TABLES

OF THE

CONCENTRATED STRENGTH OF SPIRITS

BY

SIKES'S HYDROMETER,

AS USED BY THE OFFICERS OF THE EXCISE BRANCH OF THE INLAND REVENUE.

DIRECTIONS

FOR THE USE OF

The Tables

IN

ASCERTAINING THE CONCENTRATED STRENGTH
OF SPIRITS

BY

SIKES'S HYDROMETER:

HAVING poured a sample of the spirits intended to be tried into the trial-glass, you must ascertain the temperature of the fluid by immersing the thermometer therein; stir the sample, and wait till the quicksilver remains stationary, and the degree shown on the thermometer scale is the temperature of the spirits.

The various degrees of temperature are indicated at the top of each page, commencing with 30° and ending with 80° of Fahrenheit's thermometer.

Then open the book at the temperature indicated, and apply a weight to the stem of the hydrometer below the ball

and immerse it in the spirits, pressing it down to 0 on the stem; if the right weight has been selected it will float to some division on the upper stem, the sum of which, added to that of the weight attached, is called the indication, and opposite thereto in the Table will be found the true strength of the spirit. For example: If the hydrometer with the weight 20 sinks to 28 (the temperature being 40°), the strength opposite is 45.7 per cent. over proof. If at temperature 51° you apply the weight 40, and it floats to three divisions on the stem, opposite 43 will be found 25.1 O. P., the true strength of the spirit.

The Use of the Comparative Rule

WITH

SIKES'S HYDROMETER.

FOR

SHOWING THE COMPARATIVE VALUE, TAKING STOCKS, AND REDUCING SPIRITS FROM ONE STRENGTH TO ANOTHER.

This Rule shows on the side A B, the comparative value of spirits; and on the side C C C, the quantity of water requisite for reducing from one strength to another. Upon the middle or sliding part the different strengths, from 70 per cent. under proof to 70 per cent. over proof, are laid down; and upon the side which shows the comparative value, the line A denotes shillings, from six to thirty shillings per gallon, and the line B from one shilling and sixpence to eight shillings per gallon. The left of proof on this Rule is under proof, and the right is over proof.

EXAMPLES.

Suppose a spirit 20 per cent. over proof worth eighteen shillings per gallon: place the slide so that 20 per cent. over proof shall be facing eighteen shillings upon the line A, then opposite every other strength will be found the value in proportion thereto; proof will be worth fifteen shillings per gallon; 10 per cent under proof, thirteen and sixpence per gallon. Again, suppose 10 per cent. over proof worth twelve shillings and sixpence per gallon, place the slide so that 10 per cent. over proof shall be facing twelve shillings and sixpence upon the line A, then the comparative value of proof will be eleven shillings and fourpence halfpenny per gallon; 10 per cent. under proof, ten shillings and twopence three farthings; 20 per cent. under proof, nine shillings and one penny per gallon. On the line B, if proof spirit cost five shillings per gallon, then 20 per cent. under proof will be worth four shillings per gallon, &c., &c.

On the other side, the lines C C, divided upon the upper part from 300 to 60, and below from 100 to 20, denote gallons, to facilitate the reducing of spirits. As an example, if 130 gallons of spirits, 40 per cent. over proof, are required to be reduced to proof, place the slide so that 40 per cent. over proof shall be opposite to 130, upon the upper line C, then facing proof upon the same line will be found 182, the number of gallons it is to be made up to. If 100 gallons of spirits, 20 per cent. over proof, are to be reduced to 20 per cent. under proof, fix the Rule so that 20 per cent. over proof shall be opposite 100, then facing 20 per cent. under proof will be found 150, the quantity required. Again, if the cask of 120 gallons is to be filled with a spirit 35 per cent. under proof, place 30 per cent. under proof opposite 120, then the number of gallons of any superior strength

requisite to be put into cask is immediately shown by inspection. If the spirits are 10 per cent. under proof, facing 10 per cent. under will be found 93 gallons and one-third, the quantity required; if the spirits are proof, opposite proof will be found 84 gallons, the quantity requisite; if 20 per cent. over proof, 70 will be the quantity of spirits, &c. &c., the remainder to be made up with water.

By this side of the Rule stocks may be taken and charges estimated, by placing the strength opposite the quantity; then opposite the strength the stock is to be taken at will be found the exact quantity of such spirit.

Suppose in 300 gallons of spirit, 50 per cent. under proof, how many gallons of 28 under proof? Place 50 on the slide to 300 on the upper line, then opposite to 28 per cent. under proof will be found 208, the number of gallons contained in 300 at that strength, &c.: for lesser quantities than 20 gallons—100 can count for 10, 180 for 18, 90 for 9, &c., to any smaller quantity required.

The hydrometer is fitted up either with ivory or boxwood Rules, or without Rules, at the option of the purchaser.

In the event of sending the hydrometer from the country to be repaired or re-adjusted, it is advisable not to send the thermometer (unless it is broken), as that part of the instrument is not required, and is the only one likely to get injured in the carriage.

SPECIFIC GRAVITY TABLES

ADAPTED TO

SIKES' HYDROMETER.

The following Tables of Specific Gravity, constructed from those of Ure, at temperature 51°, show the specific gravity of spirits from 70 over proof down to water at every temperature, which specific gravity is the decimal part per imperial gallon. The imperial gallon of distilled water, at a temperature of 60°, weighs 10 lbs. avoirdupois, the specific gravity being denoted as 1000; therefore a gallon of spirits at the same temperature, the specific gravity of which is 900, weighs 9 lbs. per gallon.

TO USE THE TABLES.

Find the strength and temperature in the foregoing Tables, and facing the strength will be found the Hydrometric Indication, which note; then refer to these Specific Gravity Tables for the indication so found, against which is denoted the specific gravity, or decimal weight per gallon.

EXAMPLES.

- 1. To find the specific gravity of proof spirits at temperature 60°: open Sikes's tables at 60°, and facing proof will be found 58.8, then turning to these Specific Gravity Tables for that indication (58.8), against which will be 9:196, the true specific gravity at 60° temperature, or 9lbs. 3oz. 3drms. per imperial gallon.
- 2. To find the specific gravity of spirits at 60° over proof at temperature 70°; facing 60 over proof at temperature 70°, the indication will be 5.2, and against 5.2 in these Specific Gravity Tables will be found 8.242 specific gravity, or 8lbs. 3oz. 3drms. per imperial gallon.
- 3. To find the specific gravity of spirits at 30 under proof at temperature 58°: against it will be found 76, and facing

76 in the Specific Gravity Tables is 9.525, or 9 lbs. 8oz $.7\frac{1}{2}$ drms. per imperial gallon.

Note.—In using the Tables No. 2, the right hand figure of the indication found in Tables No. 1 is, if under 5, to be omitted, and if over 5, 1 is to be added to the preceding—thus, 8.242 should be read 8.24, and 9.196—9.20.

These Tables (No. 2) are used to readily convert specific gravity into pounds weight per imperial gallon. The first or left hand figure of the specific gravity being taken as pounds, the decimal parts will, by these Tables, be rendered in ounces and drachms—thus, in reading 8.242, or 8.24, the 8 is to be written pounds, and against 24 in these Tables will be found 3oz 13drms.—8lbs. 3oz. 13drms.

EXAMPLE.

To find the weight per gallon at proof, temperature 60°, the specific gravity is 9.196.

				lbs.	oz.	dms.
900			is	9	0	0
·196 or 20			is	0	3	3

9 3 3 per imp. gall.

To find the weight per gallon at 60 over proof, temperature 70°, the specific gravity is 8.242.

					lbs.	OE.	dms.
800				is	8	0	0
·242 or	24			is	0	3	13

8 3 13 per imp. gall.

To find the weight per gallon at 30 under proof, temperature 58°, the specific gravity is 9.525.

					lbs.	oz.	dms.
900				is	9	0	0
•525				is	0	8	$7\frac{1}{2}$

9 8 $7\frac{1}{2}$ per imp. gall.
