton. The first death from cholera took place June 9th, a domestic female servant, aged 19, in Chapel-lane. The second, a woolcomber's daughter, aged 9 months, in Portland-street. The last, December 5th, a blacksmith's daughter, aged 11, in Baldwin's Fold, Manningham. The cholera prevailed in August and September.

499; 8. BRADFORD; *Thornton*. Pop. 11135.—Chol. 2; Diarr. 5.—A delver's son, aged 11 months, August 13th, at New Halifax, and a single woman's son, aged 10 weeks, in Ball-street, after 32 hours' illness, died from cholera.

499; 9. —; *Wilsden*. Pop. 4598.—Chol. 2; Diarr. 3.—July 27th, a weaver, aged 42, at Pogg's Allerton, and October 2nd, a weaver, aged 60, at Crossley Hall, from cholera.

499; 10. —; *Shipley*. Pop. 3986.—Chol. 8; Diarr. 7.—The first death from cholera took place July 10th, a coal miner's son, aged 16 weeks, at Westgate. The last, October 15th, a carrier, aged 75, in Union Mill-yard, Shipley.

499; 11. —; *Idle*. Pop. 9903.—Chol. 10; Diarr. 6.—Most of these occurred at Windhill and Eccleshill in September. The first death from cholera took place January 8th, a clothier, aged 62, at Windhill, after 24 hours' illness, having suffered from dyspepsia for 3 or 4 months. The 2 next, September 18th, both at Windhill, a cloth burler, aged 29, and a clothier, aged 65. The last, October 12th, a clothier, aged 62, at Windhill.

499; 12. —; *Calverley*. Pop. 4142.—Chol. 1; Diarr. 3.—This death from cholera took place May 16th, a clothier's wife, aged 58, at Farsley.

499; 13. —; *Pudsey*. Pop. 10002.—Chol. 14; Diarr. 6.—These deaths from cholera took place chiefly in clothiers' families in October. The first, March 13th, a farmer, aged 81, at Delfend. The second July 6th, a cloth-weaver's daughter, aged 38 weeks, at Waterloo. The last, December 21st, a waste-dealer's daughter, aged 8 months, at Little-moor. Several deaths from cholera took place at Greenside.

500; 1. HUNSLET; *Wortley*. Pop. 16213.—Chol. 40; Diarr. 8.

500; 2. —; *Kirkstall*. Pop. 17831.—Chol. 69; Diarr. 12.

500; 3. —; *Chapeltown*. Pop. 4538.—Chol. 0; Diarr. 0.

500; 4. —; *Whitkirk*. Pop. 3201.—Chol. 30; Diarr. 2.

500; 5. —; *Rothwell*. Pop. 5601.—Chol. 44; Diarr. 18.

500; 6. —; *Holbeck*. Pop. 16719.—Chol. 260; Diarr. 30.

500; 7. —; *Hunslet*. Pop. 15852.—Chol. 441; Diarr. 50.

The observations on the district of Hunslet will be found in the remarks, in foregoing pages.

501; 1. LEEDS; *South East Leeds*. Pop. 25151.—Chol. 796; Diarr. 111.

501; 2. —; *North Leeds*. Pop. 31143.—Chol. 521; Diarr. 96.

501; 3. —; *West Leeds*. Pop. 32447.—Chol. 122; Diarr. 60.

The observations on the district of Leeds will be found in the remarks, in foregoing pages.

502; 1. DEWSBURY; *Morley*. Pop. 4087.—Chol. 99; Diarr. 4.—Cholera became fatal in this sub-district on August 3rd, when a clothier, aged 80, died after an attack of 9 hours' duration, at Morley

Hole; it prevailed with severity throughout the month, and abated towards the middle of September. The last two cases took place on October 3rd and 13th, at Town End, Morley. The epidemic was most severely felt at Morley Hole, Morley Common, Morley Bottoms, Banks Hill, Town End, Middlethorp, and Tröy Hill. It was most fatal in the families of clothiers, and several instances occurred of two members of the same family dying.

502; 2. DEWSBURY; *Batley*. Pop. 7076.—Chol. 53; Diarr. 21.—The first death from cholera was that of a blacksmith's son, aged 4, at Clark Green, on August 11th, the duration of attack being only 7 hours: the next cases occurred on August 13th, at Havercroft; and on August 14th and 18th, at New Batley. It prevailed until November 3rd, when the last death was recorded at Havercroft: it was severe at Havercroft and Brownhill, and chiefly in the families of clothiers. Several deaths from diarrhoea took place prior to cholera being prevalent.

502; 3. —; *Gomersal*. Pop. 8030.—Chol. 46; Diarr. 14.—Cholera was first fatal to a clothier, aged 78, at Birstal, on June 14th; the next two cases were on July 19th, at Birkenshaw, and on August 13th, at Birstal. No other death took place until September 6th: it then became prevalent, and continued so until November 16th, when the last death was recorded at Birkenshaw Bottoms. By far the greatest number of deaths took place at Birstal, the families of clothiers and coal-miners suffering most. In the Union Workhouse, Gomersal, 3 fatal cases occurred in addition to 4 of diarrhoea.

502; 4. —; *Liversedge*. Pop. 9525.—Chol. 3; Diarr. 4.—These deaths from cholera took place at Mill Bridge, on August 21st; at Milton Row, on August 29th; and at Dog House, on September 5th.

502; 5. —; *Mirfield*. Pop. 6919.—Chol. 1; Diarr. 1.—This case of cholera, was that of a labourer, aged 43, at Batty Ford, on October 2nd; the duration of attack being 2 days.

502; 6. —; *Dewsbury*. Pop. 10600.—Chol. 18; Diarr. 19.—After a prevalence of diarrhoea in July and August, cholera became fatal to 2 female children, aged respectively 7 and 8 years, at Dawgreen, on September 5th: the epidemic was confined to this month, excepting the last death, which took place on October 3rd, in Union-street. Dawgreen and Bradford-road suffered most. 4 deaths from diarrhoea took place in the Union Workhouse.

502; 7. —; *Soothill*. Pop. 4453.—Chol. 0; Diarr. 4.

502; 8. —; *Ossett*. Pop. 6078.—Chol. 3; Diarr. 5.—These deaths from cholera took place at Gawthorpe, on August 12th, and at Ossett, on September 18th and 24th.

502; 9. —; *Thornhill*. Pop. 3941.—Chol. 1; Diarr. 0.—This was the death of a bookkeeper, aged 61, at Thornhill, Lees, on August 23rd; duration of attack, 21 hours.

503; 1. WAKEFIELD; *Bretton*. Pop. 5399.—Chol. 3; Diarr. 0.—These deaths occurred at Emley, on September 1st; at Shitlington, on October 26th; and at Emley, on October 27th.

503; 2. —; *Sandall*. Pop. 6074.—Chol. 3; Diarr. 2.—Cholera was fatal at Fall Ing, Sandal, on September 16th; at Dircarr, Crigglestone, on October 10th and December 9th; the duration of attack being in each case 24 hours, 3 days, and 5 days respectively.

503; 3. —; *Stanley*. Pop. 6625.—Chol. 132; Diarr. 16.—A miner, aged 38, died of cholera at Hatfield-row, on June 21st; the next death was that of a mechanic, aged 25, at Lofthousegate, Wrenthorpe,

on August 13th: 6 other deaths took place in August, and 4 in September. Throughout October and November it prevailed most severely; the last death being that of a slubber, aged 26, in the Lunatic Asylum, on November 30th. The epidemic was very fatal at Cock Pit Houses, Stanley, and at East Moor; the virulence with which it prevailed in the Lunatic Asylum, Stanley, was most remarkable, there being no less than 102 fatal attacks, viz., in September, 1; in October, 86, and in November, 15. 8 deaths from diarrhoea also took place in the same institution.

503; 4. WAKEFIELD; *Wakefield*. Pop. 14754.—Chol. 86; Diarr. 36.—Cholera was very fatal in January, 19 deaths taking place from the 9th to the 24th of the month; but, with the exception of a labourer's wife at Blackburn's-yard, Kirkgate, on January 11th, and the son and daughter of a corn miller, at Low Mills, Wakefield, on January 16th and 21st, all the deaths took place at the House of Correction. Diarrhoea prevailed from May to August, but no other cases of cholera are recorded until August 23rd, when an iron-moulder's son, aged 9, died at Salt-pie-alley, Westgate: it then prevailed chiefly up to the end of October, although 3 deaths took place in November, and one as late as December 12th. Nelson-street and New-street suffered much, and one fatal case occurred at the Union Workhouse, on September 14th, and one on September 23rd at the House of Correction, in addition to the 16 which took place in January.

503; 5. —; *Horbury*. Pop. 2683.—Chol. 2; Diarr. 6.—Cholera was fatal to a shoemaker, aged 56, and a spinner, aged 78, at Horbury, on September 21st and 22nd.

503; 6. —; *Alverthorpe*. Pop. 5930.—Chol. 9; Diarr. 9.—The first death from cholera was that of a spinner, aged 69, at Westgate Common, on June 28th, duration of attack 3 days: of the other deaths, one took place on September 18th; 6 in October, and the last on November 11th: 6 of these cases took place at Thornes-lane.

503; 7. —; *Ardsley*. Pop. 2392.—Chol. 2; Diarr. 2.—These deaths from cholera were those of the wife and son of a miner, at West Ardsley, on October 6th and 11th; the duration of attack being 2 days and 8 days respectively.

503; 8. —; *Oulton*. Pop. 1789. Chol. 4; Diarr. 2.—3 of these deaths from cholera took place at Woodesford, on August 14th, September 12th and 29th, and the last at Oulton, on October 18th.

504; 1. PONTEFRAC; *Kippax*. Pop. 6734.—Chol. 9; Diarr. 2.—The first 2 deaths from cholera took place on January 18th, at Little Preston and Allerton Bywater; the next case was on March 25th, at Kippax: of the rest, 3 occurred in August; 2 in September, and the last on October 2nd, at Methley. It was most prevalent at Allerton Bywater, where 5 fatal cases took place.

504; 2. —; *Knottingley*. Pop. 10154.—Chol. 49; Diarr. 17.—Diarrhoea prevailed in January; and a mariner's widow, aged 45, died of cholera, after an attack of 48 hours' duration, at Knottingley, on January 31st. No other fatal case occurred until August 6th; its prevalence then extended, and continued chiefly to the end of October, although 2 deaths occurred on November 3rd, and 2 as late as December 11th: it was most fatal at Brotherton and Knottingley. The totals for the Pontefract district, as given in the tables, included 50 cholera and 18 diarrhoea for this sub-district, instead of 49 cholera and 17 diarrhoea.

504; 3. —; *Whitley*. Pop. 2585.—Chol. 4;

Diarr. 3.—Three of these deaths from cholera took place at Whitley, on February 7th, 8th, and 14th, and the other at Eggborough, on September 5th.

504; 4. PONTEFRAC; *Pontefract*. Pop. 9226.—Chol. 67; Diarr. 11.—Cholera prevailed at an early period of the year; 3 deaths occurring at Castleford, on January 24th, February 3rd and 18th, and 2 at Mere Whitwood, on February 20th and 22nd. Excepting one case on April 23rd, at Horsefair, no other death is recorded until September 13th; it was very fatal until the end of October; in November only one case took place; but from December 5th to the 26th, 15 deaths were registered, viz., 12 at Castleford and 3 at Glass Houghton. Several instances occurred of 2 members of the same family dying, and the epidemic was most severely felt at Castleford.

504; 5. —; *Ackworth*. Pop. 5629.—Chol. 4; Diarr. 3.—Three of the deaths from cholera took place at Ackworth, on September 9th, 14th, and 20th; and the other at North Elmsall, on November 2nd.

505; 1. ECCLESFIELD; *Royston*. Pop. 3907.—Chol. 1; Diarr. 2.—A waterman, aged 44, died of cholera, at Royston on September 6th.

505; 2. —; *High Hoyland*. Pop. 3402.—Chol. 0; Diarr. 0.

505; 3. —; *Cawthorne*. Pop. 6096.—Chol. 8; Diarr. 7.—The first death from cholera was that of a labourer's wife, aged 57, at Cawthorne, on August 13th: all the other cases took place from September 2nd to 11th; and excepting one death at Gawber, they were all at Cawthorne.

505; 4. —; *Barnsley*. Pop. 16729.—Chol. 59; Diarr. 7.—Cholera was first fatal to a weaver's wife, aged 71, at Beckett-square, on July 9th, duration of attack 4 days: there were no other cases until September 6th; it then prevailed until December 8th, when the last death was recorded at Kingston-place. The epidemic prevailed most fatally at May-day Green, Wilson-piece, Union-street, Barebones, and Dawson-wall, where a weaver lost 3 daughters on November 6th and 7th: the families of weavers suffered very severely.

505; 5. —; *Darfield*. Pop. 2493.—Chol. 1; Diarr. 3.—This death from cholera was that of a coal-miner, aged 39, at Hemingfield, on September 14th.

505; 6. —; *Worsbrough*. Pop. 6879.—Chol. 30; Diarr. 2.—The first death from cholera was that of a waterman's wife, aged 38, on board a vessel at Worsbrough Bridge, on September 2nd; the next case occurred on September 3rd, at Worsbrough Common, and it continued prevalent until October 14th. Nearly all the deaths took place at Worsbrough Common and Worsbrough Bridge, and chiefly in the families of weavers and miners.

506; 1. WORTLEY; *Wortley*. Pop. 3135.—Chol. 0; Diarr. 0.

506; 2. —; *Penistone*. Pop. 4930.—Chol. 2; Diarr. 0.—There were the deaths of a female, aged 15, at Hoylandswain, on May 3rd; and a farmer, aged 65, at Gunthwaite, on September 2nd.

506; 3. —; *Bradfield*. Pop. 6318.—Chol. 0; Diarr. 1.

506; 4. —; *Ecclesfield*. Pop. 8832.—Chol. 3; Diarr. 9.—These deaths from cholera took place at Fox Hill, on June 30th; at Malin Bridge, on August 10th, and at Burncrop, on November 9th.

507; 1. ECCLESALL BIERLOW; *Nether Hallam*. Pop. 6259.—Chol. 12; Diarr. 8.—Cholera was first fatal to a silversmith and his daughter at Philadelphia, on August 27th and 31st; the last death

took place on October 6th, at Wentworth-street, where it was very prevalent.

507; 2. ECCLESALL BIERLOW; *Upper Hallam*. Pop. 2384.—Chol. 0; Diarr. 1.

507; 3. —; *Norton*. Pop. 1982.—Chol. 1; Diarr. 0.—This was the death of a labourer, aged 58, at Woodend, on October 1st.

507; 4. —; *Ecclesall Bierlow*. Pop. 21000.—Chol. 23; Diarr. 38.—After a prevalence of diarrhoea, cholera was first fatal on August 26th to a farmer's widow, aged 80, at 59 South-street; duration of attack 5 days. The epidemic continued prevalent until October 27th, when the last death occurred at 13 Carver-street: it was most fatal in the families of workers in cutlery.

508; 1. SHEFFIELD; *West Sheffield*. Pop. 16176.—Chol. 8; Diarr. 40.—First 2 deaths from cholera took place on January 4th at Broad-lane, and on February 27th at Charlotte-street; the next case was on August 28th at Newcastle-street: of the others, 3 took place in September and 2 in October. Diarrhoea was chiefly fatal from July to the end of October.

508; 2. —; *North Sheffield*. Pop. 25632.—Chol. 26; Diarr. 100.—Cholera was first fatal in the case of a coachmaker's daughter, aged 18 months, at 6 Court, Allen-street, on August 1st; 3 other deaths took place in August: the others were spread at intervals through September and October, the last case being at Court, Allen-street, on November 3rd. Diarrhoea prevailed in January, when 5 deaths took place; it was chiefly fatal, however, in August, September, and October: the families of operatives in cutlery suffered severely, and 17 deaths from diarrhoea took place in the Union Workhouse, in addition to one from cholera.

508; 3. —; *South Sheffield*. Pop. 14414.—Chol. 11; Diarr. 33.—The first death from cholera took place on June 26th at 57 Sydney-street; the next case was on August 30th at Forge-row: of the others, 4 occurred in September; 4 in October; and the last on November 4th. Diarrhoea prevailed from May 20th to November 26th; and the families of workers in cutlery suffered much.

508; 4. —; *Sheffield Park*. Pop. 11964.—Chol. 11; Diarr. 12.—Cholera was first fatal to a brace-bit maker's son at South-street, on May 7th; next case on July 22nd at Bellemont: of the others 8 took place in September and one on October 4th at Bernard-street.

508; 5. —; *Brightside*. Pop. 10089.—Chol. 36; Diarr. 14.—The first death from cholera was that of a file-smith's daughter, aged 6 weeks, at Pye Bank on August 21st; the next case occurred at Chapel-street on September 10th: it then prevailed until October 16th, when the last case was recorded at 11 Harvest-lane. Many deaths took place in Nursery-street, Neepsend, and Harvest-lane, and several instances occurred of two members of the same family dying: it was most prevalent in the families of workers in metal.

508; 6. —; *Attercliffe*. Pop. 4156.—Chol. 22; Diarr. 8.—Cholera was first fatal to a coal-miner's wife, aged 36, at Attercliffe, on September 8th; it then prevailed with much severity until October 2nd: the whole of the deaths took place at Attercliffe, and chiefly in the families of labourers, miners, and workers in metal.

508; 7. —; *Handsworth*. Pop. 2862.—Chol. 0; Diarr. 2.

509; 1. ROTHERAM; *Beighton*. Pop. 2849.—Chol. 1; Diarr. 0.—This was the death of a cord-wainer, aged 56, at Treeton, on September 10th.

509; 2. **ROTHERHAM**; *Rotherham*. Pop. 8301.—Chol. 2; Diarr. 12.—Cholera was fatal to a labourer, aged 42, at Wickersley, on June 7th; and a labourer's wife, aged 40, at Ickles, on October 12th. Diarrhœa prevailed chiefly at Westgate, Wellgate, and Crofts; and 2 deaths took place in the Workhouse.

509; 3. —; *Kimberworth*. Pop. 8757.—Chol. 8; Diarr. 11.—Diarrhœa was chiefly prevalent in August and September. Cholera was first fatal on September 15th, to a fork-maker, aged 35, at College-road; of the other cases, 5 took place in October, and 2 on November 1st. 6 of the deaths from cholera occurred at Pool-green, Masbrough.

509; 4. —; *Wath*. Pop. 6314.—Chol. 19; Diarr. 6.—A labourer's wife, aged 19, died of cholera on February 28th, at Swinton: the next two deaths took place on August 28th and 30th; in September 8 cases occurred; in October 7; and the last death was recorded on November 3rd at Swinton; it was most prevalent at West Melton and Swinton.

509; 5. —; *Maltby*. Pop. 2564.—Chol. 0; Diarr. 3.

510; 1. **DONCASTER**; *Tickhill*. Pop. 6136.—Chol. 1; Diarr. 6.—This death from cholera was that of a labourer, aged 56, at Conisbrough, on November 30th. Diarrhœa prevailed most at Tickhill.

510; 2. —; *Barmbrough*. Pop. 5041.—Chol. 8; Diarr. 4.—The first death from cholera was that of a labourer's wife, aged 28, at Barmbrough, on October 6th; the other cases took place from October 31st to November 27th, the whole of them being at Mexbrough.

510; 3. —; *Doncaster*. Pop. 10455.—Chol. 58; Diarr. 22.—Diarrhœa prevailed in January; and a labourer, aged 44, died of cholera on January 3rd at Mail-Coach-yard, Frenchgate. No other death from cholera took place until August 22nd: it then continued prevalent until November 22nd; and was most fatal at Fisher-gate, Marsh-gate, and St. Sepulchre-gate: 11 deaths occurred in the Union Workhouse, in addition to 2 from diarrhœa.

510; 4. —; *Campsall*. Pop. 4910.—Chol. 10; Diarr. 0.—The first of these deaths was that of a carrier's wife, aged 67, at Askern, on September 6th; duration of attack 2 days: of the others 4 took place in October, 3 in November, and 2 on December 1st and 2nd: Arksey and Bentley suffered most.

510; 5. —; *Bawtry*. Pop. 5860.—Chol. 1; Diarr. 0.—This was the death of a tramp, aged 35, at Bawtry, on October 13th; duration of attack 41 hours.

511; 1. **THORNE**; *Epworth*. Pop. 3885.—Chol. 6; Diarr. 5.—These deaths from cholera took place at Epworth, from September 5th to 13th. Diarrhœa prevailed most in May.

511; 2. —; *Thorne*. Pop. 7703.—Chol. 60; Diarr. 7.—Cholera was first fatal to a waterman, aged 38, at Canal-lane, on July 29th; the next case was on August 19th: it then prevailed until October 25th; it was most fatal at Field-side, Back-street, and Fishlake.

511; 3. —; *Crowle*. Pop. 3728.—Chol. 4; Diarr. 0.—These deaths took place at Derrythorpe, Amcotts, on September 14th and 22nd; at Crowle on October 2nd, and at Althorpe on November 19th.

512; 1. **GOOLE**; *Swinefleet*. Pop. 3783.—Chol. 28; Diarr. 7.—Cholera was fatal to a labourer and a labourer's wife, at Reedness, on April 9th and

12th. No other death took place until August 18th: it then prevailed throughout the rest of August and September; 2 cases took place in October, and 2 on November, 17th and 21st: it was most fatal at Garthorpe and Swinefleet.

512; 2. **GOOLE**; *Goole*. Pop. 4664.—Chol. 40; Diarr. 16.—Cholera was fatal at an early period of the year; 4 deaths took place in the latter part of January, and 4 towards the end of March. Excepting one case in the Union Workhouse, Hook, on April 17th, no other deaths occurred until August 6th; it then continued prevalent throughout August and September: the last 2 deaths took place at Armin on October 7th, and on board a vessel in the Barge-dock on October 28th: it was most fatal in James-street, South-street, and Doyle-street. Diarrhœa prevailed most in September and October.

512; 3. —; *Snaith*. Pop. 4082.—Chol. 6; Diarr. 3.—The first death from cholera was that of an Irish vagrant, aged 35, at Snaith, on January 31st: the other cases took place at Rawcliffe on September 6th, 12th, and October 9th; and at Snaith on October 7th and 12th.

513; 1. **SELBY**; *Snaith*. Pop. 2427.—Chol. 3; Diarr. 3.—These deaths from cholera took place at Temple Hirst on January 16th and October 29th; and at Little Armin on January 28th.

513; 2. —; *Selby*. Pop. 9722.—Chol. 108; Diarr. 15. Cholera, which was very fatal in this sub-district in the latter part of 1848, continued to prevail until February 5th: a pause then took place until July 13th; from this time until November 12th it was very severe, principally, however, in August and September: it prevailed in a great number of streets in Selby, but with especial virulence at Millgate, Wide-street, Ousegate—and Finkle-street suffered, though to a less extent. In the Union Workhouse no less than 19 deaths took place, in addition to 2 from diarrhœa.

513; 3. —; *Riccall*. Pop. 2953.—Chol. 1; Diarr. 0.—This was the death of a waterman's daughter, aged 4, at Barby on September 11th.

514; 1. **TADCASTER**; *Appleton Roebuck*. Pop. 1228.—Chol. 6; Diarr. 1.—These deaths from cholera took place at Acaster, on July 22nd; and at Appleton Roebuck from August 15th to 23rd.

514; 2. —; *Aberford*. Pop. 6157.—Chol. 11; Diarr. 1.—Excepting one case at Crossgate Barwick, in Elmet, on October 30th, all the deaths from cholera took place at Lotherton-cum-Aberford, from October 18th to November 4th, and chiefly in the families of labourers.

514; 3. —; *Bramham*. Pop. 5482.—Chol. 1; Diarr. 0.—This was the death of a labourer, aged 50, at Thorner, on October 1st.

514; 4. —; *Tadcaster*. Pop. 5031.—Chol. 0; Diarr. 0.

514; 5. —; *Bilton*. Pop. 1667.—Chol. 0; Diarr. 0.

36. EAST RIDING (with YORK).

515; 1. **YORK**; *Shelton*. Pop. 1864.—Chol. 0; Diarr. 0.

515; 2. —; *Bootham*. Pop. 12584.—Chol. 88; Diarr. 12.—On January 3rd, 2 deaths from cholera took place at the Union workhouse, Clifton: no other cases occurred until July 9th and 10th, when it was fatal to a shoemaker and his daughter at Friargate, St. Mary Castlegate. From this time until the middle of September it prevailed very fatally: it was severely felt in the parish of St. Mary Castlegate; Friargate, Middle Water Lane, and Kings Staith suffering much: in the Union Workhouse,

situated in the township of Clifton, no less than 27 deaths took place. The last 2 deaths occurred on October 6th and 14th. In only a few cases was the duration of the attack recorded.

515; 3. YORK; *Micklegate*. Pop. 11449.—Chol. 18; Diarr. 13.—After several deaths from diarrhoea in the spring, cholera made its appearance fatally on July 16th, in the case of a cutler, aged 33, at Clementhorpe, who died in 10 hours from the commencement of the attack. The next 3 deaths took place on July 28th: it prevailed until September 19th, when the last case was recorded; Swan-street, Clementhorpe, and Beedhams-court, suffered most.

515; 4. —; *Walmgate*. Pop. 14373.—Chol. 61; Diarr. 31.—Cholera was fatal in 2 instances in this sub-district in January. A male infant, aged 7 months, died at 25 Bilton-street on January 17th, duration of attack 6 days; the second case being that of a servant housekeeper, aged 38, at Vicars-row, on January 23rd, duration of attack 24 hours. No other deaths took place until July 13th, after which it spread, and many deaths took place in Church-lane, Union-buildings, Duke of York-street, and Wenlock-street; the last 3 deaths were those of an innkeeper's widow, aged 63, a gentlewoman aged 53, and a farmer's daughter, aged 38, at 10 Lord Mayor's Walk, on October 3rd, 7th, and 11th.

515; 5. —; *Escrick*. Pop. 2807.—Chol. 4; Diarr. 0.—Three of the deaths occurred at Naburn on July 28th and 30th, and August 1st; and the last at Woldrake on August 5th.

515; 6. —; *Dunnington*. Pop. 2821.—Chol. 2; Diarr. 3.—The deaths from cholera were those of labourers' wives, at Dunnington on July 24th, and at Elvington on August 12th.

515; 7. —; *Flaxton*. Pop. 1880.—Chol. 1; Diarr. 1.—Cholera was fatal to a labourer's wife, aged 76, at Flaxton on January 13th, duration of attack 14 days.

516; 1. *POCKLINGTON*; *East Stamford Bridge*. Pop. 4374.—Chol. 1; Diarr. 1.—This death from cholera was that of a tailor, aged 48, at Low Catton, on August 3rd, duration of attack 5 days.

516; 2. —; *Pocklington*. Pop. 6121.—Chol. 4; Diarr. 4.—The deaths from cholera took place at Pocklington; the first being that of a tramp, aged 50, on September 2nd; the second a labourer, aged 43, on September 15th; and the last two a tailor and his son, aged 31 and 5 years respectively, on September 18th and 19th.

516; 3. —; *Market Weighton*. Pop. 4933.—Chol. 32; Diarr. 4.—Cholera was first fatal on July 24th to a stonemason aged 40, in 4 days from the commencement of the attack; the next two deaths were on August 5th and 8th, but it was not until September 4th that it set in with virulence. The whole of the deaths took place at Market Weighton up to September 24th, when the epidemic ceased, except one case on November 30th at Bielby, when a labourer's son, aged one year, died after an attack of 7 days' duration; the deaths in the workhouse were on two days, the 11th and 12th of September, 5 fatal cases occurring on each day.

517; 1. *HOWDEN*; *Holme*. Pop. 1509.—Chol. 0; Diarr. 2.

517; 2. —; *Rubwith*. Pop. 2016.—Chol. 0; Diarr. 1.

517; 3. —; *Howden*. Pop. 6403.—Chol. 50; Diarr. 5.—Cholera was very fatal in the Howden Union Workhouse from January 5th to February 11th inclusive, 10 deaths took place in addition to 2 from diarrhoea. No other cases occurred until July

15th, when a labourer's son, aged 2, died at Skelton township, where also the 3 next cases took place on August 2nd, 9th, and 11th: the epidemic was most severely felt at Hemingbrough, Howden, and Skelton; several families lost two members. The last death occurred on October 19th at Sandhill.

517; 4. *HOWDEN*; *Newport*. Pop. 4335.—Chol. 8; Diarr. 0.—The deaths from cholera took place between August 17th and October 1st, the whole of them being those of males.

518; 1. *BEVERLEY*; *Cave*. Pop. 3956.—Chol. 3; Diarr. 0.—The deaths took place at South Cave on January 3rd, April 20th, and November 6th.

518; 2. —; *Beverley*. Pop. 10792.—Chol. 16; Diarr. 3.—The first two deaths from cholera occurred at Beckside on August 3rd and 7th; it afterwards prevailed severely at the Union Workhouse, where 11 deaths took place from August 13th to 23rd. The last two fatal cases were at Grove Hill-lane on October 2nd and November 7th.

518; 3. —; *Lockington*. Pop. 2776.—Chol. 0; Diarr. 0.

518; 4. —; *Leven*. Pop. 1430.—Chol. 1; Diarr. 0.—This was the death of a farmer's widow, aged 85, at Leven on July 2nd; duration of attack 7 days.

519; 1. *SCULCOATES*; *Sutton*. Pop. 6384.—Chol. 157; Diarr. 34.

519; 2. —; *Cottingham*. Pop. 2832.—Chol. 5; Diarr. 4.

519; 3. —; *Ferriby*. Pop. 1970.—Chol. 6; Diarr. 1.

519; 4. —; *Hessle*. Pop. 2235.—Chol. 6; Diarr. 1.

519; 5. —; *Hedon*. Pop. 2085.—Chol. 53; Diarr. 0.

519; 6. —; *Drypool*. Pop. 4029.—Chol. 60; Diarr. 18.

519; 7. —; *East Sculcoates*. Pop. 9437.—Chol. 207; Diarr. 46.

519; 8. —; *West Sculcoates*. Pop. 7245.—Chol. 162; Diarr. 40.

The observations on the district of Sculcoates will be found in the remarks, in foregoing pages.

520; 1. *HULL*; *Humber*. Pop. 11984.—Chol. 253; Diarr. 37.

520; 2. —; *St. Mary*. Pop. 6918.—Chol. 206; Diarr. 16.

520; 3. —; *Myton*. Pop. 22248.—Chol. 719; Diarr. 141.

The observations on the district of Hull will be found in the remarks, in foregoing pages.

521; 1. *PATRINGTON*; *Patrington*. Pop. 8680.—Chol. 4; Diarr. 0. These deaths were those of two labourers; of a sailor and of a farmer, on August 29th and 31st, and September 23rd and 26th.

522; 1. *SKIRLAUGH*; *Humbleton*. Pop. 1346.—Chol. 0; Diarr. 1.

522; 2. —; *Skirlaugh*. Pop. 2196. Chol. 2; Diarr. 7.—Cholera was fatal to a labourer aged 52, at Swine on September 9th, duration of attack 24 hours; and a labourer, aged 25, at Fareholme, Benningholme, on September 15th, after an attack of 15 hours' duration. 3 deaths from diarrhoea took place at the Workhouse.

522; 3. —; *Aldbrough*. Pop. 1707.—Chol. 2; Diarr. 1.—The deaths from cholera were those of a farmer, aged 62, at Aldbrough, on September 9th, duration of attack 3 days; and a blacksmith's wife, aged 71, at Witherwick, on September 12th, attack lasting 15 hours.

522; 4. —; *Hornsea*. Pop. 2306.—Chol. 0; Diarr. 3.

- 522; 5. SKIRLAUGH; *Brandesburton*. Pop. 1462.—Chol. 0; Diarr. 0.
 523; 1. DRIFFIELD; *Foston*. Pop. 3122.—Chol. 0; Diarr. 0.
 523; 2. —; *Driffield*. Pop. 6186.—Chol. 0; Diarr. 2.
 523; 3. —; *Bainton*. Pop. 3722.—Chol. 2; Diarr. 0.—The deaths occurred at Bainton on September 6th and 9th, and were those of a labourer, aged 29, and a labourer's wife, aged 49.
 523; 4. —; *Langtoft*. Pop. 3798.—Chol. 0; Diarr. 2.
 524; 1. BRIDLINGTON; *Skipsea*. Pop. 1849.—Chol. 0; Diarr. 0.
 524; 2. —; *Bridlington*. Pop. 7696.—Chol. 6; Diarr. 1.—The deaths from cholera took place between August 17th and September 28th, inclusive; 3 cases occurring at the Union Workhouse.
 524; 3. —; *Hunmanby*. Pop. 3516.—Chol. 2; Diarr. 3.—Cholera was fatal to a labourer, aged 79, on May 31st; and to a grocer's widow, aged 50, on December 3rd, at Hunmanby.

37. NORTH RIDING.

- 525; 1. SCARBOROUGH; *Filey*. Pop. 3159.—Chol. 1; Diarr. 1.—The deaths from cholera occurred on August 6th at Muston, it was in a labourer, aged 53, after an attack of 3 days' duration. The diarrhoea case happened to a fisherman's widow, aged 81.
 525; 2. —; *Scarborough*. Pop. 12188.—Chol. 7; Diarr. 5.—The first case occurred June 25th, at Staith, a master mariner, aged 63, after an attack of 12 hours' duration; the next case, July 24th, in the harbour, also a master mariner, aged 25, who died after an attack of only 8 hours' duration. The last case occurred September 7th, at Quay-street, a fisherman, aged 52. Of the diarrhoea cases, two occurred in the Union workhouse.
 525; 3. —; *Hutton Bushell*. Pop. 4535.—Chol. 0; Diarr. 2.—These deaths were both of children under 2 years of age.
 525; 4. —; *Sherburn*. Pop. 1415.—Chol. 0; Diarr. 0.
 526; 1. MALTON; *Rillington*. Pop. 3930.—Chol. 1; Diarr. 1.—The cholera case took place September 11th, at Scampston, a carpenter's wife, aged 31. The case of diarrhoea happened also to a carpenter's wife, at Winteringham.
 526; 2. —; *Westow*. Pop. 2933.—Chol. 0; Diarr. 5.—Of these deaths 3 were of children under 1 year.
 526; 3. —; *Malton*. Pop. 8745.—Chol. 5; Diarr. 11.—The first death from cholera occurred August 2nd, Low-street, a labourer, aged 61, after an attack of 26 hours' duration. The next case took place at old Malton gate, Aug. 17th, in a labourer's wife, aged 46. The other 3 cases occurred in the Cholera Hospital, as follows, on August 18th and 19th, and September 3rd. Of the diarrhoea cases, 9 were in children under the age of one year.
 526; 4. —; *Hovingham*. Pop. 2149.—Chol. 0; Diarr. 0.
 526; 5. —; *Bulmer*. Pop. 3917.—Chol. 0; Diarr. 1.—This case occurred at Sherriff Hutton, October 8th, a child, aged one month.
 527; 1. EASINGWOLD; *Stillington*. Pop. 2794.—Chol. 0; Diarr. 2. These deaths occurred at Sutton Forest and Stillington. A labourer's daughter, aged 3 weeks, and a female servant, aged 55.
 527; 2. —; *Easingwold*. Pop. 6835.—Chol. 1. Diarr. 1.—The case of cholera occurred June 11th at Easingwold, in a joiner's daughter, aged 3, after an attack of 18 hours' duration. The case of diarrhoea happened to a child aged 15 weeks.
 527; 3. EASINGWOLD; *Cozwold*. Pop. 1650.—Chol. 0; Diarr. 0.
 528; 1. THIRSK; *Topcliffe*. Pop. 1911.—Chol. 0; Diarr. 1.—This case took place at Dalton, January 8th, a child, aged 11 months.
 528; 2. —; *Pickhill*. Pop. 1819.—Chol. 0; Diarr. 0.
 528; 3. —; *Thirsk*. Pop. 5584.—Chol. 6; Diarr. 3.—The first case occurred August 3rd, at Morley; a labourer's widow, aged 72. The next case in the Union Workhouse, September 19th, a labouring woman, aged 58, after an attack of 10 hours' duration. The last case was at Millgate, December 20th, a coal agent, aged 27. Of the diarrhoea cases, 2 occurred in the Union Workhouse. The other 3 cases of cholera occurred at Sowerby.
 528; 4. —; *Sutton*. Pop. 1565.—Chol. 2; Diarr. 1.—These cases of cholera occurred July 8th and 9th, at Gormers Sutton, the children of a farmer, aged 6 and 3.
 528; 5. —; *Knayton*. Pop. 1844.—Chol. 0; Diarr. 0.
 529; 1. HELMSLEY; *Helmsley*. Pop. 4827.—Chol. 0; Diarr. 3.
 529; 2. —; *Oswaldkirk*. Pop. 2093.—Chol. 0; Diarr. 0.
 529; 3. —; *Kirkby Moorside*. Pop. 5932.—Chol. 0; Diarr. 3.—These were the deaths of children under the age of one year.
 530; 1. PICKERING; *Lastingham*. Pop. 1388.—Chol. 0; Diarr. 0.
 530; 2. —; *Pickering*. Pop. 4145. Chol. 1; Diarr. 1.—The case of cholera occurred September 5th, at Hay Stone Slack, a farmer's daughter, aged 12.
 530; 3. —; *Sinnington*. Pop. 1081.—Chol. 0; Diarr. 0.
 530; 4. —; *Allerston*.—Pop. 2565.—Chol. 0; Diarr. 0.
 530; 5. —; *Lockton*. Pop. 510.—Chol. 0; Diarr. 1.—This case occurred at Lockton, December 2nd, a house steward's widow, aged 98.
 531; 1. WHITBY; *Egton*. Pop. 3735.—Chol. 2; Diarr. 0.—These cases occurred at Glaisdale, January 19th and 23rd, a labourer and a labourer's wife.
 531; 2. —; *Whitby*. Pop. 12326.—Chol. 8; Diarr. 7.—The first case of cholera occurred at Ruswarp, May 10th, a stonemason, aged 59 (*inquest*). The next fatal case was in Church-street, August 21st, a mariner, aged 25. Three other fatal cases occurred in Church-street, the last of which was on October 16th, a mariner's son, aged 8, after an attack of 17 hours' duration. Of the diarrhoea cases, 4 are under the age of 2 years, the other 3 being above the age of 70.
 531; 3. —; *Lythe*. Pop. 4050.—Chol. 0; Diarr. 0.
 532; 1. GUISBOROUGH; *Lofthouse*. Pop. 2347.—Chol. 0; Diarr. 0.
 532; 2. —; *Marske*. Pop. 2562.—Chol. 2; Diarr. 0.—The first case occurred August 27th, at Saltbury, in the parish of Brotton, a coast-guard's son, aged 2. The other case was at Redcar, September 25th, a widow.
 532; 3. —; *Kirk-Leatham*. Pop. 1877.—Chol. 0; Diarr. 1.—A child, aged 10 months.
 532; 4. —; *Guisborough*. Pop. 2132.—Chol. 1. Diarr. 1.—The case of cholera occurred in the Workhouse, September 28th, a labourer, aged 50. The diarrhoea case was a child, aged 8 months.

532; 5. **GUISBOROUGH**; *Danby*. Pop. 1617.—Chol. 0; Diarr. 0.

533; 1. **STOKESLEY**; *Stokesley*. Pop. 6489.—Chol. 1; Diarr. 0.—This case occurred at Newby, August 18th, a farmer, aged 67, after an attack of 12 hours' duration.

533; 2. —; *Hutton*. Pop. 2499.—Chol. 0; Diarr. 0.

534; 1. **NORTHALLERTON**; *Appleton-upon-Wiske*. Pop. 2970.—Chol. 0; Diarr. 0.

534; 2. —; *Northallerton*. Pop. 9601.—Chol. 3; Diarr. 1.—The first case occurred at the House of Correction, January 21st, a labourer, aged 62 (*inquest*). The other 2 cases at Northallerton, February 1st, a labouring woman, aged 18, and October 31st, a tailor's wife, aged 30, after an attack of 12 hours' duration.

535; 1. **BEDALE**; *Bedale*. Pop. 5551.—Chol. 2; Diarr. 1.—These cases occurred at Leeming. The first took place August 31st, a labourer, aged 38, after an attack of 9 hours' duration; the other case of cholera occurred on September 10th, a rag-gatherer's wife, aged 40, attacked 24 hours. The case of diarrhoea was that of a labourer's widow, aged 79.

535; 2. —; *Masham*. Pop. 3062.—Chol. 0; Diarr. 1.—The case occurred at Masham, July 22nd, a tailor, aged 56.

536; 1. **LEYBURN**; *Middleham*. Pop. 4307.—Chol. 0; Diarr. 0.

536; 2. **LEYBURN**; *Leyburn*. Pop. 5641.—Chol. 0; Diarr. 1.—This case occurred at Leyburn, January 26th, a draper and tailor, aged 69.

537; 1. **ASKRIGG**; *Askrigg*. Pop. 3374.—Chol. 0; Diarr. 1.—This case occurred September 28th, at Worton, a blanket manufacturer, aged 65.

537; 2. —; *Hawes*. Pop. 2351.—Chol. 1; Diarr. 1.—The case of cholera occurred September 18th, at Hawes, a labourer, aged 72. The case of diarrhoea happened to an infant, aged 10 days.

538; 1. **REETH**; *Muker*. Pop. 2874.—Chol. 0; Diarr. 1.—This death occurred December 26th, at Muker, in a miner's son, aged 21 months.

538; 2. —; *Reeth*. Pop. 3884.—Chol. 0; Diarr. 0.

539; 1. **RICHMOND**; *Richmond*. Pop. 6968.—Chol. 1; Diarr. 2.—The case of cholera occurred at Bargate, September 7th, a rag-gatherer, aged 24, after an attack of 24 hours' duration. Both of the diarrhoea cases occurred in September. One in a tailor, aged 54; the other in a child, aged 6 months.

539; 2. —; *Catterick*. Pop. 3020.—Chol. 2; Diarr. 0.—These cases occurred at Catterick, September 10th and 13th, in a weaver's widow, aged 40, and a labourer, aged 56, after an attack of 32 hours.

539; 3. —; *Newsham*. Pop. 1655.—Chol. 0; Diarr. 3.

539; 4. —; *Aldborough*. Pop. 1820.—Chol. 0; Diarr. 0.

X. NORTHERN DIVISION.

38. DURHAM.

540; 1. **DARLINGTON**; *Darlington*. Pop. 16629.—Chol. 3; Diarr. 46.—The deaths from cholera were those of a store-keeper, aged 58, August 24th, at 84 Northgate; a weaver, aged 27, October 4th, at the Workhouse; and a publican, aged 51, October 27th, at Tubwell-row. Excepting one case on March 25th, and another on June 24th, all the deaths from diarrhoea occurred in August, September, and October; Blackwellgate, Skinnergate, Northgate, and Bondgate, suffered most.

540; 2. —; *Aycliffe*. Pop. 4858.—Chol. 1; Diarr. 1.—This was the death of a platelayer, aged 53, on July 23rd, at Aycliffe.

541; 1. **STOCKTON**; *Yarm*. Pop. 10198.—Chol. 87; Diarr. 17.—First fatal case of cholera on July 27th, when a sailor, aged 35, died in King-street: it prevailed extensively in the parishes of Yarm and Middlesborough; in Garbutt-street, Dacre-street, North-street, and Market-place Middlesborough, many deaths took place; the last person to whom cholera was fatal was a fisherman's widow at Yarm, on November 16th.

541; 2. —; *Stockton*. Pop. 13184.—Chol. 21; Diarr. 19.—The first death from cholera was that of a sailor, aged 63, at Blackbull-yard, on July 15th; last fatal attack on November 12th, when a labourer's wife, aged 61, died at Victoria-yard.

541; 3. —; *Hartlepool*. Pop. 10563.—Chol. 138; Diarr. 23.—On July 7th, at Silver-street, a labourer's wife died of cholera after an attack of 12 hours' duration, this being the first death recorded: this was followed by the deaths of two mariners in George-street, on July 24th. The disease prevailed to a great extent in Tweddle-street, Wells-street, and North Wells-street, Chapman-street, Cleveland-street,

and Croft-street; the labouring and seafaring population appear to have suffered most: the last death occurred on October 25th, at Darlington-place, a joiner aged 39 years.

541; 4. **STOCKTON**; *Sedgefield*. Pop. 5970.—Chol. 2; Diarr. 3.—Cholera was fatal to a labourer, aged 21, at Ferry-hill, on August 23rd; and a pitman, aged 26, at Red-row, Cornforth, on October 28th.

542; 1. **AUCKLAND**; *Bishop Auckland*. Pop. 14520.—Chol. 5; Diarr. 15.—First death from cholera was a cartman's wife, aged 38, at Leasingthorne, on March 24th: no other death till August 31st; and the three other cases occurred on December 20th, 23rd, and 27th; the latter being a pitman's daughter, aged 8, at Blue-row. Nine deaths from diarrhoea happened in the families of pitmen.

542; 2. —; *Hamsterley*. Pop. 7468.—Chol. 3; Diarr. 0.—Cholera was fatal on September 10th to a platelayer, aged 27, at Crook; on September 14th, to a labourer aged 21, at Woodfield. Crook, and Billy-row; and on December 26th, to a pitman aged 17, at West Auckland.

543; 1. **TEESDALE**; *Staindrop*. Pop. 4954.—Chol. 0; Diarr. 0.

543; 2. —; *Barnard Castle*. Pop. 8591.—Chol. 138; Diarr. 6.—Cholera was very fatal in Barnard Castle, commencing on August 17th, when a carpet weaver, aged 23, died: its prevalence then increased, and throughout September it was very virulent. The greatest number of deaths occurred on September 20th, 21st, and 22nd, when no less than 23 fatal cases are recorded: it declined towards the end of the month, and prevailed with diminished force in the early part of October, and the last two deaths took place on October 18th and November 6th. Females suffered to a greater extent than males; and in the families of carpet weavers the

epidemic made great ravages, and many instances occurred of two or more members of the same family being carried off. In many cases, the duration of the attack was very short.

543; 3. *TEESDALE*; *Middleton*. Pop. 6028.—Chol. 0; Diarr. 0.

544; 1. *WEARDALE*; *St. John*. Pop. 4382.—Chol. 0; Diarr. 5.

544; 2. —; *Stanhope*. Pop. 3706.—Chol. 3; Diarr. 1.—The deaths from cholera are those of a quarryman, on July 2nd, aged 45; a labourer, on July 4th, aged 40; and a miner's widow, on September 26th, aged 58, all at Stanhope.

544; 3. —; *Wolsingham*. Pop. 2086.—Chol. 1; Diarr. 0.—A miller, on May 8th, aged 67, at Bradley Burn.

545; 1. *DURHAM*; *Tanfield*. Pop. 4489.—Chol. 0; Diarr. 0.

545; 2. —; *Lanchester*. Pop. 6434.—Chol. 1; Diarr. 16.—Cholera was fatal to a shoemaker, on September 8th, aged 37, at Cutler's Hall, Benfield-side. 4 deaths from diarrhoea took place at Leadgate, Iveston, and 4 at High Conside.

545; 3. —; *St. Oswald*. Pop. 9473.—Chol. 68; Diarr. 11.—A fatal case of cholera took place on January 19th, at New Elvet, where a labourer's wife, aged 36, died. No other death took place, until a pitman, aged 44, died after an attack of 20 hours' duration, at New-row, Elvet, on May 29th. It then spread with rapid and fatal effect, particularly at Framwell Gate and New Elvet; 8 deaths occurred in the Union Workhouse, in addition to 5 from diarrhoea. The last death from cholera took place on October 4th, when a hawker's daughter, aged 10 years, died at New Elvet, after an attack of 11 hours.

545; 4. —; *St. Nicholas*. Pop. 18457.—Chol. 123; Diarr. 13.—First death from cholera took place at Ludworth, Shadforth, a viewer's widow, aged 70. It was almost exclusively confined to this locality, and in the families of pitmen, until June 4th, a pitman then died at West Hetton, Coxhoe. It was very fatal in June at Cassop Moor, Quarrington Hill, and Coxhoe Hill; 2 sons and a daughter of a pitman died at 15 Quarrington Hill, on June 19th, 20th, and 24th: it prevailed greatly at Pitlington in August; Blackgate, Coxhoe, in October; Long-row, Coxhoe, in November; and Oxclose, Coxhoe, in December: several families lost two members. The last death was that of a labourer's wife, aged 56, at Oxclose, on December 31st.

546; 1. *EASINGTON*; *Easington*. Pop. 15740.—Chol. 72; Diarr. 9.—First death from cholera on March 30th, at Wingate,—a pitman's wife, aged 46. Two deaths occurred at the same place in April, but it was not until August that it set in with virulence: it prevailed greatly in August and September, in the families of mariners at Seaham Harbour, and throughout the epidemic at South Hetton amongst the mining population. Several fatal cases took place at Haswell in September and October; and 17 deaths occurred in October at Murton colliery. Last 2 deaths on October 30th, a sailor's widow, aged 70, and a pitman, aged 36, at Murton colliery.

547; 1. *HOUGHTON-LE-SPRING*; *Houghton-le-Spring*. Pop. 8466.—Chol. 12; Diarr. 8.—First fatal case of cholera occurred on August 28th, at Stott's Pastures, Newbottle, an ironfounder's wife, aged 39; last death a pitman's widow, aged 60, at Philadelphia Township, Newbottle, on September 18th.

547; 2. —; *Hetton-le-Hole*. Pop. 7604.—

Chol. 10; Diarr. 3.—Cholera was fatal to a sawyer, aged 50, on February 13th, at West Rainton, at which place several deaths took place, as also at Brick Garth. Last death, a pitman, aged 52, at Brick Garth, on February 28th.

548; 1. *CHESTER-LE-STREET*; *Chester-le-Street*. Pop. 10057.—Chol. 67; Diarr. 7.—No fatal case of cholera was recorded until August 6th, when a labourer, aged 37, died at Edmondsley colliery, Waldrige: it prevailed extensively in September at Bourn Moor; in September and October at Chester-le-Street: many families lost 2 members. Last death, a tanner's wife, aged 47, at Chester-le-Street, October 24th.

548; 2. —; *Harraton*. Pop. 8300.—Chol. 67; Diarr. 3.—A pitman, aged 14, died of cholera at Waggon-row, Usworth, on January 28th. 10 deaths occurred in February at Waggon-row, at Fatfield and Chartershaugh, Harraton. After this, no fatal cases are recorded until August 13th, at Eighton-banks, Lamesley, at which place it was very virulent throughout September, amongst the mining population; a pitman and his 2 sons died at Peal's Houses, on October 9th and 10th, where also a blacksmith and his wife died. Last death at Birtley, on October 17th, a pitman's widow, aged 72.

549; 1. *SUNDERLAND*; *North Bishop-Wearmouth*. Pop. 14774.—Chol. 53; Diarr. 17.—First death from cholera took place on March 11th, a shipwright's daughter, aged 3 months, at 15 Dunning-street. Several deaths occurred at Pallion and at Deptford; 4 deaths at the Workhouse and 2 at the Infirmary. Last fatal case, on October 29th, at Farrington-row, a weaver, aged 82.

549; 2. —; *South Bishop-Wearmouth*. Pop. 11424.—Chol. 18; Diarr. 16.—Cholera was first fatal at Sunnyside, on March 18th, a deceased blacksmith's daughter, aged 31. With the exception of one on March 19th, and one on April 10th, no other death is recorded till August 7th, at 41 Wear-street, where a master mariner's wife, aged 35, died after an attack of 13 hours' duration. Several deaths took place at Middle-street, Little Gate: the son and daughter of a tanner died at 3 Church-lane. Last 2 deaths at 57 Brougham-street, a female, aged 77, and a male, aged 8, on September 27th and 28th.

549; 3. —; *East Sunderland*. Pop. 9497.—Chol. 141; Diarr. 14.—First death from cholera took place on March 10th, at 13 Moorgate-street, a blacksmith, aged 18; it was particularly fatal from the 10th to the 31st of March, prevailing principally at Minorca, Robinson's-lane, Silver-street, and Fitters'-row. With the exception of one case, on April 13th, no other fatal attack is recorded until August 1st: from this time its ravages extended through August, September, and October, and, in addition to the places before mentioned, its severity was much felt in Moorgate-street, Ropery-lane, Vine-street, and East-street: several families lost more than one member. The last death was on October 28th, a painter's wife, aged 27, at Northumberland-place.

549; 4. —; *West Sunderland*. Pop. 8038.—Chol. 96; Diarr. 13.—On January 2nd, cholera was fatal to a mariner's wife, aged 49, at 30 Covent Garden-street: no other death until March 10th, when it set in with severity, particularly in Low-street; Market open, Church-street, where a butcher, his wife, and infant son died; Lombard-street; Golden-alley; Arras-lane; High-street; Queen-street, where 2 sons and a daughter of a butcher died; Bank-street; Baines-lane; Union-lane; and

Church-street, where 3 female children of a pilot died. Last death, on November 7th, a mason's wife, aged 28, at Arras-lane.

549; 5. SUNDERLAND; *Monkwearmouth*.—Pop. 12493.—Chol. 55; Diarr. 12.—Cholera was very fatal in this sub-district in the latter part of 1848. One death is recorded on January 1st, 1849, at a colliery—a miner, aged 35; also 3 deaths in April, but it was not until July that it again prevailed extensively. It was most felt in Fighting Cock-yard, Hedworth-street, William-street, and Wear-street. Last death, on November 1st, a cordwainer, aged 55, at Hedworth-place.

550; 1. SOUTH SHIELDS; *Westoe*. Pop. 16231.—Chol. 124; Diarr. 51.—First death from cholera was that of a master mariner's son, aged 18, at Johnston's Hill, on January 21st. Two deaths occurred in February; 3 in March at Union-alley; one in June. After July 10th its prevalence extended, and it became very fatal in Carpenter-street, Archers Hill, Corstorphine Town, and Temple Town; a pipe-maker's 3 children died at 33 Brunswick-street, on October 11th and 12th: 11 deaths took place at the Union Workhouse. Last fatal case on November 14th, at 22 Green-street, where a stone-mason's wife, aged 30, died.

550; 2. —; *South Shields*. Pop. 12682.—Chol. 77; Diarr. 15.—Cholera was first fatal on February 13th, to a pitman's wife, aged 25, at Weaver's-row, Yarrow; it prevailed greatly in Wapping-street, Shadwell-street, and chiefly in the families of the seafaring population; several instances occurred of two persons dying in the same house. Last death, on November 2nd, a labourer's son, aged 13, at Church Jarrow.

551; 1. GATESHEAD; *Heworth*. Pop. 7008.—Chol. 23; Diarr. 6.—First death took place on February 10th, at Felling Shore,—a waterman's wife, aged 36; excepting one on February 14th, no other fatal case is recorded until August 31st, a waterman's wife at Felling Shore, at which place, and at Heworth Shore and Lane, most of the deaths occurred. Last death, on October 16th, a labourer, aged 21, at Felling Shore.

551; 2. —; *Gateshead*. Pop. 19505.—Chol. 164; Diarr. 26.—On January 8th, a shoemaker, aged 57, died of cholera, at Pipewell-gate, at which place it raged with great intensity throughout the months of January and February. In March, one death, and in May 3 deaths took place. On August 12th it again began to increase, prevailing most at Wreckenton; 11 deaths occurred in the Union Workhouse, and 20 in the Wreckenton Lunatic Asylum. Last fatal case, on October 8th, a waterman, aged 72, at the Workhouse.

551; 3. —; *Whickham*. Pop. 4319.—Chol. 45; Diarr. 1.—On January 13th a waterman's son, aged 2, died of cholera at Dunston: it was also very fatal at Swalwell in February and August, and Dunston in September and October. Last death, on October 31st, an engine-man's son, aged 3, at Dunston.

551; 4. —; *Winlaton*. Pop. 7915.—Chol. 25; Diarr. 2.—First death from cholera took place on February 4th at Winlaton Hill; it prevailed most in September at Cottage-row, Blaydon, and Blaydon Slaith. Last death, on October 6th, a forge-man's daughter at Cottage-row.

39. NORTHUMBERLAND.

552; 1. NEWCASTLE-UPON-TYNE; *Westgate*.—Pop. 13785.—Chol. 32; Diarr. 19.

552; 2. NEWCASTLE-UPON-TYNE; *St. Andrew*.—Pop. 13320.—Chol. 8; Diarr. 26.

552; 3. —; *St Nicholas*. Pop. 15066.—Chol. 30; Diarr. 25.

552; 4. —; *All Saints*. Pop. 21474.—Chol. 118; Diarr. 35.

552; 5. —; *Byker*. Pop. 8199.—Chol. 107; Diarr. 12.—The observations on the district of Newcastle-upon-Tyne will be found in the remarks, in foregoing pages.

553; 1. TYNEMOUTH; *Wallsend*. Pop. 4758.—Chol. 36; Diarr. 1.

553; 2. —; *North Shields*. Pop. 13291.—Chol. 291; Diarr. 31.

553; 3. —; *Tynemouth*. Pop. 13958.—Chol. 113; Diarr. 28.

553; 4. —; *Longbenton*. Pop. 8711.—Chol. 75; Diarr. 8.

553; 5. —; *Earsdon*. Pop. 7508.—Chol. 182; Diarr. 17.

553; 6. —; *Blyth*. Pop. 7393.—Chol. 118; Diarr. 4.—The observations on the district of Tynemouth will be found in the remarks, in foregoing pages.

554; 1. CASTLE WARD; *Ponteland*. Pop. 7229.—Chol. 5; Diarr. 0.—First death from cholera on September 6th, at Horton Grange, a labourer, aged 24; the other 4 cases occurred on September 16th, 18th, 22nd, and November 9th.

554; 2. —; *Stamfordham*. Pop. 7308.—Chol. 12; Diarr. 3.—A waggoner's son, aged one, died of cholera on May 25th, at Leamington; no other case occurred until August 4th, when a sailor's widow, aged 73, died at Bells Close; all the subsequent cases took place at Newburn and Walbottle; the last two on November 6th.

555; 1. HEXHAM; *Bywell*. Pop. 6450.—Chol. 3; Diarr. 2.—First death from cholera occurred on August 29th at Blanchland; second and third, on September 14th and 30th, at Wylam.

555; 2. —; *Hexham*. Pop. 9116.—Chol. 10; Diarr. 8.—Cholera prevailed in February at the Workhouse, where 4 deaths took place; the first 2 on February 18th; in July and August 4 females died from diarrhoea and old age in the Workhouse. The last fatal case of cholera occurred on October 26th at Market-street.

555; 3. —; *Allendale*. Pop. 7637.—Chol. 0; Diarr. 1.

555; 4. —; *Chollerton*. Pop. 4724.—Chol. 0; Diarr. 2.

556; 1. HALTWHISTLE; *Haltwhistle*. Pop. 5949.—Chol. 2; Diarr. 2.—First death from cholera, on September 27th, an agricultural labourer, aged 30, at the workhouse; second case, on October 4th, a butcher, aged 31, at Haltwhistle.

557; 1. BELLINGHAM; *Bellingham*. Pop. 3577.—Chol. 0; Diarr. 0.

557; 2. —; *Kirkwhelpington*. Pop. 3885.—Chol. 0; Diarr. 0.

558; 1. MORPETH; *Morpeth*. Pop. 6995.—Chol. 7; Diarr. 4.—First case of cholera on March 20th at Manchester-lane; no other death took place until September 14th, when it was fatal to a farmer's wife, at New Houses Farm; one death occurred at the Workhouse; the last case was on October 13th, at Old Chapel, Chantry Place. 3 of the deaths from diarrhoea took place early in November.

558; 2. —; *Bedlington*. Pop. 7993.—Chol. 29; Diarr. 5.—The first death from cholera was that of a traveller from Ireland, aged 26, at East Thirston, on March 8th; the next case was on August 27th at Newbiggin; the third on October.

4th at Bedlington, where, after November 2nd, it prevailed with great severity, several families losing 2 members; the epidemic was not fatal after November 27th.

559; 1. *ALNWICK; Warkworth.* Pop. 6416.—Chol. 5; Diarr. 5. The first 2 deaths from cholera occurred at Warkworth Harbour on September 3rd and 7th, 2 mariners, aged respectively 40 and 46. The last case took place on September 27th at Amble Link House.

559; 2. —; *Alswick.* Pop. 6637.—Chol. 127; Diarr. 11.—The first fatal cases of cholera were those of a mason's wife, daughter, and son, who died at Monkhouse-square, on September 17th and 18th. Several deaths followed on September 23rd at Clayport-street and Greenbat: it prevailed with remarkable virulence at Clayport-street throughout the epidemic; Bondgate-street also suffered much, and several families lost 2 members: 5 deaths took place at the Dispensary, Dispensary-street, in October. The last fatal case occurred on October 31st at Crofthouse, a clergyman's son, aged 3 months.

559; 3. —; *Embleton.* Pop. 5746.—Chol. 10; Diarr. 1.—Cholera first appeared fatally at Boulmer, on August 7th, when a grocer's wife, aged 52, died, her husband being the next victim on August 13th. 7 of the deaths occurred at Boulmer; 2 at Longhanton; and the last, on September 30th, at Newton-by-the-Sea.

560; 1. *BELFORD; Belford.* Pop. 6436.—Chol. 3; Diarr. 4.—The deaths from cholera took place at Belford, on October 18th, 24th, and 30th. No males died of cholera or diarrhoea during the year.

561; 1. *BERWICK; Islandshire.* Pop. 3502.—Chol. 3; Diarr. 0.—First death, a female aged 53, at Scremerston, on September 23rd; second at Auroft Moor, on September 27th; and the third at Fenwick on October 8th.

561; 2. —; *Berwick-upon-Tweed.* Pop. 13686.—Chol. 45; Diarr. 4.—Cholera prevailed in this sub-district early in the year, the first case being on January 2nd, at the Workhouse, where also 2 other deaths took place in this month. A remarkable mortality occurred in the family of a fisherman, at Shore Houses Spittal, where between January 6th and 12th, the man, his wife, and 3 children died. With the exception of 2 cases in February, and 2 in April, no deaths took place until September 17th, when it again became very prevalent, 4 more fatal cases occurring at the Workhouse; the Parade, Chapel-street, and Castlegate, also suffered: the last case was on December 6th at Ness Gate.

561; 3. —; *Norhamshire.* Pop. 3757.—Chol. 28; Diarr. 2.—Cholera was fatal, on January 2nd, to a pauper's daughter at Hornechurch. Excepting in June and July, it prevailed until November, chiefly, however, in September. Norham and Cornhill suffered most: the last death was at Norham on November 20th.

562; 1. *GLENDAL; Ford.* Pop. 7224.—Chol. 10; Diarr. 8.—Cholera was prevalent in the sub-district in the latter part of 1848; the first death in 1849 occurred on January 2nd at Milfield, Berry Hill, Wark Carham, and West Newton; Kirknewton suffered most; the last death took place on October 26th at Kilham Kirknewton.

562; 2. —; *Wooler.* Pop. 6993. Chol 1; Diarr. 1.—This case of cholera occurred at the Union Workhouse on April 2nd, an Irish labourer, aged 27.

563; 1. *ROTHBURY; Rothbury.* Pop. 5477.—Chol. 0; Diarr. 0.

563; 2. *ROTHBURY; Elsdon.* Pop. 1820.—Chol. 0; Diarr. 0.

40. CUMBERLAND.

564; 1. *ALSTON; Alston.* Pop. 6062.—Chol. 0; Diarr. 1.

565; 1. *PENRITH; Penrith.* Pop. 10061.—Chol. 0; Diarr. 4.

565; 2. —; *Greystoke.* Pop. 5084.—Chol. 3; Diarr. 0.—The first death from cholera was that of a farmer's wife, on January 24th, at Hole House Skelton. The other fatal cases were on the 7th and 16th of September, in females aged 45 and 27, they being travelling pedlars.

565; 3. —; *Kirk Oswald.* Pop. 5868.—Chol. 1; Diarr. 1.—A husbandman died of cholera at High Heskett, on 16th November.

566; 1. *BRAMPTON; Hayton.* Pop. 2628.—Chol. 1; Diarr. 1.—Cholera was fatal to an iron-merchant's assistant, at Cumwhitton, on 30th September.

566; 2. —; *Brampton.* Pop. 4873.—Chol. 0; Diarr. 2.

566; 3. —; *Walton.* Pop. 3032.—Chol. 0; Diarr. 0.

567; 1. *LONGTOWN; High Longtown.* Pop. 3269.—Chol. 0; Diarr. 0.

567; 2. —; *Low Longtown.* Pop. 6452.—Chol. 1; Diarr. 0.—A weaver's son, on January 24th.

568; 1. *CARLISLE; Wetheral.* Pop. 3571.—Chol. 1; Diarr. 2.—A stonemason's wife died of cholera at Cumwhinton, April 29th.

568; 2. —; *St. Cuthbert.* Pop. 11116.—Chol. 10; Diarr. 17.—The first fatal case of cholera in 1849, was recorded January 8th, when a labourer's daughter died at Court-square, English-street, after an attack of 8 hours' duration. 3 deaths occurred at the gaol, English-street. After February 15th, no deaths took place until August 6th, when it proved fatal to a railway clerk's son, aged 3, at 15 Jackson's-place, Botchergate: this was the last death. Diarrhoea prevailed throughout the year, principally between April 13th and December 12th.

568; 3. —; *St. Mary.* Pop. 12624.—Chol. 40; Diarr. 19.—Cholera was present in this sub-district in the latter part of 1848. The first death in 1849 took place January 2nd, at Irish Damside, when, after an attack of 5 day's duration, it was fatal to a labourer's daughter, aged 11 years. In the House of Recovery 11 deaths took place. At Eden Cottage it was fatal to the twin son and daughter, aged 10 months, of the captain of a passage-boat. The epidemic was very prevalent in Caldcoats, in Bridge-street, and at Irish Damside, and the families of the weaving population suffered much. After March, a few deaths occurred at intervals; the latest being December 14th, at Rickergate, a shoemaker's daughter, aged 15.

568; 4. —; *Stanwix.* Pop. 3324.—Chol. 0; Diarr. 0.

568; 5. —; *Burgh.* Pop. 1548.—Chol. 0; Diarr. 0.

568; 6. —; *Dalston.* Pop. 3976.—Chol. 0; Diarr. 0.

569; 1. *WIGTON; Wigton.* Pop. 10674.—Chol. 1; Diarr. 12.—Cholera was fatal to a female mendicant, aged 26 (being at the time pregnant), at Market Hill, September 23rd. 5 deaths from diarrhoea in the Union Workhouse.

569; 2. —; *Abbey Holme.* Pop. 7019.—Chol. 1; Diarr. 0.—A surgeon, aged 33, at Stenkill, on November 24th.

569; 3. WIGTON; *Caldbeck*. Pop. 5672.—Chol. 0; Diarr. 0.

570; 1. COCKERMOUTH; *Keswick*. Pop. 6001.—Chol. 5; Diarr. 0.—First death from cholera took place on June 25th, a single woman, aged 25; last death on September 11th, a weaver's wife, aged 30.

570; 2. —; *Cockermouth*. Pop. 9481.—Chol. 60; Diarr. 11.—After a prevalence of diarrhoea, the first death from cholera happened to a sempstress, aged 60, at St. Helens-street, where several other deaths took place: in Main-street, Waterloo-street, Skinner-street, and Papcastle, many fatal cases occurred. The last death was that of a draper's son, aged 3 years, at Crown-street, November 4th.

570; 3. —; *Workington*. Pop. 9424.—Chol. 167; Diarr. 14.—Cholera was first fatal to a blacksmith at the Quay, on 9th August. The epidemic prevailed severely at Priest-gate, in Pow-street, Church street and lane, Griffin-street, and Brow Top. The families of mariners and coalminers suffered greatly. The last death was that of a labourer's wife, aged 51, on November 8th, at Camerton.

570; 4. —; *Maryport*. Pop. 10775.—Chol. 50; Diarr. 2.—The first death registered from cholera was that of a sailor, who died at sea, in the passage between Dublin and Maryport: this was followed by the death of a blacksmith, aged 47, at Furnace-road, August 9th. More than one-fourth of the deaths took place in Kirby-street; several also occurred in Furnace-lane, Crosby-street, and Queen-street; the last on November 12th, when a shipwright's son, aged 9 years, died at Senhouse-street.

571; 1. WHITEHAVEN; *Harrington*. Pop. 5925.—Chol. 8; Diarr. 3.—The first fatal case of cholera was that of a shoemaker's daughter, aged 5 years, August 27th, at Harrington Harbour, at which place all the deaths took place; the last a labourer, aged 53, on October 12th.

571; 2. —; *Whitehaven*. Pop. 11854. —Chol. 38; Diarr. 22.—Cholera was first fatal on May 25th, to a labourer's son aged 4 years, at 66 Queen-street; diarrhoea prevailed, but no other fatal case of cholera until August 22nd. After this time it rapidly increased: three deaths took place at 3 New Town:

several deaths took place at this part, and also in Peter-court and Peter-street. On November 23rd, a miner's wife, aged 22, died at Banks-lane, which was the last death from cholera.

571; 3. WHITEHAVEN; *St. Bees*. Pop. 6790.—Chol. 29; Diarr. 12.—First death from cholera was that of a spinster, aged 28, at Hensingham on April 30th: three children of a single woman died at 4 Cunnings-lane New houses; two fatal cases at 25 Ginn's Preston Quarter, in which neighbourhood many deaths occurred: the last case is recorded on November 30th, a single-woman's daughter, aged 18 months, at Bransty-lane.

571; 4. —; *Egremont*. Pop. 5419.—Chol. 4; Diarr. 1.—Cholera was first fatal to a labourer's daughter, aged 3, at Gosforth, September 2. Last death September 25th, a labourer, aged 51, at Wellington-row, Egremont parish.

572; 1. BOOTLE; *Muncaster*. Pop. 2166.—Chol. 0; Diarr. 0.

572; 2. —; *Bootle*. Pop. 3350.—Chol. 0; Diarr. 0.

41. WESTMORLAND.

573; 1. EAST WARD; *Appleby*. Pop. 5290.—Chol. 0; Diarr. 0.

573; 2. —; *Kirkby Stephen*. Pop. 5690.—Chol. 1; Diarr. 0.—A straw-bonnet maker, aged 27, on July 26th.

573; 3. —; *Orton*. Pop. 2829. Chol. 0; Diarr. 0.

574; 1. WEST WARD; *Morland*. Pop. 4079.—Chol. 0; Diarr. 0.

574; 2. —; *Lowther*. Pop. 3889.—Chol. 0; Diarr. 1.

575; 1. KENDAL; *Ambleside*. Pop. 5744.—Chol. 0; Diarr. 2.

575; 2. —; *Grayrigg*. Pop. 3815.—Chol. 0; Diarr. 1.

575; 3. —; *Kirkby Lonsdale*. Pop. 6684.—Chol. 0; Diarr. 1.

575; 4. —; *Kendal*. Pop. 12021.—Chol. 0; Diarr. 12.

575; 5. —; *Milnthorpe*. Pop. 6413.—Chol. 0; Diarr. 0.

XI. WELSH DIVISION.

42. MONMOUTHSHIRE.

576; 1. CHEPSTOW; *Shire-Newton*. Pop. 4849.—Chol. 0; Diarr. 1.

576; 2. —; *Chepstow*. Pop. 6862.—Chol. 2; Diarr. 13.—These deaths from cholera were those of a labourer, aged 18, at Chepstow, on June 12th, and a labourer, aged 67, at Mathern, on September 11th; 8 deaths from diarrhoea occurred in the Union Workhouse.

576; 3. —; *Lydney*. Pop. 5065.—Chol. 0; Diarr. 0.

577; 1. MONMOUTH; *Coleford*. Pop. 9163.—Chol. 2; Diarr. 3.—Cholera was fatal to a cabinet-maker, aged 38, at Newland, on September 14th; and a gentlewoman, aged 36, at Newland, on October 24th.

577; 2. —; *Dingestow*. Pop. 5298.—Chol. 0; Diarr. 0.

577; 3. —; *Monmouth*. Pop. 6197.—Chol. 19; Diarr. 2.—First death from cholera took

place at the Workhouse on June 6th, when a labourer, aged 75, died after an attack of 17 hours' duration: all the deaths occurred between June 6th and June 19th; and, with the exception of a mother and daughter at Chippenham Gate-street, all the fatal cases were at the Union Workhouse.

577; 4. MONMOUTH; *Trelleck*. Pop. 4647.—Chol. 1; Diarr. 0.—A waterman, aged 38, at Landago, on July 12th.

578; 1. ABERGAVENNY; *Llanarth*. Pop. 1861.—Chol. 0; Diarr. 1.

578; 2. —; *Llanvihangel*. Pop. 1820.—Chol. 0; Diarr. 0.

578; 3. —; *Abergavenny*. Pop. 7256.—Chol. 9; Diarr. 13.—First death from cholera on August 7th, a female, aged 59, at King David: at the Workhouse 4 deaths took place. Last fatal case on September 6th, a cordwainer, aged 26, at Mill-street; diarrhoea prevailed previous and subsequently to the appearance of cholera.

578; 4. —; *Blaenavon*. Pop. 6223.—Chol. 1;

Diarr. 8.—Cholera was fatal to a miner's daughter, aged 20, on September 17th, at Blaenavon after suffering 3 days from diarrhoea, which she had neglected: duration of the cholera attack 36 hours.

578; 5. ABERGAVENNY; *Aberystruth*. Pop. 11272. Chol. 223; Diarr. 11.—The first fatal case of cholera recorded was that of a boiler-maker, aged 42, at Blaina on June 8th; second death on June 10th; third death on July 1st. A pause then took place until July 31st, when it broke out at Nanty Glo with extraordinary violence: at which place, together with Blaina, its presence was most marked during August and September; a few deaths occurred at Garn Vach, and at Coalbrook Vale; Ebber Vale suffered chiefly in October; it was very fatal among the iron-working and coal-mining population. Last death on November 28th, a roller's wife, aged 23, at Blaina.

578; 6. —; *Tredeggar*. Pop. 19929.—Chol. 203; Diarr. 33.—First fatal case of cholera took place on January 3rd, when a collier's wife, aged 57, died at Sirhowy: diarrhoea then prevailed; and on May 19th, another death from cholera occurred. Towards the end of June, its prevalence became fatally conspicuous: Rumney and Bedwelty suffered severely, as also at a later period did Tredeggar, Sirhowy, and Victoria; the mining and metal-working population died in great numbers. Last death on November 29th, when a metal-breaker's son, aged 4 years, died at Sirhowy.

578; 7. —; *Rock Bedwelty*. Pop. 2484.—Chol. 2; Diarr. 0.—Both deaths at Blackwood. A tailor, aged 65, on July 22nd, and a collier's widow, aged 57, on August 2.

579; 1. PONTYPOOL; *Pontypool*. Pop. 18280.—Chol. 61; Diarr. 6.—First fatal case of cholera took place on June 5th, when a brazier's wife, aged 50, died at Trevethin: its prevalence was most marked at Trosnant in July, and Enyscoy in August. 10 deaths occurred in the cholera hospital. Last death, a Wesleyan minister's wife, aged 73, at Trosnant, on September 20th.

579; 2. —; *Llangibby*. Pop. 2632.—Chol. 6; Diarr. 2.—All the deaths from cholera took place in the parish of Lanwrethva: the first on August 15th, a cinder-filler, aged 38; the last death on September 7th, a puddler, aged 30.

579; 3. —; *Usk*. Pop. 4126.—Chol. 2; Diarr. 1.—These deaths from cholera were those of a labourer, aged 22, at the House of Correction on May 27th, and a labourer, aged 40, at Barn in Frostrey on June 24th.

580; 1. NEWPORT; *Caerleon*. Pop. 5822.—Chol. 15; Diarr. 3.—First death from cholera occurred on May 29th, at Caerleon, a washerwoman, aged 45; all the deaths occurred at Caerleon, and in the parish of Christchurch. Last fatal case on September 30th, a female, aged 27, at Christchurch parish.

580; 2. —; *Newport*. Pop. 13766.—Chol. 209; Diarr. 25.—First fatal case of cholera on May 10th, when a painter's wife, aged 29, died at Friars-fields: its prevalence increased in June, and continued until the beginning of October. It was very fatal in Cross-street, Mellons-bank, Newmarket, Pentonville, Pillgwenlly, Fothergill-street, and Queen's-parade. Last death on October 2nd, at Pillgwenlly, a carpenter, aged 43.

580; 3. —; *St. Woollos*. Pop. 5765.—Chol. 18; Diarr. 1.—Cholera broke out at Marshfield on June 12th, when the wife, two sons, and two daughters of a labourer died after attacks varying from 5 hours to 15 hours' duration: it prevailed in the parish of Llantarnam, chiefly in the early part

of September. Last death on November 22nd at Cwm-bran, a roller's daughter, aged one year.

580; 4. NEWPORT; *Mynyddystwyn*. Pop. 7704.—Chol. 4; Diarr. 2.—Cholera was first fatal on July 16th at Bedwas, to a shopkeeper's wife, aged 51. Last death on September 10th at Bryn, a collier's wife, aged 53.

43 SOUTH WALES.

GLAMORGANSHIRE.

581; 1. CARDIFF; *Caerphilly*. Pop. 6554.—Chol. 24; Diarr. 8.

581; 2. —; *Cardiff*. Pop. 13922.—Chol. 360; Diarr. 61.

581; 3. —; *St. Nicholas*. Pop. 4530.—Chol. 3; Diarr. 1.

581; 4. —; *Llan-trisaint*. Pop. 7551.—Chol. 9; Diarr. 5.

The observations on the district of Cardiff will be found in the remarks, in foregoing pages.

582; 1. MERTHYR TYDFIL; *Gelligaer*. Pop. 6278.—Chol. 30; Diarr. 2.

582; 2. —; *Lower Merthyr Tydfil*. Pop. 18289.—Chol. 462; Diarr. 28.

582; 3. —; *Upper Merthyr Tydfil*. Pop. 18974.—Chol. 1005; Diarr. 64.

582; 4. —; *Aberdare*. Pop. 9322.—Chol. 185; Diarr. 3.

The observations on the district of Merthyr Tydfil will be found in the remarks, in foregoing pages.

583; 1. BRIDGEND; *Maesteg*. Pop. 6994.—Chol. 33; Diarr. 6.—No fatal case of cholera is recorded in this sub-district prior to July 22nd, when

a labourer, aged 23, and a single woman, aged 20, died at Cwmdy, where nearly all the deaths took place, chiefly among the mining population. The last death was on September 13th at Cwmdy, a single woman's son, aged 15 months.

583; 2. —; *Cowbridge*. Pop. 6449.—Chol. 4; Diarr. 2.—The first and the last death from cholera occurred in Cowbridge, on June 4th and October 21st respectively; the other 2 cases were on August 10th, at Batslays in Lantwit Major, and on September 30th at Lanblethian.

583; 3. —; *Bridgend*. Pop. 7912.—Chol. 50; Diarr. 0.—The epidemic was first fatal in the case of a horsekeeper, aged 57, at Cefn Cwse on July 8th; 7 other deaths occurred in this month. In August its prevalence increased; the places which suffered most being the Pyle Works, Kenfig Hill, Newcastle, Oldcastle, and Aberkenfig. No case is recorded later than September 18th.

584; 1. NEATH; *Margam*. Pop. 7944.—Chol. 241; Diarr. 20.

584; 2. —; *Neath*. Pop. 7768.—Chol. 245; Diarr. 28.

584; 3. —; *Ystradavelltey*. Pop. 2738.—Chol. 38; Diarr. 0.

584; 4. —; *Ystradgynlais*. Pop. 5698.—Chol. 107; Diarr. 5.

584; 5. —; *Cadoxton*. Pop. 5103.—Chol. 90; Diarr. 6.

584; 6. —; *Llansamlet*. Pop. 3375.—Chol. 17; Diarr. 2.

The observations on the district of Neath will be found in the remarks, in foregoing pages.

585; 1. SWANSEA; *Llandilo-talybont*. Pop. 4880.—Chol. 6; Diarr. 0.—The whole of the deaths occurred in the parish of Llangafelach; the first on

June 18th, and the last on August 7th.

585; 2. —; *Llangafelach*. Pop. 9001.—

Chol. 108; Diarr. 3.—Cholera was first fatal on May 31st, in the case of a labourer's son, aged 4, at Morriston; this was followed by 2 deaths in June and 3 in July. In August and September it prevailed very fatally, Morriston and Penclawdd, suffering most; several families lost 2 members, and the mining and metal-working population appear most frequently in the death-list. The epidemic seems to have subsided after October 30th, on which day the last death is recorded, a copperman's daughter, aged 15, at Caebaddell.

585; 3. SWANSEA; Swansea. Pop. 18278.—Chol. 133; Diarr. 25.—Cholera first broke out in the gaol, where 2 deaths occurred on July 14th, and 3 others subsequently during the month: it spread rapidly and was very fatal in Bethesda St. Green Hill, High-street, and Strand; all classes of operatives suffered, and females to a much greater extent than males: it declined in September, and after October 7th its presence is no longer marked.

585; 4. —; Gower. Pop. 6490.—Chol. 15; Diarr. 4.—The period during which cholera was fatal, ranged from August 12th to September 10th, and excepting 2 cases at Gellyhir Ilston, all the deaths took place at Newton and Mumbles, chiefly in the families of farmers and labourers. In only one instance is the certificate of a medical practitioner noted.

CARMARTHENSHIRE.

586; 1. LLANELLY; Loughor. Pop. 2728.—Chol. 0; Diarr. 0.

586; 2. —; Llanelly. Pop. 9266.—Chol. 29; Diarr. 10.—One death from cholera occurred on May 19th at Wern; the next case was on July 18th, but it was not until September that it became prevalent; Wern and Forge suffered most, chiefly families of colliers and coppermen. The last 2 deaths took place at Pottery-row, on October 30th and November 2nd.

586; 3. —; Pembrey. Pop. 4413.—Chol. 16; Diarr. 1.—The first death from cholera occurred on September 1st at Castell; the epidemic was chiefly confined to the borough of Kidwelly; Water-street, and Bailiff-street, suffering most. The last death was on November 6th, at Tynewydd.

586; 4. —; Llan-non. Pop. 3775.—Chol. 0; Diarr. 0.

587; 1. LLANDOVERY; Llandausaint. Pop. 942.—Chol. 1; Diarr. 0.—This death occurred on June 10th at Pontaber, a labourer, aged 42.

587; 2. —; Llangadock. Pop. 2604.—Chol. 7; Diarr. 0.—Cholera became fatal on July 26th, in the case of a labourer, aged 68, at Cwmantale; all the other cases were in August, the last death being a collier's daughter, aged 4, at Penygraig, on August 30th.

587; 3. —; Llansadurn. Pop. 1745.—Chol. 0; Diarr. 0.

587; 4. —; Myddfai. Pop. 1073.—Chol. 0; Diarr. 1.

587; 5. —; Llandingat. Pop. 2345.—Chol. 6; Diarr. 3.—The deaths from cholera occurred between the 13th and 17th of September at Cross-lane, Queen-street, and High-street. There were 2 deaths from diarrhoea in the Workhouse.

587; 6. —; Llanfairary-bryn. Pop. 1649.—Chol. 0; Diarr. 0.

587; 7. —; Llanwrttyd. Pop. 779.—Chol. 0; Diarr. 0.

587; 8. —; Cilycwm. Pop. 1481.—Chol. 0; Diarr. 1.

587; 9. —; Conwil Cayo. Pop. 2108.—Chol. 0; Diarr. 0.

588; 1. LLANDILOFAWR; Talley. Pop. 2050.—Chol. 3; Diarr. 0.—These were the deaths of females: at Cwmyrmyrm on July 28th; at Cwmgwyddil on August 6th; and at Bontgarregishaf on August 27th.

588; 2. —; Llanfynydd. Pop. 1528.—Chol. 1; Diarr. 0.—This was the death of a collier, aged 27, at Trycwmychaf on August 17th.

588; 3. —; Llangathen. Pop. 3221.—Chol. 7; Diarr. 0.—The whole of these deaths occurred in the parish of Llaneywad, the first on September 6th and the last on November 13th.

588; 4. —; Llandilo. Pop. 4793.—Chol. 7; Diarr. 2.—The first case of cholera occurred on June 7th at Pontlaides; the other 6 deaths took place from August 14th, to September 21st, viz.: 3 at Trallwm, and 3 at the Union Workhouse.

588; 5. —; Llandebie. Pop. 5536.—Chol. 22; Diarr. 1.—The first 2 deaths from cholera occurred on July 29th and 30th at Tycanol Gwtterfawr; the epidemic was most prevalent in that part of the parish of Llandilofawr lying south of the river Cennen. The last death was on September 24th at Mary's Cottage, Llanfihangel.

589; 1. CARMARTHEN; Llangendeirne. Pop. 9269.—Chol. 26; Diarr. 6.—Cholera was not fatal until August 8th, when a labourer, aged 43, died at Felindre; his wife died next, on August 11th; it became very prevalent in Pontebereen and Felindre, and was most fatal among females. The last death was a labourer's daughter, aged 21, at Penllam, on September 20th.

589; 2. —; St. Clears. Pop. 7187.—Chol. 13; Diarr. 0.—First death on August 29th, at Gosport; the epidemic was chiefly prevalent in September: Gosport suffering the most; the last 2 deaths occurred on the 14th and 28th of October.

589; 3. —; Carmarthen. Pop. 12295.—Chol. 102; Diarr. 12.—The first death from cholera occurred on June 25th at Llanllwch; it was not, however, until the beginning of August that its prevalence extended. Kidwellyfach, Aberguilly, Alltynap, Priory-street, and Dame-street, suffered severely, several families losing 2 members: in the Workhouse 2 cases were fatal. Towards the end of October the deaths grew less numerous: there were only 2 cases in November, and after one death on December 1st, and another on December 7th, it ceased to find a place in the records of mortality.

589; 4. —; Conwil. Pop. 8772.—Chol. 1; Diarr. 2.—This case of cholera occurred on August 17th, a tailor's wife, aged 54, at Fynonddrain, New Church; she had no medical attendant, and the attack was fatal after a duration of 16 hours.

PEMBROKESHIRE.

590; 1. NARBERTH; Llanboidy. Pop. 3801.—Chol. 0; Diarr. 0.

590; 2. —; Llandissilio. Pop. 3618.—Chol. 0; Diarr. 1.

590; 3. —; Amroth. Pop. 3290.—Chol. 2; Diarr. 3.—These deaths from cholera were those of a farm labourer, aged 18, at Killano, on November 19th; and a fireman at an iron furnace, aged 32, at Birdslane, on October 16th: the duration of attack in each case was 16 hours.

590; 4. —; Narberth. Pop. 3752.—Chol. 1; Diarr. 0.—This was the death of a labourer's widow, aged 57, at Sadson House on January 6th.

590; 5. —; Slebech. Pop. 3511.—Chol. 6; Diarr. 1.—The whole of these deaths occurred in the Workhouse; 3 of them being illegitimate children. The first death from cholera was on

October 29th; the last on November 4th; and the death from diarrhoea on November 30th.

590; 6. NARBERTH; *Begelly*. Pop. 3776.—Chol. 4; Diarr. 1.—These cases of cholera occurred on October 4th, 5th, and 16th.

591; 1. PEMBROKE; *Tenby*. Pop. 8436.—Chol. 5; Diarr. 3.—First death from cholera on May 18th, at Green Buildings, a labourer's daughter, aged 10 months: all the other cases occurred between October 1st and 29th.

591; 2. —; *Pembroke*. Pop. 9082. Chol. 5; Diarr. 28.—First death from cholera on September 20th, at Monkton St. Mary; last case on October 9th, at Banker's-row. Diarrhoea was very prevalent throughout September and October, and was most severe in King-street, Queen-street, and Front-street, Pembroke Dock.

591; 3. —; *Roose*. Pop. 2152.—Chol. 1; Diarr. 2.—The death from cholera was that of a shipwright's wife, aged 62, at Ware, Llandstadwell, on August 14th.

592; 1. HAVERFORDWEST; *Milford*.—Pop. 8998.—Chol. 4; Diarr. 3.—The two first cases of cholera occurred at Milford Haven on July 17th and August 10; and the other two at Broadway, Walton West, on September 15th and 17th.

592; 2. —; *Haverfordwest*. Pop. 12129.—Chol. 9; Diarr. 6.—Eight of these cases of cholera took place in September; the first on September 7th, at Greenhill-Fold; one death occurred at the workhouse; the last fatal case was that of a shoemaker, aged 34, at Shut-street, on October 8th. An inquest was held on the body, and the verdict was, that the deceased died of cholera, accelerated by immersion in cold water at his own request.

592; 3. —; *St David*. Pop. 7732.—Chol. 0; Diarr. 0.

592; 4. —; *Fishguard*. Pop. 8280. Chol. 0; Diarr. 5.

CARDIGANSHIRE.

593; 1. CARDIGAN; *Newport*. Pop. 6227.—Chol. 0; Diarr. 0.

593; 2. —; *Cardigan*. Pop. 9417. Chol. 0; Diarr. 0.

593; 3. —; *Llandygwidd*. Pop. 4259.—Chol. 0; Diarr. 1.

594; 1. NEWCASTLE-IN-EMLYN; *Kenarth*.—Pop. 9125.—Chol. 0; Diarr. 0.

594; 2. —; *Pembryn*. Pop. 5413.—Chol. 0; Diarr. 0.

594; 3. —; *Llandyssil*. Pop. 6325.—Chol. 0; Diarr. 0.

595; 1. LAMPETER; *Lanybyther*. Pop. 2737.—Chol. 1; Diarr. 0.—This was the death of a farmer, aged 56, at Tforest, Llanfihangel, on June 17th.

595; 2. —; *Pencarreg*. Pop. 2534.—Chol. 0; Diarr. 0.

595; 3. —; *Lampeter*. Pop. 2691.—Chol. 2; Diarr. 3.—On August 31st and September 9th, 2 children of a driver died of diarrhoea at the Barleymow, Lampeter; this was followed on September 11th and 13th, by 2 deaths from cholera at Lampeter-commons.

595; 4. —; *Llanwenog*. Pop. 1903.—Chol. 0; Diarr. 0.

596; 1. ABERAYRON; *Llandisilio*. Pop. 6268.—Chol. 0; Diarr. 0.

596; 2. —; *Llan-saintffraid*. Pop. 6607.—Chol. 0; Diarr. 0.

597; 1. ABERYSTWITH; *Llanrhystyd*. Pop. 3653.—Chol. 0; Diarr. 0.

597; 2. —; *Aberystwith*. Pop. 8211.—Chol. 0; Diarr. 1.

597; 3. ABERYSTWITH; *Geneur-Glynn*.—Pop. 4358.—Chol. 0; Diarr. 0.

597; 4. —; *Rheidol*. Pop. 6020.—Chol. 0; Diarr. 0.

598; 1. TREGARON; *Gwnnws*. Pop. 3018.—Chol. 0; Diarr. 0.

598; 2. —; *Llangeitho*. Pop. 3257.—Chol. 0; Diarr. 0.

598; 3. —; *Tregaron*. Pop. 3979.—Chol. 0; Diarr. 0.

BRECKNOCKSHIRE.

599; 1. BUILTH; *Aber-gwesin*. Pop. 2955.—Chol. 1; Diarr. 0.—This was the death of a farmer, aged 50, at Berthlwyd Trefflys, on September 6th: duration of attack 12 hours; he had not been visited by a medical attendant.

599; 2. —; *Colewyn*. Pop. 2172.—Chol. 0; Diarr. 0.

599; 3. —; *Builth*. Pop. 3587.—Chol. 0; Diarr. 1.

600; 1. BRECKNOCK; *Merthyr Cynog*. Pop. 1672.—Chol. 0; Diarr. 0.

600; 2. —; *Devynnock*. Pop. 4420.—Chol. 0; Diarr. 0.

600; 3. —; *Brecknock*. Pop. 7243.—Chol. 6; Diarr. 5.—With the exception of one case at Ship-street, St. Mary's, on July 28th, the whole of the deaths from cholera occurred at the Union Workhouse; the first case being on June 20th, and the last on September 26th.

600; 4. —; *Penkelly*. Pop. 1532.—Chol. 1; Diarr. 1.—This death from cholera was that of a carpenter, aged 52, at Cwm Crawnnon, on September 14th.

600; 5. —; *Llangorse*. Pop. 2834.—Chol. 0; Diarr. 1.

601; 1. CRICKHOWELL; *Cwmdû*. Pop. 1039.—Chol. 0; Diarr. 0.

601; 2. —; *Llangunider*. Pop. 2775.—Chol. 9; Diarr. 2.—Cholera was first fatal in the case of a workwoman, aged 60, at Bush Cottages, Duke's town, on August 25th. This was followed, on September 29th, by the deaths of a farmer and his wife, aged 72 and 62 respectively, at Frwd Farm: the last death occurred on October 10th at Victoria-row.

601; 3. —; *Llangattock*. Pop. 4334.—Chol. 26; Diarr. 7.—In the case of a labourer's daughter, aged 9, who died on March 3rd, at Waungoch, Beaufort, a coroner's jury returned a verdict that her death was caused by cholera; duration 12 hours. No other case occurred until August 1st, when a mason, aged 51, died at Tinker's-row; it prevailed until September 26th, and most of the deaths took place at Waungoch.

601; 4. —; *Llanelly*. Pop. 7366.—Chol. 56; Diarr. 7.—Cholera broke out on July 21st, when a coal-miner's wife, aged 50, died at the Pont-yrfel, Clydach Iron Works. It prevailed very fatally throughout August, decreasing in intensity in September, and finally disappeared after October 10th. Glamorgan-street, Worcester-street, Bailey-street, and King-street, suffered most, chiefly the mining and iron-working population.

601; 5. —; *Crickhowell*. Pop. 2162.—Chol. 4; Diarr. 0.—These deaths occurred on June 29th at Printer's-alley; on July 31st at Church-lane; and on August 6th and 11th at Mill-street.

602; 1. HAY; *Talgarth*. Pop. 2539.—Chol. 0; Diarr. 0.

602; 2. —; *Clyro*. Pop. 3837.—Chol. 0; Diarr. 1.

602; 3. HAY; *Hay*. Pop. 4953.—Chol. 1; Diarr. 0.—This was the death of a labourer, aged 30, at Hay, on April 17th: duration of attack 4 days.

RADNORSHIRE.

603; 1. PRESTEIGNE; *Brilley*. Pop. 2117.—Chol. 0; Diarr. 0.

603; 2. —; *Radnor*. Pop. 3972.—Chol. 0; Diarr. 3.

603; 3. —; *Kington*. Pop. 6128. Chol. 0; Diarr. 3.

603; 4. —; *Presteigne*. Pop. 3522.—Chol. 0; Diarr. 0.

604; 1. KNIGHTON; *Knighton*. Pop. 5038.—Chol. 2; Diarr. 1.—These cases of cholera were those of a farmer, aged 19, at Lower Hall, Heyop, on September 1st, and a farmer's son, aged one, at Rose Grove, Bettws-y-Crwyn, on September 4th.

604; 2. —; *Llanbister*. Pop. 4277. Chol. 0; Diarr. 0.

605; 1. RHAYADER; *Rhayader*. Pop. 3702.—Chol. 0; Diarr. 1.

605; 2. —; *Nantmel*. Pop. 3020.—Chol. 0; Diarr. 0.

44. NORTH WALES.

MONTGOMERYSHIRE.

606; 1. MACHYNLETH; *Machynlleth*. Pop. 3905.—Chol. 0; Diarr. 0.

606; 2. —; *Pennal*. Pop. 4407.—Chol. 0; Diarr. 0.

606; 3. —; *Darowen*. Pop. 3995.—Chol. 0; Diarr. 1.

607; 1. NEWTOWN; *Upper Llanidloes*. Pop. 4234.—Chol. 0; Diarr. 0.

607; 2. —; *Lower Llanidloes*. Pop. 3831.—Chol. 1; Diarr. 1.—The death from cholera occurred at Llechwedd Trefeglys on July 14th, a farmer, aged 40.

607; 3. —; *Llanwnnog*. Pop. 5111.—Chol. 1; Diarr. 1.—This death from cholera took place on September 18th, a plasterer's wife, aged 37, at Bwlch-y-frydd, Aberlhaesp; a coroner's inquest was held.

607; 4. —; *Kerry*. Pop. 2743.—Chol. 0; Diarr. 0.

607; 5. —; *Newtown*. Pop. 6842.—Chol. 6; Diarr. 8.—The first fatal case of cholera in this sub-district occurred on August 24th, in a currier, aged 45, at the Horsemarket; the last death took place on October 3rd, at Kerry-road, when a labourer's widow, aged 43, died. This was followed by several deaths from diarrhoea, chiefly at Pool-road.

607; 6. —; *Tregynon*. Pop. 3255.—Chol. 0; Diarr. 0.

608; 1. MONTGOMERY; *Montgomery*. Pop. 6280.—Chol. 1; Diarr. 0.—This death took place on September 5th, at the out-buildings, Abermule Inn, a currier, aged 40, after an attack of 14 hours' duration.

608; 2. —; *Chirbury*. Pop. 5395.—Chol. 2; Diarr. 3.—First death from cholera on June 8th, a gentlewoman, aged 68, at the Vicarage; second case on August 29th, a labourer's son aged 5, at Priest-weston; two deaths from diarrhoea took place at the Forden House of Industry.

608; 3. —; *Pool*. Pop. 9308.—Chol. 34; Diarr. 2.—Cholera first became fatal on August 18th, in a Custom-house officer's widow, aged 88, at High-street, Welsh Pool: it prevailed until September 24th, when a tailor's daughter, aged 2, died at Britannia-street; it was most fatal in Powell's-row and Back-road. Inquests were held in 6 cases.

609; 1. LLANFYLLIN; *Llanfair*. Pop. 6888.—Chol. 0; Diarr. 0.

609; 2. —; *Llansaintffraid*. Pop. 7989.—Chol. 4; Diarr. 2.—The first death from cholera was on July 25th, a miner's wife, aged 32, at Llanfyllin; next fatal case on August 18th, and two others on September 11th.

609; 3. —; *Llanrhaidr*. Pop. 5573.—Chol. 0; Diarr. 0.

FLINTSHIRE.

610; 1. HOLYWELL; *Whitford*. Pop. 8758.—Chol. 0; Diarr. 3.

610; 2. —; *Holywell*. Pop. 12950.—Chol. 46; Diarr. 3.—Cholera was first fatal in this sub-district on July 14th, when a smelter's wife aged 38, died at Allen-square. It was very prevalent throughout this month, Chester-road and Bagillt-street suffering most: only two deaths occurred in August; after September 6th it again increased, and continued up to October 20th, when a shoemaker, aged 32, died at Bagillt.

610; 3. —; *Flint*. Pop. 8239.—Chol. 35; Diarr. 16.—On August 20th, a forgerman's daughter, aged 9, died of cholera at Flint. It afterwards prevailed with much severity at Northop, Golftyn, and Parish-lane: the last fatal case occurred on October 6th, in a collier's widow, aged 75, near the Flint mills. Several families lost two members either by cholera or diarrhoea.

610; 4. —; *Mold*. Pop. 10851.—Chol. 5; Diarr. 4.—First death from cholera took place on July 15th, a coachman, aged 42, at Maesydre: the other cases occurred at intervals; the last on October 3rd, when a labourer, aged 76, died at Mynydd Buchan.

DENBIGHSHIRE.

611; 1. WREXHAM; *Hope*. Pop. 8874.—Chol. 0; Diarr. 2.

611; 2. —; *Mulpas*. Pop. 7009.—Chol. 0; Diarr. 2.
