PREFACE.

The stock of the List of Outlines for Medical Terms issued by the Society of Medical Phonographers in 1895 having become exhausted, the Council of the Society designated Sir W. R. Gowers, Drs. Gray, Neil, Spooner, and Mr. Norman Porritt, as a Committee to prepare a New Edition. The Council have now the pleasure to offer to the Society and the Phonographic world the following pages as the result of the Committee's labours.

Notwithstanding the attention and care that have been bestowed upon the work, it is probable that some of the outlines chosen may elicit criticism. From the nature of the case this is inevitable, although, when alternative forms were available, the final choice was not made until after the most careful weighing of the advantages and disadvantages of each rival claimant for consideration. Any divergence of opinion among the members of the Committee was settled by the vote of the majority. Space does not allow reasons to be given here; but the Revisers believe that the outlines chosen will be found in practice those best suited for Medical work. The Revisers are indebted to Sir W. R. Gowers for many valuable suggestions, and deeply regret that his recent absence from England has deprived them of the advantage of his co-operation throughout.

During the progress of the work, valuable suggestions and aid were received from Mr. L. L. Burton, Dr. P. H. Fearnside, Dr. P. G. Griffith, Dr. Hill Joseph, Dr. Holmes Joy, and other members of the Society; and, outside the Society, from Mr. H. Dickinson (the Transfer writer of the *Phonographic Record* and this List of Outlines), who has kindly helped the Committee with many results of his varied experience in medical reporting. The Council desire to offer their hearty thanks to these gentlemen for their kind co-operation, as well as to the members of the Revision Committee; and in particular to Dr. Spooner, upon whom, as Secretary of the Committee, much thankless clerical work fell, and to Dr. Gray, who undertook the final collation of the labours of the Committee.

The Council also desire to express their acknowledgments to Messrs. Sir I. Pitman & Sons, Ltd., for permission to issue the List, as well as to employ some slight deviations from standard phonography. These are enumerated in the

INTRODUCTION.

THE VOCABULARY.

The words are arranged in alphabetical order, one on each line, except where the singular and plural, or the substantive and adjectival forms of the same word are placed together.

BRACKETED OUTLINES are words liable to be confused with the outlines immediately preceding on the same line.

CONTRACTIONS.--The primary object of this Vocabulary is to indicate the best outlines rather than to give contractions on an extensive scale. Many words, however, of frequent occurrence in medical writing, need contraction, and for a considerable number of these, single and compound, the safest contractions are given. In such cases it has not been thought necessary always to add the full outline. Where the latter is given, it is connected with the contraction by the word *or*. In addition to these contractions of single and compound words, certain systematic contractions are indicated and, as they may be used extensively, they are here specified.

- (a) The stroke for *t* to represent *tumour* or *tumour of*. In any word consisting of at least two full consonants the *t* stroke prefixed, or intersected through the first consonant, indicates *tumour of*; affixed, or intersected through the last consonant, it indicates *tumour*.
- (b) The same *t* stroke prefixed, or intersecting the first consonant of a word, indicates *tincture of*.
- (c) The letter *f* affixed, or intersecting the last consonant of a word, indicates both *fever* and the adjectival ending *form*. In practice it is found that the context suffices to prevent confusion arising from this two-fold use of either of these two consonants.

In the same way and subject to the same limitations:—

- (d) *Tick h pr* may be used for *hypertrophy*;
- (e) *Hooked pr* for *paralysis*;
- (f) *Upward r* for *reflex*.

Other systematic contractions are:—

- (g) Prefixed and joined,
Diphthong *i* to represent the aspirated sound *hy*
throughout the *hypo* series of words;

- (h) Affixed and joined,
Hook nr for *murmur* ;
Half-length kr for *cord* and *cartilage* ;
Gr shn for *regurgitation*.

COMBINATIONS.—Combined outlines of pairs of words, apt to be associated in medical writing, have proved a welcome help and are given more freely in this edition. Short words so combined are mostly written in full; longer words are more or less contracted.

Two sets of these combinations need to be explained, viz. : those involving the affixes *acid* and *of soda* (or *of sodium*). *Acid* is represented by *circle s d* joined to the preceding word when that word is an acid ending in *k (ic)*; but when it ends in *s (ous)*, acid is written with *stroke s* instead of the *circle s* to avoid risk of confusion between *acid* and *soda*. The same signs *circle s d* and *circle s dm*, joined to the preceding word, are also safely used to represent *of soda* and *of sodium*, because the preceding word will always be an acid-compound ending in *t (ate or ite)*.

DEVIATIONS FROM THE AUTHORIZED SYSTEM are as follows :

1. The use of *th* with large initial hook to represent *thl* in *ophthalmia* and a few other words ;
2. Of the upward as well as the downward form for *shr* in certain words to secure convenient combinations ;
3. Of (a) downward instead of upward initial *r* in *rheumatism* and a few other words, (b) upward instead of downward initial *r* in *aura*, *erosion*, *orbicularis*, (c) of upward instead of downward final *r* in *tumour* ;
4. Of downward instead of upward initial *l* in the *lymph* series.
5. Of double-length *ng* to represent *ngtr* as well as $ng \begin{matrix} kr \\ gr \end{matrix}$ as in *sphincter* ;
6. Of double-length instead of half-length *n* as the prefix to represent *inter*, *intro*, *enter* ;
7. Of the disused but convenient sign for the sound $y\bar{o}\bar{o}\check{i}$ in such words as *pituitary*, *continuity* ;
8. Of the $y\bar{o}\bar{o}$ diphthong as a joined initial vowel in the *urea urine* series of words ;

9. Of the large *circle s* without a vowel to represent the *sis* termination (singular), and of the same circle with the vowel inside to represent the *ses* termination (plural), except in words like *stasis*, *exostosis*, where *stroke s* in the final syllable makes a more convenient outline; and in cases where it is necessary to distinguish between words having the same consonant outline ending in *sis* like *tussis* *ptosis*, *myosis* *emesis*.

The use of *half-length ld* to represent *l vowel d* has been abandoned.

THE LIST OF SIMILAR WORDS.

The appended List of Similar Words is a new feature in this edition and will, it is believed, prove of much use. It consists of sets of words differently spelt, but admitting of only one and the same shorthand outline, and consequently distinguishable only by vocalization or by position. These words, having very simple and fixed outlines, have been eliminated from the body of the List and collected into an Appendix. On the other hand there are a large number of "Similar" words of a more complex kind which can be written in more ways than one, and therefore admit of distinction by outline; these, as involving choice on the writer's part, are left in the Vocabulary.

It is the former, the simple fixed and obvious outlines, far more than the longer ones, which are apt to involve hesitation in reading. They do this because each one has generally to stand for two, three, or more words. Reference to the Appendix will show at a glance, in the case of any one of these outlines, (1) what "clashes" it will have, *i.e.* what other words it has to represent, (2) how far it must be vocalized to ensure legibility, and (3) how far legibility can be secured by position alone. The Appendix will illustrate the great danger, in writing words of this class, of a too sparing use of vowels; and the further very important fact that in many of them, position alone, though a help, is an inadequate safeguard for securing ready legibility.

No attempt has been made to present all the "clashes" of any given word; those only are given which are most apt to occur in medical work. The Appendix has been planned on the lines of the "Reporter's Assistant" (Sir I. Pitman and Sons). The words are arranged according to the Phonetic Alphabet, and to find any word it is necessary merely to remember the order of that alphabet p b, t d, ch j, etc., and the first consonant of the word sought.

SOCIETY OF MEDICAL PHONOGRAPHERS.

OFFICERS.

President :

SIR W. R. GOWERS, M.D., F.R.C.P., F.R.S.

Treasurer :

NORMAN PORRITT, M.R.C.S., L.R.C.P., Huddersfield.

Hon. Secretaries :

J. NEIL, M.D., Warneford Asylum, Oxford.

F. H. SPOONER, M.D., Clapton, N.E.

Editors of the Record :

JAMES TAYLOR, M.A., M.D., M.R.C.P.

F. H. SPOONER.

Superintendent of the Circulating Magazines :

J. BENSON COOKE, L.R.C.P., L.R.C.S., Borstal, Rochester.

Elected Members of Council :

PEYTON T. B. BEALE, F.R.C.S., London.

CHAS. W. CATHCART, M.A., M.B., F.R.C.S., Edinburgh.

E. B. GRAY, M.D., Oxford.

PATRICK G. GRIFFITH, M.B., Hayward's Heath.

A. HILL JOSEPH, M.D., Bexhill-on-Sea.

H. COUPER PATRICK, M.B., Scotland.

SIR W. THOMSON, M.A., M.D., Pres. R.C.S.I., Dublin.

THOMAS WILSON, M.D., F.R.C.S., Birmingham.

The above form the Council.

PITMAN'S SHORTHAND PUBLICATIONS.

TECHNICAL REPORTING, containing Phonographic Abbreviations for Words and Phrases commonly met with in reporting Legal, Scientific, and other Technical Subjects. By T. A. Reed.
Price, 1s. 6d. ; cloth, 2s.

BRIEF REPORTING NOTES IN SHORTHAND, or Shorthand Dictation Exercises, with Key in ordinary print. Demy 8vo., 51 pp.
Price, 6d. ; cloth, 1s.

GRADUATED DICTATION BOOKS, for acquiring speed in Shorthand. The reading matter is divided on a new and improved plan for speeds of 40, 50, 80, 100, and 160 words per minute. Cr. 8vo., 47 pp.
Price, 4d. each ; post free, 4½d.

No. 1.—Political Speeches. No. 2.—Sermons.

KEY to Graduated Dictation Book in Shorthand, No. 1.
Crown 8vo. Price, 6d. ; post free, 7d.

KEY to Graduated Dictation Book in Shorthand, No. 2
Crown 8vo. Price, 6d. ; post free, 7d

The ACQUISITION of SPEED in PHONOGRAPHY.
By E. A. Cope. 32 pp., ordinary print. Price 2d. ; post free, 2½d.

The NEW TESTAMENT, in an easy Reporting Style of Phonography, 368 pages, with two coloured maps. Size of page, 6¼-in. by 4-in.
Price, roan, red edges, 4s. ; Turkey morocco, gilt edges, 5s.

The BOOK OF COMMON PRAYER, in an easy Reporting Style of Phonography, 296 pages. Size of page, 6¼-in. by 4-in.
Price, roan, red edges, 4s. ; Turkey morocco, gilt edges, 5s.

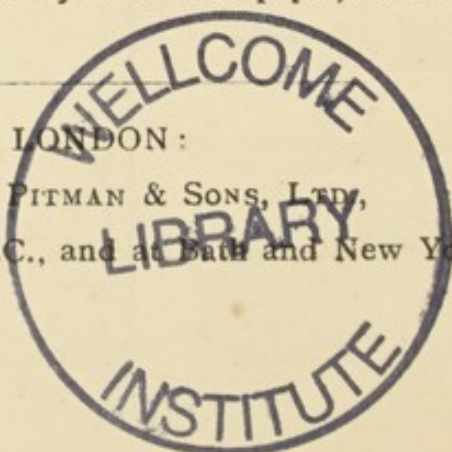

The CHURCH SERVICES, including the Book of Common Prayer, the Psalter, and Proper Lessons for Morning and Evening Prayer, in an easy Reporting Style, 935 pages. Size of page, 6¼-in. by 4-in. Price, roan, bevelled boards, gold lettered back and side, 10s. 6d. ; morocco ditto, gilt edges, 12s. 6d.

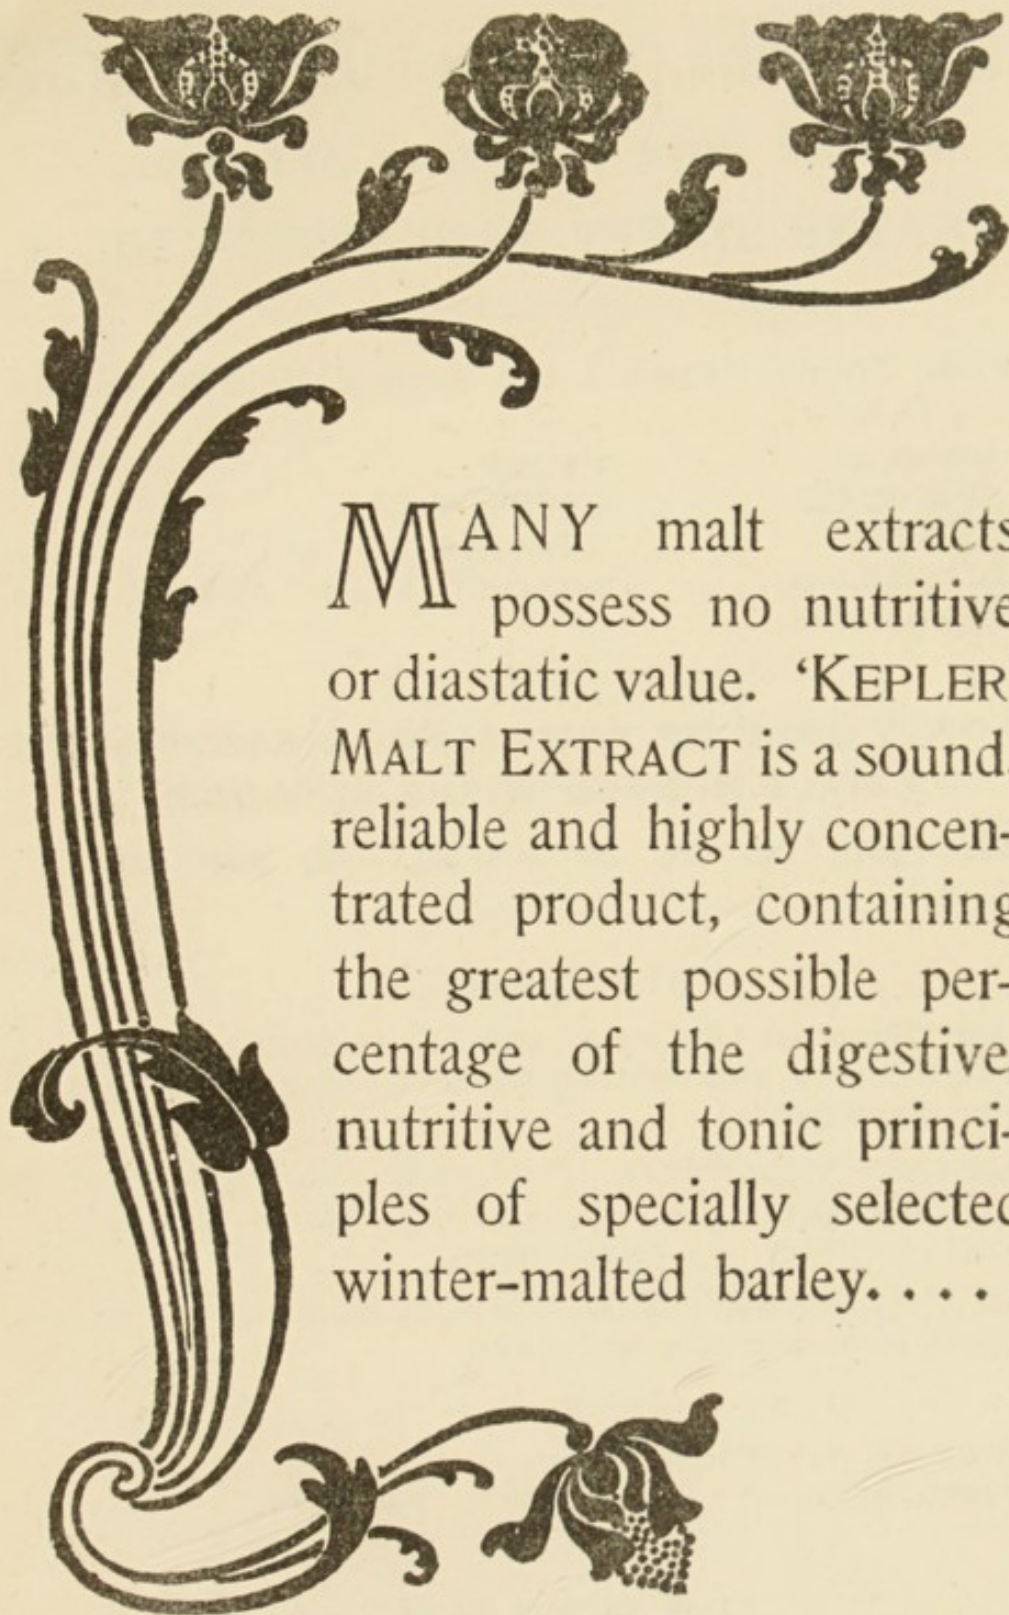

BIOGRAPHY OF SIR ISAAC PITMAN. By T. A. Reed. Illustrated with woodcuts, and facsimile pages, in handsome cloth binding, 191 pages, on specially made thick paper, crown 8vo.
Price, 3s. 6d.

LONDON :

SIR ISAAC PITMAN & SONS, LTD,

1, Amen Corner, E.C., and at Bath and New York.

MANY malt extracts possess no nutritive or diastatic value. 'KEPLER' MALT EXTRACT is a sound, reliable and highly concentrated product, containing the greatest possible percentage of the digestive, nutritive and tonic principles of specially selected winter-malted barley.

Burroughs Wellcome and Co.,
LONDON and SYDNEY.
