METEOROLOGICAL OBSERVATIONS
AT THE
FOREIGN AND COLONIAL STATIONS

OF THE
ROYAL ENGINEERS AND THE ARMY MEDICAL DEPARTMENT
1852—1886.

Published by the Authority of the Meteorological Council.

LONDON:
PRINTED FOR HER MAJESTY'S STATIONERY OFFICE
BY EYRE AND SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.

And to be purchased, either directly or through any Bookseller, from
EYRE AND SPOTTISWOODE, EAST HARDING STREET, FLEET STREET, E.C.; or
ADAM AND CHARLES BLACK, 6, NORTH BRIDGE, EDINBURGH; or
HODGES, FIGGIS, & Co., 104, GRAFTON STREET, DUBLIN.

1890.

Price Twenty-three Shillings.

METEOROLOGICAL OBSERVATIONS
AT THE
FOREIGN AND COLONIAL STATIONS
OF THE
ROYAL ENGINEERS AND THE ARMY MEDICAL DEPARTMENT.
1853-1886.

INTRODUCTION.

ADDENDA.

Hong Kong. Pages 234, etc. :—

Rainfall for the period May 1853 to May 1855 and for the years 1858-1862 is from a gauge 20 feet above the ground.

Pages 238 and 240 :—

The error of the barometer in use from March 1866 to July 1867 is not known.

ERRATA.

Page 12. Quebec, 1858, Vapour Tension :—

For "48.3," "51.1," etc., read "48.3," "51.1," etc.

Page 44. Bermuda, 1881, February, Barometer at 3 p.m. :—

For "29.905" read "29.909."

Page 96. Bahamas, 1852, Longitude :—

For "77° 22' W." read "77° 20' W."

METEOROLOGICAL OBSERVATIONS
AT THE
FOREIGN AND COLONIAL STATIONS
OF THE
ROYAL ENGINEERS AND THE ARMY MEDICAL DEPARTMENT,
1852-1886.

INTRODUCTION.

IN the year 1852 complete sets of meteorological instruments were supplied to the principal foreign stations of the Royal Engineers, together with a book of "Instructions for taking Meteorological Observations," which had been prepared by Captain (afterwards Major-General Sir Henry) James, R.E., F.R.S., &c., under the direction of General (afterwards Field Marshal) Sir J. F. Burgoyne, K.C.B., the Inspector-General of Fortifications. In accordance with these instructions a series of observations was commenced, which continued till March 1862.

They were taken twice daily, namely, at 9.30 a.m. and 3.30 p.m., and comprised on each occasion observations of the—

- Barometer,
- Dry-bulb thermometer,
- Wet-bulb thermometer,
- Wind (direction and force) by an anemometer, and
- Amount of cloud, together with the computed values of the
- Dew point,
- Vapour tension; and, in the later years,
- Relative humidity.

There were besides these the daily record (taken at 9.30 a.m.) of—

- Maximum temperature in the sun,
- Maximum temperature in the shade,
- Maximum temperature of evaporation,
- Minimum temperature in the shade,
- Minimum temperature on the grass,
- Minimum temperature of evaporation,
- Rainfall in past 24 hours on the ground,
- Rainfall in past 24 hours at some distance (usually about 20 feet) above the ground,
- Maximum pressure of wind in past 24 hours,
- Amount of ozone, and
- Remarks on—
 - The daily weather,
 - The prevalent diseases,
 - The arrival of birds of passage,
 - The leafing of trees, &c.

In addition to these observations, hourly readings of the instruments were taken at all the stations on 21st March, 21st June, 21st September, and 21st December, and at certain stations these "Term Day" readings were taken on the 21st of each month.

The observations at 9.30 a.m., together with certain of the daily results, were regularly plotted in diagrams to show, in graphical form, the weather for a month.

The results for the year 1853-1854 were reduced under the direction of Colonel Sir H. James, F.R.S., and published in 1855 under the title "Abstracts from the Meteorological Observations taken at the Stations of the Royal Engineers in the year 1853-4." A second and larger volume, also edited by Sir Henry James, was issued in 1862, with the title "Abstracts from the Meteorological Observations taken at the Stations of the Royal Engineers in the years 1853-1859." And these observations, taken as they were in many different parts of the world by trained observers, with tested instruments, and on a uniform, complete, and carefully arranged plan, have proved of immense service to meteorologists.

In the introduction to the latter volume of "Abstracts," Sir H. James, writing in March 1862, says:—

"The importance of having correct information as to the climate of all the stations at which our troops are stationed is now so fully recognized that the Secretary of State for War has given orders for meteorological observations to be taken by all the medical officers in the Army wherever stationed, and, as the observations to be taken will be precisely of the same kind as those which have been taken at the Royal Engineer stations, and it is obviously unnecessary to have a double set of instruments and a double set of observers at each station, orders have been given, at my suggestion, for the transfer of all the instruments now in charge of the officers of the Royal Engineers to the senior officer of the Army Medical Department at the several stations, and this transfer will be made on the 31st of this month."

The transfer thus announced was duly made, and from April 1st 1862 to the present time, meteorological observations have been regularly taken by the Medical Staff of our Army, and while no observations were published for 1862 or 1863, from 1864 tables of monthly results have been included in the Annual Reports of the Army Medical Department.

In the year 1879 the whole of the original documents accumulated by the Royal Engineers, which had been stored at the Ordnance Survey Office, Southampton, were handed over to the custody of the Meteorological Council, to be used as required for the furtherance of meteorological science.

No discussion of these records was taken in hand until 1886, when the following extract from a paper by Dr. J. Hann of Vienna, published by him in the "Meteorologische Zeitschrift" for March 1886, was brought to the notice of the Meteorological Council:—

"We venture to address to the Meteorological Council in London a request which will certainly be supported by all our colleagues. The 'Abstracts of Meteorological Observations taken at the Stations of the Royal Engineers, 1853-59,' published by Sir H. James, are well known to be a rich source of information as to the meteorology of the tropical and sub-tropical regions, although they only cover six years, and the discussion of the records is not carried out in the detail which is looked for at the present time."

“ In March 1862 these stations were transferred to the Army Medical Department, and it appears that the observations were kept up at most of the stations until 1875 at least. The reports of the Army Medical Department give the results of these observations for some years in a short Appendix.”

“ I possess the reports for 1864–73, and I have frequently been able to extract valuable information from them.”

“ Unfortunately the publication of the meteorological results in this form, where they are only constructed as casual returns, is most defective and is not systematical. For many stations one or more years are wanting, and the stations then crop up again. In the year 1872 no Meteorological Appendix is given. The means are full of printer's errors. In short, it seems most desirable that this valuable store of observations, especially from stations for which hardly any other information for the period exists, should be worked up according to the modern requirements of the science, and then published. For several stations there ought to be 20 years records (1853–73). If we had for this period carefully reduced observations for such places as Barbados, Bermuda, the Bahamas, Jamaica, Hong-Kong, Gibraltar, Halifax, Quebec, St. John's, N.B., &c., the gain to meteorology in general would be great, and the information would be simply priceless for investigations of meteorological periodicity.”

“ We therefore, in the name of all our colleagues, address to the Meteorological Council the request that they will, if they find it at all possible, undertake the discussion of the records of the stations of the Royal Engineers and Army Medical Department.”

“ The Council has already gained the warm gratitude of meteorologists by collecting, carefully discussing, and publishing the meteorological observations from the Arctic Regions of America. A rich mine of information has been opened by this discussion, and its contents made accessible, or at least available, for calculations.”

“ We may perhaps hope that the store of information contained in the Royal Engineers and Army Medical Department records may be similarly placed within the reach of meteorologists.”

Before coming to a decision on the question thus submitted to them, the Council applied to the Army Medical Department for permission to use the data in its possession. This permission was readily accorded, and was accompanied by an offer to hand over, if desired, the whole of the original documents still existing in the Department. This offer was gladly accepted, and thus a large mass of original data being rendered accessible, it was decided by the Meteorological Council to proceed with the discussion and publication of such portions of it as related to foreign or colonial stations.

The present volume will be found to comprise observations belonging to the two offices mentioned above, made at 33 different stations for various years between 1852 and 1886, and in addition, there is included, by the courtesy of Surgeon General Robert Lawson, an abstract of the observations made by him at Sierra Leone in the years 1847–1851.

When the observations were first established, Sir H. James expressed the hope that some of the officers concerned would be found to take such an interest in the study of meteorology as to do more than the regulations demanded. This hope was

realised, and at several stations observations were taken at night (9.30 p.m. and 3.30 a.m.), and on additional "Term Days". At one of these stations—Mauritius—the series of night observations extended over nine years, and was so full and complete that it has been deemed well to publish the data with the day readings.

There is, however, no information for the period from April 1862 (when the observing duty was taken over by the Army Medical Department) to December 1863. No data were published for this period, and it is found that the original schedules of observations have been destroyed. For the two following years, 1864, 1865, only the printed abstracts exist, the sheets for these years having also been destroyed. In consequence it will be found that the tables for the years in question (1864, 1865), are not in identically the same form as those for the other years, the pressures and temperatures, for instance, being the means of the readings at 9 a.m. and 3 p.m., instead of the readings at the separate hours.

For the same reason it has not been possible to verify, by reference to the observer's figures, doubtful values in the results for these years.

The changes in method between the Royal Engineers and the Army Medical Department were but slight, the most important being a difference of 30 minutes in the times of observing (the hours for the Royal Engineers being 9.30 a.m. and 3.30 p.m., while the Army Medical Department observed at 9 a.m. and 3 p.m.), and the discontinuance of the "Term-day" observations. In other respects the two series are practically identical.

The observations having been already prepared for publication, as stated above, it has not been deemed necessary as a general rule, to repeat the computations involved in the returns.

In those cases, however, where the reduction or discussion appeared to be faulty, the working has been checked in the Meteorological Office. The whole of the figures have been carefully read over with the original documents, and, in addition, much time has been spent upon a careful and systematic revision of the observations, which has led to the detection of many errors.

In many instances the observations are not complete. At the Royal Engineer stations it seems to have been allowed to omit the readings on Sundays and public holidays, and this rule or permission was taken advantage of in many cases, though not in all. In addition there are the usual gaps owing to illness, absence of the observer, breakage of instruments, &c., &c. In all cases where the means are based on an incomplete series the fact is stated, and the number of missing observations is shown by small figures at the side of the readings. These incomplete means, however, have been used without question in obtaining the annual values.

It should further be noted that the mean temperature, is taken to be the mean of the maxima and minima of those days only on which they have both been observed. Thus, if the maxima for a month are complete, but the minima on four days are missing, the maxima for those days have been omitted also, when obtaining the mean maximum to combine with the mean minimum. The mean temperature in such a case would therefore be based on observations for 27 days only.

The monthly sums and means have been checked in a large number of cases, while the yearly totals and averages for all the stations have been obtained in the Meteorological Office.

The extremes of temperature and the maximum daily rainfall are printed in Egyptian type, while any values printed in *italics* must be taken as probable only.

The form in which the observations are printed in the present publication is that adopted by the Meteorological Congress at Rome in 1879 for international use, with some slight modifications, rendered necessary by the hours of observation.

The list of officers under whose supervision the observations have been taken is necessarily a long one, and since it was found to be inconvenient to print the names of the responsible officers with the Tables for the various years, the following statement has been prepared to supply that information.

It will be found that the stations are grouped in districts, beginning with North America and ending with Australasia.

District.	Station.	Years.	Observations taken by or under the Direction of
North America and North Atlantic.	New Westminster (British Columbia). Newfoundland	1860-1861 -	Capt. R. M. Parsons, R.E.
		1852-1862 -	Col. W. Robinson, R.E. Captain J. G. Jervois, R.E. Captain E. Bridge, R.E. Captain M. H. Syngé, R.E. Lt.-Col. G. C. Baillie, R.E. Captain T. A. L. Murray, R.E. Staff Surgeon L. O. Patterson. Assist. Surgeon A. Knox Rickards. Assist. Surgeon S. Robertson, M.D. Assist. Surgeon A. E. Bartlett.
		1865-1870 -

PRESSURE.

The barometer readings have been corrected for index error, and reduced to 32° Fahrenheit, but not to mean sea level. The height given as that of the station above sea may be taken as that of the cistern of the barometer. No correction for gravity has been applied.

Both morning and afternoon readings are shown.

TEMPERATURE.

In very few cases is the height of the thermometers above the ground stated. But it may safely be assumed that in nearly every instance, if not indeed in all, this height is about 4 feet according to the directions given on that point in Sir Henry James's "Instructions."

The original outfit of instruments included seven thermometers, namely, a standard which had been compared at Greenwich, three mercurial maximum, and three spirit minimum instruments. Directions were given that the six self-registering instruments should be compared with the standard, and the respective errors at different points noted. Whenever this was done, the proper corrections have been applied to the readings.

At a later period the instruments sent out to replace those broken, or to furnish new stations had Kew certificates, and in these cases the proper corrections have been applied to the readings.

In most cases the readings have been taken to tenths of degrees, but at some stations for certain years the same refinement was not practised, and the readings are only to whole degrees. In all cases the monthly means are given to tenths.

The mean temperature given is the mean of the maxima and minima on those days only on which both were observed, as explained at page iv.

Some doubt exists as to whether the maximum temperatures (which with the minima were always read in the morning) have been entered to the day on which they were made, or to the previous day in accordance with the more modern practice. It is impossible now to settle the point in an entirely satisfactory manner, and consequently the entries have all been taken as given on the sheets without question.

HYGROMETRY.

According to Sir H. James's "Instructions," Dr. Apjohn's formula was always to be employed in obtaining the hygrometrical values, although Glaisher's Tables were from the first supplied to all the stations, and appear in some cases to have been regularly used.

With the Royal Engineers, and in certain cases under the Army Medical Department, the daily values of vapour tension and relative humidity have been worked out. When this has been done, the monthly mean shown, is the mean of the daily values—and in these cases the mean per-centage of humidity has been carried to the first place of decimals. In certain of the earlier Royal Engineer returns the daily values of the dew-point were inserted instead of the vapour tension, and when this was done, the vapour tension corresponding to the mean dew-point has been taken.

In a large number of the returns, however, the daily values are not shown, and the values of vapour tension and relative humidity have been obtained in the Meteorological Office from the monthly means of the dry-bulb and wet-bulb thermometer readings by Glaisher's Tables, 5th edition. The values of humidity obtained in this way have been printed to whole numbers only.

CLOUD.

In cloud-amount the scale used was the usual one, namely:—

0 = clear sky, and
10 = overcast.

RAINFALL.

The rule at the Royal Engineer stations was to have two rain-gauges, one "on the ground," the other at some distance (usually about 20 feet) above, and to enter the daily amounts from each. The rainfall collected in the lower gauge has been adopted in every case, except in those rare instances where this gauge was out of order. When the record of the upper gauge has been used a note to that effect will be found, giving also the height of the gauge above ground if that is known.

The remark made above with regard to the date of the maximum temperatures applies also to the rainfall entries. It is impossible now to say what rule was followed at the various stations in different years on this point, and therefore the entries have all been taken as belonging to the day on which they were entered. In counting the number of rainy days, those only where the fall amounted to or exceeded $\cdot 005$ inch have been included.

WIND.

At all the Royal Engineer stations, and for several years subsequent to the Army Medical Department taking over the work, the wind-force was recorded by anemometers at first apparently of the nature of Osler's pressure plate (though not made or designed by Mr. Osler), such an instrument, by Barrow, being figured in the "Instructions," 1851. Small anemometers of the Robinson pattern were afterwards supplied. The results were expressed on the sheets in pressure per square foot, and force (Beaufort scale) with, later on, miles per hour. Owing probably to sluggishness, or to the protection afforded the anemometer by trees, &c., there is at some stations a remarkable preponderance of cases where the force is given 0,—in some instances the record for a whole month showing no wind-force.

In dealing with these the rule has been followed of taking all directions given as real directions, and to count as calms only those cases where either the word calm is inserted or where direction and force are alike zero. Care has been taken that the summaries where given are complete. In the case of missing observations probable wind directions have been inserted wherever possible. If this could not be done, the summary for the month has been omitted. But frequently with the Royal Engineer stations the summary given includes only the morning observations, a note to this effect being appended to the tables.

WEATHER.

The number of days of rain is the number of days on which .005 inch or upwards was entered. Those of \mathbb{R} , Δ , and \times are the numbers of days on which these phenomena were noted. It has not been possible to give the number of days of clear sky and overcast, nor of gales, and in many cases, especially with the earlier years of the Royal Engineers, the days of thunderstorm, snow, and hail were not recorded.

The whole of the calculations connected with the present publication have been carried out in the Meteorological Office by Mr. John A. Curtis, assisted by other members of the staff.

ROBERT H. SCOTT,

Secretary to the Council.

3rd February 1890.

MONTHLY MEANS AND SUMMARIES.

The following table shows the Stations, returns from which will be found in the succeeding pages. The number of the page for each station is that on which the first return is printed.

* NOTE.—The Rainfall for 1882 is so very small, as compared with that for other years, as to raise the suspicion of a serious error in its registration. There was a change of observer in October 1881, and again in April 1883, and this change may account for the—apparent—error. The Rainfall at Freetown is given in the "Official Gazette" as 143.82 ins. for 1881; 110.58 ins. for 1882; 143.15 ins. for 1883.

LIST OF PUBLICATIONS, &c.

OFFICIAL—continued.

- No. 51. Hourly Readings, 1881 (New Series).—Part I. Price 10s. 6d. Parts II., III., and IV. Price 21s. each.
52. Quarterly Weather Report for 1877 (New Series). Appendices and Plates. Price 27s. Part I. Price 10s. Part II. Price 5s. Part III. Price 4s. 6d. Part IV. Price 6s.
53. Meteorological Atlas of the British Isles. Price 5s. 6d.
54. Hourly Readings, 1882. Parts I. and II. Price 20s. each. Part III. Price 22s. 6d. Part IV. Price 26s.
55. Quarterly Weather Report for 1878 (New Series). Appendices and Plates. Price 28s. Parts I., II., III., and IV. Price 6s. each.
56. Sunshine Records of the United Kingdom for 1881. Price 4s.
57. Meteorological Observations at Stations of the Second Order for the Year 1880. Price 34s. 6d.
58. Report for 1882-83. Price 10½d.
59. Sea Temperature Charts for the Atlantic, Pacific, and Indian Oceans. Price 21s.
60. Principles of Weather Forecasting.—By the Hon. Ralph Abercromby, F.R.Met.Soc. (Second Edition, Revised.) Price 2s.
61. A Barometer Manual for the Use of Seamen. Price 1s. 3d.
62. Monthly Weather Reports for 1884: Jan., Feb., March, May—November. Price 1s. 6d. each. April (with two Appendices), Price 2s. 6d. December. Price 1s. 9d.
63. Hourly Readings, 1883. Parts I., II., and III. Price 21s. each. Part IV. Price 30s.
64. Report for 1883-4. Price 1s. 2d.
65. Monthly Weather Reports for 1885. January to December. Price 1s. 6d. each.
66. Meteorological Observations at Stations of the Second Order for the Year 1881. Price 35s.
67. Report for 1884-5. Price 4s. 4d.
68. Monthly Weather Reports for 1886. Jan.—Dec. Price 1s. 6d. each.
69. Meteorological Observations at Stations of the Second Order for the Year 1882. Price 35s.
70. Hourly Readings, 1884. Part I. Price 12s. Part II. Price 10s. Part III. Price 10s. 6d. Part IV. Price 15s.
- No. 71. Synchronous Weather Charts of the North Atlantic and the Adjacent Continents, August 1st, 1882—September 3rd, 1883. Parts I. to IV. (33 sheets each). Price 17s. each.
72. Report for 1885-6. Price 8d.
73. Meteorological Observations at Stations of the Second Order for the Year 1883. Price 30s.
74. Hourly Readings, 1885. Parts I. and II. Price 11s. each. Part III. Price 10s. 6d. Part IV. Price 12s.
75. Report for 1886-7. Price 8d.
76. Charts showing the Mean Barometric Pressure over the Atlantic, Indian, and Pacific Oceans. Price 10s. 6d. Supplementary Chart. Price 6d.
77. Monthly Weather Reports for 1887. January to April. Price 1s. 6d. each. May. (In the Press.)
78. Meteorological Observations at Stations of the Second Order for the Year 1884. Price 32s.
79. Report for 1887-8. Price 1s.
80. Daily Weather Charts of the Arabian Sea for the Period of Six Weeks ending June 25, 1885. (The Aden Cyclone.) (In the Press.)
81. Hourly Readings, 1886. Parts I., II., and III. Price 10s. 6d. each. Part IV. Price 12s. 6d.
82. Meteorological Observations at Stations of the Second Order for the Year 1885. Price 31s.
83. Results of Observations made at Foreign and Colonial Stations, 1852-1886, by the Royal Engineers and the Army Medical Department. Price 23s.
84. Report for 1888-9. Price 5½d.
85. Weekly Weather Report for the year 1888. Vol. V. Second Series. Price 4d. per week. With Appendices and Monthly Supplements priced separately.
86. Weekly Weather Report for the year 1889. Vol. VI. Second Series. Price 6d. per week. With Appendices and Monthly Supplements priced separately.
87. Weekly Weather Report for the year 1890. Vol. VII. Third Series. Price 6d. per week. With Appendices and Monthly Supplements priced separately.
88. Meteorological Observations at Stations of the Second Order for the Year 1886. (In the Press.)
89. Meteorological Observations made at Sanchez (Samaná Bay), St. Domingo, by W. Reid, M.D. 1886-1888. (In the Press.)

LIST OF PUBLICATIONS, &c.

Issued under the Authority of the Meteorological Council.

NON-OFFICIAL.

- No. 1. Report to the Committee on the Connexion between Strong Winds and Barometrical Differences.—By Robert H. Scott, Director of the Office. Price 6*d*.
2. Report to the Committee on the Meteorology of the North Atlantic.—By Captain H. Toynbee, Marine Superintendent. Price 1*s*.
3. Report to the Committee on the Use of Isobaric Curves.—By Captain H. Toynbee, Marine Superintendent. Price 1*s*.
4. Routes for Steamers from Aden to the Straits of Sunda and back. Translated from a Paper issued by the Royal Meteorological Institute of the Netherlands. Price 6*d*.
5. On the Winds, &c. of the North Atlantic along the Tracks of Steamers from the Channel to New York. Translated from a Paper issued by the Deutsche Seewarte, Hamburg. Price 6*d*.
6. Report of the Proceedings of the Meteorological Conference at Leipzig. Price 1*s*.
7. Notes on the Form of Cyclones in the Southern Indian Ocean.—By C. Meldrum, M.A., F.R.S. [Out of print.]
8. Report on Weather Telegraphy and Storm Warnings. Presented to the Meteorological Congress at Vienna. Price 6*d*.
9. Report of the Permanent Committee of the Vienna Congress for 1874. Price 1*s*. 6*d*.
- No. 10. On the Physical Geography of that part of the Atlantic which lies between 20° N. and 10° S. and extends from 10° to 40° W. A Paper read before the British Association at Bristol, in August 1875, by Captain H. Toynbee, F.R.A.S., F.R.G.S., Marine Superintendent. Price 1*s*. 6*d*.
11. Report of the Permanent Committee of the Vienna Congress for 1876. Price 2*s*.
12. Reports to the Permanent Committee of the Vienna Congress on Atmospheric Electricity, Maritime Meteorology, and Weather Telegraphy, 1878. Price 2*s*.
13. Report of the Permanent Committee of the Vienna Congress for 1878. Price 6*d*.
14. Report of the International Meteorological Committee Meeting at Berne, 1880. Price 1*s*.
15. Report of the Second Meeting of the International Meteorological Committee, held at Copenhagen, August 1882. Price 2*s*. 6*d*.
16. Report of the Third Meeting of the International Meteorological Committee, held at Paris, September 1885. Price 1*s*.
17. Report of the Fourth Meeting of the International Meteorological Committee, held at Zürich, September 1888. Price 4*d*.
