Ultra-Violet Light =
Vitamin D (Anti-Rachitic) .**

Vitamin D in The 'Allenburys' Foods

In the 'Allenburys' Nos. 1, 2 and 3 Foods and the 'Allenburys' Malted Rusks the natural Vitamin D content is augmented by the addition of a proportion of the synthetic antirachitic factor.

The 'Allenburys' Foods, therefore, are rich in Vitamin D, and their use, among other notable advantages, ensures complete protection against rickets and defective formation of teeth whilst ensuring healthy growth and development.

Comparative Analyses of the 'Allenburys' Milk Foods HUMAN MILK AND COW'S MILK :

| | Vitamin D | Albumen | Casein | Fat | Lactose | Dextrin- Maltose |
|-----------------|-----------|---------|--------|-----|---------|---------------------|
| Milk Food No. 1 | +++ | 0.7 | 1.0 | 3.1 | 7.3 | 3.25 |
| Milk Food No. 2 | +++ | 0.75 | 1.15 | 2.9 | 6.7 | 3.8 |
| Human Milk | + | 0.7 | 0.8 | 3.3 | 7.0 | — |
| Cow's Milk | + | 0.7 | 2.8 | 3.5 | 5.0 | — |

N.B.—The 'Allenburys' Milk Foods contain no
STARCH or CANE SUGAR

*Clinical trial samples and descriptive
literature gladly sent on request.*
