CHAIR OF PRACTICE OF MEDICINE.

University of Glasgow.

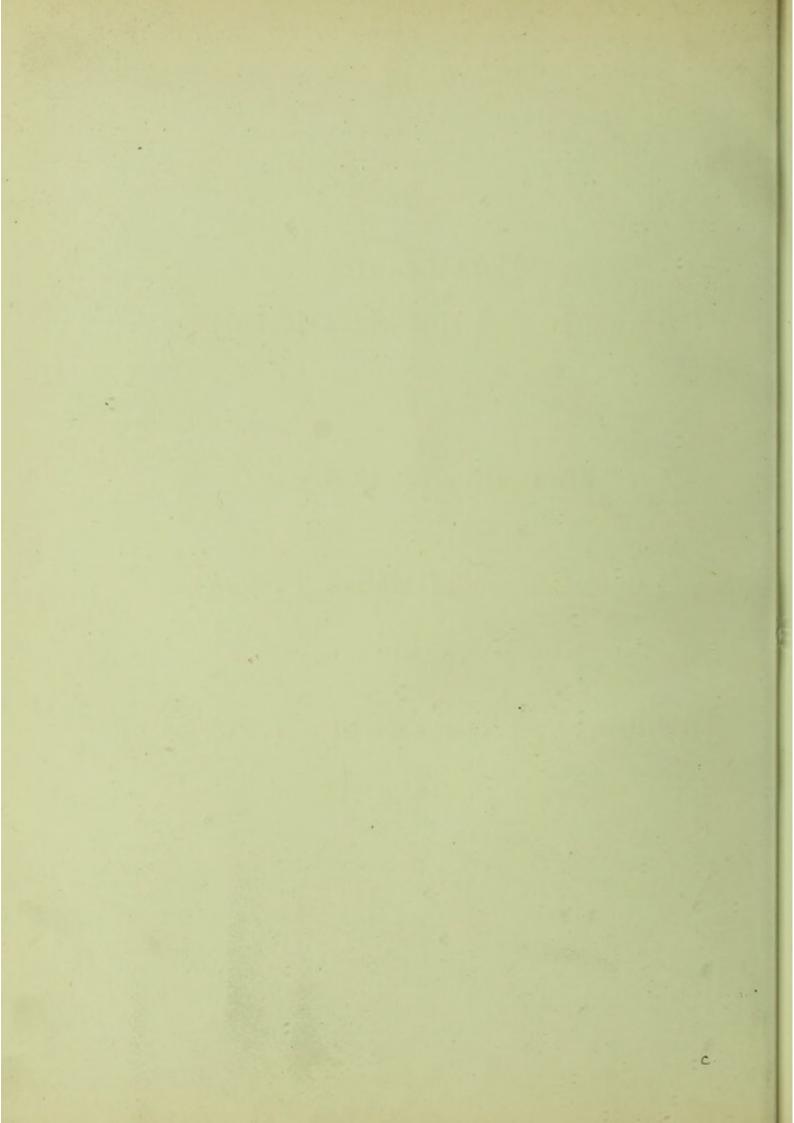

Application and Relative Letters

T. M'CALL ANDERSON, MD., P.P.P.S.

TO THE

RIGHT HONOURABLE LORD BALFOUR OF BURLEIGH, SECRETARY FOR SCOTLAND.

MY LORD,

Owing to the resignation of my colleague, Sir William Gairdner, I beg to apply for a transference from the Chair of Clinical Medicine to that of Practice of Medicine.

In doing so I take the liberty of submitting a short sketch of my professional career.

After having received a thorough general education in Edinburgh during a seven years' residence in that city, I studied Medicine in the University of Glasgow for a period of six years, where I obtained the highest honours in every medical class and obtained the Degree of Doctor of Medicine "with Honours." Having been "Resident" for the greater portion of two years in the Glasgow Royal Infirmary, I then studied for a similar period in many of the celebrated medical schools and hospitals on the continent of Europe, where I became conversant with the views of foreign physicians, and obtained a good knowledge of the French and German languages, and of the Medical Literature of those countries. A few years after having graduated, I was unanimously appointed Lecturer on Practice of Medicine in Anderson's College, Glasgow, and soon after Physician to the Royal Infirmary. In 1874, a Chair of Clinical Medicine having been founded in the University, I was appointed its first Professor, and, about the same time, Physician to the Western Infirmary, the hospital where the University students obtain their instruction. It will thus be seen that I have been a teacher of Medicine during practically the whole of my professional life.

The duties pertaining to the Chairs of Practice of Medicine and of Clinical Medicine are almost identical, except that the Professor of the former, in addition to Clinical teaching, delivers a course of systematic lectures in which he deals with the same subjects as are taught clinically.

RECHT MOMMURARES 2030 SALPOUR OF BURGERSH. SRCRETART FOR SCOTLAND.

MAA FORD'

During to the resignation of the colleague Sir William Ganduer, I beg to apply for a transference from the Chair of Clistical Medicine to that of Practice of Medicine

In doing so I take the liberty of admitting a short sketch of my -

After having received a through gauna alucation is Edulating during a seven year's residence in that the i during Modelen is the Disversity of Glaspow for a period of six years where I obtained the highest bocours in every medical class and obtained the Degree of Davio of Medican "with Honours." Maring bern "Resident" for the greater portion of two-years in the Gläspow Rayal Infrancy, I then studied for a similar period in many of the celebrated medical schede and haupitals on the contours of two-years in the Gläspow Rayal Infrancy, I then studied for a similar period in many of the celebrated medical schede and haupitals on the contours of Medicane and obtained to the Venter of the views of Graman haspages, and of the Medical Literature of those from the views of perior after taving graduated. I was autoimously appointed Learner on the same time Provide A set to Calege Glaspow and som after Flynch to the Royat Infinitely. I was appointed in het Professor, and where the founded in the University, I was appointed in het Professor, and where the the same time. Physician to the Western Infirmate, the board is done the same time. Physician to the Western Infirmate, the board is done the same time. Physician to the Western Infirmate, the board where the founded in the University, I was appointed in het Professor, and where the toended in the University, I was appointed in the Professor, and where the founded in the University, I was appointed in het Professor, and where the founded in the University, I was appointed in het Professor, and where the founded in the University, the Western Infirmate, the boardal where the there exists the their coldine their method of the fourter of the same time. Therefore of the there there a reacter of Medicine during protection in the trades of my pro-

The detice pertaining to the Chairs of Fractice of Medicine and of Clinical Medicine are almost identical, except that the Professor of the former, in addition to Clinical teaching, delivers a cause of systematic levences in which he deals with the same subjects as are tabght clinically. As examiners for degrees the duties of the Professors of Medicine and of Clinical Medicine are identical, each conducting one half of the examinations in Systematic Medicine and one half of those in Clinical Medicine.

Since I began to teach Clinical Medicine, my classes have uniformly been very large, and, as every physician to a recognized hospital is entitled to compete with me, it is reasonable to infer that my teaching has proved acceptable to the students of the Glasgow Medical School.

I am consulting Physician to many of our local Medical Institutions-The Deaf and Dumb Institution, The Glasgow Sick Poor and Private Nursing Association, The Scottish Imperial Insurance Company, etc. I am also an Honorary Member of several learned societies of Medicine in France, Austria, and America, and an Honorary Editor of several well-known Medical Journals, e.g., "The Scottish Medical and Surgical Journal," the "Archivs für Dermatologie und Syphilis," etc. I have been President of the two leading Medical societies of Glasgow, and, three years ago, I was appointed by the War Office, Examiner in Medicine for the British and Indian Medical Services, a post which has never before been held by any physician out of London. In 1888 I was President of the Medical Section of the British Medical Association. Last year I was elected Dean of the Medical Faculty of Glasgow University, and, shortly afterwards, the representative of the Senate to the National Association for the Prevention of Tuberculosis, while this year it appointed me its representative to the International Medical Congress to be held in Paris.

A list of some of my contributions to medical science, as well as extracts from reviews of several of my works, and letters from a few leaders in Medicine, is appended.

I have the honour to be,

MY LORD,

Your obedient Servant,

T. M'CALL ANDERSON.

Woodside Terrace, Glasgow, April, 1900.

OF THE NINE VOLUMES PUBLISHED BY ME FROM TIME TO TIME, THE FOLLOWING MAY BE MENTIONED:

On the Curability of Attacks of Tubercular Peritonitis and Acute Phthisis (Galloping Consumption). Crown 8vo. James MacLehose & Sons.

"We are bound to express our approbation of the treatment pursued by the author; and, if it were only as a contribution to therapeutics, we can heartily commend these lectures to the attention of the practical physician. But they likewise contain many accurately recorded clinical histories which leave no doubt that the author has successfully grappled with one of the most obstinate of maladies—Acute Tuberculosis." Dublin Journal of Medical Science.

"Sceptics will say that there is no satisfactory evidence of the presence of the peculiar forms of those diseases with which your treatise is concerned, except their presence on dissection. But I can say . . . that your histories exactly correspond with those of all the cases of Galloping Consumption which I have seen, and whose nature was demonstrated by examination after death. I used to see such cases not infrequently when I was hospital physician here, and was struck—paralysed, in short—by the utter hopelessness of accomplishing even any material palliation by any sort of treatment. Your success is therefore most remarkable."

The late Sir Robert Christison, Bart., M.D.

5

OF THE NINE VOLUMES PUBLISHED BY ME FROM TIME TO TIME THE FOLLOWING MAY BE MENTIONED:

On the Curability of Attacks of Tobercular Peritonitis and Acute Phthisis (Galloping Consumption), Crown Svo. James MacLehose & Sons.

""We are bound to express our spinolation of the treatment jurroed by the minor panel, if it was oaly as a contribution to themposize, we can hearthy commend there been been by the minor the terms to the distribution of the precise that they likewise contain there are any and there are any contracting commend there are any one of the most shouther to be been been been been and the area and the terms of induction of induction of the most of the most of induction of induction of induction. Some

"Scorptice will six that there is no summers y writeness of the prosents of the pecultur forms of these diseases with which now treatise is constanted, arrays their presence on distortion. But I can sty ... then your histories excelly conceptual with these of all the cases of Galioping Commendation which I have next, and when astare was demonstrated by examination after depth I much to see up 5 ones of interpreting when I was baseded physician form, and weat and to see up 5 ones of by the attest impedements of accomplishing word any material pathetics by any out of prostment. Your success is therefore and tomic constants."

On Syphilitic Affections of the Nervous System; their diagnosis and treatment. 8vo. James MacLehose & Sons.

"The impression made by the perusal is that here we have a master hand at case-taking—'a clinical professor,' who possesses the faculty of seizing all essential points in every case upon which he bestows his attention. With such qualifications Dr. M'Call Anderson must be no slight acquisition to the University of Glasgow." The Provincial Medical Journal.

"Dr. M'Call Anderson has gone into the matter with his usual skill and enthusiasm, and has contributed in this volume a collection of very interesting and remarkable cases. . . As neurological studies these cases are of special interest, and the chapters on general diagnosis and treatment by a writer of Dr. Anderson's position and authority will have considerable weight. . . The work is altogether a valuable one, rich in its collection of cases, written by a master hand, and bound to hold a conspicuous place in the literature of Syphilis and the Neuroses."

Medical Press.

"The work appears to me admirable as well as able in the possession of several virtues rare in current medical literature: lucidity, method, brevity, and practicalness." The late Sir Andrew Clark, Bart., M.D.

On Syphilitic Affections of the Nervous System ; their diagnosis and treatment. Syn. James MacLehose & Sons.

"The impression reads by the perseal is that here we have a master hand at constanting--- a clinical professor," who processes the faculty of scining all essential points in every then upon which he bestows his attention. With such qualifications Dr. MCall Anderson must be no slight sequesition to the University of Glabgew," "The fouriers of the interaction for the University of Glabgew,"

"In MyCall Archeston has gone this matter with his water shell and emiliatings, and has contributed in this volume, a miliculation of very interesting and sometisable cases. As sematopical studies these cases are of queckel interest, and the chapters on general disgones and managed by a writer of Da Anderberg possibles and authority will have considerable weight. The work is altogether a valuable one, rich in its bollection of cases, writers by a master hand, and hound to hold a compications place in the fiterature of Syphilis and the Neurosce."

"The work appears to no scientable as well as the to the possession of several virtuins rate in convers medical filmature : inciding, method, investy, and practicalness." "The date Sie Andreas Care, Start, M.D.

•

Lectures on Clinical Medicine delivered in the Royal and Western Infirmaries of Glasgow. With illustrations. 8vo. Macmillan & Co.

"This volume consists of Seventeen Clinical Lectures delivered by Dr. M'Call Anderson in Glasgow, and forms a valuable addition to our medical literature. . . . This work presents many other points of interest upon which we have been unable to touch, and is likely to prove of much value to all who study it."

The British Medical Journal.

"A work specially intended for students, but, although dedicated to the author's pupils only, we hope it will have a far wider sphere of usefulness, and that it will find its way into the hands of all students throughout the kingdom who are anxious to thoroughly master their profession. As to the value of clinical lectures generally, nothing need be said, but, unfortunately, all students have not the privilege and advantage of hearing such a talented and gifted physician as Dr. M'Call Anderson lecture on disease at the bedside of the patient. We, therefore, feel deeply indebted to him for placing his lectures within the reach of those students who are not members of his class."—The Students' Journal and Hospital Gazette.

Lectures on Chnical Medicine delivered in the Royal and Western Infirmaries of Glasgow, With illustrations. 8vo. Macmillan & Co.

"This volume consults at Seventness Chaical Lectures delivered by Dr. M Cal-Autorates in Glargow, and intens a valuable addition to our medical literature. This work presents many other points of interest open abieb or have been enable to touch, and is fiftely to prove of much value to all who study is."

"A write specially attacked for machine, but, differing dedicated in the author's pupils andr, we hope a vill have a be writer sphere of metalihers, and that a vill find its way into the bands of all materia threadout the bingthme was are mained to thereadyly master they profession. As to the write ville of climital leasters generally, mething aced he said, but, estimatentic, all madents have not the profession and the advantage of braining meth a calented and grited physician as Dr. M.C.M. Anderson to him he placing his instance within the reach of therefore, feel deeply indebted to him he placing his instance within the reach of these students who are not A Treatise on Diseases of the Skin, with special reference to their diagnosis and treatment, with 4 Chromo-lithographs, Steel plate, and 85 woodcuts. First Edition 1887, pp. 639. Published simultaneously in England and America. Second Edition 1894, pp. 761. Chas. Griffin & Co.

"It is beyond doubt the most important work on skin diseases that has appeared in England for many years. The book is conspicuous for the amount and excellence of the clinical and practical information which it contains."

The British Medical Journal.

"No living writer is better qualified to speak on behalf of English dermatology than its author, and the present work will still further add to his reputation. . . The work may be regarded as a storehouse of facts gathered and sifted by one whose opinion is entitled to the highest respect, and we have no hesitation in stating our belief that it has no equal in this country."-Edinburgh Medical Journal.

"The practitioner will find in it a rich store of material which will help him to diagnose and to cure them. As regards treatment the work is most comprehensive, the smallest points as well as the most important methods being carefully described. Not only are the drugs usually employed mentioned and recommended, but the times and modes of administration are carefully considered. In these respects it may be truly said that nothing has been too small or too great for Dr. Anderson's patience, industry, and discrimination. . . . As regards the diagnosis and management of skin diseases, few books so full as this have been published, and none more reliable. It deserves and will secure a wide circulation and appreciation."

The London Medical Record.

"Not since the late Dr. Tilbury Fox published his book on skin diseases has so important a treatise on this subject left the English press. . . . It is a monument to the industry of Dr. Anderson, and cannot fail to be useful to busy practitioners."

The Birmingham Medical Review.

A Treatise on Diseases of the Skin, with special reference to their diagnosis and treatment, with 4 Chromo-lithographs, Steel plate, and 85 woodcuts. First Edition 1837, pp. 539, Published simultaneously in England and America. Second Edition 1804, pp. 761, Chas Griffin & Co.

"It is beyend doubt the most supportant work on akin diseases that has appeared in England for many pates. The book is compronue for the amount and excidence of the electric and practical information which it contract." "The firsted fractical information which it contract."

"He have mine writer in better qualified to specif on helpall of Regists demanders there its satisfies, and the present such will still further add to his reputation. The work may be reported as a starchouse of facts gathered and slited by onwhene equision is mainled to the heghest compact, and we have no besitation in status our belles that it has no equal in this country." Schulargh Medical Journal.

"The precidencer will find in it a rich store of manned which will help him to disprese and to care them. As regards transport the work is most colliptications, Not only are the delay much a sid anot important methods being carefully described, terms and mades of abatectration are carefully mandened, and momented, but the pervect wall and consist has been too email or too grant in The Anderson's patience, industry, and doorinistication on this bare been published, and none angle and discasses, few books to full as this bare been published, and none angle reliable, if describes and will seare a wide circulation and published, and none angle reliable.

TANKY MANAGE MANAGE ANY

"For since the late De. Tilbury Fox pulifished his book on skin discuss has an important a treatise on this subject left the Knglith press. . . It is a monument to the industry of Dr. Anderson, and cannot his to be useful to brirg practitioners." "The Sirraphysican Nodical Arctice "When Professor M'Call Anderson . . . appears as the author of the handsome volume before us, we are justified in expecting something of lasting value. Nor has a careful perusal resulted in aught else than in confirming our anticipations. . . . The treatise is one which does much credit to the Glasgow Medical School, and will undoubtedly enhance the reputation of Dr. M'Call Anderson and his fellow-workers." *The Glasgow Medical Journal.*

"We welcome Dr. Anderson's work not only as a friend, but as a benefactor to the profession, because the author has stricken off the mediaeval shackles of insuperable nomenclature, and made crooked ways straight in the diagnosis and treatment of this hitherto but little understood class of diseases."—*Nashville Medical News*.

"Perhaps no one else in the profession has so justly acquired a right to teach it concerning this subject; for whilst your special knowledge and experience of skin diseases enable you to speak with confidence and authority, your acknowledged eminence in general medicine make us sure that you will not speak from narrow and dangerous views."—The late Sir Andrew Clark, Bart., M.D.

"Der Verfasser, einer der besten Dermatologen Englands, hat seine ungemein reichen Erfahrungen in einem Lehrbuch vereinigt, welches durch Präzision und scharfe Charakteristik der klinischen Bilder ebenso ausgezeichnet ist wie durch Klarheit und Gewandtheit der Sprache. Ein besonderer Vorzug des Buches in den Augen des praktischen Arztes ist gewiss die besonders bei den gewöhnlichen Dermatrosen oft bis in's kleinste Detail gehende Bearbeitung des therapeutischen Teiles."

Monatshefte für Praktische Dermatologie.

TRANSLATION.

"The author, one of the best Dermatologists of England, has published his unusually rich experiences in a handbook, which is as distinguished for its precision and sharp delineation of clinical pictures, as by its clearness and fluency of language. The way in which the therapeutical part is worked out, especially in the case of the common dermatoses—the most minute details being often given—will be considered a special advantage in the eyes of the practical physician." "When Professor M'Cail Andergon ... ippears as the author of the bandsoom volume before pt, we are justified in expecting something of lasting value. Nor has a careful persoal resulted in aught dise that in confinuing out anticipations The treatjue is one which does much credit to the Gaugor Medical School, and will endeabtedly enhance the reputation of Dr. M'Cail Anderson and his fellow-vertices."

We release In Anderson's work an only as a frield, but as a buncheder of the preferring because the author has attricted of the medicanal shaddles of the preferring and reasons and of the stricted reasons of the initiary and reasons of the sector of the medicanal and reasons of the initiary and reasons of the sector of the sector of the sector.

.

"Perhaps no one cite in the protession has so jundy sequired a right to teach it concerning this embject; for while your special therefore and experiment of alter diseases enable you to speak with confidence and authority, your actionaldiged animence in general medicene make as ture that you will not speak from carrow and dengerous views."---Zar fate fate for shubrer Clark, flart, Mr.D.

"The Vertagen of the beaten Dermanologen Kaglanda hat seine ungemein michen Erkhreugen in einem Lekifands vereinigt, weichen durch Frümtich und schafte Christiterieth der häufschen Ridder ebento zuspenzichnet ut wie durch Klistheit und Gewandtheit der Sprache, Ein besonderne Varung der Bachen in dan Augen der praktigehen Auten ist gewing die besonderne beil den gewöhnlichen Dermatteren oft the mit Meinere Drinil geherde Kristheitung, der thrappatischen Toler."

TRANSLATION.

"The any in which the there is a hundhoods, which is as divinguished for its precision and drarp deligention of clinical pictures, as by its clearness and daracy of language. The way in which the therapertical part is worked out, especially is the case of the editment devantores—the smart minute details being often given—will be considered a special advantage in the eyes of the practical pisyments."

Contributions to Clinical Medicine. Royal 8vo, pp. 426, 28 illustrations. Young J. Pentland, Edinburgh and London, 1898.

"These records are exceedingly well written. It is difficult in writing notes of a clinical case to avoid such excess of detail as renders the whole picture confused and indistinct, without running to the opposite extreme, and making his case dry and unattractive through want of individualism. The notes of cases in the volume before us avoid both of these extremes—they are reasonably concise, and yet present to the mind a clear delineation of the patient's case. . . The volume is published in Pentland's admirable style, and will be welcomed by Dr. M'Call Anderson's numerous pupils and friends. Other members of the profession will gain valuable hints from its perusal."—The Dublin Journal of Medical Science.

"An American physician, who takes a good deal of interest in this country, recently observed to us that the Glasgow Medical School does not publish as much as it ought to It must, however, be laid to Professor M'Call Anderson's credit that he at any rate has taken a very fair share of the teacher's burden, and we congratulate him that after the experience, as he puts it, of upwards of a quarter of a century as hospital physician and clinical teacher, he continues to give us the results of his observation instead of resting on laurels already won, and leaving it to novices to write their way into fame. . . . The author is so well known as a lucid clinical teacher that commendation on that score is not required here. . . . We cannot but recognise the attractiveness of the writer's style, which makes this work a very readable book, and we congratulate him upon the wide and ably utilized experience upon which it is founded."—*The Glasgow Medical Journal.*

"The professor of clinical medicine in the University of Glasgow has been well known in the profession for more than thirty years. His first successes were in the field of dermatology, in which he did admirable service. It was clear, even in his earliest writings, that he was gifted with the faculty of succinct and lucid statement, and that, while he mastered and stated well the opinion of others, he used his own discretion in its use. During all the years that have elapsed since his early books . . . were published, he has gone on working steadily at clinical medicine. And so, now that he is a man of large experience, both as a physician and as a teacher, the profession has the advantage of learning from him, not only in his great work on skin diseases, but in many other departments of clinical medicine. . . . The book as a whole is a valuable record of able and diligent work, and is well worthy of the reputation of Professor M'Call Anderson as one of the foremost clinicians in Scotland."

Review by the late Sir T. Grainger Stewart in Edinburgh Medical Journal.

Contributions to Clinical Medicine. Royal 8vo, pp. 420, 28 illustrations. Young J. Pentland, Edinburgh and London, 1898.

"These records are careedingly well written it is difficult to writing octes of a clinical case to avoid each excess of detail as renders the whole pletare confused and indiziner, without menuing to the apportie extremt, and making his case dry and enaturactive through want of individualiant. The noice of cases in the volume before the mind a clear definentian of the patient's case. The volume and yet present he in Pentiand's attainable asks, and all is velocated by the MCall Anderson's intermercas papin and frends. Other members of the protected by the MCall Anderson's hinds from its served. The formula formation will gete volume in published there to a the papin and branches of the patient's case.

•

Realess by the late Sr T. Groupper Stewart in Edistange Medical Journal.

Amongst many other contributions the following (which were published in the Lancet, British Medical Journal, Medical Examiner, Medical Press and Circular, Practitioner, Edinburgh Medical Journal, American Journal of the Medical Sciences, and Glasgow Medical Journal) may be indicated.

1. Diseases of the nervous system. Twenty-three papers, including papers on Bulbar paralysis, Hystero-epilepsy, Cerebral tumour with operation, and Recurrent paralysis of the third nerve with hemicrania.

2. Diseases of the circulatory system. Thirteen papers, including papers on Aneurism of the arch of the aorta presenting only indirect symptoms, Aneurism of the aorta treated by means of galvano-puncture, Embolism of the superior mesenteric artery, and Pericardial effusion treated by means of aspiration.

3. Diseases of the respiratory system. Eleven papers, including articles on the curability of acute phthisis, hazelnut in the right bronchus, and an address on the treatment of pulmonary consumption.

4. Diseases of the digestive organs. Twelve papers, including "Notes of six cases of malignant disease of the alimentary canal, with some statistics of similar cases in the Western Infirmary of Glasgow," a "Clinical Lecture on Ulceration of the Stomach, with special reference to the statistics of thirty-five consecutive cases," and "On the diagnosis and treatment of diseases of the stomach."

5. Diseases of the urinary organs. Eight papers, including "Diabetes mellitus in early life," Floating kidney, and primary cancer of the kidney.

6. Fevers. Three papers, including a paper read at the Medico-Chirurgical Society of Edinburgh, "On the danger of neglecting, and on the best means of controlling the febrile state."

7. Miscellaneous subjects. Eleven papers, including "On mediastinal tumours"; "On a case of Addison's disease improving under treatment, and on the relationship between the discoloration of the skin in that disease on the one hand, and vitiligo and alopecia areata on the other"; "On the use of antipyrin in large doses"; and "On the value of tuberculin in diagnosis and treatment," being a lecture delivered at the Polyclinique, London, at the request of the Council of the Medical Graduates' Association in February last. Amongst many other contributions the following (which were published in the Lancet, British Medical Journal, Medical Examiner, Medical Press and Circular, Practitioner, Edinburgh Medical Journal, American Journal of the Medical Sciences, and Glasgow Medical Journal) may be indicated.

te. Diseases of the nervous system. Twenty-inter papers, including papers on Bullter paralysis, Hystero-epilepay, Cercical tangon with operation, and Recurrent paralytics of the third serve with heminumic

e. Discesses of the circulatory system. Thinness papers, including papers on Anemica of the area of the area presenting only indirect symptomy, Anewirm of theder's system the means of galvano-paneture. Delaktion of the imperior meanshire arrange and Pericardial effector treated by incare of sigilation.

je Disaaassa of the respiratory system. Eleven papers, including emides on the cambling of acrie pathies, handaut in the right broachus, and an address in the treatment of patheonary constitution.

a. Discasser of the digentive argum. Teelers papers, including "Notes of an cases of maigtain discass of the ainocatory cand, with some anistics of sinilar cases is the Western-Inferency of Giergers," a "Clinical Lecture on Ulcerance of the Stomach, with special references to the galiation of theorem."

5. Diseases of the urbany organs. Eight papers, including "Dishe's mellines in early bird, Prosting Eidney, and permaty curves of the kidney.

6 Foren Three protect, including a paper read at the Madre-Chinegeral Society of Edinburgh, "On the danger of neglecting and as the best means of committing the febrile state."

To Minoplinosene subjects. Eleven papers, mainting "On mechanical manome", "On a case of Addison's disease improving under continent, and on the relationship between the discolaration of the skin in that disease on the one hand, and vitiligo and alopects areas on the other"; "On the use of antippin in large doses"; and "On the value of tuberculus in diagnosis and mentment," being a lecture delivered at the globyclinique, London, at the request of the Gouncil of the Macheal Ganduater' From DR. THOMAS, Medical Superintendent, Royal Infirmary, Glasgow.

3rd April, 1900.

I HAVE pleasure in stating that, in my opinion, DR. M'CALL ANDERSON, Professor of Clinical Medicine in the University of Glasgow, is the natural successor to the late distinguished occupant of the Chair of the Practice of Medicine in the same University. During the five years he acted as Physician to the Glasgow Royal Infirmary I had, from my position as Medical Superintendent, the very best opportunities of observing his work and of learning the estimation in which he was held by the students. On his appointment he at once began to raise the standard of clinical teaching, and his efforts were so much appreciated by the students that his clinical classes were always the most numerously attended. By his methodical arrangements he was able to teach them in a thoroughly satisfactory manner, and he had at all times complete control over his classes. He was at the same time a successful teacher of the Practice of Medicine in Anderson's College, and the students there held him in the highest esteem. Since his appointments as Physician to the Western Infirmary of Glasgow, and as Professor of Clinical Medicine in the University, his experience has widened and matured, and he has embodied much of it in the many works which he has published. He is quoted as an authority in all standard works on Medicine, and I feel it superfluous to add more in support of his claims to the Chair for which he is an applicant. His appointment would, I am sure, give satisfaction to the Medical Profession.

M. THOMAS.

SAHOHT 3

From THE BOARD OF MANAGERS OF THE WESTERN INFIRMARY.

OFFICE: 125 BUCHANAN STREET, GLASGOW, 28th March, 1900.

PROFESSOR T. M'CALL ANDERSON has earned such a great reputation as a Physician and a Teacher, and his published works are so numerous and valuable, that testimonials of merit seem quite unnecessary. We have, however, much pleasure, as representing the Board of Managers of the Western Infirmary, in bearing testimony to his exceptional success in the special department of his work with which we are more immediately connected.

As a Physician to the Western Infirmary he has displayed an enthusiasm for his work and a devotion to duty which commands universal respect and admiration, not only on the part of his professional brethren, but also on the part of the students, as evidenced by the large numbers who have always attended his Clinique.

We feel any honour conferred on Professor Anderson would be to the advantage of the School, and a fitting recognition of his valuable services to the Hospital.

> JAMES H. DICKSON, Chairman of Managers. HENRY JOHNSTON, Secretary.

FUR THE BOARD OF MARAGERS OF THE WESTERS INFRANTS

OWNER: ILS BECHARAN STREET, GRANOW, SIM Mersh, 1900.

Proressent T. MCALL AMPRESSON has carned such a great repathtion as a Physician and a Teacher, and his published works are so sourceous and valuable, that teatmenials of merit seen cole sumeessary. We have however, much pleasure, as representing the Board of Maragers of the Western Infirmary, in bearing teatmony to his exceptional success in the special department of his work with which we are more immediately connected.

As a Physician to the Western Informary he has displayed an contrustrain for his work and a divotion to duty which commands universal respect and admiration not only on the part of his professional brothern, but also on the part of the students, as evidenced by the large numbers who have always attended his Officique.

We feel any honour conferred on Professor Anderson would be to the advantage of the School, and a fitting recognition of his valuable services to the Hospital

HENRY JOHNSTON,

From JOHN G. M'KENDRICK, M.D., C.M., F.R.C.P., F.R.S.E., LL.D., F.R.S., Professor of Physiology in the University of Glasgow.

UNIVERSITY OF GLASGOW, 30th March, 1900.

My friend and colleague, PROFESSOR M'CALL ANDERSON, has requested me to express an opinion as to his fitness for the chair of Practice of Medicine about to become vacant by the resignation of Sir William T. Gairdner, who has conferred lustre on it for many years. Although I feel that it is almost presumptuous on my part to write anything of the nature of a testimonial for Dr. M'Call Anderson, yet as he has asked me to do so, I cannot refuse to accede to his request.

Dr. M'Call Anderson's well-known reputation as a physician of the first rank needs no words of mine to point out the claims he has for the appointment, but I may be allowed to say, as one who has been his colleague for twenty-four years, that I have always been struck by the zeal and energy with which he has taught Clinical Medicine in our Medical School. He is an enthusiastic teacher, and his success is universally acknowledged by the large numbers of students who year after year have flocked to his classes. In touch with medical science in all its branches, I feel sure he would be equally able to deliver valuable courses of lectures on systematic medicine, when he would deal with the subject from a somewhat different point of view to that occupied by a teacher of clinical medicine. At the same time his long experience as a physician and as Professor of Clinical Medicine would give the systematic lectures interest and vitality, and would be sure to attract and stimulate the students.

He is earnest in the advancement of medical science, to which he has devoted unremitting attention during a laborious life, and in the position he desires I have no doubt he would do good work. It is only natural that he should desire to occupy the Chair of Medicine in his *Alma Mater*, while the many services he has already rendered to medicine and to his University would be suitably acknowledged by his election to the Chair. He would, I believe, worthily carry out its best traditions.

JOHN G. M'KENDRICK.

Programmer of Physicalogy in the University of Giargeon.

L'SIVEASETY OF GLASOW, 30th Jenna, 1000

My friend and colleague, PROPESSON MCALL ANDERSON, has requested me to express an opinion as to his fitness for the chair of Practice of Medicine about to become vacant by the resignation of Sir William T. Gairfiner, who has conferred lustre on it for many years. Although I feel that it is almost presumptuous on my part to write anything of the mature of a testimonial for Dr. MCall Anderson, yet as he has asked me to do so, I cannot refuse to accade to his request.

Its M'Call Anderson's well-known reputation as a physicins of the inst rank useds no words of mine to point out the claims be inst for the appellatment, but I may be allowed to any, as one who has been his colleague for with which he has taught Clinical Medicine in our Medical School. He is an enthusiantic teacher, and his success is universally acknowledged by the large numbers of students who year after year have flocked to his classes is needbar in the success is universally acknowledged by the setting autobers of students who year after year have flocked to his classes are enthusiantic teacher, and his success is universally acknowledged by the setting mumbers of students who year after year have flocked to his classes is used with medigal science in all its transities. I feel sure he would be avent in would deal with the subject from a somewhat thiferent point of works in the tore deliver valuation who and an investment different point of and the long experience as a physician 'and as Frofessor of Choicel Medical is tong dive the systematic loctures futures and vitality, and would be sure to attract and stroughts the students.

He is carnest in the advancement of medical science to which he has devoted unremitting attention during a laboritors life, and in the position he desires I have no doubt he would do good work. It is only feitural that he should desire to occupy the Chair of Medicine in his Alwa Mater, while the huny services he has already rendered to medicine and to his University would be saitably acknowledged by his election to the Chair.

JOHN G M'RENDRICK.

From JOHN CLELAND, M.D., LL.D., F.R.S., Professor of Anatomy in the University of Glasgow.

THE UNIVERSITY, GLASGOW, 28th March, 1900.

THE high position which DR. M'CALL ANDERSON has earned for himself, both at home and abroad, in the medical profession, is so well known that it is unnecessary for me to make it subject of comment. His published works have not been confined to any one department, but bear testimony to his masterly knowledge of all, and afford the best proof of his fitness to teach in systematic form that scientific art of medicine which he taught before his appointment to the Clinical Chair which he at present occupies.

But I may be allowed to state what has specially come under my own observation, that, as a practical teacher in this University, Dr. M'Call Anderson has been flocked to so largely that, some years ago, the Managers of the Western Infirmary had to make special arrangements for the accommodation of his class, and that this popularity has arisen both from the perspicuity of his style and the thoroughly practical character of his teaching. Never forgetting the old dictum that the duty of the physician is "to obviate the tendency to death," he gives treatment its proper place, while diagnosis is earnestly studied as the only basis on which correct treatment can be established.

One cannot but remember that the late Dr. A. D. Anderson is still held in grateful memory as one of Glasgow's most accomplished physicians, and detect in his son both the effects of heredity and of early teaching.

Having been requested by my distinguished colleague to write a few words in favour of his candidature, I venture to express my confidence that, should Her Majesty be pleased to appoint Dr. M'Call Anderson to the Regius Chair of Medicine in this University, the opportunity which he will then have of giving to the students the benefit of his large knowledge and experience in a systematic form will be so used as to increase the popularity of the school, and strengthen it as a centre of practical teaching.

JOHN CLELAND.

From JOHN CLELAND, M.D., LL.D., F.R.S., Professor of Asistomy in the University of Glasgowa

GLANDOW, 7818 Merch, 1020.

THE high position which DR. MCALL ANDERSON has exceed for hinnell, both at home and abroad, in the medical profession, is so well known that it is annecessary for me to make it a bject of commant. His published works have not here coefficed to any one department, but here testimony to his masterily form that wirntific art of medicine exhich is tangkt before his appointment to the Units scientific art of medicine exhich is tangkt before his appointment to the Units allow which he at present occupies.

But I may be allowed to state what has questably come under any own observation, that as a practical teacher in this University, Dr. MrCall Anderson has been forcized to no intrack that some years ago, the Managers of the Western Informary had to make special arrangements for the accommodation of bis class, and that this popularity has arisen both from the perspicalty of bis style and the thoroughly practical character of his teaching. Never tendentey to death, he gives treatment the population is reaching the tendentey to death, he gives treatment the population is "to obviate the extinently studied as the only have of which correct treatment can be estimated.

One cannot but remember that the fate Dr. A. D. Anderson is still held in grateful memory as one of Glastysw's most accomplished physicians, and detect in his san both the effects of heredity and of early tenching.

ritaving been requested by my distinguished colleague to write a jew words in favour of his candidature, I venture to express my confidence that, should Her Majesty be pleased to appoint Dr. M'Call Anderson to the Regius Chair of Medicine in this University, the opportunity which he will then have of giving to the students the benefit of his large knowledge and experience in a systematic farm will be so used as to increase the popularity of the school and excerption.

From SIR DYCE DUCKWORTH, M.D., LL.D., F.R.C.P., Hon. Physician, H.R.H. the Prince of Wales; Physician and Lecturer on Medicine to St. Bartholomew's Hospital; Treasurer, Royal College of Physicians of London.

11 GRAFTON STREET, PICCADILLY, LONDON, W., 7th April, 1900.

PROFESSOR M'CALL ANDERSON is one of the most distinguished physicians in Scotland. His work is well known in all medical circles, and he is recognised as an efficient and enthusiastic teacher. He has largely utilised his abundant opportunities in the great academic and commercial centre of Glasgow, and made fruitful contributions to both the science and art of Medicine.

His successful career in the past is the best token of his fitness for the vacant Regius Professorship in the University of Glasgow, and I doubt if any rival candidate for the office could present claims which surpass his. I believe that Dr. M'Call Anderson's appointment would command the approval of all who know the duties of this Professorship, and are qualified to appreciate his ability to fulfil them.

DYCE DUCKWORTH.

From T. CLIFFORD ALLBUTT, M.A., M.D., F.R.C.P., F.R.S., Regius Professor of Physic in the University of Cambridge.

CAMBRIDGE, April 18, 1900.

THE Professor of Clinical Medicine in the University of Glasgow tells me that he proposes to offer himself for the Chair of Practice of Medicine vacated by my old and valued friend, Sir W. T. Gairdner. It is, of course, an honour and a pleasure to testify to the high qualifications of PROF. M'CALL ANDERSON for such a post.

For me to venture to undertake to set forth what Dr. Anderson has done to farther the progress of medicine during the many years he has been a teacher of his profession in Glasgow would be a heavy task, so many and so great are the obligations under which he has laid us. The list of his more important works Dr. Anderson will no doubt lay before the electors, and a striking list I am sure it will prove to be; indeed, this I know already. It falls to me rather to express my sense of the high value placed upon his work by the profession and teachers of medicine in Great Britain and in Western Europe, and to testify to the high quality of his work from the point of view of an expert.

Of Dr. Anderson's skill and ascendency as a teacher and lecturer I have only common report to guide me; but I may say that this common report is to the effect that he is remarkably successful as a teacher, and his courses are, I know, held in high esteem by many generations of grateful students.

T. CLIFFORD ALLBUTT.

For one to venture to undertake to all forth what Dr. Anderson has done to farther the progress of medicine during the many years he has been a tencher of his profession in Glargow would be a heavy task, so many and an great are the obligations under which he has laid at The list of his mean important works Dr. Anderson will re doubt lay before the electors, and a scaleing for 1 am suce a will prove to be indeed, this I know alcendy. It falls to are rather to express my sense of the high value placed upon his work by the profession and teachers of medicine in Great field in Westers Europe, and to teachers of medicine in Great field in work by the profession and teachers of medicine in Great field in

Of Dr. Anderson's shill and assemblency as a teleches and lectures i have only common report to guide me, but I may say that this common export is to the effect that he is remarkably moccessful as a teacher, and his courses are, I know, held in high esterm by many generations of grateful andents.

T CLIFFORD ALLBUTT.

From SURG.-GENERAL J. JAMESON, M.D., C.B., Q.H.S., LL.D., Director-General, Army Medical Service.

LONDON, 4th April, 1900.

I HAVE had the pleasure of knowing PROFESSOR M'CALL ANDERSON since the beginning of his Medical career as a student in the University of Glasgow, subsequently as a Physician and Teacher in the Glasgow Hospitals, and as a Professor in the University, and in every rôle he has earned distinction.

His contributions to Medical literature have at all times been meritorious, while his "Treatise on Diseases of the Skin" still ranks as a standard work. It is, however, as a teacher of Clinical Medicine that his work has been the most valuable, and its popularity is best shown by reference to the number of his disciples in the wards.

In recognition of Professor M'Call Anderson's abilities, the Secretary of State appointed him an Examiner in Medicine for the British and Indian Medical Services: the fairness and thoroughness of that Examination is recognised by candidates from all the Medical Schools of the country, and vouched for by myself.

Professor M'Call Anderson is active in mind and body. He is a leader rather than a follower in the realms of Medical Science, and, in my opinion, his appointment to the Chair about to be vacated by Sir William Gairdner will shed additional lustre upon the University of Glasgow.

J. JAMESON.

19

I HAVE had the pleasure of coowing PROPERSIE MULACE ANTIERSON more the beginning of his Modical career as a materia in the University of Glasgow, mbacquently as a Physician and Teacher in the Glasgow Hospitals, and as a Brofessor in the University, and in every olic he has carned distinction. if is contributions to Modical filmsture have at all times been maritoricity.

while his "I reaches on Discusses of the Skin wild ranks as a standard work. It is, however, as a teacher of Chnical Medicine that his work has been the most valuable, and its popularity is best shown by reference to the number of his disciples in the wards.

is recognition of Professor MCall Anderson's abilities the Secretary of State represents him an Examiner in Medicine for the British and Indian Medical Services: the fairness and thoroughness of that Examination is recognised by cambdates from all the Medical Schools of the country, and vanded for by menuit.

Frotenezz M'Call Anderana is activic in mind and body. He is a lander rather flam a follower in the realma of Mudical Science, and, in my ophicon his appointment to the Chair about to be vacated by Sr William Gairdner will shed additional instre upon the University of Gaspon.
