provide long-long-lasting relief from nasal congestion without rebound hyperaemia or other side effects.

A clinical trial of an isotonic solution of oxymetazoline hydrochloride 0.05 per cent, as a nasal spray, in 100 patients with acute nasal congestion gave excellent or good results in 92 patients. "In about half the patients, twice-a-day medication kept the nasal passages clear all day and all night, and for almost all the remaining patients, thrice daily dosage sufficed for this purpose."

(Haines, H.L. (1966), *Curr. Ther. Res.* **8**, 91).

Stringer, reporting on a trial of an isotonic solution containing 0.05 per cent oxymetazoline hydrochloride, stated that 30 out of 31 patients obtained relief from nasal congestion "and that the relief was long-lasting in 26 of these patients."

(Stringer, C. G. (1964), *Practitioner*, **192**, 270).

A long-lasting nasal decongestant permits comfortable sleep, which, in itself, is therapeutic.

- ☐ **Hazol Drops** in 15 ml glass dropper bottles, basic NHS cost 3/4d.
- ☐ **Hazol Spray** in 15 ml plastic spray bottles, basic NHS cost 3/4d.

Each contain 0.05% oxymetazoline hydrochloride in isotonic solution.
