Fresh Ginkgo extract

The effectiveness of the herb Ginkgo biloba is well documented. Many studies have been done on this herb, particularly in Europe. Ginkgo biloba has been shown to help maintain and support the body's circulation, particularly to the extremities, such as the brain, hands and feet.

The Ginkgo tree hails from China, and bears a number of common names.

Amongst these are The Memory Tree and Chinese Temple Tree. It is the leaves of the tree which are used in health-care.

The Bioforce preparation of Ginkgo biloba is unique in containing freshly harvested Ginkgo leaves. This ensures that the richest amount of the naturally occurring active compounds is retained in the preparation.

The Advantages of Bioforce Fresh Herb Tinctures...

Freshly Harvested Herbs

At Bioforce, each herb is used within 24 hours of harvesting to ensure that all the beneficial compounds are retained. Tinctures made from freshly harvested herbs can be more effective than tablets or capsules made from dried herbs.

Quality

The herbs are harvested at the optimum stage and time of development to ensure that the richest content of the natural ingredients in each plant is obtained.

Organically Grown

All the herbs used in the Bioforce range carry the Organic Certification of the Swiss authorities. In our cultivation fields, natural fertilisation and composting is used, together with hand weeding. No chemical fertilisers or pesticides are ever used.

Better Absorption

Tinctures are absorbed very quickly and enter the bloodstream with the minimum of interference. Unlike tablets or capsules which have firstly to disintegrate in the digestive tract, the absorption of tinctures starts, as soon as it reaches the mouth.

Greater Stability

Laboratory tests done at our factory in Switzerland have shown that the freshly harvested herbs, processed into tinctures are more stable and have a longer shelf life.
