INTRODUCTION.

IN arranging this Catalogue our aim has been to show the most approved appliances in Sanitary Ware, and to cover a wide range with regard to prices, so that Fittings of the cheapest class are illustrated, as well as those of the highest finish in every detail; but in each case the apparatus has to pass the same severe test as regards perfect working.

Owing to the large increase in the demand for their well-known Sanitary Specialities, Messrs. Doulton & Co., Ltd., have taken the opportunity to issue a new and revised Catalogue, and at the same time to introduce a number of improved models, having made a special study of the designs most suitable for the Colonial, Continental, and general export requirements. This Catalogue does not include many models designed more particularly for the Home Trade.

Our position as Manufacturers is unique. We are not only makers of all kinds of Pottery, viz., Queensware, Vulcan-ware, and Stoneware, but also have our own Brass and Iron Foundries and Finishing Shops, so that every part of the work is carried out by us in its entirety.

The Works being under one control is a great assistance to prompt delivery of orders, as well as being most advantageous in carrying out the special requirements of architects and others.

The Catalogue is arranged in sections, and, with the exceptions of the Bath Rooms in opening pages, it is printed in numerical order, so there is no difficulty in finding any number at once, even without the aid of the Index. Code words are given under each item, and in an Appendix at the end of the book prices and details with regard to packing, weights, and measurements will be found.

ESTIMATES.

In cases where architects desire special patterns or alterations of design, the Company will be pleased to submit estimates for the work, and designs; but it is obvious that alterations to standard patterns must take a considerable time to carry out. It is therefore advisable not to depart from list designs unless for strong and essential reasons.

IMPROVEMENTS.

The Company reserve to themselves the right to make, without notice, any improvement in the designs, and to supply same, although they may differ from the pattern illustrated in the Catalogue.

All our Fittings are thoroughly tested before delivery, and it cannot be too forcibly impressed upon architects and others the advisability of ordering all apparatus complete, and thus ensure their perfect working.

The name or trade mark of the Company is invariably printed or impressed upon every article, so that it can be seen if they are of our manufacture.

Whilst showing as varied a selection of Fittings as possible, we shall be happy to carry out architects' special requirements.

DOULTON & CO. LIMITED.

CONDITIONS OF SALE.

Packages are not included in these prices, and are charged extra.

FOREIGN OR EXPORT TRADE.

Goods for shipment abroad are delivered f.o.b. at the Ports named in the List if desired, or for the Continent at Leith instead of Glasgow, or Hull in place of Liverpool.

COST OF PACKAGES.

The actual price of packing Baths is given in the Appendix, and, where possible, approximate figures are given for other fittings packed in full packages, but for small quantities these prices would not apply.

BREAKAGES.

In some cases insurance against breakage in transit from port can be obtained, but instructions to insure must be given with order, and the cost will be charged on invoice plus 5 per cent. per annum on out-of-pocket expenses.

If freight is prepaid by us we charge plus 5 per cent. interest.

DELIVERY.

Prices are based on delivery at the port nearest the manufacturing centre, and goods will be shipped from such port unless other instructions are sent with order. When placing orders, in cases where goods are required to be dispatched immediately on receipt, it would be advisable to state that fittings of similar design may be sent in place of those ordered, if the latter are not ready, provided there is no increase in price.

ERRATA.

Page 50.—No. 5099A should read "with mahogany seat," not "mahogany flap."

Page 78.—Paragraph "With teak inside pieces as shown" should read "With teak side pieces as shown."

Page 103.—The illustration of No. 5171 lavatory is incorrect. It is made as shown in No. 3 Bath Room, page 3 in Catalogue.

Page 112.—No. 5180. The measurements given are incorrect. They should be: top, 24 in. (0·610 m.) × 20 in. (0·508 m.); basin, 17 in. (0·432 m.) × 12 in. (0·305 m.).

Page 113.—No. 5181. The measurements given are incorrect. They should be: top, 24 in. (0·610 m.) × 20 in. (0·508 m.); basin, 17 in. (0·432 m.) × 12 in. (0·305 m.).

Page 123.—No. 5196 should be described as a School Lavatory. The height from floor is 24 in. (0·610 m.).

Page 157.—Measurements on Section of No. 5247 are incorrect. 7 in. (0·178 m.) should read 8½ in. (0·216 m.); and 10½ in. (0·114 m.) should read 10½ in. (0·267 m.).

Pages 154, 156, and 159 in the Urinal Section.—The prices are f.o.b. Liverpool.

Page 158 in the Urinal Section.—The prices are f.o.b. Glasgow.

Pages 171, 172, 173, 174, and 175 in the Sink Section.—The prices are f.o.b. Liverpool.

CODE.

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

Each item in the catalogue has a code word to represent it.

All selected words are of five letters only, so in telegraphing two can be connected and sent as one word of ten letters. For example, the following message would be coded thus:—

(Send) 40 No. 5000 5 ft. 6 in. Baths.

BAGFUBECFO.

When connecting up words always put the quantity first.

When two words are necessary to describe the fitting required, combine these in one-word message, thus:—

(Send a) No. 5021 Bath, white porcelain enamelled outside.

BREVOBOWJU.

If four words are necessary to fully describe, as an example:—

(Send) 20 No. 5006 Baths, white stove enamel out, first finish, with three gold lines.

Code as follows:—

BAFAIBERZE

BEDJEBEDLO

If no number is mentioned, it will be understood that one only is required. In every case goods will be sent by cargo steamer, or if by water and rail, by the ordinary route, unless customer has sent standing instructions regarding delivery.

Unless goods have to be forwarded by some special route, it will be sufficient to use one word only; as an instance, the word BECFO will stand for "(Send one) No. 5000 5 ft. 6 in. Bath."

Code words are placed in alphabetical order through the list, so there will be no difficulty in finding them. The only cases where this rule may seem to have been disregarded will be in the coding of the Bath Rooms; there some fittings have been illustrated in other parts of the catalogue, and the code word used in the latter case is repeated.

In addition to this code, the A1, ABC (4th and 5th editions) and Lieber's may be used.

BAMKU	Pottery only required. (This word must be added to the code word if no fittings are required).	BARDA	Put order in hand but do not ship for one month.
BAMLA	No marble or slate work. (This word must be added to the code word if no marble or slate work is required).	BARFE	Put order in hand but do not ship for two months.
BANNI	Telegraph estimate for.....	BARGI	Put order in hand but do not ship for three months.
BANPO	Send by first mail estimate for	BASHO	Ship order in.....consignment.
BANRU	Telegraph estimate for.....and say when you can deliver.	BASJU	Repeat my order No.....

"RAIN" BATH FITTINGS

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

FOR PUBLIC BATHS, SCHOOLS, BARRACKS, FACTORIES, Etc.

No. 5034

The "Rain" Baths are arranged in separate cubicles with dressing room attached to each. This method is specially suitable for Public Baths, Industrial Schools, Military and Police Barracks, Factories, Coal and other Mines, where baths are fixed for the employees, athletic clubs and gymnasia. It has many advantages over the ordinary plunge bath for factories, etc. First, the great saving of water, equal to 10 or more gallons for each bather; also the saving in time—a great consideration—saving in cost, and at the same time an equal if not superior method of cleansing.

A foot tub is placed in the ground, and in this the bather takes his stand, the bath containing a small amount of warm water. The bather then soaps his body with warm lather and then turns on a fine spray of warm water, which removes the soap and dirt. The valve attached to the shower is a patent anti-scalding mixing valve, which will give water at any temperature by a slight movement of the lever, so that the bather can vary the heat of the water.

By using the spray the bather is washing the whole time in perfectly clean water. In most cases a spray ring is used, but a shower can be had if desired. A ring shower is recommended, so that the spray falls on the body and shoulders of the bather.

Full-way stop cocks should be fixed in all cases.

PATENT SAFETY MIXING VALVE

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

FOR HOT AND COLD SUPPLY

FOR SHAMPOO AND SHOWER FITTING

No. 5066

This valve is made for the purpose of mixing hot with cold water for showers, shampoo fittings, etc.

The cold water is turned on first, thus preventing any chance of scalding by accidentally opening the hot supply too soon.

The water is mixed by one movement of the lever, and can be had at any temperature required.

Each valve is tested up to 200 lbs. pressure per square in. (14 kilos per square c/m).

PRICES (f.o.b. Glasgow):

				$\frac{1}{2}$ in. (0.013 m.) $\frac{3}{4}$ in. (0.019 m.)

PATENT METALLO- KERAMIC JOINT

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

This patent consists of a unique method for connecting the closet outlet to the soil pipe. It has been in use for many years, and was awarded the only Gold Medal for Joints at the Sanitary Congress held in Liverpool in 1894. Since then a large and practical experience has proved it to be the one joint that is perfectly and reliably sound.

Since it was fully recognised that there was a risk of unsoundness in flanged and cemented joints, many unsuccessful methods have been tried in order to meet the difficulty—such means as coating the ware with a film of copper, or grooving the pottery and filling in the space between it and the pipe with lead, trusting to the contraction of the cooling metal to make a tight joint. Metal couplings with indiarubber washers have been tried, but their soundness depends on the life of the washer.

The Metallo-Keramic Joint is based on a totally different principle. The closet is finished and fired in the usual way, and then the outlet is coated with a certain preparation and re-fired, a short length of lead soil pipe is soldered on to the prepared part, the connection between the metal and pottery being so perfect that the lead can only be removed by breaking off the surface of the ware at the same time.

Every joint is tested under a pressure of 45 feet (13·716 m.) before despatching.

Though the use of this joint adds to the first cost of the closet, the actual increase is very slight, for not only is the expense of the brass thimble saved, but also the time taken in cementing it to the closet and testing to see if the joint is sound.

This patent is only applied to Queensware closets.

With the S (or turn-down) trap a length of pipe is soldered to the ventilating arm as well as to the outlet. The lead pipe attached to this closet is in each case sufficiently long to allow connection to the soil pipe.

THE HEALTH CLOSET

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5115

SECTION.

PLAN OF SEAT:

Depth of seal about 2 in. (0.051 m.).
Water area about 6 in. (0.152 m.)
× 5½ in. (0.140 m.).

PRICES (f.o.b. Glasgow):

No. 5115—White Queensware Health Closet, with seat lugs and turn-down (S) trap, polished mahogany double thickness seat with ramps, 2-gallon (9.09 litres) white porcelain enamelled cast-iron Paisley cistern and cover, painted cast-iron cantilevers, nickel-plated brass chain pull and ebonized handle				Cojsi
If with 1½ in. (0.032 m.) pipe to connect cistern to closet, nickel-plated brass, add ..				Coito

ISOLATED TROUGH CLOSETS

WITH SYPHONIC ACTION

DOULTON & CO., LIMITED.
LAMBETH, LONDON, S.E.

No. 5131

For ranges of five or less the outlet is fixed at the end, and in this case the length required from centre of end basin to wall will be 1 ft. 5½ in. (0.438 m.).

For ranges beyond five the outlet is placed in the centre, and no extra space is necessary.

In fixing the closet care must be taken to discharge into a manhole or ventilated drain.

No tank should be fixed less than 6 ft. (1.829 m.) from the underside to the floor level.

PRICES (f.o.b. London):

No. 5131—Range of Isolated Trough Closets, comprising stoneware basins, junctions, pipes and iron trap, automatic flush tank, and painted cast-iron pipe to connect tank to basins, and painted cast-iron bearers for tanks. Air pipe from tank to trap not included.

SPECIAL HIGH-PRESSURE FLUSHING VALVE FOR CLOSETS

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5150

This method of flushing a closet is steadily advancing in favour. It is neat in appearance and very compact, and gives a powerful flush.

We give herewith a few of its special advantages:—

Will work on any pressure above 10 ft. (3.048 m.).

Perfectly reliable in action.

Simple to fix. Care must be taken to see that the supply pipe equals in area the inlet to valve.

Only one joint to be made.

No complicated parts in design, so that it can be seen to by any practical workman.

Very easy in action.

Can be regulated to give any required after-charge.

May be fixed just above closet or at side.

If the ordinary house supply is through a smaller size pipe than is required for the valve, a small intermediate tank can be fixed and a pipe of necessary size can be brought from this to the closet valve.

PRICES:

In nickel-plated brass, $1\frac{1}{4}$ in. (0.032 m.)	..	..	Demnu
Do. do. 1 in. (0.025 m.)	..	..	Dempa

FIXING.

A storage tank should in every case be used; the valve should not be connected direct on to the main. The horizontal branches from the vertical service to the valve must be above the inlet of the valve, and in no case must a trap be formed in the pipe.

When one closet only is fixed and the water pressure is not less than 6 ft. (1.829 m.) or more than 30 ft. (9.144 m.), the supply pipe to the valve must be $1\frac{1}{4}$ in. (0.032 m.) in diameter.

If the pressure is not less than 30 ft. (9.144 m.) or more than 75 ft. (22.860 m.), the supply pipe must be 1 in. (0.025 m.) in diameter.

If two closets are fixed on one vertical pipe, that and the horizontal pipes must be $1\frac{1}{2}$ in. (0.038 m.) internal diameter.

If more than two closets are fixed on one vertical pipe, it must be 2 in. (0.051 m.), with $1\frac{1}{4}$ in. (0.032 m.), $1\frac{1}{2}$ in. (0.038 m.), or 2 in. (0.051 m.) branches taken off, according to the number of closets on the one floor.

If full particulars are sent us at the time of order, with a plan of the building and a sectional elevation showing position of the proposed closets, we will decide the diameter of the pipes to be supplied.

SPECIAL WATER WASTE PREVENTING VALVE FOR CLOSETS

WILL WORK ON ANY PRESSURE

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5151

This flushing valve is made so as only to pass a certain amount of water at each flush. It meets with the approval of most Town authorities that have regulations to prevent waste of water, as it can be sealed up after it is regulated. The amount of water to be passed can be regulated by means of a small screw.

We give herewith a few of its special advantages:—

- Will work on any pressure.
- Is non-concussive and perfectly silent in action.
- Simple to fix. Care must be taken to see that the supply pipe equals in area the inlet to valve.
- Only one joint to be made.
- Meets the requirements of Water authorities, as it controls the amount of water to be used.
- Can be regulated to give any required after-charge.
- Simple and easy in action.
- Can be fixed above or at side of closet.
- If the ordinary house supply is through a smaller size pipe than is required for the valve, a small intermediate tank can be fixed and a pipe of necessary size can be brought from this to the closet valve.

PRICES:

In nickel-plated brass, $1\frac{1}{4}$ in. (0.032 m.)	..	..	Depba
Do. do. 1 in. (0.025 m.)	..	..	Depce

FIXING.

- A storage tank should in every case be used; the valve should not be connected direct on to the main. The horizontal branches from the vertical service to the valve must be above the inlet of the valve, and in no case must a trap be formed in the pipe.
- When one closet only is fixed and the water pressure is not less than 6 ft. (1.829 m.) or more than 30 ft. (9.144 m.), the supply pipe to the valve must be $1\frac{1}{4}$ in. (0.032 m.) in diameter.
- If the pressure is not less than 30 ft. (9.144 m.) or more than 75 ft. (22.860 m.), the supply pipe must be 1 in. (0.025 m.) in diameter.
- If two closets are fixed on one vertical pipe, that and the horizontal pipes must be $1\frac{1}{2}$ in. (0.038 m.) internal diameter.
- If more than two closets are fixed on one vertical pipe, it must be 2 in. (0.051 m.), with $1\frac{1}{4}$ in. (0.032 m.), $1\frac{1}{2}$ in. (0.038 m.), or 2 in. (0.051 m.) branches taken off, according to the number of closets on the one floor.
- If full particulars are sent us at the time of order, with a plan of the building and a sectional elevation showing position of the proposed closets, we will decide the diameter of the pipes to be supplied.

ARRANGEMENT OF CLOSET DIVISIONS

IN MARBLE, FOR HOTELS, ETC.

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

In many lavatories, in buildings such as Hotels, Railway Stations, Clubs, etc., space is a considerable object, and the ordinary brick divisions between closets not only take up a great deal of room, but have a very heavy appearance. By using a marble division, sufficient space is saved over the length required when brick walls are used to fix an extra closet in each range of 10.

Marble is far preferable to woodwork, as the surface cannot readily be scratched or cut.

The above design shews an arrangement of marble divisions fixed to brass framing, and hardwood panelled doors. The dividing slabs stand 9 in. (0.229 m.) to 12 in. (0.305 m.) from the floor, and the top is about 6 ft. 6 in. (1.981 m.) from the ground, so that each compartment is quite secluded. The slabs are $1\frac{1}{2}$ in. (0.032 m.) or $1\frac{3}{4}$ in. (0.038 m.) thick.

The marble may be white veined or coloured—the latter is advised—while in some cases the lower part is dark to act as a dado, with the upper half in white or light colour.

Only one design is shewn, but further patterns to meet different requirements may be had on application.

On receipt of particulars prices will be quoted for the above pattern or any variation of same that may be desired.

GLASS ENAMELLED CAST-IRON SOIL AND WASTE PIPES

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5161 Dibdu	No. 5161D Dicku	No. 5161H Didpo	No. 5161M Difvi	No. 5161R Digbo
No. 5161A Dibfa	No. 5161E Dicla	No. 5161J Didru	No. 5161N Difwo	No. 5161S Digcu

No. 5161C Dicjo	No. 5161G Didni	No. 5161L Didte	No. 5161P Difze	No. 5161U Digfe

Cast-iron soil and waste pipes are now largely used for the exterior of buildings instead of lead.

Iron pipes have been treated in various manners to prevent rusting, viz., painting, galvanizing, and coating with Dr. Angus Smith's solution, but none are really lasting.

For many years Doulton & Co. have treated these pipes by lining them with a coating of glass enamel. This gives a smooth and perfectly sanitary surface, unsurpassed for cleanliness, and which does not corrode or deteriorate by contact with sewage or noxious gases; thus the durability of the pipes is very considerably increased.

The illustrations only represent those connections which are most used in ordinary everyday work, but any other patterns or any special fittings can be readily quoted for.

The pipes and junctions are manufactured in medium or heavy weights.

For full particulars of Weights, Prices, &c., see Appendix.

ENCLOSURES IN GLAZED STONEWARE

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

CITY AND PARK CONVENIENCES

ORNAMENTAL SCREENS IN DOULTON STONEWARE

Of late years there has been a general movement in favour of placing the public conveniences below the level of the street. It was felt to be impossible to treat satisfactorily the old-fashioned iron and slate enclosures, and at the same time more accommodation was required than these structures could conveniently give.

On the other hand, underground conveniences are costly in construction, and the necessary stairways above-ground are often no more sightly than the old style of enclosure. There are many wide streets and public spaces where above-ground structures would be far preferable to underground, if only suitable designs were provided. In gardens and parks also, where taste is displayed in the arrangements of flowers and foliage, it should equally be evident in such structures as the public conveniences.

It is desirable, therefore, that they should always be designed as architectural structures in harmony with their surroundings, whether urban or sylvan. The materials of these erections should also be of an artistic and permanent nature.

In DOULTON-WARE such a material is provided. It is a glazed stoneware, baked at so high a temperature that the ware is impervious, the glaze absolutely fast, and the colours permanent and unaffected by exposure or ordinary acids. The colours in use are very varied, and colour schemes suitable to any locality are easily arranged. While, of course, rather more costly than brick or iron, Doulton-ware is so eminently adapted for erections of this nature, so easily kept clean and requiring no repaintings, that its first cost is soon repaid.

No. 5261

Special designs can be prepared on receipt of dimensions of the site and particulars of the accommodation desired. Three typical designs are, however, shown here to give an idea of what is possible. More elaborate or more simple designs can be furnished. The designs show a combination of moulded blocks (hollow-backed) and tiles (key-backed), used as a facing to the actual wall, which is built of brick or reinforced concrete. The interior face of the wall, where not hidden by the stalls or woodwork, can be lined with stoneware tiles also if required.

For underground or above-ground conveniences alike the closet fronts can be made in glazed ware. Of several patterns in use, the sketch in margin indicates a simple and strong design. The pilasters stand in front of a $4\frac{1}{2}$ in. (0.114 m.) brick division (which can be tile-faced if necessary).

Price of blocks for Pilaster No. 5261, 6 ft. 6 in. (1.981 m.) high, each

Gafzo

Cornice and Frieze to match, per foot (0.305 m.) run

Gagba

Mitres and Angles of Cornice and Frieze extra.

For Cost of Packing, Weights and Measurements, see Appendix.

STRONG WHITE GLAZED VULCAN-WARE SINKS

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5278

No. 5279

No. 5278 is made with the outlet in centre at back.

Outlets, right or left hand, supplied to order only.

The centre outlet is suitable for most requirements. It reduces the number of patterns to be kept in stock.

The fall from all sides to the centre makes it a good draining sink.

PATENT AUTOMATIC FLUSH TANKS

WITH CAST-IRON TRAP

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

No. 5301

ADVANTAGES:

Simplicity in fixing. Certainty of action. Works by drop-and-drop supply. Easy to inspect.

These tanks are most useful for flushing short lengths of house drains; waste water can be collected in them and discharged in one volume instead of dribbling through the drain in small quantities.

In covering these flush tanks or syphons an air inlet must be provided.

If a trap exists between the flush tank and sewer, a ventilating pipe must be fixed.

The tanks are made in stout gauge galvanized iron with a cast-iron trap.

No. 5301

PRICES (f.o.b. London):

		Length.		Breadth.		Depth.

PATENT AUTOMATIC SYPHON FOR FLUSHING SEWERS

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

CAN BE USED EITHER WITH FRESH WATER OR SEWAGE

No. 5302

Absolute certainty of action.
Velocity in discharge.
Works with drop-by-drop feed.
Every part easy of access.
Works perfectly with intermittent supply.
Full way all through the syphon so that there is no check in the flush.
All parts in cast iron.
Can be arranged for outlet to discharge in any direction.
Syphon can be made with double outlet if desired so as to flush separate drains.
Full details of flushing chambers supplied on application.
The air pipe is arranged so that the difficulty of a partial vacuum, owing to too quick a rush of water into the tank just at the end of the discharge, is entirely overcome.
There are no small pipes or syphon liable to be blocked up.
These syphons are usually made to work with 2 ft. 6 in. (0.762 m.) or 3 ft. (0.914 m.) depth of water in the tank, but the size up to and including 9 in. (0.229 m.) can be manufactured to suit any depth from 1 ft. (0.305 m.) upwards.

PRICES (f.o.b. Glasgow) :

No. 5302	—Syphon, 4 in. (0.102 m.) outlet, 3 ft. 0 in. (0.914 m.) deep, to flush a 6 in. (0.152 m.) drain, painted	..	Gopdo

TERRA COTTA, GLAZED STONEWARE AND FAIENCE FOR ARCHITECTURAL PURPOSES.

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

VIEW OF MESSRS. DEBENHAM & FREEBODY'S PREMISES, WIGMORE STREET, LONDON.
Messrs. Wallace & Gibson, Architects.

The whole of the fronts to this important recent building are in Doulton's Carrara; no colour was introduced, the architects relying for effect on the variations of tone in the white Carrara surface.

MESSRS. DOULTON & Co. were among the earliest English manufacturers to produce specially made hard-fired terra cotta for important architectural purposes, and in many well-known buildings erected since the middle of the nineteenth century their work is to be noticed.

In glazed architectural wares, Messrs. Doulton & Co., while making the ordinary lead-glazed wares known as Faience or Majolica, have directed all their energies and resources to the introduction and development of the harder-fired stonewares. Salt-glazed coloured stoneware (or "Doulton-ware" as it came to be distinctively named) dates from about 1873, and was followed by other varieties of glazed stoneware. Of these, the most important, and one that is now being most extensively used in Great Britain, the Colonies, and on the Continent, is that known as "Carrara" stoneware. The opaque crystalline appearance of the glaze or enamel has an extraordinary brilliance of effect when used in large masses on the façades of modern buildings. The ware is "hard-fired," the blocks being coated while still unfired in the "Carrara" enamel, and both the body and enamel brought to completion in the one firing. This is a condition of manufacture that appeals to architects, who see in it a guarantee of permanence. There is no risk of the enamel coming away from the body of the block, as is the case in other wares which have undergone two or more firings. "Carrara" ware has a half-glossy or "egg-shell" surface, and this avoidance of the glittering surface of ordinary Faience is a distinct advantage. A selection of quiet tints of colour is available, in addition to the original tone of white or cream colour.

All Messrs. Doulton & Co.'s "Stoneware" enamels and coloured glazes are **LEADLESS**.

ESTIMATES for any proposed work will be submitted free of charge, but the fullest information should be supplied to Messrs. Doulton & Co., Ltd., at their Head Offices, Lambeth, London. Drawings showing the extent of the work, and probable number of repetitions of the ornamental features, must be forwarded if anything more than an approximate estimate is required.

DOULTON'S SALT-GLAZED PIPES AND FITTINGS

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

Quotations will be given on application for Glazed Stoneware Pipes of all diameters, from 2 in. upwards.

STANDARD DIAMETERS:—

2 in., 3 in., 4 in., 6 in., 9 in., 12 in., 15 in., 18 in., 21 in., 24 in., and 30 in. diameter.

5 in., 7 in., 8 in., 10 in., and 27 in. diameter also supplied.

Pipes 2 in. to 6 in. diameter are usually supplied in 2 ft. lengths.

9 in. and 12 in. diameter in 2 ft. 6 in. lengths.

15 in. and larger diameters in 2 ft. 6 in. or 3 ft. lengths.

Other lengths supplied to order.

Doulton's Works on the Thames at Lambeth, and in the neighbourhood of Liverpool, afford exceptional convenience for shipment.

Giving Prices and Details of
Weights and Packing

These Weights are approximate only
and not guaranteed

APPENDIX

DOULTON & CO., LIMITED,
LAMBETH, LONDON, S.E.

The particulars of Weights and Measurements and Costs of Packing given below have been prepared in order to, as far as possible, enable the Importer to estimate the "Landed Cost" of the principal Sanitary Fittings shown. We have prepared this information with much care, and while we believe it to be reliable, we cannot in any way guarantee individual shipments.

Wherever possible we show fittings "complete" packed in one case; this means that pottery, metals, etc., are all packed together.

Owing to varying Customs' or Shipping Co.'s regulations, or customer's special requirements, this cannot always be done, in which case due allowance must be made for increased Costs of Packing that may be incurred.

Weights in Pottery especially are liable to vary.

The weights of such small component parts as Pottery Grips, India-rubber Washers, etc., are not given separately.

URINAL SECTION								
If more than a range of three of any pattern are required, when telegraphing add the number required to the Code Word. As an example, you would code a range of seven No. 5243 as follows:—								
"Seven No. 5243 Bardi Frutu"								
This will be understood as "Range of seven No. 5243," and not seven ranges of three.								
146	No. 5239, range of three, complete ..	42 0 0	—	—	—	—	—	—
