ABRIDGED CATALOGUE
OF
DENTAL MATERIALS.

In issuing this Catalogue to the members of the Dental Profession at home and abroad, we have pleasure in pointing out that it is "Abridged" only in the sense that certain illustrations and descriptive paragraphs, which necessitated a large volume in former editions, have been omitted.

As a Price List the present volume is complete, and will be found to contain illustrations of many of the most useful articles.

REMARKS ON ORDERING GOODS, Etc.

It will save much of our time, and greatly assist us in the prompt execution of orders, if, when ordering, the page and figure of the article, if illustrated, are quoted.

A fresh line should be commenced for each article.

The Address to which the goods are to be sent should be distinctly written, and if any particular conveyance or route be preferred the same should be named. When no forwarding instructions are given, discretion will be exercised as to the best manner of sending.

Printed Order Books are supplied, free of charge, on application. There is a counterfoil to every form in each book, on which a record of the goods ordered can be kept.

Printed Envelopes, bearing our name and address, may be had, free of charge, on application.

Goods of other Manufacturers, English or American, obtained to order.

Goods to the Colonies and foreign parts are insured at the expense of the purchaser, unless ordered otherwise.

The Parcel Post now in operation between England, the Colonies, and most Foreign Countries affords an inexpensive and quick means for the transmission of small parcels, which can be insured at reasonable rates.

Accounts are only opened on receipt of approved references.

STATEMENT OF WORK

This document outlines the scope of work for the project. It details the objectives, deliverables, and the timeline for completion. The project is expected to be completed by the end of the year.

The project will be managed by the Project Manager, who will be responsible for ensuring that the project is completed on time and within budget. The Project Manager will also be responsible for communicating with the client and providing regular updates on the project's progress.

The project will be divided into several phases, each with its own set of deliverables. The phases are: Planning, Design, Development, Testing, and Deployment. Each phase will have a specific start and end date, and will be overseen by the Project Manager.

The project is expected to be completed by the end of the year. The Project Manager will provide regular updates on the project's progress and will be available to answer any questions that the client may have.

All goods are despatched at the risk of the purchaser.

Bankers' Drafts, Cheques, etc., should be crossed "Union of London and Smiths Bank, Ltd."

Post Office Orders and Postal Orders should be made payable at the Chief Office, St. Martin's-le-Grand, London, to CLAUDIUS ASH & SONS, LTD.

A discount of 5 per cent. is allowed off all accounts for Teeth, Dental Rubbers, Furniture, Instruments, Gas Apparatus, Tools, and Sundries, of not less than £5 in amount, for cash **on delivery of the goods**. Precious Metals are invoiced at **net cash** prices.

OLD METALS, Etc.

We purchase old Gold, Platinum, Dental Alloy, Silver, Board and Floor Sweep, in either large or small quantities.

It may be remarked that several sendings of small quantities are not so profitable to the vendor as the same metals, etc., are if sent in one parcel, for this reason: each lot that is sent has to be separately tested to ascertain its intrinsic value, and the expense of several testing trials is necessarily greater than one.

IMPORTANT.

Never mutilate but always mention the name of the Catalogue or List from which goods are ordered, and, if possible, give date of same and the number of the page referred to.

CLAUDIUS ASH & SONS, LIMITED.

ASH'S SET OF TEETH SHADES.

(REGISTERED. REG. No. 269,728.)

Each Tooth in the Set of Shades here illustrated is made with a single pin, and is riveted to a strip of aluminium bearing the colour and shade by which the tooth is known—the letter or letters indicating the colour, and the number the shade.

The single pin serves as a pivot, and permits of the Tooth being turned completely round, so that when the Upper Teeth are to be matched the cutting edge can be set downwards, as shown in the engraving, and, inversely, when the Lowers are to be matched the cutting edge can be set upwards. This arrangement is of great advantage, inasmuch as it enables the operator to place any Tooth in the Set of Shades against the Teeth in the mouth in such a way that the effect is seen at a glance, and when he has found the Tooth which matches, it is only necessary for him to write for B/3, D/4, etc., in order to obtain approximately the colour and shade which he requires.

ASH'S MINERAL TEETH.

The greatest care and attention are bestowed on this, the staple branch of our manufactures; new forms, sizes, and colours are being continually introduced, in order to meet, as far as possible, the requirements of an art which has for its object the close imitation of the Natural Teeth in their infinite varieties of form, colour, and general appearance.

Our stock comprises a most extensive assortment of flat, vulcanite, diatoric (pinless), and tube teeth, which possess the following desirable qualities:

NATURAL FORM.—The shapes, which are made in a great variety of sizes and lengths, closely resemble human teeth.

COLOUR.—They are made in so many different colours, in shades ranging from very light to very dark, that any tooth can be closely matched.

ADAPTABILITY.—Being made of the same material throughout, they can be cut or ground, in any way to any extent desired, and polished, the new surface thus obtained being perfectly clean and equal to any other part of the tooth in its absolute imperviousness to moisture. As showing to what extent this can be done, we may mention that some dentists even go so far as to convert one tooth into another by grinding and polishing.

It will, therefore, be seen that their adaptability is practically unlimited in the hands of the skilful worker, and that they are not only eminently suited for general work, but also for inlay and crown work and for all kinds of special or abnormal cases.

TEXTURE AND STRENGTH.—Their fine, close texture and freedom from porosity or air-bubbles give them that unusual strength for which they are everywhere renowned; the surface of the mineral remains unimpaired after the process of soldering, and also when the teeth are used for continuous-gum work.

ASH'S MINERAL TEETH—*continued.*

FULL SIZE.

LONG PINS.—All our flat and vulcanite teeth are made with long tough platinum pins (the flat being suitable for either plate or vulcanite work), which can be bent and roughened, with the pliers here shown, to keep them firmly fixed in the vulcanite. To obtain the best results the pins should be bent as nearly as possible at right angles (see Fig. *A*), and in such a direction that they will grasp the vulcanite in the thickest part. In the several illustrations given above, Fig. *B* shows the most usual bend.

TEETH CATALOGUE.

Illustrated Catalogue of the various kinds, patterns, sizes, and lengths of the mineral teeth which we manufacture will be sent, post free, on receipt of professional card.

ASH'S MINERAL TEETH—*continued.*

159

We desire to inform the Profession that our Trade Mark as here shown—

is impressed on the back of all the wax on which we fix the Mineral Teeth of our Manufacture, and that the absence of this Trade Mark is evidence that any teeth which may be offered for sale as ours are not genuine.

We find it necessary to make this announcement in order to protect ourselves and the Profession against the many inferior imitations of our Mineral Teeth which are now in the Market.

SUGGESTIONS FOR ORDERING TEETH.

Orders for teeth should contain the fullest possible information to ensure their prompt and accurate execution. A written order is always preferred. It is necessary to state clearly :—

- Kind . . . whether flat, vulcanite, diatoric, tube, or gum.
- *Size . . . „ large, medium, or small.
- *Length . . „ long, medium, or short.
- *Enamel . . „ long or short.
- Number . . „ in sets of 2, 4, 6, 14 or 28.
- *Surface . . „ smooth, corrugated, or natural pattern.

Colour—When patterns cannot be sent, the colours and shades required should be quoted from the set of shades.

* It will not be necessary to mention the *size, length, enamel, and surface* when ordering from our Teeth Catalogue ; all that then need be done is to quote the number of the illustration and the page on which it is shown.

ASH'S MINERAL TEETH—continued.

A discount of 5 per cent. for prompt cash is allowed when teeth are purchased to the amount of £5 and upwards.

Owing to the continued fluctuation in the value of Platinum we have not given the Prices of Teeth on this page, but Current Rates can be had on Application.

Ash's Mineral Teeth are supplied in the following varieties :—

FLAT TEETH.

Incisors and Canines	In sets of 6, Upper or Lower.
Incisors	„ 4, „ „
Incisors and Canines	In pairs, „ „
Bicuspid and Molars	In sets of 4, „ „

ASH'S DOWEL CROWNS—continued.

TO GRIND AND POLISH ASH'S MINERAL TEETH.

(By the late R. P. LENNOX, of Cambridge.)

“Although Ash's mineral teeth have now been before the profession for close upon seventy years, and many references are made in dental literature to the fact that they are of the same non-porous texture throughout, and can therefore be ground and polished to any extent that may be desired to suit special cases, it is yet remarkable that no writer has attempted to give definite instructions for grinding and polishing them.

“By way of introduction to making such an attempt, I may say in the first place that the density of Ash's mineral teeth permits of their being ground to a very fine edge without the risk of chipping, and, if necessary, the ground surface can afterwards be highly polished. A further advantage is the absence of the particles of porcelain which in some teeth are found encroaching upon the pins, to remove which, when backing teeth, involves annoyance and loss of time.

“**To Grind the Teeth.**—For this purpose I use carborundum or corundum wheels running in a trough of water when doing the work in the lathe, and carborundum or corundum wheels and points when doing it with the dental engine.

“The use of carborundum pretty well does away with the need for a steel tool in countersinking, but where a lathe or dental engine is not at hand, the teeth may be countersunk by means of a graver and camphorated turpentine, into which the graver is dipped from time to time.

“**To Polish the Teeth.**—This is a process which I seldom find it necessary to carry to any great length. An Arkansas stone run in the dental engine* and kept wet gives a very fine surface. No. 1 glass paper used dry will add a further gloss. Where a yet finer surface is desired, I use a buff carrying putty powder, and finally finish with whiting.

“The following articles for the double purpose of **grinding** and **polishing** will meet all requirements :—

* Every well-equipped workshop should be provided with a dental engine.—*R. P. L.*

TO GRIND AND POLISH ASH'S MINERAL TEETH

(continued).

“ Equipment for use with the Dental Lathe.

(1) A carborundum or corundum wheel for grinding the tooth to shape.

(2) An Arkansas wheel or an Ash's polishing wheel for removing the marks left by the carborundum or corundum, and for smoothing the ground surface.

(3) A brush or buff wheel, some superfine pumice or putty powder, and some whiting for polishing. *Note.*—Water to be used at every stage.

“ Equipment for the Dental Engine.

(1) Carborundum or corundum wheels and points.

(2) An Arkansas or Water of Ayr stone.

(3) A brush or buff polisher, some superfine pumice, etc., as under No. 3 above.

“ Equipment for hand use.

(1) A half-round carborundum or corundum file.

(2) A hone of Arkansas or Water of Ayr stone.

(3) A hand buff, some superfine pumice, etc., as under No. 3 of dental lathe equipment.”

ASH'S POLISHING STONE.

For imparting a smooth and polished surface to Mineral Teeth after they have been ground.

In all our experience we have never found a stone to equal it for this purpose. It is tough, though soft ; does not chip, like most other stones do, and will stand long and hard wear if it be kept well wetted with water during use.

It fits the Lathe Chucks of our manufacture.

DALL'S
GROUND MINERAL INLAYS,
INLAY BURS AND GAUGE.

(REGISTERED. REG. Nos. 297,136 and 303,110.)

ADVANTAGES :

Rapid and beautiful work can be done with the **GROUND INLAYS** designed by Mr. Dall, of Glasgow, whose very large experience of Inlay Work enables him to say that he can thoroughly recommend it to the Profession.

These inlays are durable, artistic, and pleasing to patients, and can be inserted in from ten to fifteen minutes.

Inlays can be inserted on the labial surfaces of upper and lower incisors, also on the buccal surfaces of upper and lower bicuspid.

Inlays can be inserted on the cervico-labial surfaces of upper and lower incisors, and on the cervico-buccal surfaces of upper and lower bicuspid.

Inlays can be inserted on the coronal surfaces of upper and lower bicuspid and molars.

Inlays can be inserted on the disto-labial and mesio-labial surfaces of upper and lower incisors, and on the mesio-buccal surfaces of upper and lower bicuspid.

Inlays can be inserted in the small cavities of honeycombed teeth.

INLAYS.

These are made slightly tapering from back to front, in twenty-five sizes, as illustrated on Inlay Gauge on page 21. The side views to the left of the Gauge represent deep and shallow inlays, size A L, and the front view shows how the inner surface is serrated for securing firm attachment to the phosphate cement, which is used for fixing the inlays in position.

The inlays are prepared in a variety of shades. In ordering them please indicate the shade required by quoting **from the cutting edges of the teeth** on our Set of Shades.

INLAY BURS.

These are made in twenty-five sizes which correspond with the inlays. The shape of the burs and inlays is conical, consequently the cavity will take the same size of inlay as the size of bur used.

DALL'S METHOD OF INLAY WORK.

INSTRUCTIONS.

FIG. 1.—**First.**—Clean the surface of the tooth by using, in the engine, a fine carborundum point or paper disc, so that the decayed or soft parts can be seen to their full extent.

Second.—Enlarge the cavity with sharp rose-headed burs and one or two inlay burs, make a slight groove with grooving bur at base of wall, select inlay same size as bur, fix with phosphate cement, dry with hot air, and when dry grind the surface of the inlay with carborundum points, which still further tends to harden the cement; finish with Ash's Tannstones, Water of Ayr stone, buff and pumice.

FIG. 2.—Same instructions as for Simple Cavity in Fig. 1, with one or two exceptions, viz., rose-headed burs need not be used; the inlay burs can be employed from start to finish; moreover, a groove at base of cavity is not necessary.

FIG. 3.—Same instructions as for Pitted Teeth—see Fig. 2.

The Tapering-cone Bur, shown on page 21, will be found very useful for Cavities of this class, especially when it is necessary to drill right through the tooth, in which case a tapered inlay is inserted corresponding to the size of the bur used.

The Operator must be very careful, while enlarging cavity, not to exercise pressure on the bur towards the cutting edge, as thereby it would be weakened.

DALL'S ROUND INLAY OUTFIT.

ASH'S No. 2 GAS FURNACE.

FOR INLAYS, CROWNS, AND SECTIONS.

(MANUFACTURED FOR US BY FLETCHER, RUSSELL & Co.) Registered. Reg. No. 326,329.

Size all over, outside measurements : 12 in. long, including blast burner ; $6\frac{1}{2}$ in. wide ; $5\frac{3}{4}$ in. high. Size of the oval Nickel Muffle, $4\frac{1}{2}$ in. long ; $1\frac{3}{8}$ in. high.

This is the most powerful small Gas Furnace that has ever been designed for Inlay, Crown, and Bridge Work. Every kind of Gum Body and Enamel can be perfectly fused in it with the greatest ease.

To work it efficiently, under all conditions, a half-inch gas supply with clear-bore tap is necessary, and Fletcher's size 5 Bellows should be used, the rubber disc of which should be kept well inflated to ensure a strong, steady blast. Very little exertion is required to do the blowing.

PRICES:

Ash's No. 2 Furnace, complete, with Nickel Tray, one extra oval			
Nickel Muffle, one tin Investing Material, and Repairing	£	s.	d.
Outfit consisting of Silicate of Soda and Fireclay	3	15	0

CHRISTENSEN'S DRAUGHT GAS FURNACE

For INLAYS, CROWNS, and BRIDGES.

(REGISTERED. REG. NO. 362,761.)

NO BLOWER REQUIRED.

With a half-inch gas supply and clear-bore taps the Furnace will fuse our High-Fusing Mineral Bodies in from four to five minutes, starting all cold—our Low-Fusing in less time.

GIVES A PERFECTLY UNIFORM HEAT.

NEEDS NO UNUSUAL ATTENTION
WHATEVER.

Muffle, 3 in. long; $1\frac{1}{2}$ in. high; $1\frac{1}{2}$ in. wide. Height of Furnace, $11\frac{1}{2}$ in.; width, 7 in.; depth, $5\frac{1}{2}$ in.; weight, $7\frac{1}{2}$ lbs. Chimney, 18 in. long.

DIRECTIONS FOR USE :

The Burner should be lifted out of the Furnace, lighted outside, and then put back; on no account should it be lighted from the top of the Chimney.

It should be turned full on from the commencement of firing.

When the firing is nearly completed the Furnace door may be left open for the purpose of observing the work. Upon the completion of the firing the door should be closed again, and kept closed until the Furnace has cooled down.

ASH'S No. 4 BLAST FURNACE

FOR BRIDGES AND FULL SETS OF CONTINUOUS-GUM WORK.

(Registered design.)

MADE FOR US BY MESSRS. FLETCHER, RUSSELL & CO.

Size all over, outside measurements—12 in. long, including double blast burner 15½ in. wide; 10½ in. high.

Size of oval Nickel Muffle, 5½ in. long; 1½ in. high.

Allen's or any other High-Fusing Gum Body can be fused with ease in this Furnace. It is as powerful in every way as our No. 2 Blast Furnace, and in its construction we have succeeded in securing uniform heat all over the muffle during the firing of the work.

To work it efficiently, under all conditions, a half-inch gas supply with clear-bore tap is necessary, and Fletcher's size 5 Bellows should be used, the rubber disc of which should be kept well inflated to ensure a strong, steady blast. Very little exertion is required to do the blowing.

PRICES:

Furnace complete, with Nickel Tray, one extra Nickel Muffle, one tin Investing Material, and Repairing Outfit consisting of Silicate of Soda and Fireclay	£	s.	d.
Extra Nickel Muffles each	0	12	6
" " Trays	0	2	0
Fletcher's Bellows, Fig. 9B, size 5	1	16	6

India-rubber Tubing is charged extra, according to length required.

MITCHELL'S ELECTRIC FURNACES, Nos. 1 and 2, WITH SMALL RESISTANCE.

The illustration shows the wires from the Resistance and the source of supply *A* connected to the Furnace.

By using this Resistance, with either size of Mitchell's Small Furnaces, the heat can be gradually raised or lowered at will. It thus adds to the usefulness and safety of a Furnace, inasmuch as it greatly lessens the risk of breaking the Muffle wires, such as attends the sudden switching off of the current from full pressure; moreover, by slow cooling down, toughness is secured in the fired mineral body or enamel.

The Resistance is of the well-known Iron and Enamel type, the main feature in which is the embedding of the wires in the enamel to prevent corrosion by exposure to the air. It should be screwed to the wall, or in any other suitable vertical position, so that the air can freely pass behind it and carry off the heat generated.

No. 1 FURNACE.

For Inlays and Crowns.

Size of Muffle, $2\frac{1}{4} \times \frac{7}{8} \times \frac{7}{8}$ inch.
Height on stand, 6 inches.
Current absorbed, 200 watts.

No 2 FURNACE.

For Inlays, Crowns, and Bridges.

Size of Muffle, $2\frac{3}{8} \times 1\frac{1}{2} \times \frac{7}{8}$ inches.
Height on stand, 6 inches.
Current absorbed, 250 watts.

PRICES :

	£	s.	d.
No. 1, complete with accessories, for any voltage	2	2	6
„ 2, „ „ „ „ „	2	7	6
„ 2, „ specially wound for fusing Allen's Body	3	2	6
Resistance	0	12	6

In ordering the Resistance, state for which Furnace it is required and for what voltage.

MITCHELL'S ELECTRIC FURNACE No. 3.

FOR CONTINUOUS-GUM SECTIONS AND FULL SETS.

Inside measurement of muffle, $3\frac{1}{4}$ inches long, 3 inches wide, and $1\frac{1}{2}$ deep.
 A—Wires leading to source of supply.

Each coating of our High-Fusing Mineral Body or Gum Enamel which is used for an upper or lower denture can be fused in this Furnace in about fifteen minutes. The Furnace is provided with an air-jacket which materially conserves the heat produced, and there is a small slot in the hinged lid through which every part of the work in the muffle can be seen. Uniform heat is produced all over the muffle; the possibility of fusing one part of the work before another is thus avoided. Further, the heat can always be got up at a fixed uniform rate; the time required for any particular class of work can therefore be very accurately gauged. The resistance supplied with the Furnace permits of the heat being varied as desired, for drying the work, or for warming up metal plates ready for soldering, etc. After using the Furnace, the Switch Lever should be placed on the last contact for a few minutes before it is finally switched off. This will allow the Furnace to cool down gradually. If the current is suddenly switched off from full power, the sudden contraction through cooling too quickly may cause breakage of the platinum wires or other parts.

NOTE.—All our Cylinders can be made cohesive by annealing before using.

ASH'S
FIBROUS GOLD BLOCKS.
EXTRA DENSE.

We have pleasure in placing before the Profession an Extra Dense form of our Fibrous Gold Blocks.

In response to many requests, added to the great demand existing at the present time for rapid filling materials, we have recently experimented with this gold with the object of increasing its rapidity in condensation, and as a result we have been able to produce this Extra Dense form, which, we feel sure, will add very materially to the already wide popularity of our Fibrous Gold Blocks, and be a great advantage to those to whom a rapid-working filling material is a necessity.

CLAUDIUS ASH & SONS, Ltd.,

One ounce		12	6
Five ounces		52	0

ASH'S SECOND QUALITY AMALGAM.

(Known as Filings for Metallic Paste.)

This Amalgam has been in use for over forty years, and the sale increases every year, so that it has become an established stopping. It is composed of unobjectionable metals, and requires but a small quantity of Mercury to make it into a paste; it soon sets in the tooth, and will take a high polish, and does not change colour or decompose in the mouth. **It is unequalled by any Amalgam which is sold at a similar price.**

Fletcher's chemically purified per bottle	1	0
„ electrically „ „	2	0

NOTE.—It is absolutely necessary that pure Mercury be used for Amalgam Stoppings. The Mercury commonly sold as pure is known to contain Lead, Antimony, etc., which impurities cannot be separated by mere distillation, and if used with the Filings alters the compound and causes it to become discoloured in the mouth.

TILTING LEVER, suggested by Mr. CLAUDE ROGERS.

LOWEST POSITION.

The Morrison Chair has a range of $23\frac{1}{2}$ inches, starting from the low position of $17\frac{1}{2}$ inches.

It is a strong, steady Chair with many useful movements.

It is upholstered in best quality plush and carpet, all the bright parts are nickel-plated, and the framework is japanned black, relieved with plain-line ornamentation.

ASH'S MORRISON HOSPITAL CHAIR.

The Chair shown above is also supplied with Carved Wooden Seat, Wooden Arms and Back, and Head-Rest covered with Leather-Cloth. We can most confidently recommend it. It is exceedingly strong and will not readily get out of order.

	£	s.	d.
Price	12	5	0

ASH'S PATENTED LONG-RANGE PUMP CHAIR.

With improved Short Back, $14\frac{1}{2}$ inches deep, which can be lowered on to the Seat.

FEATURES:

RANGE—The Chair has a range of 19 inches. At its lowest position the seat is 16 inches from the floor, and at its highest 35 inches.

COMFORT AND CONVENIENCE—It is very comfortable and convenient in use to both patient and operator.

QUALITY AND WORKMANSHIP—For high-class quality, excellence of workmanship, external and internal finish, it is unsurpassed.

MOVEMENTS—It possesses all the movements that can be desired by the dental surgeon.

ADVANTAGES:

1. It rotates from the floor plate, consequently all the levers are carried round with it, and are behind it in whatever position it may be.

2. All the internal working parts are well protected from dust.

The Chair is made in two styles, as under:

1. With simple Foot-Rest, as shown on page 55.
2. With extending Foot-Rest, as shown on opposite page.

In all other respects the two styles are identical.

It is kept in Stock in Maroon Plush, but it can be had to order in Plain Green Plush, or in Figured Plush, or in Morocco Leather.

We keep Seven Varieties of Figured Plush in Stock, also a nice variety of Saddle-Bags and Morocco Leathers, patterns of which may be had for selection on application.

ASH'S FIG. 26a HEAD-REST.

FIG. 26A.

This Head-Rest can be screwed on to the back of any suitable **Wooden Chair**.

Its movements, which are controlled by a single handle and the screw on the socket **B**, are so numerous that we can recommend it as a first-class Head-Rest. The Arm-Support **A** can be fixed on either side of it as may be desired.

The upholstered part is nicely padded and covered with the finest Plush, and all the metal parts, except the socket **B**, are substantially nickel-plated.

Head-Rest, in Green or Maroon

PORTABLE HEAD-REST.

(AMERICAN PATTERN.)

The American pattern Head-Rest here shown, which only weighs 5½ lbs., possesses so many useful movements that it will be found to meet all the requirements of those Dentists who have a visiting practice. It can be attached to an ordinary chair. When taken apart and folded up, as illustrated, it is very portable and does not take up much room.

It is strongly made and highly finished, all the metal parts being heavily nickel-plated, and the upholstered part nicely padded and covered with best quality plush, or, if preferred, with leather-cloth.

ASH'S IMPROVED CABINET—Fig. 1.

For workmanship and finish this Cabinet stands unrivalled, and forms a very handsome and valuable addition to the Operating Room.

The top compartment contains back and side mirrors and a marble shelf, beneath which are placed fourteen drawers varying in depth from half an inch to $1\frac{1}{2}$ inches. Immediately under the drawers is a pull-out shelf for instruments, the width of the Cabinet and $9\frac{1}{2}$ inches from back to front. When not in use the whole of the upper part is covered by a revolving shutter, which is fitted with lock and key. All the drawers are nicely lined with maroon cloth.

OUTSIDE DIMENSIONS:

58 inches high; 28 inches wide; 15 inches deep.

board, with two adjustable shelves, which measures inside 26 inches high, 24 wide, 13 deep. The Cabinet is mounted on casters, and each of the drawers and the cupboard are provided with lock and key.

The lower portion of the Cabinet is occupied by two drawers $2\frac{1}{2}$ inches deep; and a cup-

THE WEBER REGULAR FOUNTAIN SPITTOON. (PATENTED.)

Descriptive Circular on application.

No other Fountain Spittoon can be compared with the Weber for cleanliness and efficiency. Its action is instantaneous—any fluid or mucus discharged into the bowl disappears immediately. A smaller pressure of water will work it than is required for working other Fountain Spittoons. It is elegant and refreshing in appearance, perfectly sanitary, quite noiseless in use, thoroughly well made, and sold at a reasonable price. It can be had with CLEAR CRYSTAL GLASS BOWL, RUBY GLASS

BOWL, GREEN GLASS BOWL, AMBER GLASS BOWL, or with BLUE AND GOLD PORCELAIN BOWL, or with WHITE AND GOLD PORCELAIN BOWL.

In ordering, be careful to specify which bowl is required.

Discount for Cash, 5 per cent.

THE WEBER SPECIAL FOUNTAIN SPITTOON.

The Weber SPECIAL Fountain Spittoon not only possesses all the features of the REGULAR form, shown on the opposite page, but is also distinguished for :

1. The beautiful shape of the Bowl.
2. Its rapidity of action; all discharges instantly disappear.
3. Its greatly improved overflow outlet.
4. Its safety and durability in use, which are secured by mounting the Bowl on a soft rubber cushion, to allow of the expansion and contraction of the glass under varying changes of temperature; it is safe to say that it will not break unless it is hit with something hard enough to smash it.

The Weber SPECIAL Fountain Spittoon is supplied with Crystal, Ruby, Amber, or Green Glass Bowl at the same prices as the REGULAR form—see previous page.

DENTAL FORCEPS.

The Illustrations of Forceps on the following pages represent a selection of the most improved forms in general use, which have met with the approval of the best Operators. The upper part of each is drawn nearly full size, in order to give a clear view of the construction of the beaks. It should be noted that the words "for the right or for the left side of the mouth," employed in some of the descriptions, mean the right or left side **in the patient's mouth.**

We have devoted special attention to this branch of our business for more than forty years, during which time we have availed ourselves of the suggestions for new Forceps and for modifications of existing forms made by the most eminent Practitioners in the Dental Profession, including the late Sir John Tomes and other Operators whose names have never been formally associated with the instruments which they designed. All our Forceps are made of the best steel, **nickel-plated**, and we can confidently recommend them for **lightness, strength, temper, finish, and accuracy of adaptation.** The beaks of each are made to fit the teeth for which they are intended so perfectly that a firm grip can be obtained and sufficient pressure applied for the removal of any tooth without danger of crushing the crown.

During cold weather Forceps should be warmed by being placed in hot water before they are used. The best tempered steel is liable to snap during the winter months, if this precaution is neglected. ;

Special Forceps made to Operators' own patterns or models. ; All forms of American pattern Forceps supplied or made to order.

Forceps repaired, re-plated, etc., at moderate charges.

The complete Forceps List, with illustrations of all the Forceps we keep in stock, will be sent on application.

ENGINE AT REST.

ENGINE ARM CONTROLLER.

This device is the outcome of suggestions made by Mr. Louis Jeffrey, of London, and is intended for drawing back the Arm of Shaw's Engine out of the Operator's way when it is set free after use.

To apply.—Put the Controller on the top of the Upright, place the Engine Arm in position, fit Band on Driving Wheel and Pulley, hold the Arm in the position in which it is required when at rest, and fix the Controller to it and the Upright by tightening up the two screws.

After use, the Handpiece should be placed at rest in the Spiral, which should be attached to the centre of the Upright.

Price	2 6

DOUBLE-BEARING CABLE ENGINE

(ASH'S ENGLISH MANUFACTURE).

The enlarged drawing in the illustration shows the double bearing, which affords good support for the spindle to which the cable is attached and ensures steady running. This double bearing is provided with two oil holes *a, a*.

The Head of the Engine is controlled by the sliding collar *b*, and can be kept in the position shown in the illustration, or let down by the side of the Upright, in which position it should always be allowed to rest when the Engine is not in use.

The Stand consists of tripod with Treadle and connecting Rod, Upright with forward rocking motion, and large Driving Wheel.

ASH'S TRAVELLING ENGINE WITH CABLE HEAD.

This Engine is especially designed for Practitioners who have to visit patients or have a travelling practice. It can be put together or taken apart in a few minutes without the aid of screw-driver or spanner. The box is arranged to take the parts separately without packing, each piece being held securely in position, and there is no fear of them being broken in transit.

Weight of Engine, Lathe Attachment, and Box, complete, 32 lbs.

Outside dimensions of box :

C. ASH & SONS

ASH'S SLIP-JOINT ATTACHMENT.

The Slip-Joint Attachment is highly appreciated on account of its great usefulness. Those Operators who have it attached to their Engines are very pleased to find that the Straight Handpiece can be laid aside when they have occasion to employ the Right or other Angle Handpiece, or the Engine Mallet; and that while the Straight Handpiece is at rest it is not being worn out, as is the case when it is used to carry the Right-Angle or the Mallet.

The several parts of Ash's Attachment—viz., Slip-Joint, Dog, and Ferrule—are shown in the top row of illustrations. The lower illustration shows:—

- A—Part of Handpiece.
- D & F—Ferrule with Dog inside.
- SJ—Slip-Joint with A, D & F connected to it.

Connection is made by simply pushing on A, D & F, and disconnection by drawing back sliding collar C on the Slip-Joint part.

B—Part of Flexible Attachment of Engine.

ASH'S ASEPTIC RIGHT-ANGLE ATTACHMENTS AND HANDPIECES—

Nos. 4 and 5.

(PATENT APPLIED FOR.)

The special features of these Attachments and Handpieces are as follows :—

1. They can be taken to pieces, every part sterilised, and put together again in a few moments.

2. They are made with small coned nose, which gives steadiness to the Bur, affords the Operator a clear view of his work, and enables him to reach with ease the bottom of deep cavities.

3. The steel frame of the Head of each is very strong, all the working parts are securely enclosed and the oil is retained in them ; they are thus rendered, as far as possible, inaccessible to saliva and dust.

4. One drop of oil put in the lubricating hole, underneath the spring catch, flows to all the working parts.

5. They are constructed to take both styles of right-angle instruments—Nos. 1 and 2—as shown in the illustrations.

6. The Heads can be fitted to most existing right-angle lower parts.

7. All the parts are interchangeable, and those liable to wear out can be readily and inexpensively renewed.

Directions for taking apart, etc., supplied with each Attachment and Handpiece.

POWER'S ENGINE MALLET'S

WITH IMPROVED STOP-ACTION.

FIG. 5.

Style
of Point
used in
Fig. 5.

FIG. 6.

Few Engine Mallets can be compared with Power's for range of blow, efficiency, ease of adjustment, durability and excellence of workmanship. They work equally well whichever way the Engine is driven.

CAUTION.—There are some very inferior imitation Power's Mallets in the market, which are so badly constructed that they are dear at any price.

The only genuine ones made bear our name—C. Ash & Sons, England—and we strongly advise purchasers not to accept any other.

DESCRIPTION :

Fig. 5.—Straight Mallet with Stop-Action, **D**, which upon being drawn downwards with the finger stops the blow while the Engine is in motion, and enables the Operator to pick up gold, or to use the Mallet temporarily as a Hand Plugger.

Fig. 6.—Right-Angle Mallet with Stop-Action, **D**.

A.—Milled Collar for regulating the strength of blow.

B.—Nose end of Mallets.

C.—Tang end of Mallets.

To keep in good working order, apply a little oil occasionally between the nose and the outer case at **B**, and pour a few drops down by the tang at **C**.

For Prices see next page.

LONG BURS AND DRILLS

FOR Nos. 1, 3 and 4 ANGLE ATTACHMENTS AND HANDPIECES.

Burs and Drills for these Attachments and Handpieces are frequently required longer than Fig. 1, illustrated above, and to meet the demand which has arisen for them, we keep the most useful forms and sizes in stock, **an eighth of an inch longer than shown in the illustration.**

To distinguish them from the regular kind we have named them: Long Burs and Drills for Angle Attachments and Handpieces.

They are charged at the same prices as the regular kind.

ASH'S BEST QUALITY STONED CAVITY BURS.

For excellence of temper, strength of blades, cutting power, and fitness for the work for which they are intended, our **Best Quality Stoned Cavity Burs** are highly esteemed by Dentists in all parts of the world.

They are made from carefully selected steel of the finest quality; they are regular in shape and true to gauge; all the blades on them are of equal length, and each one is brought to a keen-cutting edge by means of Arkansas Stone, with the result that they cut smoothly, rapidly, and with a minimum of pain to the patient.

The large demand which there is for them, coupled with our increased means of production, enables us to offer them to the Profession at the following favourable rates.

ASH'S BUR GAUGE.

ASH'S SECOND QUALITY BRITISH CAVITY BURS.

To meet the call for **Cheap Burs** which has arisen, we are now making a **second quality**, from exactly the same steel as we use for the best quality Burs.

These Burs are thoroughly reliable for **temper** and **cutting power**, and only differ from our best quality in nicety of finish; the labour thus saved on them accounts for the difference in price between them and the best. They are in every way adapted to serve the needs of those Operators who like to use Burs freely, and to throw them in the waste box when they have lost their keenness in cutting, without troubling to have them re-cut.

They are made in the shapes and sizes here illustrated, for Nos. 4 and 7 Handpieces, and for Angle Attachments and Handpieces which take Nos. 1 and 2 styles of right-angle Burs.

DIAMOND BURS AND DISCS,

FOR TRIMMING AND POLISHING ENAMEL MARGINS.

(Suggested by Dr. J. LEON WILLIAMS.)

Disc Burs. Dr. Jenkins, of Dresden, says of these Diamond

Burs :—

“They are superb. They make it possible to polish the edges of a cavity easily and most perfectly; and grind so smoothly as to be a great comfort to the patient. . . . They are invaluable for my purpose in Inlay work.”

We have every confidence in their lasting qualities. They are very carefully charged with Diamond. In use they should be run at high speed, and kept well wetted with water.

ASH'S GROOVED DIAMOND DISCS.

(Registered. Reg. No. 310,731.)

One of the most prominent and valuable features in these Diamond Discs is, that they will last twice as long as any other and are not so readily spoiled by the application of pressure to the sides and edge. They should be kept well wetted with water during use and run at high speed.

In our practical, everyday experience of Diamond Discs we find that these grooved discs will not only stand hard wear, but that they are superior to any other which we have ever tried.

We make them in two forms, as under :—

Charged on both sides and on edge.

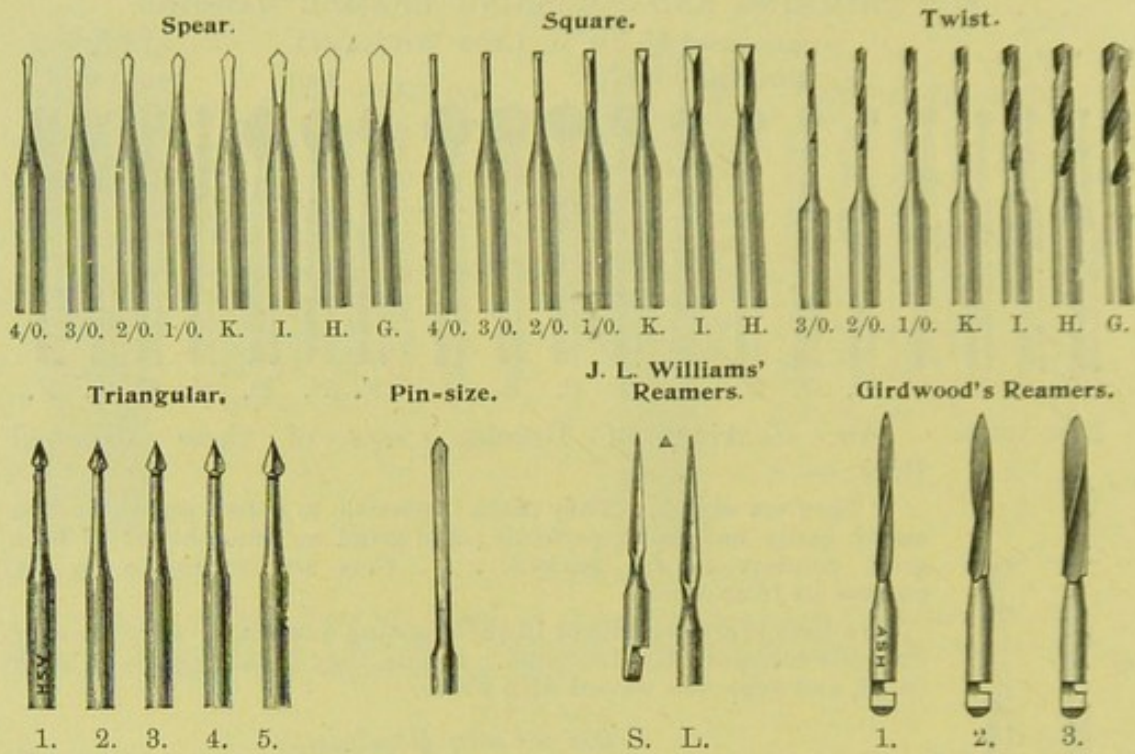

Sizes and Prices : $\frac{1}{2}$ inch, 4/6 ; $\frac{3}{4}$ inch, 6/0 ; $\frac{7}{8}$ inch . . . 7 6

Supplied in Two Grits, known as Fine and Coarse.

When ordering mounted Corundum Discs and Points, please state for which Handpiece they are required.

ASH'S RUBBER-CARBO SEPARATING DISCS AND STUMP WHEELS.

The mixture of India-Rubber and Carborundum, of which these Discs and Stump Wheels are composed, offers a threefold advantage, viz. :—

1. Toughness with edge strength;
2. Great cutting and abrasive power;
3. It does not gum-up in use.

The Discs are very thin, cut rapidly, and do not easily break. Made in four sizes, as under :—

Diameter— $\frac{7}{8}$ $\frac{3}{4}$ $\frac{5}{8}$ $\frac{1}{2}$ inch.

The Stump Wheels are made in the three sizes here shown, in thin and thick :—

Diameter— $\frac{3}{4}$ $\frac{5}{8}$ $\frac{1}{2}$ inch.

In ordering, be careful to state whether thin or thick wheels are wanted.

Discs, any size	each 3d. ; per doz.	s. d.
Stump Wheels, any size, thin or thick	„ 3d. ; „	2 6

PAPER AND CLOTH DISCS. In boxes containing 525 Discs, namely : 150 each Emery-Paper, Sand-Paper, Cuttle-Fish Paper, and 75 Emery-Cloth Discs. Assorted diameters, $\frac{5}{8}$, $\frac{3}{4}$ and $\frac{7}{8}$ of an inch.

Price	per box	s. d.
		2 1

THICKENED-RIM SAND-PAPER DISCS. These can be mounted on any of the Paper Disc Mandrels. Supplied in two sizes, $\frac{5}{8}$ and $\frac{7}{8}$ of an inch in diameter. Put up in boxes containing 400 Discs, assorted grits.

Price, either size	per box	s. d.

ARKANSAS STONES.

(Suggested by Dr. JENKINS, of Dresden.)

Invaluable in **Inlay Work** for smoothing the edges of cavities, etc.; also most useful for polishing gold fillings.

As will be seen from the illustrations, which show the stones full size, they are small and mounted on slender stems, hence they require to be used with care. They are made in large and small sizes of five most useful shapes.

Price	(Figs. 1-10 each)	s. d.
„	per set of 10	1 9 17 6

ASH'S TAN-STONE.

There is no stone before the Profession that is equal to our Tan-Stone for the purposes for which it is intended.

After being cut to shape each point or wheel is fired; this renders it tough and conserves its abrasive power.

TAN-STONE CAVITY POINTS.

MADE IN THE SAME SIZES AND SHAPES AS THE ARKANSAS STONES SHOWN ABOVE.

For smoothing cavity margins, dressing down the edges of inlays, and for the same uses as the larger points shown below.

Price, any size or shape	each	s. d.
		0 10

TAN-STONE POLISHING STONES.

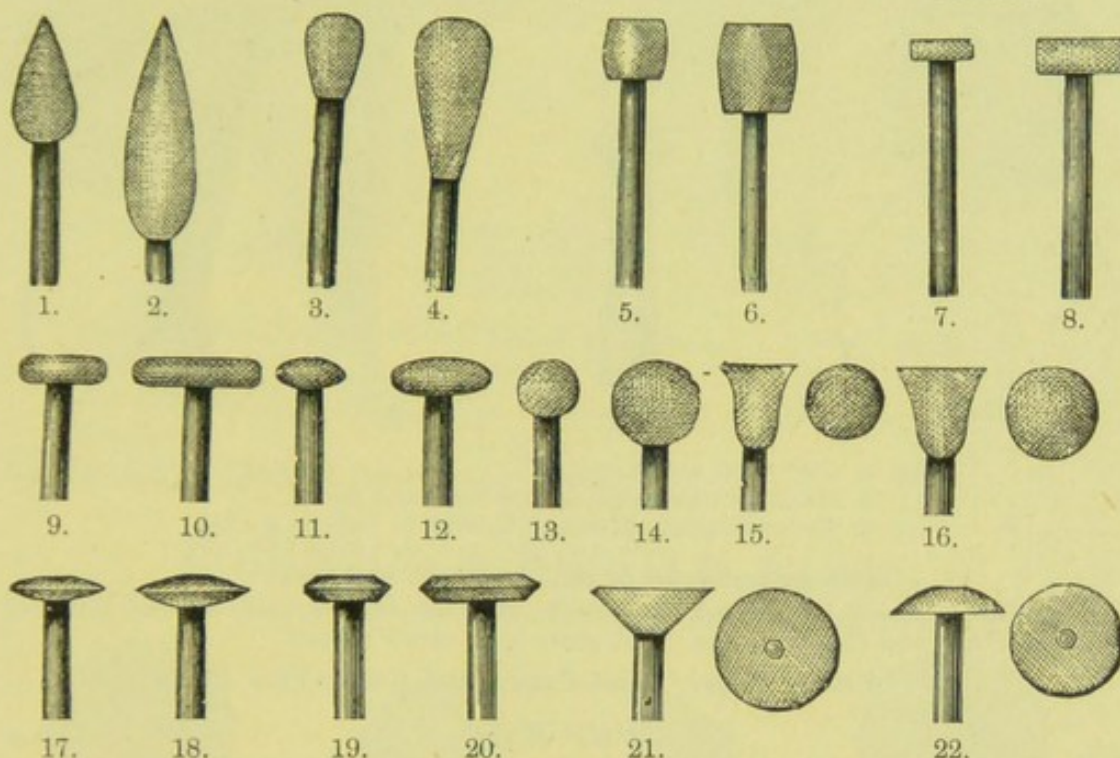

For trimming and smoothing gold and amalgam fillings, to which they impart a fine surface.

Price, for any Handpiece	(Figs. 1-9) each	s. d.
		1 0

In ordering, state for which Handpiece they are wanted.

POLISHING STONES.

ARKANSAS, HINDOSTAN, AND WATER OF AYR.

MOORE'S DISCS AND MANDREL.

FIG. 4.

FIG. 2.

FIG. 3.

- Fig. 2. Disc with metal centre.
- „ 3. Mandrel with split square head and neck.
- „ 4. Shows how the Mandrel is held to remove a disc.

The Advantages of the Invention are these :

The Discs cannot be torn in the centre ; they are held securely by the Mandrel whichever way the Engine is run ; and there is no screw to lose.

Kinds—Emery Paper, Sand-Paper, and Cuttle-Fish Paper.

ELECTRICITY IN DENTAL PRACTICE.

The extensive increase in the number of Electric Supply Companies during the last few years, and the consequent demand for suitable apparatus to be worked by the electric current in the dental surgery and workroom, have led manufacturers of electrical appliances to study the needs of the Dentist, and to place before him a number of labour- and time-saving appliances, the use of which he will find profitable in practice.

A Special Catalogue containing a full list of the Electrical Apparatus we supply will be sent on application.

COLUMBIA ALL-CORD ENGINE.

This is the most powerful of all the Columbia Engines, and is therefore specially recommended to crown and bridge workers, and others who require maximum power.

PRICES, less 10 per cent. for cash :

PULP-CANAL CLEANSERS.

(ASH'S MAKE.)

The points of these Pulp-Canal Cleansers are reduced so as to enter the canal readily, and the barbs, which are cut of just sufficient depth to accomplish their work, are arranged spirally around the shaft, in effect forming a screw, so that no two cuts are exactly opposite each other (see enlarged view *D*). With ordinarily careful usage these Cleansers will remove the pulp-substance perfectly, without liability to be broken or to become fastened in the canal. If at any time the instrument does not withdraw readily from the root, a turn or two to the left (unscrewing) will at once release it.

BATTLE-AXE EXCAVATORS.

(Dr. S. G. PERRY'S.)

2. 3. 4. 5. 6. 7. 8. 9. 10. 11. 12. 13.

14. 15. 16. 17. 18. 19. 20. 21. 22. 23. 24.

In presenting these Excavators to the Profession, Dr. Perry said: The blades are made somewhat like a battle-axe in shape. One distinguishing feature about them is the great slenderness of the shank, while the round cutting-edge is intended to fit into the contour of cavities. Another advantage of the round cutting-edge is that it "bites" only in one place, and where it bites it takes hold.

The Excavators vary in size from very fine and delicate ones to larger sizes, the idea of the round face and cutting-edge being carried out in all. There are twenty-four in the set, running from the smallest to the largest size needed; the largest ones being for opening into cavities and cutting down crown surfaces, and the others for work in the interior of all cavities.

MALLET POINTS,
WITH CONVEX STONED FACES.
(Dr. PROSPER LADMORE'S.)

1. These Pluggers are very finely serrated, and carefully made to patterns approved by Dr. Prosper Ladmore, and it gives us much pleasure to state that he says of their manufacture :—

“They are perfect and without fault.”

| | | | |

“SPECIAL” FORMS.

These “Special” Mallet Points have been suggested from time to time by various Operators, for whom we have made them, and, as they have met with much favour, we have decided to make them known to the Profession at large by illustrating them. Figs. 6 and 8 have convex surfaces, and all the others have flat surfaces.

FOR FINE COHESIVE GOLD WORK.

(Set of 14, selected by Mr. CLAUDE ROGERS.)

1.

Mr. Rogers finds these instruments so useful in practice that we have obtained his permission to offer them to the Profession as a set selected by him. Several have been modified to his directions, and all of them as now illustrated meet with his approval.

They are made with highly finished stoned serrations.

Price, with screw ends, Nickel-plated . (Figs. 1-14) each

HAMPEL'S AMALGAM CARRIER.

This is a most useful instrument for carrying Amalgam to and discharging it in the cavity.

To take up the Amalgam it is only necessary to press the tubular end of the Carrier into it a few times until the tube is filled.

The Amalgam is discharged by taking part *B* between the first and second fingers and pressing with the thumb on the end *A*.

By means of the long bent nozzle, the Operator is enabled to reach with comparative ease cavities difficult of access without obstructing his view of them.

Price, Nickel-plated s. d.
4 6

FULL SIZE.

AMALGAM SPOONS,

FOR HEATING COPPER AMALGAMS.

FILE CARRIER.

(DR. COGSWELL'S.)

With screw clamp, for holding pieces of files.

By means of the slots in the heads of the Carrier the files can be fixed at various angles.

| | | | |
|--|--|----|----|
| Price, in Ebony handle, as illustrated | | s. | d. |
| | | 6 | 6 |

TRANSPARENT CELLULOID PULP CAPS.

(Suggested by Dr. W. MITCHELL.)

Owing to their transparency the operator can see where he is putting a cap. The material is non-conducting. A cap can be conveyed to the cavity by means of the instrument here shown, which is charged on the end with carrying cement. The cement will hold the cap securely while conveying it to the cavity, and yet leave it readily when the cap is in position.

| | <i>s.</i> | <i>d.</i> |
|--|-----------|-----------|
| Price, assorted, in boxes of 100 . . . per box | 1 | 0 |

CONE-SOCKET HANDLES.

Figs. 1, 2, and 3 are for Excavators, Chisels, etc.
 Fig. 5 is for Screw Pluggers.
 Figs. 10-13 will take both styles.

VELVET RUBBER-DAM.

Size of Tin Cylinder: 7 $\frac{3}{8}$ inches long.

IN TWO THICKNESSES—MEDIUM AND THIN.

It is made of pure Para rubber of the highest grade, with the greatest care and in the best manner. We can most strongly recommend it.

| | | | | | | s. | d. |
|---------|-----------------------|-------------------|---|---|---|---------|-----|
| Medium, | in lengths of 15 feet | by 6 inches wide | . | . | . | per tin | 7 6 |
| " | " | 7 $\frac{1}{2}$ " | " | " | " | " | 3 9 |
| Thin | " | 15 " | " | " | " | " | 5 6 |

EXCELSIOR RUBBER-DAM.

SUPERFINE QUALITY—MEDIUM THICKNESS.

Made from the purest Para rubber. Keeps good a long time; is strong and tough, and can be stretched to a great extent without tearing.

| | | | | | | s. | d. |
|----------------------------|--------------------|---|---|---|---|---------|-----|
| Fifteen feet long | by six inches wide | . | . | . | . | per tin | 7 6 |
| Seven and a half feet long | by six inches wide | . | . | . | . | " | 3 9 |

GLOBE COFFER-DAM RUBBER.

(Introduced by Mr. H. T. KIRBY.)

Of superior quality, not readily affected by climate. It is of a pale red colour, and adds to the light in the mouth.

| | | | | | | s. | d. |
|-----------------------|-------------------|---|---|---|---|---------|-----|
| In lengths of 15 feet | by 6 inches wide | . | . | . | . | per box | 7 6 |

WAXED.

SILK HOLDER.

FULL SIZE.

For attaching to the bracket table, or wall, or any available place within easy reach of the Operator.

It will hold a reel of our plain or waxed floss silk, and can be charged or re-charged in a few moments.

To charge, unscrew the ends, slip the reel on the spindle inside the holder, and pass the end of the silk through the hole shown in the illustration.

Price, Nickel-plated, with *s. d.*
cutter on end 3 6

RUBBER-DAM APPLIERS.

(Mr. MARCUS DAVIS'S.)

6 3/4 INCHES LONG.

Price, in File-cut handle, Nickel-plated each *s. d.* 3 9

RUBBER-DAM PUNCHES.

AINSWORTH'S.

6½ inches long.

Rubber-dam Punch, Dr. Ainsworth's, with circular plate containing five holes of different sizes.

| | |
|-----------------------------------|-------|
| In Steel, Nickel-plated | s. d. |
| | 12 6 |

IMPROVED FORM.

5¾ inches long.

Rubber-dam Punch, Improved Form, with circular plate containing four holes of different sizes.

The punching pin *a* slides in socket *b* in a straight line when pressure is applied, and thus cuts equally all round the edge of the holes. There is a small spring on the pin, inside the socket, which opens the handles when the pressure is released.

The rubber-dam can be laid in the space beneath the plate and pin without danger of being caught and torn in the joint of the handles.

IMPROVED HOT-AIR SYRINGE.

(AMERICAN PATTERN.)

With Asbestos connection suggested by Mr. KENDRICK.

| | | |
|--|----|----|
| Hot-Air Syringe, with patented Asbestos connection, metal parts Nickel-plated, and bulb covered with silk netting as illustrated | s. | d. |
| | 14 | 0 |
| Patented Asbestos connection fitted to Syringes now in use each | 2 | 3 |
| Extra Bulbs without net „ | 1 | 3 |

9 inches long.

HOT-AIR SYRINGE STAND.

This Stand will be found convenient for holding a hot-air syringe over a spirit flame while the Operator is at work on the cavity of the tooth.

The syringe bulb rests in the frame on the top of the Stand, and the metal tube to which it is secured slides up and down the pillar attached to the base, to permit of the heat chamber being fixed at any point above the flame of the lamp.

Sole Agents :

CLAUDIUS ASH & SONS, Ltd.,

5 to 10, BROAD STREET, GOLDEN SQUARE, LONDON, W.

To be obtained of all Dental Dealers.

ASH'S ANATOMICAL IMPRESSION TRAYS.

These Trays are designed for taking impressions of average normal mouths, and are the outcome of suggestions made to us by many practical Operators.

UPPER.

They are made in Britannia Metal and in German Silver.

ASH'S ANATOMICAL IMPRESSION TRAYS—*continued.*

The Britannia Metal Trays are stout enough to withstand the pressure of ordinary usage without altering in shape, but at the same time allow of ready adjustment to meet the needs of abnormal cases.

The handles are flat, and there is a hole in each to admit of the Trays being hung up when not in use.

LOWER.

NITROUS OXIDE GAS.

(COXETER'S, CLARKSON'S, AND SPURGE'S.)

In thoroughly cleansed, reliable, annealed Steel and Iron Cylinders, which are most carefully tested under very high pressure to ensure absolute safety in transit and in handling. See Professor Goodman's Paper on "The Strength of High-Pressure Gas Cylinders" in the Journal of the British Dental Association for August, 1900.

GAS CYLINDER.

- A. Key for releasing the Gas. B. Tap of Gas Cylinder.
C. Male Screw on Cylinder, to which the union of the Cattlin's Bag is attached.

STEEL OR IRON CYLINDERS.

| | Cylinder. | | | Gas. | | Complete. | | |
|--------------------------|-----------|----|----|------|----|-----------|----|----|

| 500 " | 2 | 10 | 0 | 25 | 0 | 3 | 15 | 0 |

Steel or Iron Cylinders refilled at the prices here noted for the Gas. When the Gas in 25, 50, 100, or 200-gallon size Cylinders that are refilled at one time amounts to 500 gallons or more, it is charged at the rate of 5s. per 100 gallons.

NOTE.

We have sometimes been asked if Nitrous Oxide Gas deteriorates with age. A reference to some of the old Journals will show that this question has been discussed again and again and decided in the negative.

OXYGEN GAS.

FOR USE IN CONJUNCTION WITH NITROUS OXIDE.

A 100-gallon size Nitrous Oxide Cylinder holds about 30 gallons of Oxygen. Cylinders are refilled at 2s. 6d. each.

| Prices | Cylinder. | | | Oxygen. | | Complete. | | |

SPURGE'S ANGLE GAS CYLINDERS.

MADE OF STEEL, AND MOST CAREFULLY ANNEALED.

Spurge's Angle Cylinders for Nitrous Oxide Gas, or for Oxygen, are recommended with the fullest confidence.

They are favoured by the most eminent Anæsthetists, who claim that this form of Cylinder renders the Gas less liable to freeze in the valve, and thus hamper the administration of the anæsthetic, than other kinds of Gas Cylinders.

CELLULOID FACEPIECE AND WELLER'S ASEPTIC THREE-WAY STOPCOCK.

Facepiece and Stopcock.

The chief feature about this Facepiece is that it is roomy enough to go over a Mason's Gag when it is fixed in the mouth.

Enlarged view of Stopcock.

The inside of the Stopcock can be readily and thoroughly cleansed by removing the rim *D* on each side.

PORTABLE GAS OUTFITS, FOR THE ANÆSTHETIST WHEN VISITING.

DESCRIPTION:

- su*—Single Union.
t—India-rubber Tube.
B—Cattlin's Bag.
T—India-rubber Tube covered with Worsted.
TS—Two-way Stopcock.
h—Air-hole in Stopcock.
FP—Facepiece.
ev—Expiratory valve.
iv—Inspiratory valve.
ac—Air-cushion.
sc—Stopcock of air-cushion.
SC—Stopcock of Supplemental Bag.
b—Supplemental Bag.

In addition to the Bags, Facepiece, and Tubings shown above, the Leather-covered Case here illustrated will hold a cylinder of Gas, with Key, a second Facepiece, a set of Gags, etc.

NOTES.

"One great advantage of the Supplemental Bag is that while it continues to empty itself and refill, there can be no doubt that respiration is being properly performed; it is an unfailing index of the state of this all-important function."—*A. S. Underwood.*

Mr. Braine says: "It may be urged against this method that the patient re-breathes the carbonic acid of his own expired air, and this is true; but from the length of time I have employed this plan, and from never having seen any deleterious results from it, I do not attach any importance to the objection."

WELLER'S APPARATUS

FOR THE ADMINISTRATION OF NITROUS OXIDE GAS AND
OXYGEN.

DESCRIPTION:

- | | |
|---|----------------------|
| F—Facepiece. | EV—Expiratory Valve. |
| H—Regulating Handle. | B—Twin Bag. |
| MM—Mounts. | TT—Tubings. |
| UU—Unions for attaching to Gas Cylinders. | |

NOTE.—The union marked O on the *red* tubing is connected to the Oxygen cylinder, and the other union to the Nitrous Oxide cylinder.

PRICES:

| Twin Bag | 4 | 5 | 0 |
| The same, with Black Silk Twin Bag | 5 | 0 | 0 |

HEWITT'S SIMPLIFIED PORTABLE APPARATUS

FOR ADMINISTERING NITROUS
OXIDE AND OXYGEN.

DIRECTIONS FOR USE:

All air or gas should first be pressed out of the double bag,* the indicator turned to "Air," and the two divisions of the bag nearly, but not quite, filled with their respective gases, by rotating the foot keys. No further addition of oxygen will be needed. The facepiece should then be very accurately applied. Air will be breathed freely through the apparatus. The valves should be heard to act, otherwise the facepiece is not fitting, or the patient is not breathing as freely as he should. The indicator is now turned to "1," which means that nitrous oxide with a small quantity, possibly 1 or 2 per cent., of oxygen will be inhaled. It is most important that the two divisions of the double bag should be kept *equally and partly distended*, as shown in illustration. The Anæsthetist must therefore keep his foot almost constantly turning the nitrous oxide foot key in order that the two parts of the bag may remain equal in size throughout. After two or three breaths at "1" the indicator should be turned to "2," and progressively, after every two or three breaths, to "3," "4," "5," "6," "7," "8," "9," or "10," according to the type of patient. In children and very anæmic persons the indicator may be placed at "2," "3," or even "4," to start with, and turned to a fresh number every breath or two. But in adults in good health less oxygen must be given.

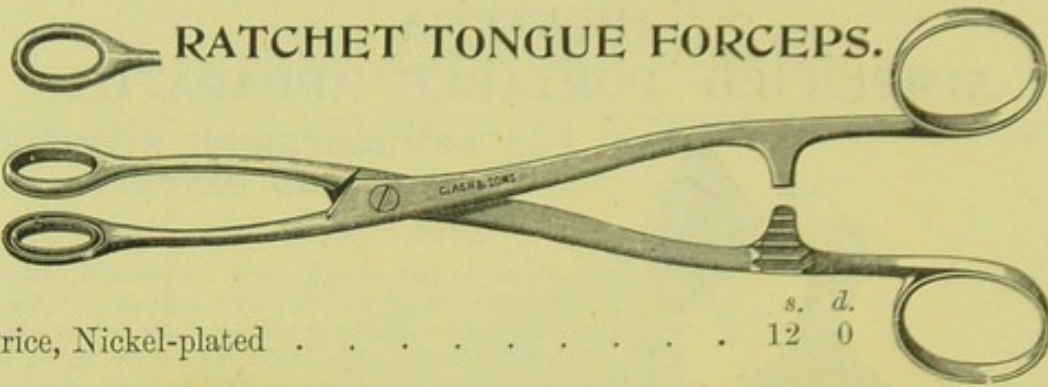

Apparatus complete.

* It is not advisable to press the bags too tightly, as the suction caused by the sides adhering together has a tendency to draw the valves in the delivery tubes through to the wrong side.

THE PERFECT MASK.

(PATENTED.)

(Designed by FIELD ROBINSON, D.D.S., Univ. of Penn.)

Aseptic, Transparent, Simple in Construction,
Readily Sterilised, Reliable, Economical, and
Insoluble to Anæsthetics of the Ethyl-Methyl Class.

SUITABLE FOR USE IN ADMINISTERING

Somnoform, Ether, Ethyl Chloride, Chloroform,
Ethyl-Methyl Mixtures, also
Nitrous Oxide Gas, and
Nitrous Oxide and Oxygen in combination.

Mask complete, with door of metal chamber open. *A.* Pneumatic India-rubber pad—commonly known as Facepiece pad. *B.* Metal chamber on side of glass frame. *C.* Sterilised bladder. (If preferred, an India-rubber bag can be used instead.)

General Directions sent with each Mask.

LOBJOIS' No. 1 INHALER.

(PATENTED.)

Specially designed for taking the sealed tubes of
BENGUÉ'S PURE ETHYL CHLORIDE,
 but it is also equally well adapted for use in administering any of the
 Anæsthetics of the

ETHYL OR ETHYL-METHYL CLASS,

although only Ethyl Chloride is referred to in the description of the Inhaler and its advantages.

This illustration shows the Inhaler complete, ready for use.

**ADVANTAGES:**

1. It holds the bulb of Ethyl Chloride containing the dose necessary for producing anæsthesia.

2. Additional Ethyl Chloride can be applied, if required, during the administration, without removing the Facepiece.

3. Air can be given and regulated according to the needs of the patient by means of the Air Valve D.

4. The Ethyl Chloride is so securely confined within the cage F that when the Facepiece is applied there is no waste, and all the Anæsthetic vapour is freely inhaled by the patient without discomfort or sense of suffocation.

5. The Inhaler is extremely portable.

6. It is simple in construction, and all its parts can be readily sterilised.

7. It is thoroughly well made, and moderate in price.

LOBJOIS' No. 1 INHALER.

FIG. 6.

* This Gauge is illustrated on page 231.

KNÖFERL'S PATENTED GAS-REGULATING GAUGE.

A—Safety Disc Fitting.

The Gauge, as above illustrated, has been designed and patented by Mr. Francis Knöferl; it embodies considerable improvements, the result of his twenty years' experience. The advantages are—

- First.—The arrangement controlling the supply of gas is frictionless, consequently it does not impede the action of the Gauge.
- Second.—The flexible gas-supply pipe may be attached to either nipple, to meet the convenience of the Operator.
- Third.—The gas chamber may be turned either way, even while the Gauge is in operation and subject to pressure, without injury to the Gauge.

If from any cause the Gauge fails to act, relief to the boiler pressure is afforded by the rupture of a copper safety disc *A* provided for that purpose. Spare discs are supplied to order.

We recommend the use of the Thermometer and Gauge together—see Circular, to be had on application.

PRICES:

| | £ | s. | d. |
|--|---|----|----|
| Gauge with Copper Syphon and Safety Disc Fitting . | 1 | 17 | 6 |

Separately:

| | | | |
|-------------------------|---|----|---|
| Gauge | 1 | 12 | 6 |
| Copper Syphon | 0 | 5 | 0 |

NOTE.—We have ceased to supply the Iron Syphon because it is liable to corrode and choke the Gauge. There is no such danger with a Copper Syphon.

ASH'S Fig. 90 FLASK.

In three parts: simple, compact, and strong; much liked and extensively used on account of its general utility.

| | Large. | | Small. | |
|------------------------|--------|----|--------|----|
| | s. | d. | s. | d. |
| In Gun-Metal | 5 | 6 | 4 | 6 |
| In Iron | 4 | 6 | 4 | 0 |

WROUGHT-IRON RING,

WITH THUMB SCREW.

For Ash's Fig. 90 Flask shown above, and for other Flasks.

Made in two sizes—large and small.

Price, either size . . . each

| | |
|----|----|
| s. | d. |
| 3 | 6 |

Both sizes of Fig. 90 Flask when employed in conjunction with this Ring and Thumb Screw are too large for our Portable Vulcanizers; if either is required to go in these Vulcanizers, the Clamp and Wedge shown below must be used with it.

WROUGHT-IRON CLAMP,

WITH WEDGE.

For Ash's Fig. 90 and other Flasks. Made in two sizes—large and small.

Price, either size . . . each

JORDAN'S PIN FLASK.

This well-known and favourite Flask is made in three sizes, which time has proved to be the most useful for all-round work.

| | Iron. | Gun-Metal. |
|------------------------|-------|------------|
| | s. d. | s. d. |
| *Extra large | — | 9 0 |
| Large | 4 6 | 7 6 |
| Medium | 4 0 | 6 0 |

* The Extra Large size will not go in our One-, Two-, and Three-Flask Portable Vulcanizers, the Large and Medium will.

OVERELL'S PIN FLASK.

This Flask is as large as it can be made for our Portable Vulcanizers, and is specially adapted for wide lowers.

By means of the lug on the lid, which is undercut to admit of being readily grasped with a suitable tool, it can be easily withdrawn from the Vulcanizer.

HALF-SIZE.

| | s. | d. |
|-------------------------------|----|----|
| Price, in Gun-Metal | 7 | 6 |

LADMORE'S FLASK.

Consisting of three parts. The upper and lower sections are held together by side clamps, but these clamps are not intended for closing the Flask; they merely serve to keep the parts together after it has been closed in the press or vice. A few light taps with a wooden mallet will be found sufficient to drive them home. There are two projections on the top of the upper part, under which the lid slides and fixes itself.

The hook, shown in the illustration, is for lifting the Flask while hot.

PLASTER OF PARIS.

SPECIALLY PREPARED FOR DENTAL PURPOSES.

Knowing as we do that good Plaster of Paris is of the utmost importance to dentists, we give the strictest attention to each kind which we supply, and this enables us to recommend it with the fullest confidence. Every lot is carefully tested before it is offered for sale, and it is very gratifying to us to be able to state that our Plaster gives general satisfaction to all who use it, both at home and abroad.

| | <i>PRICES:</i> | Per bag. | | Per cwt. | |
|---|---------------------|-----------|-----------|-----------|-----------|
| | | <i>s.</i> | <i>d.</i> | <i>s.</i> | <i>d.</i> |
| Fine, for Models | in 7-lb. paper bags | 0 | 6 | 6 | 6 |
| Superfine, for Models | „ | 0 | 9 | 9 | 6 |
| Extra Superfine, for Models and Impressions | „ | 1 | 0 | 12 | 6 |

Plaster of Paris in paper bags, as above, wrapped in waterproof paper and packed for export in tin-lined cases, supplied to order.

Dentists residing abroad and in the Colonies will find this much cheaper than the Tins mentioned on the next page, if they can keep the Plaster in a dry place when they receive it.

RUBBER BOWLS FOR MIXING PLASTER.

These Bowls are made of soft rubber, about one-eighth inch thick. The principal advantages in their use are: They cannot be broken; their sides can be pressed together so as to form a lip or spout for pouring out soft plaster; the plaster that remains in them and becomes set can be thoroughly crushed and removed by squeezing the sides of the bowls together.

| | | <i>PRICES:</i> | | <i>s. d.</i> | |
|---|------|----------------|---|--------------|--|
| Small Plaster Bowls, 4 in. diameter by $2\frac{3}{4}$ in. deep inside | each | 2 | 6 | | |
| Large „ 4½ in. „ by $3\frac{1}{2}$ in. „ | „ | 3 | 4 | | |

PLASTER OF PARIS FOR EXPORT.

IN TINS WITH PATENT SELF-OPENING LIDS.

All our Plaster Tins are now fitted with the Patent Self-opening Lid. This Lid is so constructed that it can be removed and replaced any number of times without becoming loose, and it fits the Tin so perfectly that the air is excluded from the Plaster, which can thus be kept good for any length of time.

To open the Tin, lever up the Lid, as shown in the illustration, with the side of a screw-driver, or other suitable tool.

ASH'S METAL BARS.

FOR STRENGTHENING LOWER VULCANITE DENTURES.

In using a Metal Bar for strengthening a Lower Vulcanite Denture, it is important to see that it is suitable for its purpose. If it is too rigid it may weaken or even crack a plate, and if it is too soft it will fail to restore the plate to its normal shape, should it be subjected to undue strain in any direction.

These Bars possess just enough elasticity to give with the plate, and are, therefore, **strengtheners** in the strictest sense of the word.

CHRISTENSEN'S RATIONAL ARTICULATOR.

(REGISTERED. REG. No. 372,481.)

Mr. Carl Christensen claims that with this Articulator it is possible to imitate, "with an exactness sufficiently great for practical purposes, the natural individual movements of the jaw, which, in regard to articulation, are of importance in the construction of artificial dentures," and says that it is not intended to facilitate "the wholesale production of dentures; on the contrary, it will only be an important aid in the hands of the Dentist who turns out perfect work and who is striving to reach the ideal."

CONE-JOURNAL HAND AND FOOT LATHE.

(ASH'S ENGLISH MANUFACTURE.)

FIG. 6.

This Lathe is made with an adjustable cone, split at both ends, which acts as a double clamp for holding the stems of the chucks, thus giving them extra long bearings. The working parts are well shown in the cut. It is very suitable for a branch practice or when visiting, and is extremely portable, the total weight being only 8 lbs. We can recommend it as powerful enough for the heaviest work in the dental laboratory.

MOORE'S UNIVERSAL SPRING APRON.

There are no buttons to fasten on this Apron, and no strings to tie or untie; it can be slipped on or off in a moment, is very useful for general wear, but invaluable to the Dentist who spends a portion of his time in the workroom, and is as easily washed as a handkerchief after the springs are removed from the loops in which they are inserted.

| | |

ASH'S CORUNDUM WHEELS, FILES, Etc.

From our long experience in the use of Corundum, we are able to select the kind and quality best adapted for dental purposes. Our method of crushing it prevents as much as possible dulling the sharp edges of the particles while reducing them to their several grits. It is this cutting quality which has obtained for our Wheels, Files, etc., the high estimation in which they are held both in England and abroad.

The Wheels are adapted to fit all the Lathe Chucks of our manufacture.

For remarks concerning the Files see page 268.

WHEELS (see next page):—

VULCANITE CUTTERS.

(MR. E. LLOYD-WILLIAMS'.)

Mr. Lloyd-Williams thus describes them :

These tools, made in two sizes, will be found useful for finishing vulcanite work. They are invaluable for clearing—and leaving smooth—the V-shaped spaces between teeth, and for defining the cervical border of the vulcanite in front and the shoulder of the tooth at the back. Using the thumb as a support, they may also be employed for “planing down” any surface which requires reducing.

SPRING-MAKING PLIERS.

(INTRODUCED BY MR. G. NORTHCROFT.)

4½ inches long.

Different forms of Springs made with the Pliers.

“These Pliers,” states Mr. Northcroft, “are after a design of Prof. W. H. Dorrance, and will be found to greatly simplify the bending of pianoforte wire into Talbot coils, etc., for regulation cases. The springs produced by them are bent evenly and symmetrically, and are hence much neater and more efficient in use than springs that are made with a tool that is not specially adapted for the purpose.”

The springs illustrated are drawn from patterns kindly furnished by Mr. Northcroft.

| | s. | d. |
|---------------------------|----|----|
| Price of Pliers | 4 | 6 |

SCREW-CUTTING PLIERS.

(SUGGESTED BY MR. R. P. LENNOX.)

With straight chops. Designed for use in the **Operating Room**.

ADAPTED FOR—

- (1) Cutting a thread on a tapering wire to make a screw post which will tap for itself a root to be filled or crowned.
- (2) Grasping a strip of copper about a bicuspid root in crowning.
- (3) Inserting and removing cone-socket points.

It is also a useful tool in the **Workshop** for general purposes, in particular for bending the pins in pin-teeth, and for adjusting the pins for tube-teeth, the long slender chops being especially fitted for these purposes.

Pliers, 5 in. long, Nickel-plated 3 6

CAVITY CAP PUNCH.

(MR. G. NORTHCROFT'S.)

6 inches long.

For punching out Metal Pulp Caps.

With this tool, correctly shaped caps in three different sizes can be made by the Operator from an ordinary thin sheet of white metal or telephone plate.

ASH'S RETAINING TAGS.

FOR COMBINATION DENTURES AND FOR CONTINUOUS-GUM WORK.

(REGISTERED. REG. No. 350,189.)

By Combination Dentures are meant such work as lining the palatine or lingual surface of a vulcanite denture with gold, or using metal strengtheners in conjunction with vulcanite.

The engraving shows a palatine lining with the Tags soldered on the outer or lingual side ready for the vulcanite to be attached. When the lining is required on the lingual side, the Tags are, of course, soldered on the inner or palatine side.

MELOTTE'S PATENT REVOLVING COMBINATION BENCH BLOCK.

ABOUT HALF-SIZE.

DESCRIPTION:

No. 1 is a nicely finished case-hardened Steel Anvil, which may be instantly revolved and stopped on quarters.

No. 2 is a Rubber Block, held by friction on its arm, and can be readily turned to any position.

No. 3 is a Wooden Block held on its arm by a rubber friction device, which can be turned round to any position desired.

The Bracket also affords a hammering surface.

BROWNLIE'S SUCTION VALVE.

This Valve can be attached to either a metal plate or a vulcanite piece.
The claim made for it is that it is the best in the market.

ADVANTAGES:

- 1.—It is simple in construction.
- 2.—Not liable to get out of order.
- 3.—Will hold the heaviest denture in position, if properly adjusted.

Some idea of its power in this direction may be gained when it is stated that it will support a column of water in a glass tube 30 inches long, which is equal to 5 ounces in weight.

- 4.—It is very cleanly, comfortable, and efficient in use.

5.—It does not produce soreness or swelling of the palate; in a word, it has more advantages than other valves without any of their disadvantages.

DESCRIPTION:

- A—Valve mounted in vulcanite.
- B—Valve unmounted.
- C—Screw head.
- D—India-rubber washer.
- E—Key for adjusting screw-head.

Directions for Use supplied with each Valve.

| Key for adjusting screw-head in position | 0 | |
| Extra India-rubber Washers, in packets containing 2 doz. | 0 | 6 |

A discount of 10 per cent. is allowed when half a dozen Valves are purchased.

LORD'S PATENT MOULDED SUCTION DISCS.

The following Discs are made from rubber masticated by powerful and specially constructed machinery (in our own works) without the use of naphtha or other solvent in any shape or form. The rubber being masticated dry is less liable to swell in the mouth, and is also perfectly free from the smell of solvents, such as naphtha, etc. Every Disc is compressed, moulded, and vulcanized under compression in separate metallic moulds. We are thus able to produce them of one uniform density and quality. Their vulcanization is carried to the utmost limit without injury to the rubber. Every Disc is numbered and bears the words "Lord's Patent" in raised letters.

SIZES AND PATTERNS OF DISCS.

We make 10 patterns and sizes of Discs, and put them up in boxes of 12. Each box contains full directions for use. 12 Moulded Rubber Discs, any colour, pattern, or size; 13 sets of patterns for forming chambers, cut from millboard; 12 pins for fastening the same down to model; 12 stamped washers and bolts, for fixing Disc to palate.

Boxes of Discs can also be had packed, with 6 sets fine grain tin chamber patterns, which can be used in two or more cases each. These are very soft, and will not stain the vulcanite. When not otherwise specified, boxes will be sent packed with red rubber discs Nos. 0 and 1, and tin chamber patterns.

LADLE FURNACE.

(FLETCHER, RUSSELL & CO.'S.)

This Furnace will take Ladles 7 inches in diameter. The burner, which is removable, can also be used for heating soldering irons, boiling water, and other purposes. The body and lid are arranged to admit the handles of different size Ladles at different heights, to enable them to be kept perfectly level. It is furnished with a metal skimmer, and hook for lifting the lid.

| Furnace complete, without Ladle | 13 0 |

LADLES FOR ZINC AND LEAD.

(FLETCHER, RUSSELL & CO.'S.)

These Ladles, which are true to shape and thickness, are made with cast-iron bowls for lead and malleable iron bowls for zinc. The handles are bolted on, and never wear out. A new bowl can be fixed in a few minutes. The diameter of each is 7 inches. The handles ensure perfect steadiness in pouring, and are always cool; the sliding handle being pushed to the cool end while the metal is being heated.

MELTING ARRANGEMENT.

(FLETCHER, RUSSELL & CO.'S.)

For melting gold and silver rapidly, without the use of a furnace. In this arrangement the two parts of the ingot mould slide on each other, to admit of ingots of any width being cast. We find it necessary to emphasise this fact, in answer to the numerous inquiries which we receive for wire moulds. This mould serves for both plate and wire, and the Blowpipe is part of the rocking stand.

SLIGHTLY UNDER HALF-SIZE.

| | |

INGOT MOULD FOR PLATE AND WIRE.

(MR. W. DE C. PRIDEAUX'S.)

ABOUT ONE-THIRD SIZE.

For use with Fletcher's Automatic Hand Blowpipe; adapted for melting up to about 3 ozs. of gold.

The engraving shows the mould for *plate* with Fletcher's slide and crucible secured to it by the screw on the top of the frame. The upper part of this mould can be removed and the mould for *wire* substituted for it in a few moments.

A slight twist of the handle suffices for pouring the molten metal into the mould.

FLASKS FOR MAKING METAL DIES.

(BAILEY'S.)

FIG. 1.

FIG. 2.

FIG. 3.

DIRECTIONS FOR USE:

Place a shallow Plaster Cast, A B C (Fig. 3), on a level surface; turn over it the lower half of the Flask (Fig. 1), with joint side down; pack the sand in it, and level off the top; turn up the Flask, remove the superfluous sand, tap the cast lightly, when it can be easily lifted out; pour in the Zinc; when the impression is filled, place over it the upper half of the Flask (Fig. 2), and fill up immediately; knock out the sand, invert the whole Flask, and pour the Lead upon the Zinc; when cooled, part and remove the Flasks, and with a few sharp blows at the joint the Dies will separate.

Figs. 1 and 2 constitute the Flask, which is made in two sizes, large and small.

ASH'S PERFECT AUTOMATIC BLOWPIPE.

(Patented in Great Britain, Germany, and the United States of America.)

DESCRIPTION :

- A—Regulating Slide.
- B—By-pass Controller.
- C—Hook for hanging up Blowpipe.
- D—Cap in which nozzle is screwed.
- Gas—Gas inlet.
- Air—Air inlet.

Any size flame between a large heating-up flame and a needle flame can be obtained in a moment with Ash's Perfect Automatic Blowpipe ; it is in every way an ideal blowpipe.

There are no taps about it and nothing to get out of order. By means of the sliding Thumb Regulator **A** both gas and air can be instantly cut off, leaving only the By-pass alight ; the Blowpipe is thus not only always ready for use, but under the most perfect control ; moreover, it is absolutely steady in use.

The By-pass can either be cut off or enlarged by opening or closing the Regulating Screw **B**, but there is no need to touch it, except for some special reason, because it is set at the right point when the Blowpipe is tested before being offered for sale.

The Blowpipe is light and handy, comfortable to use, thoroughly well made, and in every way suited for all classes of Dental Work.

The nozzle which screws into Cap **D** can be removed and replaced by a new one, when necessary, in a few moments.

FLETCHER'S AUTOMATIC BLOWPIPE.

(C. 10.)

This will be found a simple and most extraordinarily efficient Blow-pipe for ordinary workshop use. Both gas and air are controlled with a movement of the finger, a few minutes' practice giving perfect mastery over the character of the flame. It consumes about 10 cubic feet of gas per hour at full power. Requires Foot Blower, size No. 3.

| | |
|---------------------------------|-------|
| Price, as illustrated | s. d. |
| | 9 0 |

FLETCHER'S FOOT BLOWERS.

FIG. 9.

These Blowers (Fig. 9) have proved themselves to be efficient, simple, strong, and able to stand hard and constant work. The pattern is now made in the following sizes :

| | | | s. | d. |
|---------|-------------------------|------|----|----|
| Size 3. | 13 by 10 by 6½ in. deep | each | 26 | 0 |
| „ 5. | 15 „ 12 „ 7 | „ „ | 33 | 6 |

FIG. 9B.

This pattern, by reversing the position of the Blower, reduces the risk of mechanical injury to the disc, and does away with the necessity for a wood casing or protection. It also prevents the valve from picking up dirt from the floor, keeping the whole arrangement cleaner, and the valves in more perfect order.

| | | | s. | d. |
|---------------|--|------|----|----|
| Size 3. | Same dimensions as Fig. 9 | each | 30 | 6 |
| „ 5. | „ „ „ 9 | „ | 36 | 6 |
| Rubber Discs, | for size 3 each 2/8 ; for size 5 | „ | 4 | 0 |
| Nets, | „ 3 „ 1/- ; „ | „ | 1 | 4 |

(Two Rubber Discs are used on each Blower.)

FLASK HOLDER

AS USED AT THE BERLIN DENTAL SCHOOL.

By means of the screw handle, the Flask can be firmly clamped in the Holder for heating-up, scalding out the wax, or packing the rubber.

| | s. | d. |
|-----------------|----|----|
| Price | 3 | 6 |

**STANDING'S
PORTABLE DOUBLE FOOT-BELLOWS AND RESERVOIR.
(FOR USE WITH THE BLOWPIPE.)**

A steady and continuous blast is given by this compact little apparatus, sufficiently powerful for any Blowpipe that is used for dental purposes. The double bellows is worked by a rocking motion of the foot, and requires very little exertion.

As shown in the engraving, the air reservoir can be suspended by the side or underneath the work-bench in any convenient position where it is not likely to get damaged.

BRITTAN'S SOLDERING SPOON.

With wire handle and gauze bowl, supported underneath by two iron stays.

The shape of the Spoon is so convenient that any case can be soldered upon it, and when the case is red-hot the handle remains perfectly cool.

ABOUT TWO-THIRDS SIZE.

Mr. Brittan says: My method of using the Spoon is as follows: The teeth or bands having been waxed to the plate ready for inserting in plaster and sand, I mix this as usual, put sufficient for the case on the gauze of the Soldering Spoon,

and insert the case. Should I be in a hurry, I put the Spoon over a low flame *at once* to hasten the setting, and when the case is red-hot I solder. The advantages of my plan are these:

- a. A great saving of time.
- b. I have no need of a clumsy charcoal slab.
- c. The plaster and sand mixture does not crack in the Spoon.
- d. By means of the Spoon work can be done with more ease, comfort, and certainty than by any other method.

To remove the case from the Spoon.—Let the case cool, *place it in water for a few moments*, and then tap the Spoon lightly on the bench—this is all that is necessary.

It is well known that after a mixture of plaster and sand has once been made red-hot, it will fall to pieces if it be put into water.

| Price, on Brass Stand, as illustrated | | 4 | 2 |

WATTS' COMBINED BUNSEN AND BLOWPIPE BURNER.

This is a most useful burner for blowpipe work; the bent arm prevents the possibility of small articles or *débris* being dropped down the tube, and the V-shaped slit at end forms a rest for the blowpipe nozzle. A Bunsen flame can be instantly obtained by opening the shutter A.

BUNSEN BURNER.

(FLETCHER, RUSSELL & CO.'S.)

FOR MODELLING AND FOR
GENERAL PURPOSES.

These are the ordinary brass tube Bunsen. They are correctly proportioned in every detail, and of the full theoretical power, working up to their maximum calculated duty in every case. All are screwed for $\frac{3}{8}$ -in. connection.

The number gives the maximum gas consumption in cubic feet per hour at $\frac{1}{10}$ pressure.

All have air tubes; these enable the smaller sizes to be used with a blowpipe without the necessity of a loose internal tube.

| | Number | 3. | 5. | 6. | 8. | 12. |
|---------------------------------|--------|--------------------|--------------------|-------------------|-------------------|-------------------|
| Size of Tube outside | | $\frac{3}{8}$ in. | $\frac{7}{16}$ in. | $\frac{1}{2}$ in. | $\frac{5}{8}$ in. | $\frac{3}{4}$ in. |
| Height, without Stand | | $3\frac{1}{2}$ in. | $4\frac{1}{4}$ in. | 5 in. | 6 in. | 7 in. |
| | | s. d. | s. d. | s. d. | s. d. | s. d. |
| Price, without Stand | | 0 7 | 0 9 | 0 10 | 1 0 | 1 6 |
| „ on Brass „ | | 2 0 | 2 2 | 2 4 | 3 0 | 4 0 |
| „ „ „ with Tap | | 3 0 | 3 2 | 3 4 | 4 0 | 5 0 |

Heavy round brass stands only are supplied. The objectionable nature of iron stands on a laboratory table is too well known to need any remark. The stand increases the total height about 1 inch. They can be supplied in clusters of 3, 4, 7 or 12 burners, or mounted on tubes in any form.

LABORATORY BUNSEN.

(FLETCHER, RUSSELL & CO.'S.)

Messrs. Fletcher, Russell & Co. say: "We have frequently been asked to make a correctly adjusted Bunsen for laboratory use, but have declined, owing to the very low price at which the common foreign burners are made. As we have, however, established a private demand for these burners, we have decided to put them on our list for the future. They are substantially made, correctly adjusted, the screws are English Standard threads, and the stand is formed with a carrier to hold the rose when not in use, so as to prevent its loss, which usually happens with the ordinary make. The roses are solid cored castings, not made out of thin parts stuck together, as is usual in the cheaper makes."

Height with rose as engraved, $5\frac{1}{2}$ inches.

Gas consumption, at $\frac{1}{10}$, 4 feet per hour.

| | | |
|--|-------|-----|
| Price of Bunsen without rose | s. d. | 1 9 |
| Rose extra | | 0 7 |

IMPROVED SAFETY BUNSEN.

(FLETCHER, RUSSELL & CO.'S.)

FOR MODELLING, ANNEALING, AND OTHER PURPOSES.

These will be found as perfect as any upright burner can possibly be made, of the highest possible power for the size—can be turned down to the merest flicker without lighting back. They are made in three sizes, all in brass polished. The number gives the maximum gas consumption in cubic feet per hour at $\frac{1}{10}$ pressure. These burners can be supplied in clusters of any number, or mounted on tubes, any shape, and with or without taps, to order.

| | Number | 5. | 10. | 14. |
|--|--------|--------------------|--------------------|--------------------|
| Diameter across top of gauze | | $\frac{7}{8}$ in. | $1\frac{1}{4}$ in. | $1\frac{1}{2}$ in. |
| Height, without Stand | | $3\frac{3}{4}$ in. | $4\frac{1}{2}$ in. | 6 in. |
| | | s. d. | s. d. | s. d. |
| Price, without Stand. | | 1 9 | 2 3 | 3 0 |
| „ on Brass „ | | 3 6 | 4 6 | 5 9 |
| „ „ „ with Tap | | 4 6 | 5 6 | 6 9 |

If placed a number together, on a tube or ring, they must be at least one-fourth the diameter of the top apart. The stand increases the total height about 1 inch.

SETS OF ABOVE (No. 10 SIZE).

Mounted in clusters, each burning 10 cubic feet of gas per hour.

This tool is also supplied, at the same price, with pin-holder and pins the same size as in the Pin Nippers, for punching holes in metal backings for flat teeth.

7½ inches long.

YOUNG'S ADJUSTABLE PERFORATORS.

FOR PUNCHING TWO HOLES AT ONCE.

Mr. Young claims that his tool secures, rapidly and with mathematical precision, exact correspondence between the holes in the metal plate used for backing teeth, and the pins of the tooth to be backed. It provides also for the quick and easy disengagement of the plate from the perforating pins after punching. The difficulty of separating, without twisting or injuring the perforated plate (the greatest obstacle to punching two holes at once), is entirely removed.

The risk of fracture in backing teeth is reduced to a minimum.

No measuring is required. The tooth is its own gauge, virtually punching its own holes.

RIVETING HAMMER.

(DESIGNED BY MR. W. W. DYKES.)

Mr. Dykes says: "This Hammer will be found useful in dishing bands to fit the contour of molars and bicuspid, for touching up the cusps of gold crowns, putting a finish upon the heads of pins in riveting backs upon flat teeth, etc., etc.

"It was specially designed to ensure the easy and thorough cupping of the rubber discs—Hall's, Lord's, and others—in suction uppers, and for making a solid smooth head on the pin in the counter-sink. While in the act of riveting there is no danger with the rounded end of chipping or indenting the vulcanite or of injuring the washer which is used with Hall's disc."
