Prostasan a supplement for men

The traditional use of the herb *Sabal serrulata* – to help maintain the health of the urinary system – is supported by various German studies.

Sabal serrulata is a small palm with fan shaped leaves. The fruit it bears contain a volatile oil called palmetto oil.

Prostasan is unique in containing the freshly

harvested *Sabal serrulata* plant along with many other herbs – including *Echinacea purpurea*.

Prostasan, with its main ingredient, *Sabal serrulata*, can help to maintain health in men.

Manufactured by Bioforce, Prostasan is tested to ensure that ALL the plants' biologically important elements are present.

for men

The Advantages of Bioforce Fresh Herb Tinctures...

Freshly Harvested Herbs

At Bioforce, each herb is used within 24 hours of harvesting to ensure that all the beneficial compounds are retained. Tinctures made from freshly harvested herbs can be more effective than tablets or capsules made from dried herbs.

Quality

The herbs are harvested at the optimum stage and time of development to ensure that the richest content of the natural ingredients in each plant is obtained.

Organically Grown

All the herbs used in the Bioforce range carry the Organic Certification of the Swiss authorities. In our cultivation fields, natural fertilisation and composting is used, together with hand weeding. No chemical fertilisers or pesticides are ever used.

Better Absorption

Tinctures are absorbed very quickly and enter the bloodstream with the minimum of interference. Unlike tablets or capsules which have firstly to disintegrate in the digestive tract, the absorption of tinctures starts, as soon as it reaches the mouth.

Greater Stability

Laboratory tests done at our factory in Switzerland have shown that the freshly harvested herbs, processed into tinctures are more stable and have a longer shelf life.
